thereon, a keeper for holding a cable in said seat, a U-bolt for clamping the cable between the keeper and seat, said bolt's being disposed at the longitudinally mid position of said keeper and seat, pintles on the respective legs of said U-bolt, and means for engaging said pintles for pivotally supporting said cable clamp.

2,023,932
STABILIZING SHEET VULCANIZED FIBER

Herbert E. Stratford, Cleveland, Ohio, assignor to Horace E. Fay, Cleveland, Ohio

No Drawing. Application August 28, 1931, Serial No. 559,925

6 Claims. (Cl. 91—68)

1. A method of inhibiting distortive changes in sheet vulcanized fiber, which comprises expelling moisture from the fiber, and sealing the surface with a settable liquid composition having as its essential component a urea resin condensation product mixed with other synthetic resin.

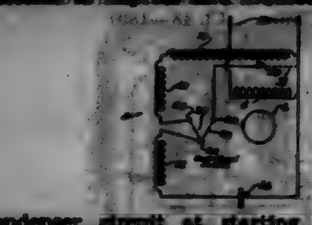
2,023,933
TIME CONTROLLED MECHANISM FOR VALVES OR THE LIKE

Roy W. Johnson, Milwaukee, Wis.

Application April 11, 1933, Serial No. 664,585

7 Claims. (Cl. 251—7)

Time controlled mechanism comprising a clockwork, a manually rotatable shaft, a friction coupling between the shaft and the clockwork whereby the shaft is driven from the clockwork, a trip carried by the shaft, a latch pivotally mounted adjacent the clockwork and in cooperative relation to the trip, a single acting lever having one end pivotally supported and having its other end cooperable with the latch, the intermediate portion of the trip being provided with a slot, and a manually operable set shaft provided with a crank having a pin operatively fixed in said slot.



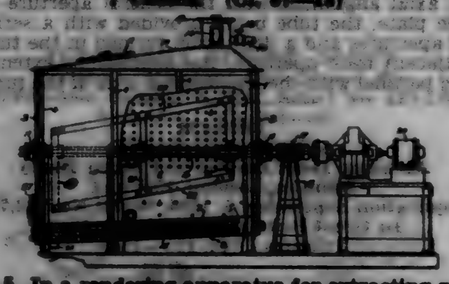
2,023,934
CONDENSER INDUCTION MOTOR

Carlton L. Kennedy, Swampscott, Mass., assignor to The Holtzer-Cabot Electric Company, Roxbury, Mass., a corporation of Massachusetts

Application April 18, 1930, Serial No. 445,090

12 Claims. (Cl. 172—224)

11. A condenser induction motor having, in combination, a rotor, a plurality of windings including a stator main winding to be connected to a source of voltage and a stator condenser winding, a condenser element including the condenser winding and a condenser, one of the windings having induced therein a voltage component in phase with the voltage source, connections to impress said induced voltage in the



condenser circuit at starting, and switching means for simultaneously cutting a part of the condenser winding out of circuit and decreasing the magnitude of said voltage component under running conditions.

2,023,935
GELATIN AND GLUE EXTRACTOR

William V. Kasil, Dayton, Ohio

Application June 6, 1933, Serial No. 675,649

7 Claims. (Cl. 87—13)

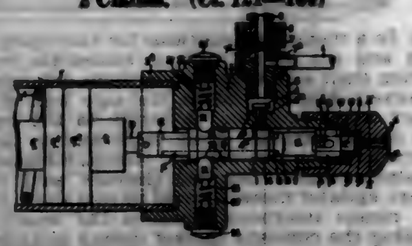
5. In a rendering apparatus for extracting gelatin and the like, a pair of concentric vessels having their side walls and bottoms arranged in relatively spaced relation, the side wall of the inner vessel extending upwardly to the top of the outer vessel and being perforated to permit communication between said vessels, a horizental rotatable shaft extending through said inner vessel, agitator means carried by said shaft, heating means interposed between the vessels for heating the contents thereof during agitation, a conduit for supplying liquid to the inner vessel, and an outlet conduit connected to the side wall of the outer vessel at a point substantially level with said agitator shaft.

2,023,936
CARRIER WEB FOR THE FORMATION OF THIN TRANSPARENT FILMS

Edouard M. Kratz, Gary, Ind., and Erich Gebauer-Fuelnegg, Evansville, Ill., assignors, by mesne assignments, to Marbo Products Corporation, Chicago, Ill., a corporation of Delaware

No Drawing. Application December 15, 1933, Serial No. 702,993

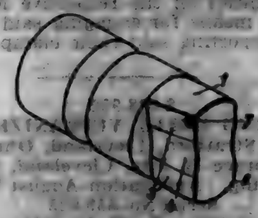
3 Claims. (Cl. 18—15)



1. A casting belt for transparent sheet material comprising a laminated fabric web, a pigmented layer of a cellulose-ester composition thereon, a plurality of coatings of soft plasticized clear nitrocellulose composition above said pigmented layer to form a smooth, brilliant top surface and an inert barrier film on said surface to protect the under coatings from the action of solvents in the film forming solution to be cast on the belt.

2,022,937
GAS MIXER
Maurice Lefebre, Detroit, Mich.
Application January 26, 1934, Serial No. 708,373
1 Claim. (Cl. 48—190)

In a gas mixer, a sheet metal plate having a central aperture and a series of smaller apertures spaced circumferentially thereabout, the plate being provided with a slit extending radially from the central aperture to each smaller aperture and the lugs thus formed being twisted to extend at an angle to the plane of the sheet metal plate, the lugs being also bent outwardly to the contour of a truncated cone and each lug being provided with an aperture therethrough and a tube supported on the ends of the lugs and extending in axial alignment with the central aperture of the plate, the tube being provided with a series of apertures and a depression formed in the tube adjacent each aperture, the depressions extending parallel with the longitudinal axis of the tube.



2,022,938
AUTOMATIC VALVE
Abraham Isaac Legette and Edgar Harry Dainton, London, England
Application September 5, 1934, Serial No. 742,778
In Great Britain September 2, 1933
2 Claims. (Cl. 121—164)

1. Automatic valve and valve gear mechanism, for pneumatic motors of the reciprocating piston type, comprising a valve casing having a laterally disposed inlet valve, and, at one end, an exhaust valve, and a plunger formed with a longitudinal bore with ports at the ends thereof, said plunger being constructed and adapted, on its instroke, to open the inlet valve and close the exhaust valve, and on its outstroke to close the inlet valve and open the exhaust valve and to provide for the passage of the air through the bore of the casing during the inlet and exhaust operations, according to the direction of movement of the plunger.

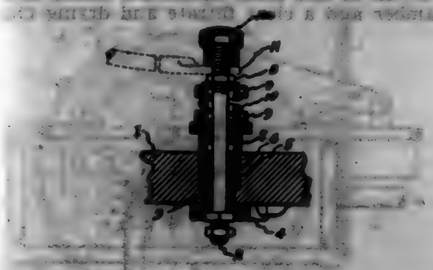
2,022,939
FOLLOWER FOR STEERING GEARS FOR VEHICLES
Frederick George Matravers, Harpenden, England, assignor to Adamant Engineering Company Limited, Luton, Bedfordshire, England, a company of Great Britain
Application June 18, 1935, Serial No. 26,819
In Great Britain October 13, 1934
7 Claims. (Cl. 74—454)

1. A vehicle steering gear follower for transmitting motion between a helical thread on the steering shaft and the vehicle steering arm, comprising a cylindrical body mounted rotatably about its longitudinal axis in said steering arm and having a substantially rectangular projec-

ing end substantially the same width as said thread for engagement with it, the contacting surfaces of said end being substantially helical about said longitudinal axis.

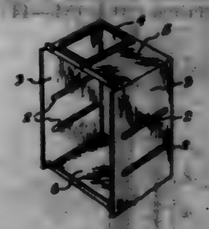
2,022,940
ORE EXTRACTION
George James MacKay, Kingston, Ontario, Canada
No Drawing. Application September 24, 1934, Serial No. 744,393. In Canada September 7, 1934
9 Claims. (Cl. 75—18)

1. A method of treating ore or concentrates thereof for the recovery of precious metals, which comprises mixing the ore with a salt of a group consisting of carbonate or nitrate of sodium or potassium, heating the mixture under non-roasting conditions to 950° to 1250° F. and disintegrating the heated mixture in water to dissolve the soluble products so formed.



2,022,941
BRIGHT ANNEALER
Patrick J. McIntyre, Detroit, Mich.
Application March 6, 1931, Serial No. 520,559
9 Claims. (Cl. 263—6)

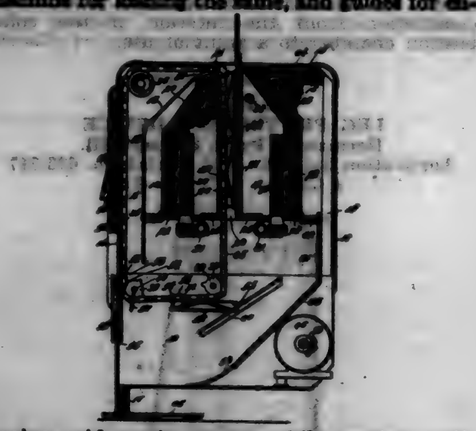
1. An annealing furnace comprising a generally U-shaped structure divided into a plurality of compartments of substantially equal length, the base of the U forming a compartment of a length substantially equal to the length of the next adjacent compartment in each leg of the U, a fluid tight closure member located at the juncture of one leg with the base, and means in alinement with the other leg extending within the base for injecting therein a plurality of gaseous mixtures.



2,022,942
ELECTRICAL ENTRANCE PLUG
Roland H. Money, Cincinnati, Ohio, assignor to The Crosley Radio Corporation, Cincinnati, Ohio, a corporation of Ohio
Application September 18, 1935, Serial No. 41,186
2 Claims. (Cl. 175—311)

1. In an electrical terminal plug for the purpose described the combination of a non-conductive tube, a terminal element passing through the same, a rubber gasket surrounding said non-conductive tube, and adapted to seat in an annular space about said tube, a non-conductive

sleeve on the terminal member and adapted also to enter said annular space, and means for pressing said sleeve into said annular space comprising a spring, and a nut pressing upon said spring, and threaded to the terminal member.

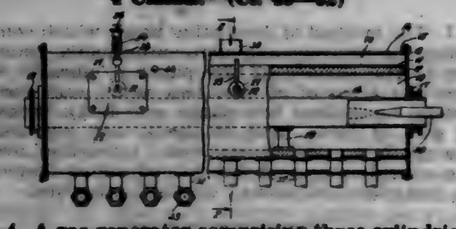


2,022,943
METHOD OF FORMING REFRIGERATOR LININGS
Roland H. Money, Cincinnati, Ohio, assignor to The Crosley Radio Corporation, Cincinnati, Ohio, a corporation of Ohio
Application September 26, 1935, Serial No. 41,241
3 Claims. (Cl. 113—120)

1. That method of forming a refrigerator lining shell which consists in starting with a flat unenameled sheet, stamping said sheet by heavy pressure applied across the entire sheet, so as to form spaced ledges lengthwise thereof at the terminal portions of the sheet, then folding the sheet to form the back and two sides of a refrigerator cabinet shell, with the ledges extended inwardly at the sides of said shell, and the back free of ridges, then securing top and bottom plates to said shell to complete the compartment shell, and then enameling same.

2,022,944
TOASTING MACHINE
Harry S. Morrison, Auburn, R. I., assignor, by mesne assignments, to Republic Metalware Company, Buffalo, N. Y., a corporation of New York
Application June 30, 1928, Serial No. 288,243
20 Claims. (Cl. 53—5)

1. A toasting machine comprising a casing, a vertically divided oven within the casing, heating elements within the oven, endless carrier means mounted in the casing and having its upward pass entirely exposed at the front of the machine for loading the same, and guides for en-



gaging said carrier means while passing vertically through the said oven.

2,022,945
AUTOMOBILE BUMPER DEVICE
Willard L. Morrison, Lake Forest, Ill.
Application October 2, 1933, Serial No. 692,730
8 Claims. (Cl. 293—55)

7. An automobile bumper device comprising a bumper, a stop device at a distance from the bumper, a pneumatic tire supported between the stop device and the bumper and acting to oppose the movement of the bumper when the bumper is struck.

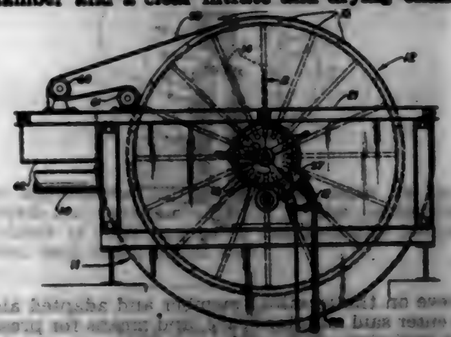
2,022,946
GAS GENERATOR
Dimitry Nicoseff, Clarksdale, Ariz., assignor, by mesne assignments, to Phelps Dodge Corporation, New York, N. Y., a corporation of New York
Application November 2, 1929, Serial No. 404,210
4 Claims. (Cl. 48—62)

4. A gas generator comprising three cylindrical members so arranged as to provide an outer preheating chamber, an intermediate combustion chamber and an inner ignition tube, one or more burners mounted on a wall of the combustion chamber within the walls of the preheating chamber and providing means of communication between the preheating chamber and the combustion chamber, means for introducing powdered coal into the combustion chamber adjacent the burners, means for introducing an

oxidizing gas into the preheating chamber, and means for conducting the gaseous products of combustion from the interior of the combustion chamber to a point of use.

2,028,947
LEG PROTECTING DEVICE
Herman C. Fahs, Chicago, Ill.
Application July 12, 1932, Serial No. 622,047
4 Claims. (Cl. 36—2)

1. A leg protecting device comprising a body portion, encircling spring members at the ends of said body portion, and a series of separated cushion members on the interior of said body portion which engage the leg at separated points.

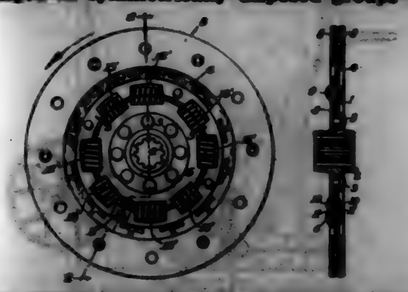


2,028,948
DECORATIVE PAPER AND METHOD OF MAKING THE SAME
Joseph J. Pohlmann, South Hadley Center, Mass., assignor to The Beveridge-Marvelkote Company, Holyoke, Mass., a corporation of Massachusetts
Application November 7, 1934, Serial No. 751,879
2 Claims. (Cl. 41—26)

1. The method of decorating paper which comprises successively and non-conformably applying to the surface of the paper a plurality of irregular areas of at least two colors, said areas having no defined boundaries and being formed of dots of color, light in shade, and variously spaced to provide various color intensities over the several areas, and thereafter forming thereon an unbroken translucent crystalline coating.

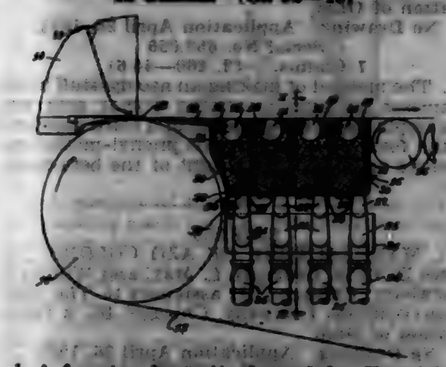
2,028,949
FILTER
William Raiech, Forest Hills, N. Y., and John H. Fodeler, Jr., Glen Rock, N. J., assignors to Underpinning & Foundation Company, Inc., a corporation of New York
Application March 23, 1933, Serial No. 661,490
4 Claims. (Cl. 210—197)

1. In a rotary filter, a revolving valve member having in the face of one of its ends a plurality of ports arranged at intervals around the center of said face, a stationary valve member cooperating with the face of the revolving member to provide a main chamber therebetween, means including three radial partitions to set off in said main chamber a cloudy filtrate chamber and a clear filtrate and drying chamber, and means connected with said partitions at their inner ends for varying the positions of said partitions from the exterior of the valve without interrupting the action of the filter, such varying means including means for varying the position of one of said partitions and means for simultaneously varying the positions of the other two of said partitions.



2,028,950
LAMINATED PANEL
Meredith S. Randall, Detroit, Mich., assignor to Woodall Industries Incorporated, Detroit, Mich., a corporation of Michigan
Application November 6, 1933, Serial No. 696,813
10 Claims. (Cl. 154—44)

1. A laminated panel comprising, in combination, a metal lamination, a lamination of tough dense non-sound transmitting material secured to one surface of said metal lamination, a lamination of loosely compacted sound insulating material secured to said last named lamination, and a lamination of finish material arranged adjacent to said sound insulating lamination spaced from the lamination of non-sound transmitting material by means other than the intervening lamination of insulating material.

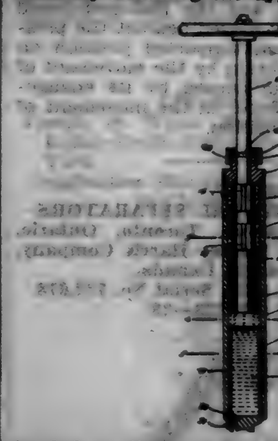


2,028,951
CLUTCH PLATE
Harold V. Reed, Chicago, Ill., assignor, by mesne assignments, to Borg-Warner Corporation, Chicago, Ill., a corporation of Illinois
Application December 15, 1931, Serial No. 581,119
10 Claims. (Cl. 192—46)

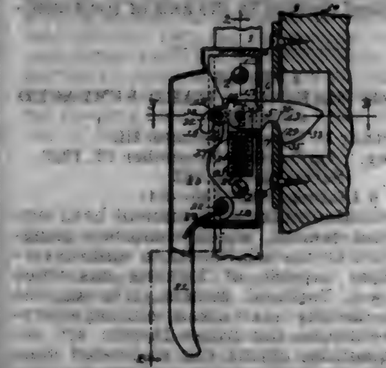
1. A clutch plate for friction clutches comprising a driving member and a driven member, said members having a plurality of pockets formed by opposed openings in the members, and springs arranged in said pockets to engage the end walls of said openings, said pockets being arranged in symmetrically disposed groups and

the openings in one member being progressively longer than the openings in the other member for successive pairs of pockets to cause the springs in said pockets to act in stages during movement of one member relative to the other member.

2,028,952
APPARATUS FOR, AND METHOD OF MAKING PAPER
Philip J. Reimer, Neenah, Wis.
Application February 16, 1931, Serial No. 711,053
12 Claims. (Cl. 92—46)



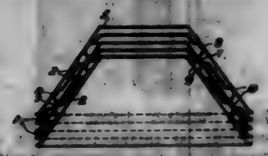
1. A forming box attachment for Fourdrinier type paper machines comprising, in combination, a box having a bottom, ends and side walls, a plurality of partitions in said box defining watertight chambers, a perforated pipe communicating with the interior of each chamber, means for flowing liquids through said pipe, and drain openings in the bottom of each chamber.



7. The process of forming sheet material having improved characteristics, which comprises flowing an aqueous suspension of stock onto the forming wire of a Fourdrinier type paper machine, flowing liquid upwardly through the forming wire to maintain the stock thereon in suspension and gradually regulating the drainage of water through the wire to prevent the formation of two-sided sheets.

2,028,953
SAFETY STEERING ROD
William Middleton Roark, Perryton, Tex.
Application June 3, 1932, Serial No. 615,783
2 Claims. (Cl. 74—492)

1. A steering post comprising a lower cylindrical section and an upper rod section extending into and splined to the cylindrical section, a dash pot construction between the inner end of the upper section and the cylindrical section, a laterally yielding joint between the two sections normally retaining the upper rod section in extended position which joint yields to permit upper rod section to move into the cylindrical section by impact of the human body in event of an accident.



2,028,954
LATCH
Gordon E. Reedding, Grand Rapids, Mich., assignor to Grand Rapids Brass Company, Grand Rapids, Mich., a corporation of Michigan
Application October 14, 1934, Serial No. 747,820
11 Claims. (Cl. 292—126)

1. A latch structure comprising: a lever latch bolt having spaced fulcruming members; fulcrums for said members respectively, one of the members being mounted for reversible movement to supported position on its fulcrum in a direction parallel with the bolt's movement to its latching position; a spring urging said member in its said movement and the bolt to latching position; an operating unitary handle carrying the other fulcrum in a position supporting the other member in the normal position of the handle and in the latching position of the bolt, the handle being movable from its normal position for moving said other fulcrum from its said supporting position; means operable by the handle in its said movement for moving said other member about the axis of the first-mentioned member to thus turn the bolt on the first-mentioned fulcrum from latching position, the handle being reversely movable to normal position

for moving said other member reversely to thus turn the bolt reversely and for moving said other fulcrum into its said supporting position, the bolt in its last-mentioned position being turned on said other fulcrum and the first-mentioned member being reversely moved against the pressure of the spring from supported position on the first-mentioned fulcrum by the movement of the bolt's latching arm caused by its engagement with the bolt's keeper in the movement of the closure to closed position.

2,028,955
DISK FOR CENTRIFUGAL SEPARATORS
Osborne Harris Shenstone, Toronto, Ontario, Canada, assignor to Massey-Harris Company, Limited, Toronto, Ontario, Canada.
Application June 27, 1934, Serial No. 732,673
5 Claims. (Cl. 233—29)

1. In a centrifugal separator, a plurality of deformed and plain frustro-conical disks arranged alternately in assembled form, said deformed disks having a plurality of internal and external spacers arranged in pairs, each spacer having a flat portion in a plane parallel with the wall of the disk for engagement with a plain disk, said internal and external spacers being so arranged that in assembled form said flat portions and the engaged portions of the plain disks form a bearing column disposed parallel to the axis of the assembled disks.

2,028,956
METHOD OF MAKING A HARD SURFACED CEMENT
Arthur L. Emyly, Chicago, Ill.
No Drawing. Application November 13, 1933, Serial No. 642,443
6 Claims. (Cl. 106—24)

1. The method of making permanent hard surfaced Portland cement, which comprises grinding a mass of iron material likely to contain certain impurities capable of forming gas when present in wet Portland cement, treating the ground mass directly to an alkali solution whereby said gas-forming impurities therein are decreased in quantity, drying the so-treated mass while wet with alkali whereby to coat the particles with a protective alkali, and adding the treated iron to Portland cement.

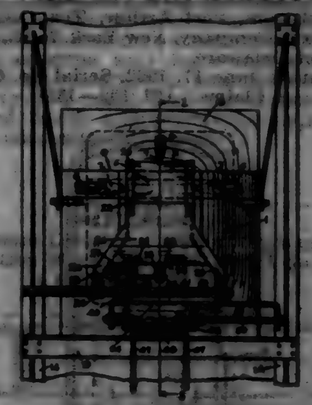
2,028,957
OSCILLATING CULTIVATOR
George W. Swan, Flat Rock, Mich.
Application September 7, 1934, Serial No. 743,853
7 Claims. (Cl. 97—45)

1. In an oscillating cultivator, an elongated frame, a ground engaging wheel detachably secured in the forward end of said frame, said wheel having a rim formed in a zigzag course extending completely around the circumference of the same, an oscillating member, a cross member secured to the top of said frame, an additional cross member secured to the bottom of said frame, both of said cross members disposed in alignment relative to each other, the aforesaid oscillating member being supported between said cross members and being adapted to pivot and oscillate in relation to said cross members, a pair of rollers journaled within the forward end of the oscillating member, either of said rollers

adapted to contact the aforesaid zigzag wheel rim so that as said wheel is rotated during the normal operation of the device, said rim will simultaneously oscillate the aforesaid oscillating member, ground working implements carried by the rear end of said oscillating member.

2,028,958
MANUFACTURE OF AZO COLORS
James D. Todd, Lawrence R. May, and William L. Newbury, Chicago, Ill., assignors to The Sherwin-Williams Company, Chicago, Ill., a corporation of Ohio
No Drawing. Application April 26, 1933, Serial No. 668,620
7 Claims. (Cl. 260—44.6)

1. The method of making an azo dyestuff which comprises coupling diazotized Tobias acid with beta naphthol in the presence of a third substance in the form of a quantity of phenyl-methyl-pyrazolone up to 20% by weight of the beta-naphthol.



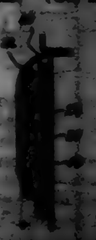
2,028,959
MANUFACTURE OF AZO COLORS
James D. Todd, Lawrence R. May, and William L. Newbury, Chicago, Ill., assignors to The Sherwin-Williams Company, Chicago, Ill., a corporation of Ohio
No Drawing. Application April 26, 1933, Serial No. 668,621
7 Claims. (Cl. 260—39)

4. The method of forming a dyestuff which comprises diazotizing Tobias acid, and coupling said diazotized Tobias acid with beta-naphthol while simultaneously coupling with beta-naphthol a lesser quantity of diazotized naphthylamine sulfo acid which is distinctly foreign to the Tobias acid employed.

2,028,960
GLASS FEEDING SHELF
Albert F. Tremblay, Union City, Ind.
Application August 23, 1934, Serial No. 741,445
3 Claims. (Cl. 49—54)

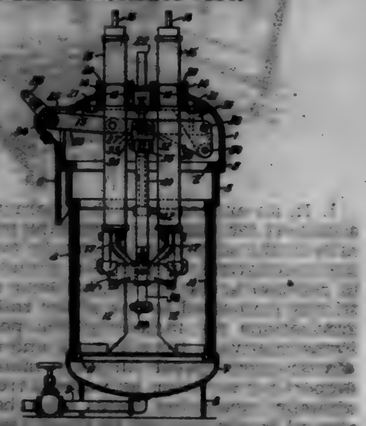
1. A glass shelf for glass gathering machines having glass gathering molds, a tank, a shelf part protruding from the tank, a top part having an opening, a cover located in proximity to and above the top for closing the said opening by sliding movements, a piston and cylinder located beneath the shelf, means for connecting a source of air pressure supply with the cylinder, a plate slidably operated by the piston and connected to the cover at its edge and depending therefrom and extending along the under surface of the

shelf, a rod for slidably supporting the plate and cover and located beneath the shelf, a bracket



for supporting the said rod and located on the surface of the shelf.

2,028,961
MAKING OF PACKING RINGS
Harley T. Wheeler, Dallas, Tex.
Application February 16, 1931, Serial No. 515,232
3 Claims. (Cl. 154—2)

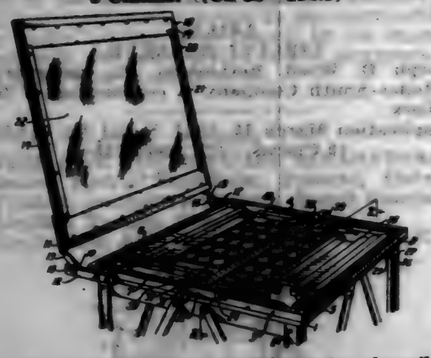


3. A method of forming a substitution for use as a packing made from a ring of material having a uniform fabrication, including the steps of so pressing the ring that the configuration of the ring will be altered, and so that the normal arrangement of the particles with respect to each other on the inner portion of the ring will be retained, and so pressing the ring that the outer portion will have an increased density.

2,028,962
LAMINATED PANEL
Herbert J. Woodall and Meredith S. Randall, Detroit, Mich., assignors to Woodall Industries Incorporated, Detroit, Mich., a corporation of Michigan
Application June 22, 1932, Serial No. 618,394
4 Claims. (Cl. 154—44)

4. A laminated panel structure comprising, in combination, a layer of loosely interlaced thermo material possessing high sound insulating properties, an outer layer of thermoplastic phenolic impregnated fibrous self supporting material responsive to heat and pressure to assume and permanently retain a deformed shape permanently secured to one side of the first layer, and an outer layer of flexible deformable cushioning material secured to the opposite side of said first layer.

2,028,963
CIRCUIT BREAKER
Joseph D. Wood, Bethlehem, Pa., assignor to Roller-Smith Company, a corporation of New York
Application March 10, 1934, Serial No. 714,959
10 Claims. (Cl. 200—154)



1. An oil circuit breaker comprising an enclosing tank, said tank having a dome-shaped head, and a baffle element fitted within the dome-shaped portion of the head and secured to said dome-shaped portion of the head at the outer edge of said element forming an enclosed space between said element and the top of the tank, said element having an opening connecting said space with the interior of the tank and said head having a venting opening connecting said space with the exterior of the tank.

2,028,964
BALL BEARING
Robert Amsler, Bienne, Switzerland, assignor to the firm Louis Muller & Cie S. A., Fabrique d'Horlogerie "Le Champagne", Bienne, Switzerland, a joint-stock company of Switzerland
Application January 18, 1933, Serial No. 2,583
In Germany January 27, 1934
1 Claim. (Cl. 308—184)

In a ball bearing arrangement having ball races made of sheet metal and in combination inner ball races made of metal strips with bent up borders and outer ball races of the same character both ball races being capable of some resiliency, an adjusting member adapted to subject said ball races to an axial pressure so as to produce a deformation of at least one of said races and a set of balls guided by said ball races.

2,028,565
APPARATUS FOR REGISTERING AND ALIGNING PRINTERS' FORMS, PLATES, AND THE LIKE
Clarence A. Beitz, Kansas City, Mo.
Application February 16, 1934, Serial No. 711,529
3 Claims. (Cl. 33—194.5)

1. In an apparatus of the character described, a support for removably retaining printing forms, rails on the support enclosing the forms and having graduations, means for aligning the forms in relation to the rail graduations, means eccentrically connected to one of the rails and having graduations for indicating the position of the forms relative to the side rails, and a transparent shatter-proof panel hingedly mounted on the support for receiving an imprint from the forms, whereby succeeding forms may be placed and aligned in the support in exact relation to each other.

2,028,966
RELEASING OVERSHOT
Erwin Burns, Los Angeles, and Harry F. Wickersham, Huntington Park, Calif.
Application May 7, 1934, Serial No. 724,594
1 Claim. (Cl. 294—106)

A well tool including a tubular body adapted to be passed over a fish, a depending lug in the upper end of the body, a gripping unit slidable in the body comprising a ring, arms depending from the ring, and gripping jaws on the arms actuated against the fish through cooperation with the body, a lug on the unit adapted to be engaged with the first mentioned lug to hold the unit in a released position, and inclined faces on the lugs adapted to cooperate in part in effecting the engagement of the lugs.

2,028,967
LINING FOR VESSELS
John Caristrom, Port Arthur, Tex., assignor to The Texas Company, New York, N. Y., a corporation of Delaware
Application June 17, 1932, Serial No. 617,511
6 Claims. (Cl. 196—133)

2. A metal vessel adapted for use in the conversion treatment of hydrocarbon oils comprising cylindrical side walls and end walls forming an enclosed chamber, tubular connections communicating with said chamber, a plurality of metal sheets arranged circumferentially about a longitudinal section of said chamber and forming a lining therefor, an annular bracket secured to the wall of said chamber at one end of the longitudinal section, a longitudinally extending flange on said bracket spaced from said chamber wall and cooperating therewith to form an annular recess adapted to receive one end of said liner sheets, means at the opposite end of said liner sheets for holding said liner sheets in transverse alignment against the wall of said chamber, and means including latches for interlocking adjacent longitudinal edges of said liner sheets.

2,028,968
LINING FOR VESSELS
John Caristrom, Port Arthur, Tex., assignor to The Texas Company, New York, N. Y., a corporation of Delaware
Application August 25, 1932, Serial No. 630,668
3 Claims. (Cl. 196—133)

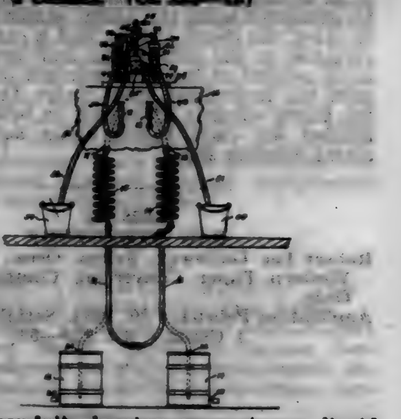
1. A vessel adapted to contain hydrocarbons undergoing treatment at high temperatures and

prising an outer metal shell forming an enclosed chamber, a layer of corrosion-resistant material secured to the interior wall of said shell and covering a portion thereof, a sheet of heat insulating material covering said layer and contiguous therewith, bricks secured to said sheet and means secured to said metal shell for supporting said sheet and bricks and permitting said shell to expand independently thereof.

2,028,969
THERMOMETER
William Carruthers Dillon, Chicago, Ill.
Application March 28, 1933, Serial No. 663,426
4 Claims. (Cl. 73—118)

2. A portable thermometer comprising an elongated unitary tubular member of uniform diameter, apertured cap members for each end of said tubular member, temperature indicating means positioned in said tubular member, one end of said temperature indicating means being provided with temperature responsive expansible means, said expansible means being adapted to be at least partially immersed in the liquid, the temperature of which is being measured, flowing into said tubular member through one of said apertured cap members.

2,028,970
PROCESS OF PRESERVING FRUIT AND VEGETABLES
Will H. Ewell, Los Angeles, Calif.
No Drawing. Application December 1, 1933, Serial No. 700,589. Renewed July 29, 1935
2 Claims. (Cl. 99—2)



1. The process of preserving fruit and vegetables subject to discoloration on exposure to air comprising cutting the fruit or vegetables into slices, immersing the slices in water saturated with carbon dioxide, removing the slices from the water and draining the excess water therefrom, and packing the slices tightly in an impervious envelope.

2,028,971
SPARK PLUG
Clinton Fuller, Akron, Ohio
Application June 15, 1931, Serial No. 544,813
3 Claims. (Cl. 123—169)

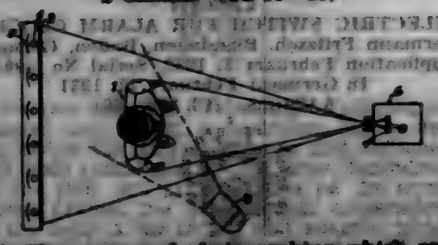
In a spark plug of the character specified, a porcelain core provided at its lower end with a spark pin, an exteriorly threaded shell fitting around the lower end of the electrode, a metal ring fitting in the lower end of the shell and formed at its interior with a projecting wall or portion and a triangular-shaped spark point forming device concentrically mounted on the bottom of said ring and adapted to be fitted to cause any one of its points to extend over the straight wall or portion of the ring opposite the spark pin, to regulate the gap of the spark pin.

2,028,972
CONDUIT CLEANING APPARATUS
Elmer Otto Fessler, Des Moines, Iowa
Application November 19, 1934, Serial No. 753,436
2 Claims. (Cl. 225—12)

1. In a conduit cleaning apparatus, a liquid pump having inlet and outlet ports, a jar member designed to contain granular abrasive material at times, a second jar member designed to contain granular abrasive material at times, a perforated straining member in the top of each of said jar members, a flexible hollow element having one of its ends communicating with the inside bottom of said first-mentioned jar and designed to have its other end communicating with one end of the conduit to be cleaned, a second flexible hollow element having one of its ends communicating with the inside bottom of said second jar and designed to have its other end communicating with the other end of the conduit to be cleaned, a liquid supply pipe communicating with the inlet port of said pump, a pipe leading from the outlet port of said pump, a pipe communicating with the inside top of said first-mentioned jar, a pipe communicating with the inside top of said second jar, a waste pipe, and a multi-way operated valve connected to said last-mentioned four pipes capable of being placed in positions for selectively connecting said pipe leading from said pump with said waste pipe, for connecting said pipe leading from said pump with the said pipe communicating with the inside top of said first-mentioned jar and said pipe communicating with the inside top of said second jar with said waste pipe, and for connecting said pipe communicating with the inside top of said second jar with said pipe leading from said pump and said pipe leading from the inside top of said first-mentioned jar with said waste pipe.

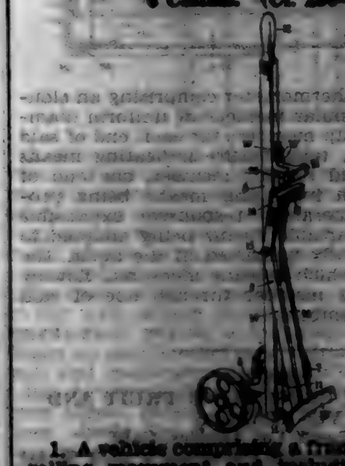
2,028,973
ELECTRIC SWITCH FOR ALARM CLOCKS
Hermann Fritsch, Buggingen, Baden, Germany
Application February 3, 1933, Serial No. 655,517
In Germany February 11, 1931
6 Claims. (Cl. 200—38)

1. Switching means for controlling an electric circuit by the alarm winding shaft of a normal alarm clock, comprising a complete electric



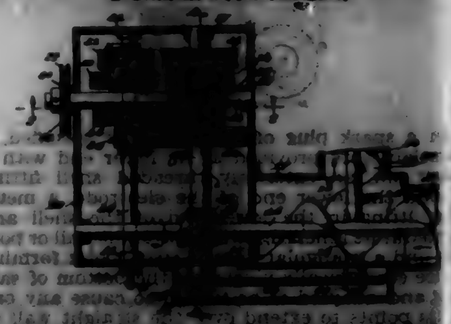
switch, said electric switch having a casing and a shaft mounted rotatably in said casing for effecting the switching, the latter shaft being adapted to be coupled to the alarm winding shaft so as to turn therewith and, when so coupled, to be supported upon the alarm winding shaft and to carry the entire switch, and a catch member attached to the said casing and constructed so as to prevent or limit the rotation of the casing with the mentioned shaft under the action of the alarm winding shaft only by bearing loosely against the clock casing under action of the alarm winding shaft.

2,028,974
BAG STRUCTURE
Robert Lee Galloway, Salem, Oreg., assignor to Western Paper Converting Company, Salem, Oreg.
Application February 20, 1934, Serial No. 712,248
1 Claim. (Cl. 229—53)



A bag for confection of the type having a stick or handle, comprising a body part and a double ply center seam lengthwise of the body part of the bag, said bag having elongated, pre-formed, registering, knife-slits completely through the bag lengthwise thereof and substantially midway between the ends and side of and at the bag, and through the material of the seam, the respective edges of which lie in contact with the confection in the bag to substantially preserve the normal tightness of the bag and to closely fit the handle of the confection when the same is inserted through the slits to form a shield to prevent soiling the hands and garments, and the material of the seam constituting a reinforcement about the handle.

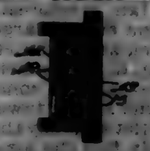
2,028,975
COMPOSITE PICTURE
Clyde F. Gillette, New York, N. Y., assignor to United Research Corporation, Long Island City, N. Y., a corporation of Delaware
Original application September 1, 1931, Serial No. 560,746. Divided and this application February 28, 1934, Serial No. 712,225
2 Claims. (Cl. 88—16)



1. The process of photographing which comprises arranging sensitive photographic material in front of less sensitive photographic material, illuminating a foreground subject at a luminosity level appropriate for producing a half tone print upon said sensitive photographic material, but insufficient for exposing said less sensitive photographic material when arranged, simultaneously illuminating a plain ground behind said foreground subject at a higher intensity level such that an exposure can be produced thereby upon said less sensitive photographic material, and exposing the superimposed sensitive and less sensitive materials to said foreground and said plain ground thus arranged and illuminated.

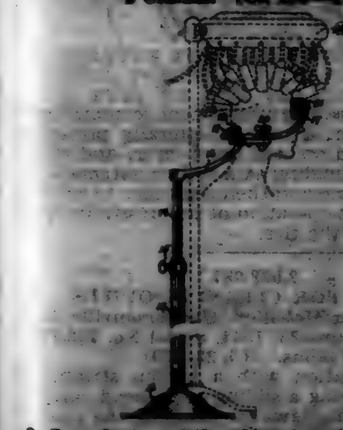
2,028,976
WHEELED VEHICLE
Frederic J. Goff, Madison, Wis., assignor to William J. Kehrs, Milwaukee, and Nathaniel G. Goff, Madison, Wis., partners
Application June 1, 1933, Serial No. 674,814
Renewed October 25, 1934
6 Claims. (Cl. 280—33)

1. A vehicle comprising a frame constructed for rolling movement and including an elongated supporting member; a stationary clamping jaw carried by said member adjacent the upper end thereof; and a pivoted member on said supporting member, said pivoted member being adapted to support an article to be carried and against which said article reacts at a point remote from said stationary clamping jaw and adjacent the lower end of said supporting member, said pivoted member including a movable jaw cooperating with said stationary jaw to clamp an article on said pivoted member.



2,028,977
AUTOMATIC STOKER-FED COAL BURNER
Thomas Chesley Grant, Greenville, S. C.
Application July 2, 1932, Serial No. 620,995
6 Claims. (Cl. 302—22)

4. In a stoker for coal burners in which a rotary conveyor for the coal is provided for moving



speeds by a driven shaft, means for varying the speed of the driven shaft and comprising a sleeve loose on said shaft and provided with spaced gears connected to the sleeve, a worm wheel between said gears and connected to the sleeve, a drive shaft having a worm meshing with the worm wheel, a rock shaft provided with spaced eccentrics, a pair of connected gears on each eccentric, a gear on the driven shaft at each side of the sleeve and fixed to said shaft, means for operating the rock shaft and causing one eccentric to move the gears thereon into meshing relation with one of the fixed gears on the driven shaft and a gear secured to the sleeve while moving the gears on the other eccentric out of meshing relation with the other fixed gear on the driven shaft and the other gear on the sleeve.

2,028,978
MATRIX AND METHOD OF MANUFACTURING THE SAME
Arthur R. Reilly, Chicago, Ill., assignor to Ludlow Typograph Company, Chicago, Ill., a corporation of Illinois
Application November 1, 1934, Serial No. 752,430
15 Claims. (Cl. 101—401.1)

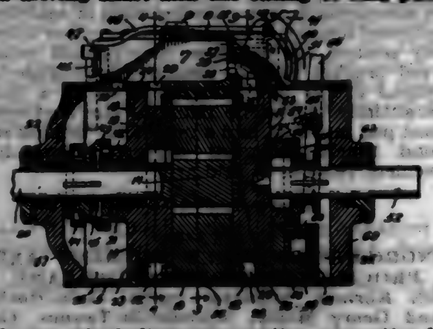
1. The method of forming matrices which consists in providing a metal matrix body the portion thereof in which the matrix cavity is to be formed comprising a relatively thin web section forming a portion only of said body, backing said web-section with material harder than that forming said body, and forcing a matrix-forming punch against said portion to form the matrix cavity therein.

2,028,979
ADJUSTABLE HEAD SUPPORT
Josephine C. Hintz, Lake Mills, Iowa
Application September 24, 1934, Serial No. 745,237
2 Claims. (Cl. 155—174)

2. In a device of the class described, a supporting post, an arm extending forwardly and upwardly from said post, a curved bracket element extending rearwardly and laterally and rigidly secured to said arm, a pad member operatively secured on the inner side of said curved bracket member extending at an angle to the vertical and designed to engage the back lower portion of the head of the user, a second curved bracket element hinged to said arm adjacent the first bracket element to swing horizontally and extending upwardly and forwardly and laterally to an elevation substantially above the elevation of said first-mentioned bracket element, a pad member operatively secured on the inner side of said second curved bracket element designed to engage the forehead of the user and positioned in a plane substantially above the plane of the first-mentioned pad member, and a means for locking said second bracket element against independent movement relative to said arm.

2,028,980
INORGANIC COLORED PIGMENT AND PROCESS OF PREPARING THE SAME
Erich Korinth, Frankfort-on-the-Main-Hochst, and Georg Meier, Munster-in-Taunus, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany
No Drawing. Application February 3, 1932, Serial No. 590,735. In Germany February 11, 1931
11 Claims. (Cl. 134—78)

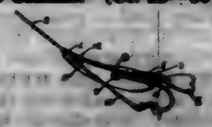
2. The process of producing pigments which comprises combining practically pure zinc oxide and a metal oxide of the type MeO, wherein Me represents a metal of the group consisting of Cd, Mg, Fe and Mn to form mixed crystals or solid solutions by thermal combination of the components at temperatures between about 800° C. and about 1400° C.



2,028,981
PRODUCTION OF AZO DYESTUFFS
Hans Kruhoffer, Ludwigshafen-on-the-Rhine, and Walther Kuchel, Mannheim, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a corporation of Delaware
No Drawing. Application April 2, 1925, Serial No. 24,234. In Germany April 11, 1924
6 Claims. (Cl. 260—12)

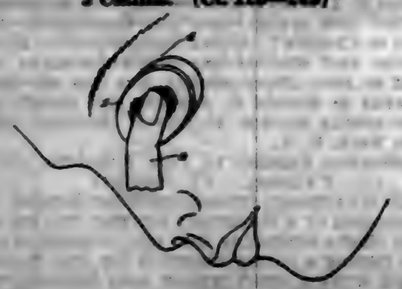
1. A process of producing azo dyestuffs containing metals which comprises causing salts of halogen-substituted low molecular fatty acids with metals capable of forming complexes to act on azo dyestuffs which are capable of forming complex metal compounds.

2,028,982
HYDRAULIC TRANSMISSION MECHANISM
Thomas H. Lambert, Ridgewood, N. J., assignor of twelve and seventy-five one-hundredths per cent to Charles S. James, Ridgewood, N. J., and twelve and seventy-five one-hundredths per cent to John Mergendoller, five and one-tenth per cent to Harold B. Aldrich, and twenty and four-tenths per cent to Ray B. Henline, all of New York, N. Y.
Application January 11, 1933, Serial No. 1,377
6 Claims. (Cl. 192—61)



1. In a hydraulic transmission mechanism, the combination of a stationary housing, driving and driven shafts extending into said housing, a gear pump having a casing mounted for free rotation on said driving shaft within said housing, said gear pump further including a drive gear fixed to said driving shaft, means providing an operative connection between said pump casing and said driven shaft, said housing and said pump casing having passages to provide for fluid cir-

culation between said housing and said pump, a valve associated with the discharge passage of said pump to control the passage of liquid therethrough at will, means to provide a releasable positive mechanical driving connection between said driving shaft and the casing of said pump,



and means including an operative connection between said last-named means and said valve for operating the said last-named means to establish said positive mechanical driving connection automatically upon continued operation of said valve immediately subsequent to complete closing of said valve and while said valve is closed.

2,022,962
FISH LURE
Ernest Liebin, Cleveland, Ohio
Application February 28, 1935, Serial No. 8,757
9 Claims. (Cl. 43—39)

1. A casting spoon of concavo-convex configuration, means for securing a line to the forward end thereof, an elongated longitudinal slot in the center of and terminating immediately adjacent the edge of the rear end thereof, a tongue integral with said spoon at the forward end of said slot and angularly extending from the convex surface of said spoon, and means for securing a spinner on said tongue.

2,022,964
EYECUP
Clarence D. Lukens, St. Louis, Mo.
Application June 24, 1933, Serial No. 677,354
3 Claims. (Cl. 128—249)

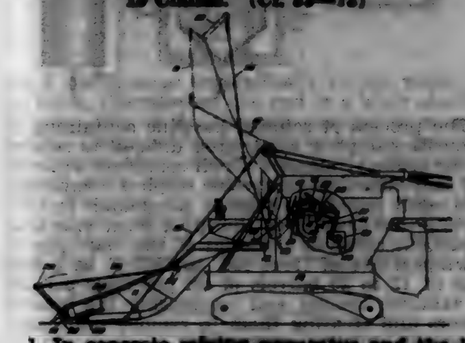
2. An eye cup, comprising, a shallow resilient, stemless cup of ovoid shape having an eye receiving opening at the side of the ovoid, said opening being provided with a reinforced oval rim fitted to the contour of the orbit, the bottom of said cup being impressible toward the eye when in place thereon whereby to produce, by expelling air, sufficient motion upon its resilient return to normal shape to retain the cup and its liquid content in place on the eye.

2,022,965
FAN
Clarence A. Mahon, Kansas City, Mo.
Application May 25, 1932, Serial No. 613,425
2 Claims. (Cl. 230—120)

1. A device of the character described including a propeller type fan, a cone-shaped ring having an air inlet at one end of larger diameter than the fan and having an air outlet at the other end substantially equal to the diameter of the fan, and means supporting the fan concentrically within the cone of the ring and in inwardly spaced relation to said air outlet whereby the air stream from the fan completely fills the air outlet to prevent eddy currents without being cut off by the ring.

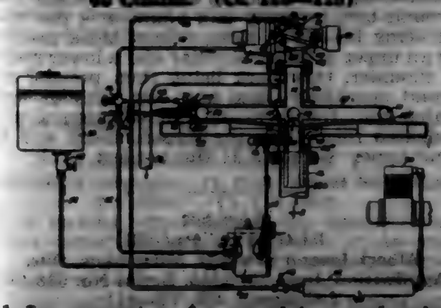
2,022,966
TIRE SPREADING IMPLEMENT
Marion Mathiesen, Chicago, Ill., assignor to John H. Lee, River Forest, Ill.
Application October 1, 1934, Serial No. 746,448
3 Claims. (Cl. 152—37)

1. A tire-spreading implement comprising a rigid hand-lever, a pair of laterally projecting rollers journaled on said hand-lever, and means for alternately holding said rollers automatically to enable first one and then the other to serve as a fulcrum in the operation of progressively opening portions of the tire.



2,022,967
DEVICE FOR CLEANING QUILLS
Edgar Alexander McKillop, Hendersonville, N. C.
Application June 25, 1934, Serial No. 732,317
2 Claims. (Cl. 28—29)

1. In combination with a bobbin stripper of the type employing a sliding cross-head carrying a pair of gripping jaws for gripping the head of the bobbin to draw it through the usual scraping knives, a slidable tube carrying a nozzle at the end adapted to engage the tip of the bobbin while the same is grasped by said jaws, the tube being connected at its other end to a source of compressed air, a valve in said tube, and means actuated by the forward movement of said cross-head to not only advance said tube to put its

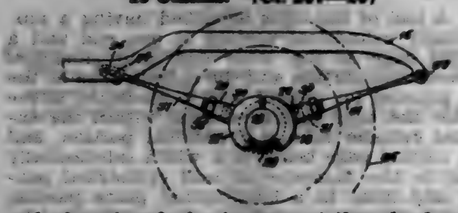


nozzle into contact with the tip end of the bobbin but also to open said valve.

2,022,968
CONTROL MECHANISM FOR CONCRETE MIXERS AND ANALOGOUS APPARATUS
Arthur E. Miller and Samuel Shafer, Jr., Milwaukee, Wis., assignors to Chain Belt Company, Milwaukee, Wis., a corporation of Wisconsin
Application October 26, 1931, Serial No. 570,161
19 Claims. (Cl. 53—73)

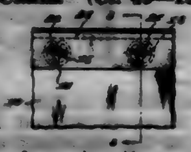
1. In concrete mixing apparatus and the like having a charging skip, and mechanism for automatically controlling the operations of said skip, said mechanism being provided with a starting lever for setting it into operation, the combination of means movable to and from position to prevent actuation of the starting lever of said control mechanism; means adjacent said skip, operable by a vehicle as it reaches and leaves discharging position relative to the skip, for controlling the movements of said first named means; and connections between said first and last named means.

2,022,969
APPARATUS FOR AND PROCESS OF OPERATING INTERNAL COMBUSTION ENGINES ON FUEL OF LOW VOLATILITY
Arlington Moore, New York, N. Y., assignor, by mesne assignments, to Maxmoor Corporation, New York, N. Y., a corporation of Delaware
Application August 1, 1930, Serial No. 472,110
46 Claims. (Cl. 123—118)



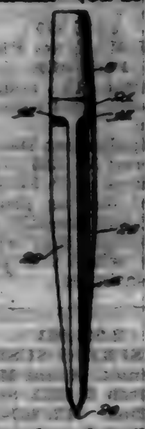
1. In apparatus for supplying and mixing charges for internal combustion engines, an intake, a throttle therein, means for delivering fuel into the intake beyond the throttle, means varied as a substantially pure function of engine speed for varying the fuel flow directly therewith, and means for varying the fuel flow in inverse relation to the variations in intake depression.

2,022,970
PROCESS OF MAKING PROPELLENT POWDER
Fredrich Olsen, Alton, Ill., assignor to Western Cartridge Company, East Alton, Ill., a corporation of Delaware
No Drawing. Application December 8, 1930. Serial No. 500,845
2 Claims. (Cl. 52—28)



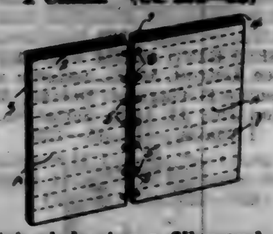
1. In the art of making propellent powders, the process comprising, treating an ungelatinized nitro-cellulose powder grain with a gelatiniser for nitro-cellulose while the grain contains a solvent for the gelatiniser.

2,022,971
VEHICLE SPRING SUSPENSION
James V. Pernice, Mount Morris, N. Y.
Application March 5, 1935, Serial No. 9,471
19 Claims. (Cl. 267—20)



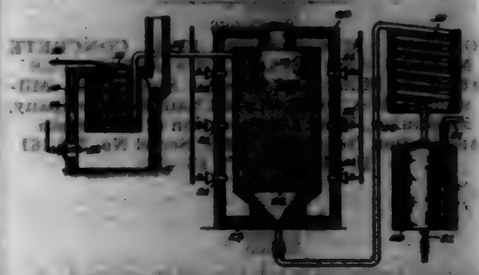
1. A spring device to connect the wheel carrying axle and frame of a vehicle comprising a pair of complementary interlocking hub members having a bore extending therethrough in the assembled position of the hub members, said hub members being relatively rotatable about the axle, resilient means arranged to resist relative rotation of the hub members, and an arm connecting each hub member to the vehicle frame.

2,022,992
SECURING TRIM PANELS
Elon C. Place, Detroit, Mich., assignor of one-half to George E. Gageler, Detroit, Mich.
Application July 17, 1929, Serial No. 378,964
1 Claim. (Cl. 45—138)



The method of constructing a trim panel and preparing it for the reception of headed fasteners from the uncovered side thereof, which consists in applying the upholstery covering to the foundation material, cutting the panel blank from the covered foundation material and punching openings to receive the fasteners in at least one of the margins of said blank, folding said margin back against the rear face of the panel, and attaching said margin to said rear face by means applied on a line between said openings and the line of fold so as to provide an unattached portion of the folded-back margin permitting the free insertion of the fasteners while said portion is held in its folded-back position by said means.

2,028,984
CHISEL
Hugh E. Pollard, Chicago, Ill., assignor to Arrow Tools, Inc., Chicago, Ill., a corporation of Illinois
Application October 26, 1934, Serial No. 750,200
2 Claims. (Cl. 29—95)



1. A tool of the class described having a substantially cylindrical portion at one end and a cutting edge at the other end, four shoulders between said portion and the cutting edge of the tool adapted for impact with a mounting sleeve or the like, said shoulders being within the extended cylinder of said cylindrical portion, and said cutting edge being of a width substantially equal to the diameter of said cylindrical portion and lying in a longitudinal plane passing through diagonal corners of the tool formed by the said shoulders.

2,028,994
NOTEBOOK BINDING
Hays Rehm, Salem, Oreg., assignor to Western Paper Converting Company, Salem, Oreg.
Application January 28, 1935, Serial No. 2,819
1 Claim. (Cl. 281—25)

In a notebook having a filler and covers provided with a series of spaced holes adjacent the back edge of the notebook and registering when the book is assembled; a wire strand lying against the inner face of one of the covers and having its terminal ends bent about the edges of the cover to clasp against the back face thereof to positively hold the strand in place on the inner face of the cover to be out of the way and out of engagement with a table on which the notebook may be placed; and intermediate portions of the strand bent upon themselves at points registering with said openings, said intermediate bent portions projected through the openings in the cover and substantially circularly turned to form closed eyes upon which the other cover and the leaves of the filler are assembled to be freely movable completely about said eyes within the limits defined by the cover to which the eyes are attached thereby to complete the assembly of the notebook.

2,028,996
DESULPHURIZING PETROLEUM OILS
Francis M. Rogers, Whiting, Ind., assignor to Standard Oil Company, Whiting, Ind., a corporation of Indiana
Application December 15, 1933, Serial No. 702,570
Renewed February 22, 1934
1 Claim. (Cl. 196—27)

The process of refining gasoline containing as impurities sulphur compounds difficult to remove in the ordinary manner which comprises converting said difficultly removable sulphur compounds into easily removable sulphur compounds by contacting said gasoline in the vapor form with solid adsorbent catalytic material of the clay type at a temperature of from 600° to 750° F. at a flow rate of 15 to 30 barrels of oil per hour per ton of catalyst, cooling and condensing the treated vapors and treating them to remove said easily removable sulphur compounds.

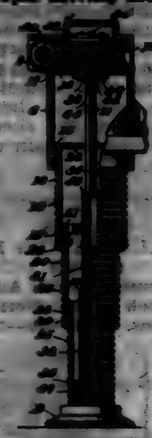
2,028,995
MANUFACTURE OF CARTRIDGE CASE CUPS
Emile Sautier, Bischheim, France, assignor to Manufacture De Machines Du Haut-Rhin S. A. Mulhouse-Bourtzwiller, (Haut-Rhin, France), a corporation of France
Application August 24, 1934, Serial No. 741,272
In Switzerland September 16, 1933
1 Claim. (Cl. 29—1.3)

Method of making cartridge cases and the like which comprises shearing a blank laterally from a round bar, pressing said blank in a die without being heated to form a solid block presenting an upper cylindrical collar and a lower rounded shoulder, this blank being then pressed in a second operating stage and also without being heated into the form of a cup having a more elongated form than the pressed block and the same upper diameter as the pressed block.

2,028,997
BUILDING BLOCK
Albert Joseph Schmitz, Milwaukee, Wis.
Application June 20, 1933, Serial No. 676,451
2 Claims. (Cl. 72—41)

1. A wall comprising block units, placed end to end in courses, each unit formed with openings

extending through the unit, one of said openings having an open side, and each unit formed at opposite ends with a projecting offset, the offset at one end projecting from the upper portion of the block and the offset at the opposite end projecting from the lower portion of the block, the offset at one end overlapping the offset of an adjoining block, when the blocks are laid in courses, the offset at each end having a thickness equal substantially to one half the depth of the block



and a width equal substantially to the width of the block, the offset at one end of a block closing the open side of the through-extending in an adjoining block; additional blocks at the ends of the courses where window or door jambs occur, formed each with substantially L-shaped recesses forming an opening through said end blocks, and substantially rectangular shaped header blocks fitted between the door or window jamb and adjoining block formed with the L-shaped recesses.

2,028,998
METHOD OF SWEETENING HYDROCARBON OILS
Walter A. Schulze and Lovell V. Chaney, Bartlesville, Okla., assignors to Phillips Petroleum Company, Bartlesville, Okla., a corporation of Delaware
No Drawing. Application December 2, 1933, Serial No. 700,700
10 Claims. (Cl. 196—30)

1. An improved method for sweetening a mercaptan-bearing petroleum hydrocarbon fluid, comprising treating said fluid with a hypochlorite solution in the absence of oxygen carriers, whereby a part of the mercaptans are converted to disulfides and the rest to alkyl sulfur chlorides, said alkyl sulfur chlorides remaining in the hydrocarbon fluid, separating said fluid from the hydrochlorite solution, treating the fluid with a strong reducing solution of a water soluble alkaline salt selected from the group consisting of the alkali and alkaline earth sulfites, cyanides and stannites, whereby the alkyl sulfur chlorides are reduced to disulfides, and separating the improved sweetened hydrocarbon fluid from the reducing solution.

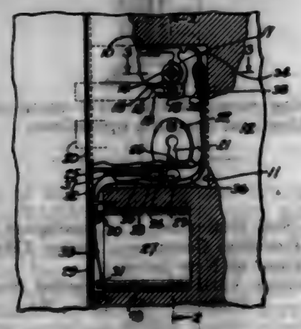
2,028,999
JACKING APPARATUS FOR MOTOR VEHICLES
Frederick Soles, Albany, N. Y.
Application November 13, 1934, Serial No. 752,939
7 Claims. (Cl. 254—95)

1. A jacking apparatus of the character described comprising a jack mounted on an axle, said jack having a series of telescopic screw members therein, a geared driving mechanism seated in said jack, telescopic drive means connected to said geared mechanism and said telescopic screw members and driving means positioned in said geared mechanism and connected with said telescopic driving means for rendering

said driving means inoperative upon completion of the lifting and lowering operations.

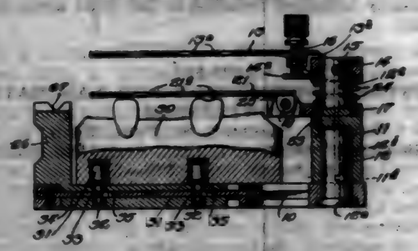
2,029,000
ERASER
Edwin A. Bell, Belleville, N. J., assignor to Joseph Dixon Crucible Company, Jersey City, N. J., a corporation of New Jersey
Application April 11, 1935, Serial No. 15,737
2 Claims. (Cl. 120—36)

1. In a brush attachment for erasers, wherein a disk eraser has a central hole, wherein a pair of yoke arms are pivotally connected to the eraser at the central hole with the arms extending radially beyond the periphery of the eraser and wherein a brush is mounted between the outer ends of the yoke arms, a cup for the inner end of the brush pivotally mounted between the outer ends of the yoke arms whereby the brush may be angularly adjusted relative to the yoke arms and eraser.



2,029,001
BOTTOM CONSTRUCTION FOR LAMINATED CONTAINERS
David C. Shepard, St. Paul, Minn.
Application February 27, 1933, Serial No. 658,687
11 Claims. (Cl. 229—5.5)

3. In a circular container having a wall structure formed of a number of layers of paper wrapped about one another and glued together,



a bottom therefor constructed of square sheets of paper glued one upon the other and disposed in progressive angular relation with respect to each other to uniformly distribute the corners about the periphery of the bottom, said sheets being formed to provide a body portion adapted to extend across the lower end of the wall structure and a flange connected therewith and embodying the corners of the sheets, said flange being disposed between certain of the layers of the wall structure.

2,029,002
KEYHOLE ILLUMINATING MEANS FOR DOORS
David E. Smiley, Santa Ana, Calif.
Application March 6, 1933, Serial No. 659,390
2 Claims. (Cl. 240—2.13)

1. A door having a lock provided with a keyhole, a latch bolt, and a manually operable actuator for the latch bolt; an electric lamp supported within the door in a position for light rays from the lamp to be visible through the keyhole when the lamp is lighted, while rendering the keyhole free for the insertion of a key; and a circuit including a battery enclosed within the door, conductors insulated from each other and electrically connected to the battery and lamp, said conductors having spaced terminals, and means operable by said actuator from exteriorly of the door to complete the circuit through said terminals and thereby supply current from the battery to the lamp.

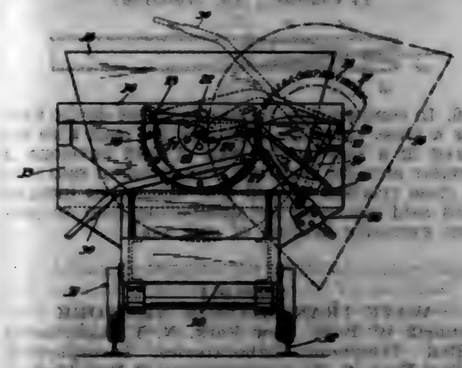
2,029,003
ART OF DENTISTRY
Harry Spiro, Chicago, Ill.
Application June 15, 1933, Serial No. 675,978
6 Claims. (Cl. 32—27)

5. In an articulator adapted to support a centric bite cast by means of a bite cast tray; a base adapted to support a master cast; a post on said base; a registry device on said base spaced from said post; and means on said post for supporting a functional bite cast with a portion of said cast in cooperation with said registry device.

2,029,004
METHOD OF AND APPARATUS FOR MOLDING CONCRETE
Alfredo Vercl, Fallanca, Italy
Application January 2, 1934, Serial No. 704,881
In Italy January 3, 1933
8 Claims. (Cl. 25—118)

1. Apparatus for molding in successive section lengths long floating concrete structure, comprising a trough mold section adapted to be readily disengaged in a downward direction from the structure molded therein, a plurality of flotation chambers extending along the outside of each side member of the trough section, means for flooding and emptying said chambers individually, and working closures for the ends of the trough, and provisional closures capable of sealing the end of the trough near the working closure to enable the latter to be removed and of being slid longitudinally of the trough before concrete is poured in the latter.

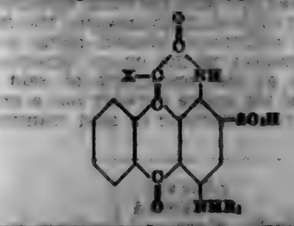
4. A process for molding in water floating monolithic concrete structures, comprising assembling and floating in water a plurality of mold sections and flotation chambers to form a trough in the line of the structure to be formed and including inner and outer mold sections considered longitudinally of the structure, sealing the free ends of the trough by means of working closures, removing water from the trough, mounting in the trough framing for molding the walls and partitions of a length of the structure, casting concrete in the trough, allowing the concrete to set, disconnecting inner mold sections from outer mold sections and removing the former downwardly from the structure, substituting provisional for the working closures at the ends of the trough, attaching the removed mold sections to the outer ends of the outer section to form an extension of the trough in the direction of construction, and repeating the procedure to add further lengths to the structure.



2,029,005
KNITTING NEEDLE STITCH HOLDER
Harriett A. Webber, Coronado, Calif.
Application March 27, 1935, Serial No. 13,154
7 Claims. (Cl. 66—117)

7. In a knitting needle stitch holder, a resilient and elastic pad consisting of two resilient and elastic flat pads placed side by side, and means for holding said pads in engaged relation with each other, said pads provided with holes therein of very small size relative to the needle.

2,029,006
LATCHING AND RIGHTING MECHANISM FOR DUMP CARS
Fred E. Wedlake and Hannibal Hart, Eveleth, Minn.
Application March 6, 1933, Serial No. 659,594
16 Claims. (Cl. 105—244)

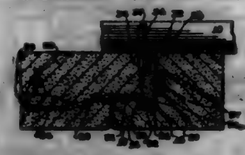


6. A dump car including a frame and a car body rotatable on said frame in either direction from an upright to a dump position, a projection extending from each end of the body respectively and having lateral movement in a horizontal plane upon rotation of the body, a latch associated with each projection, one latch preventing movement of its projection in one direction only and the other latch preventing movement of its projection in the opposite direction, and means associated with each latch operable to release the

latch to permit lateral movement of the released projection in a certain direction, said releasing means maintaining a position in advance of said projection, whereby said releasing means has utility in returning the car body from a dump to an upright position.

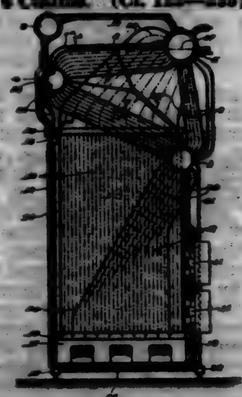
2,029,007
ANTHRAPYRIDONE SULFONIC ACIDS AND THE PROCESS OF MAKING THEM
Klaus Weinand, Leverkusen-I. G. Werk, Germany, assignor to General Aniline Works, Inc., New York, N. Y., a corporation of Delaware
No Drawing. Application November 11, 1932, Serial No. 642,152. In Germany November 14, 1931
2 Claims. (Cl. 260—43)

7. The compounds of the type



in which X stands for —CO—CH₃ or —COO—alkyl, and R_1 stands for an alkyl-, phenyl-, chlorophenyl-, acetamino-phenyl-, benzyl-, hydronaphthyl-, or hydrophenyl group, said compounds forming red to blue crystals, soluble in water with the same colorations, in strong sulphuric acid with a yellow to red coloration, dyeing wool from an acid bath clear red to violet shades of good fastness properties.

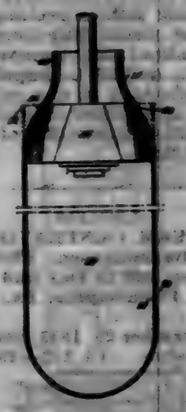
2,029,008
MEANS FOR AND METHOD OF MARKING
Ralph A. Wilson, Chicago, Ill., assignor of one-half to George A. Charlton
No Drawing. Application February 15, 1933, Serial No. 656,841
4 Claims. (Cl. 134—37)



3. An adhesive comprising approximately 55% volatile solvent, 30% rubber cement, 5% latex, and 5% of a heavy drying-retardant mineral oil.

2,029,009
BUILDING CONSTRUCTION
Harold E. Ansing, Evanston, Ill., assignor to United States Gypsum Company, Chicago, Ill., a corporation of Illinois
Application April 13, 1934, Serial No. 721,861
9 Claims. (Cl. 72—68)

7. In a building slab, a rectangular cementitious slab having outstanding tongues formed on opposite longitudinal and transverse edges and on opposed faces, and an L-shaped metallic runner partially embedded in one only of said longitudinal edges, said runner extending at the surface of the angular intersection of a longitudinal tongue and said slab.



2,029,010
STEAM GENERATOR
John Phillips Badenhausen, Philadelphia, Pa., assignor of one-half to Day and Zimmermann, Incorporated, Philadelphia, Pa., a corporation of Maryland
Application September 22, 1933, Serial No. 691,284
6 Claims. (Cl. 122—235)

1. In a steam generator, the combination with a water tube boiler section, including a plurality of drums and a plurality of banks of water tubes connecting said drums in series to provide for a continuous circulating flow of water in a closed or endless path through said series of drums and banks of tubes, one of said drums being an upper steam-and-water drum and a second of said drums being a water drum continually filled with water during the operation of the boiler, of a combustion chamber, including a front wall, a bank of vertical tubes lining the inner surface of said front wall and exposed to the radiant heat of the combustion of fuel in said chamber, means to conduct water from a relatively cool point in the circulatory system of said boiler section to the lower ends of said bank of vertical tubes lining said front wall, means within said water drum providing a chamber closed to the interior of said drum, means to conduct steam and water from the upper ends of said bank of vertical tubes into said chamber, means to conduct the steam and water delivered to said chamber and to deliver the same into said steam-and-water drum in substantially the same direction that the cir-

culating water of said boiler section enters said steam-and-water drum whereby the steam and water delivered from said vertical bank of tubes and passing through said water drum does not disturb the free movement of the water of said boiler section through said water drum.

2,029,011
SEAMLESS TANK
Blasius Bart, East Orange, N. J.
Application February 2, 1931, Serial No. 512,902
5 Claims. (Cl. 204—6)

1. In the art of forming hollow articles, the method which consists in housing in the open end of a cylindrical shell of electrolytically deposited metal a collapsible chuck, and a preformed metallic collar having an annular groove at one end and a bendable lip on the outside of the collar and lapping the groove and spinning the open end of the shell into the groove and causing the portion at the open end to conform to the outlines of the chuck and incidentally bending the lip into position to secure the open end of the shell in the groove, removing the chuck, positioning a blanking off member on the preformed member and subjecting the shell and exposed part of the preformed member to the action of an electrolytic tank to form thereon a layer of metal extending across the joint between the preformed member and the shell thereby to form a smooth exterior to the article as a whole and to give rigidity to the article as a whole.

2,029,012
PHONOGRAPH RECORD AND METHOD OF MAKING THE SAME
Nat T. Beans, Palisade, N. J., and George H. Walden, Jr., and Louis P. Hammett, New York, N. Y.
No Drawing. Application November 20, 1929, Serial No. 408,668
15 Claims. (Cl. 18—48.4)

3. The method of making a moldable material comprising mixing together resorcinol, alcohol, and paranitroaniline; heating said mixture to 70° C. until solids are dissolved; adding 40% formaldehyde, and maintaining the temperature at substantially 70° C. until the precipitate formed is dissolved; continuing heating at 70° C. until the fluid reaches the consistency of thick molasses, adding alcohol; cooling the solution to 30° C. and adding Turkey red oil.

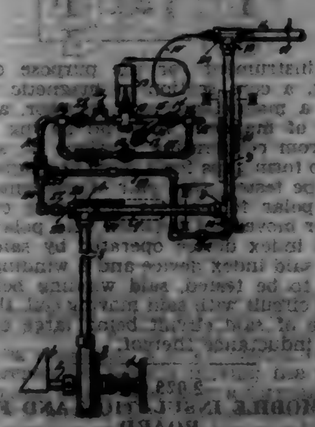
2,029,013
CATHODE FOR DISCHARGE DEVICES
Phillip W. Blackburn, East Orange, N. J., assignor to Westinghouse Lamp Company, a corporation of Pennsylvania
Application March 23, 1932, Serial No. 600,273
14 Claims. (Cl. 176—126)

6. In combination, a glow discharge device having a glass envelope, a conductive lead wire secured in a seal in the wall of said envelope, a tubular metallic electrode supported on said wire in close relation to said seal and spaced integral with said electrode for dissipating heat to prevent excessive heating of said seal.

2,029,014
WAVE TRANSMISSION NETWORK
Hendrik W. Bode, New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application January 31, 1934, Serial No. 708,078
20 Claims. (Cl. 178—44)

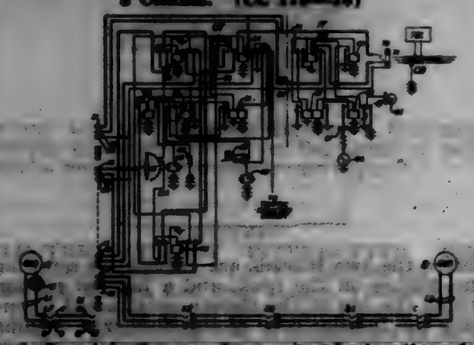
1. In a wave transmission network of the ladder type having impedance branches in series with the line and alternately disposed impedance branches in shunt therewith, the attenuation of said filter in its transmission band varying with frequency due to the dissipation inherent in the reactance elements comprising said network, two impedance branches, a third impedance branch interposed therebetween, and internal means for equalizing the transmission characteristic of said network in its transmission band, said means comprising an additional dissipative impedance branch inserted in said network effectively at the mid-point of said third branch, the impedance of said additional branch being proportioned with respect to the image impedance of said network at the mid-point of said third branch so that the entire network has a uniform transmission characteristic in said transmission band.

2,029,015
ANTENNA
Otto Böhm, Berlin, Germany, assignor to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, a corporation of Germany
Application August 9, 1930, Serial No. 474,115
In Germany August 27, 1929
3 Claims. (Cl. 250—33)



1. An antenna array comprising a plurality of linear radiators arranged around a circle and disposed at equal distances from a central nonradiating point, certain of said radiators being spaced apart from each other a distance equal to a whole multiple of one-half the length of the communication wave, and means for exciting said radiators cophasally.

2,029,016
WINDOW FASTENER
Oscar F. Calkins, Bayside, N. Y.
Application July 24, 1933, Serial No. 681,347
7 Claims. (Cl. 292—32)



1. A lock mechanism for windows comprising a lock control element adapted to be mounted in each side of a window sash and having upper and lower surfaces inclined in opposite directions from each other, a lock element associated with each surface and wedged thereby against a window frame to prevent movement of the sash in one direction, and means to move said locking element out of wedging engagement with said frame and to also adjust the sash in said direction.

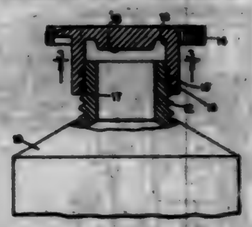
2,029,017
PASTEURIZATION
Robert K. Cooney, Yankton, S. Dak., assignor of one-half to Frank J. Keesling, Yankton, S. Dak.
Application March 12, 1934, Serial No. 714,513
16 Claims. (Cl. 241—15)

2. Pasteurizing apparatus for liquids comprising an outer duct having a section to provide a uniform cross-section chamber therealong as a heating zone, an inner duct centered as to the outer duct in said zone, heating fluid supply means to the inner duct, there being a plurality of longitudinally extending series of inclined openings from the inner duct for passing the heating fluid as jets into the liquid, and flow promotion means for causing the liquid to travel as a uniform cross-section stream filling the heating zone and moving through the zone while being heated by the heating fluid from said jets, said travel of the stream being in the direction of the inclination of said jets, liquid inport in and from said heating zone.

2,029,018
TELEPHONE SYSTEM
John R. Cruickshank, Hollis, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application November 2, 1931, Serial No. 572,333
8 Claims. (Cl. 179—16)

1. In a telephone system, a trunk circuit, a plurality of branches incoming to said trunk circuit, trunk conductors outgoing from said trunk circuit, means for seizing said trunk circuit over any one of said plurality of incoming branches, impulse receiving means in said trunk circuit, switching means for connecting said incoming branches to said outgoing conductors, and means for rendering said switching means operatively effective after a required plurality of series of impulses have been received, the required plurality of series of impulses varying in accordance with the particular branch over which said trunk circuit is seized.

2,029,019
ELECTRIC OUTLET MOLDING
Albert P. Dorsey, Poughkeepsie, N. Y.
Application February 19, 1934, Serial No. 711,531
1 Claim. (Cl. 247—3)



An electrical outlet molding comprising a sheet metal casing including a rear wall and upper and lower vertically spaced walls extending therefrom and having angularly disposed flanges on their free edges, a front closure member for the casing formed of insulating material and T-shape in cross section, the arms of the member having grooves in their longitudinal edges to receive the flanges of the casing, securing members passable through the member and adapted for engagement in the rear wall of the casing to hold the flanges in adjustable engagement in said grooves, feeding strips secured to the arms of the member, resilient contacts secured to the strips, said member having openings therein for the passage of plug prongs adapted to engage the contacts.

2,029,020
CONTAINER CLOSURE
William Erhard, North Bergen, N. J., assignor to Globe Collapsible Tube Corporation, Brooklyn, N. Y., a corporation of New York
Application March 1, 1933, Serial No. 659,122
3 Claims. (Cl. 222—89)

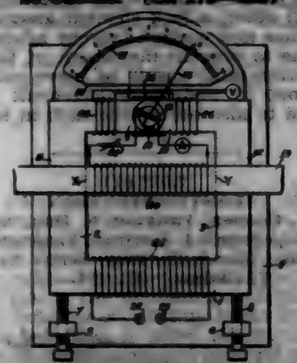
1. In a collapsible container of the screw cap type, a neck around the discharge opening having a screw thread on the exterior and an

unthreaded guiding portion above the thread, a cap having a thread to cooperate with the thread and an unthreaded guiding portion to cooperate with the guiding portion on the neck, said guiding portions engaging telescopically and freely to align the closure and the neck axially

before the two threads are engaged in screwing the closure on the neck, and a tapered portion within the top of the closure constructed to engage the interior edge of the discharge opening and seal said opening when the screw threads are fully engaged.

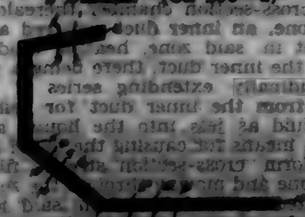
1,989,031
CREAM COOLER
Edward Franklin and Thorsten Nelson, Fresno, Minn.
Application March 16, 1933, Serial No. 13,153
2 Claims. (Cl. 21—4)

1. A cream cooling and aerating device comprising a bowl provided with an upstanding neck, a funnel provided with a depending tube depending into the neck, a closure in the neck for the lower end of the tube, said tube being provided with outlet openings, inlet and outlet means for cooling agents on said bowl, and supporting means for the said bowl, said supporting means comprising a pan having a central opening and provided with upstanding studs for spacing the said bowl from the pan.



1,989,032
EXTENSION HEAD FOR LIFTING JACKS
Frank A. Graham, York, Pa., assignor to American Chain Company, Inc., Bridgeport, Conn., a corporation of New York
Application November 16, 1934, Serial No. 753,378
9 Claims. (Cl. 254—1)

4. A head for a lifting jack comprising, a bearing member formed with a vertical bore, and a rest plate formed with a stem adapted to fit slidably within said bore, said stem being formed with a pair of diametrically opposed keys and said bore being formed with two pairs of diametrically opposed key slots adapted to receive

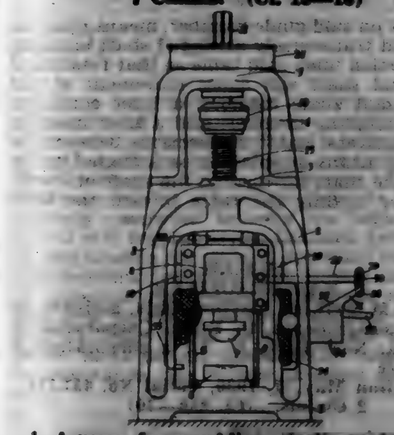


said keys, one pair of key slots being materially shorter than the other.

1,989,033
INSTRUMENT FOR MEASURING CORE LOSS IN MAGNETIC MATERIALS
Paul L. Hoover, Middlebush, N. J., assignor to Endowment Foundation, New Brunswick, N. J., a corporation of New Jersey
Application June 14, 1933, Serial No. 675,622
20 Claims. (Cl. 175—183)

1. An instrument for the purpose described including, a core section of magnetic material carrying a magnetizing coil therefor, a pair of elements of magnetic material having portions spaced from cooperating portions on said core section to form gaps for a piece of magnetic material to be tested, said pair of elements having opposed polar formations, a moving coil positioned for movement between said polar formations, an index device operated by said coil, a scale for said index device and a winding for the material to be tested, said winding being connected in circuit with said moving coil, the ohmic resistance of said circuit being large compared with the inductance thereof.

1,989,034
AUTOMOBILE INSULATION AND FLOOR BOARD
Clarence I. Justheim, Salt Lake City, Utah
Application September 12, 1932, Serial No. 633,240
2 Claims. (Cl. 296—1)



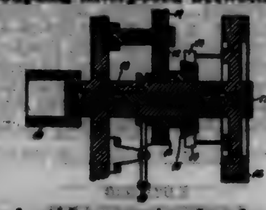
1. In a floor board for automobiles, the combination of two sheets of metal having one flanged

to secure them together, but spaced apart over the entire flat or curved surface thereof; sheets of very thin metallic reflecting material carried between the two sheets with one side of the reflecting material formed with concave facets and the other side with convex facets to diffuse the heat and cold with sealed air spaces between the sheets and the metallic reflecting material.

1,989,035
METHOD OF FREEZING ICE CREAM AND FORMULA THEREFOR
Clarence I. Justheim, Salt Lake City, Utah
No Drawing. Application March 1, 1934, Serial No. 713,325
5 Claims. (Cl. 99—11)

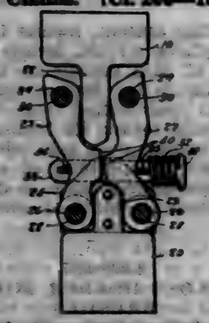
1. A method of making a frozen confection comprising combining powdered gelatine, powdered egg, powdered skim milk, cream, sugar, flavoring and mixing the entire formula by quick stirring motions with powdered solid carbon dioxide.

1,989,036
PRESS
Rudolph John Kaula, Edgbaston, Birmingham, England, assignor to The General Electric Company Limited, London, England
Application July 31, 1934, Serial No. 737,735
In Great Britain August 1, 1933
7 Claims. (Cl. 18—16)



1. A press for moulding plastic material comprising cooperating mould portions, one of which is movable relative to the other into position for the forming operation, a screw having relatively coarse threads for rapidly moving the movable mould portion before and after a forming operation, a screw having finer threads than the first screw for exerting pressure on the movable mould portion during the forming operation, an electric motor for driving both the coarse and fine screws and circuits including control means for maintaining the motor in circuit during the forming operation.

1,989,037
STRIP RECORD SUPPORTING AND DRIVING APPARATUS
Edward W. Kellogg, Moorestown, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application July 7, 1932, Serial No. 620,020
9 Claims. (Cl. 274—13.2)



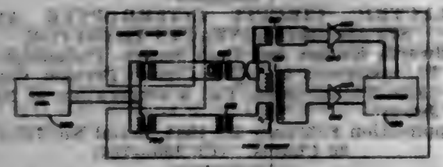
1. The combination of a film-supporting driving means for moving said film, inertia means ar-

ranged to move with said support, and a variable-friction coupling interposed between said driving

means and said support, whereby a frictional driving torque dependent on the speed of said inertia means is imparted to said support.

1,989,038
ELECTRIC CIRCUIT INTERRUPTER AND SEPARABLE CONTACTS THEREFOR
Edwards Knauss and Otto Jensen, Philadelphia, Pa., assignors to I-T-E Circuit Breaker Company, Philadelphia, Pa., a corporation of New Jersey
Application February 15, 1934, Serial No. 711,315
20 Claims. (Cl. 200—166)

1. In an electric switch relatively movable contact structures one of which comprises a pair of bridging elements, mounting means providing independent limited freedom of movement for each of said elements, a conducting member disposed between said bridging elements and provided with contact surfaces independent of said mounting means arranged to be engaged by the corresponding bridging elements, another of said movable contact structures positioned between said bridging elements in the closed circuit position, and a spring interconnecting said elements intermediate the ends thereof and in spaced relation from said conducting member and said other of said movable contact structures when in said circuit closing position for biasing said bridging elements into engagement with said other of said movable contact structures and into wiping and rolling engagement with said conducting member.



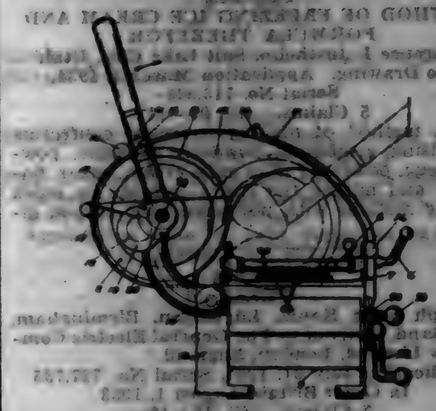
1,989,039
IMPRINTING MEANS FOR IDENTIFYING CHARTS OF RECORDING INSTRUMENTS
Herman Koester, Waterbury, Conn., assignor to The Bristol Company, Waterbury, Conn., a corporation of Connecticut
Application June 15, 1934, Serial No. 730,760
2 Claims. (Cl. 234—1)

1. Stamping means for imprinting upon the removable charts of graphic instruments indicia

identifying the same, said means being attachable to the instrument and comprising a reciprocable element, a platen and inking means lying substantially in a common plane, and means to urge the reciprocable element toward the said plane, whereby indicia may be impressed upon the chart when the latter is presented between the reciprocable element and platen and the said element inked when juxtaposed to the inking means.

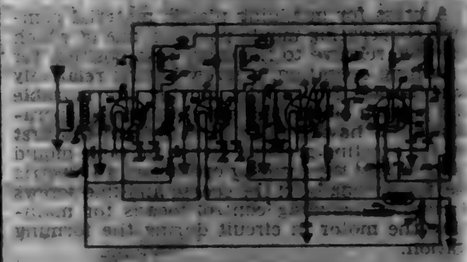
2,029,630
TESTING SYSTEM
Frank K. Low, Brooklyn, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application August 25, 1934, Serial No. 741,263
15 Claims. (Cl. 179—175.2)

1. In a testing system, means for generating signals, a telephone circuit, means for transmitting a series of said signals to said telephone circuit, and means for testing the accuracy of said signals as transmitted over said telephone circuit comprising means for transmitting duplicate series of signals over said telephone circuit and over means independent of said telephone circuit, and means responsive to differences between said signals to sound an alarm.



2,029,631
DENTAL FLOSS HOLDER FOR TOOTHBRUSHES
Jacob Novick, Newark, N. J.
Application April 15, 1934, Serial No. 722,243
2 Claims. (Cl. 132—91)

1. In a device of the kind described, a handle member having a projecting prismatic end having a pair of opposite side faces at angularly disposed planes, a pair of floss holding arms pivoted to the forward ends of said side faces to lie flat against the faces in housed position, said arms having means at their free ends to attach a strand of dental floss said arms being movable on their pivots from inoperative positions parallel to the sides to which they are pivoted to operative positions in a plane at right angles to the axis of the prism whereby a strand of dental floss attached to the free ends of the arms in their inoperative position will be stretched as the arms are moved to operative position.

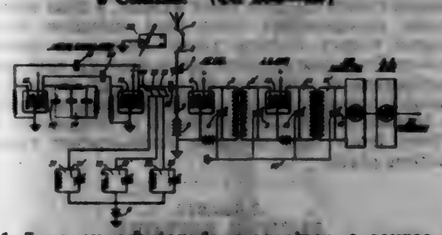


2,029,632
MACHINE FOR SLICING MEATS
Karl Eric Olsson, Stockholm, Sweden
Application September 13, 1933, Serial No. 689,197
10 Claims. (Cl. 146—102)

1. In a slicing machine, a frame, a shaft journaled in the frame, an arm carried at one end of the shaft and adapted for reciprocal movement, a rotary knife journaled on the arm, a table in the frame movable perpendicularly to the path of the knife, a coupling connected to said shaft and adapted to be actuated as the knife is swung from slicing position and to be released as the arm is swung toward slicing position, a second shaft journaled in the frame and extending transversely of the first shaft, a guide member and a carrier for the table mounted for

movement on said guide member, means upon the second and transversely arranged shaft engaging with a portion upon said table so that rotation of said second shaft will cause movement of said table on said guide member, a lever connected with the coupling member, and a lever mounted on the transverse shaft, connections between the levers and means adapted to be actuated by the lever on the shaft for turning the shaft in the direction for feeding the table toward the knife path.

2,029,634
RADIORECEIVER
Laurence M. Perkins, Dayton, Ohio, assignor, by mesne assignments, to Radio Corporation of America, New York, N. Y., a corporation of Delaware
Application May 11, 1933, Serial No. 467,728
2 Claims. (Cl. 250—20)

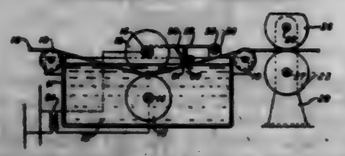


1. In combination with a radio receiver of the type including a high frequency amplifier, a detector including a tube provided with a screen grid electrode, and an automatic gain control connection between the plate circuit of the detector and a gain control electrode of said amplifier, a source of positive potential for said screen grid, and means for adjusting the screen grid potential to regulate the volume output of said receiver.

2,029,634
PRESSED FIBER BOARD AND METHOD OF MANUFACTURE
Robert T. Pollock, New York, N. Y., assignor to Respass, Inc., Cranston, R. I., a corporation of Rhode Island
No Drawing. Application July 21, 1933, Serial No. 682,970
4 Claims. (Cl. 92—3)

1. The process of producing hard pressed board, which comprises reducing uncooked wood and vegetable matter to fibrous states, mixing and sheeting the uncooked wood and the vegetable fibers with an excess of wood fibers over the vegetable fibers, drying and pressing to hard board.

2,029,635
MULTIRANGE SUPERHETERODYNE RECEIVER
Walter van B. Roberts, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application October 21, 1933, Serial No. 694,545
8 Claims. (Cl. 250—20)



1. In a superheterodyne receiver, a source of signal currents comprising the series connection of a capacity type antenna and a high resistance, a local oscillator including a tunable circuit, a first detector coupled to said source of signals, a condenser having a low impedance to the signal currents connected between the high potential end of said resistance and the high potential end of said tunable circuit, said oscillator tunable circuit including an adjustable tuning means, and an intermediate frequency network coupled to said first detector, said intermediate frequency network being tuned to a frequency of a value so low as to permit substantially maximum signal resonance rise in said oscillator tunable circuit.

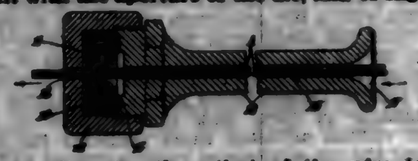
2,029,636
TOY GUN FOR PROJECTING AEROPLANES
William J. Reitner, Brooklyn, N. Y.
Application October 2, 1934, Serial No. 746,488
4 Claims. (Cl. 124—12)

1. A device of the class described, comprising a gun stock pivotally connected with a gun barrel, a plunger in the barrel, a spring urging said plunger forwards, a trigger on the barrel adapted to hold the plunger in a rear position in which the gun is loaded, an element pivotally mounted on the gun stock and associated with the plunger and adapted to draw the plunger rearwards when the gun is bent at the junction of the gun stock and barrel, said barrel being formed with a longitudinal top opening, a pin on the plunger engaging in said opening and coactable with a pin projecting from a toy airplane to propel the airplane as the plunger moves forward, and a pair of flanges on the sides of said opening forming tracks for guiding said airplane, said pair of flanges being pivotally mounted intermediate of their ends and adapted to assume various adjusted tilted positions for projecting the toy airplane at various desired angles.

2,029,637
PROCESSING OF METAL PARTS
De Hart G. Serantoni, Maplewood, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application March 3, 1933, Serial No. 656,443
4 Claims. (Cl. 148—10)

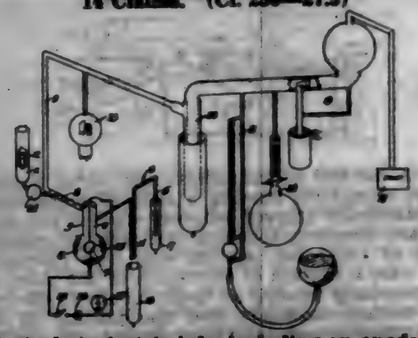
1. A method of manufacturing metal articles which comprises passing a strip of metal stock longitudinally thereof between opposed electrical contact members touching the strip at opposite sides of the same portion only and extending over only a portion of the width of the strip, simultaneously passing an electric current through the contact members and the portion of the strip therebetween only whereby only the portion of the strip between the contact members is heated, and simultaneously maintaining the contact faces of the members and the portion of the strip therebetween immersed in a quenching liquid whereby the heating effect of the electric current on the strip is confined to substantially the portion of the strip between the contact members and whereby the heated portion of the strip is immediately quenched.

2,029,638
ELECTRIC CABLE
Thomas R. Scott and Thomas K. D. Menzies, Aldwych, London, England, assignors to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application April 6, 1932, Serial No. 603,471
In Great Britain June 18, 1931
5 Claims. (Cl. 173—266)



1. An electric power cable having a fluid impregnated dielectric and a device having a negative temperature coefficient of cubical expansion arranged within the cable to compensate for changes in volume of said fluid dielectric due to change of temperature.

2,029,639
PROCESS AND APPARATUS FOR WIRE DRAWING
Aaron Simons, New York, N. Y.
Application November 6, 1934, Serial No. 751,676
4 Claims. (Cl. 204—29)



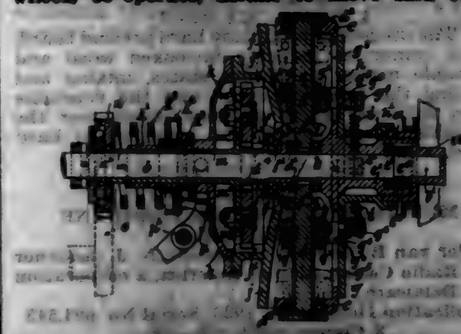
1. A wire drawing apparatus including a pair of detachable casing sections adapted to receive a wire drawing die therebetween, one of said sec-

tions having a long cylindrical passage in alignment with the aperture of the die, and of slightly

greater diameter than that of the wire to be drawn.

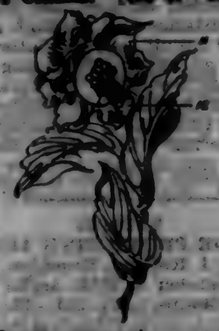
2,029,640
PHOTO-ELECTRIC TUBE
George R. Stilwell, Plainfield, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application April 18, 1929, Serial No. 356,695
14 Claims. (Cl. 250—27.5)

1. A photoelectric tube including an anode and a light sensitive electrode having a base metallic layer, a thin layer of dielectric thereon, a thin film of light sensitive material on said dielectric, and another thin layer of dielectric material upon said thin film of light sensitive material.



2,029,641
LOADED TRANSMISSION LINE
Maurice E. Strieby, Maplewood, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application December 31, 1931, Serial No. 584,945
8 Claims. (Cl. 178—45)

1. In a signaling system, a transmission line comprising a central conductor and a return conductor concentric therewith, said line being divided by joints into a plurality of sections, members of magnetic material encircling said central conductor at said joints for lump loading said line, adjacent ends of said sections of outer conductor being spaced apart by a distance comparable with the diameters of said conductors so that said members may readily be inserted, and means at said joints for electrically connecting said sections.



2,029,642
VARIABLE SPEED MECHANISM
William Turner, Longsight, Manchester, England
Application February 26, 1933, Serial No. 658,228
In Great Britain February 23, 1934
6 Claims. (Cl. 74—206)

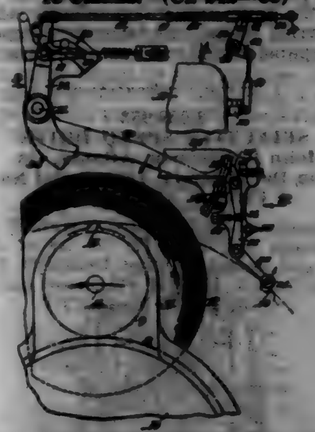
1. Variable speed mechanism for motor vehicles or other purposes comprising a stationary shaft, a rotary mass, means to drive said rotary mass, radial shafts carried by said rotary mass, gear to actuate said radial shafts, friction wheels on said radial shafts, means to guide said friction wheels to permit of inward and outward movement of same, an axially movable cone-shaped rotary friction plate with which said friction wheels co-operate, means to move said cone-

shaped rotary friction plate axially, a gear mechanism co-operating with said movable cone-shaped rotary friction plate, means to convey motion from the friction plate through said gear mechanism to a part to be driven, all whereby a variable speed from "neutral" to a maximum can be transmitted to and conveyed to the part to be driven from said movable cone-shaped rotary friction plate.

2,029,643
FLOWER SUPPORT
Rand E. Wendell, Wilmette, and Frank Hlavacek, Jr., Evanston, Ill.; said Wendell assignor to said Hlavacek
Application November 13, 1933, Serial No. 642,769
Renewed June 25, 1935
5 Claims. (Cl. 47—38)

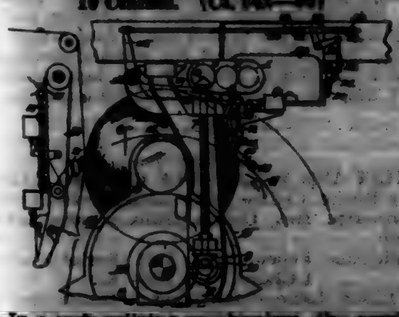
1. In a flower support, a petal-reinforcing member having a portion deflected from its face, the walls of said deflected portion being adapted to engage the stem of a flower, and means for increasing the normally effective biting quality of said deflected portion.

2,029,644
PROCESS OF MAKING CABLES
Anton Westhäuser, Leverkusen-Lowenich, Germany
Application October 12, 1933, Serial No. 693,153
In Great Britain February 25, 1933
6 Claims. (Cl. 113—23)



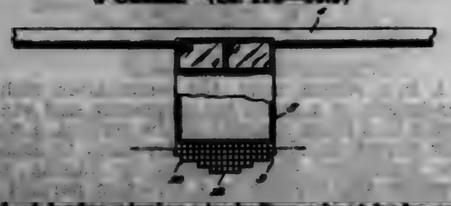
1. The process of welding a certain part of aluminium mantles for heavy and light current cables while keeping another part cool consisting in bending a flat sheet of aluminium or its alloys into a trough-like shape, introducing the core into

the latter, arranging a shoe between the core and the edges of the bent sheet, cooling the shoe and



simultaneously welding the edges of the sheet together while passing the sheet and core longitudinally of the shoe.

2,029,645
WEB ROLL SPEED CONTROL
Henry A. Wise Wood, New York, N. Y., assignor to Wood Newspaper Machinery Corporation, New York, N. Y., a corporation of Virginia
Application June 30, 1931, Serial No. 547,358
Renewed October 8, 1934
18 Claims. (Cl. 242—58)



17. In a web splicing device, the combination with a rotatable web roll support and means for speeding up a fresh roll through its central axis, of means for regulating the speed of the speeding-up means, and means whereby said regulating means is set by the rotation of the web roll support.

2,029,646
WEB SPLICING DEVICE
Henry A. Wise Wood, New York, N. Y., assignor to Wood Newspaper Machinery Corporation, New York, N. Y., a corporation of Virginia
Application November 15, 1933, Serial No. 698,122
Renewed December 4, 1934
10 Claims. (Cl. 242—58.2)

1. In a web splicing mechanism, the combination with means for rotating the fresh web roll, and means controlled by the diameter of said fresh roll for varying the speed of said rotating means to bring the surface speed of the fresh roll substantially to web speed at the time of splicing, of means for reducing the speed of the fresh roll driving means immediately after the fresh roll is spliced to the running web for the purpose of producing tension on the web.

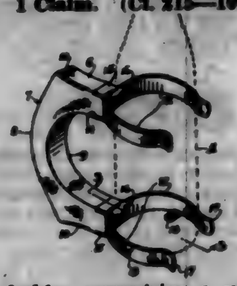
2,029,647
CELLULAR BOTTOM CONSTRUCTION FOR THE BOAT BODIES OF HYDROAIRPLANES
Harry N. Atwood, South Lyndeboro, N. H.
Application September 14, 1934, Serial No. 744,066
5 Claims. (Cl. 114—66.5)

1. A hydro-airplane including a boat body, and a water contacting element forming an auxiliary bottom for the boat body and constructed of hermetically sealed tubular members approximately straight throughout their entire lengths and arranged in superposed layers with the layers gradually decreasing in width toward the bottom of the contacting element to form transverse steps and with certain of the layers shorter than the others to form longitudinal steps.

2,029,648
TUBULAR STRUCTURAL UNIT AND METHOD OF MAKING THE SAME
Harry N. Atwood, South Lyndeboro, N. H.
Application July 11, 1934, Serial No. 737,838
9 Claims. (Cl. 154—2)

2. A structural unit comprising tubular members assembled side by side with their adjacent surfaces in intimate contact and bonded together, and a coating of cellulosic plastic material covering the assembled tubes and bonded thereto.

2,029,649
BUILT-UP CELLULAR STRUCTURE AND METHOD OF MAKING THE SAME
Harry N. Atwood, South Lyndeboro, N. H.
Application July 31, 1934, Serial No. 737,839
8 Claims. (Cl. 154—2)



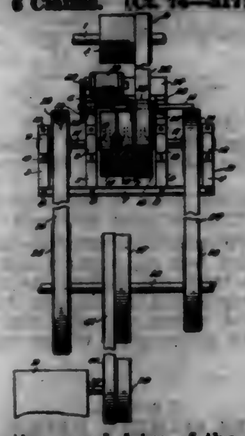
1. A composite structural unit comprising a plurality of tubular members each formed of superposed plies of wood veneer wound in spiral form with the wood veneer of adjacent plies overlapping, said tubular members being disposed in superposed layers to form a built up structure with the tubular members of each layer having bonding engagement with each other and with the tubular members of adjacent layers, and an acetone solution containing cellulosic plastic material forming an exterior coating for the built up structure.

2,029,050
CONVERTIBLE SEDAN AND PHAETON
Raymond R. Birge, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a corporation of Michigan
Application June 27, 1930, Serial No. 464,285
18 Claims. (Cl. 296—45)

1. In a vehicle body, the combination with a windshield, of a frame for supporting said windshield in a plane inclined to the vertical, a window having an edge portion arranged to engage the windshield frame, means for raising and lowering said window in a direction parallel to the plane of the windshield to maintain engagement between the windshield frame and the window, and means defining the window opening and including a portion of the windshield frame and a substantially vertical member at the rear of the opening, said window being dimensioned to completely fill the opening when in raised position.

2,029,051
BOTTLE HOLDER
Albert C. Blevins, Dallas, Tex., assignor to Nu-Deal Handle Co., Dallas, Tex., a co-partnership composed of D. G. Blevins and L. M. Rosenthal
Application June 20, 1933, Serial No. 676,537
1 Claim. (Cl. 215—100)

A bottle holder comprising a substantially U-shaped handle, resilient clips secured to the end of each leg of said handle, the outer edges of said clips being substantially coplanar with the outer surfaces of the legs of said handle, the ends of each leg being provided with recesses, and flanges extending from said clips into said recesses to facilitate assembling of said clips in proper position on said legs.

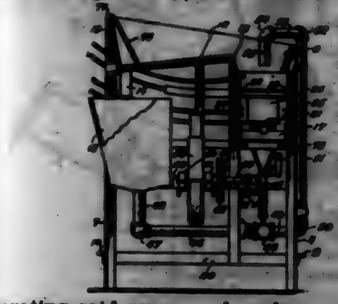


2,029,052
FURNACE
Clinton A. Bowen, Corning, N. Y., assignor to Corning Glass Works, Corning, N. Y., a corporation of New York
Application November 10, 1933, Serial No. 697,501
2 Claims. (Cl. 263—46)

2. In combination, a glass melting furnace comprising a tank composed of a bottom and side blocks forming a relatively shallow trough, girders supporting the bottom, standards extending upwardly parallel with the side blocks, brackets on the standards, side walls supported on the brackets independently of the side blocks, brackets on the standards above the first mentioned brackets, a cap supported on the second mentioned brackets independently of the side walls, tuck-stones between the sides of the tank and the side walls and independently adjustable means

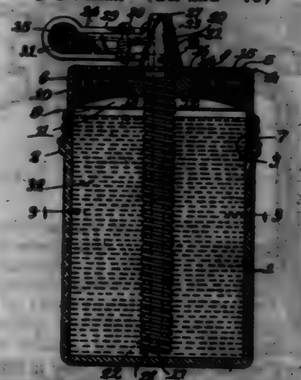
carried by the standards for holding the side blocks in place against the pressure of the contents of the tank and independently adjustable means carried by the standards for compensating for the expansion and contraction of the cap.

2,029,053
SELECTIVE SPEED DRIVE
John B. Brennan, Atlanta, Ga.
Application December 11, 1934, Serial No. 757,061
6 Claims. (Cl. 74—217)



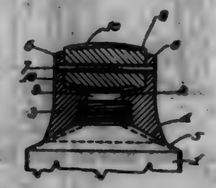
1. A selective speed drive of the character described comprising a pair of independently rotatably aligned shafts, a trio of pulleys, the outermost pulleys of the trio being connected to the inner extremities of the aligned shafts, the intermediate pulley being independently rotatable with respect to said shafts, a driven shaft, a pulley keyed to the driven shaft, and means connecting the free ends of the aligned shafts with the driving shaft, whereby the last-mentioned pulley may be operated at different speeds.

2,029,054
FRUIT AND VEGETABLE FILLING TABLE
Harry Burge, Celina, Ohio, assignor to Crampton Canneries, Inc., Celina, Ohio, a corporation of Ohio
Application February 21, 1935, Serial No. 7,651
1 Claim. (Cl. 226—43)



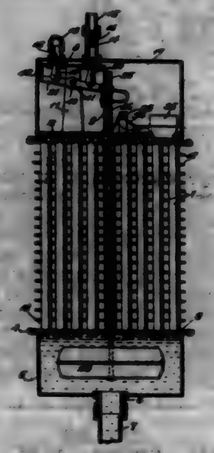
A filling table comprising a frame having a working table top adapted to support filling material, a guideway for receptacles extending along and at one side of one edge of said top, said top being inclined downwardly from said edge, a tank below said top, a gravity conveyor for moving

receptacles to the inlet end of said guideway, a pusher moving said receptacles from said inlet end on to said guideway, a pump connected to said tank for transferring liquid in measured quantities from said tank to a location directly above said guideway, means for simultaneously



operating said pump and pusher, said top having an aperture through the lower part thereof for conducting liquid by gravity from the material on said top into said tank and a screen on said table top to prevent solid material passing through said aperture onto said tank.

2,029,055
DISPENSER
William H. Burke, Onawa, Iowa, assignor of one-fourth to G. W. Myriand and one-fourth to Geo. W. Prichard, both of Onawa, Iowa
Application November 22, 1934, Serial No. 754,346
3 Claims. (Cl. 221—79)

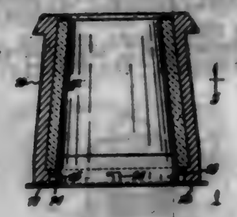


1. Dispensing mechanism comprising a container, a piston slidable in the container, operating means embodying a feed screw held for rotation but again longitudinal movement on the container, the feed screw being threaded into the piston, the operating means, including the feed screw, having a conduit for the discharge of the contents of the container, under pressure of the piston, a lever, fixed fulcrum means by which the lever is mounted on the operating means, the lever having a closure so located as to control the passage of the contents of the container through the conduit, the lever being disposed substantially at right angles to the axis of the feed screw, the fulcrum means comprising a part so located as to be engaged by the outer end of the lever whereby pressure exerted against the outer end of the lever first will swing the lever and move the closure to open position with respect to the conduit, and then rotate the screw, to advance the piston and force the contents of the container through the conduit.

2,029,056
ROTARY SPREADER
George E. Carlsen, Chicago, Ill., assignor to Carlsen Research Corporation, Chicago, Ill., a corporation of Illinois
Application December 1, 1933, Serial No. 700,382
7 Claims. (Cl. 91—67.4)

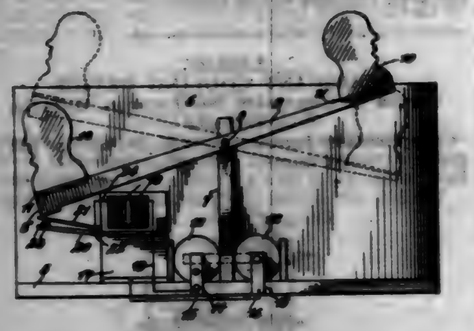
1. A spreader including a receptacle having a discharge orifice, a roller mounted for rotation adjacent the orifice to receive material on its surface, and a support in which the roller is mounted having cheeks closely fitting against the ends of the roller with curved surfaces surrounding the orifice and adjoining said cheeks, said surfaces conforming closely to the curved side portions of the roller between its ends and the area exposed to the orifice.

2,029,057
LUBRICANT COOLING DEVICE
Edwin A. Chambers, St. Thomas, Ontario, Canada
Application January 7, 1935, Serial No. 752
7 Claims. (Cl. 123—196)



1. A lubricant cooling device for an engine and comprising cooling means, means whereby suction is created in said device for drawing lubricant from the engine for passage through the cooling means, and means acting alternately with the second mentioned means to break the suction to allow the lubricant to drain back to the engine.

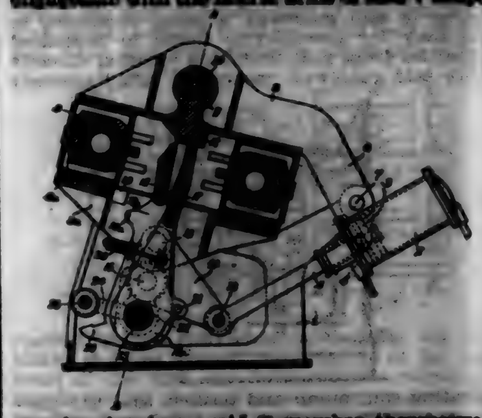
2,029,058
HOT TOP AND LINING THEREFOR
Walter M. Charman, Cleveland Heights, Ohio
Application July 24, 1933, Serial No. 681,891
6 Claims. (Cl. 22—147)



1. In a hot top, a body member and a lower lining covering the lower end surface of the body member, said body member having inverted L-

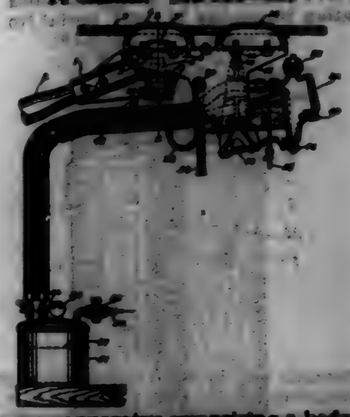
shaped slots and said lining having projections adapted to be moved into the slots from the bot-

tom thereof and then moved into the horisontal portions thereof.



2,029,059
TOY TARGET
Clarence F. Cookson, Lyndhurst, N. J., assignor to Joseph Schneider, Inc., New York, N. Y., a corporation of New York
Application February 18, 1935, Serial No. 7,663
7 Claims. (Cl. 124—15)

1. A toy target comprising, in combination with a vertical panel, a member mounted at the rear side of said panel for movement relative thereto, a target carried by said member, electrically controlled means for operating said member, a circuit therefor, and a normally open switch in said circuit, engaged and actuated to closed position by said member in its movement in one direction to energize said first named means and reverse the movement of said member, whereby the target is positioned beyond one edge of the panel.

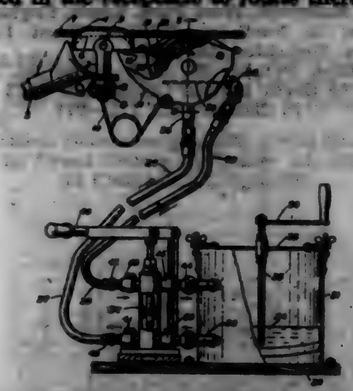


2,029,060
VULCANIZING PRESS FOR PNEUMATIC TIRES, INNER TUBES, AND SIMILAR ARTICLES
Giuseppe Cesne, Milan, Italy, assignor to Società Italiana Pirelli, Milan, Italy
Application February 20, 1934, Serial No. 711,126
In Germany February 28, 1933
8 Claims. (Cl. 18—17)

1. A vulcanizing press or the like comprising a base, a bottom mold section supported by said base and a top mold section hinged to said base and swingable into and out of association with said top mold section, and means for locking together said mold sections, said means comprising a T shaped member attached to one of said mold sections and extending toward the other mold section and a pair of latch members anchored with respect to said other mold section, said latch members being pivotally associated with each other in scissors fashion and jointly engageable with the lateral arms of said T shaped

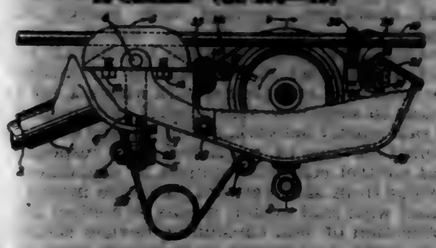
member to clamp said T member therebetween and prevent separation of said mold sections.

2,029,061
SPRAY GUN
Fred R. Dippman, Mansfield, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a corporation of New Jersey
Application September 2, 1931, Serial No. 560,735
14 Claims. (Cl. 194—12)



1. A spray apparatus comprising a body, a pair of current collectors secured to the body, a support for the body, means to secure the support to a trolley pole, a spray gun mounted on the body, the collectors arranged to contact with a trolley wire and the gun arranged to spray material upon the wire and means to adjust the relation of the gun to the collectors to vary the position of the gun nozzle to the trolley wire.

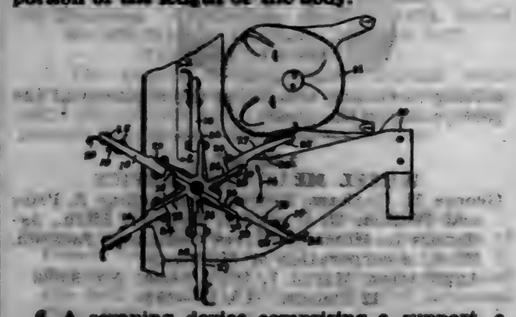
2,029,062
LUBRICATING DEVICE
Fred R. Dippman, Mansfield, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a corporation of New Jersey
Application December 3, 1931, Serial No. 578,578
Renewed June 11, 1934
32 Claims. (Cl. 184—15)



1. A lubricating device comprising a sliding shoe to engage a trolley wire to guide the device relative to the wire, a support for the shoe and means to secure the support to a trolley pole mounted on a moving vehicle, a separately formed

receptacle detachably secured to the shoe and arranged to hold a lubricating material, a wheel mounted in the receptacle to rotate therein and

dip into the lubricating material and to engage with the trolley wire and distribute the said material thereon as the vehicle moves relative to the wire.



2,029,063
LUBRICATING DEVICE
Fred R. Dippman, Mansfield, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a corporation of New Jersey
Application June 23, 1934, Serial No. 732,458
15 Claims. (Cl. 184—15)

1. A lubricating device for trolley wires comprising a receptacle to retain a quantity of lubricating material, a support secured to a vehicle, the receptacle sustained by the support in spaced relation to the vehicle and arranged to pivot in a substantially horizontal plane, a wheel mounted to rotate within the receptacle and engage the trolley wire and contact with the lubricating material as the wheel rotates and apply the material upon the wire, yielding means urging the receptacle towards the trolley wire and means associated with the receptacle and spaced from the wheel and movable relative to the receptacle in a substantially horizontal plane to guide one end of the receptacle relative to the trolley wire.

2,029,064
CARCASS SCRAPER
George N. Edwards, Willoughby, Ohio, assignor to The Ohio Rubber Company, Willoughby, Ohio, a corporation of Ohio
Application November 17, 1934, Serial No. 753,434
7 Claims. (Cl. 15—15)

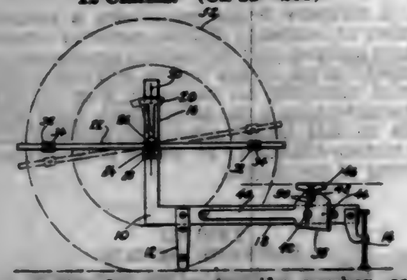
1. A carcass scraper comprising a support, an elongated resiliently flexible body connected with said support and having a portion thereof extending beyond the support, and a scraper blade on the extending portion of the body, said body having a substantially continuous uniform taper progressively varying the thickness therefor and being thickest adjacent the connection with said support whereby deflection of the body during use of the scraper is distributed over a substantial portion of the length of the body.

6. A scraping device comprising a support, a member of resiliently flexible material connected to said support and extending therebeyond, said member having means on the extending portion thereof providing an increased body of flexible material forming a yieldable mount, and a scraper blade on said mount adaptable substantially to the surface contour of an object to be scraped by yielding of the mount.

2,029,065
CLOSURE DEVICE
Edward E. Farley, Pocatello, Idaho
Application September 5, 1934, Serial No. 742,821
1 Claim. (Cl. 221—60)

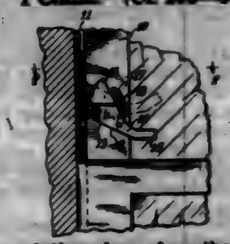
A closure device for a collapsible tube comprising in combination, a body having a bore providing the outlet for the tube, said body including curved upper and rear portions and flat front and side portions, and a cap having a groove therein and curved to follow the upper and rear portions for slidable movement thereon for controlling the bore, an abutment to limit the closed position of the cap, a handle for the cap, said body having bearing openings in the side portions and triangular grooves diverging from the openings to provide guides, a resilient square cornered ball having a straight bight portion received in the cap groove, trunnions on the ball and guided to the bearing openings by the triangular grooves in applying the cap to the body and the cap groove being convexed to provide deep end portions to receive the corresponding ends of the bight portion to allow the cap to pass over the abutment during the application of the cap to the body.

2,029,066
METHOD OF MEASURING THE HARDNESS OF ABRASIVE DISKS
Karl Geppert, Schweinfurt-on-the-Main, Germany, assignor to Kugelfischer Erste Automatische Gussstahlkugelfabrik vorm. Friedrich Fischer, Schweinfurt-on-the-Main, Germany
Application October 31, 1934, Serial No. 750,901
In Germany November 3, 1933
1 Claim. (Cl. 265—13)



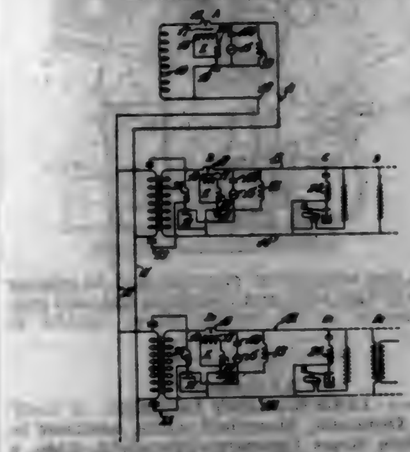
A method of measuring the hardness of abrasive disks or plates consisting in applying a sheet of perforatable material to the surface of said disk

or plate, driving a conical impact pin through said sheet into said plate or disk by a standardized



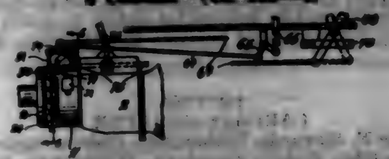
driving force, and measuring the diameter of the perforation in the sheet.

2,029,667
WHEEL MEASURING DEVICE
George M. Graham, Detroit, and Arthur E. Price and William O. Westcott, Jackson, Mich., assignors to Hinckley-Myers Company, Jackson, Mich., a corporation of Michigan
Application March 7, 1935, Serial No. 9,696
12 Claims. (Cl. 33—203)



1. A device for measuring the camber, caster and king pin angles of swivelled vehicle wheels which comprises, in combination, a square, means for supporting said square in upright position so as to provide a horizontal base section and a vertical section extending upwardly therefrom, a protractor adjustably mounted on the vertical section and provided with laterally extending arm sections for making spaced contacts on the vehicle wheel, a second protractor carried by the horizontal section of the square, said supporting means being adjustable to tilt the square with respect to the horizontal.

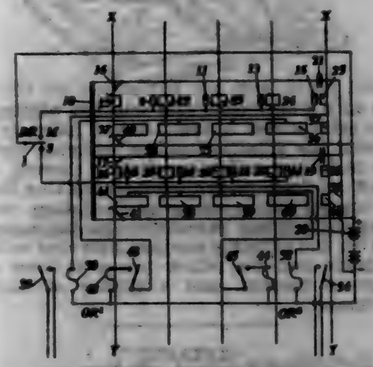
2,029,668
WINDOW TIGHTENER
Arthur W. Greene, Englewood, N. J.
Application April 26, 1935, Serial No. 18,278
1 Claim. (Cl. 292—342)



A device of the class described comprising a member pivotally mounted on a window sash, said member comprising on one end a resilient arm having a handle and on the other end a rounded wedge, said wedge being forced between the window sash and frame upon rotation of said member in one direction, and means for releasably locking said member in said wedging position comprising an arcuate member rigidly mounted on said sash concentrically with the pivot of said pivotal mounting under said first-named member and provided with serrations, and serrations on the underside of said first-named member yieldably registering in said serrated member.

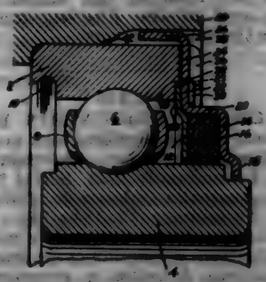
2,029,669
REMOTE CONTROL SYSTEM FOR ELECTRIC SUPPLY NETWORKS
Edison Hallewell, West Park, Leeds, England, assignor to Northern Utilities Trust Limited, Leeds, Yorkshire, England
Application October 26, 1934, Serial No. 748,234
In Great Britain October 28, 1933
15 Claims. (Cl. 171—97)

15. In an electrical supply network which includes at least one control station and a plurality of remote current consuming devices of restricted load character provided with energy storage medium, a control system which comprises means at said control station to generate control current impulses in response to an increase of the total load on said network above a set value, means to superpose said control current impulses on said supply network, switch means at said consuming devices of restricted load responsive to said control current impulses to disconnect said devices from said network, selective means associated with said switch means to control the disconnection of said consuming devices successively in units, and means to maintain each of said units disconnected from said network for a period dependent on the ratio of the existing capacity of said energy storage medium to the maximum capacity thereof.



2,029,670
HYDRAULIC SAFETY BRAKE FOR AUTOMOBILES
George C. Higbee, Tekoa, Wash.
Application January 28, 1935, Serial No. 2,851
8 Claims. (Cl. 188—4)

1. In a structure of the character described, a rotary shaft, means for controlling rotation of said shaft including a disk rotating with the shaft and a companion disk loose about the shaft, hydraulic means automatically operated for controlling shifting of the companion disk into and out of position to grip the first disk and prevent rotation of the shaft in one direction, means for relieving the companion disk from pressure by the hydraulic means, and manually controlled

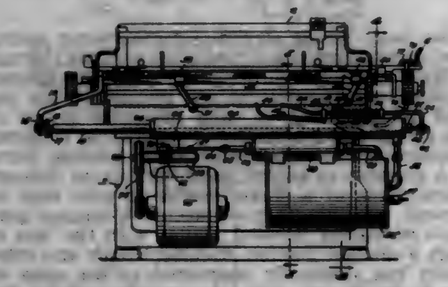


means for operating the hydraulic means and preventing rotation of the shaft in either direction.

2,029,671
TELEGRAPH SIGNALING APPARATUS
Harry Vernon Higgitt, London, England, assignor to Cable and Wireless Limited, a British company
Application December 15, 1932, Serial No. 647,454
In Great Britain December 24, 1931
12 Claims. (Cl. 178—88)

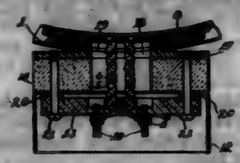
2. In a telegraph receiving apparatus for receiving double current cable code signals of the type set forth, the combination of a receiving relay having two contacts actuated in accordance with marking and spacing currents forming the signals and a pair of switching devices driven so as to be regularly operative at the rate of occurrence of the signaling periods, each comprising coacting contact members so relatively located that said switching devices prepare circuits respectively each including one of the two contacts of said receiving relay, during the first half and the second half of each signaling period respectively.

2,029,672
ANTIFRICTION BEARING AND SEAL
Frederick G. Hughes, Bristol, Conn., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application April 17, 1934, Serial No. 720,887
11 Claims. (Cl. 308—187)



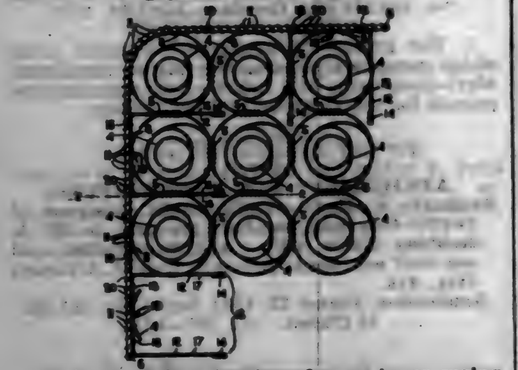
1. In a device of the character described, a race ring, a closure carried by the race ring, a keying member connected to the closure and interlocking with the race ring, and the keying member having a projection extended beyond the race ring; substantially as described.

2,029,673
PRODUCTION OF SULPHONIC ACIDS
Richard Huttenlocher and Richard Hess, Frankfort-on-the-Main, Germany
No Drawing. Application April 17, 1933, Serial No. 666,545. In Germany April 18, 1932
9 Claims. (Cl. 260—159)



1. The process of preparing sulphonic acids which comprises reacting compounds containing alkyl-disulphonic acid radicles with organic compounds having alcoholic hydroxyl groups.

2,029,674
ATTACHMENT FOR TYPEWRITERS
Benjamin S. Hyatt, Vinita, Okla., assignor of twenty-four and one-half per cent to W. A. Robbins, Tulsa, Okla., and twenty-four and one-half per cent to Bryan N. Wright, Arkansas City, Ark.
Application August 29, 1933, Serial No. 687,362
10 Claims. (Cl. 197—67)



1. In a device of the class described, a typewriter comprising a frame, a carriage movable on the frame, a cylinder carried by the frame, a piston operating in the cylinder, means for connecting the piston with the carriage to secure a return movement of the carriage, a source of fluid pressure supply having an inlet communicating with the cylinder, a valve slidable in the cylinder and governing the inlet, and means operated by the carriage during its advancing movement, for actuating the valve to admit fluid pressure to the cylinder and bring about said return movement of the carriage.

2,029,675
ELECTRIC HEATING ELEMENT
John A. Knight, Hamilton, Ontario, Canada
Application April 27, 1934, Serial No. 722,894
9 Claims. (Cl. 219—38)

1. An electrical heating element comprising a thin metal facing band; an insulated resistance element applied to the outer surface of the facing band; a cushion band applied outside the resistance element; a semi-rigid supporting band of metal formed as a split ring; and means for drawing its ends together to clamp it about a cylindrical surface and thus press the cushion against the insulated resistance element, the resistance element against the facing band and the latter against the surface to which the heating element is applied.

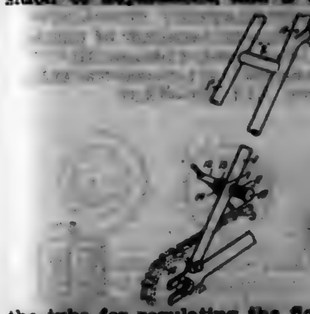
2,029,676
INNER SPRING MATTRESS
Edward D. Leeman, Medford, Mass.
Application May 6, 1933, Serial No. 669,708
1 Claim. (Cl. 5—260)

An inner spring structure for an inner spring mattress comprising a group of vertical springs, a binding wire encircling the group of springs at both top and bottom and secured to the top and bottom turns of each marginal spring of the group, and a plurality of reinforcing elements connecting the upper and lower binding wires at a plurality of points, each reinforcing element being made of a single length of wire bent to present two integrally-connected V-shaped portions occupying parallel planes with the legs of each V-shaped portion of equal length and integrally but resiliently connected at the apex of the V-shape and with the opposite ends of the corresponding legs of the two V-shaped portions integrally connected by a connecting portion extending at right angles to the legs and integral with each leg, said single length of wire being further bent to form an arm extending laterally from the opposite end of the other leg of each V-shaped portion, said arms being parallel with the connecting portion and in alignment with and meeting each other, the apexes of the two V-shaped portions being unconnected, said connecting portion having substantially the same length as the diameter of each vertical spring, a reinforcing element being placed with its two V-shaped members embracing alternate marginal vertical springs along the side of the mattress whereby there will be a V-shaped portion between each two adjacent springs along said side of the mattress, means tying the connecting portion of each reinforcing element to one of the binding wires and means tying the two arms of each reinforcing element to the other binding wire.

2,029,677
PROCESS FOR THE PRODUCTION OF COLORED PHOTOGRAPHS, PARTICULARLY IN NATURAL COLORS, ON PAPERS, FILMS, AND THE LIKE
Franz Lejeune, Vienna, Austria
Application April 29, 1931, Serial No. 533,841
In Austria May 3, 1930
2 Claims. (Cl. 101—149)

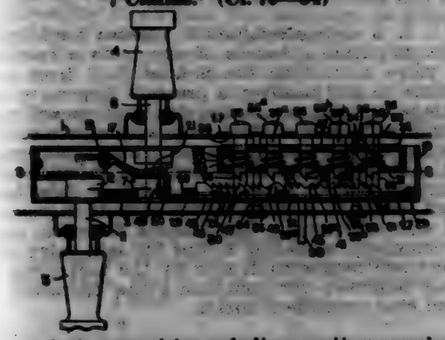
2. Process for the production of colored photographs in natural colors on a single printing surface in which three printing images produced by tanning in a picture-like manner and corresponding to a blue print image, a yellow print image and a red print image are soaked with metallic solutions in a well balanced manner of concentration in a proper image-like distribution, which consists in embodying in the printing surface a precipitate in the form of a water-insoluble lead compound, a precipitate in the form of dimethyiglyoxime and a precipitate in the form of ferric salt, hereafter soaking the blue print image with a potassium ferrocyanide solution, placing said blue print image in intimate contact with the printing surface to form a Prussian-blue precipitate therein, stripping off said blue print image, further soaking the yellow print

image with a chromatic salt solution, placing said yellow print image in register and intimate contact with the printing surface carrying the blue image to form a yellow precipitate therein, stripping off said yellow print image, soaking the red print image with a nickel-salt solution, placing said red print image in register and intimate contact with the printing surface provided with the blue image and the yellow image to form a red precipitate therein, and stripping of said red print image.



2,029,678
FILTERING DEVICE
James Aaron Matney, Prosser, Wash.
Application June 13, 1934, Serial No. 731,877
1 Claim. (Cl. 210—121)

A filtering device comprising a container, inlet means and outlet means therefor, magnetic means in said container and being insulated therefrom, means for detachably securing the magnetic means in position, filtering material in said container, a skeleton wire frame for the filtering material and including split end rings, means for detachably connecting the ends of the rings together, cross rods having their ends secured to the rings, said frame and filtering material being removable from the container as a unit, screening means cooperating with the filtering material, and means for holding the screening means against one end of the filtering material and spaced from the outlet means.



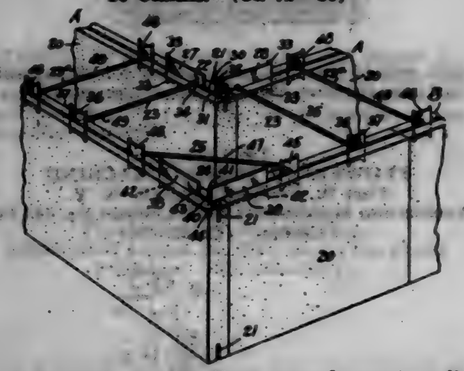
2,029,679
CYCLE CHAIN LUBRICATION DEVICE
Raphael Meray Miller, Paddington, near Sydney, New South Wales, Australia
Application December 6, 1934, Serial No. 756,317
In Australia October 26, 1934
2 Claims. (Cl. 184—15)

2. A lubricating device for cycle chains including in combination, a tubular cycle frame having a hollow portion forming a reservoir for oil, means for introducing oil into the top of the reservoir, means for discharging oil from the reservoir, including a hollow tube traversing and in communication with the reservoir, a feed pipe operatively connected to one end of the tube and in communication therewith for conducting oil to a desired point upon the chain, means for removably clamping the feed pipe in the desired position of adjustment, and a valve mounted in

the tube for regulating the flow of oil from the reservoir to the feed pipe.

2,029,680
COMBINATION LOCK
George E. Mills, Brighton, Mass.
Application April 26, 1934, Serial No. 722,430
7 Claims. (Cl. 70—54)

1. A lock comprising a bolt-operating member, a locking member for locking the same from operation, a toothed slide, some of the teeth of which have faces inclined in one direction while other teeth have faces inclined in the opposite direction, a plurality of push pins adapted when depressed to engage said teeth and move the slide, said teeth having such relation to the push pins that when the pins are depressed in a predetermined order each pin will advance the slide forwardly one step in the same direction, while if any pin is depressed out of the predetermined order the slide will be given a reverse movement, means to release the locking member when the slide has been given a predetermined number of forward steps, and means co-operating with said slide to restrain movement thereof at the end of each forward step.

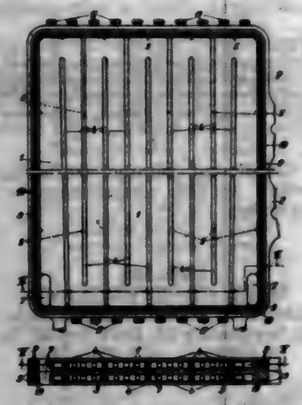


2,029,681
MACHINE FOR MAKING INSULATING MATERIAL
Oliver F. Mottweiler, Alexandria, Ind.
Application May 6, 1933, Serial No. 669,872
2 Claims. (Cl. 154—37)

1. A machine for making insulating material in sheet form, comprising a casing divided into two communicating chambers, a pair of opposed endless compressors located, respectively, in each of said chambers at corresponding compressing distances apart relative to the original thickness of material to be passed between them, and in line with each other, means for continuously passing a compressible insulating material mixed with a binder between the successive sets of compressors, and means for subjecting the material to hot air in the first of said chambers and to

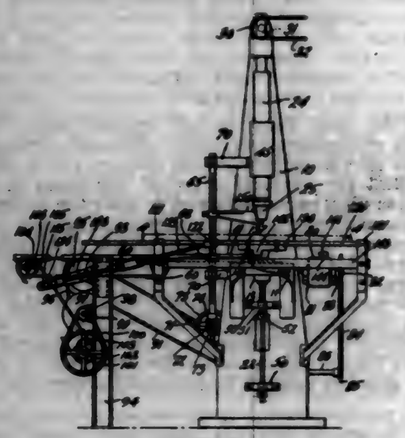
cold air in the second chamber while maintained under pressure by the compressors in the respective chambers.

2,029,682
WALL CONSTRUCTION
Charles H. Odam, Tucson, Ariz.
Application September 22, 1934, Serial No. 745,154
10 Claims. (Cl. 72—39)



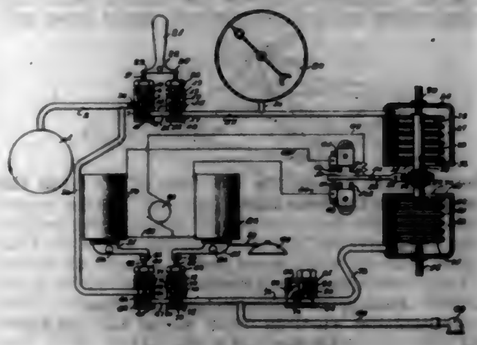
1. In wall construction, spaced apart walls, each comprising vertically disposed rectangular slabs laid in corresponding courses and arranged so that the vertical edges of the slabs of each course abut each other and so that the horizontal edges of the slabs of one course engage the corresponding edges of the slabs of the next adjacent course, the horizontal edges of the slabs of each course having confronting vertical grooves, and a tie member connecting one wall with the other and including means extending into the aforementioned confronting grooves and having portions embedded in said slabs, whereby to secure the member against longitudinal movement.

2,029,683
HEAT EXCHANGE APPARATUS
Edwin Prestage, London, England
Application August 28, 1935, Serial No. 38,249
In Great Britain May 25, 1934
1 Claim. (Cl. 257—245)



A heating unit for the interchange of heat between two streams of fluids, such as milk and steam, comprising a plurality of identical plates, each plate having a narrow metal frame mounted between two relatively thin metal closure sheets, said sheets forming the heat-exchange surfaces of the plate, baffle strips extending across the interior of the frame between said closure sheets and forming a zig-zag channel for the passage of the steam, metal strips on the exterior surfaces of both closure sheets, the metal strips being half the thickness of the desired milk channel, the said metal strips forming, when the plates are assembled, channels between adjacent plates for the passage of the milk, whereby disassembly of the unit will open the milk channels for inspection

or cleaning without disturbing the internal steam channels within the individual plates, a cover at

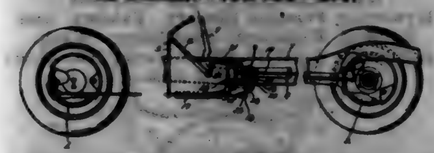


each end of the unit, and means for detachably clamping together the plates and the covers.

2,029,084
FLOWERPOT MAKING MACHINE
Carl W. Schmidt, Buffalo, N. Y.
Application September 15, 1934, Serial No. 744,541
7 Claims. (Cl. 25—24)

1. In a machine for molding articles from plastic material, a mold and a core axially aligned therewith and one of which is reciprocable toward and into operative relation with the other to mold material introduced into said mold and then away therefrom to separate said core from the molded article, means for ejecting said article out of said mold, and a carriage disposed in lateral relation to said mold and reciprocable crosswise of said mold and having thereon a pair of pivoted, oppositely swingable arms, arm actuating means operable when said carriage approximates one end of its stroke to swing said arms into closed position about opposite sides of said article to support the same while in said ejected position, said closed arms being then movable with said carriage toward the other end of its stroke to carry said article therewith, and said arm actuating means being operable to open said arms and release said article when said carriage approximates said other end of its stroke.

2,029,085
PRESSURE FLUID SUPPLY SYSTEM AND APPARATUS
Max H. Sussin, Chicago, Ill., assignor of one-half to Frank L. Barchard, Chicago, Ill.
Application December 26, 1931, Serial No. 583,339
5 Claims. (Cl. 221—78.5)

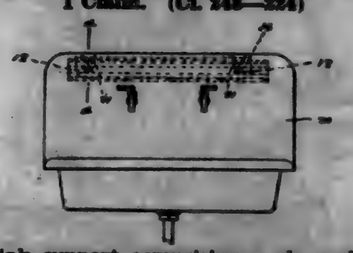


1. In a system adapted to furnish fluid under pressure from a source of supply to a receiver, a valve controlling the flow of fluid from said source to said receiver, a pressure responsive device comprising a movable structure, means controlling the flow of fluid from said source to one part of said device for causing primary movement of said structure in one direction, means under control of said valve for conducting fluid from said source to said device for causing movement of said structure in the opposite direction, electromagnetic actuating means for said valve, and electrical means controlled by the movement of said structure for controlling the operation of said electromagnetic means.

2,029,086
METHOD OF AND AN APPARATUS FOR CHARGING CELLULOSE DIGESTERS OR THE LIKE
Sjume Svensson, Hisingsfors, Krokom, Sweden
Application October 27, 1934, Serial No. 750,371
In Sweden May 27, 1933
10 Claims. (Cl. 92—7)

1. In a method of charging cellulose digesters with fibrous material, for instance, chip wood, in which the speed of the charging material is accelerated only by means of steam, introducing excess steam, assembled in the digester during the charging operation, into the downwardly flowing charging material before the same is subjected to actuation by the speed accelerating steam, in such direction that it has no entraining effect upon the charging material and in such a quantity that the excess steam prevents air accompanying the charging material from getting into the digester.

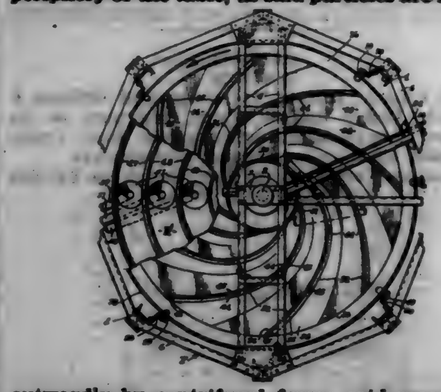
2,029,087
BRAKE MECHANISM
George Joseph Thomas, Birmingham, Mich., assignor to Kelsey-Hayes Wheel Company, Detroit, Mich., a corporation of Delaware
Application July 9, 1934, Serial No. 734,411
14 Claims. (Cl. 188—194)



1. In a motor vehicle front and rear wheel brake system, the combination of a pair of downwardly and upwardly extending pivotal members respectively connected to the front and rear wheel brakes, and an actuating member pivotally connected to said downwardly and upwardly extending pivotal members respectively below and above their pivots.

2,029,088
PROCESS FOR TANNING
Harold G. Turley, Moorestown, N. J., and Ian C. Somerville, Fox Chase, Pa., assignors to Röhm & Haas Company, Philadelphia, Pa.
No Drawing. Application May 15, 1934, Serial No. 725,214
12 Claims. (Cl. 149—5)

1. The step in the process of tanning which comprises treating skins and hides with an aldehyde capable of reacting with the hide protein, a salt of aluminum and a synthetic organic tanning material.

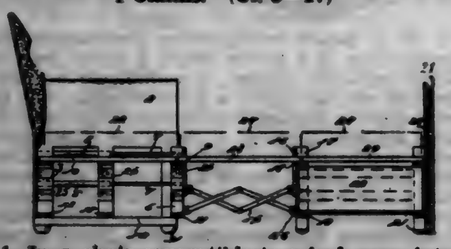


2,029,089
SINK SUPPORT
August F. Weirauch, Milwaukee, Wis.
Application May 7, 1935, Serial No. 20,234
1 Claim. (Cl. 248—224)

A sink support comprising a channeled wall studding attached member provided with cross slots therein, a slide block for each of the cross slots, said blocks being slidable in the channel of said member, each cross slot being provided with a wider vertical slot and a horizontal slot so that when the corresponding block is moved to the vertical slot it can be disengaged from the channeled member, each of the said blocks being provided with a threaded opening, a clamp plate, screws for the clamp plate engageable into the said blocks, said clamp plate being provided with lateral flanges for engaging the adjacent wall structure and provided with openings in one of the flanges into which the hanger lugs of a sink structure can be engaged.

2,029,090
MEANS FOR SEPARATING MINERALS FROM ORES
Paul R. Yewell, Los Angeles, Calif.
Application September 13, 1933, Serial No. 689,382
9 Claims. (Cl. 209—444)

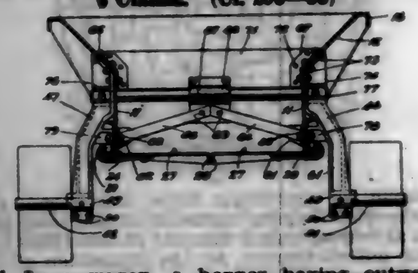
1. An apparatus for separating materials comprising: a rotatable table for receiving the material, and means thereon for intercepting and collecting particles of different specific gravity at different points intermediate the axis and the periphery of the table, as said particles are moved



outwardly by centrifugal force; said means including riffles forming segments of said table and traps at corresponding margins of said riffles and having outlets therein, for the disposition of the classified minerals.

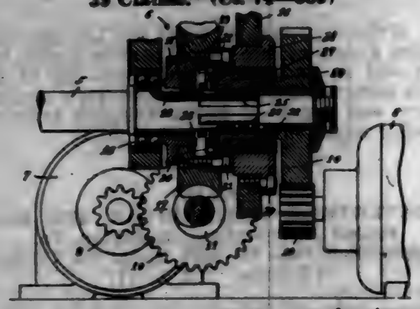
2,029,091
DISPLAY STAND
Frank Bern, Cleveland, Ohio
Application August 24, 1935, Serial No. 37,623
9 Claims. (Cl. 40—152.1)

1. A display stand for cards and the like, comprising a strip of sheet metal bent to form a base part and an upstanding back part, one of said parts being bent to form a transversely disposed sleeve, and a pair of article-gripping arms adjustably mounted in said sleeve.



2,029,092
CONVERTIBLE CHAIR, DIVAN, AND BED
Rudolf H. Bjorklund, Essington, Pa.
Application June 19, 1934, Serial No. 731,261
4 Claims. (Cl. 5—17)

1. In a chair convertible to a bed, rear, intermediate and front posts, a support for a bed section movable into said chair beneath its seat and against said intermediate posts and having means to interlock with said front posts, said rear and front posts and said support having registering slots, and a drawer mounted in said bed section

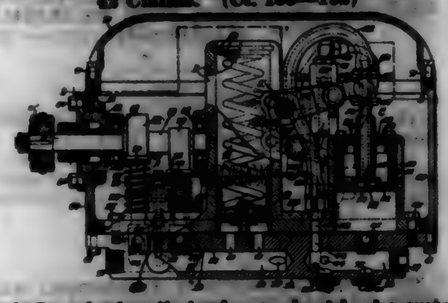


support and movable with it into the chair beneath the seat the drawer being provided with guides mounted on the sides thereof travelling in the registering slots.

2,029,093
WAGON
Roy E. Choate, Harold N. Graves, and William I. Leech, Cedar Rapids, Iowa, assignors to La Plant-Choate Manufacturing Co. Inc., Cedar Rapids, Iowa, a corporation of Delaware
Application November 16, 1932, Serial No. 642,864
6 Claims. (Cl. 280—35)

1. In a wagon, a hopper having outwardly flared upper walls, legs secured to the vertical and the flared portions of the walls, a bracing structure disposed inside the hopper and comprising a transversely-extending plate and means for securing the plate to the walls of the hopper and to the legs, and a transverse shaft extending through the hopper and through the legs below the transverse plate.

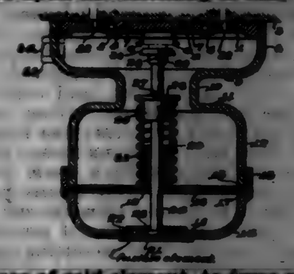
2,029,894
POWER TRANSMISSION MECHANISM
Charles B. De Vlieg and Nels S. Lundberg, Jackson, Mich., assignors to Associated Patents, Inc., Cincinnati, Ohio, a corporation of Ohio
Application December 9, 1932, Serial No. 646,424
39 Claims. (Cl. 74—389)



1. In a power transmission mechanism, the combination of a driven shaft, a worm gear rotatably mounted thereon, a second gear rotatably mounted on said shaft, a worm meshed with the worm gear to transmit drive thereto or hold the same against turning, a relatively slow speed power means for driving said worm, a relatively high speed power means for driving the second gear, a sleeve slidably but nonrotatably mounted on said shaft to transmit drive thereto from either of said gears, intermeshable drive teeth on said worm gear and sleeve engaged when the sleeve is in one limit position and disengaged when the sleeve is in another limit position, constantly meshed cam-shaped drive teeth on said sleeve and second gear adapted to cause movement of the sleeve from the first limit position to the other limit position when drive is transmitted to the sleeve from the second gear, whereby to disengage the first mentioned drive teeth, and spring means tending normally to return said sleeve to the first limit position.

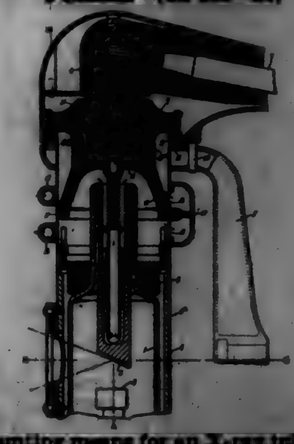
2,029,895
ATTACHMENT FOR STOVES
Hymerick Preston Demery, Yakima, and Emmett Kirkland, Ellensburg, Wash.
Application April 16, 1935, Serial No. 16,588
2 Claims. (Cl. 248—3)

1. An attachment for cooking stoves and the like, comprising a bracket of channel-like form arranged to embrace the edge of a shelf, a shelf-clamping element carried by the lower flange of the channel, a lamp socket secured to said flange, and a reflector secured to the rear edge of the upper flange of the channel and extending forwardly and downwardly to a point spaced forwardly of said socket, the reflector being of such dimension and so positioned as to conceal the bracket and socket from view at a plane above the structure.



2,029,896
HYDRAULIC BRAKE
Willis G. Doyle, Detroit, Mich., assignor to American Car and Foundry Motors Company, New York, N. Y., a corporation of Delaware
Application December 1, 1931, Serial No. 578,221
43 Claims. (Cl. 188—152)

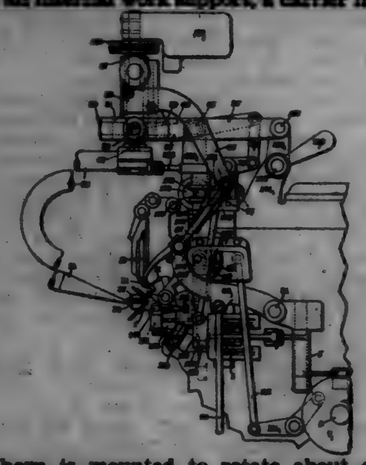
4. In a hydraulic brake, a wheel brake system, a low pressure actuator therefor comprising a piston, a valve in the head of the piston and a valve stem, a high pressure storage device, a high pressure release valve normally closing the high pressure storage device from the wheel brake system, a brake pedal and mechanical connections between the pedal, the piston valve, and the high pressure release valve.



2,029,897
ELECTRIC FIRE ALARM
Joseph Garner, Harrisburg, Pa.
Application December 15, 1932, Serial No. 782,463
5 Claims. (Cl. 200—142)

1. A switch for electric fire alarm systems, comprising a casing, a base adapted to be normally secured to a supporting surface and detachably supporting said casing, a plurality of electrical contact members carried by said base, said casing having an open side, a cover detachably closing said side and itself having an aperture, a closure of fusible material normally spanning said aperture, a switch element having a portion attached to said closure, and resilient means operative upon the softening of said closure and

the release of said element, to force said element away from said cover and into a position electrically connecting said contact members.



2,029,898
X-RAY TUBE MOUNT
Edwin R. Goldfield, Cleveland Heights, and Casperen R. Hershey, East Cleveland, Ohio, assignors to Wappler & Eberbach X-Ray Manufacturing Company, Cleveland, Ohio, a corporation of New York
Application December 19, 1934, Serial No. 758,789
2 Claims. (Cl. 250—54)

1. Mounting means for an X-ray tube comprising generally cylindrical base means containing said tube, means supporting said base means intermediate its ends for rotatable adjustment about the tube axis, said base means having at its end an insulator for the corresponding tube end, a corresponding relatively stationary insulator, said insulators having interengaging parts arranged concentrically about said axis to permit said adjustment and cooperative with baffle effect to prevent electrical leakage, and said insulators having electrical leads for said tube end, with cooperative contactors at said axis, and means associating said relatively stationary insulator with said base supporting means to prevent rotation of the former about said axis.

2,029,899
SEWING MACHINE
Joseph Gouldstone, Leicester, England, assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application January 22, 1934, Serial No. 707,446
In Great Britain January 30, 1933
17 Claims. (Cl. 112—62)

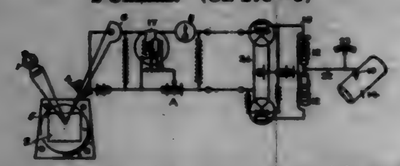
1. A machine for sewing suitcases or like articles having, in combination, a work support having angularly disposed surfaces to engage the work externally, a needle and awl arranged to move across the corner formed by said surfaces, a work entering horn provided at its inner end with an internal work support, a carrier in which

the horn is mounted to rotate about an axis passing through the work engaging end of the horn, and means supporting the carrier, permitting an adjustment of the carrier with the horn about an axis parallel to the line of feed and in proximity to the sewing point.

2,029,186
TREATMENT OF HYDROCARBON OILS
Aristid V. Grosse, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of South Dakota
No Drawing. Application October 5, 1931, Serial No. 567,127
5 Claims. (Cl. 196—24)

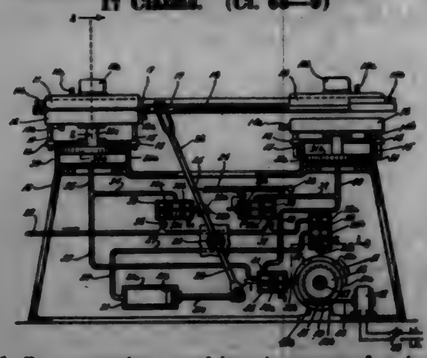
1. In the refining of sulphur-containing hydrocarbon oil, the step which comprises treating the oil with hydrogen in the presence of a preformed thio compound selected from the group consisting of the relatively stable thio-molybdates and thio-tungstates under conditions such as to react the hydrogen with sulphur compounds contained in the oil and in the absence of hydrogen sulphide other than that evolved by said reaction and from the oil.

2,029,101
METHOD OF RE-COVERING BOOKS
Ernest Hartsburg, Des Moines, Iowa
Application September 18, 1935, Serial No. 41,088
5 Claims. (Cl. 281—29)



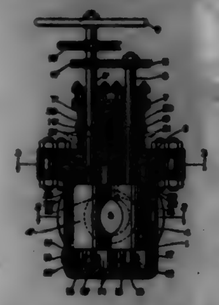
5. A method of re-covering books, including the cutting of cloth approximately to size for a case, putting the lettering for the back of the book on the cloth, marking the reverse side of the cloth according to the location of the back lettering for the placing of the back strip and boards, gluing the back strip and boards to the cloth, completing the case, and binding the book therein.

2,029,102
GRAMOPHONE RECORD AND PROCESS FOR MANUFACTURE THEREOF
Guy Hilhouse, Surbiton, England, assignor to Trusound Limited, London, England, a corporation
No Drawing. Application August 7, 1930, Serial No. 473,787. In Great Britain May 16, 1930
7 Claims. (Cl. 18—48.4)



1. The method of forming a gramophone record without the use of an adhesive, consisting in placing superposed thin, flexible transparent discs of celluloid together with an intermediate co-extensive sheet of fibrous material in a heated press, then pressing the discs and sheet together while the press remains heated sufficiently to cause the surfaces of the celluloid disks in contact with the paper to be extruded into the pores of the paper and thus effect a permanent union of the paper and celluloid disks, and then cooling the press and removing the pressure.

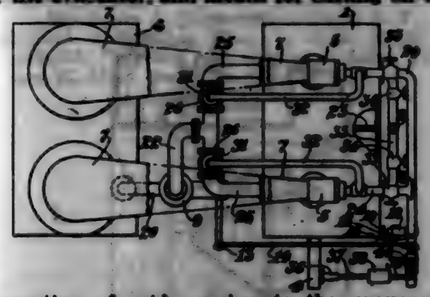
2,029,103
PHOTO-ELECTRIC INTAGLIO AND RELIEF ENGRAVING SYSTEM
Walter Hovey, New York, N. Y.
Application March 15, 1932, Serial No. 599,034
2 Claims. (Cl. 178—5)



1. A photo-electric engraver comprising a light sensitive scanner, a vacuum tube amplifier adapted to increase the strength of the output of the scanner, a graver, an actuating arm therefor, a bi-polar armature on the arm spaced apart from the graver, a separate coil for each pole connected in opposition to each other, a push-pull amplifier comprising a pair of amplifier tubes actuated by an amplified current from the scanner, connections from one coil to the plate of one of the push-pull tubes, and connections from the other coil to the plate of the other push-pull tube, and cooperating means for indicating the successive positions of the graver.

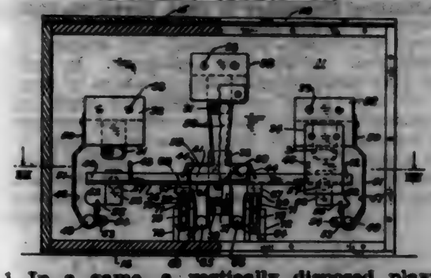
2,029,104
PRESSING MACHINE—RECIPROCATING TYPE
George W. Johnson, Cincinnati, Ohio, assignor to The American Laundry Machinery Company, Norwood, Ohio, a corporation of Ohio
Application June 10, 1935, Serial No. 25,784
17 Claims. (Cl. 68—9)

1. In a pressing machine, two spaced pairs of coacting pressure producing members, means for actuating each pair of members in pressure-producing and pressure-releasing directions, work-carrying means movable alternately in two directions, each movement being adapted to position an article to be pressed between one pair of pressure members and simultaneously to move a pressed article from the other pair of pressure members to exposed position, and continuously operating control mechanism having operative connections with said work-carrying means and with each of said pair-actuating means for causing continuous repetition of a cycle including movement of the work-carrying means in one direction to place an article between one pair of members, actuation of that pair of pressure producing members in pressure-producing and pressure-releasing directions, movement of the work-carrying means in the other direction, and actuation of the other pair of pressure producing members in pressure-producing and pressure-releasing directions.



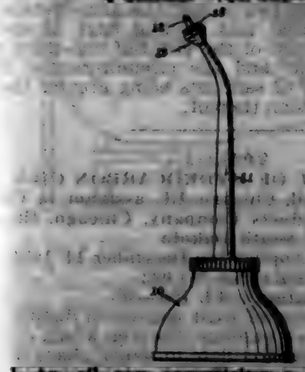
2,029,105
VALVE
William R. Kinnaird, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
Application December 21, 1932, Serial No. 648,251
4 Claims. (Cl. 251—91)

1. A valve for controlling the flow of fluids which comprises, in combination, a main valve body having inlet and outlet ports, two cylindrical, rotatable members positioned within the main valve body and adjoining on a line along their outer circumference, said rotatable members being provided with a port intercepting their line of juncture and connecting the inlet and outlet ports of the valve, means for simultaneously rotating said cylindrical members in opposite directions whereby the effective opening through said port may be increased and decreased, means for introducing a cooling fluid into the valve and passing the same between the rotatable members and the main valve body and means for introducing cooling fluid into the port of said rotatable members while the port is effectively opened.



2,029,106
REFRIGERATING SYSTEM
John Kirgan, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a corporation of New Jersey
Application December 19, 1934, Serial No. 758,153
3 Claims. (Cl. 62—153)

1. The combination of an evaporator, an evacuator therefor, a condenser to which the evacuator delivers, a member connected to the evaporator and condenser, an element in said member connected to regulate the power medium for the evacuator, and means for cutting off the

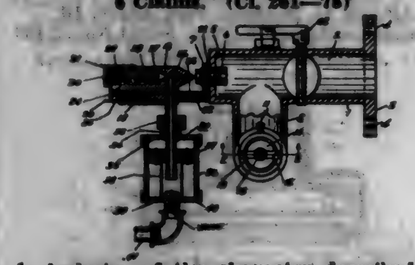


connection of said member to the evaporator when the evacuator is not operating.

2,029,107
GAME
Otto Ludwig Klein, San Francisco, Calif.
Application August 29, 1934, Serial No. 741,583
15 Claims. (Cl. 273—95)

1. In a game, a vertically disposed playing surface having a series of apertures therein, a plurality of ball return guides, a plurality of ball retainers, two or more of said apertures being in constant communication with said ball return guides, and means whereby one of said apertures will be put into communication with at least one of said ball retainers.

2,029,108
OIL CAN
Stefan Krafka, Cicero, Ill.
Application October 6, 1934, Serial No. 747,167
4 Claims. (Cl. 221—33)

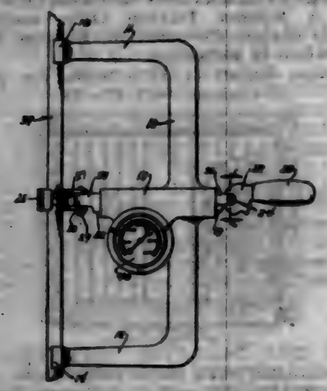


1. An oil can comprising a discharge spout having a non-stretchable annular supporting member positioned thereon and through which the end of said spout extends and a flexible sealing member secured to the forward face of said supporting member, said end of said spout constituting means for effecting the registration of said sealing member with an oil opening.

2,029,109
REFRIGERATING APPARATUS
Andrew A. Kucher, Dayton, Ohio, assignor to General Motors Corporation, Dayton, Ohio, a corporation of Delaware
Application August 31, 1933, Serial No. 687,622
15 Claims. (Cl. 62—34)

1. A container rack for a refrigerator including a generally flat metal structure having a U-shaped groove formed therein providing a track for supporting and guiding containers in a U-shaped path within the cold circulating air within the refrigerator, said rack having fastening means for fastening the rack to a refrigerator shelf.

2,029,110
FUEL SAVING DEVICE
Roy C. Lee, Irvington, N. J.
Application August 3, 1934, Serial No. 738,357
6 Claims. (Cl. 261—78)



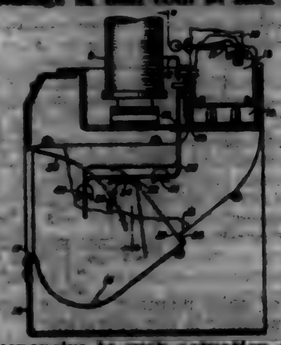
1. A device of the character described comprising a casing having a fuel inlet at its outer end and an air inlet arm intermediate its length open at its outer end, a ring in the arm constituting a valve seat and having an inwardly directed frusto-conical outer surface, a bar carried by and extending diametrically across said ring at the outer end thereof, a concavo-convexed valve head in said arm inwardly of the ring and having its convexed face presented outwardly and slidably engaged, a stem for said valve head extending outwardly through said bar, a spring urging said stem outwardly to yieldably hold the valve head seated against the inner end of said ring, and means for injecting fuel into said casing through the inlet thereof comprising an injector facing the outer end of said casing in axial alinement with said fuel inlet and a fuel container communicating with said injector.

2,029,111
DEVICE FOR MEASURING AND INDICATING TENSION ON CABLES
Christopher J. Lester, Cleveland, Ohio
Application April 22, 1935, Serial No. 17,557
3 Claims. (Cl. 245—1)

1. In an instrument of the kind described, the combination of a yoke frame having arms

which may be applied to one side of a cable at spaced points, a guide mounted on the frame, a tension rod slidable in the guide and provided with a hook for engaging the opposite side of the cable between the arms, a pressure bar slid-

able in the guide, a cam handle connected to the tension rod and bearing against the pressure bar, and a gage including a spring resisting the movement of the pressure bar and operatively connected to the pressure bar to indicate the movement thereof.



1,929,112
VENTILATING ATTACHMENT FOR PRESSING MACHINES
Alfonso G. Maltese, Park Ridge, Ill.
Application August 8, 1925, Serial No. 35,463
12 Claims. (Cl. 68—9)

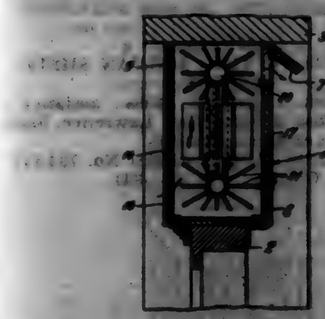
1. A pressing machine embodying co-operating pressing elements having relative movement one toward and away from the other, the movable one of said elements being heated, an open hood carried with and covering said movable member, said hood having an air discharge outlet, a fan mounted within said hood for causing a circulation of air into the hood, around the press member and through said outlet, and means for operating the fan.

1,929,113
TELEPHONE COIN COLLECTOR
Percy E. Mills, Towaco, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York.
Application May 15, 1926, Serial No. 21,556
16 Claims. (Cl. 133—57.5)

1. A coin collector comprising a refund chute having a coin pocket accessible from outside said collector, means for discharging deposited coins into said chute, a pivoted member actuated from its normal position when a deposited coin is discharged into said chute, a vane normally substantially closing said chute above said pocket but actuated by the weight of a discharged coin to permit passage of said coin to said pocket, and

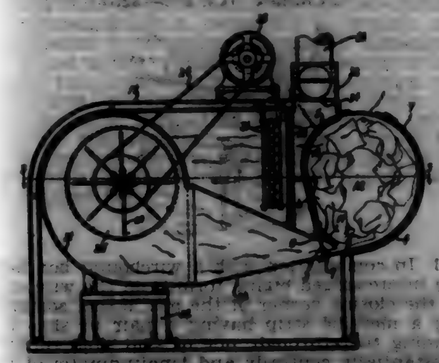
means responsive to such actuation of said vane for restoring said member to its normal position.

1,929,114
STONE SAW
William Milne, Barre, Vt.
Application December 7, 1931, Serial No. 795,459
8 Claims. (Cl. 125—23)



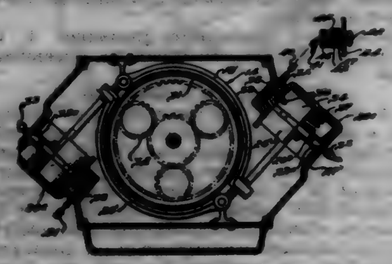
3. A stone saw comprising a circular blade having sets of integrally connected teeth projecting from the periphery thereof at an angle inclined in the direction opposite to the direction of rotation, the teeth tapering from their outer ends toward their bases at such angles that the ratio of circumferential width of teeth to circumferential width of gullets is approximately the same at different radii throughout the operative length of the teeth, said ratio being approximately two to one, the angle between the circumferential and leading edge of each tooth being at least of the order of one-third of a complete circle, and the circumferential dimension of each of said sets being greater than the radial dimension thereof.

1,929,115
TREATMENT OF HYDROCARBON OILS
Jacque C. Morrell, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of South Dakota
No Drawing. Application December 14, 1931, Serial No. 581,023
4 Claims. (Cl. 196—24)



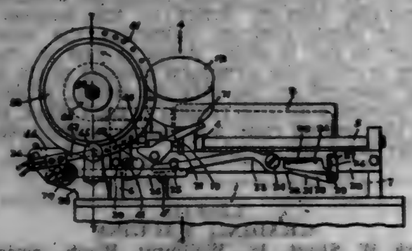
1. In the refining of light petroleum distillates of the character of gasoline, the step which comprises treating the distillate in vapor phase with a solution containing sufficient sulphuric acid to effect substantial refining of the vapors and to which has been added a saturated hydrocarbon in amount sufficient to dilute the sulphuric acid substantially.

1,929,116
VENTILATING DEVICE
Benjamin A. Morton, New York, N. Y.
Original application May 2, 1928, Serial No. 273,178. Divided and this application February 25, 1932, Serial No. 595,624
4 Claims. (Cl. 98—33)



1. A ventilation device comprising a container having vertically separated openings in one side, vertically separated openings in the opposite side, means for closing the diagonally opposite pairs of openings alternately, incandescent means in said container intermediate said openings, light-diffusing means in a wall of said container between said incandescent means and the room, and a member so located and supported within the container as to form a draft stack with the light-diffusing member and simultaneously acting as a reflector for the incandescent means.

1,929,117
DRYING MACHINE
Charles H. Otis, Rochester, N. Y., assignor to The American Laundry Machinery Company, Norwood, Ohio, a corporation of Ohio
Application April 15, 1931, Serial No. 530,326
10 Claims. (Cl. 34—7)



1. In a fabric drying machine, means providing a work container of generally cylindrical form, the central portion of said container means being substantially unobstructed, said structure having an opening through which work may be received and withdrawn and a closure for said opening, said container having air inlet means arranged for delivery of drying air into said container generally tangentially thereof, the container having means providing for outlet of said air without permitting egress of work with the air.

1,929,118
DRIVING MECHANISM
Herbert F. Patterson, Detroit, Mich., assignor to Chrysler Corporation, Detroit, Mich., a corporation of Delaware
Application January 25, 1924, Serial No. 706,213
25 Claims. (Cl. 74—242)

1. In a driving mechanism having a transmission of the epicyclic type, a drive controlling clutch for said transmission, said clutch comprising relatively movable frictionally engageable members, means for actuating said clutch, and additional means for actuating said clutch during operation of the driving mechanism independently of said first clutch actuating means each of said actuating means being adapted to provide the same speed ratio drive.

1,929,119
PHONOGRAPH MECHANISM
Charles Lepel Richardson and Arthur P. Holden, Toronto, Ontario, Canada, assignors to H. Norton De Witt, Toronto, Ontario, Canada
Application May 31, 1932, Serial No. 614,353
19 Claims. (Cl. 274—17)

10. In a phonograph mechanism, the combination with a phonograph record and a reproducer power operated to travel over said record, of electrically operated means for starting and stopping the phonograph mechanism, a pair of spring contacts included in the starting and stopping means, a rotatable member having a rim of thin insulating material extending between and separating said contacts and having perforations arranged at predetermined intervals to permit said contacts to engage and close the circuit, a helical spring fixed at one end and connected at its other end to said rotatable member, a drum connected to said rotatable member, a tape secured at one end to said drum and encircling same and secured at its other end to the power driven reproducer, means for automatically releasing said reproducer from its power drive at one end of its travel to permit the spring to return same to its starting position, and means for automatically connecting said reproducer with its power drive at the other end of its travel.

2,029,120

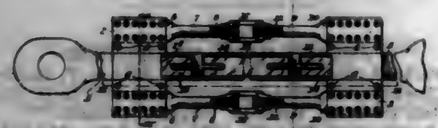
SEPARATION OF UNSATURATED HYDROCARBONS FROM GAS MIXTURES CONTAINING THE SAME

Heinrich Schilling, Ludwigshafen-on-the-Rhine, and Robert Stadler, Ziegelhausen-on-the-Neckar, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany

No Drawing. Application December 3, 1931, Serial No. 578,844. In Germany December 10, 1930

5 Claims. (Cl. 260—170)

1. A process for the separation of acetylene from a gas mixture containing the same which comprises absorbing said acetylene in a liquefied substance which under atmospheric pressure is gaseous at 15° C. and condensable at a temperature above 100° below zero C. but different from substances chemically converting said acetylene and from substances composed of an unsaturated hydrocarbon, by washing the said gas mixture with such liquefied substance.



2,029,121

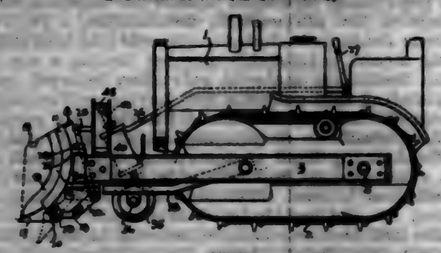
METHOD FOR ADJUSTING THE LENGTH OF STRUCTURAL MEMBERS

Robert Seeman, Merrick, N. Y., and Allen R. Wilson, Philadelphia, Pa., assignors to Ernest H. Pacy, Pittsburgh, Pa.

Application December 23, 1931, Serial No. 582,849

13 Claims. (Cl. 29—151)

1. The method of adjusting the length of a structural member, which comprises applying a removable take-up device to the member at spaced points thereon, tightening the take-up device to put it under strain to test it, thereafter severing the structural member in the portion spanned by the take-up device, adjusting the severed ends with respect to each other, joining the severed ends, and removing the take-up device from the member.



2,029,123

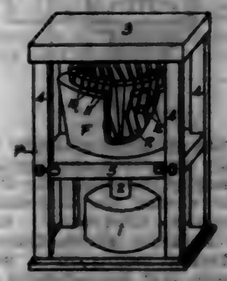
GRADING MACHINE

Mark W. Stout, Jr., Wellpinit, Wash., assignor of forty one-hundredths to John C. Wynecoop, Wellpinit, Wash.

Application January 12, 1935, Serial No. 1,566

4 Claims. (Cl. 37—144)

1. The combination with an automotive vehicle, of a frame pivotally supported thereon and comprising a pair of side beams, a rigid cross bar joining the free ends of said beams, and an excavating blade mounted at the front of the frame, of a ground wheel, a frame for the wheel pivotally supported in said side beams and including a yoke, a motive fluid cylinder pivoted on the yoke, a piston in the cylinder and a stem therefor, a pivotal connection between said stem and the cross bar, and means for supplying motive fluid to said cylinder.



2,029,124

PROCESS OF FITTING JORDAN SHELL LININGS

Harold D. Stuck, Lawrence, Mass., assignor to John W. Bolton & Sons, Inc., Lawrence, Mass., a corporation of Massachusetts

Application July 12, 1934, Serial No. 734,819

15 Claims. (Cl. 29—84)

1. The process of fitting the knives and separators of a preconstructed Jordan engine shell lining section which consists of placing the knives and separators in the large end of a truncated conical mould and of forcing the assembly into the small end of such mould.

2,029,134

SEALING MEANS FOR WIREBOUND BOXES

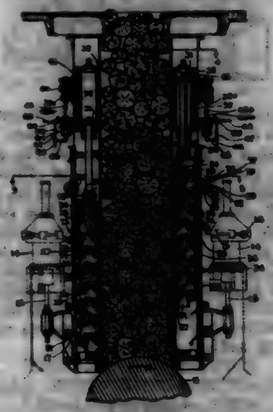
Alfred L. Rosemund, Rockaway Borough, N. J., assignor to Stapling Machines Co., a corporation of Delaware

Application March 2, 1934, Serial No. 713,833

2 Claims. (Cl. 292—325)

1. In combination with a wirebound box having interengaged bights formed on the wire ends at the closing corner of the box, a seal comprising a metallic strip having a pair of slots extending therethrough, one of said slots running substantially centrally and longitudinally of the strip to receive one of the bights on the end of the wire binding prior to interengagement of the bights, and the other of said slots running at substantially a right angle to the first slot and spaced therefrom and from that end of the strip, a tongue at the other end of the strip bent over the interengaged bights on the end of the wire binding and extending through the second slot to encase the interengaged bights, the tongue and the opposite end of the strip being united by piercing and crimping the metal of the strip to seal the encasement of the interengaged bights.

2,029,125



WOOD GRINDING MACHINE

Andrew N. Russell and John D. Robb, Lachine, Quebec, Canada, National Trust Company Limited, executor of said John D. Robb, deceased, assignors to Dominion Engineering Works Limited, Lachine, Quebec, Canada

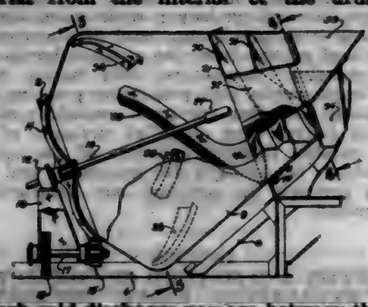
Application May 18, 1933, Serial No. 671,125

In Great Britain August 11, 1841

8 Claims. (Cl. 83—75)

1. A pulp wood grinder comprising a magazine, a plurality of reciprocable feed members arranged therein, a piston connected to each feed member, a separate cylinder for each of said pistons, high and low pressure fluid supply lines, a valve mechanism for each cylinder operable to periodically connect one end of said cylinder with the high pressure fluid supply line to effect a working stroke of the feed member and to periodically connect the remaining end of the cylinder with the low pressure fluid supply line to effect a return stroke of the feed member, said valve mechanism also serving to connect each end of the cylinder with an exhaust line during admission of fluid to the opposite end of the cylinder, a differential piston connected to operate said mechanism to positions alternately connecting each end of the cylinder with its respective fluid supply line, a differential cylinder containing said differential piston, one end of said differential cylinder being in constant communication with a pressure line, and means functioning periodically to alternately connect the remaining end of the differential cylinder with a pressure line and with an exhaust line.

2,029,126



MIXING APPARATUS

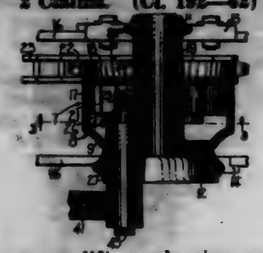
Adolph W. Rybeck, Milwaukee, Wis., assignor to T. L. Smith Company, Milwaukee, Wis., a corporation of Wisconsin

Application March 1, 1934, Serial No. 713,491

3 Claims. (Cl. 83—73)

1. In a material mixing apparatus, a rotatable mixing drum having an opening at one end, a tubular duct in said end of the drum to afford a charging passage, said duct being spaced from the adjacent wall of the drum to provide a discharge passage around the outside of the duct and extending a substantial distance into the drum, and a spiral wall encircling the tubular duct with one edge fixed to the duct and its opposite edge fixed to the drum to mount the duct from the drum without closing said discharge passage, and said spiral wall being operable upon rotation of the drum in one direction to eject material from the interior of the drum out

through said discharge passage between the duct and the adjacent wall of the drum.



2,029,127

POWER LIFT CLUTCH MECHANISM

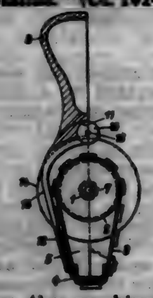
John Schaeffer, Hericon, Wis., assignor to The Van Brunt Manufacturing Company, Hericon, Wis., a corporation of Wisconsin

Application November 2, 1933, Serial No. 696,524

2 Claims. (Cl. 192—62)

2. In a power lift mechanism comprising a continuously rotating drum member, an intermittently rotatable plate member journaled concentrically with said drum member, and means for causing said plate member to be rotated with said drum, a relatively large cylindrical trunnion formed on said rotatable plate and extending axially thereof, a bearing in which said trunnion is journaled, a pivot pin supported on said trunnion and disposed eccentrically to the axis thereof, said pin projecting outwardly beyond the outer side of said bearing, and a lifting link pivoted on said outwardly projecting end of said pin.

2,029,128



STAMP

Herbert Schönfelder, Leipzig, Germany, assignor to Elizabeth Tietze, née Friedrich, Molkau/Leipzig, Germany

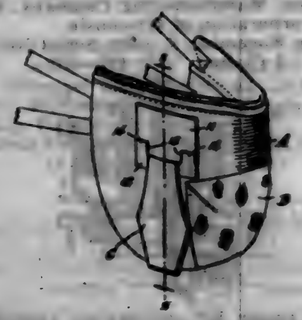
Application December 14, 1932, Serial No. 647,294

In Germany May 3, 1932

5 Claims. (Cl. 101—111)

1. In a stamp the combination of: a casing including a knob; a spindle mounted in said

casing; a printing bar carried by the casing; a plurality of pulleys independently rotatable upon said spindle and provided with discs slightly projecting from said casing, said disc serving for setting said pulleys from the outside; bands carrying printing characters, said bands being passed each over a pulley and the printing bar; said casing including the knob consisting of two identical halves, the plane of division of the casing passing through the axis of the spindle upon which the pulleys are mounted, and also passing through the printing bar, substantially as described.



2,029,129

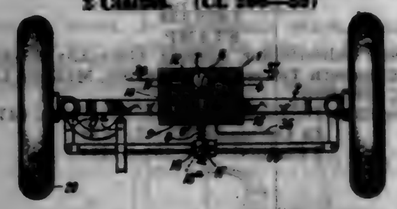
MEANS FOR AND METHOD OF CONNECTING AN EXHALATION VALVE, SEPARATOR, OR SIMILAR ELEMENT WITH THE FACE PIECE OF A RESPIRATOR, GAS MASK, OR THE LIKE

Nathan Schwartz, New York, N. Y.

Application July 26, 1935, Serial No. 33,198

4 Claims. (Cl. 128—146)

1. In a respirator, gas mask or the like, a face piece having a slit, an element having an open end extending through said slit, swatches of gas impervious material adhesively applied to the exterior of the face piece adjacent said slit and adhesively joined to said element and to each other.



2,029,130

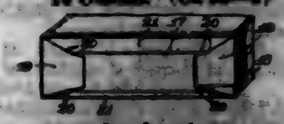
SWITCH MECHANISM

Paul A. Schwartz, Flushing, N. Y.

Application April 8, 1931, Serial No. 528,545

2 Claims. (Cl. 200—52)

1. In a selective switch for electrical circuits adapted to be operated by a shiftable member connected to steering mechanism, a basic support, normally fixed electrical contacts mounted thereon, a movable electrical contact pivotally mounted on said basic support between said fixed contacts and having an operating arm, and yielding actuating means for said operating arm comprising a flexible member overlapping said arm in mutually retentive relationship therewith to angularly displace said arm and an automatically adjustable connector for attachment to the shiftable member to be movable therewith to apply force to said flexible member laterally thereof.



2,029,131

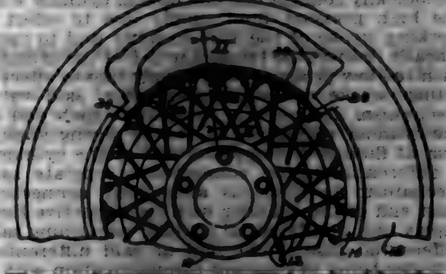
WRAPPER OF TRANSPARENT OR ORNAMENTAL CHARACTER AND METHOD OF MAKING THE SAME

Milton J. Shoemaker, Madison, Wis., assignor, by mesne assignments, to Carbide and Carbon Chemicals Corporation, New York, N. Y., a corporation of New York

Application May 27, 1931, Serial No. 540,275

16 Claims. (Cl. 93—1)

1. The process for forming a wrapper under tension upon an article which comprises wrapping upon at least a portion of said article a sheet of thin, limp, wet material having film-forming properties, said sheet being capable of shrinking substantially upon drying, arranging portions of said sheet in overlapping relation, pressing said overlapping portions together to cause adherence of the sheet portions, and drying said wrapper, the inherent adhesive properties of said wet sheet being sufficient to hold the overlapping portions together against the shrinking forces exerted by the shrinking action of the sheet.



2,029,132

WHEEL BALANCE

Owen R. Skelton, Grosse Pointe Farms, Mich., assignor to Chrysler Corporation, Detroit, Mich., a corporation of Delaware

Application December 10, 1932, Serial No. 647,067

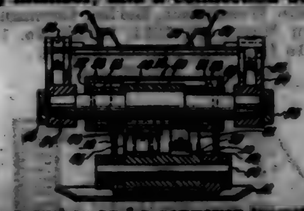
1 Claim. (Cl. 301—5)

The combination in a vehicle wheel having a rim of channel section, a liner over the rim serving as a protective covering for the outer periphery of the base of said channel rim, a tire casing on said rim, an inner tube within said casing in contact with the outer periphery of said liner, of a circumferentially shiftable balancing weight between the adjacent faces of said liner and said rim temporarily held in a predetermined position by said liner and permanently held in position by the pneumatic pressure in said inner tube.

2,029,133

DRIVE MECHANISM FOR SHAKER CONVEYERS

William W. Sloane, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a corporation of Illinois



Application May 1, 1933, Serial No. 669,871

Renewed June 15, 1935

5 Claims. (Cl. 74—26)

1. A casing for shaker conveyer drives including side and end walls and a detachable cover, bearing support means in the sides of said casing,

a rotatable crank journaled therein, other bearing support means in the sides of said casing, a bell crank member journaled therein for rocking movement with respect thereto, a third set of bearing support means in the sides of said casing, a rocking member journaled therein, a connection between said bell crank member and rocking member, and a connection between said

rocking member and a conveyer trough for reciprocably driving said conveyer trough at a predetermined variable acceleration, said casing being so arranged and constructed that other rocking and connecting members may be interchanged with said first-mentioned members for changing the conveying action of said conveyer trough without changing said bearing means.

2,029,134

TIGHTENING DEVICE

Harry Stanley, Rocky River, and Vincent J. Muir, Cleveland Heights, Ohio

Application June 20, 1934, Serial No. 731,492

4 Claims. (Cl. 24—264)

1. A tensioning device comprising a pin rotatable about its axis and having an axial bore for the reception of the end of a string, means enclosing the end of said bore and an opening through the wall of the pin to said axial bore.

2,029,135

MUSICAL INSTRUMENT

Harry Stanley, Rocky River, and Vincent J. Muir, Cleveland Heights, Ohio

Application December 5, 1934, Serial No. 756,099

9 Claims. (Cl. 84—298)

1. A bridge for musical instruments comprising a rigid bar having string engaging recesses, and threaded members rigidly and permanently secured to said bar and adapted to clamp the same upon a surface of a musical instrument.

2,029,136

TIME ELEMENT DEVICE

Harry M. Stevens, deceased, late of Schenectady, N. Y., by Emmanuan Stevens, executrix, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York

Application October 4, 1932, Serial No. 632,112

11 Claims. (Cl. 128—94)

1. In a relay time element mechanism of the type wherein a fluid containing chamber of variable volume is provided with means for changing its volume, a restricted passage from said chamber for the admission and emission of fluid, a relatively unrestricted passage from said chamber, and valve means for controlling the flow of fluid in said unrestricted passage constructed and arranged to occupy any one of a plurality of positions therein, said valve means being opera-

tive in one of said positions to prevent only emission of fluid from said chamber through said unrestricted passage and in another of said positions to prevent only admission of fluid through said unrestricted passage to said chamber and means for controlling said valve when in said other position to prevent any flow of fluid in said unrestricted passage.

2,029,137

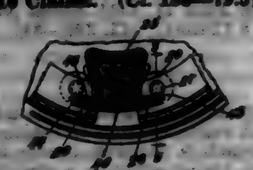
ELECTRORESPONSIVE DEVICE

Harry M. Stevens, deceased, late of Schenectady, N. Y., by Emmanuan Stevens, executrix, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York

Original application October 4, 1932, Serial No. 632,113. Divided and this application May 2, 1935, Serial No. 19,623

5 Claims. (Cl. 200—87)

1. A relay comprising relatively movable cooperating contacts, actuating means therefor including a collapsible mechanism, means for maintaining said mechanism rigid to hold said contacts in one position, means for collapsing said mechanism including a movable operating member, a projection on said operating member extending in the path of movement of said mechanism and engageable therewith on longitudinal movement of the operating member in one direction while the mechanism is collapsed to restore it to the rigid condition, said operating member being rotatable to a position such that said projection is out of the path of movement of said mechanism whereby longitudinal movement of the operating member in said direction while the mechanism is collapsed is ineffective to reset the mechanism.



2,029,138

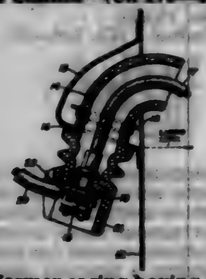
BRAKE SHOE CENTRALIZING DEVICE

William Sterrie, Providence, R. I., assignor to Lewis R. Smith, receiver for Apco Mossberg Corporation, a corporation of Rhode Island

Application December 19, 1934, Serial No. 758,251

10 Claims. (Cl. 188—79.5)

1. In a brake, a pair of movable shoes, a support member provided with a supporting surface

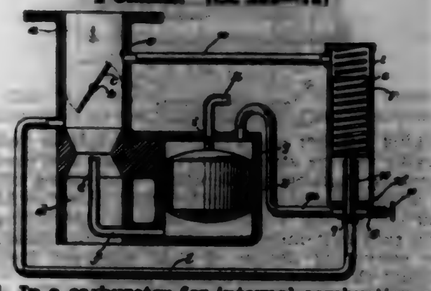


thereon, a spacing member on said surface, secured to said support member and means on said shoes to slidingly engage said member and support the shoes thereby.

2,029,129
ASH RECEPTACLE
Gustave V. Stalm, New York, N. Y.
Application January 23, 1931, Serial No. 511,675
4 Claims. (Cl. 131—51)

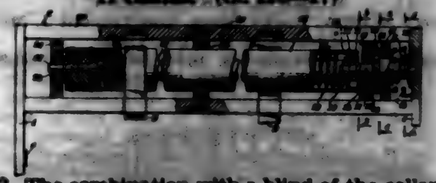
1. An ash receiver for cigars and cigarettes comprising a shallow flanged tray, a receptacle of substantially greater height than the tray, mounted in the tray but spaced from the flange thereof, air vents formed in the lower portion of said receptacle and communicating with said tray and a grid spanning the top of said receptacle.

2,029,140
BUSHING FOR TRANSFORMER CASINGS
Edward D. Treanor, Pittsfield, Mass., assignor to General Electric Company, a corporation of New York
Application November 1, 1934, Serial No. 750,993
3 Claims. (Cl. 175—361)



3. A transformer casing having an overhanging side pocket, an insulating bushing secured through the bottom of said pocket, a transformer terminal secured in the outer end of said bushing, said bushing having an integral flange extending between said terminal and the adjacent wall of the casing and having an opening in its side opposite the casing, an electrode secured to the terminal and extending through said flange opening with its outer end spaced from the outer part of said pocket to provide a discharge gap, and an insulating liquid in said casing with its level between that of said terminal and said outer part of the pocket.

2,029,141
DEVICE FOR SPRAYING
Earl S. Warner, Valleville, Conn., assignor to Air-Flo Corporation, Boston, Mass., a corporation of Massachusetts
Application June 11, 1934, Serial No. 730,055
8 Claims. (Cl. 299—89)



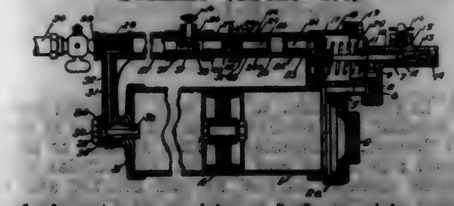
8. The method of atomizing a liquid substance to be sprayed which consists in forcing air under pressure through a tapered nozzle reducing in diameter and terminating in a circular opening and provided with means for imparting a rotary motion to the formed cylinder of air and simultaneously projecting a liquid substance to be sprayed in a ribbonlike stream in the axis of the revolving cylindrical stream of air and in the direction of flow of the air.

2,029,142
CARBURETOR FOR COMBUSTION ENGINES
Wilhelm Wennhöner, Berlin, Germany
Application March 15, 1934, Serial No. 715,769
In Germany March 15, 1933
2 Claims. (Cl. 261—72)

1. In a carburetor for internal combustion engines, in combination, a float chamber, a mixture conduit including a venturi, a fuel jet in said venturi, a throttle valve in said conduit posterior to said venturi, a fuel pipe leading from said chamber directly to said jet, a passage leading from a point in said chamber above the fuel level therein to a point in said conduit between said venturi and said throttle, a cylinder, a piston slidable in said cylinder, a valve on said piston adapted to control said passage, a spring in said cylinder urging said valve toward closed position, a second passage from said cylinder behind said piston to a point in said conduit beyond said throttle, and adjustable means to admit air to said first passage between said valve and said chamber.

2,029,143
VENETIAN BLIND AND MECHANISM FOR OPERATING THE SAME
Miles O. Wicks, Glen Cove, N. Y.
Application August 24, 1934, Serial No. 741,262
11 Claims. (Cl. 160—17)

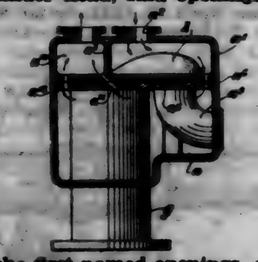
2. The combination with a blind of the collapsible type, of a spring roller attached to the top of the blind, and means connected to one end of the spring roller for controlling tension of the spring therein and for controlling the raising and lowering of the blind.



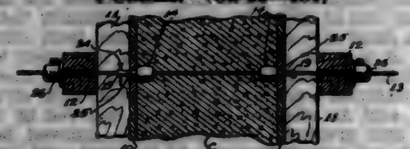
2,029,144
ELECTRIC DISCHARGE DEVICE OR VACUUM TUBE
Erich Wiegand, Berlin-Waldesruhe, Germany, assignor to General Electric Company, a corporation of New York
Application April 27, 1934, Serial No. 722,783
In Germany May 4, 1933
4 Claims. (Cl. 250—27.5)

1. The method of introducing a highly reactive metal into the envelope of an electric discharge device which consists in forming a stable alloy of said metal with a highly reducing metal, mixing said alloy with an exothermically reducible

compound sufficient in amount to react only with said reducing metal, and heating said mixture to a reaction temperature in said envelope.



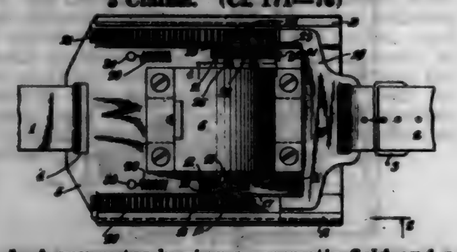
2,029,145
MOTOR
George B. Wilson and Karl C. Hagley, Erie, Pa.
Application June 29, 1932, Serial No. 619,937
4 Claims. (Cl. 121—150)



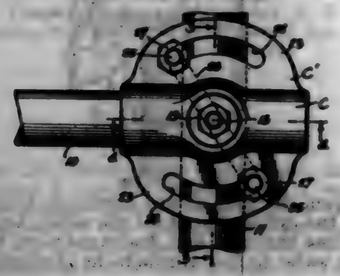
1. A motor comprising a body; a piston operating in the body; a pressure fluid supply means delivering fluid to the body in pressure relation to the piston; and a valve mechanism in said supply means comprising a valve chamber, a reciprocating valve seating in the chamber and controlling an alternate fluid supply and exhaust to and from the body, said valve having opposed differential surfaces subjected to the supply fluid with the surface of lesser area subjected to ingoing fluid and the surface of greater area to the outgoing fluid, said chamber having an inlet for the ingoing fluid, an outlet leading to the body and an exhaust port discharging the fluid from the outlet side of the valve, said exhaust being closed during the building up of pressure in the body and valve chamber, the valve being immediately responsive in alternative movement to pressure differences on the opposite ends of the valve induced by fluid pressure differences.

2,029,146
WATER COOLING SYSTEM FOR INTERNAL COMBUSTION ENGINES
Gottfried Wirrer, Plainfield, N. J., assignor to International Motor Company, New York, N. Y., a corporation of Delaware
Application August 3, 1934, Serial No. 738,871
6 Claims. (Cl. 123—173)

1. In an internal combustion engine having a jacketed cylinder head and a jacketed cylinder, a combustion chamber exposed to the interior of the cylinder, an inlet port in the cylinder head through which cooling water passes over the combustion chamber, inlet and exhaust ducts disposed within the cylinder jacket, registering openings in the cylinder head and cylinder jacket remote from said inlet port through which water passes from the cylinder head to the cylinder jacket, one of said openings being disposed in proximity to the exhaust duct and adjacent one side thereof, other registering openings in the cylinder jacket and cylinder head through which the water passes from the cylinder jacket back into the cylinder head, said openings being remote from the first named openings, a discharge port in the cylinder head for the water, and means separating the inlet and discharge ports to cause cooling water to flow through the aforesaid openings.

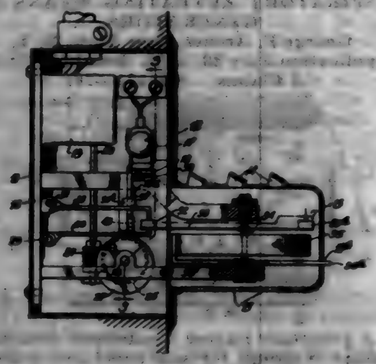


2,029,147
CORE FOR MOLDING CONCRETE
MacGregor S. Anderson, Chicago, Ill.
Application May 21, 1934, Serial No. 726,639
4 Claims. (Cl. 25—131)



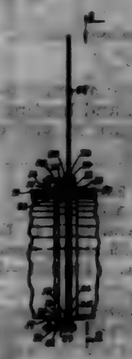
1. A device of the class described for molding concrete, comprising a form tie rod, a radially expansible and endwise compressible core of resilient material mounted on said tie rod, and means for compressing said core endwise comprising clamp plates engaging the ends of said core and provided with relatively rotatable shank portions having threaded engagement with each other, one of said shank portions extending through said core.

2,029,148
RESPIRATORY ACTUATING MEANS FOR GENERATORS
George F. Archer, New York, N. Y.
Application July 20, 1935, Serial No. 32,373
3 Claims. (Cl. 171—76)



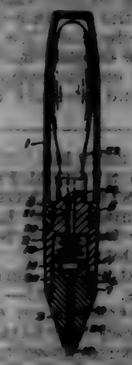
1. A generator having a magnetic field and an armature, a mount for said generator, guideways on said mount, separate gear trains operably engaging said armature, respective racks, slidable in said guideways, in operative engagement with said gear trains, belt means whose opposite ends respectively engage said mount and racks for their movement in one direction during respiratory induced expansion of the belt means, and spring retracting means operable during respiratory induced contraction, whereby the armature is caused to rotate within the field.

2,029,140
GROUND CONNECTER
George L. Barnes, Los Angeles, Calif.; Marne O. Barnes administratrix of said George L. Barnes, deceased
Application April 20, 1933, Serial No. 667,199
2 Claims. (Cl. 247—1)



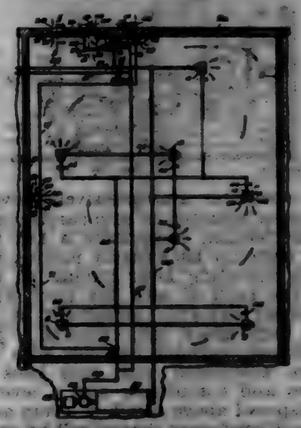
1. A ground connecter characterized by a body structure formed with reversely disposed arcuate slots and alined annularly grooved jaws interposed between the slots; means connecting with the slots to secure said clamping element to a service conduit or water pipe to dispose the jaws in any one of different positions angularly thereto; a fixed bolt projecting from said body structure at a point intermediate the said jaws and medially of the body member and including means for confining a conductor against said body structure, and an element removably received by the bolt and provided with annularly grooved jaws which are complementary to the first said jaws, and means on the bolt for moving said element axially of the bolt, as and for the purpose set forth.

2,029,150
CONDITION CONTROLLED MECHANISM
Paul H. Bear, Dowagiac, Mich., assignor of three-fourths to Herbert E. Ruckles, Jr., Elkhart, Ind.
Application February 14, 1935, Serial No. 6,691
15 Claims. (Cl. 74—53)



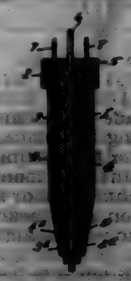
1. In apparatus of the class described, a part to be moved, a constantly reciprocating member, a second member spaced therefrom and parallel thereto in all positions, the second member being operably connected to the part so as to move the part from one position to another as the second member is moved, and a condition-controlled element normally out of operative relation with both members and movable into operative relation connecting said members to transmit motion from the constantly reciprocating member to the second member to move the part.

2,029,151
GOGGLE VALVE
Charles G. Bigelow, Chicago, Ill., assignor to Freyn Engineering Company, Chicago, Ill., a corporation of Maine
Application October 16, 1934, Serial No. 748,271
3 Claims. (Cl. 251—167)



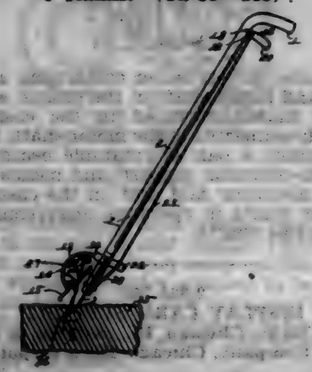
1. In combination, a first pipe, a second pipe, an annular seat secured to said first pipe at one end thereof, an annular bracket secured to said second pipe at an end thereof, an annular collapsible member carried by said bracket and a second annular seat carried by said collapsible member, spacing bolt means cooperating with said first seat and said bracket, a goggle plate movable between said seats, bolts for clamping said goggle valve between said seats, and cracking bolts threaded into said seats for loosening said goggle valve.

2,029,152
INK HEADSEATING DEVICE
Teofil L. Bonkowski, New York, N. Y.
Application September 22, 1934, Serial No. 745,059
4 Claims. (Cl. 138—36)



1. A fluid container and dispenser comprising a casing, a reservoir in one end of the casing, a plunger having a recess in the upper end adapted to hold a small amount of fluid extending thru a tip in the opposite end and a valve positioned above the plunger adapted to be opened by said plunger as it is moved inward.

2,029,153
REFRIGERATION PROCESS AND APPARATUS
James A. Burner, Minneapolis, Minn., assignor to Air Systems Incorporated, Minneapolis, Minn., a corporation of Minnesota
Application August 30, 1929, Serial No. 389,496
Renewed November 16, 1932
3 Claims. (Cl. 62—271)



1. A refrigerating process for cooling refrigeration chambers which consists in supplying a refrigerant to a plurality of refrigerating coils located at different points in the chamber to be cooled, passing air rapidly through the various refrigerating coils to cause the refrigerant to absorb heat from the air and deflecting the air as it passes through the refrigerating coils in such manner as to maintain a constant circulation of air in a desired direction to all portions of the refrigeration chamber.

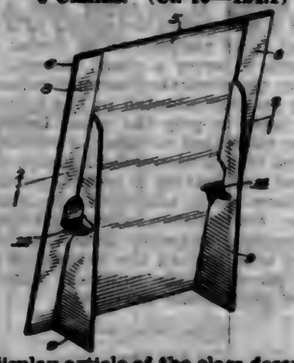
2,029,154
PROCESS OF MAKING CUTTING BLOWPIPE TIPS
Lora Campbell, Jr., Lakewood, Ohio
Application February 11, 1931, Serial No. 515,324
2 Claims. (Cl. 29—157)

1. The process of making a unitary blowpipe tip having a central bore for cutting oxygen and a plurality of bores for preheating mixture grouped about such central bore, said process consisting in providing a blank of ductile metal; forming in one end of said blank an annular recess; providing said blank with a central bore for cutting oxygen extending longitudinally therethrough and with a plurality of bores for preheating mixture extending longitudinally therethrough and grouped about the central bore and substantially parallel therewith and communicating each at one end with said recess; inserting into said bore cylindrical mandrels of smaller diameters than the diameters of said bores; and subjecting the end of said blank which is opposite the one provided with the annular recess to pressure in such manner that the said end is given a substantially frusto-conical shape, the delivery portions of all of said bores are brought into engagement with the corresponding portions of said mandrels therein, and the delivery end portions of the bores for preheating mixture are reduced in diameter and are inclined toward the reduced delivery end of the central bore and the delivery end portion of each bore for preheating mixture merges smoothly with the enlarged portion of such bore which is remote from the delivery end of the tip.

2,029,155
IMPLEMENT FOR REMOVING WEEDS AND THE LIKE
William F. Cervenka and Fred Miller, Traverse City, Mich.
Application September 11, 1935, Serial No. 40,021
6 Claims. (Cl. 55—148)

1. A horticultural implement comprising, in combination: an elongated member including a body part having at its upper end a handle portion and a lower part consisting of a cutting tool of chisel form adapted to be thrust endwise into the earth to sever a plant therein; a lever fulcrumed on the elongated member adjacent the tool, having an arm adapted in one turned position of the lever to grip the plant between said arm and the elongated member; a member movably mounted on the elongated member adjacent its upper end and having a handle portion, said handle portions being adapted to be grasped by the operator; connections extending between the movably mounted member and the lever for moving said arm toward the elongated member to grip the plant, by the mutually approaching movement of said handle portions.

2,029,156
OXIDE FLOTATION
Ludwig J. Christmann, Jersey City, and Stuart A. Falconer, Elizabeth, N. J., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application November 1, 1934, Serial No. 751,610
4 Claims. (Cl. 209—166)

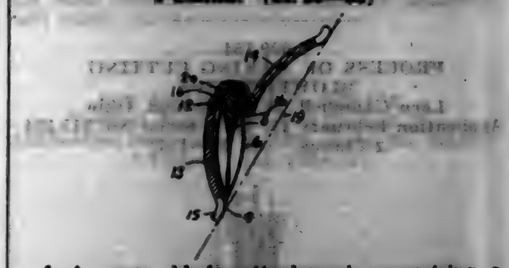


3. A method of concentrating oxidized ores which includes the step of subjecting an oxidized ore to a froth flotation operation in the presence of sodium mercaptobenzothiazole, phosphoric acid and a frother.

2,029,157
MOTOR-DRIVEN BEATER
Arthur B. Church, Chicago, Ill., assignor, by mesne assignments, to Hamilton Beach Manufacturing Company, Racine, Wis., a corporation of Wisconsin
Application February 6, 1931, Serial No. 513,815
10 Claims. (Cl. 259—121)

1. A motor driven beater comprising a casing, a motor and motor shaft in the casing, a pair of rotatable shafts journaled in the casing and operatively connected to the motor shaft, a beater unit including a pair of rotatable beater shafts and a non-rotatable support, and means for detachably mounting said unit on the casing with the beater shafts in operative engagement with said rotatable shafts.

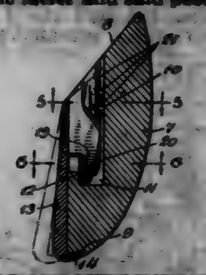
2,029,158
DISPLAY CARD SUPPORT
John D. Clarke, Chicago, Ill., assignor to Chicago Carton Company, Chicago, Ill., a corporation of Illinois
Application May 3, 1935, Serial No. 19,562
6 Claims. (Cl. 40—124.1)



1. A display article of the class described, comprising a main body having display material on its front and having an easel formation on its back, said easel formation comprising a narrow flap extending from one edge of the body member, integral therewith, rebent and secured to said back thereof, a wing extending from the inner edge of said rebent flap, said wing being foldable into angularly disposed relation to said flap and having its lower edge adapted to engage the surface on which the display article is placed to support the same in operative position, and means for locking said wing in said angularly disposed relation.

2,029,159
TYPEWRITER
Seward A. Dean, St. Paul, and Obed M. Russell, Hastings, Minn., assignors of one-fourth to Arthur C. Cragg, one-fourth to Le Roy Wellver, and one-fourth to Roy F. Wilder, all of St. Paul, Minn.
Application April 20, 1932, Serial No. 606,352
2 Claims. (Cl. 197—6)

1. In a typewriter, a progressively movable carriage, a platen mounted on said carriage and back spacing mechanism comprising a key lever, an actuating lever for backwardly moving said carriage, said actuating lever having an arm disposed in the path of said key lever whereby a predetermined swinging movement of said key lever will back space said carriage a predetermined distance, variable carriage stop or guard mechanism associated with said back spacing mechanism and comprising also a lever having an arm disposed above said key levers and so related to said key levers that it will be swung different predetermined distances by said several levers and a movable guard or stop selectively positioned for engagement with said carriage by said carriage stop actuating lever.



2,029,160
RAZOR ATTACHMENT
Carl Friedrich Erx, Solingen-Wald, Germany
Application December 9, 1933, Serial No. 701,585
5 Claims. (Cl. 30—53)

1. A razor blade attachment comprising a spring for engaging the blade, hinged means to serve as a guard for the cutting edge of the razor blade and as a handle to manipulate the spring to apply the attachment to or remove it from the blade, and faces on said means for directly engaging the blade to retain said means in different positions.

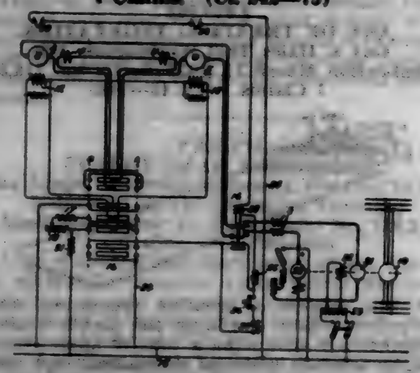
2,029,161
BACKING FOR ARTIFICIAL TEETH
Hyman Freedman, Brooklyn, N. Y.
Application January 20, 1934, Serial No. 707,718
1 Claim. (Cl. 32—8)

In a dental bridgework, an artificial tooth provided in its rear surface with a groove extending from the inner end of the tooth to a point short of the incisal tip thereof and having cross-sectional areas of different widths, and a backing having a ledge engageable with the incisal tip of said tooth and provided with a post insertable into said groove, said post having one portion conforming to the contour of the different cross-sectional areas of said groove and another portion conforming only to the smaller cross-sectional area of the groove, both of said portions being of smaller dimensions than the corresponding areas of said groove so as to provide a space between the walls of the latter and said post, whereby the

inner adjacent faces of the tooth and backing may assume a relative angular position until said post is entirely inserted into said groove, said tooth and backing thereafter having relative lateral movement to abut said faces and thereby engage said ledge with said incisal tip, and the total length of said post being less than that of said groove.

2,029,162
BAR CLAMP FOR BELTS
Jesse G. Gibson, Bradford, Pa., assignor of fifty-one per cent to Bovaird and Company, Bradford, Pa., a copartnership consisting of George W. Bovaird and Joseph H. Bovaird
Application January 30, 1934, Serial No. 708,089
15 Claims. (Cl. 24—31)

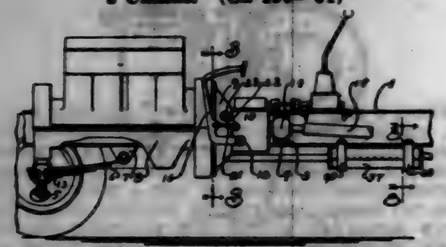
1. A bar clamp for belts comprising opposing series of bar sections, said sections having complementary hinge members at opposite sides connecting the sections, said hinge members having surfaces locking one section against disengagement from another.



2,029,163
AUTOMATIC AIR VENT FOR PIPE LINES UNDER PRESSURE
Benedetto Giovenale, Rome, Italy
Application January 14, 1932, Serial No. 851,693
In Italy April 15, 1931
2 Claims. (Cl. 137—93)

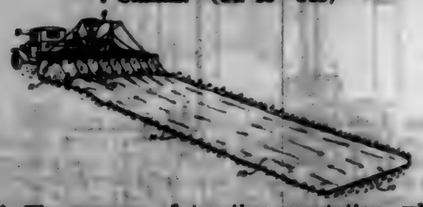
1. Automatic air vent for pipe lines adapted to be operated by the pressure of water or other liquid flowing therethrough, so as to respectively control the discharge and the introduction of air in the pipe line as it is being filled with or emptied of liquid, and also to allow the escape of air accumulating in the pipe line during its operation, comprising in combination with a chamber communicating with the pipe line, a vertical cylinder connected to said chamber, a piston adapted to be moved vertically in said cylinder by the differential action of the hydrostatic pressure applied to the underside of said piston by means of a pipe directly connecting the underside of said piston with the pipe line, and the hydrodynamic pressure applied to the upper side of said piston conveyed thereon through said chamber, curved pipe and passages, a main valve integral with said vertical piston, a container having its underside connected with said chamber for collecting the air contained in the pipe line, a float vertically movable in said container, being guided therein by central upper and lower pivots, a second smaller vertical cylinder, an air escape valve at the top of said container con-

trolled by said upper pivot leading to a tube connected to the top of said smaller vertical cylinder, and a second piston valve provided in said smaller vertical cylinder adapted to be operated by the air conveyed therein from said container, thus automatically discharging to atmosphere all the air collecting in the pipe line when the said main valve is closed.



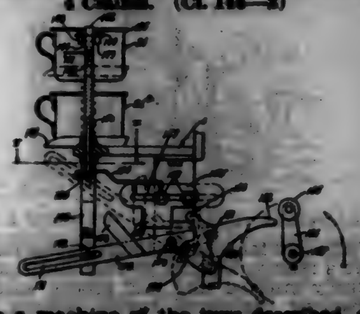
2,029,164
ROLLING MILL DRIVE
Wilfred B. Green, Rugby, England, assignor to General Electric Company, a corporation of New York
Application October 27, 1931, Serial No. 571,407
In Great Britain October 28, 1930
7 Claims. (Cl. 242—75)

1. In combination with means for winding and unwinding a continuous strip of material having a winding reel and an unwinding reel, a pair of dynamo-electric machines each connected to one of said reels, and each provided with a series field



winding and a parallel field winding, a supply generator, said generator and dynamo electric machines being connected in series relationship with each other, means for controlling the energization of said field winding so that the windings of the winding reel machine act cumulatively and the windings of the unwinding reel machine act differentially thereby to maintain the tension of the strip substantially constant and means for controlling said dynamo electric machines so that the voltage of one of said machines adds to the generator voltage and the voltage of the other of said machines opposes the generator voltage.

2,029,165
VEHICLE CONTROL
Newton F. Hadley, Beverly Hills, and Edward J. Delahanty, Detroit, Mich., assignors to Chrysler Corporation, Detroit, Mich., a corporation of Delaware
Application January 2, 1931, Serial No. 506,114
Renewed July 19, 1935
2 Claims. (Cl. 180—64)



1. In a vehicle having a chassis frame and a motor including variable transmission mechanism, a member on one end of said motor swiveled on said frame, means yieldably supporting the other end of said motor, a housing having a gear shift lever swiveled therein mounted on said frame rearwardly of said member, a shiftable shaft operatively associated with said gear shift lever and rotatably mounted in said housing, and a flexible link located in registration with said member pivotally attached at one end to said shaft and at the other end to said transmission mechanism for operating the latter by movement of said gear shift lever and adapted to prevent movement of said gear shift lever by the movement of said motor.

2,029,166
ART OF TREATING VEGETATION
Guy S. Hake, Port Washington, Wis.
Application March 21, 1934, Serial No. 716,569
7 Claims. (Cl. 43—143)

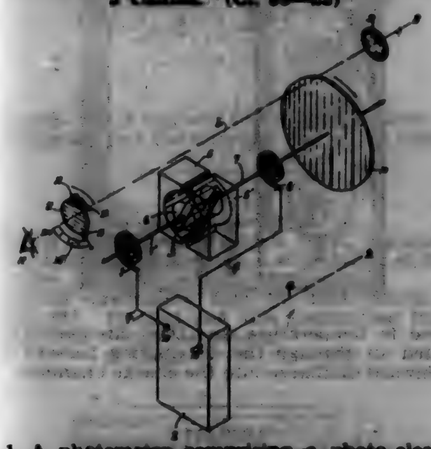
1. The process of treating vegetation, which comprises, totally confining the plants while simultaneously advancing a zone of application of volatile treating material therealong, and subsequently maintaining such total confinement of the plants while gradually and positively forcing the volatile material into intimate contact therewith for a definite period of time after such initial application of the treating material.

2,029,167
CUP MOVING MECHANISM
Morten Hansen, Los Angeles, and Joseph F. Pollen, Glendale, Calif.; said Pollen assignor to William G. Young, Los Angeles, Calif.
Original application June 24, 1932, Serial No. 619,100. Divided and this application July 25, 1933, Serial No. 682,082
4 Claims. (Cl. 146—2)

1. In a machine of the type described, a cup, means for supporting said cup in a predetermined position, a second cup, second means for independently supporting said second cup directly below said first cup, and means actuated in response to removal of said first cup from said predetermined position for lifting said second cup vertically into said predetermined position and into supported relation with said first supporting means.

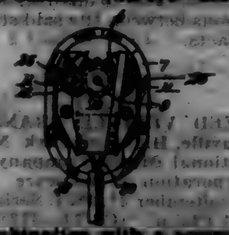
2,029,168
SULPHONATED HIGHER UNSATURATED CARBOXYLIC ESTERS OF POLYHYDROXY SUBSTANCES
Benjamin R. Harris, Chicago, Ill.
No Drawing. Application November 16, 1929, Serial No. 407,796
15 Claims. (Cl. 260—156)

1. A derivative of an unsaturated higher fatty acid ester of a sugar, the ester being solid at ordinary room temperatures, there being a sulphate group attached to a carbon at a double bond of the unsaturated fatty acid.



2,029,169
INTERNAL COMBUSTION ENGINE
Yasunaburo Hiroaka, Tsuwano-cho, Kano-Ashigun, Shimane-ken, Japan
Application June 13, 1932, Serial No. 617,006
4 Claims. (Cl. 123—48)

4. In an internal combustion engine, including a cylinder and piston, means for varying the throw of the piston under variations of pressure in the cylinder, including a shaft, a ratchet wheel mounted thereon, a pawl device for turning said shaft in alternately opposite directions and

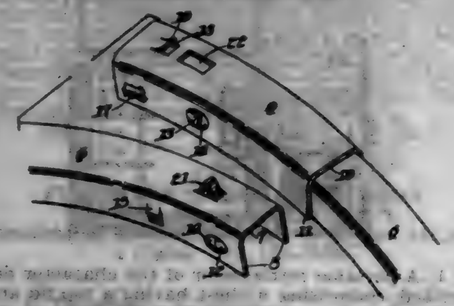


means for actuating said pawl device and turning said ratchet wheel in a direction dependent on the variation of pressure in the cylinder.

2,029,170
PHOTOMETER
Lloyd Irving Hall, Milwaukee, Wis.
Application February 4, 1933, Serial No. 655,897
5 Claims. (Cl. 88—23)

1. A photometer comprising a photo-electric device constituting a source of current and arranged to receive light from a source to be measured and an electrical measuring instrument for indicating the electromotive force generated by said photo-electric device, having a rotatable shaft, an electrical connection between the measuring instrument and the photo-electric device, whereby to cause the shaft to rotate in response to current flowing through the device, and an optical system comprising two tourmaline plates, a lens, the lens and tourmaline plates being located in the same light path, one of said plates being mounted on the shaft for rotation therewith, the other of said plates being manually rotatable, a pointer attached by suitable means to the last mentioned plate and a scale for cooperation with said pointer, for determining the current flow through said indicating means.

2,029,171
BRUSH FOR MOTORS AND GENERATORS
August F. Lundquist, Worcester, Mass., assignor to Lundquist Tool & Mfg. Company, Worcester, Mass., a firm consisting of August F. Lundquist and Einar B. Lundquist
Application October 22, 1934, Serial No. 749,527
3 Claims. (Cl. 171—221)

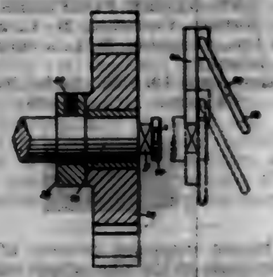


3. The combination with a commutator and a brush therefor, of a fixed stud on which the brush is centrally and rotatably mounted, and means connecting the stud with the brush for rotating the brush through a substantially complete revolution automatically as it is worn away.

2,029,172
MATERIAL FOR LEATHER SUBSTITUTE AND OTHER PURPOSES
Albert J. Hanley, Cranston, R. I., assignor to Keepro Inc., Cranston, R. I., a corporation of Rhode Island
Application April 19, 1933, Serial No. 666,843
8 Claims. (Cl. 91—68)

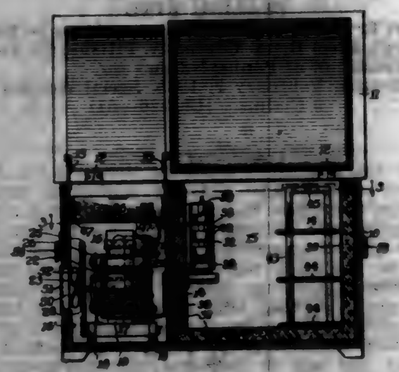
1. The herein disclosed process of making a leather substitute or the like, which comprises applying a rubber compound to a textile fabric base having attached loops of thread projecting therefrom in an uncut state, drying and effecting vulcanization of the rubber compound and at one stage in the process pressing the uncut loops of thread into flattened condition in the applied compound, substantially parallel to the general plane of the fabric to provide a smooth fibrous surface.

2,029,173
SEALING RING
Albert E. Joyner, Edgewood, Pa., assignor to Pittsburgh Steel Drum Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application February 2, 1933, Serial No. 654,833
9 Claims. (Cl. 220—61)



1. In a split ring of the character described having overlapping ends, one of said ends having a latch portion and the other end having interlocking means co-operating with said latch portion to resist circumferential opening movement of said ring, the outermost portion of the overlapping ring end having means co-operating with the other end portion resisting outward opening movement of the ring when said ring is closed.

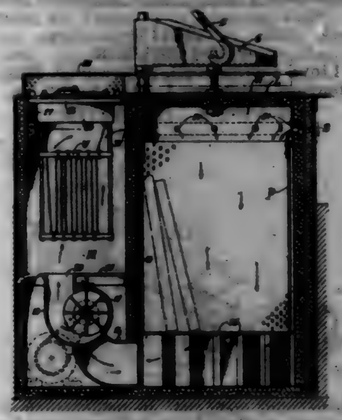
2,029,174
CHANGE GEAR MECHANISM
Max Junge, Chemnitz, Germany, assignor to J. E. Reinecker, A. G., Chemnitz, Germany
Application June 12, 1934, Serial No. 730,243
2 Claims. (Cl. 287—53)



1. In a change gear mechanism of the character set forth a trunnion, a gear wheel detachably mounted on said trunnion, the latter having a head which outwardly projects off the trunnion proper and is notched laterally so as to present a pair of guiding faces, the latter being parallel to each other, a slotted disc adapted to slidingly fit into the notched portion of the said head, and additional locking means for securing said slotted disc in its operative position, said additional locking means comprising a stirrup shaped clasp

resiliently hinged to the slotted disc by means of pivots, which extend at an obtuse angle to each

other, and being adapted to engage the projecting head of the trunnion.



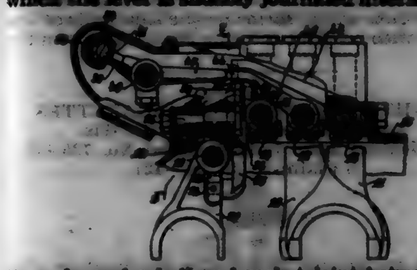
2,028,175
PORTABLE REFRIGERATOR
Sylvester A. Limpert, Bay Shore, N. Y., assignor to Mechana Kold Corporation, Bay Shore, N. Y., a corporation of New York
Application December 4, 1933, Serial No. 700,789
9 Claims. (Cl. 62—116)

1. A portable refrigerator of the character described, comprising a chest having a top lid and a transverse partition dividing the body of the chest into two compartments, refrigerant circulating means mounted in one of said compartments, and a freezing unit mounted in the other compartment and pipe connected to said circulating means, said freezing unit comprising a relatively narrow and deep box open at its top, and an ice cube tray vertically insertible and removable through the open upper end of said box.

2,028,176
DRAWING FURNACE
Le Roy A. Lindberg, Evanston, Ill., assignor to Lindberg Engineering Company, Chicago, Ill., a corporation of Illinois
Application January 14, 1935, Serial No. 1,753
2 Claims. (Cl. 266—5)

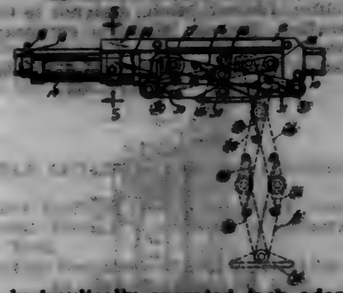
1. In a drawing furnace having a charge chamber open at the top together with a removable cover therefor, the combination of walls defining a separate heating chamber extending vertically adjacent the charge chamber and in free communication therewith adjacent its bottom, means providing a horizontal distributing passage circumferentially of the charge chamber in its upper region and in communication with the upper region of the heating chamber, a heating unit mounted within the heating chamber, and means below the heating unit for drawing air from the bottom region of the charge chamber, sending the air upwardly past the heating unit to be thereby

raised in temperature, and then circulating the heated air through the distributing passage for downward discharge into the charge chamber.



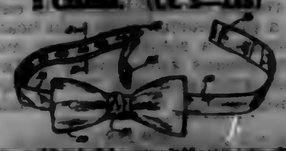
2,028,177
GAME APPARATUS
Ben MacDougall, Chicago, Ill., assignor to Fred C. McClellan, Chicago, Ill.
Application November 15, 1935, Serial No. 49,969
4 Claims. (Cl. 273—121)

1. A score control device for an amusement apparatus of the type which includes a cabinet having a member providing a ball-playing surface provided with ball-receiving pockets, said score control device comprising score-indicating means, a plurality of electrical circuits for operating said score-indicating means and each of said circuits including a switch closed by the action of a ball entering one of said pockets, each of said circuits also including a stationary contact and a movable contact and the latter being movable successively into engagement with said stationary contacts, and means for moving the said movable contacts successively into engagement with the said stationary contacts to change, by chance, the relative positions between the said stationary and movable contacts.



2,028,178
FOUR-SPEED VEHICLE TRANSMISSION
Keith E. Manville, Highland Park, N. J., assignor to International Motor Company, New York, N. Y., a corporation of Delaware
Application September 23, 1934, Serial No. 745,011
1 Claim. (Cl. 74—473)

A transmission mechanism having a plurality of shifter rods lying in a horizontal plane, shifter fingers on the shifter rods, the ends of the fingers having angular portions terminating in a vertical plane, a transmission operating mechanism, a lever to actuate the fingers by the mechanism, a guide rod parallel to the shifter rods and upon which the lever is slidably journaled intermediate



its ends, and a ball and socket joint between the mechanism and the adjacent end of the lever.

2,028,179
VEHICLE JACK
Harold J. Marlowe, Brooklyn, N. Y., assignor to Jackomatic Corporation, a corporation of Delaware
Original application July 22, 1931, Serial No. 552,428. Divided and this application March 24, 1932, Serial No. 600,852
13 Claims. (Cl. 254—121)

8. A hydraulically operated jack adapted for permanent mounting on a vehicle adjacent the underside thereof, including in combination, an extendible and retractable lazy-tong jack unit, cylinder and piston operating mechanism for the jack unit, and a common supporting member for the jack unit and the cylinder and piston mechanism, the connections between the jack unit and the supporting member being such that all vertical components of thrust are transmitted from the jack unit to the vehicle through the supporting member without affecting the cylinder and piston mechanism.

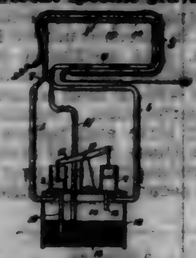
2,028,180
NECKTIE CONSTRUCTION
William Mayer, New York, N. Y.
Application July 27, 1933, Serial No. 681,483
2 Claims. (Cl. 2—145)

1. In an adjustable necktie, a neckband portion comprising inner and outer plies having their edges doubled inwards and stitched together to form a relatively thick margin of at least four plies, an additional strip of material, narrower than the neckband portion, stitched at its edges to the outside of said inner ply, said stitches extending only through the inner ply and lying within the medial area between said margins, said strip having a series of perforations arranged in predetermined longitudinally spaced relation, said neckband portion being adapted to be doubled back upon itself and provided at its end with a hook adapted to engage with a selected perforation, a reinforcement band underneath said strip and having perforations registering with those in said strip, and means marginally interengaging each pair of registering perforations for securing the reinforcement band in position.

2,028,181
NECKTIE CONSTRUCTION
William Mayer, New York, N. Y.
Application August 12, 1935, Serial No. 35,747
3 Claims. (Cl. 2—155)

1. In an adjustable necktie having a neckband portion adapted to be doubled back upon itself, a male fastening element at the end of said portion, and a band carried by the neckband portion on its inner surface and provided with longitudinally spaced perforations, whereby said fastening element may be engaged with any selected perforation to adjust the effective length of said neckband portion; said band comprising a length of flattened tubular-woven fabric, and said perforations being longitudinal slits extending only through the exposed ply of said band.

2,028,182
FURNITURE SPRING SUSPENSION
Charles C. Murdock, Buffalo, N. Y.
Application November 5, 1932, Serial No. 641,389
1 Claim. (Cl. 155—179)



A furniture spring suspension comprising a frame; a plurality of main springs each of which is connected at one end with said frame; a pivot bar connecting the other ends of said main springs; a draw bar connected to said frame and a resilient connection between said pivot bar and said draw bar.

2,028,183
ADVERTISING SIGN OF ELECTRIC LIGHTS
Eizo Mukasa, Meguro-ku, Tokyo, Japan
Application December 29, 1933, Serial No. 704,578, Renewed November 23, 1935. In Japan December 31, 1932
2 Claims. (Cl. 40—130)

1. An advertising electric light sign characterized in that it comprises a liquid pipe overlapped on an electric luminous member and a liquid tank connected to said liquid pipe, said liquid tank containing a plurality of liquids of different

colors and different specific gravities, and means

for causing the liquids of the layers in the tank to alternately flow through said liquid pipe.

2,029,124
OIL BURNING APPARATUS
Arthur E. Paige, Philadelphia, Pa.
Application April 7, 1933, Serial No. 665,149
3 Claims. (Cl. 158—91)

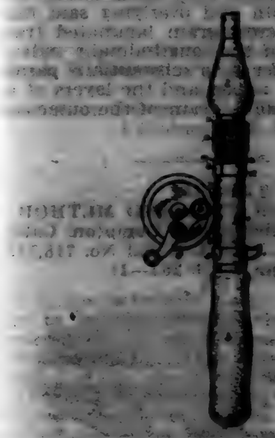
1. The combination with an annular oil burner bowl, having a central air conduit; of an air jacket surrounding said bowl in spaced relation with the rim thereof, adapted to conduct air to support combustion in said bowl; air directing means overlying said bowl and respectively adapted to direct air outwardly with respect to said axis and inwardly with respect to said rim, including a cap at the axis of said bowl and supported by said central air conduit and an air distributing ring overhanging the rim of said bowl and supported by said jacket; and means respectively connecting said cap with said bowl and said bowl with said ring in variable vertically spaced relation; whereby the quantity and proportions of air delivered to said bowl, outwardly from the axis thereof and inwardly from the circumference thereof and consequently the shape of the flame produced by combustion in said bowl may be varied by relative vertical adjustment of said cap and bowl with respect to said ring.

2,029,185
SPINNING BUCKET
Vincent Pasoff, Bellort, France, assignor to General Electric Company, a corporation of New York
Application October 16, 1934, Serial No. 748,210
In France November 2, 1933
3 Claims. (Cl. 117—27.5)

1. A spinning spindle comprising a driven shaft, a spinning bucket, means for positively fastening the bucket to the shaft, and a removable false bottom adapted to fit in said bucket for removing the cake which forms on the side walls of the bucket without disconnecting the bucket from the shaft.

2,029,186
LIGHTING DEVICE FOR CIGARETTES
Norman Peterson, Marinette, Wis.
Application June 7, 1935, Serial No. 725,453
6 Claims. (Cl. 44—42)

2. In an igniting device, the combination with an article to be ignited treated with potassium permanganate, of a device separate from the article containing a material including glycerine for causing a chemical reaction with the potassium permanganate and the article to bring about the instant combustion of the article and the giving off of free oxygen by the potassium permanganate to support combustion when the treated portion of the article is placed in contact with the material in said device.

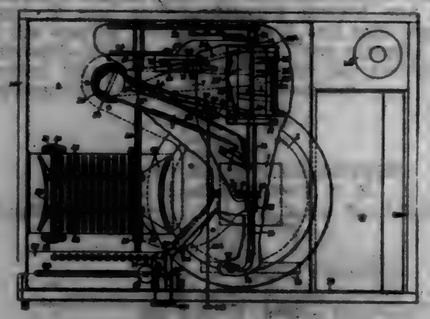


2,029,187
CLUTCH MECHANISM
Karl Pfeiffer, Detroit, Mich., assignor to Chrysler Corporation, Detroit, Mich., a corporation of Delaware
Application March 10, 1932, Serial No. 598,259
5 Claims. (Cl. 192—68)

4. A clutch including driving means and a driven member, a clutch disc mounted on said driven member, a pressure ring shiftably mounted on said driving means, springs bearing between said pressure ring and said driving means normally retaining said disc in frictional engagement with said driving means, spaced lugs on said pressure ring having registering apertures therein, a rolling contact bearing in each of said apertures, a pin journaled in said bearings, and means including a rotatable finger mounted on said driving means and having rolling contact engagement with said pin for retracting said pressure ring against the action of said springs.

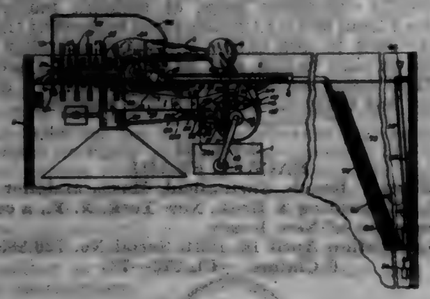
2,029,188
REEL BASE-PLATE FISHING-ROD ATTACHING MEANS
Joseph L. Potter, Indianapolis, Ind.
Application November 23, 1934, Serial No. 754,486
3 Claims. (Cl. 43—23)

1. A reel seat comprising a tube having an outside annular head, means on the tube for receiving one end of a reel base, a sleeve slidably and rotatively mounted on the tube between the base of the reel and the annular head, said sleeve having means to receive the other end of the reel base, threads on the sleeve, and a nut,



threads on the nut engaging the threads on the sleeve, said nut adapted to contact the head on the tube and force the sleeve and its reel base holding means toward the reel to clamp the reel base to the tube.

2,029,189
DOUBLE ACTING INTERNAL COMBUSTION ENGINE
Johannes Radlof, Berlin, Germany, assignor to General Electric Company, a corporation of New York
Application December 18, 1934, Serial No. 758,211
In Germany April 14, 1934
5 Claims. (Cl. 123—176)



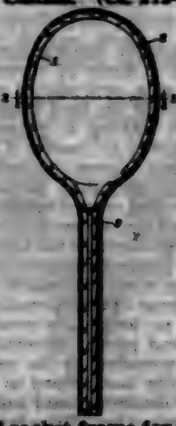
1. In a double acting internal combustion engine, the combination of a hollow piston, a piston stem secured to the piston and having an axial channel for conducting cooling medium to the piston, a tubular member surrounding the piston stem and defining an annular space for conducting cooling medium discharged from the hollow piston, and means for reducing the cooling effect of said medium on the tubular member.

2,029,190
PHONOGRAPH
Clemens E. Ranzy, Riverside, Ill.
Application July 24, 1928, Serial No. 295,617
127 Claims. (Cl. 274—19)

75. In a phonograph, record rotating means, reproducing mechanism, record feeding mechanism adapted to deliver records of different predetermined diameters and having a plurality of different carriers in alignment with said record rotating means and each delivering only a record of a certain diameter directly on said means, and means for automatically adjusting said reproducer mechanism to cooperate with the records delivered by different carriers including a cam movable with the feeding mechanism and reproducer controlling mechanism controlled by said cam.

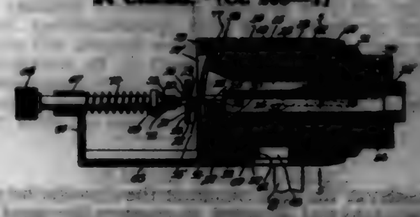
2,029,191
PHONOGRAPH
Clemens E. Ranzy, Riverside, Ill.
Application January 11, 1934, Serial No. 706,264
94 Claims. (Cl. 274—19)

23. In a phonograph, mechanism for automatically reproducing a series of records including a record rotating table, reproducer mechanism for reproducing a record on said table, a record receiving magazine having a plurality of record holders each adapted to receive a record, means for advancing said record holders toward said table, and means including a control member located alongside said record holders and in position to be engaged by the records in said holders for controlling the automatic operation of said mechanism, said control member being displaced by the insertion of a record in any of said holders whereby to continue the automatic operation of said mechanism so long as a record remains in said magazine, and means governing the return of said control member to its normal position upon feeding of the last record in said magazine to the table and disabling said automatic mechanism upon reproduction of the last record.



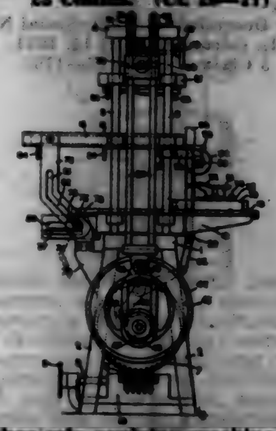
2,028,183
SMOKING STAND
Alvis M. Ray, Tacoma, Wash.
Application May 27, 1935, Serial No. 23,768
15 Claims. (Cl. 131—51)

1. A portable smoking stand comprising a body portion having an open top and a passageway therethrough communicating at the other end with the atmosphere of the room in which the stand is located, means for supporting a cigar or cigarette with its lighted end adjacent the open top of said body portion, means for creating a draft of air through said passageway in a direction away from the open top, and means for removing ashes and smoke from the air drawn through said passageway before it again reaches the atmosphere of the room.



11. In a smoking stand, the combination with a casing having an open top of means for supporting a cigar or cigarette with its lighted end adjacent said open top comprising a plurality of upwardly extending loops of resilient material formed from one continuous piece secured at their lower ends to said casing through a plurality of holes in said casing and having their adjacent vertical sides normally spaced apart by a distance less than the diameter of a cigarette.

2,028,184
RACKET FRAME
William F. Roach, Springfield, Mass., assignor to A. G. Spalding & Bros., New York, N. Y., a corporation of New Jersey
Application April 14, 1934, Serial No. 720,863
6 Claims. (Cl. 273—73)

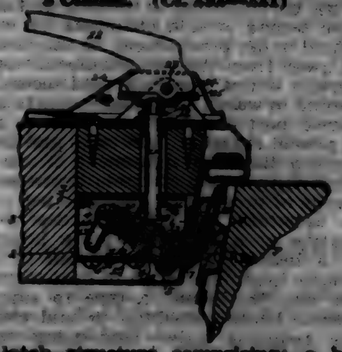


1. In a wood racket frame for tennis or the like, an inner strip portion with the grain running longitudinally thereof, said inner strip being bowed against the edge of the grain, and an outer strip portion with the grain running longitudinally thereof, said outer strip being bowed with the flat of the grain and overlying said inner strip, providing a cross-grain laminated frame having the layers of the longitudinally extending grain of the inner strip substantially parallel to the plane of the racket and the layers of the longitudinally extending grain of the outer strip transverse thereto.

2,028,194
WATCHMAKER'S TOOL AND METHOD
Eugene Myrian Richardson, Compton, Calif.
Application April 3, 1934, Serial No. 718,787
14 Claims. (Cl. 266—1)

1. The method of forming a pivot at the end of a staff which comprises drawing out the end of the staff, and turning the drawn-out end to proper size and shape to fit its bearing.

2,028,195
SHOE SOLE APPLYING MACHINE
Charles M. Riddoch, Amherst, Mass.
Application December 26, 1934, Serial No. 758,213
22 Claims. (Cl. 12—17)



10. A shoe sole applying machine comprising a frame, an upper support mounted to move vertically thereon, an upper base on the upper support, a sole pressing die on the upper base, a mid-support fixedly mounted on the frame and extending laterally therefrom, a mid-base mounted to slide laterally on the mid-support, an open die on the mid-base having its upper surface of a width to support the upper portion of the shoe sole extending beyond the upper, a lower support mounted for vertical movement on the frame and extending laterally therefrom in a direction opposite the mid-support, a lower base mounted to slide laterally on the lower support, a last having its upper portion of a size and shape to conform to the inner surface of the inner sole of an assembled shoe upper and inner sole pivotally mounted at the heel end of its lower portion to the lower base.

2,028,196
MOTOR SLEIGH
Joseph W. Roberts, Portage la Prairie, Manitoba, Canada
Application February 15, 1934, Serial No. 711,410
2 Claims. (Cl. 180—5)

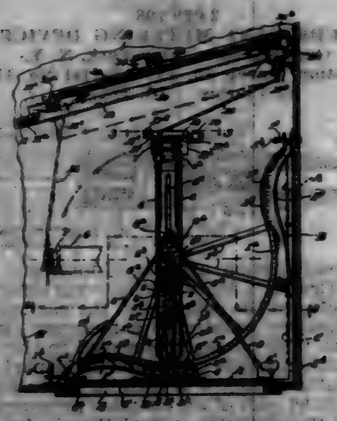
1. In an automobile sleigh movable over a surface by crawler traction, the combination with the rear end of an automobile frame, the rear axle housing underlying the rear end of the frame and the rear driving axle contained within the housing, of a gear casing pivotally carried for vertical swinging movement by the outer end of the housing, a rear shaft carried by the casing, driving connections between the shaft and the axle and contained within the casing, a road wheel secured to the shaft, a pair of forwardly and rearwardly extending side arms pivotally connected to the frame for vertical swinging movement, means pivotally connecting the rear end of the rear arm to the gear casing, a forward cross shaft underlying the forward end of the front arm and pivotally connected thereto and provided with a road wheel tracking in advance of the rear wheel, a spring associated with the arms and preventing their collapse under the weight of the load imposed on the frame, a spacing arm extending between the gear casing and the front shaft and pivotally attached to such parts, said arm being adjustable in length, a radius rod preventing rear swing of the rear axle, endless ground engaging chains passing around the rims of the wheels, chain wheels connected to the hub portion of the road wheels and an endless chain connecting the chain wheels.

2,028,197
LATCH
Gordon E. Redding, Grand Rapids, Mich., assignor to Grand Rapids Brass Company, Grand Rapids, Mich., a corporation of Michigan
Application February 22, 1934, Serial No. 712,581
5 Claims. (Cl. 292—331)

1. A latch structure comprising: a base; a latching bolt pivotally mounted thereon for projecting and retracting movements; an elongated first member pivotally connected with the bolt; a second member having a limited movement relatively to said first member in the longitudinal direction thereof; a bearing in the base wherein said second member is slidable, said bearing being so disposed that the sliding movement of said second member toward one end of the bearing projects the bolt and said second member's sliding movement in the opposite direction retracts the bolt; means for yieldingly holding the bolt in projected position.

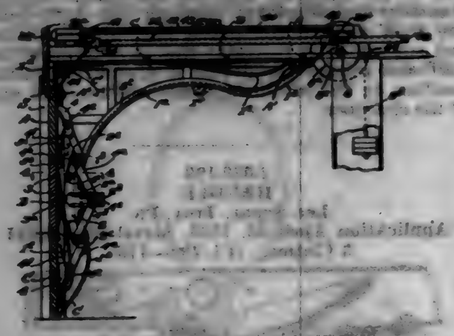
2,028,198
LUBRICANT METERING DEVICE
Oscar A. Ross, New York, N. Y.
Application March 19, 1927, Serial No. 176,221
27 Claims. (Cl. 184—7)

1. In combination, a source of lubricant, a part to be lubricated, a lubricant metering device connected between the source and the part comprising; a member containing a metering chamber having an inlet passage connected to the source and an outlet passage connected to the part, a metering piston arranged to travel between the inlet and the outlet ends of the chamber arranged to act as a seal therebetween, a port therein for transferring the lubricant from the inlet side to the outlet side of the piston, a valve member supported by the piston controlled by the movement thereof arranged to close the port as the piston is moved to the inlet end and open the port as the piston is moved to the outlet end of the chamber, resilient means normally urging the piston to the inlet end of the chamber, means for supplying lubricant under pressure from the source to the chamber whereby the chamber is filled with lubricant and the piston is moved to the outlet end of the chamber and the movement thereof actuates the valve to open the port during the final movement thereof, and means for relieving the pressure whereby the resilient means normally restrains the piston to the inlet end of the chamber and the movement thereof transfers the lubricant through the port from the inlet side to the outlet side of the piston and subsequently restrains the valve to close the port and restore the device to normal operating position as the piston impinges on the inlet end of the chamber.



2,028,199
HANDLE
Lee Segar, Troy, Pa.
Application April 23, 1935, Serial No. 17,885
3 Claims. (Cl. 292—173)

1. The combination of a latch releasing handle, a releasing plate having the handle interfitted therewith and operative for projecting the handle when pressure is applied to said plate, means connected with the handle and plate to normal-



ly hold the bans interfitted with each other and latching means directly operated upon by the handle when projected by the plate and said handle shifted in one direction.

2,029,260
SWINGING DOOR MECHANISM
Ernest L. Shaffer, Vinton, Iowa
Application June 6, 1931, Serial No. 543,672
24 Claims. (Cl. 20—30)

1. In combination, a swinging door having a plurality of hinged sections; a pivoted swingable carrier for said door connected to one section and adapted to move the door from fully closed position into fully opened position; a member movably mounted on the carrier; and means operated by the member for yieldably aligning the several sections edgewise as they move into fully closed or into fully opened positions.

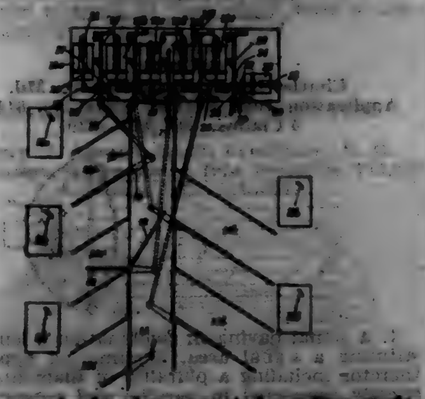
2,029,261
SWINGING DOOR MECHANISM
Ernest L. Shaffer, Vinton, Iowa
Application June 6, 1931, Serial No. 543,673
20 Claims. (Cl. 20—30)

1. In combination, a swinging door comprising a plurality of relatively movable sections; a movable carrier at each side of said door and connected therewith and adapted to move the door from its fully closed position into its fully opened position; a member movably mounted on each carrier; and means operated by the members for yieldably aligning the several sections edgewise as they move into fully closed or into fully opened positions.

2,029,262
HIGH PRESSURE SAFETY GAUGE COCK
Chester G. Shepherd, Prospect, Ill.
Application August 28, 1935, Serial No. 38,271
2 Claims. (Cl. 251—89)

1. A safety gauge cock of the class described, comprising a body having its bore at the attaching end provided with a bevelled valve seat, a conical valve for engaging said seat, vanes to ream the bore of the body above said seat, a stem section from which the vanes extend and carrying said valve, an adjustable abutment on said stem, an abutment intermediate of said body, an expansive spring arranged between said abutments and urging the valve to its seat, a bonnet screw-threaded to said body, a valve stem section screw-threaded in the bonnet, and separable coupling means between the valve stem sections.

2,029,263
TEMPERATURE REGULATOR
Elem B. Soderberg, Passaic, N. J., assignor to Leslie Corporation, Lyndhurst, N. J.
Application July 31, 1933, Serial No. 683,360
8 Claims. (Cl. 236—99)

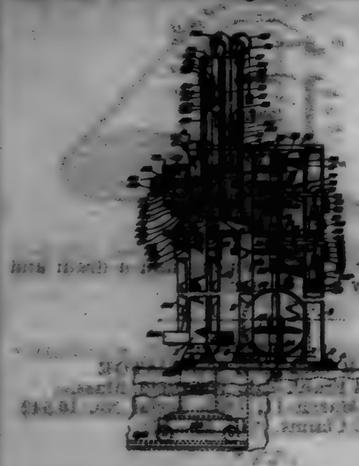


1. In apparatus of the class described, a control element comprising in combination a pair of chambers communicating through a port, a tapered restriction pin reciprocably movable within the port, an inlet to the first and an outlet from the second of said chambers by means of which fluid under pressure can be supplied to and carried away from the two chambers respectively, a further outlet port from said second chamber opening to waste, and a valve controlling said last-named port arranged responsive to pressure in said second chamber, said valve and pin being so arranged that any movement of the former will affect the position of the latter to accelerate the change of pressure in the chamber.

8. In apparatus of the class described, the combination of a container for a liquid to be heated, a heating element adapted to carry a condensable heating medium in heat-transferring relation with the liquid, a pipe to supply said condensable heating medium to said element, a pressure reducing valve controlling the flow through said pipe and adapted to reduce the pressure from a variable higher pressure to an adjustable lower pressure, said pressure reducing valve comprising a main valve controlling the flow of heating medium, pressure fluid actuated means for operating said main valve, a pilot valve admitting pressure fluid to said means, a diaphragm the pressure on which influences the extent of opening of the pilot valve, and thermostatically operated means varying the pressure on said diaphragm responsively to the temperature of the liquid to be heated.

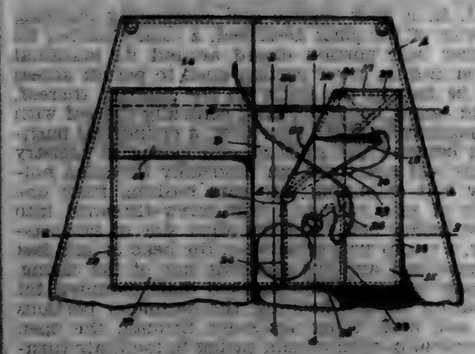
2,029,264
TRANSFER INK
Frank Solomon, New York, N. Y., assignor to Resistion Paint, Long Beach, N. Y.
No Drawing. Application May 28, 1934, Serial No. 727,912
3 Claims. (Cl. 154—32)

1. A transfer ink having a solid state in normal atmospheric temperature and flowable into a thin film in the presence of low heat from a hot iron, consisting of five parts of alcohol combined with approximately one part of titanium dioxide in the presence of heat with one-half a part of tricresyl phosphate, five parts of resin and a one-half part of varnish combined to form a binder for the other ingredients together with coloring material added thereto.



2,029,265
COIN-FREED DELIVERY MACHINE
Henry Cecil Sumner, Wyberton, and Frederick John Taylor and Frank Langley, Kirton, England
Application February 1, 1935, Serial No. 2,147
In Great Britain February 2, 1934
13 Claims. (Cl. 194—10)

1. In a coin-freed or operated vending or delivery machine having a plurality of coin-insertion positions and a plurality of goods-delivery positions corresponding thereto the combination of delivery tracks leading one to each delivery position, and electromagnetic devices for preparing, upon the insertion of a coin at a selected position, the corresponding track for delivery and for locking all other tracks against delivery until such delivery has been effected, which devices are in circuit with and include contacts at each insertion position for actuating said devices upon the insertion of a coin.

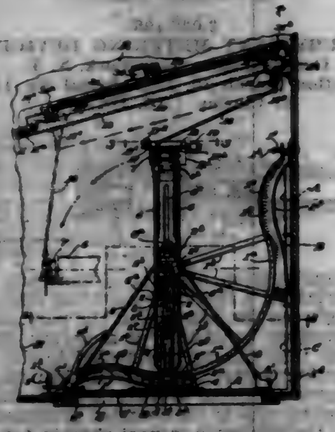


2,029,266
METHOD AND MACHINE FOR DRAWING OR PULLING WIRE
George H. Williams, Kokomo, Ind., assignor to Continental Steel Corporation, Kokomo, Ind., a corporation of Indiana
Application August 22, 1932, Serial No. 629,618
55 Claims. (Cl. 80—32)

1. In a continuous wire drawing machine adapted to draw wire from a main wire body comprising a rotatable wire drawing block, means for rotating said block, wire severing means rotatable with said block adapted to sever wire there-

on during rotation thereof and means for actuating said severing means at predetermined intervals whereby predetermined amounts of severed wire are produced from said main wire body.

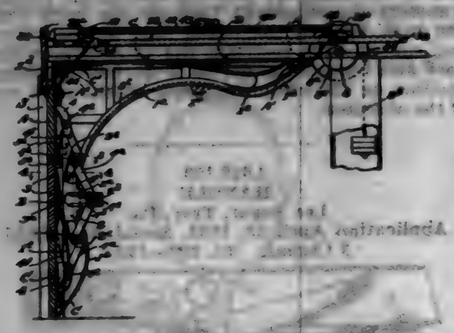
2,029,267
SAFETY WATCH POCKET FOR GARMENTS
Charles Reece Wood, Red Boiling Springs, Tenn.
Application October 24, 1933, Serial No. 695,009
In Canada April 22, 1933
7 Claims. (Cl. 2—254)



1. Pocket structure, comprising two pieces of material sewn to a backing to provide with said backing a plurality of pockets, said pieces being offset with respect to each other overlapped and secured together to provide between the overlapped portions of said pieces an additional pocket.

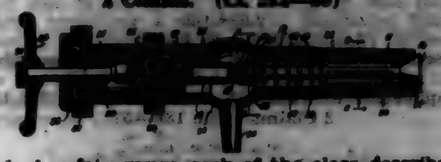
2,029,268
HUMIDIFYING HEAT-SAVER
Kirdy C. Wright, St. Paul, Minn.
Application August 22, 1932, Serial No. 629,819
14 Claims. (Cl. 261—15)

14. A heating and humidifying device for buildings including a cabinet, a series of transverse flues extending in said cabinet, connecting passageways and baffle means to direct hot gases



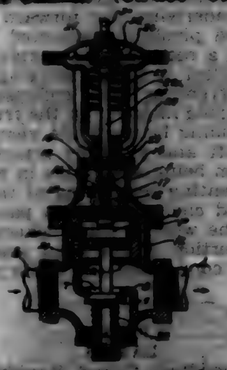
ly hold the same interfitted with each other and latching means directly operated upon by the handle when projected by the plate and said handle shifted in one direction.

1,929,200
SWINGING DOOR MECHANISM
Ernest L. Shaffer, Vinton, Iowa
Application June 6, 1931, Serial No. 543,671
24 Claims. (Cl. 20—39)



1. In combination, a swinging door having a plurality of hinged sections; a pivoted swingable carrier for said door connected to one section and adapted to move the door from fully closed position into fully opened position; a member movably mounted on the carrier; and means operated by the member for yieldably aligning the several sections edgewise as they move into fully closed or into fully opened positions.

1,929,201
SWINGING DOOR MECHANISM
Ernest L. Shaffer, Vinton, Iowa
Application June 6, 1931, Serial No. 543,675
20 Claims. (Cl. 20—39)

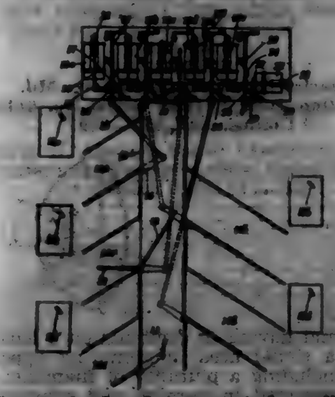


1. In combination, a swinging door comprising a plurality of relatively movable sections; a movable carrier at each side of said door and connected therewith and adapted to move the door from its fully closed position into its fully opened position; a member movably mounted on each carrier; and means operated by the members for yieldably aligning the several sections edgewise as they move into fully closed or into fully opened positions.

1,929,202
HIGH PRESSURE SAFETY GAUGE COCK
Chester G. Shepherd, Freeport, Ill.
Application August 23, 1928, Serial No. 301,271
2 Claims. (Cl. 251—39)

1. A safety gauge cock of the class described, comprising a body having its bore at the attaching end provided with a beveled valve seat, a conical valve for engaging said seat, vanes to ream the bore of the body above said seat, a stem section from which the vanes extend and carrying said valve, an adjustable abutment on said stem, an abutment interiorly of said body, an expansive spring engaging said abutments and urging the valve to its seat, a bonnet screw-threaded to said body, a valve stem section screw-threaded in the bonnet, and separable coupling means between the valve stem sections.

1,929,203
TEMPERATURE REGULATOR
Sten E. B. Soderberg, Passaic, N. J., assignor to Leslie Company, Lyndhurst, N. J.
Application July 22, 1932, Serial No. 624,360
8 Claims. (Cl. 236—20)

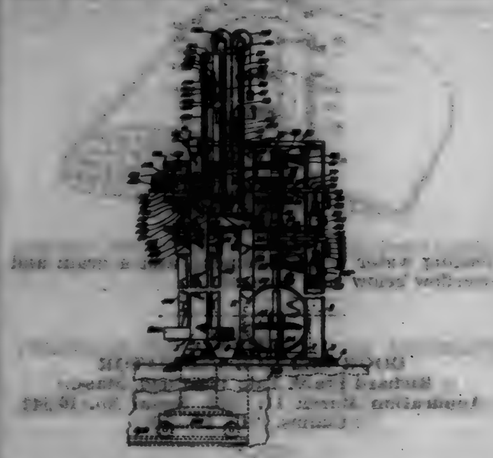


1. In apparatus of the class described, a control element comprising in combination: a pair of chambers communicating through a port, a tapered restriction pin reciprocably movable within the port, an inlet to the first and an outlet from the second of said chambers by means of which fluid under pressure can be supplied to and carried away from the two chambers respectively, a further outlet port from said second chamber opening to waste, and a valve controlling said last-named port creating variations in pressure in said second chamber, said valve and pin being so arranged that any movement of the former will affect the position of the latter to accelerate the change of pressure in the chamber.

8. In apparatus of the class described, the combination of a container for a liquid to be heated, a heating element adapted to carry a condensable heating medium in heat transferring relation with the liquid, a pipe to supply said condensable heating medium to said element, a pressure reducing valve controlling the flow through said pipe and adapted to reduce the pressure from a variable higher pressure to an adjustable lower pressure, said pressure reducing valve comprising a main valve controlling the flow of heating medium, pressure fluid actuated means for operating said main valve, a pilot valve admitting pressure fluid to said means, a diaphragm the pressure on which influences the extent of opening of the pilot valve, and thermostatically operated means varying the pressure on said diaphragm responsively to the temperature of the liquid to be heated.

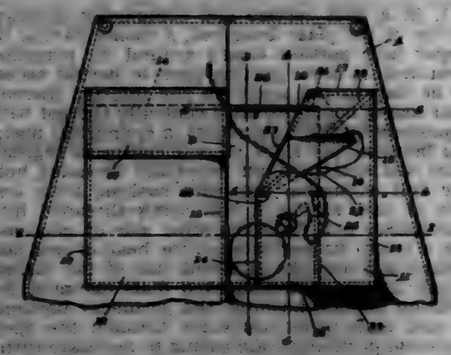
1,929,204
TRANSFER INK
Frank Solomon, New York, N. Y., assignor to Beatrice Ryter, Long Beach, N. Y.
No Drawing. Application May 28, 1924. Serial No. 717,913
2 Claims. (Cl. 134—22)

1. A transfer ink having a solid state in normal atmospheric temperature and flowable into a thin film in the presence of low heat from a hot iron, consisting of five parts of abestine combined with approximately one part of titanium dioxide in the presence of heat, with one-half a part of tricresyl phosphate, five parts of resin and a one-half part of varnish sufficient to form a binder for the other ingredients, together with coloring material added thereto.



1,929,205
COIN-FREED DELIVERY MACHINE
Henry Cecil Sumner, Wyberton, and Frederick John Taylor and Frank Langley, Kirton, England
Application February 1, 1929, Serial No. 337,782
In Great Britain February 2, 1928
13 Claims. (Cl. 194—46)

1. In a coin-freed or operated vending or delivery machine having a plurality of coin-insertion positions and a plurality of goods-delivery positions corresponding thereto the combination of delivery tracks leading one to each delivery position, and electromagnetic devices for preparing, upon the insertion of a coin at a selected position, the corresponding track for delivery and for locking all other tracks against delivery until such delivery has been effected, which devices are in circuit with and include contacts at each insertion position for actuating said devices upon the insertion of a coin.

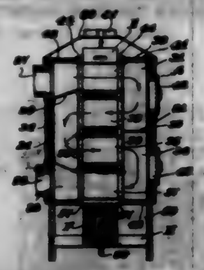


1,929,206
METHOD AND MACHINE FOR DRAWING OR PULLING WIRE
George H. Williams, Kokomo, Ind., assignor to Continental Steel Corporation, Kokomo, Ind., a corporation of Indiana
Application August 18, 1923, Serial No. 664,818
55 Claims. (Cl. 80—33)

1. In a continuous wire drawing machine adapted to draw wire from a main wire body comprising a rotatable wire drawing block, means for rotating said block, wire severing means rotatable with said block adapted to sever wire there-

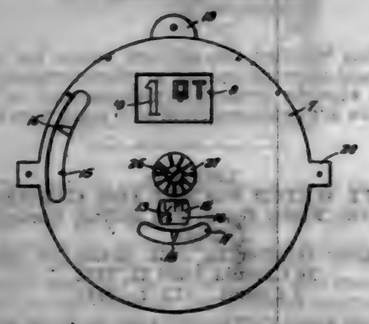
on during rotation thereof and means for actuating said severing means at predetermined intervals whereby predetermined amounts of severed wire are produced from said main wire body.

1,929,207
SAFETY WATCH POCKET FOR GARMENTS
Charles Reece Weed, Red Rolling Springs, Texas.
Application October 24, 1923, Serial No. 670,902
In Canada April 22, 1923
7 Claims. (Cl. 2—254)



1. Pocket structure, comprising two pieces of material sewn to a backing to provide with said backing a plurality of pockets, said pieces being offset with respect to each other overlapped and secured together to provide between the overlapped portions of said pieces an additional pocket.

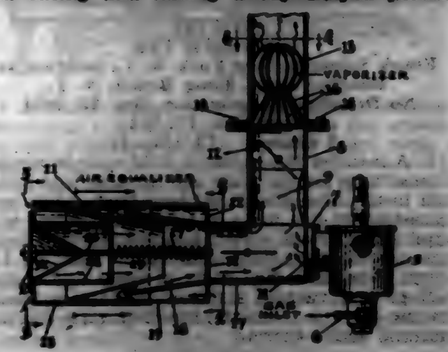
1,929,208
HUMIDIFYING HEAT-SAVER
Kindy C. Wright, St. Paul, Minn.
Application August 23, 1913, Serial No. 785,819
16 Claims. (Cl. 261—15)



14. A heating and humidifying device for buildings including a cabinet, a series of transverse flues extending in said cabinet, connecting passageways and baffle means to direct hot gases

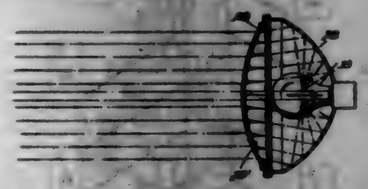
through said flues, a humidifying element extending between said flues, and spray means for

feeding water to said element, and a drain and overflow below said element.



2,029,199
DOOR SERVICE INDICATOR
Richard Frank Zak, Westfield, Mass.
Application March 11, 1935, Serial No. 10,542
3 Claims. (Cl. 40—70)

1. In a door service and commodity ordering device of the class described, a casing having its upper half portion closed around its marginal area and its lower portion open to permit access to be had to the space on the interior thereof, said casing being provided centrally thereof with oppositely disposed apertures, a cylindrical bushing between the sides of said casing in registry with said apertures, an internally threaded hollow bolt extending into said bushing from one side of said casing, a bolt screw-threaded into said hollow bolt from the other side of said casing, a crimp washer between the head of said last named bolt and the adjacent side of the casing, a pair of companion marked dials mounted for rotation on said bushing, the perimeter portions of said dials being accessible through the open marginal portion of said casing to facilitate turning of the dials if and when said dials hang or become otherwise bound in a manner to hinder expeditious adjustment thereof.

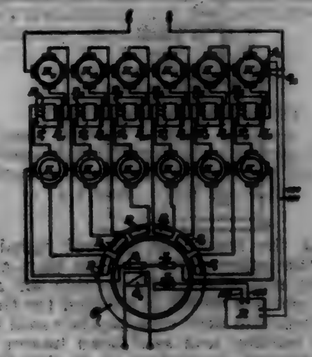


2,029,210
CARBURETOR AIR INTAKE AND VAPORIZER
Antonio G. Abate, Napa, Calif.
Application January 14, 1935, Serial No. 1,763
1 Claim. (Cl. 261—64)

A device of the character described, in combination with a carburetor, a standpipe attached to the carburetor and communicating therewith, a manifold connected to said standpipe and communicating with an internal combustion engine, an agitating element positioned between said standpipe and said manifold, a horizontal extension connected to said standpipe, a funnel secured to said extension, a casing surrounding said funnel, ports formed in said casing, at a point adjacent to the connection of said funnel with said horizontal port extension, and a second funnel sealed to the end of said casing, having its small end projecting into said first mentioned funnel, a telescopic member slidably mounted on said casing and having a cup shaped portion

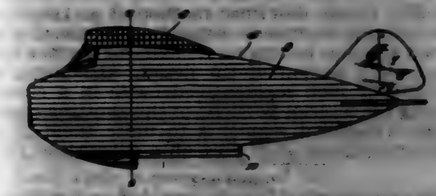
extending into said second mentioned funnel, spring means for maintaining said sliding member in adjusted position, and a valve extending into said cup shaped portion, whereby when said cup shaped portion is moved away from said valve against the tension of said spring air may pass through said cup shaped portion and said second mentioned funnel.

2,029,211
SIGNAL
Charles Adler, Jr., Baltimore, Md.
Application June 1, 1935, Serial No. 24,818
4 Claims. (Cl. 177—329)



1. A signal having in combination a lens constituting a signal area, illuminating apparatus therefor including a plurality of filaments electrically connected in parallel and substantially at the focus of said lens, and a screen between said filaments disposed in rear of and spaced a substantial distance from the signal area and cooperating with said filaments and signal area and permitting unobstructed illumination of the signal area when each filament is energized, said screen when one of said filaments burns out cooperating with the remaining filament and confining a portion only of the light from said remaining energized filament to produce a substantial bright area and a smaller but visible darker spot on the signal area.

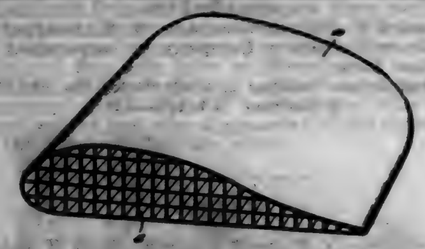
2,029,212
ELECTRICAL DIRECT CURRENT SYSTEM
Johan Emil Aba, Stockholm, Sweden, assignor to Baltzar Carl Von Platen, Stockholm, Sweden
Application February 16, 1934, Serial No. 711,761
In Sweden February 22, 1933
26 Claims. (Cl. 171—123)



1. A direct current system comprising an alternating current machine of the synchronous

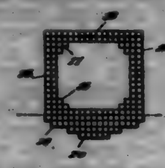
heteropolar type having a plurality of phase displaced armature windings, a plurality of alternating current circuits each controlled by one of said armature windings, main field pole pieces and intermediate auxiliary pole pieces, the last named pieces being arranged for setting up commutation voltages in the armature windings, commutators cooperating with said alternating cur-

rent circuits to separately commutate the voltages in the alternating current circuits and to compose the same into a substantially constant unidirectional voltage, said commutators being provided with brushes arranged to periodically short circuit the alternating current circuits during finite intervals of time which form a relatively great part of the half period.



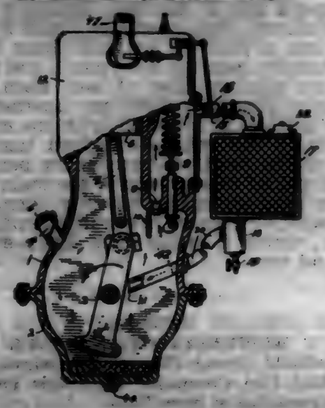
2,029,213
HONEYCOMB CONSTRUCTION FOR AIRCRAFT
Harry N. Atwood, South Lyndeboro, N. H.
Application September 14, 1934, Serial No. 744,869
2 Claims. (Cl. 244—31)

1. An aircraft comprising a body and wing assembly, the body being hollow and constructed of longitudinal tubular members disposed side by side in intimate bonding contact with each other to form walls of inner and outer tubular members, and the wing being formed entirely of superposed longitudinally disposed tubular members arranged at substantially right angles to the longitudinal tubular members of the body and bonded to each other and to the tubular members constituting the walls of said body to form a homogeneous structure.



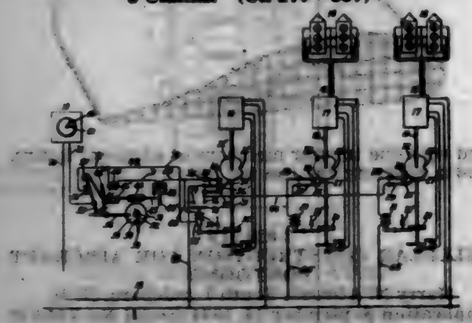
2,029,214
HONEYCOMB WING CONSTRUCTION FOR AIRPLANES
Harry N. Atwood, South Lyndeboro, N. H.
Application September 14, 1934, Serial No. 744,870
2 Claims. (Cl. 244—31)

1. An air foil formed entirely of preformed tubular members arranged in superposed layers, each layer comprising a plurality of individual tubes having bonding contact with each other



and with the tubular members of adjacent layers, and a covering for the air foil.

2,029,215
CELLULAR CONSTRUCTION FOR AIRCRAFT PONTOONS
Harry N. Atwood, South Lyndeboro, N. H.
Application September 14, 1934, Serial No. 744,871
4 Claims. (Cl. 114—66.5)



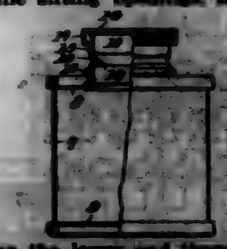
1. A pontoon for hydro-airplanes comprising a hollow structural unit formed of laminated tubular members straight throughout their lengths and disposed side by side in superposed layers and intimately bonded together to form reinforced top, bottom and side walls, and auxiliary tubular members disposed within the hollow structure at the intersection of adjacent walls and bonded to said adjacent walls.

2,029,216
CRANK CASE VENTILATION
George A. Barker, Rochester, N. Y.
Application November 15, 1934, Serial No. 753,235
15 Claims. (Cl. 123—171)

1. In an internal combustion engine having a rotatable crankshaft, the combination of a crankcase for containing lubricant; and conduit means for delivering a portion of the air and oil vapors from the high pressure area of the crankcase to the low pressure area thereof, said means including means for cooling the delivered vapors.

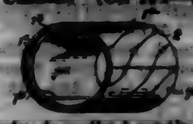
2,029,217
TRAFFIC SIGNALING SYSTEM AND APPARATUS
Howard H. Bell, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application October 1, 1932, Serial No. 635,776
5 Claims. (Cl. 177—337)

1. In a traffic control system, the combination of a plurality of signaling units provided respectively with a series of corresponding signals, means located in each unit for continuously operating said signals in a predetermined sequence, means for synchronizing said units including means for periodically stopping the operating means for each unit, means for restarting each unit only when said units are in synchronism, and means for delaying the operation of the restarting means for a predetermined period of time at preselected ones of said restarting operations.



2,029,218
ANTIFROST GLASS
John F. Bielit, Milwaukee, Wis.
Application March 13, 1934, Serial No. 715,129
1 Claim. (Cl. 20—40.5)

A vehicle windshield having a main panel of glass and a pair of secondary panels of glass attached thereto, said secondary panels being similar to one another in size and shape but being much smaller than the main panel, and being disposed on opposite sides of said main panel in horizontal alinement with one another, and in proper position to cooperate with the eyes of an operator of the vehicle to afford unobstructed vision of the road, said secondary panels being held in spaced relationship to the main panel, to provide dead air spaces between them and the main panel, by a border of a transparent inorganic cement, which is stable even when exposed to light and heat.



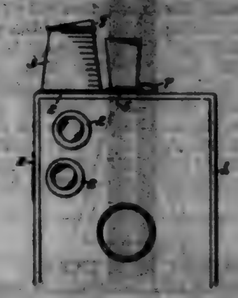
2,029,219
DISPENSING CONTAINER
Eli Bourland, Jersey City, N. J., assignor to Continental Can Company, Inc., New York, N. Y., a corporation of New York
Application March 19, 1935, Serial No. 11,846
1 Claim. (Cl. 221—64)

A dispensing container comprising a body portion having ends joined thereto, one of said ends having a reduced neck portion having an integral closure end in which are formed sifter openings and a pouring opening, said neck intermediate its ends having a groove which surrounds the same, a cap for said neck having a closure end and a depending skirt, said closure end being shaped so as to contact with the integral end of said neck for closing the sifting openings and the pouring opening therein, said closure end of the cap having an opening therethrough adapted to be brought into register with the pouring opening and the sifting openings, the skirt of said

cap having the lower end thereof rolled into a bead and the upper portion of the skirt adjacent the closure end shaped to provide an annular projecting portion which is knurled for the turning of the cap, said skirt intermediate said knurled projecting portion and said bead having an inwardly extending circular rib adapted to fit within the groove in the neck portion, said rib and groove being so disposed that the end of the closure is held in close contact with the end of the neck.

2,029,220
METHOD OF MAKING DESIGN PRINTING CYLINDERS
Werthen E. Brown, Brunswick, Maine, assignor to Pejepscot Paper Company, Brunswick, Maine, a corporation of Maine
Application November 18, 1931, Serial No. 575,886
7 Claims. (Cl. 101—401.1)

1. The herein described method of making design printing cylinders; consisting in forming a curved segment having on its exterior surface the design or a section of the design, assembling a plurality of such segments edgewise in a circle, melting the interior portions of the abutting edges of the assembled segments to unite them in a ring, and placing such ring on a supporting roll.

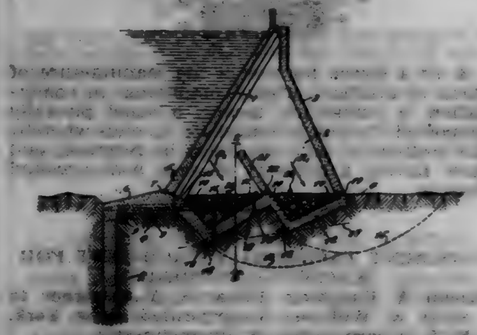


2,029,221
ILLUMINATED DISPLAY APPARATUS
Jackson Burgess and Howard W. Garbe, Freeport, Ill., assignors to O. F. Burgess Laboratories, Inc., Madison, Wis., a corporation of Delaware
Application June 4, 1934, Serial No. 729,235
7 Claims. (Cl. 40—132)

1. In an illuminated display apparatus, a case having a transparent front wall, a source of il-

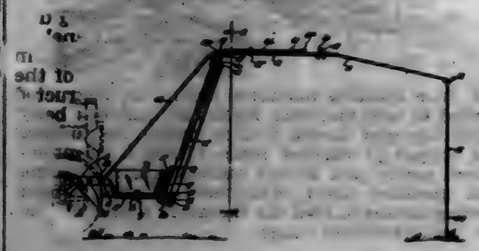
lumination within said case, reflecting means for distributing the light from said source substantially uniformly upon said front wall, a portion of said wall having a substantially permanent transparent cover thereupon, and a second portion of said wall having a removable transparent cover thereupon, and thin sign members held in place by pressure between said wall and said covers respectively, said sign members comprising relatively translucent and opaque portions to form distinguishable characters.

2,029,222
CAMERA ATTACHMENT
John Cree, Calster Centre, Ontario, and John William Horn, Hamilton, Ontario, Canada
Application August 6, 1934, Serial No. 738,754
1 Claim. (Cl. 88—1.5)



In combination with a camera having spaced view finders, a truncated body provided with openings in opposite ends and adapted to be positioned over any one of said finders with the openings in alignment with the finders, integrally connected and angularly related flanges formed on one end of the body and extending about three sides of one of the openings of the body, an ear formed on the body to provide a finger piece, and a flexible element connecting said ear to the camera, and of a length to permit the body being positioned over any one of the view finders.

2,029,223
FEEDING MECHANISM FOR ROCK DRILLS
John C. Curtis, Garfield Heights, Ohio, assignor to The Cleveland Rock Drill Company, Cleveland, Ohio, a corporation of Ohio
Application February 2, 1933, Serial No. 654,899
6 Claims. (Cl. 121—6)

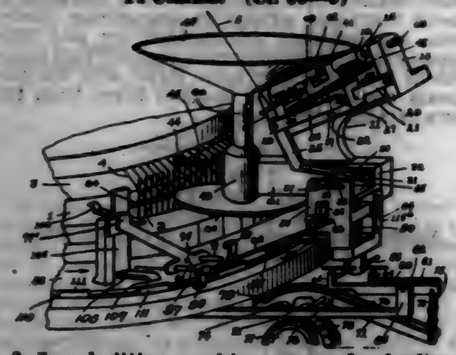


1. In a rock drilling apparatus, a support having a drilling motor slidably guided thereon, a feeding mechanism for said motor comprising a tube having a fluid actuated member reciprocable therein, said member having a duality of heads in fluid tight engagement with the inner wall of said tube, a stationary partition between said heads having a rod slidable therethrough uniting said heads, passages for admitting motive fluid into said tube adjacent said partition for actuating said member, a flexible draft element connecting said member to said motor, said element being fastened to said tube and said motor while engaging said member for movement relative thereto during the normal reciprocation of the latter, and openings through said tube through which said element is free to pass from the interior to the exterior of said tube, the position of said openings being such that the motive fluid admitted into said tube is prevented to escape through said openings due to the fluid tight engagement of the heads of said member with the inner wall of said tube irrespective of the position of the former within the latter.

2,029,224
DAM
Calvin V. Davis, Mount Vernon, N. Y., assignor to Amberson Construction Company, Inc., New York, N. Y., a corporation of New York
Application February 25, 1935, Serial No. 712,868
2 Claims. (Cl. 61—35)

1. A dam comprising an inclined up-stream water-bearing deck supported by a plurality of spaced buttresses extending downstream therefrom, and masonry foundations for said buttresses extending transversely thereof, said foundations having one or more steps, with the up-stream edge of a step disposed lower than the down-stream edge thereof.

2,029,225
INSECT DESTROYER
Oscar K. Ekre, Perks, Mont.
Application March 7, 1935, Serial No. 9,732
8 Claims. (Cl. 43—132)



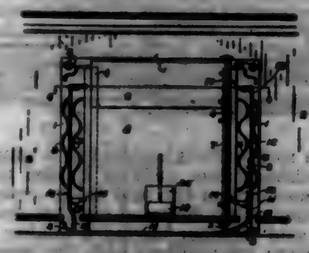
1. In a device of the kind described, brackets adapted for mounting on a vehicle, an elongated rectangular open frame adjustably supported by the brackets crosswise to the line of travel of the vehicle, the said frame being inclined forwardly and upwardly, electrically charged wires strung in spaced parallel relation in the frame and insulated therefrom, an agitator assembly supported forwardly of the frame, open rectangular end panels hinged to the ends of the frame, and electrically charged wires strung in these end panels and connected to the wires in the frame.

2,029,226
APPARATUS FOR THE MANUFACTURE OF ARTIFICIAL SILK
Rudolf Ehrhorn, Oberbruch, Germany, assignor to North American Rayon Corporation, New York, N. Y., a corporation of Delaware
Application March 15, 1932, Serial No. 599,051
In Germany March 27, 1931
9 Claims. (Cl. 242—130)

8. In a device for use in the manufacture of yarns of artificial origin, comprising, in combination, a supporting means, a spool pivotally supported thereby intermediate its ends whereby the position of said spool may be reversed, said spool having a plurality of yarn bodies wound thereon.

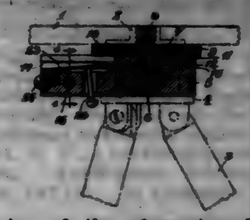
2,029,227
GARMENT TAPERING ATTACHMENT FOR KNITTING MACHINES
Joseph A. Firsching, Utica, N. Y., assignor to Scott & Williams, Incorporated, New York, N. Y., a corporation of Massachusetts
Application April 4, 1934, Serial No. 718,958
14 Claims. (Cl. 66—9)

9. In a knitting machine, means for feeding a thread to said machine, means for automatically adjusting said thread feeding means for feeding the thread at varying rates within a predetermined range and means automatically stopping said machine upon adjustment of said thread feeding means to feed the thread at a rate outside the predetermined range.



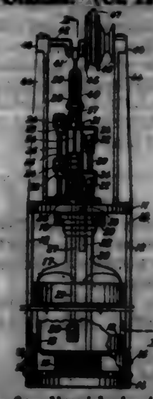
2,029,228
EYE TESTING AND RECORDING APPARATUS
Belford Garrison, Cape May Court House, N. J.
Application May 1, 1935, Serial No. 19,228
3 Claims. (Cl. 88—22)

1. An eye testing and recording apparatus, a set of independent, vertically, selectively movable parallel carriers, a set of spaced edgewise superposed holders mounted upon one of the carriers for supporting minus testing lenses of different power for selective position before an eye being tested, a set of spaced edgewise superposed holders mounted upon another one of the carriers for supporting plus testing lenses of different power for selective position before an eye being tested, a set of spaced edgewise superposed holders mounted upon the other of said carriers for supporting axis testing lenses of different power for selective position before an eye being tested, said sets of holders being disposed in parallel paths, means for independently shifting each of said carriers, a stationary eye testing board provided with an eye opening and boxes adapted to



receive removable axis indicia cards, each of said carriers provided with spaced means adapted to receive normally concealed removable cards carrying indicia for designating the power of the lenses supported by the set of holders mounted thereon, said board being formed with spaced card selecting means leading from that axis lens positioned at said opening to said boxes, and said board being provided with means for exposing cards in the carriers, on the completion of the test, to associate with a selected card in a box of the board to provide a lens prescription.

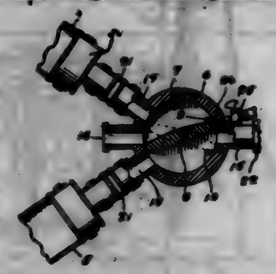
2,029,229
GRAIN DOOR AND ASSOCIATED MECHANISM
George Gerlip, Neepawa, Manitoba, Canada
Application August 21, 1934, Serial No. 741,892
In Canada November 8, 1933
4 Claims. (Cl. 20—27)



1. Improvements in grain doors on cars and associated mechanism for sealing and unsealing same comprising in combination with a swingable grain door a separable slidable sealing panel on each side of said door and lever and link mechanism extending between said panels for synchronously sliding said panels towards or away from each other.

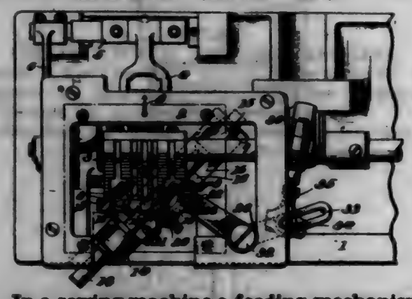
2,029,230
DETACHABLE CAMERA TRIPOD HEAD
Perry Rehrer Getz, New York, N. Y.
Application August 14, 1934, Serial No. 739,825
7 Claims. (Cl. 248—187)

2. A device of the character described, including a fitting adapted to be connected with a camera, said fitting having a flange, a base adapted to be carried by a tripod, said base having a groove for receiving said flange, a flat spring carried by said base and projecting normally into the path of movement of the flange as it enters said base, said spring being depressed as the flange enters the base, and after the flange has completely entered the base said spring being adapted to be expanded and presenting an abutment against removal, and screw means acting on the base to cause the base to pinch said flange and prevent independent rotation thereof.



2,029,231
SAMPLING DEVICE
Augustus W. Gleason and Ernest L. Meyer, El Segundo, Calif.
Application October 29, 1934, Serial No. 750,558
10 Claims. (Cl. 137—18)

1. A sampler for liquids in tanks, comprising a frame, a receptacle, means for securing said receptacle in said frame, a pump on said frame adapted to discharge liquid into said receptacle, and flexible suspension means controlled from the top of said tank for actuating said pump.

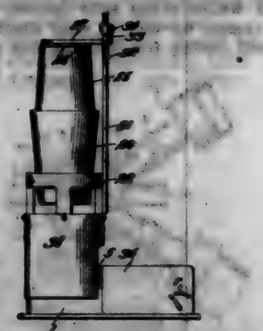


2,029,232
REVERSIBLE FLUSHER FOR CLEANING AUTOMOBILE WATER COOLING SYSTEMS
Frank W. Green, Oshkosh, Wis.
Application October 9, 1934, Serial No. 747,868
1 Claim. (Cl. 251—104)

A flusher comprising a casing, oppositely arranged inlet and outlet nipples in communication with the interior of the casing and said inlet nipple adapted to be connected to a water pressure system, nipples in communication with said casing and arranged at opposite sides of the outlet nipple and adapted for connection to a device to be flushed, a valve operating in said casing and movable to two positions for directing water alternatingly through the last-named nipples while permitting water from said device to discharge from the casing by way of said discharge nipple, stops in said casing for limiting the movement of

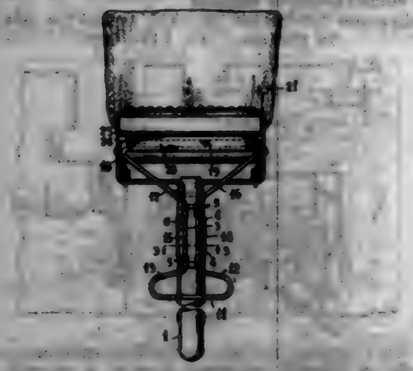
the valve, said casing having a port adjacent the inlet nipple closed by the valve when in one of its positions and open to the casing and one of said nipples at the side of the outlet nipple when the valve is in the other position, and a fitting connected in said port to enable an air pressure system to be connected to the interior of the casing.

2,029,233
LOOPER MECHANISM FOR SEWING MACHINES
Hans Hackländer, Tinley Park, Ill., assignor to Union Special Machine Company, Chicago, Ill., a corporation of Illinois
Application November 20, 1933, Serial No. 698,891
10 Claims. (Cl. 112—199)



1. In a sewing machine a feeding mechanism, a needle, a thread carrying looper, a carrier for said looper, a support for said carrier mounted for reciprocation in a line at an acute angle to the line of feed and means for reciprocating said support including an actuated member connected to said support, an actuating member, means whereby said actuating member and said actuated member may be connected and disconnected by a lateral movement of one relative to the other and yielding means for normally holding said members connected.

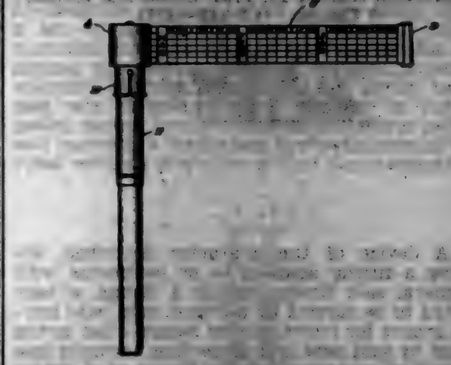
2,029,234
BEVERAGE MIXING DEVICE
Maximilian J. Helmen, Springfield, Mass.
Application April 6, 1934, Serial No. 718,525
2 Claims. (Cl. 259—91)



1. A mixing device of the character described, comprising a base member having a vertical bracket, guide studs on the bracket, a container carrier member formed with guideway slots fitted to the studs, an operating shaft journalled in the

bracket, an actuating cam rotatively keyed on the shaft with an elongated slot allowing of limited free movement and positioned to engage the carrier, spring supporting means for the carrier connected to the carrier and bracket respectively, a

container holder on the carrier adapted to receive a lower receptacle, a vertical rack on the carrier, an upper holder adjustably fitted to the rack for engagement with an upper receptacle and a lever on the operating shaft for manual rotation thereof.

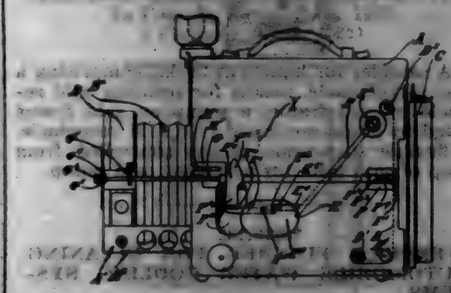


2,029,215
MOP
Thomas M. Jenkins, Los Angeles, Calif., assignor to Claude G. Watson, Oakland, Calif.
Application February 4, 1935, Serial No. 4,954
7 Claims. (Cl. 15—119)

1. An improvement in wringer mops comprising, an elongated mop handle, strips mounted on the mop handle opposite each other, ribs on each longitudinal edge of the strips, slides with grooves formed therein adapted to engage over the ribs, and mop swab fasteners carried by the slides to hold a mop swab.

2,029,236
COMBINATION PEN AND CALENDAR
Werner Klephaus, New York, N. Y.
Application April 24, 1934, Serial No. 722,175
1 Claim. (Cl. 40—102)

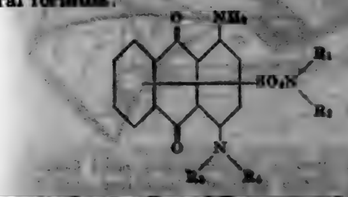
A device of the character described, comprising a cylindrical casing (6) for a tape (8), said casing including a top and a bottom, a hollow spindle (5) journalled in said top and bottom of the mentioned casing, a torsional spring (9) within said casing, one end of said spring being attached to the bottom of the casing and the other end to said spindle, a tape (8) spirally wound around the spindle and having one end secured thereto, said spring being adapted to wind up said tape within the casing, and a slot-



ted ferrule (10) extending centrally from the bottom of the casing and of smaller diameter than said casing.

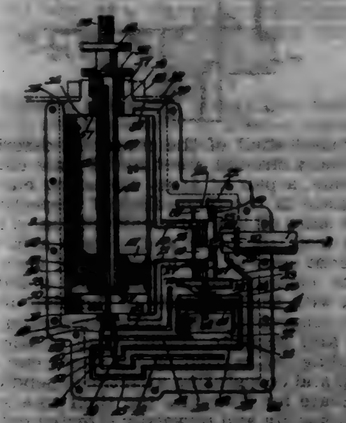
2,029,237
PRODUCING VAT DYESTUFFS OF THE DIBENZANTHRONE SERIES
Karl Koeberle, Ludwigshafen-on-the-Rhine, Hugo Wolff, Mannheim, and Emil Krauch, Ludwigshafen-on-the-Rhine, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a corporation of Delaware
No Drawing. Application July 24, 1934, Serial No. 736,774. In Germany August 6, 1933
4 Claims. (Cl. 260—41)

1. Nitrodibenzanthrones containing between about 4.5 and about 6.5 per cent of nitrogen forming crystalline violet powders dissolving in concentrated sulphuric acid giving a blue coloration dyeing from a blue vat vegetable fibres green shades which by aftertreatment with hypochlorite become grey to black.



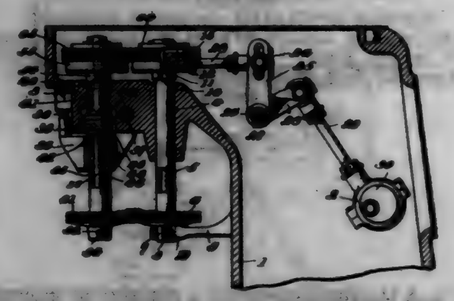
2,029,238
CAMERA MECHANISM
Terkel Kerling, Chicago, Ill., assignor to The Felmer Graflex Corporation, Rochester, N. Y., a corporation of Delaware
Application June 14, 1933, Serial No. 675,653
22 Claims. (Cl. 95—42)

1. In a photographic device comprising a light-tight receptacle, means for receiving a piece of photo-sensitive material, said receptacle having a light beam admitting opening opposite said photo-sensitive material, and a light obstructing device between said opening and said sensitive material, means for automatically and successively reducing the cross sectional area of a light beam passing through said opening, for removing said obstructing device from the path of said beam; for increasing the illumination of the object and finally for obstructing said light beam.



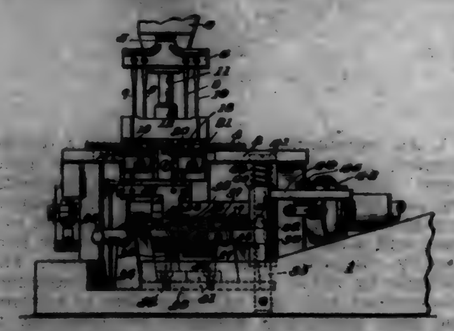
2,029,239
ANTHRAQUINONE DERIVATIVES
Georg Krämlein, Frankfort-on-the-Main, Hans Schlichenmaier, Kelkheim in Taunus, and Ludwig Schörnig, Frankfort-on-the-Main, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a corporation of Delaware
No Drawing. Application February 16, 1933, Serial No. 657,183. In Germany February 23, 1932
6 Claims. (Cl. 260—89)

1. The anthraquinone derivatives of the general formula:



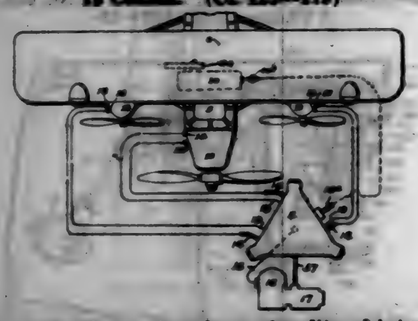
wherein R_1, R_2, R_3 and R_4 represent hydrogen or aliphatic, alicyclic, aromatic or aliphatic-aromatic radicals, which compounds are well crystallizing, intensely colored products, dissolving in concentrated sulfuric acid mostly with a blue to blue-green color and yielding with alkaline hydrosulfite a red-brown vat.

2,029,240
FLUID PRESSURE MOTOR
George Kuba, Takoma Park, Md.
Application October 4, 1932, Serial No. 634,216
7 Claims. (Cl. 121—127)



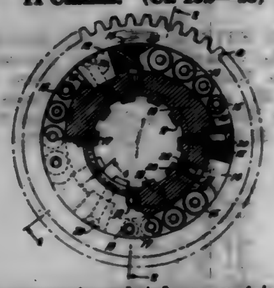
1. In a fluid pressure motor, a casing comprising complemental parts defining conformity power and control chambers and fluid passages operatively connecting said chambers, the arrangement being such that the passages do not cross each other and that each of said parts and the portions of the chambers and passages therein are enabled to be formed completely in a single die casting operation, tubular liners for said chambers clamped between said parts, and means engaging the liners to hold them positively against axial displacement.

2,029,241
FEEDING MECHANISM FOR SEWING MACHINES
Harold J. Le Vesconte, Western Springs, Ill., assignor to Union Special Machine Company, Chicago, Ill., a corporation of Illinois
Application September 21, 1933, Serial No. 690,487
8 Claims. (Cl. 112—18)



2. A feeding mechanism for sewing machines including cooperating rotating feed wheels, feed shafts for imparting movements to said feed wheels, means whereby rotations imparted to one shaft are positively imparted to the other, an actuating clutch mechanism attached to one of said shafts for imparting feeding movements to said shafts, and a restraining clutch mechanism attached to the other shaft for preventing retrograde movements in either shaft, one of said shafts for operating the feed wheels being formed in sections with a universal connection between said sections whereby to permit relative movement of said feed wheels toward and away from each other.

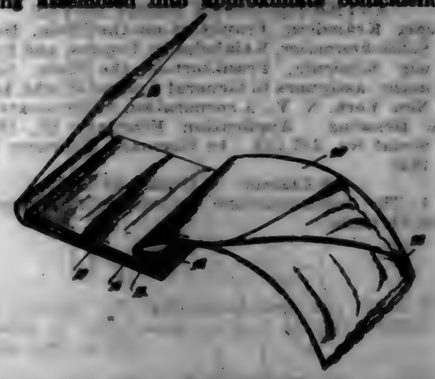
2,029,242
CHAIN STITCH SEWING MACHINE
Harold J. Le Vesconte, Western Springs, Ill., assignor to Union Special Machine Company, Chicago, Ill., a corporation of Illinois
Application November 6, 1933, Serial No. 696,389
10 Claims. (Cl. 112—199)



1. In a sewing machine, the combination of a needle, a feeding mechanism for feeding the material, a thread carrying looper cooperating with said needle, means for supporting and moving said looper back and forth in a single plane, said supporting and moving means being disposed so that the looper eye moves from a position in rear of the needle and at one side of a vertical plane containing the needle and parallel to the line of feed to a position in front of the needle and at the other side of said plane as it enters the needle thread loop, said looper penetrating said vertical plane in front of the path of the needle.

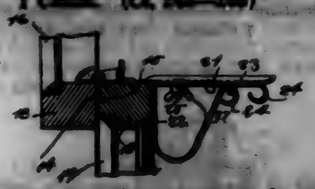
2,029,243
ENGINE STARTING MECHANISM
Francis Linder, East Orange, N. J., assignor to Eclipse Aviation Corporation, East Orange, N. J., a corporation of New Jersey
Application April 24, 1930, Serial No. 447,821
19 Claims. (Cl. 123—179)

1. A starting system for a plurality of internal combustion engines comprising a fluid actuated starter for each engine, a main magneto for each engine, a single source of actuating fluid, a single source of starting ignition current, and means for selectively connecting both of said sources to the starter and magneto, respectively, of any selected one of said engines.



2,029,244
DRIVING MECHANISM
Francis Linder, East Orange, N. J., assignor, by mesne assignments, to Eclipse Aviation Corporation, East Orange, N. J., a corporation of New Jersey
Application November 26, 1932, Serial No. 644,497
11 Claims. (Cl. 192—45)

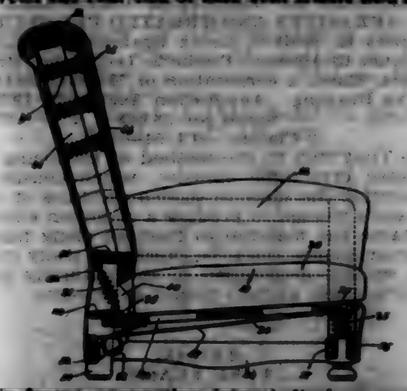
1. An overrunning clutch comprising a driving member, a driven member, a roller cage interposed therebetween and concentric therewith, and capable of only limited angular play relative to said driven member, rollers journalled in said cage, and a radially movable pilot member frictionally engaging said driving member, and shiftable by virtue of said frictional engagement into contact with one of said rollers to advance said cage through a sufficient arc relatively to said driven member to carry all said rollers into position to transmit torque from said driving member to said driven member.



2,029,245
TISSUE PACKET
James B. Lyon, New York, N. Y., assignor of one-tenth to George H. Covey, Bayside, and nine-tenths to Margaret H. Lyon, New York, N. Y.
Application August 29, 1932, Serial No. 629,625
4 Claims. (Cl. 206—57)

1. A tissue paper packet comprising an assembly of sheets of thin tissue paper having a soft texture and adapted to be used for removing cleansing cream and for like purposes about the person, said assembly comprising a plurality of contiguous superimposed units each individually folded upon itself in the same direction into leaves of unequal length, the inner faces of which are in contact, the edges of the longer portions being assembled into approximate coincidence,

and binding means for securing said coincident edges of the longer portions together, leaving the edges of the shorter portions free, and wherein when the assembly is flexed the individual units are separated at their free fold ends, thereby permitting them to be grasped by the fingers for ready removal of the top unit without disturbing the other units.



2,029,246
PLANT SHELF FOR WINDOW MOUNTINGS
John H. McCarroll, Des Moines, Iowa
Application March 28, 1934, Serial No. 718,851
1 Claim. (Cl. 248—239)

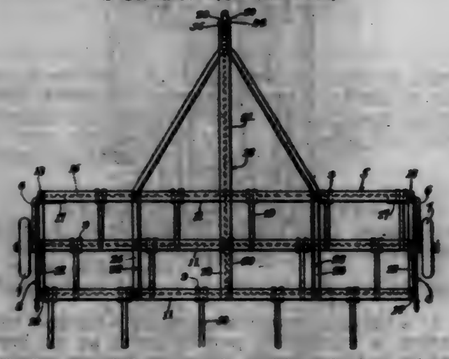
In a plant shelf of the character described, a substantially circular sheet metal plate cut-away at one side, a pair of arms projecting outwardly of the plate in the plane thereof respectively at opposite sides of the cut-away portion, a leg depending from the outer end of each arm with a return bent spur at the lower end of each leg, a one-piece clamp member including a flat strip engaged with the underside of the plate and adjustably secured thereto between the cut-away portion and opposite curved edge of the plate, a depending leg carried by the inner end of the flat strip and cooperating with the depending legs on the plate for clamping the shelf to a support and a forwardly and upwardly directed extension on the lower end of the depending leg and attached at its upper end to the under side of the strip adjacent the outer end thereof to support the plate in a horizontal position.

2,029,247
SPRING SEAT
Jerry Moroseglaire, Brooklyn, N. Y.
Application October 26, 1932, Serial No. 639,147
3 Claims. (Cl. 155—59)

4. In a chair or like article of furniture comprising a frame having front and rear leg members, a cross member extending between said front leg members, and a rear cross member extending between said rear leg members, a seat frame resiliently mounted both at the front and rear, with respect to said cross members, a vertical sliding slot and tongue interlocking connection between the rear end of said seat frame and said

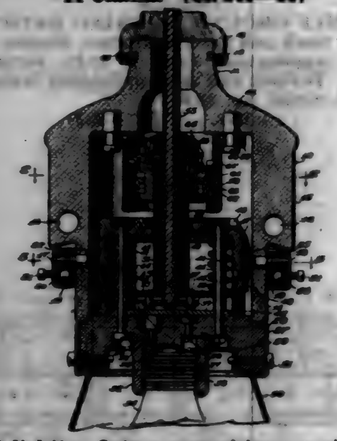
chair frame, preventing lateral displacement of said seat frame, while allowing unhampered angular displacement thereof in a vertical plane about an axis substantially coinciding with the front end of said seat frame, and a strip member attached under the front of said seat frame and anchored to the rear of said chair frame preventing forward displacement of said seat frame.

2,029,248
PRESERVATION OF ANIMAL TISSUES
Sidney Blumer, New York, N. Y.
No Drawing. Application July 16, 1935, Serial No. 31,653
10 Claims. (Cl. 99—189)



1. A method of protecting an animal product subject to oxidative change against deterioration which comprises the dusting of a mixture of 50% salt and 50% of a vegetative antioxidative substance including cereal flour upon the surface of such animal product.

2,029,249
MOBILE GROUND WORKING DEVICE
Iscuo H. Neoll and Fred W. Hosmo, Hooker, Okla.
Application June 1, 1935, Serial No. 24,553
1 Claim. (Cl. 97—133.1)



In a ground working device, a mobile I-beam, a resilient beam having a horizontally disposed part and a part depending from the rear end of the horizontally disposed part for carrying a ground working tool, said horizontal part extending rearwardly from said I-beam and having a portion thereof positioned transversely of the bottom of the I-beam, a base member arranged against the lower face of the said portion and being formed with a vertically disposed opening having a threaded wall, oppositely disposed upstanding clamping means at the front and rear of said base member and overlapping the lengthwise edges of the base flanges of said I-beam, and adjustable means threadedly engaging with the wall of said opening, abutting said portion and coacting with said clamping means for clamping said horizontal part against the bottom flanges of the I-beam, the said clamping means at the front and at the rear of said base member being in the form of a pair of spaced parallel curved arms of like form, the inner side edges of the arms of each pair abutting the lengthwise edges of said horizontal part.

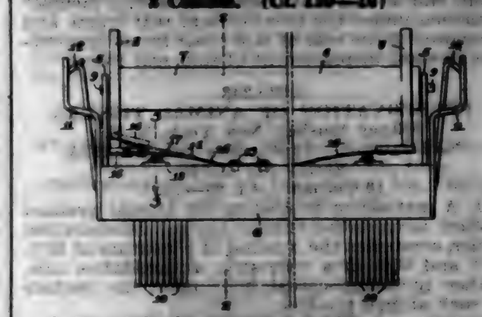
2,029,250
MOBILE GROUND WORKING DEVICE
Iscuo H. Neoll and Fred W. Hosmo, Hooker, Okla.
Original application June 1, 1935, Serial No. 24,553. Divided and this application September 3, 1935, Serial No. 39,653
2 Claims. (Cl. 97—233)

1. In a mobile ground working device a horizontally disposed skeleton body for supporting upon its top a forwardly extending draw-bar and for suspending from its bottom couplers for ground working tools, said body being formed of a set of spaced parallel I-beams arranged in tandemwise relation, a pair of oppositely disposed inwardly opening channel irons overlapping the ends of said beams, the bottom flanges of the channel irons suspending the base flanges of said beams, the base flanges of each of said beams constituting oppositely disposed means for suspending means for coupling therewith ground working tools, spaced pairs of holdfast devices extending through the flanges of the channel irons and the ends of the top and bottom flanges of said beams for fixedly securing the irons and beams together, a draw-bar having a straight rear stretch mounted upon and anchored to the top flanges of said beams centrally and transversely of said top flanges, said rear stretch having its ends flush with the front and rear of said body and bracing the latter, said draw-bar including a forwardly extending front stretch merging at its rear end into the forward end of said rear stretch and inclining downwardly throughout with respect to the front of said body, a pair of bracing bars having straight parallel spaced rear stretches anchored to the top flanges of said beams adjacent opposite sides of the rear stretch of the draw-bar, the rear stretches of said bracing bars having their ends flush with the front and rear of said body and constituting bracing means for the latter, said bracing bars having forwardly extending front stretches inclining downwardly with respect to the front of said body and inclining towards the front stretch of the draw-bar, the forward end terminal portions of the forward stretches of said bars being positioned against opposite sides of the front stretch of the draw-bar rearwardly of the forward end of the latter, and means for anchoring the forward end terminal portions of the front stretches of the bracing bars to opposite sides of the front stretch of the draw-bar.

2,029,251
COMBINED LAMP STRUCTURE AND HANGER
Irvin W. Nye, Bethlehem, and Herbert E. Miller, Allentown, Pa., assignors to Utilities Service Company, Inc., Allentown, Pa., a corporation of Pennsylvania
Application March 16, 1935, Serial No. 661,170
11 Claims. (Cl. 248—68)

1. A lighting fixture comprising a vertical body having a cylindrical portion open at its lower end, a bodily movable structure having portions adapted for insertion within the lower end of said body, said structure including a pair of elements relatively movable vertically with respect to each other, the lower element being provided with a lamp socket and having an upper face portion engageable with the lower end of said body, a supporting element arranged within said body and relatively rotatable with respect thereto, radial supporting pins carried by said supporting member, the upper element of said movable structure being provided with a pair of downwardly facing notches adapted to receive said pins, and spring means urging the elements of said structure toward each other.

2,029,252
GLOBE MOUNTING
John A. Pinand, Atlantic Highlands, N. J., assignor to Rand McNally & Company, New York, N. Y., a corporation of Illinois
Application January 28, 1933, Serial No. 654,836
10 Claims. (Cl. 35—46)

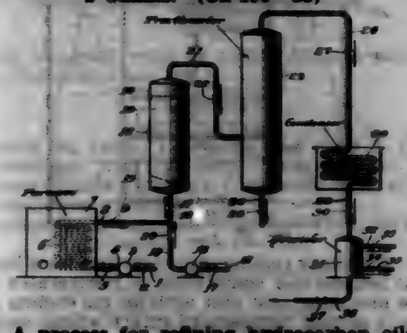


1. An improved support for a globe, comprising a supporting annulus for the said globe, and means for grippingly supporting the said annulus in a desired position, said means comprising at least three resilient members mounted in the yoke and adapted to form at least a three-point support.

2,029,253
METHOD OF TREATING CRYSTALLINE ABRASIVES AND TREATED PRODUCT
Charles R. Walker, South Braintree, Mass., assignor to Abrasive Products, Inc., South Braintree, Mass., a corporation of Massachusetts
No Drawing. Application August 26, 1933, Serial No. 686,653
9 Claims. (Cl. 51—276)

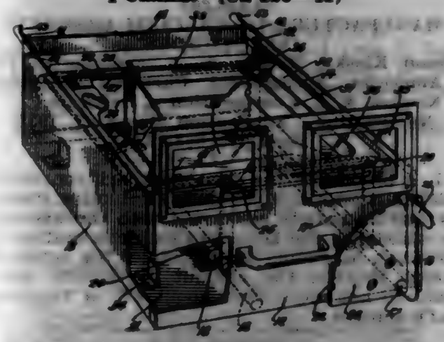
1. That step in the method of producing uncrushed crystalline abrasive, which consists in subjecting the same to sudden extremes of temperature change to produce a re-action effective to cause the material to fracture along natural cleavage planes and to be capable of ready crushing without destruction of the naturally sharp cutting edges at such planes of fracture.

2,029,254
TUBE FRAME
Eugene F. Clark, Damariscotta, Maine, assignor to Marshall Field Mills Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application May 19, 1934, Serial No. 726,854
2 Claims. (Cl. 130—16)



1. In a tube frame, a carrier bar provided with spool bearings and having a ring secured thereon, a spool journaled in the bearings and having an end head, a resilient brake arm extending longitudinally of the bar and having an inner end portion secured thereto and an outer free end portion provided with a part constructed to press against said head when the arm is sprung from a normal condition, and a spiral spring interposed between said arm and said bar and seated within said ring and spaced outwardly from said inner end portion and inwardly from the plane of rotation of said head and forming a fulcrum for said arm for flexing the same between its inner end and said plane when it is sprung from said normal condition.

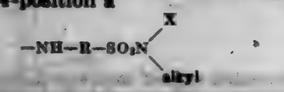
2,029,255
METHOD OF MAKING SHANK BUTTONS
Benjamin F. Conner, West Hartford, Conn., assignor to Colt's Patent Fire Arms Manufacturing Co., Hartford, Conn., a corporation of Connecticut
Application October 22, 1932, Serial No. 639,069
1 Claim. (Cl. 79—3)



The hereindisclosed method of making a shank button, which comprises molding the button with an integral shank of relatively small diameter and having opposite recesses therein, and then after the completion of the molding operation drilling a transverse thread hole through the shank from one recess to the other.

2,029,256
TREATMENT OF HYDROCARBON OILS
Roland B. Day, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
Application August 25, 1931, Serial No. 558,726
2 Claims. (Cl. 196—25)

1. A process for refining hydrocarbon oils of approximately motor fuel boiling range which comprises treating the oil at a temperature between 200° F. and 600° F. with added aqueous hydrogen chloride in the presence of a natural zinc-bearing clay.



2,029,257
COOKING STOVE
Claude M. Dibble, Joliet, Ill., assignor to Moore Brothers Company, Joliet, Ill., a corporation of Illinois
Original application June 3, 1927, Serial No. 196,197. Divided and this application August 27, 1930, Serial No. 478,875. Renewed March 18, 1935
4 Claims. (Cl. 126—41)

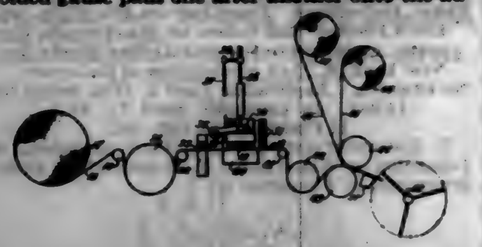
2. In a stove, means forming a compartment open at one end, a drawer movable therein having a sight aperture at the front, a pan fitting loosely in the drawer, means operable from the front thereof for adjusting the vertical elevation of the pan in the drawer, said means comprising a pair of shafts extending longitudinally in the drawer, arms projecting from the shafts, slotted cross pieces engaging under the ends of the pan, and means projecting from the ends of the arms and engaging in the slots of the cross pieces for moving the pan in accordance with the movement of the shafts.

2,029,258
ACID DYESTUFFS OF THE ANTHRAQUINONE SERIES AND A PROCESS OF PREPARING THEM
Ernst Diefenbach, Frankfort-on-the-Main, and Erich Fischer, Bad Soden-on-the-Taunus, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a corporation of Delaware
No Drawing. Application April 5, 1935, Serial No. 14,954. In Germany April 11, 1934
11 Claims. (Cl. 260—66)

7. The anthraquinone compounds containing in 1-position a NH_2-group, in 2-position a sulfo-group and in 4-position a

group wherein X means hydrogen or a lower alkyl group, R means an aryl radical of the benzene and naphthalene series and alkyl means a lower alkyl group, at least one of the alkyl groups containing a hydroxy group.

2,029,259
CLOSURE FOR CONTAINERS
Rollin L. Drake, Port Arthur, Tex., assignor to The Texas Company, New York, N. Y., a corporation of Delaware
Application August 19, 1931, Serial No. 558,023
4 Claims. (Cl. 113—121)



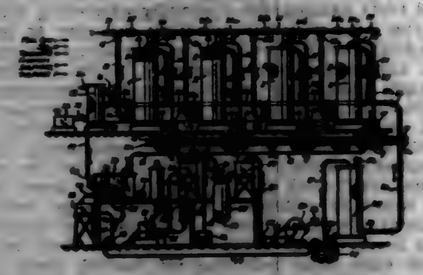
1. The method of attaching a closure element to a container which comprises, providing a body member having an opening therein and an upwardly extending annular flange about the periphery of said opening, providing a neck which may serve as a pouring outlet for the container and having adjacent its lower end an inwardly extending radial flange, said flange being turned upwardly at its inner edge, positioning the neck over the opening in the body member so that the upwardly extending flange of the neck surrounds and rests against the upwardly extending flange of the body member, exerting pressure to bend the juxtaposed flanges outwardly and continuing the application of pressure to flatten the bend against said body member to thereby form a seam attaching the neck to the body member.

3. In a container, a body member having an opening therein, an upwardly extending neck adapted to serve as a pouring outlet for the container, said neck having adjacent its lower end an inwardly extending annular flange resting upon the body member about the said opening, said flange being crimped back upon itself at its inner edge, said body member having about the said opening an upwardly and then outwardly extending flange crimped over the said neck flange to fasten the neck to the body member.

2,029,260
METHOD OF MAKING ADHESIVE TAPE AND GAUZE DRESSINGS
Warner Eustis, Newton, Mass., and Paul Walter, Chicago, Ill., assignors to The Kendall Company, Chicago, Ill., a corporation of Massachusetts
Application October 28, 1933, Serial No. 695,620
4 Claims. (Cl. 154—2)

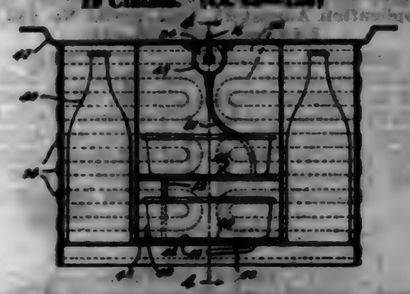
1. The method of making adhesive tape and

gauze dressings which consists in feeding a web of adhesive-coated material past a pad-applying station, forming folded gauze pads, pressing said folded gauze pads one after another onto the ad-



hesive-coated side of said web as the latter passes said station, and severing the web intermediate said pads to form individual tape and gauze dressings having an adhesive-coated area on all sides of the pad.

2,029,241
SOYBEAN PHOSPHATIDES
Wells W. Gunn, Cincinnati, Ohio, assignor to Chemical Novelties Corporation, Cincinnati, Ohio, a corporation of Ohio
No Drawing. Application January 26, 1935, Serial No. 4,147
9 Claims. (Cl. 260—99.26)



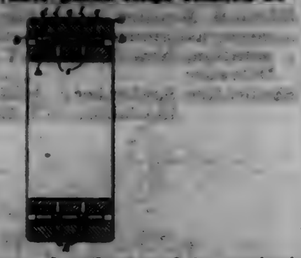
1. A new method of obtaining soybean phosphatides which comprises, hot pressing the soybean oil and separating the phosphatides from the oil by virtue of the difference of specific gravity between the oil and the phosphatides.

2,029,242
REMOVAL OF HYDROGEN SULPHIDE AND AMMONIA FROM GASES
Christian Johannes Hansen, Essen-Ruhr, Germany, assignor, by mesne assignments, to The Koppers Company of Delaware, Pittsburgh, Pa., a corporation of Delaware
Application January 25, 1932, Serial No. 589,794
In Germany January 24, 1931
2 Claims. (Cl. 23—225)
(Granted under the provisions of sec. 14, act of March 3, 1927; 357 O. G. 5)

1. In the method of removing hydrogen sulphide in combination with ammonia from gases comprising washing the gas with a thionate solution to remove hydrogen sulphide therefrom and regenerating the spent solution with sulphur dioxide in separate chambers therefor, the improvement comprising periodically discontinuing the washing of gas in the chamber in which the gas is being washed and the regeneration in the chamber in which the regeneration is being conducted and resuming the gas washing in the chamber in which the regeneration has just been discontinued and the regeneration with sulphur dioxide in the chamber in which gas washing has just been discontinued, thereby dissolving precipitated solids that may have clogged in the discontinued gas washing chamber.

2,029,263
REFRIGERATING APPARATUS
Lloyd M. Keighley, Dayton, Ohio, assignor to General Motors Corporation, Dayton, Ohio, a corporation of Delaware
Application November 15, 1932, Serial No. 642,855
19 Claims. (Cl. 62—120)

1. A unitary cooling unit structure for a household refrigerator comprising, a refrigerated surface providing said unit with an air cooling portion, a second refrigerated suface within said air cooling portion of said unit providing a sharp freezing zone for receiving and supporting a receptacle adapted to contain a substance to be congealed or frozen, means interposed between said refrigerated surface of said freezing zone and the refrigerated surface of said air cooling portion of the cooling unit and forming an elongated support for the reception of a plurality of bottles to be cooled, said means also including a vertically disposed portion forming a wall between the freezing zone and the air cooling portion of the cooling unit, and means for supplying refrigerant to the refrigerated surface of said freezing zone and to the refrigerated surface of the air cooling portion of the cooling unit.



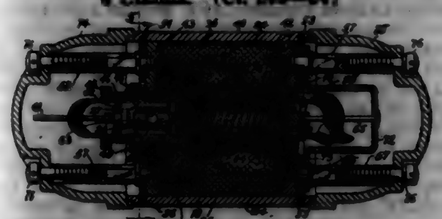
2,029,264
MANUFACTURE OF CALCIUM ARSENATE INSECTICIDES
Simon Kleeky, Roselle, N. J., assignor to The American Agricultural Chemical Company, Newark, N. J., a corporation of Delaware
No Drawing. Application March 22, 1933, Serial No. 662,063
12 Claims. (Cl. 167—13)

1. A product of the class described, containing calcium arsenate, and combined fluorine insolubly and intimately associated with the arsenate for stabilizing the latter against deterioration by liberation of soluble arsenic under the action of carbon dioxide, the amount of fluorine being equal to not more than about 4% of the total As_2O_5 content.

2,029,265
MULTIROW CYLINDRICAL ROLLER BEARING
Karl Erik Kylin, Gothberg, Sweden, assignor to Aktiebolaget Svenska Kullagerfabriken, Gothberg, Sweden, a corporation of Sweden
Application February 7, 1935, Serial No. 5,151
In Germany May 30, 1934
3 Claims. (Cl. 308—212)

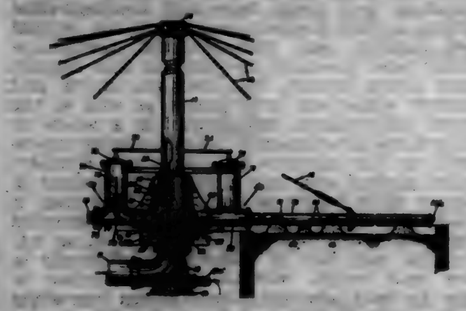
1. A multi-row cylindrical roller bearing comprising in combination, a number of rows of rollers, an inner race ring, an outer race ring formed in one piece with two inwardly directed

integral flanges adjacent its respective sides, and one or more removable guide rings located be-



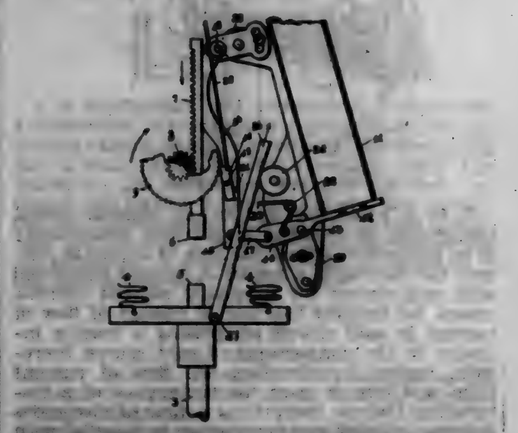
tween adjacent rows of rollers and in contact with the outer race ring.

2,029,266
REGULATOR
Bennett M. Leece, Cleveland, and Dale S. Cole, Cleveland Heights, Ohio, assignors to The Leece-Neville Company, Cleveland, Ohio, a corporation of Ohio
Application October 26, 1931, Serial No. 572,842
3 Claims. (Cl. 290—37)



1. In an electromagnetic device of the character described the combination of a frame, a magnet winding on said frame, and a circuit control device responsive to magnetization produced by said winding, said control device comprising an elongated air tight envelope, a support wholly enclosed in said envelope and retained in place therein by engagement with the wall of the envelope at peripherally spaced areas which extend for a substantial distance along the wall of the envelope, a contact on said support, and a vibratory armature in the envelope for cooperation with said contact.

2,029,267
ELECTROMAGNETIC DEVICE
Bennett M. Leece, Cleveland, and Dale S. Cole, Cleveland Heights, Ohio, assignors to The Leece-Neville Company, Cleveland, Ohio, a corporation of Ohio
Application June 10, 1932, Serial No. 616,644
6 Claims. (Cl. 200—84)



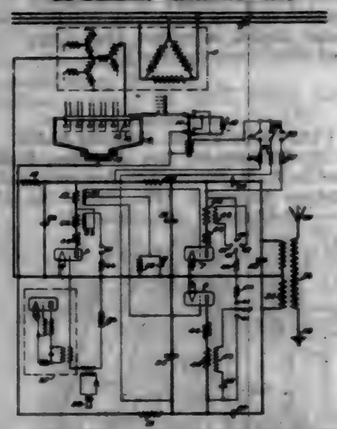
1. An electromagnetic device of the character described comprising a hollow frame element, a pair of spaced frame elements extending transversely of said hollow frame element, a magnet winding disposed in said hollow element between said spaced elements, aligned core sections extending into said winding from said spaced elements, means for relatively adjusting said sections, an envelope disposed in said sections, and a make and break device in said envelope responsive to magnetization produced by said winding.

2,029,268
LIQUID DISTRIBUTOR
Nels R. Lund, Sanford, N. Y., assignor to The Deer Company, Inc., New York, N. Y., a corporation of Delaware
Application September 3, 1931, Serial No. 561,625
13 Claims. (Cl. 299—166)

1. In a liquid distributor, a liquid conducting distributing arm having a longitudinally spaced series of discharge orifices each of any desirable shape, a distributing attachment associated with each orifice for shaping the liquid issuing therefrom into a flattened stream or spray, said attachment comprising a delivery nozzle portion having a pair of lips forming a horizontally elongated mouth, and also a body portion fitted for engagement upon said distributing arm, and means for bodily adjusting the said attachment relative to the orifice substantially in an up and down direction, by which means the delivery volume from any of the orifices can be controlled individually through optional part coverage of the orifice by said nozzle body portion whereby a desirable general shape of the spray is maintained under various operating conditions as the discharging liquid traverses the supporting top surface of the lower lip portion.

2,029,269
COIN CONTROL FOR SCALES
William R. McDonald, Los Angeles, Calif., assignor to L. H. Stark, Los Angeles, Calif.
Application August 5, 1935, Serial No. 34,706
2 Claims. (Cl. 194—47)

1. In a weighing device, a coin chute, a weight ascertaining mechanism including a gear pinion and a ratchet wheel securely combined for rotation around a common axis, a coin trap pivotally



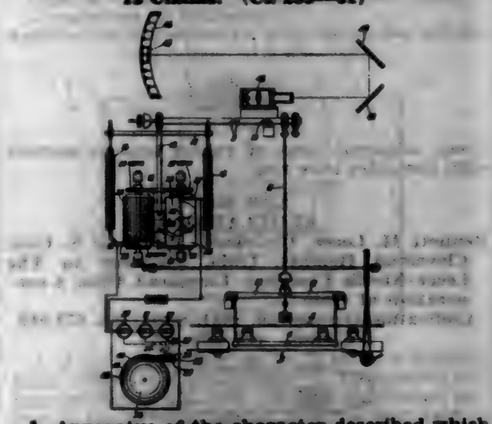
mounted with respect to the chute to be actuated by a coin passing through the chute, a counterweight portion on the coin trap extending beyond the pivot mounting for returning the coin trap to and normally maintaining it in inoperative position, a ratchet pawl support pivotally suspended at one end and with the other end extending to a point near said counterweight portion, a link member connecting the ratchet pawl support and counterweight portion, a ratchet pawl pivotally mounted on said support under spring tension that normally allows said sprocket wheel and gear pinion as well as the weight ascertaining mechanism as a whole to rotate in one direction only, locking against movements in the opposite direction, said counterweight portion and link member functioning in manner of a toggle to fold when the trap is actuated by a coin so as to swing the connected suspended ratchet pawl support to such an extent that said pawl is withdrawn sufficiently to allow said weight ascertaining mechanism to move in said opposite direction, an operating member mounted for rotation subject to movements of a cooperatively connected weighing device, and a spring member with one end secured to the coin trap and with the other end disposed to become engaged with said operating member when the coin trap is actuated.

2,029,270

ELECTRIC VALVE PROTECTIVE SYSTEM

Franz Meriens, Mannheim, Germany, assignor to Aktiengesellschaft Brown Boveri & Cie., Baden, Switzerland, a joint-stock company of Switzerland

Application March 14, 1935, Serial No. 10,984
In Germany November 11, 1933
11 Claims. (Cl. 250—27)



2. In a protective system, an electric circuit comprising an element of variable conductivity to be protected against the flow of excessive current therethrough, a source of current connected with said circuit for supplying current thereto, means for limiting the rate of change of flow of current in said circuit comprising a reactor included in the connections of said source therewith, means for diverting the flow of current from said circuit upon the occurrence of a disturbance therein comprising a pair of electrodes defining a spark gap connection in parallel with said circuit, and means operable responsive to the magnitude of the rate of increase of flow of current in said circuit to cause breakdown of said spark gap.

2,029,271

CONVEYER WEIGHING APPARATUS

Edwin H. Messiter, Jersey City, N. J., assignor, by mesne assignments, to Chatillon-Schaefer Corporation, New York, N. Y., a corporation of Delaware

Application September 1, 1928, Serial No. 303,481
15 Claims. (Cl. 235—61)

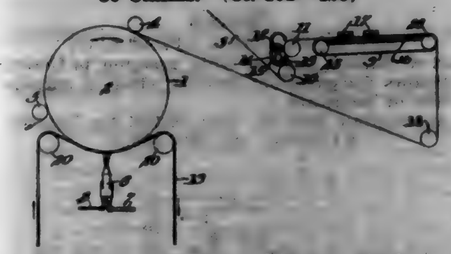
1. Apparatus of the character described which comprises an element having a conducting surface of variable width forming a portion of an electric circuit, a contact element adapted to periodically engage said surface to close said circuit, means for shifting said surface relative to said contact, means for intermittently forcing said contact into engagement with said surface, said last two recited means being operated out of synchronism, integrating means in said electric circuit operated by said engagements, and means operated in accordance with a function to be integrated for shifting said contact relative to said surface in a direction transverse to said first mentioned relative movement so as to vary the number of contacts made with said surface during a given time interval.

2,029,272

DELAYED CONTROL TIME LOCK

William C. Miller, Canton, Ohio, assignor to Diebold Safe & Lock Co., Canton, Ohio, a corporation of Ohio

Application September 4, 1934, Serial No. 743,857
14 Claims. (Cl. 70—36)



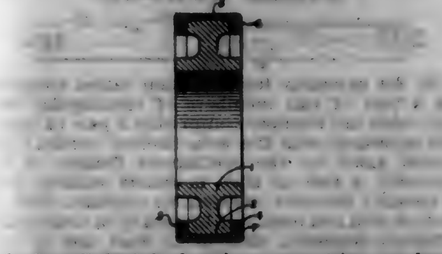
3. In combination: a combination lock including a closure-locking bolt; clock-mechanism equipped with an auxiliary locking-device for preventing retraction of said bolt; a winding-gear journaled on the frame of the clock-mechanism and equipped with a winding disk carrying a winding-pawl; a stud on said gear adapted to be actuated by said pawl in the winding operation; and means carried by the combination lock-mechanism serving to actuate said winding disk during the manipulation of the dial to bring the combination to the unlocking position.

2,029,273

PROCESS OF COATING PAPER

William J. Montgomery and Donald E. Bradner, Hamilton, Ohio, assignors to The Champion Paper and Fibre Company, Hamilton, Ohio, a corporation of Ohio

Application January 25, 1929, Serial No. 335,016
30 Claims. (Cl. 101—426)



1. In the manufacture of paper which is at least partially covered with coating having a cast surface, the hereindescribed process which comprises depositing a fluid aqueous coating upon a hard non-adhering finishing surface, cementing paper to said coating, separating the paper together with the coating from said finishing surface, and hardening the coating to a non-plastic cast condition on said finishing surface prior to the separation thereof.

2,029,274

RADIAL PLAIN BEARING

Nils Arvid Palmgren, Goteborg, Sweden, assignor to Aktiebolaget Svenska Kullagerfabriken, Goteborg, Sweden, a corporation of Sweden

Application December 7, 1934, Serial No. 756,541
In Sweden January 30, 1934
4 Claims. (Cl. 308—72)

1. A radial plain bearing comprising an inner bearing ring having a spherical unbroken sliding surface on its outer periphery and an outer bearing ring having a spherical unbroken sliding surface fitting the inner bearing ring, the outer ring being of greater width than the width of the inner ring, there being recesses formed in the inner periphery of the outer bearing ring extending inwardly from the side face of the ring for facilitating the insertion of the inner ring, the outer ring being thin enough to deform ovally for permitting its passage onto the inner ring, while in a position perpendicular to the latter.

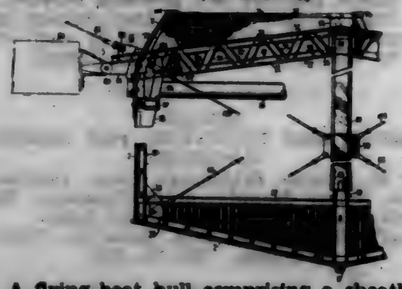
2,029,275

RADIAL PLAIN BEARING FOR GREASE LUBRICATION

Nils Arvid Palmgren, Goteborg, Sweden, assignor to Aktiebolaget Svenska Kullagerfabriken, Goteborg, Sweden, a corporation of Sweden

Application January 19, 1935, Serial No. 2,592
In Sweden November 2, 1934
4 Claims. (Cl. 308—127)

1. A radial plain bearing for grease lubrication, characterized by the combination of an outer bearing ring with an inner sliding surface, an inner bearing ring, consisting of an inner flange for mounting on a shaft and an outer flange with an external sliding surface to bear against the outer bearing ring and a web, connecting the inner and outer flanges of the inner bearing ring, lubricating channels from the inner to the outer side of the outer flange of the inner bearing ring, side plates fixed to the outer bearing ring and extending inwardly towards the bearing center and constitut-



ing a seal against the inner flange of the inner bearing ring and enclosing a chamber formed by the side plates and the bearing rings, and separating discs fixed at the edges of the outer flange of the inner bearing ring and extending inwardly towards the bearing center at a radius which is greater than the smallest radius of the side plates, the said separating discs together with the outer flange of the inner bearing ring forming a chamber within the chamber formed by the side plates and the bearing rings.

2,029,276

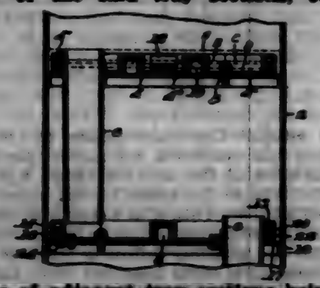
FLYING BOAT SUSPENSION STRUCTURE

Earl J. W. Ragsdale, Norristown, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a corporation of Pennsylvania

Application May 12, 1932, Serial No. 610,782
7 Claims. (Cl. 244—2)

1. A flying-boat hull comprising a sheathing, a transverse beam including continuous top and bottom chords extending through the sheathing, and a unit fitting structure on the beam and braced to the sheathing fore and aft and vertically and having a portion outside the sheathing for mounting the hull and attaching a guy-wire thereto and a portion inside the sheathing for attaching a guy-wire thereto to brace it to the central portion of the hull.

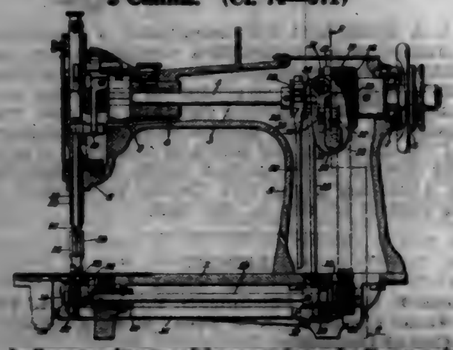
2,029,277



BUBBLE TRAY

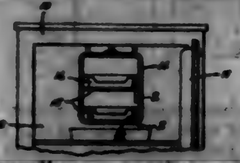
Loren P. Scoville, Flushing, N. Y., assignor to The Texas Company, New York, N. Y., a corporation of Delaware

Application February 23, 1933, Serial No. 658,683
9 Claims. (Cl. 261—114)



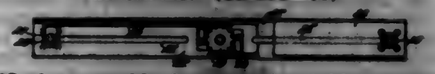
1. In a bubble tower, a supporting ring secured to the interior face of the tower and having an upwardly extending flange about the inner pe-

riphery thereof to form a liquid retaining trough, a sectional bubble tray removably supported within the tower by said trough, vapor risers and bubble caps carried by said tray, the marginal portions of said tray sections adjacent the said trough having flanges overlapping the said upwardly extending flange of the trough and then depending down into the trough in spaced relation to the upwardly extending flange and to substantially the same level as the lower ends of the said bubble caps, spaced supports between the said trough and the said overlapping flanges of the tray sections to form vapor passages therebetween, whereby an additional vapor bubble passage is formed about substantially the entire periphery of the said tray sections, contiguous



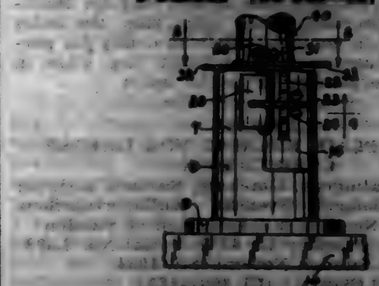
portions of adjacent tray sections being spaced from each other to form additional vapor passages, there being an upwardly extending flange on one tray section to form a liquid pool thereon and an overlapping flange on the adjacent tray section which extends downwardly in spaced relation to the said upwardly extending flange and into the said liquid pool to substantially the same level as the lower ends of the bubble caps, and spaced supports between the said upwardly extending flange and the said overhanging flange of adjacent tray sections, whereby additional vapor bubble passages are provided between the said tray sections, the said tray sections being supported substantially entirely by each other and by the said liquid retaining trough.

2,029,278
ADJUSTABLE ECCENTRIC FOR SEWING MACHINES
Jake H. Stearns, Bridgeport, Conn., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a corporation of New Jersey
Application July 17, 1934, Serial No. 735,612
3 Claims. (Cl. 74—571)



1. In a sewing machine, a rotary shaft, an actuating eccentric having an arcuate rack, means for securing said eccentric for rotation with said shaft and providing for right line adjustment of the eccentric crosswise of the shaft, an adjusting cam rotatably mounted upon said shaft, a connection between said cam and eccentric whereby relative rotation of the cam and eccentric effects adjustment of the eccentricity of the eccentric, a spring-pressed detent carried by said cam for engagement with said rack, and manually operable means for releasing said detent from said rack.

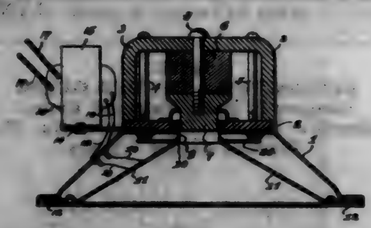
2,029,279
REFRIGERATING APPARATUS
Carl A. Stickel, Dayton, Ohio, assignor to General Motors Corporation, Dayton, Ohio, a corporation of Delaware
Application June 27, 1934, Serial No. 733,622
9 Claims. (Cl. 62—108.5)



1. A refrigerating apparatus comprising in combination, a cooling element having a support for an ice tray, an ice tray positioned on said support, and means carried by said cooling element and adapted to engage said tray to release the tray from its support, said means being resiliently mounted on said cooling element and adapted to be actuated either in a downward or in an upward direction about its mounting to pry the tray loose from its support.

2,029,280
EXTENSION TABLE
William F. Kow, Winston-Salem, N. C.
Application April 21, 1935, Serial No. 17,728
22 Claims. (Cl. 311—73)

13. An assembly for extension tables comprising a pair of rail members of rectangular section, each rail member comprising a pair of channels arranged with the webs thereof vertical and spaced apart by the overlapped flanges of the channels, a pair of slide members slidably held in parallel movable relation on opposite sides of each of said rail members by means of connecting elements engaging slots in at least one of said members, said cross members rigidly positioning said rail members in spaced parallel relationship.



2,029,281
TREE HOLDER
Frank P. McCann, Seattle, Wash.
Application November 26, 1934, Serial No. 754,471
3 Claims. (Cl. 248—24)

3. The combination with a tree holder having a side-gate, a hinge bolt for the gate, and a fastening bolt for the free edge of the gate, of a pair of adjustable, opposed, arcuate, slotted jaws mounted on said bolts, one of said jaws having an open slot at one end and adapted to pivot at its other end on a bolt, and nuts on the bolts for clamping the jaws in engagement with a tree.

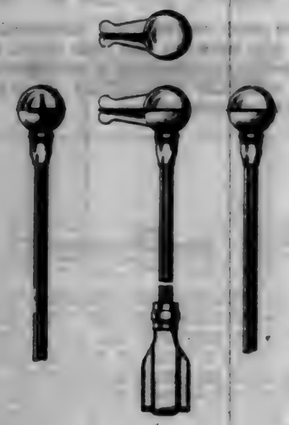
2,029,282
MAGNETIC CIRCUIT AND CONSTRUCTION THEREOF
Igor B. Sarpe, Rochester, N. Y.
Application April 13, 1935, Serial No. 16,361
7 Claims. (Cl. 179—117)

1. In a magnetic circuit for a transducer, a single relative short permanent magnet having a polar plane surface extending in a plane normal to the axis of the magnet and to the flux lines, a mild steel yoke attached to said magnet and including a mild steel pole plate having an opening therein concentric with the axis of said permanent magnet, a pole piece having a plane under surface extending normal to the axis of the pole piece and contacting with the polar plane surface of the magnet, said pole piece projecting into

said opening and cooperating therewith to define an air gap between the pole piece and pole plate, said pole piece having a substantially homogeneous structure throughout its length but different flux concentrations.

DESIGNS

JANUARY 28, 1936



98,288

DESIGN FOR A FENDER GUIDE

Gustave F. Bahr, Fairfield, Conn.

Application June 7, 1935, Serial No. 57,187

Term of patent 7 years

The ornamental design for a fender guide, as shown.

98,289

DESIGN FOR A SHOE

Haviland D. Baldwin, Auburn, Maine

Application December 10, 1935, Serial No. 59,999

Term of patent 3½ years

The ornamental design for a shoe substantially as shown and described.

98,290

DESIGN FOR A COMBINATION WEINER ROASTING APPARATUS AND DISPLAY HOUSING

Lloyd J. Bohnsman, Kansas City, Mo.

Application November 25, 1935, Serial No. 59,735

Term of patent 14 years

The ornamental design for a combination weiner roasting apparatus and display housing, as shown and described.

98,291

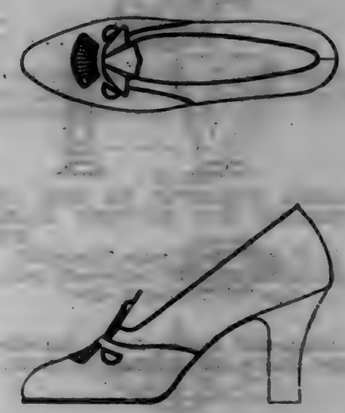
DESIGN FOR A SHOE

Pasquale Berda, Brooklyn, N. Y., assignor to Bancroft Walker Co., Waltham, Mass., a corporation of Massachusetts

Application December 13, 1935, Serial No. 60,055

Term of patent 3½ years

The ornamental design for a shoe substantially as shown and described.



98,292

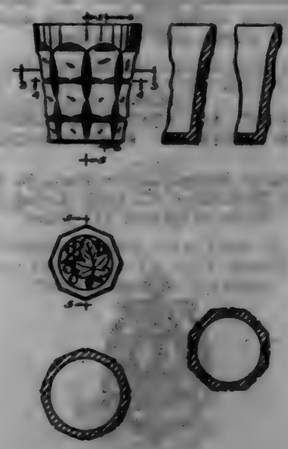
DESIGN FOR A SHOE

Pasquale Berda, Brooklyn, N. Y., assignor to Bancroft Walker Co., Waltham, Mass., a corporation of Massachusetts

Application December 13, 1935, Serial No. 60,056

Term of patent 3½ years

The ornamental design for a shoe substantially as shown and described.



98,293

DESIGN FOR A GLASS

Jeddia B. Clark, Dunkirk, Ind., assignor to Indiana Glass Company, Dunkirk, Ind., a corporation of Indiana

Application October 5, 1935, Serial No. 58,844

Term of patent 7 years

The ornamental design for a glass, as shown and described.

98,294

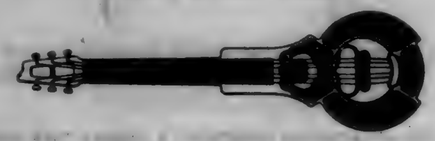
DESIGN FOR AN EMBLEM

Amy J. Daniels, Palmer, Mass.

Application May 11, 1935, Serial No. 56,793

Term of patent 14 years

The ornamental design for an emblem substantially as shown and described.



98,295

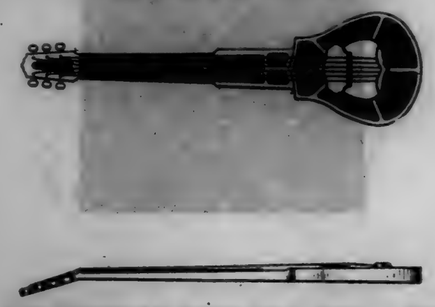
DESIGN FOR A MUSICAL INSTRUMENT

Rudolph Dopyera, Los Angeles, Calif.

Application September 23, 1935, Serial No. 58,669

Term of patent 7 years

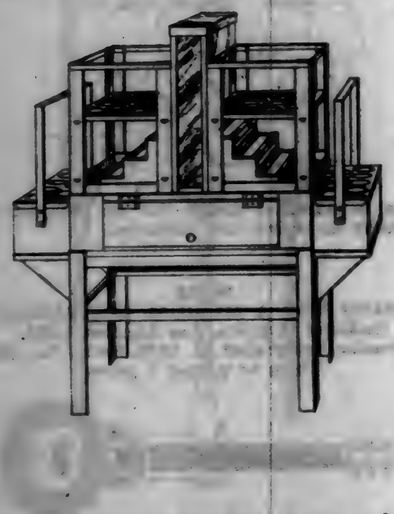
The ornamental design for a musical instrument as shown.



98,296

DESIGN FOR A MUSICAL INSTRUMENT

Rudolph Dopyera, Los Angeles, Calif.



Application September 23, 1935, Serial No. 58,670

Term of patent 7 years

The ornamental design for a musical instrument as shown.

98,297
DESIGN FOR A DISPLAY RACK
Samuel C. Earley, Toledo, Ohio, assignor to The Acklin Stamping Company, Toledo, Ohio, a corporation of Ohio
Application May 20, 1935, Serial No. 56,914
Term of patent 7 years

The ornamental design for a display rack substantially as shown and described.

98,298
DESIGN FOR LACE
Bert Edson, Pawtucket, R. I.
Application December 24, 1935, Serial No. 60,250
Term of patent 3½ years

The ornamental design for lace, substantially as shown.

98,299
DESIGN FOR A COMBINED SALT AND PEPPER SHAKER
Harry J. Edison, Kansas, Minn.
Application December 5, 1935, Serial No. 58,969
Term of patent 7 years

The ornamental design for a combined salt and pepper shaker, substantially as shown.

98,300
DESIGN FOR AN APPLIQUE EMBLEM OR SIMILAR ARTICLE FOR WEARING APPAREL
Charles Ramsey, New York, N. Y.
Application December 17, 1935, Serial No. 60,142
Term of patent 3½ years

The ornamental design for an appliqué emblem or similar article for wearing apparel, substantially as shown and described.

98,301
DESIGN FOR AN APPLIQUÉ EMBLEM OR SIMILAR ARTICLE FOR WEARING APPAREL
Charles Ramsey, New York, N. Y.
Application December 17, 1935, Serial No. 60,143
Term of patent 3½ years

The ornamental design for an appliqué emblem or similar article for wearing apparel, substantially as shown and described.

98,302
DESIGN FOR AN APPLIQUÉ EMBLEM OR SIMILAR ARTICLE FOR WEARING APPAREL
Charles Ramsey, New York, N. Y.
Application December 17, 1935, Serial No. 60,144
Term of patent 3½ years

The ornamental design for an appliqué emblem or similar article for wearing apparel, substantially as shown and described.

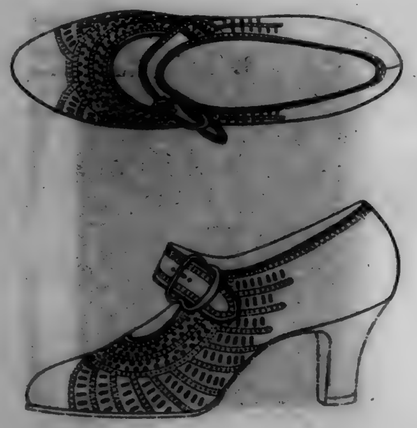
98,303
DESIGN FOR AN APPLIQUÉ EMBLEM OR SIMILAR ARTICLE FOR WEARING APPAREL
Charles Ramsey, New York, N. Y.
Application December 17, 1935, Serial No. 60,145
Term of patent 3½ years

The ornamental design for an appliqué emblem or similar article for wearing apparel, substantially as shown and described.

98,304
DESIGN FOR AN APPLIQUÉ EMBLEM OR SIMILAR ARTICLE FOR WEARING APPAREL
Charles Ramsey, New York, N. Y.
Application December 17, 1935, Serial No. 60,146
Term of patent 3½ years

The ornamental design for an appliqué emblem or similar article for wearing apparel, substantially as shown and described.

98,305
DESIGN FOR AN APPLIQUÉ EMBLEM OR SIMILAR ARTICLE FOR WEARING APPAREL
Charles Ramsey, New York, N. Y.
Application December 19, 1935, Serial No. 60,179
Term of patent 3½ years



The ornamental design for an appliqué emblem or similar article for wearing apparel, substantially as shown and described.

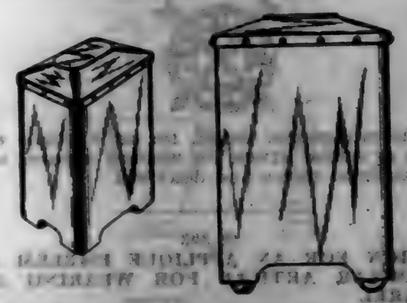
98,306
DESIGN FOR A CYCLE SADDLE SEAT
Roland W. Faulkner, Elyria, Ohio, assignor to The Troxel Manufacturing Company, Elyria, Ohio, a corporation of Ohio
Application September 5, 1935, Serial No. 58,448
Term of patent 7 years

The ornamental design for a cycle saddle seat substantially as shown.

98,307
DESIGN FOR A SHOE
Jacob Fishman, Brooklyn, N. Y., assignor to Geo. E. Keith Company, Campello, Mass., a corporation of Massachusetts
Application November 23, 1935, Serial No. 59,817
Term of patent 3½ years

The ornamental design for a shoe, as shown and described.

98,308
DESIGN FOR A DOME LIGHT
Burton S. Fleraday, Toledo, Ohio, assignor to Dura Company, Toledo, Ohio, a corporation of Ohio
Application August 23, 1935, Serial No. 58,255
Term of patent 7 years



The ornamental design for a dome light, as shown and described.

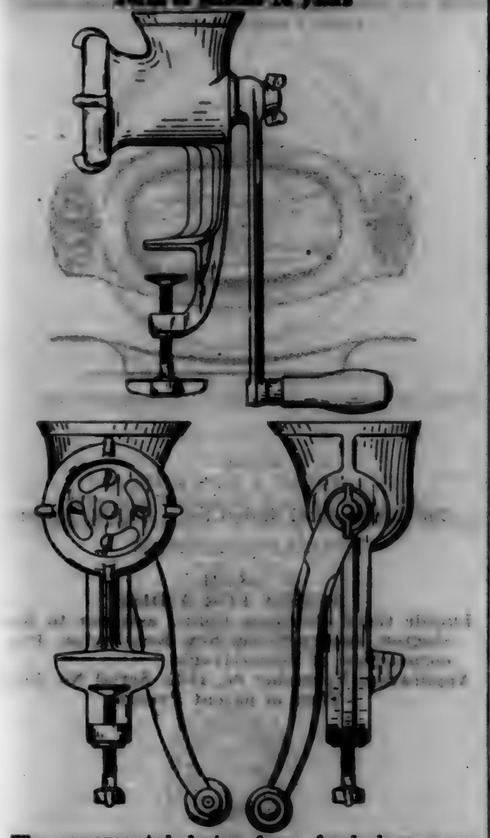
98,309
DESIGN FOR A TEXTILE FABRIC OR SIMILAR ARTICLE OF MANUFACTURE
John F. Gaul, Jr., Clifton, N. J., assignor to Botany Worsted Mills, Passaic, N. J., a corporation of New Jersey
Application December 2, 1935, Serial No. 59,257
Term of patent 14 years

The ornamental design for a textile fabric or similar article of manufacture substantially as shown.

98,310
DESIGN FOR A GREASING APPARATUS CABINET
Charles W. Ginter, Bryan, Ohio, assignor to The Aro Equipment Corporation, Bryan, Ohio, a corporation of Ohio
Application June 12, 1935, Serial No. 57,235
Term of patent 7 years

The ornamental design for a greasing apparatus cabinet as shown and described.

98,311
DESIGN FOR A SHOE
Myron S. Goldman, St. Louis, Mo., assignor to Valley Shoe Corporation, St. Louis, Mo., a corporation of Missouri
Application December 9, 1935, Serial No. 59,362
Term of patent 3½ years

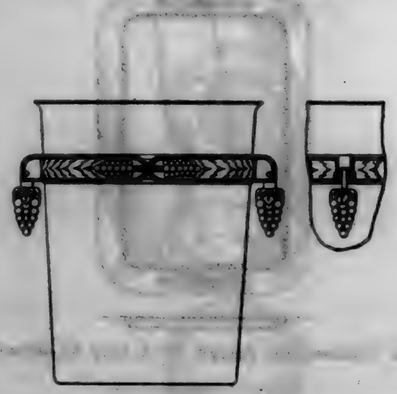


The ornamental design for a shoe, substantially as shown.

98,312
DESIGN FOR A SHOE
Myron S. Goldman, St. Louis, Mo., assignor to Valley Shoe Corporation, St. Louis, Mo., a corporation of Missouri
Application December 9, 1935, Serial No. 59,363
Term of patent 3½ years

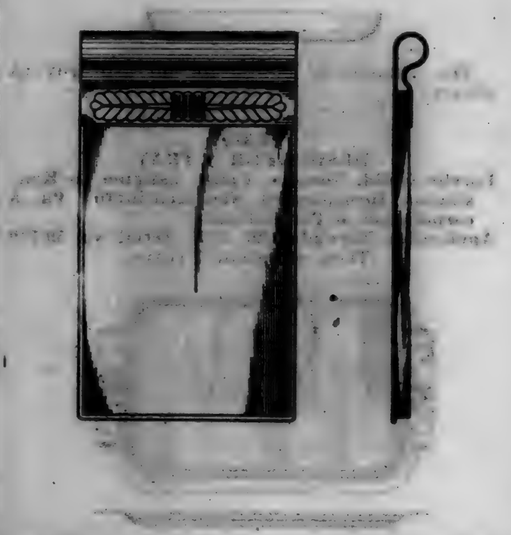
The ornamental design for a shoe, substantially as shown.

98,313
DESIGN FOR A FOOD CHOPPER
Roger W. Griswold, Erie, Pa., assignor to The Griswold Manufacturing Company, Erie Pa., a corporation of Pennsylvania
Application November 1, 1935, Serial No. 58,121
Term of patent 14 years



The ornamental design for a food chopper as shown.

98,314
DESIGN FOR AN UPHOLSTERY FABRIC
William Guthrie, New York, N. Y.
Application December 12, 1935, Serial No. 60,325
Term of patent 3½ years



The ornamental design for an upholstery fabric as shown and described.

98,315
DESIGN FOR A WINE COOLING BUCKET OR THE LIKE
Lurelle Guild, Noroton, Conn., assignor to Kensington, Incorporated, New Kensington, Pa., a corporation of Pennsylvania
Application April 20, 1935, Serial No. 56,482
Term of patent 3½ years

The ornamental design for a wine cooling bucket or the like as shown and described.

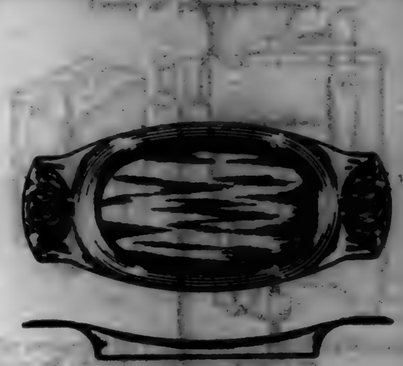
98,316
DESIGN FOR A MEMORANDUM PAD
Lurelle Guild, Noroton, Conn., assignor to Kensington, Incorporated, New Kensington, Pa., a corporation of Pennsylvania
Application October 24, 1935, Serial No. 59,275
Term of patent 3½ years

The ornamental design for a memorandum pad as shown.

98,317
DESIGN FOR A TRAY
Lurelle Guild, Noroton, Conn., assignor to Kensington, Incorporated, New Kensington, Pa., a corporation of Pennsylvania
Application October 30, 1935, Serial No. 50,277
Term of patent 3½ years

The ornamental design for a tray as shown.

98,318
DESIGN FOR AN ASH TRAY
Lurelle Guild, Noroton, Conn., assignor to Kensington, Incorporated, New Kensington, Pa., a corporation of Pennsylvania
Application October 30, 1935, Serial No. 50,278
Term of patent 3½ years



The ornamental design for an ash tray as shown.

98,319
DESIGN FOR A TRAY
Lurelle Guild, Noroton, Conn., assignor to Kensington, Incorporated, New Kensington, Pa., a corporation of Pennsylvania
Application November 30, 1935, Serial No. 50,779
Term of patent 7 years

The ornamental design for a tray as shown.

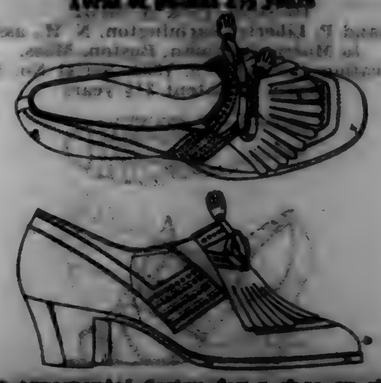
98,320
DESIGN FOR A TRAY
Lurelle Guild, Noroton, Conn., assignor to Kensington, Incorporated, New Kensington, Pa., a corporation of Pennsylvania
Application November 30, 1935, Serial No. 50,780
Term of patent 7 years

The ornamental design for a tray as shown.

98,321
DESIGN FOR A DISH
Lurelle Guild, Noroton, Conn., assignor to Kensington, Incorporated, New Kensington, Pa., a corporation of Pennsylvania
Application November 30, 1935, Serial No. 50,782
Term of patent 7 years

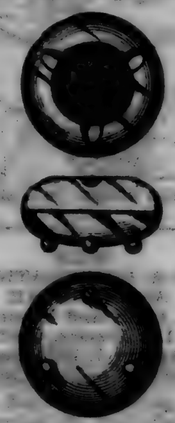
The ornamental design for a dish as shown.

98,322
DESIGN FOR A PLATTER
Lurelle Guild, Noroton, Conn., assignor to Kensington, Incorporated, New Kensington, Pa., a corporation of Pennsylvania
Application November 30, 1935, Serial No. 50,783
Term of patent 7 years



The ornamental design for a platter as shown.

98,323
DESIGN FOR A PAPER CUP
Virginia Bolderick, Kansas City, Mo.
Application October 2, 1935, Serial No. 50,791
Term of patent 3½ years



The ornamental design for a paper cup substantially as shown.

98,324
DESIGN FOR A SHOE OR SIMILAR ARTICLE
Charles G. Hirshman, New York, N. Y.
Application December 18, 1935, Serial No. 50,995
Term of patent 3½ years

The ornamental design for a shoe or similar article, substantially as shown.

98,325
DESIGN FOR AN ASH TRAY
James H. Hershey, Chicago, Ill.
Application November 11, 1935, Serial No. 50,424
Term of patent 14 years

The ornamental design for an ash tray, substantially as shown.

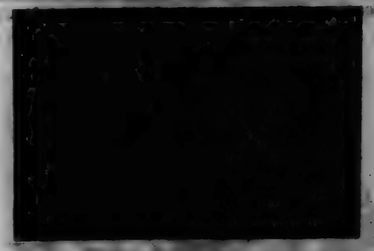
98,326
DESIGN FOR LACE
Hugo W. Hucknall, Elyria, Ohio, assignor to The American Lace Mfg. Co., Elyria, Ohio, a corporation of Ohio
Application October 14, 1935, Serial No. 50,977
Term of patent 3½ years

The ornamental design for lace, substantially as shown and described.

96,327
DESIGN FOR A SHOE
Alphons Herzeler, New Rochelle, N. Y.
Application December 12, 1935, Serial No. 66,647
Term of patent 3½ years

The ornamental design for a shoe substantially as shown.

96,328
DESIGN FOR A COMBINATION ASH TRAY AND LIGHTER
William A. Ingle and Edwin E. Baitke, Los Angeles, Calif.
Application August 7, 1935, Serial No. 58,605
Term of patent 7 years



The ornamental design for a combination ash tray and lighter as shown.

96,329
DESIGN FOR A LIGHTING FIXTURE
Arthur A. Johnson, New Bedford, Mass.
Application September 10, 1935, Serial No. 58,618
Term of patent 7 years

The ornamental design for a lighting fixture as shown.

96,330
DESIGN FOR A TEXTILE FABRIC
Abe C. Kaplan, New York, N. Y.
Application December 27, 1935, Serial No. 66,942
Term of patent 3½ years

The ornamental design for a textile fabric, substantially as shown.

96,331
DESIGN FOR A REFRIGERATOR CABINET
Ralph E. Krush, Springfield, Mass., assignor to Westinghouse Electric & Manufacturing Company, a corporation of Pennsylvania
Application April 23, 1935, Serial No. 56,522
Term of patent 7 years

The ornamental design for a refrigerator cabinet substantially as shown.

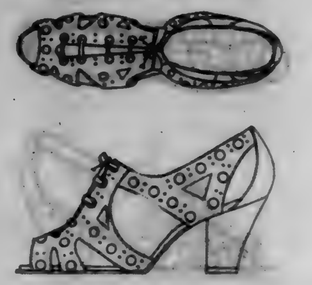
96,332
DESIGN FOR A SHOE
Normand P. Liberty, Farmington, N. H., assignor to Morris Bartman, Boston, Mass.
Application December 9, 1935, Serial No. 59,961
Term of patent 3½ years

The ornamental design for a shoe substantially as shown.

96,333
DESIGN FOR A SHOE
Normand P. Liberty, Farmington, N. H., assignor to Morris Bartman, Boston, Mass.
Application December 9, 1935, Serial No. 59,969
Term of patent 3½ years

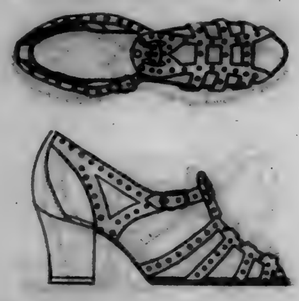
The ornamental design for a shoe substantially as shown.

96,334
DESIGN FOR A SHOE
Normand P. Liberty, Farmington, N. H., assignor to Morris Bartman, Boston, Mass.
Application December 5, 1935, Serial No. 59,971
Term of patent 3½ years



The ornamental design for a shoe substantially as shown.

96,335
DESIGN FOR A SHOE
Normand P. Liberty, Farmington, N. H., assignor to Morris Bartman, Boston, Mass.
Application December 9, 1935, Serial No. 59,975
Term of patent 3½ years



The ornamental design for a shoe substantially as shown.

96,336
DESIGN FOR A SHOE
Normand P. Liberty, Farmington, N. H., assignor to Morris Bartman, Boston, Mass.
Application December 5, 1935, Serial No. 59,975
Term of patent 3½ years

The ornamental design for a shoe substantially as shown.

96,337
DESIGN FOR A SHOE
Normand P. Liberty, Farmington, N. H., assignor to Morris Bartman, Boston, Mass.
Application December 10, 1935, Serial No. 59,983
Term of patent 3½ years

The ornamental design for a shoe substantially as shown.

96,338
DESIGN FOR A SHOE
Normand P. Liberty, Farmington, N. H., assignor to Morris Bartman, Boston, Mass.
Application December 18, 1935, Serial No. 59,984
Term of patent 3½ years

The ornamental design for a shoe substantially as shown.

98,339
DESIGN FOR A SHOE
Normand P. Liberty, Farmington, N. H., assignor to Morris Bartman, Boston, Mass.
Application December 10, 1935, Serial No. 59,985
Term of patent 3½ years

The ornamental design for a shoe substantially as shown.

98,340
DESIGN FOR A SHOE
Normand P. Liberty, Farmington, N. H., assignor to Morris Bartman, Boston, Mass.
Application December 10, 1935, Serial No. 59,986
Term of patent 3½ years

The ornamental design for a shoe substantially as shown.

98,341
DESIGN FOR A SHOE
Normand P. Liberty, Farmington, N. H., assignor to Morris Bartman, Boston, Mass.
Application December 10, 1935, Serial No. 59,987
Term of patent 3½ years

The ornamental design for a shoe substantially as shown.

98,342
DESIGN FOR A SHOE
Normand P. Liberty, Farmington, N. H., assignor to Morris Bartman, Boston, Mass.
Application December 10, 1935, Serial No. 59,988
Term of patent 3½ years

The ornamental design for a shoe substantially as shown.

98,343
DESIGN FOR A SHOE
Normand P. Liberty, Farmington, N. H., assignor to Morris Bartman, Boston, Mass.
Application December 10, 1935, Serial No. 59,989
Term of patent 3½ years

The ornamental design for a shoe substantially as shown.

98,344
DESIGN FOR A SHOE
Normand P. Liberty, Farmington, N. H., assignor to Morris Bartman, Boston, Mass.
Application December 10, 1935, Serial No. 59,990
Term of patent 3½ years

The ornamental design for a shoe substantially as shown.

98,345
DESIGN FOR A SHOE
Normand P. Liberty, Farmington, N. H., assignor to Morris Bartman, Boston, Mass.
Application December 10, 1935, Serial No. 59,992
Term of patent 3½ years

The ornamental design for a shoe substantially as shown.

98,346
DESIGN FOR A SHOE
Normand P. Liberty, Farmington, N. H., assignor to Morris Bartman, Boston, Mass.
Application December 12, 1935, Serial No. 60,025
Term of patent 3½ years

The ornamental design for a shoe substantially as shown.

98,347
DESIGN FOR A SHOE
Normand P. Liberty, Farmington, N. H., assignor to Morris Bartman, Boston, Mass.
Application December 12, 1935, Serial No. 60,026
Term of patent 3½ years

The ornamental design for a shoe substantially as shown.

98,348
DESIGN FOR A SHOE
Normand P. Liberty, Farmington, N. H., assignor to Morris Bartman, Boston, Mass.
Application December 12, 1935, Serial No. 60,027
Term of patent 3½ years

The ornamental design for a shoe substantially as shown.

98,349
DESIGN FOR A SHOE
Normand P. Liberty, Farmington, N. H., assignor to Morris Bartman, Boston, Mass.
Application December 12, 1935, Serial No. 60,028
Term of patent 3½ years

The ornamental design for a shoe substantially as shown.

98,350
DESIGN FOR A SHOE
Normand P. Liberty, Farmington, N. H., assignor to Morris Bartman, Boston, Mass.
Application December 12, 1935, Serial No. 60,029
Term of patent 3½ years

The ornamental design for a shoe substantially as shown.

98,339
DESIGN FOR A SHOE
Normand P. Liberty, Farmington, N. H., assignor to Morris Burtman, Boston, Mass.
Application December 10, 1935, Serial No. 59,985
Term of patent 3½ years

The ornamental design for a shoe substantially as shown.

98,340
DESIGN FOR A SHOE
Normand P. Liberty, Farmington, N. H., assignor to Morris Burtman, Boston, Mass.
Application December 10, 1935, Serial No. 59,986
Term of patent 3½ years

The ornamental design for a shoe substantially as shown.

98,341
DESIGN FOR A SHOE
Normand P. Liberty, Farmington, N. H., assignor to Morris Burtman, Boston, Mass.
Application December 10, 1935, Serial No. 59,987
Term of patent 3½ years

The ornamental design for a shoe substantially as shown.

98,342
DESIGN FOR A SHOE
Normand P. Liberty, Farmington, N. H., assignor to Morris Burtman, Boston, Mass.
Application December 10, 1935, Serial No. 59,988
Term of patent 3½ years

The ornamental design for a shoe substantially as shown.

98,343
DESIGN FOR A SHOE
Normand P. Liberty, Farmington, N. H., assignor to Morris Burtman, Boston, Mass.
Application December 10, 1935, Serial No. 59,989
Term of patent 3½ years

The ornamental design for a shoe substantially as shown.

98,344
DESIGN FOR A SHOE
Normand P. Liberty, Farmington, N. H., assignor to Morris Burtman, Boston, Mass.
Application December 10, 1935, Serial No. 59,990
Term of patent 3½ years

The ornamental design for a shoe substantially as shown.

98,345
DESIGN FOR A SHOE
Normand P. Liberty, Farmington, N. H., assignor to Morris Burtman, Boston, Mass.
Application December 12, 1935, Serial No. 60,022
Term of patent 3½ years

The ornamental design for a shoe substantially as shown.

98,346
DESIGN FOR A SHOE
Normand P. Liberty, Farmington, N. H., assignor to Morris Burtman, Boston, Mass.
Application December 12, 1935, Serial No. 60,025
Term of patent 3½ years

The ornamental design for a shoe substantially as shown.

98,347
DESIGN FOR A SHOE
Normand P. Liberty, Farmington, N. H., assignor to Morris Burtman, Boston, Mass.
Application December 12, 1935, Serial No. 60,026
Term of patent 3½ years

The ornamental design for a shoe substantially as shown.

98,348
DESIGN FOR A SHOE
Normand P. Liberty, Farmington, N. H., assignor to Morris Burtman, Boston, Mass.
Application December 12, 1935, Serial No. 60,027
Term of patent 3½ years

The ornamental design for a shoe substantially as shown.

98,349
DESIGN FOR A SHOE
Normand P. Liberty, Farmington, N. H., assignor to Morris Burtman, Boston, Mass.
Application December 12, 1935, Serial No. 60,028
Term of patent 3½ years

The ornamental design for a shoe substantially as shown.

98,350
DESIGN FOR A SHOE
Normand P. Liberty, Farmington, N. H., assignor to Morris Burtman, Boston, Mass.
Application December 12, 1935, Serial No. 60,029
Term of patent 3½ years

The ornamental design for a shoe substantially as shown.

98,351
DESIGN FOR A SHOE
Normand P. Liberty, Farmington, N. H., assignor to Morris Bartman, Boston, Mass.
Application December 12, 1935, Serial No. 60,020
Term of patent 3½ years

The ornamental design for a shoe substantially as shown.

98,352
DESIGN FOR A SHOE
Normand P. Liberty, Farmington, N. H., assignor to Morris Bartman, Boston, Mass.
Application December 17, 1935, Serial No. 60,126
Term of patent 3½ years

The ornamental design for a shoe substantially as shown.

98,353
DESIGN FOR A SHOE
Normand P. Liberty, Farmington, N. H., assignor to Morris Bartman, Boston, Mass.
Application December 17, 1935, Serial No. 60,127
Term of patent 3½ years

The ornamental design for a shoe substantially as shown.

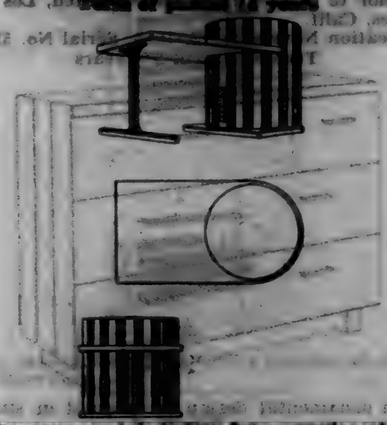
98,354
DESIGN FOR A SHOE
Normand P. Liberty, Farmington, N. H., assignor to Morris Bartman, Boston, Mass.
Application December 17, 1935, Serial No. 60,128
Term of patent 3½ years

The ornamental design for a shoe substantially as shown.

98,355
DESIGN FOR A SHOE
Normand P. Liberty, Farmington, N. H., assignor to Morris Bartman, Boston, Mass.
Application December 17, 1935, Serial No. 60,129
Term of patent 3½ years

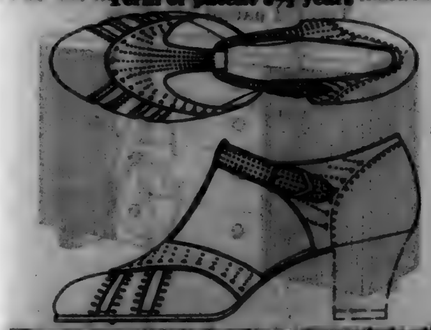
The ornamental design for a shoe substantially as shown.

98,356
DESIGN FOR A SHOE
Normand P. Liberty, Farmington, N. H., assignor to Morris Bartman, Boston, Mass.
Application December 17, 1935, Serial No. 60,130
Term of patent 3½ years



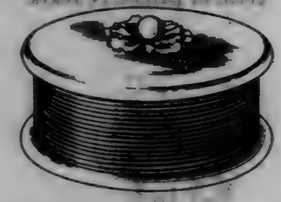
The ornamental design for a shoe substantially as shown.

98,357
DESIGN FOR A SHOE
Normand P. Liberty, Farmington, N. H., assignor to Morris Bartman, Boston, Mass.
Application December 17, 1935, Serial No. 60,131
Term of patent 3½ years



The ornamental design for a shoe substantially as shown.

98,358
DESIGN FOR A SERVICE STATION
Leonard D. Long, Charleston, S. C., assignor to Southern States Oil Company, Charleston, S. C., a corporation of South Carolina
Application May 25, 1935, Serial No. 57,059
Term of patent 14 years

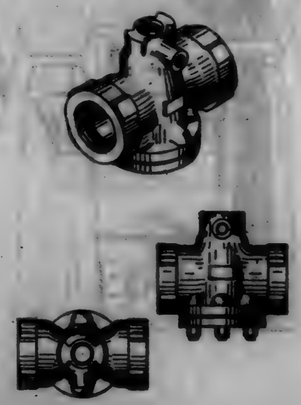


The ornamental design for a service station, as shown.

98,359
DESIGN FOR A SHOE
Joseph McGee, New York, N. Y., assignor to Bancraft Walker Co., Waltham, Mass., a corporation of Massachusetts
Application December 14, 1935, Serial No. 60,085
Term of patent 3½ years

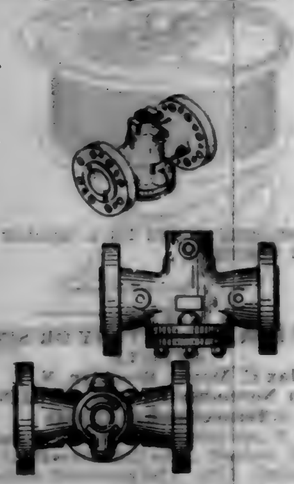
The ornamental design for a shoe substantially as shown and described.

98,360
DESIGN FOR A BOUDOIR CASE
Max C. Meyer, Brooklyn, N. Y.
Application July 17, 1935, Serial No. 57,483
Term of patent 3½ years



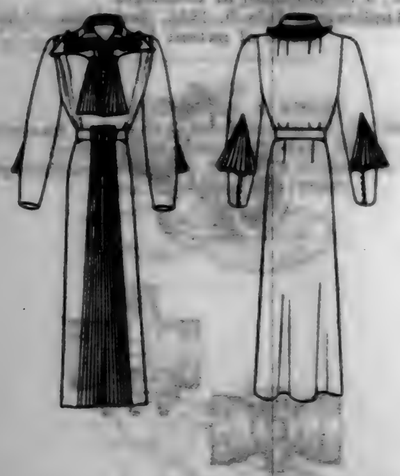
The ornamental design for a boudoir case, as shown and described.

98,361
DESIGN FOR AN ASH TRAY OR SIMILAR ARTICLE
Max C. Meyer, Brooklyn, N. Y.
Application November 12, 1935, Serial No. 59,537
Term of patent 7 years



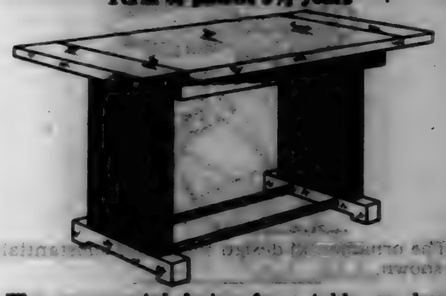
The ornamental design for an ash tray or similar article, as shown.

98,362
DESIGN FOR A PLUG VALVE BODY
Sven J. Nordstrom, Piedmont, Calif., assignor to Mereo Nordstrom Valve Company, Pittsburgh, Pa., a corporation of Delaware
Application July 9, 1935, Serial No. 57,574
Term of patent 14 years



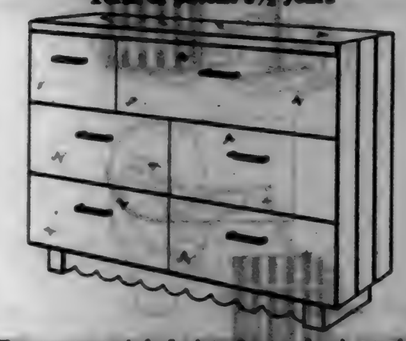
The ornamental design for a plug valve body, substantially as shown.

98,363
DESIGN FOR A PLUG VALVE BODY
Sven J. Nordstrom, Piedmont, Calif., assignor to Merco Nordstrom Valve Company, Pittsburgh, Pa., a corporation of Delaware
Application July 9, 1935, Serial No. 57,575
Term of patent 14 years



The ornamental design for a plug valve body, substantially as shown.

98,364
DESIGN FOR A DRESS
David William Price, New York, N. Y.
Application December 27, 1935, Serial No. 60,300
Term of patent 2½ years



The ornamental design for a dress, substantially as shown.

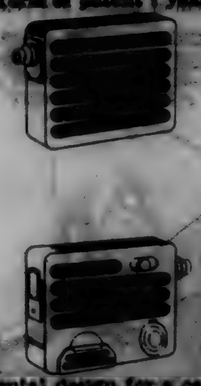
98,365
DESIGN FOR A TABLE
Marshall C. Pumphrey, Los Angeles, Calif., assignor to Barker Bros. Incorporated, Los Angeles, Calif.
Application November 11, 1935, Serial No. 59,093
Term of patent 3½ years

The ornamental design for a table, as shown.

98,366
DESIGN FOR A CHEST OR SIMILAR ARTICLE
Marshall C. Pumphrey, Los Angeles, Calif., assignor to Barker Bros. Incorporated, Los Angeles, Calif.
Application November 12, 1935, Serial No. 59,506
Term of patent 3½ years

The ornamental design for a chest or similar article as shown and described.

98,367
DESIGN FOR A DRESSER OR SIMILAR ARTICLE
Marshall C. Pumphrey, Los Angeles, Calif., assignor to Barker Bros. Incorporated, Los Angeles, Calif.
Application November 26, 1935, Serial No. 59,773
Term of patent 3½ years

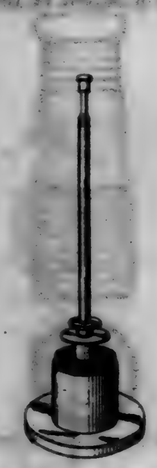


The ornamental design for a dresser or similar article as shown and described.

98,368
DESIGN FOR A BUCKLE
Solomon Putman, Newark, N. J.
Application October 24, 1935, Serial No. 59,052
Term of patent 3½ years

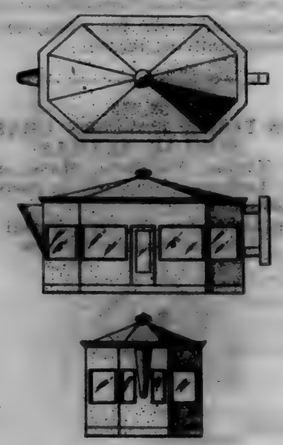
The ornamental design for a buckle, substantially as shown.

98,369
DESIGN FOR A CAMERA
Gordon Brown Schaibell, Millburn, N. J.
Application June 11, 1935, Serial No. 57,362
Term of patent 7 years



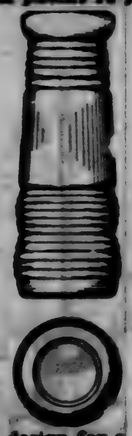
The ornamental design for a camera as shown and described.

98,370
DESIGN FOR A MUSICAL INSTRUMENT
Vinnie Seaver, Beloit, Wis.
Application November 9, 1935, Serial No. 59,231
Term of patent 7 years



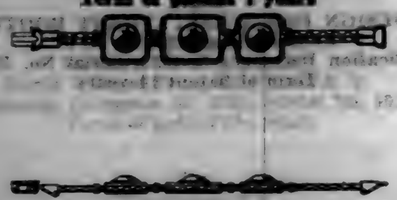
The ornamental design for a musical instrument, as shown.

98,371
DESIGN FOR A DISPLAY STAND
Bernard R. Steve, Chicago, Ill.
Application November 27, 1935, Serial No. 59,702
Term of patent 7 years



The ornamental design for a display stand, as shown.

98,372
DESIGN FOR A RESTAURANT BOOTH
Richard Sloss, Clifton, N. J.
Application December 5, 1935, Serial No. 59,917
Term of patent 14 years

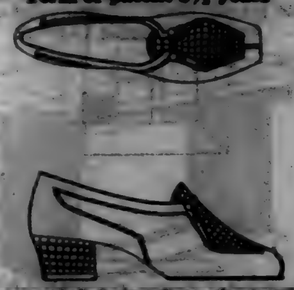


The ornamental design for a restaurant booth as shown and described.

98,373
DESIGN FOR A BOTTLE
Norman F. Stoner, San Francisco, Calif., assignor to Nesbitt Fruit Products Inc., Los Angeles, Calif., a corporation of California
Application September 18, 1935, Serial No. 36,507
Term of patent 14 years

The ornamental design for a bottle, as shown.

98,374
DESIGN FOR A BRACELET OR SIMILAR ARTICLE
James W. Taylor, Attleboro, Mass., assignor to S. & B. Lederer Company, a corporation of Rhode Island
Application December 19, 1935, Serial No. 60,185
Term of patent 7 years



The ornamental design for a bracelet or similar article, substantially as shown.

98,375
DESIGN FOR A JEWELRY CHARM OR SIMILAR ARTICLE
James W. Taylor, Attleboro, Mass., assignor to S. & B. Lederer Company, a corporation of Rhode Island
Application December 19, 1935, Serial No. 60,187
Term of patent 7 years

The ornamental design for a jewelry charm or similar article substantially as shown.

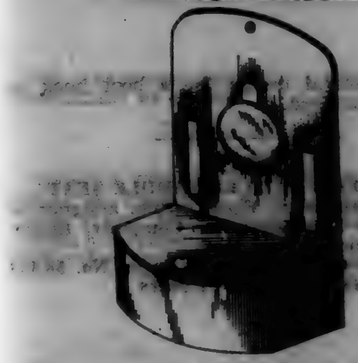
98,376
DESIGN FOR A SHOE
Abraham Turinsky, New York, N. Y.
Application December 19, 1935, Serial No. 60,168
Term of patent 3½ years

The ornamental design for a shoe, substantially as shown.

98,377
DESIGN FOR A SHOE
Abraham Turinsky, New York, N. Y.
Application December 19, 1935, Serial No. 60,169
Term of patent 3½ years

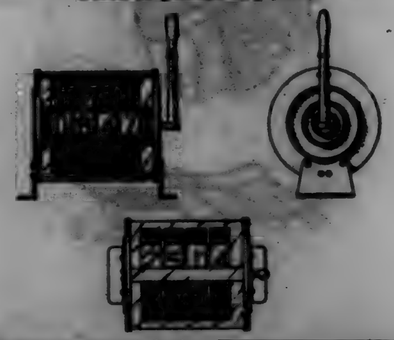
The ornamental design for a shoe, substantially as shown.

98,378
DESIGN FOR LACE
James Waterfield, Philadelphia, Pa., assignor to Louis A. Hill & Company Inc., New York, N. Y.
Application November 6, 1935, Serial No. 59,480
Term of patent 3½ years



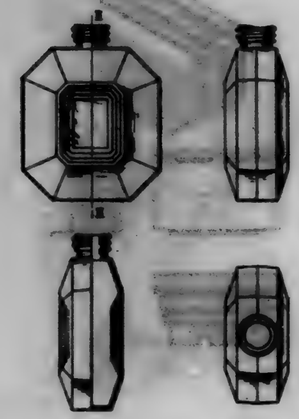
The ornamental design for lace substantially as shown.

98,379
DESIGN FOR A LACE
Joseph D. Wiener, New York, N. Y.
Application December 21, 1935, Serial No. 60,213
Term of patent 3½ years



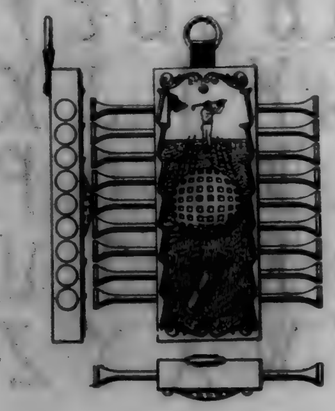
The ornamental design for a lace substantially as shown and described.

98,380
DESIGN FOR A SEWING KIT
Giuseppe Amato, New Britain, Conn.
Application September 7, 1935, Serial No. 58,469
Term of patent 3½ years



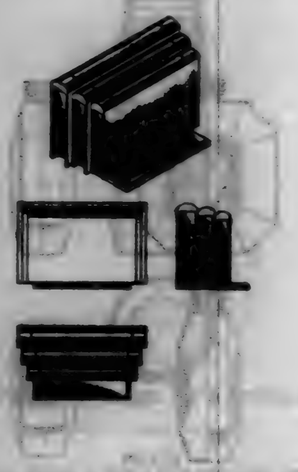
The ornamental design for a sewing kit, as shown.

98,381
DESIGN FOR A NONRETREATING INDICATOR
Alfred R. Babcock, Chicago, Ill.
Application November 16, 1935, Serial No. 59,684
Term of patent 1¼ years



The ornamental design for a nonrepeating indicator, as shown.

98,382
DESIGN FOR A BOTTLE
Ferdinand S. Barthers, Lancaster, Ohio, assignor to General Glass Corporation, Lancaster, Ohio, a corporation of Ohio
Application December 2, 1935, Serial No. 59,883
Term of patent 14 years

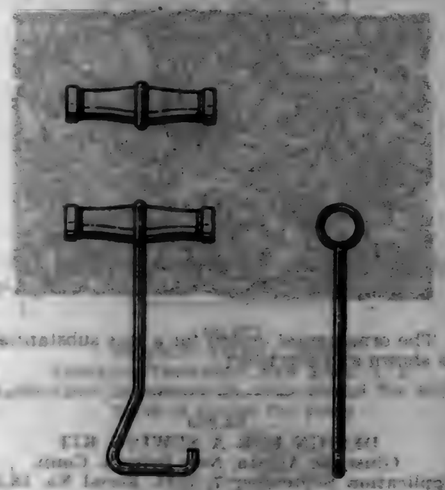


The ornamental design for a bottle substantially as shown and described.

98,383
DESIGN FOR A NECKTIE RACK
Abe H. Brothers, Brooklyn, N. Y.
Application November 30, 1935, Serial No. 59,675
Term of patent 14 years

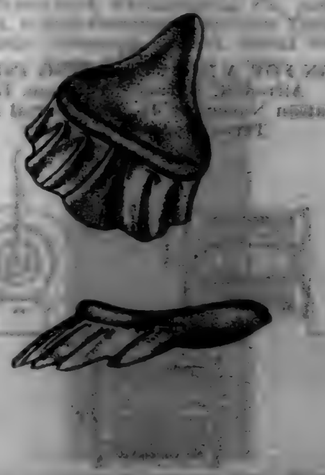
The ornamental design for a necktie rack, as shown.

96,334
DESIGN FOR A BOOK END
Kenneth L. Cooley, Rochester, N. Y.
Application June 17, 1935, Serial No. 57,302
Term of patent 7 years



The ornamental design for a book end, substantially as shown.

96,335
DESIGN FOR A DECORATIVE ALPHABET FOR FORMING MONOGRAMS FOR WEARING APPAREL OR SIMILAR ARTICLE
Charles Ennacy, New York, N. Y.
Application November 4, 1935, Serial No. 59,382
Term of patent 14 years



The ornamental design for a decorative alphabet for forming monograms for wearing apparel or similar article, as shown and described.

96,336
DESIGN FOR A BOOT HOOK
John A. Farnum, Worcester, Mass.
Application May 20, 1935, Serial No. 54,964
Term of patent 7 years

The ornamental design for a boot hook as shown and described.

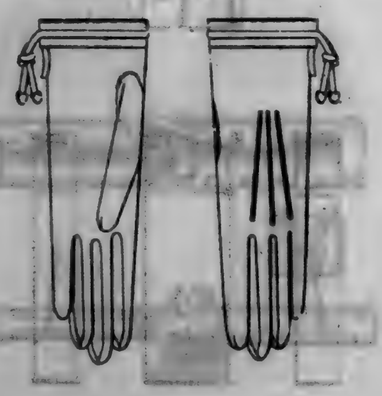
96,337
DESIGN FOR A CYCLE SADDLE SEAT
Roland W. Faulhaber, Elyria, Ohio, assignor to The Troxel Manufacturing Company, Elyria, Ohio, a corporation of Ohio
Application September 5, 1935, Serial No. 58,449
Term of patent 7 years

The ornamental design for a cycle saddle seat substantially as shown.

96,338
DESIGN FOR A CYCLE SADDLE SEAT
Roland W. Faulhaber, Elyria, Ohio, assignor to The Troxel Manufacturing Company, Elyria, Ohio, a corporation of Ohio
Application September 5, 1935, Serial No. 58,450
Term of patent 7 years

The ornamental design for a cycle saddle seat substantially as shown.

96,339
DESIGN FOR A CYCLE SADDLE SEAT
Roland W. Faulhaber, Elyria, Ohio, assignor to The Troxel Manufacturing Company, Elyria, Ohio, a corporation of Ohio
Application September 5, 1935, Serial No. 58,451
Term of patent 7 years



The ornamental design for a cycle saddle seat substantially as shown.

96,340
DESIGN FOR A CYCLE SADDLE SEAT
Roland W. Faulhaber, Elyria, Ohio, assignor to The Troxel Manufacturing Company, Elyria, Ohio, a corporation of Ohio
Application September 5, 1935, Serial No. 58,453
Term of patent 7 years

The ornamental design for a cycle saddle seat substantially as shown.

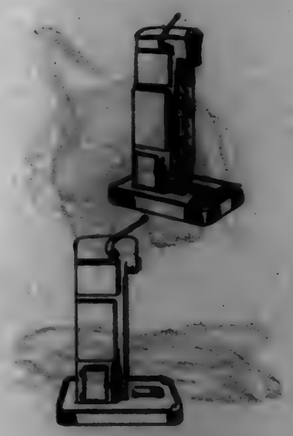
96,341
DESIGN FOR A GLOVE
Jerome J. Fox, New York, N. Y.
Application November 5, 1935, Serial No. 59,383
Term of patent 3½ years

The ornamental design for a glove, substantially as shown and described.

88,292
DESIGN FOR A LACE
Frank Gehring, New York, N. Y.
Application January 6, 1936, Serial No. 60,422
Term of patent 3½ years

The ornamental design for a lace substantially as shown and described.

88,293
DESIGN FOR A POCKET LIGHTER OR THE LIKE
Thomas M. Gibson, North Attleboro, Mass., assignor to Evans Case Company, North Attleboro, Mass., a corporation of Massachusetts
Application November 18, 1935, Serial No. 59,629
Term of patent 3½ years



The ornamental design for a pocket lighter or the like as shown.

88,294
DESIGN FOR A LIGHTING UNIT
Joseph W. Gosling, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application June 13, 1935, Serial No. 57,240
Term of patent 14 years

The ornamental design for a lighting unit, as shown.

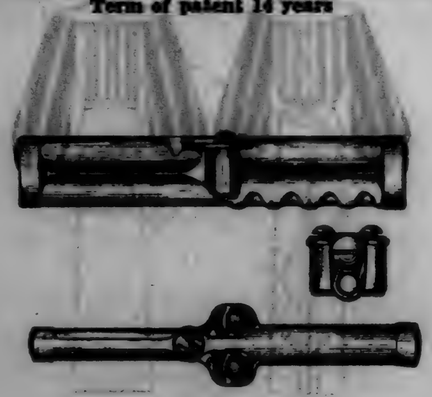
88,295
DESIGN FOR A MILLING MACHINE STANDARD
Benjamin F. Graves, Cranston, R. I., assignor to Brown & Sharpe Manufacturing Company, a corporation of Rhode Island
Application July 2, 1935, Serial No. 57,695
Term of patent 14 years

The ornamental design for a milling machine standard, substantially as shown and described.

88,296
DESIGN FOR A BOTTLE
Frank W. Gray, Los Angeles, Calif., assignor to Mission Dry Corporation, Los Angeles, Calif., a corporation of Delaware
Application August 26, 1935, Serial No. 58,913
Term of patent 14 years

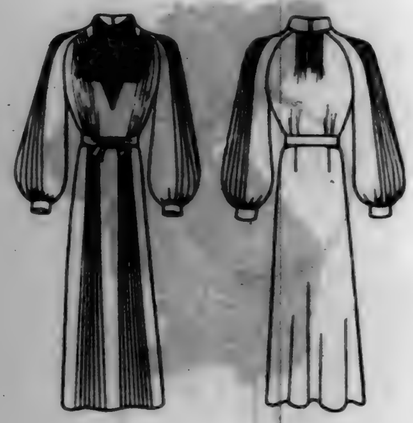
The ornamental design for a bottle as shown.

88,297
DESIGN FOR A CIRCULATION HEATER
David J. Howard, Chicago, Ill., assignor to Quaker Manufacturing Company, Chicago, Ill., a corporation of Illinois
Application September 16, 1935, Serial No. 58,569
Term of patent 3½ years



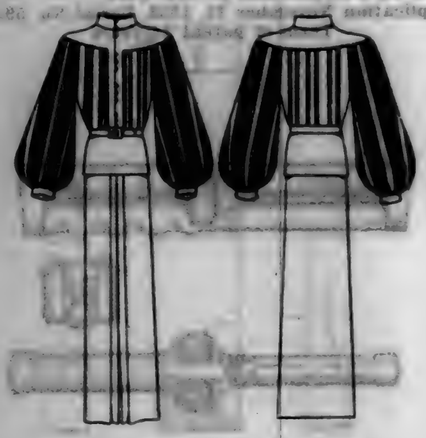
The ornamental design for a circulation heater substantially as shown and described.

88,298
DESIGN FOR A HAND MIRROR OR THE LIKE
Cecil H. Lawrence, Attleboro, Mass., assignor to Evans Case Company, a corporation of Massachusetts
Application December 18, 1935, Serial No. 60,161
Term of patent 7 years



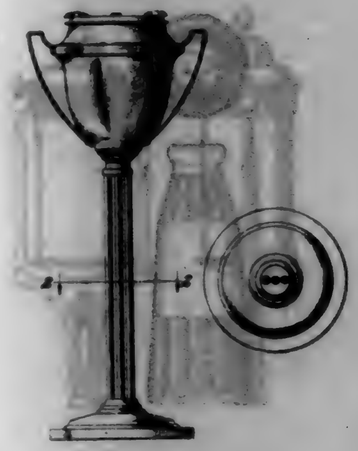
The ornamental design for a hand mirror or the like as shown.

88,299
DESIGN FOR AN AIR LINE GAUGE
Walter H. Longstreet, Brooklyn, N. Y., assignor to Acme Air Appliance Company, Inc., Brooklyn, N. Y., a corporation of New York
Application November 19, 1935, Serial No. 59,656
Term of patent 14 years



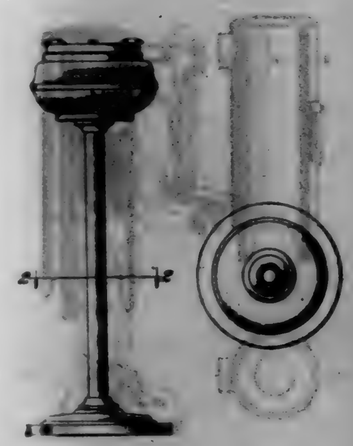
The ornamental design for an air line gauge, as shown.

88,480
DESIGN FOR A DRESS
David William Price, New York, N. Y.
Application December 27, 1935, Serial No. 60,381
Term of patent 3½ years



The ornamental design for a dress, substantially as shown, and described.

88,481
DESIGN FOR A DRESS
David William Price, New York, N. Y.
Application December 31, 1935, Serial No. 60,352
Term of patent 3½ years

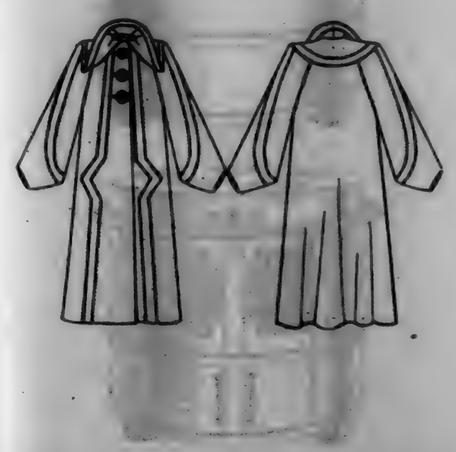


The ornamental design for a dress, substantially as shown, and described.

88,482
DESIGN FOR A SMOKING STAND
Edward Schultz, Chicago, Ill., assignor to The Nagel-Chase Mfg. Co., Chicago, Ill., a corporation of Illinois
Application November 23, 1935, Serial No. 59,744
Term of patent 7 years

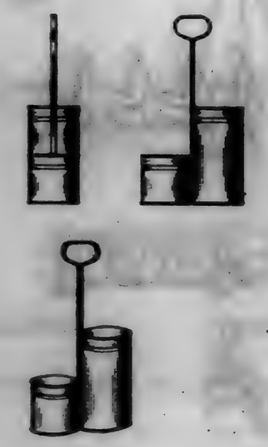
The ornamental design for a smoking stand, as shown.

88,482
DESIGN FOR A SMOKING STAND
Edward Schultz, Chicago, Ill., assignor to The Nagel-Chase Mfg. Co., Chicago, Ill., a corporation of Illinois
Application November 23, 1935, Serial No. 59,744
Term of patent 7 years



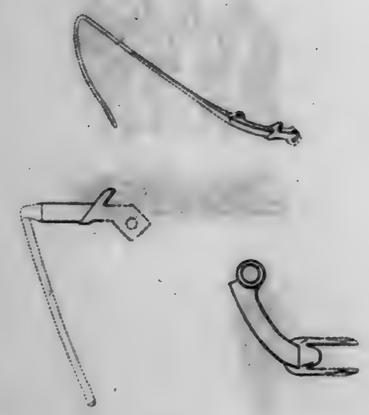
The ornamental design for a smoking stand, as shown.

88,494
DESIGN FOR A COAT
Abraham Sieglman, New York, N. Y.
Application December 12, 1935, Serial No. 60,235
Term of patent 3½ years



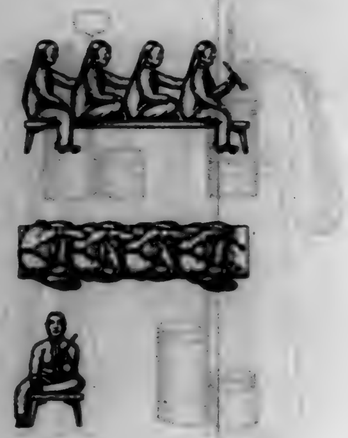
The ornamental design for a coat, substantially as shown.

88,495
DESIGN FOR A COAT
Abraham Sieglman, New York, N. Y.
Application December 31, 1935, Serial No. 60,351
Term of patent 3½ years



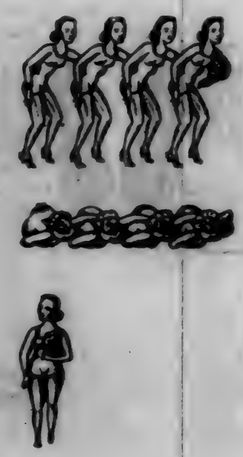
The ornamental design for a coat, substantially as shown.

88,496
DESIGN FOR A CONTAINER FOR FLOWERS
Pauline Wilcox Smith, Waterbury, Conn.
Application March 23, 1935, Serial No. 55,999
Term of patent 7 years



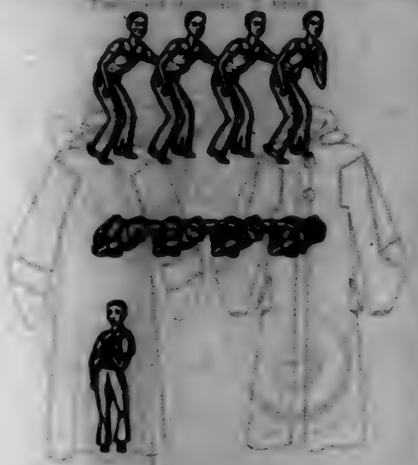
The ornamental design for a container for flowers substantially as shown and described.

88,497
DESIGN FOR A COMBINED TEMPLE AND TEMPLE SUPPORT FOR AN OPHTHALMIC MOUNTING
Edward M. Splaine, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a voluntary association of Massachusetts
Application October 24, 1935, Serial No. 59,204
Term of patent 14 years



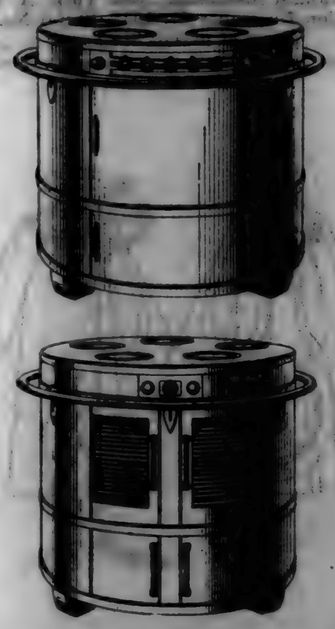
The ornamental design for a combined temple and temple support for an ophthalmic mounting substantially as shown and described.

98,408
DESIGN FOR A RADIATOR OR SIMILAR ARTICLE
Mikolaj Stefanczyk, Hamtramck, Mich.
Application November 16, 1935, Serial No. 39,691
Term of patent 7 years



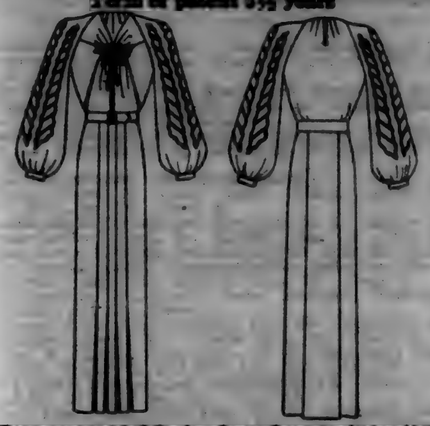
The ornamental design for a radiator or similar article, as shown.

98,409
DESIGN FOR A RADIATOR OR SIMILAR ARTICLE
Mikolaj Stefanczyk, Hamtramck, Mich.
Application November 16, 1935, Serial No. 39,692
Term of patent 7 years



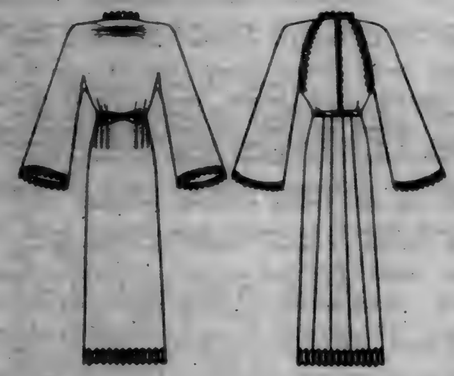
The ornamental design for a radiator or similar article, as shown.

98,410
DESIGN FOR A RADIATOR OR SIMILAR ARTICLE
Mikolaj Stefanczyk, Hamtramck, Mich.
Application November 16, 1935, Serial No. 39,693
Term of patent 7 years



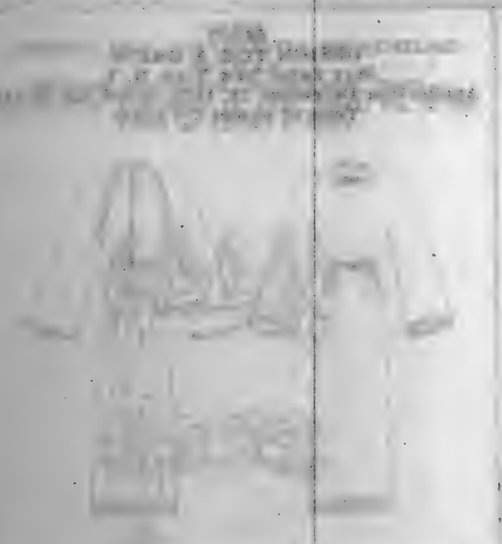
The ornamental design for a radiator or similar article, as shown.

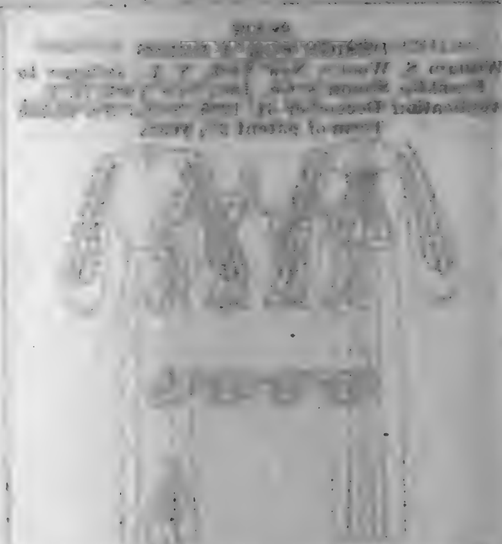
98,411
DESIGN FOR A STOVE
John Tjaarda, Birmingham, Mich., assignor to Briggs Manufacturing Company, Detroit, Mich., a corporation of Michigan
Application December 14, 1935, Serial No. 40,896
Term of patent 14 years



The ornamental design for a stove, substantially as shown.

98,412
DESIGN FOR A DRESS
William S. Woolfe, New York, N. Y., assignor to Franklin Simon & Co., Inc., New York, N. Y.
Application December 21, 1935, Serial No. 40,150
Term of patent 3½ years





The ornamental design for a dress, substantially as shown, and described.

98,413
DESIGN FOR A DRESS
Max Zahn, New York, N. Y.
Application December 28, 1935, Serial No. 40,312
Term of patent 3½ years

The ornamental design for a dress, substantially as shown.

LIST OF TRADE-MARK APPLICANTS

Medicine, kidney and bladder medicine, etc., Blood. R. N. French. 331,944; Jan. 28; Serial No. 368,962; published Nov. 19, 1935.

Nasal oil. Purpoll Laboratories, Inc. 331,965; Jan. 28; Serial No. 368,634; published Nov. 19, 1935.

Nose drops. Green Cross Pharmaceutical Products, Inc. 331,987; Jan. 28; Serial No. 368,411; published Nov. 12, 1935.

Oils suitable for perfuming purposes, Natural and synthetic essential. Fritzsche Brothers, Inc. 332,004; Jan. 28; Serial No. 369,225; published Nov. 19, 1935.

Petroleum products used as a base for cosmetics, etc. L. Sonneborn Sons, Inc. 331,928; Jan. 28; Serial No. 369,094; published Nov. 19, 1935.

Pharmaceutical product. Society of Chemical Industry in Basle. 107,647-8; renewed Dec. 14, 1935.

Pills, tablets, powders, etc. York Drug Co. 331,923; Jan. 28; Serial No. 367,470; published Nov. 12, 1935.

Powder, Medicinal. La Compagnie Pharmaceutique Desbergers. 331,967; Jan. 28; Serial No. 368,749; published Nov. 12, 1935.

Powder used for feminine hygiene. E. H. Luebbers. 332,049; Jan. 28; Serial No. 367,945; published Nov. 19, 1935.

Preparation for cancers, ulcers, and tumors. B. H. Green. 110,210; renewed May 9, 1936.

Preparation for diseases and ailments of the feet, External. Atex Laboratories, Inc. 332,043; Jan. 28; Serial No. 369,521; published Nov. 19, 1935.

Preparation for lung, throat, and intestinal diseases. Delson Chemical Co. 107,778; renewed Dec. 28, 1935.

Preparation for the treatment of gastric hyperacidity etc. Myron L. Walker Company. 332,007; Jan. 28; Serial No. 369,115; published Nov. 19, 1935.

Preparation for the treatment of hay fever, catarrh of the head, asthma, etc. L. C. Inman. 331,988; Jan. 28; Serial No. 368,071; published Nov. 12, 1935.

Preparation for use as a non-poisonous, non-escharatic, germicidal hemostat, bacteriostat, astringent, etc., Liquid. J. W. King. 332,060; Jan. 28; Serial No. 367,563; published Nov. 19, 1935.

Preparation for use as an alterative and antiseptic, etc. C. E. Clark. 332,042; Jan. 28; Serial No. 369,524; published Nov. 19, 1935.

Preparation for use in the tanning and dressing of leather, Yellowish oily. Jacques Wolf and Co. 331,934; Jan. 28; Serial No. 367,482; published Nov. 19, 1935.

Preparation of particular service in the dietetic treatment of wasting diseases. Standard Emulsion Company. 107,456; renewed Nov. 30, 1935.

Remedies, Veterinary. Wells Medicine Company. 109,274; renewed Oct. 15, 1935.

Remedy for gouty and rheumatic diseases and neuralgic affections. Farbwerke vorm. Meister Lucius & Brüning. 109,160; renewed Mar. 21, 1936.

Rouge. Richard Hudnut. 109,687; renewed Apr. 11, 1936.

Shampoo for the hair. Fairytoot Products Company. 331,924; Jan. 28; Serial No. 368,170; published Nov. 12, 1935.

Skin preparation. J. E. Singer. 331,986; Jan. 28; Serial No. 361,064; published Nov. 12, 1935.

Sodium hydrate, sodium carbonate, sodium bicarbonate, etc. Innis, Speiden & Company. 331,999; Jan. 28; Serial No. 369,277; published Nov. 19, 1935.

Solder, concentrated metallic preparation, a welding compound, etc. E. D. Sloan; 332,047; Jan. 28; Serial No. 367,837; published Nov. 19, 1935.

Tonic, General. Green Cross Pharmaceutical Products, Inc. 331,986; Jan. 28; Serial No. 368,410; published Nov. 12, 1935.

Tonic, Medicinal. A. G. Dorsey. 107,831; renewed Jan. 4, 1936.

Tonic, nose drops, a laxative, etc., General. Green Cross Pharmaceutical Products, Inc. 331,990; Jan. 28; Serial No. 368,415; published Nov. 12, 1935.

Tonic, Sulphur and liver blood. R. G. Tunison. 331,970; Jan. 28; Serial No. 367,946; published Nov. 19, 1935.

Vitamin tablet, Concentrated food. R. Lee. 331,921; Jan. 28; Serial No. 368,107; published Nov. 12, 1935.
Wave solution, soapless oil shampoo, finger waving powder, etc., Permanent. Regal Company. 331,950; Jan. 28; Serial No. 355,039; published Nov. 12, 1935.

CLASS 12

Cement, Portland. Santa Cruz Portland Cement Company. 109,484; renewed Apr. 11, 1936.
Building and roofing material, Waterproof and weatherproof. Paraffine Paint Company. 108,657; renewed Feb. 22, 1936.
Solution to accelerate and harden ordinary concrete. Holdeman & Son. 332,063; Jan. 28.

CLASS 13

Aluminum double boilers, deep fat fryers, straight covered kettles, etc. Simmons Hardware Company. 331,980; Jan. 28; Serial No. 368,462; published Nov. 19, 1935.
Carpet clips, rods, buttons, etc., Stair. Smith & Davis Limited. 331,935; Jan. 28; Serial No. 360,009; published Nov. 19, 1935.
Fasteners, Sliding. H. Wittenburg & Co. 332,044; Jan. 28; Serial No. 369,512; published Nov. 19, 1935.
Plates for shoes, Heel and toe. L. Weinstein. 331,984; Jan. 28; Serial No. 369,638; published Nov. 19, 1935.
Strapping, Box. Stanley Works. 332,037; Jan. 28; Serial No. 370,151; published Nov. 19, 1935.
Strapping, Box. Stanley Works. 332,054; Jan. 28; Serial No. 370,152; published Nov. 19, 1935.
Wire fabric and wire-cloth. Wright Wire Company. 110,441; renewed May 23, 1936.

CLASS 14

Alloys and alloying metals used in the manufacture of special steels. Electro Metallurgical Company. 108,965; renewed Feb. 29, 1936.
Iron and steel sheets and plates and tin and terne plates. American Sheet and Tin Plate Company. 109,207; renewed Mar. 28, 1936.
Steel bars, Carbon and alloy. A. B. Bets. 331,996; Jan. 28; Serial No. 369,293; published Nov. 19, 1935.
Welding-rods. Oxweld Acetylene Company. 108,012; renewed Feb. 15, 1936.

CLASS 15

Oils, Lubricating. Union Oil Company of California. 107,797; renewed Dec. 28, 1935.

CLASS 16

Paint, Ready-mixed. Oliver Johnson & Company. 108,519–20; renewed Feb. 15, 1936.
Paints and painters' materials. Gerstendorfer Bros. 110,399; renewed May 23, 1936.
Polish and cleaners, paints, varnishes, etc. S. H. Kress and Company. 331,994; Jan. 28; Serial No. 366,662; published Oct. 15, 1935.

Cigars. A. Kafka & Co. Inc. 331,968; Jan. 28; Serial No. 369,490; published Nov. 19, 1935.
Tobies. Industrial Cigar Co. 109,898; renewed Apr. 25, 1936.

CLASS 19

Automobiles. Lincoln Motor Company. 332,052; Jan. 28; Serial No. 370,351; published Nov. 19, 1935.
Window runways or channel and tacking strips. Standard Products Company. 331,940; Jan. 28; Serial No. 362,537; published Nov. 19, 1935.

CLASS 21

Batteries, Electric storage. American Auto upply Co. Inc. 332,014; Jan. 28; Serial No. 369,904; published Nov. 19, 1935.
Electric toasters. Samson-United Corporation. 332,012; Jan. 28; Serial No. 369,931; published Nov. 19, 1935.
Signs, Electrically illuminated. Neon Product, Inc. 331,983; Jan. 28; Serial No. 369,623; published Nov. 19, 1935.
Welding electrodes formed of carbon. Lincoln Electric Company. 331,954; Jan. 28; Serial No. 356,445; published Nov. 19, 1935.

CLASS 22

Balls, Inflated game. P. Goldsmith Sons Co. 332,065; Jan. 28.
Golf balls. United States Rubber Company. 332,027; Jan. 28; Serial No. 357,316; published Nov. 19, 1935.
Toys. D. Frisoli. 332,070; Jan. 28.

CLASS 23

Apparatus for treatment of solids suspended in liquids and more particularly for sedimentation apparatus such as clarifiers, etc. Dorr Company. 332,008; Jan. 28; Serial No. 369,957; published Nov. 19, 1935.
Check-protectors, Mechanical. Hedman Manufacturing Company. 108,791; renewed Feb. 29, 1936.
Machine tools. Brown & Sharpe Manufacturing Company. 332,013; Jan. 28; Serial No. 369,909; published Nov. 19, 1935.
Presses, Printing. Babcock Printing Press Manufacturing Company. 108,323; renewed Feb. 1, 1936.
Saws. Ohlen-Bishop Comp. y, The. 332,016; Jan. 28; Serial No. 369,894; published Nov. 19, 1935.
Screen plates, evaporator tubes, suction box covers, etc., in the paper making industry. Chromium Corporation of America. 332,017; Jan. 28; Serial No. 369,878; published Nov. 19, 1935.

CLASS 25

Locks and lock-dials. Nydia Bank Lock Company. 110,034; renewed May 2, 1936.

CLASS 26

Cameras. Perma Cameras Limited. 332,015; Jan. 28; Serial No. 369,895; published Nov. 19, 1935.
Lenses, Optical. White-Haines Optical Company. 110,410; renewed May 23, 1936.
Measuring and scientific appliances. Nitsche & Günther Optische Werke. 108,440; renewed Feb. 8, 1936.
Pumps, Self-measuring. Tokheim Tank & Pump Co. 332,019; Jan. 28; Serial No. 369,863; published Nov. 19, 1935.

CLASS 28

Brushes. International Silver Company. 331,942; Jan. 28; Serial No. 362,374; published Nov. 19, 1935.

CLASS 31

Trays used as refrigerating units, Ice. Inland Manufacturing Company. 332,055; Jan. 28.

CLASS 33

Bed-springs. Moore Manufacturing Company. 110,580; renewed May 30, 1936.

CLASS 34

Burners, Oil. Electric Refrigerator Sales Corp. 331,970; Jan. 28; Serial No. 367,236; published Nov. 19, 1935.
Thermostatic combustion controls for heating plants, pressure operating control mechanism involving use of thermostatic valves for heating, ventilating, etc. Superstat Company. 331,948; Jan. 28; Serial No. 352,936; published Nov. 19, 1935.

CLASS 35

Belting, Leather. George Rahmann & Co. 109,306; renewed Jan. 25, 1936.
Belting, Leather. Geo. Rahmann & Co. 109,123; renewed Mar. 21, 1936.
Belting, Leather. Geo. Rahmann & Co. 109,843; renewed Apr. 18, 1936.
Piston rings. Steelcraft Piston Ring Company. 332,060; Jan. 28.

Liberty, Normand P., Farmington, N. H., assignor to Morris Burtman, Boston, Mass. Shoe. 98,336; Jan. 28.

Liberty, Normand P., Farmington, N. H., assignor to Morris Burtman, Boston, Mass. Shoe. 98,337; Jan. 28.

Liberty, Normand P., Farmington, N. H., assignor to Morris Burtman, Boston, Mass. Shoe. 98,338; Jan. 28.

Liberty, Normand P., Farmington, N. H., assignor to Morris Burtman, Boston, Mass. Shoe. 98,339; Jan. 28.

Liberty, Normand P., Farmington, N. H., assignor to Morris Burtman, Boston, Mass. Shoe. 98,340; Jan. 28.

Liberty, Normand P., Farmington, N. H., assignor to Morris Burtman, Boston, Mass. Shoe. 98,341; Jan. 28.

Liberty, Normand P., Farmington, N. H., assignor to Morris Burtman, Boston, Mass. Shoe. 98,342; Jan. 28.

Liberty, Normand P., Farmington, N. H., assignor to Morris Burtman, Boston, Mass. Shoe. 98,343; Jan. 28.

Liberty, Normand P., Farmington, N. H., assignor to Morris Burtman, Boston, Mass. Shoe. 98,344; Jan. 28.

Liberty, Normand P., Farmington, N. H., assignor to Morris Burtman, Boston, Mass. Shoe. 98,345; Jan. 28.

Liberty, Normand P., Farmington, N. H., assignor to Morris Burtman, Boston, Mass. Shoe. 98,346; Jan. 28.

Liberty, Normand P., Farmington, N. H., assignor to Morris Burtman, Boston, Mass. Shoe. 98,347; Jan. 28.

Liberty, Normand P., Farmington, N. H., assignor to Morris Burtman, Boston, Mass. Shoe. 98,348; Jan. 28.

Liberty, Normand P., Farmington, N. H., assignor to Morris Burtman, Boston, Mass. Shoe. 98,349; Jan. 28.

Liberty, Normand P., Farmington, N. H., assignor to Morris Burtman, Boston, Mass. Shoe. 98,350; Jan. 28.

Liberty, Normand P., Farmington, N. H., assignor to Morris Burtman, Boston, Mass. Shoe. 98,351; Jan. 28.

Liberty, Normand P., Farmington, N. H., assignor to Morris Burtman, Boston, Mass. Shoe. 98,352; Jan. 28.

Liberty, Normand P., Farmington, N. H., assignor to Morris Burtman, Boston, Mass. Shoe. 98,353; Jan. 28.

Liberty, Normand P., Farmington, N. H., assignor to Morris Burtman, Boston, Mass. Shoe. 98,354; Jan. 28.

Liberty, Normand P., Farmington, N. H., assignor to Morris Burtman, Boston, Mass. Shoe. 98,355; Jan. 28.

Liberty, Normand P., Farmington, N. H., assignor to Morris Burtman, Boston, Mass. Shoe. 98,356; Jan. 28.

Liberty, Normand P., Farmington, N. H., assignor to Morris Burtman, Boston, Mass. Shoe. 98,357; Jan. 28.

Long, Leonard D., assignor to Southern States Oil Company, Charleston, S. C. Service station. 98,358; Jan. 28.

Longstreet, Walter H., assignor to Acme Air Appliance Company, Inc., Brooklyn, N. Y. Air line gauge. 98,359; Jan. 28.

McGee, Joseph, New York, N. Y., assignor to Bancroft Walker Co., Waltham, Mass. Shoe. 98,350; Jan. 28.

Meyer, Max C., Brooklyn, N. Y. Boudoir case. 98,360; Jan. 28.

Meyer, Max C., Brooklyn, N. Y. Ash tray or similar article. 98,361; Jan. 28.

Mission Dry Corporation. (See Gray, Frank W., assignor.)

Nagel-Chase Mfg. Co., The. (See Schultz, Edward, assignor.)

Nesbitt Fruit Products Inc. (See Steuer, Norman F., assignor.)

Nordstrom Meroo Valve Company. (See Nordstrom, Sven J., assignor.)

Nordstrom, Sven J., Piedmont, Calif., assignor to Meroo Nordstrom Valve Company, Pittsburgh, Pa. Plug valve body. 98,362; Jan. 28.

Nordstrom, Sven J., Piedmont, Calif., assignor to Meroo Nordstrom Valve Company, Pittsburgh, Pa. Plug valve body. 98,363; Jan. 28.

Price, David W., New York, N. Y. Dress. 98,364; Jan. 28.

Price, David W., New York, N. Y. Dress. 98,400; Jan. 28.

Price, David W., New York, N. Y. Dress. 98,401; Jan. 28.

Pumphrey, Marshall C., assignor to Barker Bros. Incorporated, Los Angeles, Calif. Table. 98,365; Jan. 28.

Pumphrey, Marshall C., assignor to Barker Bros. Incorporated, Los Angeles, Calif. Chest or similar article. 98,366; Jan. 28.

Pumphrey, Marshall C., assignor to Barker Bros. Incorporated, Los Angeles, Calif. Dresser or similar article. 98,367; Jan. 28.

Putman, Solomon, Newark, N. J. Buckle. 98,368; Jan. 28.

Quaker Manufacturing Company. (See Howard, David J., assignor.)

Scheibell, Gordon B., Millburn, N. J. Camera. 98,369; Jan. 28.

Schultz, Edward, assignor to The Nagel-Chase Mfg. Co., Chicago, Ill. Smoking stand. 98,402; Jan. 28.

Schultz, Edward, assignor to The Nagel-Chase Mfg. Co., Chicago, Ill. Smoking stand. 98,403; Jan. 28.

Seaver, Vinols, Beloit, Wis. Musical instrument. 98,370; Jan. 28.

Sieve, Bernard E., Chicago, Ill. Display stand. 98,371; Jan. 28.

Silk, Louis A., & Company Inc. (See Waterfield, James, assignor.)

Sisco, Richard, Clifton, N. J. Restaurant booth. 98,372; Jan. 28.

Sisselman, Abraham, New York, N. Y. Coat. 98,404; Jan. 28.

Sisselman, Abraham, New York, N. Y. Coat. 98,405; Jan. 28.

Smith, Pauline W., Waterbury, Conn. Container for sewers. 98,406; Jan. 28.

Southern States Oil Company. (See Long, Leonard D., assignor.)

Spiaine, Edward M., assignor to American Optical Company, Southbridge, Mass. Combined temple and temple support for an ophthalmic mounting. 98,407; Jan. 28.

Stefanczyk, Mikolaj, Hamtramck, Mich. Radiator or similar article. 98,408; Jan. 28.

Stefanczyk, Mikolaj, Hamtramck, Mich. Radiator or similar article. 98,409; Jan. 28.

Stefanczyk, Mikolaj, Hamtramck, Mich. Radiator or similar article. 98,410; Jan. 28.

Steuer, Norman F., San Francisco, assignor to Nesbitt Fruit Products Inc., Los Angeles, Calif. Bottle. 98,373; Jan. 28.

Taylor, James W., Attleboro, Mass., assignor to S. & B. Lederer Company. Bracelet or similar article. 98,374; Jan. 28.

Taylor, James W., Attleboro, Mass., assignor to S. & B. Lederer Company. Jewelry charm or similar article. 98,375; Jan. 28.

Tjaarda, John, Birmingham, assignor to Briggs Manufacturing Company, Detroit, Mich. Stove. 98,411; Jan. 28.

Troxel Manufacturing Company, The. (See Faulhaber, Roland W., assignor.)

Turiansky, Abraham, New York, N. Y. Shoe. 98,376; Jan. 28.

Turiansky, Abraham, New York, N. Y. Shoe. 98,377; Jan. 28.

Valley Shoe Corporation. (See Goldman, Myron S., assignor.)

Waterfield, James, Philadelphia, Pa., assignor to Louis A. Silk & Company, Inc., New York, N. Y. Lace. 98,378; Jan. 28.

Westinghouse Electric & Manufacturing Company. (See Kruck, Ralph E., assignor.)

Wiener, Joseph D., New York, N. Y. Lace. 98,379; Jan. 28.

Woolfe, William S., assignor to Franklin Simon & Co., Inc., New York, N. Y. Dress. 98,412; Jan. 28.

Zahn, Max, New York, N. Y. Dress. 98,413; Jan. 28.

LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 28TH DAY OF JANUARY, 1936

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abate, Antonio G., Napa, Calif. Carburetor air intake and vaporizer. 2,029,210; Jan. 28.

Abrasive Products, Inc. (See Walker, Charles R., assignor.)

Acy Racket Stringers (Foreign Rights) Limited. (See Procter, James H., assignor.)

Adamant Engineering Company Limited. (See Matravers, Frederick G., assignor.)

Adler, Charles, Jr., Baltimore, Md. Signal. 2,029,211; Jan. 28.

Ahrens, Robert S. (See Seeger, W. G., and Ahrens.)

Aicher, Alfred L., assignor to Yarnall-Waring Company, Philadelphia, Pa. Water column displacement weight. 2,028,356; Jan. 28.

Air-Flo Corporation. (See Warner, Earl S., assignor.)

Air Systems Incorporated. (See Burner, James A., assignor.)

Aktiebolaget Svenska Kullagerfabriken. (See Kylin, Karl E., assignor.)

Aktiebolaget Svenska Kullagerfabriken. (See Palmgren, Nils A., assignor.)

Aktiengesellschaft Kummler Bossert & Cie. (See Mertens, Franz, assignor.)

Aldrich, Harold B., et al. (See Lambert, Thomas H., assignor.)

Allen, Howard C., Vancouver, British Columbia, Canada. Measuring valve. 2,028,816; Jan. 28.

Alm, Johan E., assignor to E. C. Von Platen, Stockholm, Sweden. Electrical direct current system. 2,029,212; Jan. 28.

Ambursen Construction Company. (See Davis, Calvin V., assignor.)

American Agricultural Chemical Company, The. (See Klonky, Simon, assignor.)

American Can Company. (See Murch, John H., assignor.)

American Car and Foundry Motors Company. (See Doyle, Willis G., assignor.)

American Chain Company. (See Graham, Frank A., assignor.)

American Cyanamid & Chemical Corporation. (See Clark, Cyril R., assignor.)

American Cyanamid Company. (See Christmann, L. J., and Falconer, assignors.)

American Laundry Machinery Company, The. (See Johnson, George W., assignor.)

American Laundry Machinery Company, The. (See Otis, Charles M., assignor.)

American Telephone and Telegraph Company. (See Ampack, E. J., and Harrison, assignors.)

American Telephone and Telegraph Company. (See Herman, Joseph, assignor.)

Ams, Max, Chemical Engineering Corporation, The. (See Brenzinger, Julius, assignor.)

Anderson, MacGregor E., Chicago, Ill. Core for molding concrete. 2,029,147; Jan. 28.

Anguish, Frank, Wewoka, Okla., assignor of one-half to Phillips Petroleum Company. Hydraulic jack. 2,028,817; Jan. 28.

Annen, Robert, assignor to the firm Louis Muller & Cie S. A., Fabrique d'Horlogerie "Le Champagne", Bienne, Switzerland. Ball bearing. 2,029,034; Jan. 28.

Anning, Harold E., Evanston, assignor to United States Gypsum Company, Chicago, Ill. Building construction. 2,029,000; Jan. 28.

Anspach, Russell J., Roselle, and J. W. Harrison, West Belt, N. J., assignors to American Telephone and Telegraph Company. Printing telegraph system. 2,028,618; Jan. 28.

Apco Mossberg Corporation. (See Stearns, William.)

Archer, George F., New York, N. Y. Respiratory actuating means for generators. 2,028,148; Jan. 28.

Arrow Tools, Inc. (See Pollard, Hugh E., assignor.)

Ashton, Charles E., Stockton, Calif. Strommer line mill. 2,028,750; Jan. 28.

Associated Patents, Inc. (See De Vlieg, C. E., and Lundberg, assignors.)

Atkinson, Ray E., Fowler, Ind. Bruskin plow. 2,028,810; Jan. 28.

Atlantic Pipe Line Company. (See Howe, E. W., Love, and Wood, assignors.)

Atwood, Harry N., South Lyndeboro, N. H. Cellular bottom construction for the boat bodies of hydroairplanes. 2,029,037; Jan. 28.

Atwood, Harry N., South Lyndeboro, N. H. Tubular structural unit and matting the same. 2,029,043; Jan. 28.

Atwood, Harry N., South Lyndeboro, N. H. Built-up cellular structure and matting the same. 2,029,042; Jan. 28.

Atwood, Harry N., South Lyndeboro, N. H. Honeycomb construction for aircraft. 2,029,213; Jan. 28.

Atwood, Harry N., South Lyndeboro, N. H. Honeycomb wing construction for airplanes. 2,029,214; Jan. 28.

Atwood, Harry N., South Lyndeboro, N. H. Cellular construction for aircraft pontoons. 2,029,215; Jan. 28.

Baddour, Joseph S., Los Angeles, Calif. Electrical face treating mask. 2,028,889; Jan. 28.

Badenhausen, John P., Philadelphia, assignor of one-half to Day and Zimmermann, Incorporated, Philadelphia, Pa. Steam generator. 2,029,010; Jan. 28.

Bagshaw, W. H., Co. (See Parker, Edward H., assignor.)

Baker, Andrew D., assignor to Boeing Airplane Company, Seattle, Wash. Riveting mouse. 2,028,880; Jan. 28.

Bales, James E., assignor to Lyon Metal Products, Incorporated, Aurora, Ill. Machine stand and cabinet. 2,028,891; Jan. 28.

Barchard, Frank L. (See Suazin, Max H., assignor.)

Barker, George A., Rochester, N. Y. Crank case ventilation. 2,029,216; Jan. 28.

Barnes, George L., deceased, Los Angeles, Calif., M. O. Barnes, administratrix. Ground connecter. 2,029,149; Jan. 28.

Barnes, Marne O., administratrix. (See Barnes, George L.)

Bart, Blasius, East Orange, N. J. Seamless tank. 2,029,011; Jan. 28.

Barton, Loy E., Collingswood, N. J., assignor to Radio Corporation of America. Radioreceiver. 2,028,830; Jan. 28.

Barton, Charles W., New York, N. Y. Container. 2,028,751; Jan. 28.

Beans, Hal T., Palisade, N. J., G. H. Walden, Jr., and L. P. Hammett, New York, N. Y. Phonograph record and making the same. 2,029,012; Jan. 28.

Bear, Paul S., Dowagiac, Mich., assignor of three-fourths to H. E. Buckles, Jr., Elkhart, Ind. Condition controlled mechanism. 2,029,150; Jan. 28.

Beck, Charles J., Philadelphia, Pa. Type clamp. 2,028,892; Jan. 28.

Bell, Howard H., Schenectady, N. Y., assignor to General Electric Company. Traffic signaling system and apparatus. 2,029,217; Jan. 28.

Bell, James H. (See Dinley, Clarence F., assignor.)

Bell Telephone Laboratories, Incorporated. (See Bode, Hendrik W., assignor.)

Bell Telephone Laboratories, Incorporated. (See Crutchfield, John E., assignor.)

Bell Telephone Laboratories, Incorporated. (See Low, Frank E., assignor.)

Bell Telephone Laboratories, Incorporated. (See Mills, Percy E., assignor.)

Bell Telephone Laboratories, Incorporated. (See Stillwell, George R., assignor.)

Bell Telephone Laboratories, Incorporated. (See Strieby, Maurice E., assignor.)

Bern, Frank, Cleveland, Ohio. Display stand. 2,028,991; Jan. 28.

Bethurum, Will J., Franklin, Tenn. Chin support. 2,028,830; Jan. 28.

Betts, Clarence A., Kansas City, Mo. Apparatus for registering and aligning printers' forms, plates, and the like. 2,028,965; Jan. 28.

Beverage, Harold H., Riverhead, N. Y., assignor to Radio Corporation of America. Receiving system. 2,028,680; Jan. 28.

Beveridge-Marvellum Company, The. (See Pohlmann, Joseph J., assignor.)

Biesik, John F., Milwaukee, Wis. Antifreet alarm. 2,029,218; Jan. 28.

Bildh, Tom C., Alsten, Sweden, assignor to Electrolux Corporation, Dover, Del. Apparatus for treating articles. 2,028,861; Jan. 28.

Bigelow, Charles G., assignor to Freyn Engineering Company, Chicago, Ill. Goggle valve. 2,029,151; Jan. 28.

Birge, Raymond B., assignor to Packard Motor Car Company, Detroit, Mich. Convertible sedan and phaeton. 2,029,050; Jan. 28.

Bishop & Babcock Manufacturing Company, The. (See Boudurant, Carlton W., assignor.)

Bjorklund, Rudolf H., Essington, Pa. Convertible chair, divan, and bed. 2,029,002; Jan. 28.

Blackburn, Phillip W., East Orange, N. J., assignor to Westinghouse Lamp Company. Cathodes for discharge devices. 2,029,018; Jan. 28.

Blevins, Albert C., assignor to Na-Deal Handle Co., Dallas, Tex. Bottle holder. 2,029,051; Jan. 28.

Bode, Hendrik W., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Wave transmission network. 2,029,014; Jan. 28.

Boeing Airplane Company. (See Baker, Andrew D., assignor.)

Böhm, Otto, assignor to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany. Antenna. 2,029,015; Jan. 28.

Bolton, John W., & Sons, Inc. (See Stuck, Harold D., assignor.)

Boudurant, Carlton W., assignor to The Bishop & Babcock Manufacturing Company, Cleveland, Ohio. Controlling refrigerator temperature. 2,028,883; Jan. 28.

Bonkowski, Teofil L., New York, N. Y. Ink eradicating device. 2,029,182; Jan. 28.

Borg-Warner Corporation. (See Buchanan, John C., assignor.)

Borg-Warner Corporation. (See Reed, Harold V., assignor.)

Bouriand, Eli, Jersey City, N. J., assignor to Continental Can Company, Inc., New York, N. Y. Dispensing container. 2,029,210; Jan. 28.

Bovaird and Company. (See Gibson, Jesse G., assignor.)

Bovard, Floyd G., Akron, assignor to The Ohio Brass Company, Mansfield, Ohio. Conductor clamp. 2,028,894; Jan. 28.

Bovard, Floyd G., Akron, assignor to The Ohio Brass Company, Mansfield, Ohio. Spring support for conductors. 2,028,895; Jan. 28.

Bowen, Clinton A., assignor to Corning Glass Works, Corning, N. Y. Furnace. 2,029,063; Jan. 28.

Bradner, Donald B. (See Montgomery, W. J., and Bradner.)

Brawn, Worthen E., assignor to Pejepscot Paper Company, Brunswick, Maine. Making design printing cylinders. 2,029,224; Jan. 28.

Brennen, John B., Atlanta, Ga. Selective speed drive. 2,029,083; Jan. 28.

Bresninger, Julius, Fairfield, assignor to The Max Ams Chemical Engineering Corporation, Bridgeport, Conn. Spinning machine for rayon or other synthetic material. 2,028,821; Jan. 28.

Briel, Conrad G., assignor to Cinema Development Company, Chicago, Ill. Producing composite pictures. 2,028,862; Jan. 28.

Briel, Conrad G., assignor to Cinema Development Company, Chicago, Ill. Producing composite pictures. 2,028,863; Jan. 28.

Brier, Beatrice. (See Solomon, Frank, assignor.)

Brinker, George C., Greensburg, Pa. Spark plug. 2,028,896; Jan. 28.

Bristol Company, The. (See Koester, Herman, assignor.)

Brown, Charles S., Syracuse, N. Y. Piston. 2,028,822; Jan. 28.

Brown Company. (See Richter, George A., assignor.)

Broening, Bernard G., Evansville, Ind. Chair. 2,028,823; Jan. 28.

Buchanan, John C., Detroit, Mich., assignor, by mesne assignments, to Borg-Warner Corporation. Compressor for refrigerating systems. 2,028,824; Jan. 28.

Buchlen, Herbert R., Jr. (See Bear, Paul S., assignor.)

Budd, Edward G., Manufacturing Company. (See Bassergian, Carolus L., assignor.)

Budd, Edward G., Manufacturing Company. (See Ragsdale, Earl J. W., assignor.)

Buffalo Brake Beam Company. (See Busch, Charles R., assignor.)

Burge, Harry, assignor to Crampton Canneries, Inc., Celina, Ohio. Fruit and vegetable filling table. 2,028,054; Jan. 28.

Burger, Michael, Munich, assignor to F. Deckel, Munich-Prinz Ludwigshohe, Germany. Photographic camera. 2,028,782; Jan. 28.

Burgess, C. F., Laboratories, Inc. (See Burgess, J., and Garbe, assignors.)

Burgess, Jackson, and H. W. Garbe, Freeport, Ill., assignors to C. F. Burgess Laboratories, Inc., Madison, Wis. Illuminated display apparatus. 2,029,221; Jan. 28.

Burke, William H., assignor of one-fourth to G. W. Myrland, and one-fourth to G. W. Prichard, Oswya, Iowa. Dispenser. 2,029,055; Jan. 28.

Burner, James A., assignor to Air Systems Incorporated, Minneapolis, Minn. Refrigeration process and apparatus. 2,029,153; Jan. 28.

Burns, Erwin, Los Angeles, and H. F. Wickersham, Huntington Park, Calif. Releasing overshot. 2,028,966; Jan. 28.

Burroughs Adding Machine Company. (See Horton, A. A., and Rowland, assignors.)

Busch, Charles R., Orange, N. J., assignor to Buffalo Brake Beam Company, New York, N. Y. Brake shoe key. 2,028,788; Jan. 28.

Cable and Wireless Limited. (See Higgitt, Harry V., assignor.)

Cadmus, Oscar P., Bayside, N. Y. Window fastener. 2,029,016; Jan. 28.

Calderio, Edward, Garfield, N. J. Pocket cigarette making machine. 2,028,897; Jan. 28.

Caldwell, Clarence H., Oak Park, Ill. Window cleaning device. 2,028,738; Jan. 28.

Campbell, Lorn, Jr., Lakewood, Ohio. Making cutting blowpipe tips. 2,029,154; Jan. 28.

Carbex Chemical Co. of Illinois. (See John, R., and Spellmeyer, assignors.)

Carbide and Carbon Chemicals Corporation. (See Shoemaker, Milton J., assignor.)

Carlson, George E., assignor to Carlson Research Corporation, Chicago, Ill. Rotary spreader. 2,029,066; Jan. 28.

Carlson Research Corporation. (See Carlson, George E., assignor.)

Carlstrom, John, Port Arthur, Tex., assignor to The Texas Company, New York, N. Y. Lining for vessels. 2,028,967; Jan. 28.

Carlstrom, John, Port Arthur, Tex., assignor to The Texas Company, New York, N. Y. Lining for vessels. 2,028,968; Jan. 28.

Celanese Corporation of America. (See Dreyfus, C., and Schneider, assignors.)

Celanese Corporation of America. (See Ellis, G. H., and Storey, assignors.)

Celanese Corporation of America. (See Hibbert, Harold, assignor.)

Central Valve Mfg. Co. (See Pope, Charles E., assignor.)

Cervenka, William F., and F. Miller, Traverse City, Mich. Implement for removing weeds and the like. 2,029,188; Jan. 28.

Chain Belt Company. (See Miller, A. R., and Shafer, assignors.)

Chambers, Edwin A., St. Thomas, Ontario, Canada. Lubricant cooling device. 2,029,057; Jan. 28.

Champion Paper and Fibre Company, The. (See Montgomery, W. J., and Bradner, assignors.)

Chaney, Loyall V. (See Schnine, W. A., and Chaney.)

Charman, Walter M., Cleveland Heights, Ohio. Hat top and lining therefor. 2,029,058; Jan. 28.

Chatillon-Schafer Corporation. (See Hamister, Edwin H., assignor.)

Chemical Novelties Corporation. (See Ginn, Wells W., assignor.)

Chicago Carton Company. (See Clarke, John D., assignor.)

Choate, Roy E., H. N. Graves, and W. L. Lorch, Cedar Rapids, assignors to La Plant-Choate Manufacturing Co. Inc., Cedar Rapids, Iowa. Wagon. 2,029,006; Jan. 28.

Chow, David. (See Fischke, Alexander, assignor.)

Christensen, Emil, Canterbury, Melbourne, Victoria, Australia. Service container. 2,028,825; Jan. 28.

Christmann, Ludwig J., Jersey City, and S. A. Falconer, Elizabeth, N. J., assignors to American Cyanamid Company, New York, N. Y. Orlon fibration. 2,029,184; Jan. 28.

Chritton, George A. (See Wilson, Ralph A., assignor.)

Chrysler Corporation. (See Hadley, N. F., and Delahanty, assignors.)

Chrysler Corporation. (See Patterson, Herbert F., assignor.)

Chrysler Corporation. (See Pfeiffer, Karl, assignor.)

Chrysler Corporation. (See Skelton, Owen R., assignor.)

Church, Arthur B., Chicago, Ill., assignor, by mesne assignments, to Hamilton Beach Manufacturing Company, Racine, Wis. Motor-driven beater. 2,029,157; Jan. 28.

Cincinnati Milling Machine Company, The. (See Ernst, H., and Nenninger, assignors.)

Cinema Development Company. (See Briel, Conrad G., assignor.)

Clark, Cyril B., Scarsdale, N. Y., assignor, by mesne assignments, to American Cyanamid & Chemical Corporation. Sulphuric acid manufacture. 2,028,750; Jan. 28.

Clark, Eugene F., Damariscotta, Maine, assignor to Marshall Field Mills Corporation, Philadelphia, Pa. Tube frame. 2,029,204; Jan. 28.

Clarke, John D., assignor to Chicago Carton Company, Chicago, Ill. Display card support. 2,029,158; Jan. 28.

Cleveland Rock Drill Company, The. (See Curtis, John C., assignor.)

Clisby, K. Y. (See Reiboldt, William P., assignor.)

Cole, Dale S. (See Lacey, H. M., and Cole.)

Coleman, James D. (See Malm, C. J., and Coleman.)

Colorado Fuel and Iron Company, The. (See Frantz, Philip M., assignor.)

Colt's Patent Fire Arms Manufacturing Co. (See Conner, Benjamin F., assignor.)

Conner, Benjamin F., West Hartford, assignor to Colt's Patent Fire Arms Manufacturing Co., Hartford, Conn. Making shank buttons. 2,029,235; Jan. 28.

Continental Can Company. (See Bourland, Eli, assignor.)

Continental Steel Corporation. (See Williams, George H., assignor.)

Cookson, Clarence F., Lyndhurst, N. J., assignor to Joseph Schneider, Inc., New York, N. Y. Toy target. 2,029,060; Jan. 28.

Cooney, Robert K., assignor of one-half to F. J. Keating, Yankton, S. Dak. Pasteurization. 2,029,017; Jan. 28.

Copony, Alfred, Mount Clemens, Mich. Engine accessory. 2,028,826; Jan. 28.

Carey, George H., et al. (See Lyon, James B., assignor.)

Cornlng Glass Works. (See Bowen, Clinton A., assignor.)

Cox, Henry J., New Orleans, La. Combined visor and ventilator for motor vehicles. 2,028,827; Jan. 28.

Cozzo, Giuseppe, assignor to Societa Italiana Pirelli, Milan, Italy. Vulcanizing press for pneumatic tires, inner tubes and similar articles. 2,029,060; Jan. 28.

Crapp, Arthur C., et al. (See Dorr, R. A., and Russell, assignors.)

Crampton Canneries, Inc. (See Burge, Harry, assignor.)

Crecca, John D., U. S. Navy, and S. M. Phillips, Westbury, N. Y. Breather valve. 2,028,754; Jan. 28.

Crecca, John D., U. S. Navy, and S. M. Phillips, Westbury, N. Y. Breather valve. 2,028,755; Jan. 28.

Crecca, John D., U. S. Navy, and S. M. Phillips, Westbury, N. Y. Breather valve. 2,028,756; Jan. 28.

Cree, John, Leicester Centre, Ontario, and J. W. Horn, Hamilton, Ontario, Canada. Camera attachment. 2,029,223; Jan. 28.

Crosley Radio Corporation, The. (See Money, Roland H., assignor.)

Cruickshank, John E., Hollis, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Telephone system. 2,029,018; Jan. 28.

Curtis, John C., Garfield Heights, assignor to The Cleveland Rock Drill Company, Cleveland, Ohio. Feeding mechanism for rock drills. 2,029,223; Jan. 28.

Dainton, Edgar H. (See Logette, A. L., and Dainton.)

Davis, Calvin V., Mount Vernon, assignor to Ambursen Construction Company, Inc., New York, N. Y. Dam. 2,029,224; Jan. 28.

Day, Roland E., assignor to Universal Oil Products Company, Chicago, Ill. Treatment of hydrocarbon oils. 2,029,234; Jan. 28.

Day and Zimmermann, Incorporated. (See Badenhausen, John P., assignor.)

Dean, Seward A., St. Paul, and O. M. Russell, Hastings, assignors of one-fourth to A. C. Cragg, one-fourth to Le R. Wellver, and one-fourth to R. F. Wilder, St. Paul, Minn. Typewriter. 2,029,159; Jan. 28.

De Cesare, Matteo, Newark, N. J., assignor to S. Kalmer and K. Ohlbaum, New York, N. Y. Doll construction. 2,028,757; Jan. 28.

Deckel, Friedrich. (See Berger, Michael, assignor.)

Delahanty, Edward J. (See Hadley, N. F., and Delahanty.)

Demory, Hyacinth P., Yakima, and E. Kirkland, Ellensburg, Wash. Attachment for stoves. 2,029,085; Jan. 28.

De Stoutz, Robert, Zurich, Switzerland. Pump. 2,029,044; Jan. 28.

Devine, Thomas C., Branxville, N. Y. Trimming strip. 2,028,760; Jan. 28.

De Vleg, Charles E., and N. S. Lundberg, Jackson, Mich., assignors to Associated Patents, Inc., Cincinnati, Ohio. Power transmission mechanism. 2,029,094; Jan. 28.

De Witt, H. Norton. (See Richardson, C. L., and Holden, assignors.)

Dibble, Claude M., assignor to Moore Brothers Company, Joliet, Ill. Cooking stove. 2,029,257; Jan. 28.

Diebold Safe & Lock Co. (See Miller, William C., assignor.)

Diefenbach, Ernst, Frankfort-on-the-Main, and E. Fischer, Bad Soden-on-the-Taunus, Germany, assignors to General Aniline Works, Inc., New York, N. Y. Acid dyestuffs of the anthraquinone series and preparing them. 2,029,268; Jan. 28.

Dietz, Joseph B., Lansdowne, and E. F. Oellinger, Philadelphia, Pa., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Varnish composition. 2,028,758; Jan. 28.

Dillon, William C., Chicago, Ill. Thermometer. 2,028,909; Jan. 28.

Dillström, Torbjörn V., Stockholm, Sweden, assignor to Hesselman Motor Corporation, Ltd., London, England. Internal combustion engine. 2,028,160; Jan. 28.

Dinley, Clarence F., Detroit, Mich., assignor to J. H. Bell, Philadelphia, Pa. Treatment with solvents. 2,028,759; Jan. 28.

Dippman, Fred R., assignor to The Ohio Brass Company, Mansfield, Ohio. Spray gun. 2,028,061; Jan. 28.

Dippman, Fred R., assignor to The Ohio Brass Company, Mansfield, Ohio. Lubricating device. 2,028,062; Jan. 28.

Dippman, Fred R., assignor to The Ohio Brass Company, Mansfield, Ohio. Lubricating device. 2,029,063; Jan. 28.

Disney, Charles P., Toronto, Ontario, Canada. Bridge construction. 2,028,741; Jan. 28.

Dixon, Joseph, Crucible Company. (See Sell, Edwin A., assignor.)

Dominion Engineering Works Limited. (See Russell, A. N., and Robb, assignors.)

Dorr Company, The. (See Lund, Nels E., assignor.)

Dorsey, Albert P., Poughkeepsie, N. Y. Electric outlet moulding. 2,029,019; Jan. 28.

Doyle, Willis G., Detroit, Mich., assignor to American Car and Foundry Motors Company, New York, N. Y. Hydraulic brake. 2,029,095; Jan. 28.

Drake, Rollin L., Port Arthur, Tex., assignor to The Texas Company, New York, N. Y. Closure for containers. 2,029,209; Jan. 28.

Dreyfus, Camille, New York, N. Y., and G. Schneider, Montclair, N. J., assignors to Celanese Corporation of America. Treating cellulose esters of organic acids. 2,028,761; Jan. 28.

Dreyfus, Camille, New York, N. Y., and G. Schneider, Montclair, N. J., assignors to Celanese Corporation of America. Reducing the viscosity of cellulose esters of organic acids. 2,028,762; Jan. 28.

Dreyfus, Camille, New York, N. Y., and G. Schneider, Montclair, N. J., assignors to Celanese Corporation of America. Treating organic esters of cellulose. 2,028,763; Jan. 28.

Dreyfus, Henry, London, England. Synthesis of formic acid. 2,028,764; Jan. 28.

Dreyfus, Henry, London, England. Synthesis of formic acid. 2,028,765; Jan. 28.

Duplate Corporation. (See Sherts, James H., assignor.)

Du Pont, E. I., de Nemours & Company. (See Dietz, J. E., and Oellinger, assignors.)

Durkee Company, The. (See Jacobsen, Oystein, assignor.)

Eagley, Karl C. (See Wilson, G. E., and Eagley.)

Earl, Herbert, Roselle Park, N. J. Oil burner. 2,028,890; Jan. 28.

Eastman Kodak Company. (See Malm, C. J., and Coleman, assignors.)

Eastman Kodak Company. (See Othmer, Donald F., assignor.)

Eclipse Aviation Corporation. (See Linder, Francis, assignor.)

Edwards, George N., assignor to The Ohio Rubber Company, Willoughby, Ohio. Carcass scraper. 2,029,064; Jan. 28.

Edwards, William F. M., Earls Court, London, assignor to Filter Tips Limited, London, England. Cigarette. 2,028,828; Jan. 28.

Eitner, August D., Rockville Centre, N. Y., assignor to News Projection Corporation, New York, N. Y. Tape guide mechanism for quotation projectors. 2,028,767; Jan. 28.

Ekre, Oscar K., Forks, Mont. Insect destroyer. 2,029,225; Jan. 28.

Emergian, Carolus L., Detroit, Mich., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa. Die press safety system. 2,028,768; Jan. 28.

Electric and Musical Industries Limited. (See Whyte, Samuel, assignor.)

Electrolux Corporation. (See Bleth, Tom C., assignor.)

Ellis, George H., and R. C. Storey, Spondon, near Derby, England, assignors to Celanese Corporation of America. Treatment of textile or other materials. 2,028,769; Jan. 28.

Endowment Foundation. (See Hoover, Paul L., assignor.)

Erhard, William, North Bergen, N. J., assignor to Globe Collapsible Tube Corporation, Brooklyn, N. Y. Container closure. 2,029,020; Jan. 28.

Erx, Carl F., Solingen-Wald, Germany. Razor attachment. 2,029,160; Jan. 28.

Ernst, Hans, and L. F. Nenninger, assignors to The Cincinnati Milling Machine Company, Cincinnati, Ohio. Uniform feed system. 2,028,766; Jan. 28.

Eskra, William J., et al. (See Goff, Frederic J., assignor.)

Etzkorn, Rudolf, Oberbruch, Germany, assignor to North American Rayon Corporation, New York, N. Y. Apparatus for the manufacture of artificial silk. 2,029,226; Jan. 28.

Eustis, Warner, Newton, Mass., and P. Walter, assignors to The Kendall Company, Chicago, Ill. Making adhesive tape and gauze dressings. 2,029,260; Jan. 28.

Ewell, Will H., Los Angeles, Calif. Preserving fruit and vegetables. 2,028,976; Jan. 28.

Fageol, Frank R., and W. B. Fageol, assignors to Twin Coach Company, Kent, Ohio. Transportation vehicle. 2,028,829; Jan. 28.

Fageol, William B. (See Fageol, F. R. and W. B.)

Falconer, Stuart A. (See Christmann, L. J., and Falconer.)

Falor, Clinton, Akron, Ohio. Spark plug. 2,028,971; Jan. 28.

Farley, Edward R., Pocatello, Idaho. Closure device. 2,029,065; Jan. 28.

Fay, Horace B. (See Stratford, Herbert R., assignor.)

Fedeler, John H., Jr. (See Raisch, W., and Fedeler.)

Fessler, Elmer G., Des Moines, Iowa. Conduit cleaning apparatus. 2,028,972; Jan. 28.

Fillmore, Wright, et al. (See Rowe, Claude O., assignor.)

Filter Tips Limited. (See Edwards, William F. M., assignor.)

Firsching, Joseph A., Utica, assignor to Scott & Williams, Incorporated, New York, N. Y. Garment tapering attachment for knitting machines. 2,029,227; Jan. 28.

Fischer, Erich. (See Diefenbach, E., and Fischer.)

Fitch, Benjamin F., Greenwich, Conn. Demountable body. 2,028,902; Jan. 28.

Fitch, Benjamin F., Greenwich, Conn., assignor to Motor Terminals Company, New York, N. Y. Freight container. 2,028,770; Jan. 28.

Fitch, Benjamin F., Greenwich, Conn., assignor to Motor Terminals Company, New York, N. Y. Door locking device for demountable bodies. 2,028,771; Jan. 28.

Fitch, Benjamin F., Greenwich, Conn., assignor to Motor Terminals Company, New York, N. Y. Demountable freight container. 2,028,900; Jan. 28.

Fitch, Benjamin F., Greenwich, Conn., assignor to Motor Terminals Company, New York, N. Y. Demountable body. 2,028,901; Jan. 28.

Folmer Graflex Corporation, The. (See Koerling, Torkel, assignor.)

Forsyth, Florans D., Athens, Ohio, and D. A. Nevin, Waynesboro, Pa. Massaging device. 2,028,865; Jan. 28.

Franklin, Edward, and T. Nelson, France, Minn. Cream cooler. 2,029,021; Jan. 28.

Franklin Process Company. (See Wood, John M., assignor.)

Frantz, Philip M., Pueblo, Colo., assignor to The Colorado Fuel and Iron Company, Denver, Colo. Coal flotation process. 2,028,742; Jan. 28.

Freedman, Hyman, Brooklyn, N. Y. Backing for artificial teeth. 2,029,161; Jan. 28.

Freya Engineering Company. (See Bigelow, Charles G., assignor.)

Friedman, William F., Washington, D. C., and G. A. Graham, Fort Monmouth, N. J. Cryptographic system. 2,028,772; Jan. 28.

Fritsch, Hermann, Buggingen, Baden, Germany. Electric switch for alarm clocks. 2,028,973; Jan. 28.

Fuchs, Norbert, Chicago, Ill. Typographical machine. 2,028,743; Jan. 28.

Gagier, George E. (See Place, Hiss C., assignor.)

Galkin, Joseph, assignor to Treuser Waist-Band Machine Co. Inc., New York, N. Y. Universal folder for sewing machines. 2,028,773; Jan. 28.

Galloway, Robert L., Salem, assignor to Western Paper Converting Company, Salem, Oreg. Bag structure. 2,028,974; Jan. 28.

Garbe, Howard W. (See Burgess, J., and Garbe.)

Garner, Joseph, Harrisburg, Pa. Electric fire alarm. 2,028,007; Jan. 28.

Garrison, Belford, Cape May Court House, N. J. Eye testing and recording apparatus. 2,029,229; Jan. 28.

Gebauer-Fuelnegg, Erich. (See Kratz, R. M., and Gebauer-Fuelnegg.)

General Aniline Works, Inc. (See Diefenbach, E., and Fischer, assignors.)

General Aniline Works, Inc. (See Koeberle, K., Wolf, and Krauch, assignors.)

General Aniline Works, Inc. (See Krzikalla, G., Schlichenmaier, and Schörnig, assignors.)

General Aniline Works, Inc. (See Krzikalla, H., and Kuehne, assignors.)

General Aniline Works, Inc. (See Weinand, Klaus, assignor.)

General Electric Company. (See Bell, Howard H., assignor.)

General Electric Company. (See Green, Wilfred B., assignor.)

General Electric Company. (See Pinoff, Vincent, assignor.)

General Electric Company. (See Radioff, Johannes, assignor.)

General Electric Company. (See Stevens, Harry M., assignor.)

General Electric Company. (See Treuser, Edward D., assignor.)

General Electric Company. (See Wiegand, Erich, assignor.)

General Electric Company Limited, The. (See Kaula, Rudolph J., assignor.)

General Motors Corporation. (See Hughes, Frederick G., assignor.)

General Motors Corporation. (See Keighley, Lloyd M., assignor.)

General Motors Corporation. (See Kucher, Andrew A., assignor.)

General Motors Corporation. (See Stickel, Carl A., assignor.)

Geppert, Karl, assignor to Kugelfischer Georg Attmannsche Gesellschaft mit beschränkter Haftung vorm. Friedrich Fischer, Schweinfurt-on-the-Main, Germany. Measuring the hardness of abrasive disks. 2,029,060; Jan. 28.

Gerlip, George, Neepawa, Manitoba, Canada. Grain door and associated mechanism. 2,029,229; Jan. 28.

Getz, Forry R., New York, N. Y. Detachable camera tripod head. 2,029,220; Jan. 28.

Gibson, Jesse G., Bradford, assignor of fifty-one per cent to Rowaind and Company, Bradford, Pa. Bar clamp for belts. 2,029,162; Jan. 28.

Gillette, Clyde F., New York, assignor to United Research Corporation, Long Island City, N. Y. Composite picture. 2,028,975; Jan. 28.

Glan, Wells W., assignor to Chemical Novelties Corporation, Cincinnati, Ohio. Soybean phosphatides. 2,029,261; Jan. 28.

Giovenale, Benedetto, Rome, Italy. Automatic air vent for pipe lines under pressure. 2,029,163; Jan. 28.

Gleason, Augustus W., and B. L. Moyer, El Segundo, Calif. Sampling device. 2,029,221; Jan. 28.

Gliemke, Walter M., Sandusky, Ohio. Tube cap. 2,029,830; Jan. 28.

Globe Collapsible Tube Corporation. (See Erhard, William, assignor.)

Goff, Frederic J., assignor to W. J. Eakes, Milwaukee, and N. G. Goff, Madison, Wis. Wrecked vehicle. 2,028,976; Jan. 28.

Goff, Nathaniel G., et al. (See Goff, Frederic J., assignor.)

Goldberg, Erwin E., Cleveland Heights, and C. B. Harvey, East Cleveland, assignors to Waite & Bartlett X-Ray Manufacturing Company, Cleveland, Ohio. X-ray tube mount. 2,029,096; Jan. 28.

Goodman Manufacturing Company. (See Sloane, William W., assignor.)

Gouldbourn, Joseph, Leicester, England, assignor to United Shoe Machinery Corporation, Paterson, N. J. Sewing machine. 2,029,090; Jan. 28.

Gower, Thomas C., Greenville, S. C. Automatic stoker for coal burners. 2,028,977; Jan. 28.

Graham, Frank A., York, Pa., assignor to American Chain Company, Inc., Bridgeport, Conn. Extension head for lifting jacks. 2,029,022; Jan. 28.

Graham, George A. (See Friedman, W. F., and Graham.)

Graham, George M., Detroit, A. E. Price, and W. O. Westcott, assignors to Hinchley Myers Company, Jackson, Mich. Wheel measuring device. 2,029,067; Jan. 28.

Grand Rapids Brass Company. (See Meadding, Gordon E., assignor.)

Graves, Harold N. (See Choate, S. E., Graves, and Locke.)

Green, Frank W., Oshkosh, Wis. Reversible finisher for cleaning automobile water cooling systems. 2,029,232; Jan. 28.

Green, Wilfred B., Rugby, England, assignor to General Electric Company, Schenectady, N. Y. Rolling mill drive. 2,029,164; Jan. 28.

Greene, Arthur W., Englewood, N. J. Window lightener. 2,029,008; Jan. 28.

Griswold, Walter R., assignor to Packard Motor Car Company, Detroit, Mich. Internal combustion engine. 2,028,903; Jan. 28.

Grosse, Aristid V., assignor to Universal Oil Products Company, Chicago, Ill. Treatment of hydrocarbon oils. 2,029,109; Jan. 28.

Hachlander, Hans, Tinley Park, Ill., assignor to Union Special Machine Company, Chicago, Ill. Looper mechanism for sewing machines. 2,029,233; Jan. 28.

Hadaway, John R., Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Treating sole channels. 2,028,121; Jan. 28.

Hadley, Newton F., Beverly Hills, and R. J. Delahanty, assignors to Chrysler Corporation, Detroit, Mich. Vehicle control. 2,029,168; Jan. 28.

Hale, Roger W., Rumford, R. I. Braiding machine carrier. 2,028,744; Jan. 28.

Hales, Guy R., Fort Washington, Wis. Treating vegetables. 2,028,168; Jan. 28.

Hallam, Harry, and C. H. James, Leicester, England, assignors to United Shoe Machinery Corporation, Paterson, N. J. Apparatus for molding soles. 2,028,852; Jan. 28.

Hallowell, Edison, West Park, Leeds, assignor to Northern Utilities Trust Limited, Leeds, Yorkshire, England. Remote control system for electric supply networks. 2029,089; Jan. 28.

Hamilton Beach Manufacturing Company. (See Cowell, Arthur E., assignor.)

Hammett, Louis P. (See Beans, H. T., Waldon, and Hammett.)

Hanley, Albert J., assignor to Respro Inc., Cranston, R. I. Material for leather substitute and other purposes. 2,029,172; Jan. 28.

Hansell, Clarence W., Port Jefferson, N. Y., assignor to Radio Corporation of America. Oscillation generation. 2,028,833; Jan. 28.

Hansell, Clarence W., Port Jefferson, N. Y., assignor to Radio Corporation of America. Ultra short wave communication system. 2,028,896; Jan. 28.

Hansen, Christian J., Essen-Ruhr, Germany, assignor, by mesne assignments, to The Koppers Company of Delaware, Pittsburgh, Pa. Removal of hydrogen sulphide and ammonia from gases. 2,029,252; Jan. 28.

Hansen, Morten, Los Angeles, and J. P. Pullen, Glendale, said Pullen assignor to W. G. Young, Los Angeles, Calif. Cup moving mechanism. 2,029,107; Jan. 28.

Hantlepoulos, George, New York, N. Y. Automatic cultivator. 2,028,774; Jan. 28.

Harris, Benjamin R., Chicago, Ill. Salpromated higher unsaturated carboxylic esters of polyhydroxy substances. 2,029,168; Jan. 28.

Harrison, Jackson W. (See Ammann, R. I., and Harrison.)

Hart, Hanallai. (See McClain, F. R., and Hart.)

Haworth, Mark R., Pittsburgh, Pa., assignor to The Jeffrey Manufacturing Company. Coal cleaning apparatus. 2,028,534; Jan. 28.

Haworth, Mack R., Pittsburgh, Pa., assignor to The Jeffrey Manufacturing Company. Coal cleaning apparatus. 2,028,904; Jan. 28.

Hedly, Arthur H., assignor to Ludlow Typograph Company, Chicago, Ill. Matrix and manufacturing the same. 2,028,978; Jan. 28.

Heia, Gothard G., assignor to Hein-Werner Motor Parts Corporation, Waukesha, Wis. Jack. 2,028,905; Jan. 28.

Hein-Werner Motor Parts Corporation. (See Hein, Gothard G., assignor.)

Heitlage, Henry. (See Reid, F., and Heitlage.)

Helmes, Maximilian J., Springfield, Mass. Beverage mixing device. 2,029,254; Jan. 28.

Hendricks, Wallace M., Great Neck, and G. Loeffler, Jr., Flushing, N. Y. Apparatus for bituminous mining. 2,028,748; Jan. 28.

Hankins, Roy B., et al. (See Lambert, Thomas H., assignor.)

Herman, Joseph, Westfield, N. J., assignor to American Telephone and Telegraph Company. Start-stop telegraph repeater. 2,028,835; Jan. 28.

Herlinberg, Ernest, Des Moines, Iowa. Recovering books. 2,029,101; Jan. 28.

Hess, Richard. (See Huttenlocher, R., and Hess.)

Hesselman Motor Corporation. (See Dillstrom, Theodora V., assignor.)

Hetenyi, Paul, New York, N. Y., assignor to Solar Manufacturing Corporation. Electrical condenser. 2,028,775; Jan. 28.

Hibbert, Harold, Montreal, Quebec, Canada, assignor to Celanese Corporation of America. Cellulosic articles and preparing the same. 2,029,716; Jan. 28.

Higbee, George C., Tekoa, Wash. Hydraulic safety brake for automobiles. 2,029,979; Jan. 28.

Higgins, Edgar, Akron, assignor to The Ohio Brass Company, Mansfield, Ohio. Marker light. 1,958,959; Jan. 28.

Higgins, Ralph, Akron, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio. Condenser. 2,028,967; Jan. 28.

Higgitt, Harry V., London, England, assignor to Cable and Wireless (Limited). Telegraph signaling apparatus. 2,029,071; Jan. 28.

Hillsmer, Guy, Surbiton, assignor to Transoptal Limited, London, England. Gramophone record and manufacture thereof. 2,029,102; Jan. 28.

Hinchley-Myers Company. (See Graham, G. M., Price, and Westcott, assignors.)

Hintz, Josephine C., Lake Mills, Iowa. Adjustable head support. 2,029,979; Jan. 28.

Hironaka, Yasumbaro, Tsuruga-cho, Kano-Ashi-gun, Shimane-ken, Japan. Internal combustion engine. 1,959,169; Jan. 28.

Hlavacek, Frank, Jr. (See Wendell, R. E., and Hlavacek.)

Hoe, R., & Co. (See Lamatsch, Frederick.)

Hoene, Fred W. (See Noell, I. H., and Hoene.)

Hoffman, Edward L., Dayton, Ohio. Pneumatic construction. 2,028,777; Jan. 28.

Hoffmann, Gilbert P. (See Noyes, W. A., and Hoffmann.)

Hoffmann, Gilbert P., Milwaukee, Wis., assignor to Pittsburgh Plate Glass Company. Polyhydric alcohol-polybasic acid-monobasic aliphatic acid anhydride condensation product and making the same. 2,029,203; Jan. 28.

Holden, Arthur P. (See Richardson, C. L., and Holden.)

Holden Knitting Co. (See Holden, R. M., and Roberts, assignors.)

Holden, Roger M., and J. F. Roberts, assignors to Holden Knitting Co., Worcester, Mass. Knitted lining for rubber footwear. 2,028,746; Jan. 28.

Holden, William H., Tudor, Idaho. Slusher and scraper. 2,028,947; Jan. 28.

Holgate, Clarence G., Milwaukee, Wis. Tape carrier. 2,028,236; Jan. 28.

Holt, Samuel, Somercotes, England. Straight bar knitting machine. 2,028,837; Jan. 28.

Holtzer-Cabot Electric Company, The. (See Kennedy, Carlton L., assignor.)

Hoover, Paul L., Middletown, assignor to Endowment Foundation, New Brunswick, N. J. Instrument for measuring core loss in magnetic materials. 2,029,823; Jan. 28.

Hopwood, John M. (See Smith, George W., assignor.)

Horn, John W. (See Cree, J., and Horn.)

Horsley, Carsten E. (See Goldfield, E. R., and Horsley.)

Horton, Allen A., Plymouth, and D. P. Rockwell, assignors to Borroughs Adding Machine Company, Detroit, Mich. Electrically operated paper carriage. 2,028,747; Jan. 28.

Hosmer, Frank F., Glendale, Calif. Can opener. 2,028,778; Jan. 28.

Houlik, Louis D., Dallas, Tex. Bake oven. 2,028,748; Jan. 28.

Howe, Ralph W., Dallas, R. B. Love, Lufkin, and J. H. Wood, Jr., Dallas, Tex., assignors to Atlantic Pipe Line Company, Dallas, Tex. Apparatus for cleaning pipe lines. 2,028,779; Jan. 28.

Howey, Walter, New York, N. Y. Photo-electric intaglio and relief engraving system. 2,029,105; Jan. 28.

Hughes, Frederick G., Detroit, assignor to General Motors Corporation, Detroit, Mich. Anti-friction bearing and seal. 2,029,072; Jan. 28.

Hull, Lloyd L., Milwaukee, Wis. Photometer. 2,028,178; Jan. 28.

Huttenlocher, Richard, and R. Hess, Frankfort-on-the-Main, Germany. Production of sulphonic acids. 2,029,073; Jan. 28.

Hyatt, Benjamin S., Vinita, assignor of twenty-four and one-half per cent to W. A. Robbins, Tulsa, Okla., and twenty-four and one-half per cent to E. M. Wright, Artesian City, Ark. Attachment for typewriters. 2,028,074; Jan. 28.

Hygrade Sylvania Corporation. (See Thomas, Ralph B., assignor.)

I. G. Farbenindustrie Aktiengesellschaff. (See Kuhrich, K., and Moder, assignors.)

I. G. Farbenindustrie Aktiengesellschaft. (See Schilling, H., and Stadler, assignors.)

I-T-E Circuit Breaker Company. (See Kaufman, R., and Jensen, assignors.)

Ingersoll-Rand Company. (See Kirgan, John, assignor.)

International Motor Company. (See Manville, Keith B., assignor.)

International Motor Company. (See Wiener, Gottfried, assignor.)

International Standard Electric Corporation. (See Scott, T. R., and Monnier, assignors.)

Irving Trust Company, permanent trustee. (See Lamatsch, Frederick, assignor.)

Ito, Masaji, Sumaura-dori, Suma-Ku, Kobe, Japan, assignor to Kabushiki Kaisha Kawasaki Zosensho (Kawasaki Dockyard Co. Ltd.), Kobe, Japan. Electric arc welder. 2,028,780; Jan. 28.

Jackcomatic Corporation. (See Mariews, Harold J., assignor.)

Jackson, James J., Woodbury, N. J., assignor to Sandura Company, Inc., Philadelphia, Pa. Producing decorative sheet material. 2,028,781; Jan. 28.

Jackson, James J., Woodbury, N. J., assignor to Sandura Company, Inc., Philadelphia, Pa. Decorative sheet material and manufacturing the same. 2,028,782; Jan. 28.

Jacobsen, Gystein, Dayton, Ohio, assignor to The Dutton Company, Inc. Centrifugal pump. 2,028,783; Jan. 28.

James, Charles S., et al. (See Lambert, Thomas H., assignor.)

James, Cyril H. (See Hallam, H. and James.)

Jardin, Joaquin S., New York, N. Y. Jack. 2,028,988; Jan. 28.

Jeffrey Manufacturing Company, The. (See Haworth, Mack R., assignor.)

Jenkins, Thomas M., Los Angeles, assignor to C. G. Watson, Oakland, Calif. Mop. 2,029,235; Jan. 28.

Jennett, Robert, Camden, N. J. Hedge cutter. 2,028,784; Jan. 28.

Jennings, James W., Providence, R. I. Salt shaker or the like. 2,028,870; Jan. 28.

Jensen, John, assignor to Whitney Metal Tool Company, Rockford, Ill. Bending brake. 2,028,869; Jan. 28.

Jensen, Otto. (See Knauss, H., and Jensen.)

Jesser, Albert H., Edgewood, assignor to Pittsburgh Steel Drum Company, Pittsburgh, Pa. Sealing ring. 2,029,173; Jan. 28.

John, Robert, Middleton Township, Monmouth County, and E. F. Spellmeyer, East Orange, N. J., assignors to Carbex Chemical Co. of Illinois, Chicago, Ill. Spark plug. 2,028,749; Jan. 28.

Johnson, George W., Cincinnati, assignor to The American Laundry Machinery Company, Norwood, Ohio. Pressing machine—reciprocating type. 2,029,104; Jan. 28.

Johnson, Lit A., et al. (See Rowe, Claude O., assignor.)

Johnson, Oliver W. (See Williams, P. S., and Johnson.)

Johnson, Roy W., Milwaukee, Wis. Time controlled mechanism for valves or the like. 2,028,883; Jan. 28.

Johnston, Howard A., Toronto, Ontario, Canada. Measuring device. 2,028,871; Jan. 28.

Jones, Charles T. (See Hicks, F., and Jones.)

Junge, Max, assignor to J. E. Reinecker, A. G. Chemnitz, Germany. Change gear mechanism. 2,029,174; Jan. 28.

Justheim, Clarence I., Salt Lake City, Utah. Automobile insulation and floor board. 2,029,024; Jan. 28.

Justheim, Clarence I., Salt Lake City, Utah. Freezing ice cream and formula therefor. 2,029,025; Jan. 28.

Kabushiki Kaisha Kawasaki Zosensho (Kawasaki Dockyard Co. Ltd.). (See Ito, Masaji, assignor.)

Kaiser, Samuel, et al. (See De Cesare, Mattee, assignor.)

Kavik, Rudolph J., Edgbaston, Birmingham, assignor to The General Electric Company Limited, London, England. Press. 2,029,026; Jan. 28.

Keating, Frank J. (See Cooney, Robert K., assignor.)

Keighley, Lloyd M., assignor to General Motors Corporation, Dayton, Ohio. Refrigerating apparatus. 2,029,263; Jan. 28.

Kellogg, Edward W., Moorestown, N. J., assignor to Radio Corporation of America. Strip record supporting and driving apparatus. 2,029,027; Jan. 28.

Kellogg, William D., assignor to Mohawk Carpet Mills, Inc., Amsterdam, N. Y. Pile fabric. 2,028,872; Jan. 28.

Kelsey-Hayes Wheel Company. (See Thomas, George J., assignor.)

Kendall Company, The. (See Rustin, W., and Walter, assignors.)

Kendall, James M., Woodbury Heights, N. J., assignor to Radio Corporation of America. Electrical translation device. 2,028,873; Jan. 28.

Kennedy, Carlton L., Braintree, assignor to The Holtzer-Cabot Electric Company, Boxbury, Mass. Condenser induction motor. 2,028,934; Jan. 28.

Kermin, Henry, San Bernardino, Calif. Container and dispenser. 2,028,585; Jan. 28.

Kinnaeiman & Lane Holding Co. (See Lane, Donald B., assignor.)

Kinnaird, William R., assignor to Universal Oil Products Company, Chicago, Ill. Valve. 2,029,105; Jan. 28.

Kirgan, John, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J. Refrigerating system. 2,028,106; Jan. 28.

Kirkland, Emmett. (See Demery, H. P., and Kirkland.)

Klein, Otto L., San Francisco, Calif. Game. 2,029,107; Jan. 28.

Kleinberg, Paul H., Easton, Pa., assignor to T. W. & C. B. Sheridan Company, New York, N. Y. Trimming mechanism for bookbinding machines. 2,028,785; Jan. 28.

Klinkhamer, Hendrik A. W., assignor to N. V. Philips' Gloeilampenfabrieken, Eindhoven, Netherlands. Circuit arrangement for gas filled discharge tubes. 2,028,880; Jan. 28.

Klopbaug, Werner, New York, N. Y. Combination pen and calendar. 2,029,230; Jan. 28.

Kloeky, Simon, Roselle, assignor to The American Agricultural Chemical Company, Newark, N. J. Manufacture of calcium arsenate insecticides. 2,029,964; Jan. 28.

Knauss, Edwards, and O. Jensen, assignors to I-T-E Circuit Breaker Company, Philadelphia, Pa. Electric circuit interrupter and separable contacts therefor. 2,028,875; Jan. 28.

Knight, John A., Hamilton, Ontario, Canada. Electric heating element. 2,029,075; Jan. 28.

Knoll, William V., Dayton, Ohio. Gelatin and glue extractor. 2,028,925; Jan. 28.

Koeberle, Karl, Ludwigshafen-on-the-Rhine, and H. Wolf, Mannheim, and R. Krauch, Ludwigshafen-on-the-Rhine, Germany, assignors to General Aniline Works, Inc., New York, N. Y. Producing vat dyestuffs of the dibenzanthrone series. 2,029,237; Jan. 28.

Koester, Herman, assignor to The Bristol Company, Waterbury, Conn. Imprinting means for identifying charts of recording instruments. 2,029,029; Jan. 28.

Koppers Company of Delaware, The. (See Hansen, Christian J., assignor.)

Korinth, Erich, Frankfort-on-the-Main-Hochst, and G. Meder, Manster in Taunus, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Inorganic colored pigment and perparing the same. 2,028,960; Jan. 28.

Korling, Torkel, Chicago, Ill., assignor to The Folmer Graflex Corporation, Rochester, N. Y. Camera mechanism. 2,029,228; Jan. 28.

Krafka, Stefan, Cicero, Ill. Oil can. 2,029,108; Jan. 28.

Kramer, Paul H. and J. C. Thompson, Detroit, Mich., assignors to Park Chemical Company. Binding device. 2,028,874; Jan. 28.

Krinzlein, Georg, Frankfort-on-the-Main, H. Schlichenmaier, Kelkheim in Taunus, and L. Schdrnig, Frankfort-on-the-Main, Germany, assignors to General Aniline Works, Inc., New York, N. Y. Anthraquinone derivatives. 2,029,239; Jan. 28.

Kratz, Edouard M., Gard, Ind., and E. Gebauer-Fuelnegg, Evansville, Ill., assignor, by mesne assignments, to Marbe Products Corporation, Chicago, Ill. Carrier web for the formation of thin transparent films. 2,028,936; Jan. 28.

Krauch, Emil. (See Koeberle, K., Wolf and Krauch.)

Kraikalla, Hans, Ludwigshafen-on-the-Rhine, and W. Kuehne, Mannheim, Germany, assignors to General Aniline Works, Inc., New York, N. Y. Production of azo dyestuffs. 2,028,961; Jan. 28.

Kucher, Andrew A., assignor to General Motors Corporation, Dayton, Ohio. Refrigerating apparatus. 2,029,109; Jan. 28.

Kuehne, Walther. (See Kraikalla, H., and Kuehne.)

Kugelfischer Erste Automatische Gusstahlkugelfabrik vorm. Friedrich Fischer. (See Geppert, Karl, assignor.)

Kuhn, George, Takoma Park, Md. Fluid pressure motor. 2,028,240; Jan. 28.

Kuwada, Gompei, Masdani-Mura, Kawabe-Gun, Japan. Doubling spindle. 2,028,578; Jan. 28.

Kylen, Karl E., assignor to Aktiebolaget Svenska Kullagerfabriken, Goteborg, Sweden. Multirow cylindrical roller bearing. 2,029,262; Jan. 28.

La Dispersion Cathodique. (See von Bosse, J., and Richter, assignors.)

Lamatsch, Frederick, Grantwood, N. J., assignor to Irving Trust Company, Permanent Trustee for R. Hoe & Co., Inc., New York, N. Y. Gearing for rotary printing machine folders. 2,028,798; Jan. 28.

Lambert, Thomas H., assignor of twelve and seventy-five one-hundredths per cent to C. S. James, Ridgewood, N. J., twelve and seventy-five one-hundredths per cent to J. Mergendoller, five and one tenth per cent to H. B. Aldrich and twenty and four tenths per cent to H. B. Henlins, New York, N. Y. Hydraulic transmission mechanism. 2,028,982; Jan. 28.

Lane, Donald B., Glen Cove, assignor to Kimmelman & Lane Holding Co., Inc., New York, N. Y. Cigarette dispensing machine. 2,028,787; Jan. 28.

Lane, Donald B., Brooklyn, assignor to Kimmelman & Lane Holding Co., Inc., New York, N. Y. Coin controlled apparatus. 2,028,788; Jan. 28.

Langley, Frank. (See Sumner, H. C., Taylor, and Langley.)

La Plant-Choate Manufacturing Co. Inc. (See Choate, R. E., Graves, and Leech, assignors.)

Lawson, Alexander M. (See Vander Cook, R. E., and Lawson).

Lee, John H. (See Mathiesen, Marius, assignor.)

Lee, Roy C., Irvington, N. J. Fuel saving device. 2,029,110; Jan. 28.

Leece, Bennett M., Cleveland, and D. S. Cole, Cleveland Heights, assignors to The Leece-Neville Company, Cleveland, Ohio. Regulator. 2,029,206; Jan. 28.

Leece, Bennett M., Cleveland, and D. S. Cole, Cleveland Heights, assignors to The Leece-Neville Company, Cleveland, Ohio. Electromagnetic device. 2,029,207; Jan. 28.

Leece-Neville Company, The. (See Leece, B. M., and Cole, assignors.)

Leech, William I. (See Choate, R. E., Graves, and Leech.)

Leeman, Edward D., Medford, Mass. Inner spring mattress. 2,029,076; Jan. 28.

Lee-Tex Rubber Products Corporation. (See Miller, Layard D., assignor.)

Lefebre, Maurice, Detroit, Mich. Gas mixer. 2,028,937; Jan. 28.

Lejeune, Franz, Vienna, Austria. Production of colored photographs particularly in natural colors, on papers, films, and the like. 2,029,071; Jan. 28.

Leslie Company. (See Soderberg, Sten H. B., assignor.)

Lester, Christopher J., Cleveland, Ohio. Device for measuring and indicating tension on cables. 2,029,111; Jan. 28.

Le Vesconte, Harold J., Western Springs, assignor to Union Special Machine Company, Chicago, Ill. Feeding mechanism for sewing machines. 2,029,241; Jan. 28.

Le Vesconte, Harold J., Western Springs, assignor to Union Special Machine Company, Chicago, Ill. Chain stitch sewing machine. 2,029,242; Jan. 28.

Limpert, Sylvester A., assignor to Mechana Kold Corporation, Bay Shore, N. Y. Portable refrigerator. 2,029,175; Jan. 28.

Lindberg Engineering Company. (See Lindberg, Le Roy A., assignor.)

Lindberg, Le Roy A., Evanston, assignor to Lindberg Engineering Company, Chicago, Ill. Drawing furnace. 2,029,176; Jan. 28.

Linder, Francis, assignor to Eclipse Aviation Corporation, East Orange, N. J. Engine starting mechanism. 2,029,243; Jan. 28.

Linder, Francis, assignor, by mesne assignments, to Eclipse Aviation Corporation, East Orange, N. J. Driving mechanism. 2,029,244; Jan. 28.

Lindquist, Carl J., Brooklyn, N. Y. Ironing board. 2,028,789; Jan. 28.

Liotta, Ernest, Cleveland, Ohio. Fish lure. 2,028,988; Jan. 28.

Livingston, John W., Wilkinsburg, assignor to The Union Switch & Signal Company, Swissvale, Pa. Apparatus for the control of railway car retarders. 2,028,900; Jan. 28.

Loeffler, Gustave, Jr. (See Hendrick, W. M., and Loeffler, assignors.)

Logette, Abraham L., and E. H. Daintee, London, England. Automatic valve. 2,028,556; Jan. 28.

Lotts, Delbert L., Chicago, Ill. Clutch mechanism. 2,028,876; Jan. 28.

Love, Robert E. (See Howe, R. W., Love and Wood.)

Low, Frank K., Brooklyn, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Testing system. 2,029,030; Jan. 28.

Ludlow Typograph Company. (See Holly, Arthur E., assignor.)

Lukens, Clarence D., St. Louis, Mo. Eyecup. 2,028,884; Jan. 28.

Lund, Arthur D., Minneapolis, Minn. Casting machine. 2,028,790; Jan. 28.

Lund, Nels R., Seaford, assignor to The Dorr Company, Inc., New York, N. Y. Liquid distributor. 2,029,268; Jan. 28.

Lundberg, Nels S. (See De Vlieg, C. B., and Lundberg.)

Lundquist, August F., Worcester, Mass., assignor to Lundquist Tool & Mfg. Company. Brush for motors and generators. 2,029,171; Jan. 28.

Lundquist Tool & Mfg. Company. (See Lundquist, August F. assignor.)

Lynde, Fred H., North Attleboro, assignor to H. E. Sweet, Attleboro, Mass., doing business as R. F. Simmons Company. Wrist watch bracelet. 2,028,781; Jan. 28.

Lyon, James B., New York, assignor of one-tenth to G. H. Covey, Bayside, and nine-tenths to M. H. Lyon, New York, N. Y. Tissue packet. 2,029,245; Jan. 28.

Lyon, Margaret H., et al. (See Lyon, James B., assignor.)

Lyor Metal Products, Incorporated. (See Bales, James B., assignor.)

MacClatchie, John W., Los Angeles, Calif. Reamer. 2,028,910; Jan. 28.

MacDougall, Ron, assignor to F. C. McClellan, Chicago, Ill. Game apparatus. 2,029,177; Jan. 28.

MacKay, George J., Kingston, Ontario, Canada. Ore extraction. 2,028,940; Jan. 28.

MacKenzie, Ella L., administratrix. (See MacKenzie, Fred L.)

MacKenzie, Fred L., deceased, by E. L. MacKenzie, administratrix, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Fastening inserting machine. 2,028,940; Jan. 28.

Mahon, Clarence A., Kansas City, Mo. Fan. 2,028,985; Jan. 28.

Mattsen, Alfonso G., Park Ridge, Ill. Ventilating attachment for pressing machines. 2,029,112; Jan. 28.

Malm, Carl J., Rochester, N. Y., and J. D. Coleman, Columbus, Ohio, assignors to Eastman Kodak Company, Rochester, N. Y. Preparation of alkoxy fatty acid esters of cellulose. 2,028,792; Jan. 28.

Manufacture de Machines du Haut-Rhin S. A. (See Sautier, Emile, assignor.)

Manville, Keith R., Highland Park, N. J., assignor to International Motor Company, New York, N. Y. Four-speed vehicle transmission. 2,028,116; Jan. 28.

Marbe Products Corporation. (See Kratz, E. M., and Gebauer-Fuelnegg, assignors.)

Marlowe, Harold J., Brooklyn, N. Y., assignor to Jacksmatic Corporation. Vehicle jack. 2,029,179; Jan. 28.

Marshall Field Mills Corporation. (See Chrit, Eugene F., assignee.)

Marvin, Orris F., assignor to Mills Alloys, Inc., Los Angeles, Calif. Making tungsten carbide cutting. 2,028,911; Jan. 28.

Mascuch, Joseph J., Newark, N. J. Interference preventing cable. 2,028,798; Jan. 28.

Massey-Harris Company. (See Shenstone, Osborne H., assignor.)

Mathiesen, Marius, Chicago, assignor to J. H. Lee, River Forest, Ill. Tire spreading implement. 2,028,986; Jan. 28.

Matney, James A., Fresno, Wash. Filtering device. 2,029,073; Jan. 28.

Matravers, Frederick G., Harpenden, assignor to Adamant Engineering Company Limited, Luton, Bedfordshire, England. Follower for steering gears for vehicles. 2,028,989; Jan. 28.

Matthes, Gerard H., Los Angeles, Calif. Constructing revetments. 2,028,794; Jan. 28.

Maulis, Rudolph D., Ravenna, Nebr. Viscous fluid pump. 2,028,912; Jan. 28.

Maxmoor Corporation. (See Moore, Arlington, assignor.)

May, Lawrence E. (See Todd, J. D., May, and Newbury.)

Mayer, William, New York, N. Y. Necktie construction. 2,029,180; Jan. 28.

Mayer, William, New York, N. Y. Necktie construction. 2,029,181; Jan. 28.

McCann, Frank P., Seattle, Wash. Tree holder. 2,029,241; Jan. 28.

McCarroll, John H., Des Moines, Iowa. Plant shelf for window screenings. 2,029,246; Jan. 28.

McClellan, Fred C. (See MacDougall, Ron, assignor.)

McDonald, William R., assignor to L. H. Stark, Los Angeles, Calif. Coin control for scales. 2,029,269; Jan. 28.

McIntyre, Patrick J., Detroit, Mich. Bright annealer. 2,028,941; Jan. 28.

McKee, Ralph H., New York, N. Y., assignor to U. S. Hydrogenation Corporation. Conversion and hydrogenation of heavy petroleum oils and apparatus. 2,028,795; Jan. 28.

McKillop, Edgar A., Hendersonville, N. C. Device for cleaning quills. 2,028,987; Jan. 28.

Mechana Kold Corporation. (See Limpert, Sylvester A., assignor.)

Meder, George. (See Koeiath, R., and Meder.)

Menzies, Thomas E. D. (See Scott, T. E., and Menzies.)

Mercogliano, Jerry, Brooklyn, N. Y. Spring seat. 2,029,247; Jan. 28.

Mergendoller, John, et al. (See Lambert, Thomas H., assignor.)

Merritt, Matthew M., Middleton, Mass., assignor to The Tanning Process Company, Boston, Mass. Application of finely divided material to articles of manufacture. 2,028,796; Jan. 28.

Mertens, Franz, Mannheim, Germany, assignor to Aktiengesellschaft Brown Boveri & Cie, Baden, Switzerland. Electric valve protective system. 2,029,270; Jan. 28.

Messiter, Edwin H., Jersey City, N. J., assignor, by mesne assignments, to Chatillon-Schaefer Corporation, New York, N. Y. Conveyer weighing apparatus. 2,029,271; Jan. 28.

Meutsch, Charles C., Buffalo, N. Y. Furniture spring suspension. 2,029,182; Jan. 28.

Miller, Arthur E., and S. Shafer, Jr., assignors to Chain Belt Company, Milwaukee, Wis. Control mechanism for concrete mixers and analogous apparatus. 2,028,988; Jan. 28.

Miller, Fred. (See Cervenka, W. F., and Miller.)

Miller, Herbert E. (See Nye, I. W., and Miller.)

Miller, Layard D., assignor to Lee-Tex Rubber Products Corporation, Chicago, Ill. Suspension rubber toy. 2,028,797; Jan. 28.

Miller, Raphael M., Paddington, near Sydney, New South Wales, Australia. Cycle chain lubrication device. 2,029,079; Jan. 28.

Miller, William C., assignor to Diebold Safe & Lock Co., Canton, Ohio. Delayed control time lock. 2,029,272; Jan. 28.

Mills Alloys, Inc. (See Marvin, Orris F., assignor.)

Mills, George E., Brighton, Mass. Combination lock. 2,029,080; Jan. 28.

Mills, Percy E., Towaco, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Telephone coin collector. 2,029,113; Jan. 28.

Milne, William, Barre, Vt. Stone saw. 2,029,114; Jan. 28.

Mohawk Carpet Mills, Inc. (See Kellogg, William D., assignor.)

Moir, Vincent J. (See Stanley, H., and Moir.)

Money, Roland H., assignor to The Crosley Radio Corporation, Cincinnati, Ohio. Electrical entrance plug. 2,028,942; Jan. 28.

Money, Roland H., assignor to The Crosley Radio Corporation, Cincinnati, Ohio. Forming refrigerator linings. 2,028,943; Jan. 28.

Montgomery, William J., and D. B. Bradner, assignors to The Champion Paper and Fibre Company, Hamilton, Ohio. Coating paper. 2,029,273; Jan. 28.

Moore, Arlington, assignor, by mesne assignments, to Maxmoor Corporation, New York, N. Y. Apparatus for and process of operating internal combustion engines on fuel of low volatility. 2,028,949; Jan. 28.

Moore Brothers Company. (See Dibble, Claude M., assignor.)

Morrell, Jacques C., assignor to Universal Oil Products Company, Chicago, Ill. Treatment of hydrocarbon oils. 2,028,115; Jan. 28.

Morrison, Harry E., Auburn, R. I., assignor, by mesne assignments, to Reynolds Metalware Company, Buffalo, N. Y. Toasting machine. 2,028,944; Jan. 28.

Morrison, Willard L., Lake Forest, Ill. Automobile bumper device. 2,028,945; Jan. 28.

Morton, Benjamin A., New York, N. Y. Ventilating device. 2,029,116; Jan. 28.

Motor Terminals Company. (See Fitch, Benjamin F., assignor.)

Mottweiler, Oliver F., Alexandria, Ind. Machine for making insulating material. 2,029,081; Jan. 28.

Moyer, Ernest L. (See Gleason, A. W., and Moyer.)

Mukaza, Hiso, Meguro-ku, Tokyo, Japan. Advertising sign of electric lights. 2,029,183; Jan. 28.

Muller, Louis, & Cie S. A., Fabrique d'Horlogerie "La Champagne". (See Annen, Robert, assignor.)

Murch, John H., East Orange, N. J., assignor to American Can Company, New York, N. Y. Lining the inside of cans. 2,028,798; Jan. 28.

Murray, Charles, Clifton, N. J. Eliminating static and other disturbances. 2,028,841; Jan. 28.

Mushet, Sidney, New York, N. Y. Preservation of animal tissues. 2,029,248; Jan. 28.

Myriand, G. W., et al. (See Burke, William H., assignor.)

N. V. Philips' Gloeilampenfabrieken. (See Klinkhamer, Hendrik A. W., assignor.)

National Aniline and Chemical Company. (See Rogers, Donald G., assignor.)

National Trust Company Limited, executor. (See Russel, A. N., and Robb.)

Nelson, Thorsten. (See Franklin, E., and Nelson.)

Nenninger, Lester F. (See Ernst, H., and Nenninger.)

Neumann, Paul, Milwaukee, Wis. Aquarium. 2,028,913; Jan. 28.

Nevin, Donald A. (See Forsyth, F. D., and Nevin.)

Newbury, William L. (See Todd, J. D., May, and Newbury.)

News Projection Corporation. (See Eltzen, August D., assignor.)

Niconoff, Dimitry, Clarkdale, Ariz., assignor, by mesne assignments, to Phelps Dodge Corporation, New York, N. Y. Gas generator. 2,028,946; Jan. 28.

Noell, Isome H., and F. W. Hocme, Hooker, Okla. Mobile ground working device. 2,029,249; Jan. 28.

Noell, Isome H., and F. W. Hocme, Hooker, Okla. Mobile ground working device. 2,029,250; Jan. 28.

North American Rayon Corporation. (See Etukorn, Rudolf, assignor.)

Northern Utilities Trust Limited. (See Hallowell, Edison, assignor.)

Novick, Jacob, Newark, N. J. Dental floss holder for toothbrushes. 2,029,031; Jan. 28.

Noyes, William A., Urbana, Ill., and G. F. Hoffman, Milwaukee, Wis., assignors to Pittsburgh Plate Glass Company. Production of resin like materials. 2,028,914; Jan. 28.

Nu-Deal Handle Co. (See Blevins, Albert C., assignor.)

Nye, Irvin W., Bethlehem, and H. E. Miller, assignors to Utilities Service Company, Inc., Allentown, Pa. Combined lamp structure and hanger. 2,029,251; Jan. 28.

O'Connor, Raymond L., Oakland, Calif. Piston. 2,028,799; Jan. 28.

Odam, Charles H., Tucson, Ariz. Wall construction. 2,029,082; Jan. 28.

Oeffinger, Edmund F. (See Dietz, J. B., and Oeffinger.)

Ohio Brass Company, The. (See Bovard, Floyd G., assignor.)

Ohio Brass Company, The. (See Dippman, Fred R., assignor.)

Ohio Brass Company, The. (See Higgins Ralph, assignor.)

Ohio Brass Company, The. (See Taylor, John J., assignor.)

Ohio Rubber Company, The. (See Edwards, George N., assignor.)

Ohlbaum, Karl, et al. (See De Cesare, Matteo, assignor.)

Olsen, Fredrich, Alton, assignor to Western Cartridge Company, East Alton, Ill. Making propellent powder. 2,028,950; Jan. 28.

Olsson, Karl R., Stockholm, Sweden. Machine for slicing meats. 2,029,032; Jan. 28.

Othmer, Donald F., Brooklyn, N. Y. Concentrating acetic acid. 2,028,801; Jan. 28.

Othmer, Donald F., assignor to Eastman Kodak Company, Rochester, N. Y. Concentrating acetic acid. 2,028,800; Jan. 28.

Otis, Charles M., Rochester, N. Y., assignor to The American Laundry Machinery Company, Norwood, Ohio. Drying machine. 2,029,117; Jan. 28.

Ott, Charles J., Bellingham, Wash. Vegetable peeler and slicer. 2,028,915; Jan. 28.

Ottke, Robert L., Fox Chapel Manor, Pa., assignor to Standard Sanitary Manufacturing Company. Sink structure. 2,028,802; Jan. 28.

Ottke, Robert L., Fox Chapel Manor, Pa., assignor to Standard Sanitary Manufacturing Company. Balanced sink structure. 2,028,803; Jan. 28.

Owen, William, Pittsburgh, Pa., assignor to Pittsburgh Plate Glass Company. Apparatus for laminating glass. 2,028,916; Jan. 28.

Owen, William, Pittsburgh, Pa., assignor to Pittsburgh Plate Glass Company. Turnover table for glass sheets. 2,028,917; Jan. 28.

Packard Motor Car Company. (See Birge, Raymond B., assignor.)

Packard Motor Car Company. (See Griswold, Walter R., assignor.)

Packard Motor Car Company. (See Vincent, Charles H., assignor.)

Pacy, Ernest H. (See Seeman, R., and Wilson, assignors.)

Paige, Arthur E., Philadelphia, Pa. Oil burning apparatus. 2,029,184; Jan. 28.

Palm, Herman C., Chicago, Ill. Leg protecting device. 2,028,947; Jan. 28.

Palmgren, Nils A., assignor to Aktiebolaget Svenska Kullagerfabriken, Goteborg, Sweden. Radial plain bearing. 2,029,274; Jan. 28.

Palmgren, Nils A., assignor to Aktiebolaget Svenska Kullagerfabriken, Goteborg, Sweden. Radial plain bearing for grease lubrication. 2,029,276; Jan. 28.

Panoff, Vincent, Belfort, France, assignor to General Electric Company. Spinning bucket. 2,029,185; Jan. 28.

Pass, Ralph, Los Angeles, Calif. Foldable screen. 2,028,918; Jan. 28.

Park Chemical Company. (See Kramer, P. H., and Thompson assignors.)

Parker, Edward H., Arlington, assignor to W. H. Bagshaw Co., Lowell, Mass. Textile picker. 2,028,919; Jan. 28.

Patterson, Herbert F., assignor to Chrysler Corporation, Detroit, Mich. Driving mechanism. 2,029,115; Jan. 28.

Pejepscot Paper Company. (See Brawn, Worthen E., assignor.)

Pennsylvania Salt Manufacturing Company. (See Van der Cook, R. E., and Lawson, assignors.)

Perkins, Laurence M., Dayton, Ohio, assignor, by mesne assignments, to Radio Corporation of America, New York, N. Y. Radioreceiver. 2,029,023; Jan. 28.

Pernice, James V., Mount Morris, N. Y. Vehicle spring suspension. 2,028,991; Jan. 28.

Peterson, Norman, Marinette, Wis. Lighting device for cigarettes. 2,029,186; Jan. 28.

Pfeiffer, Karl, assignor to Chrysler Corporation, Detroit, Mich. Clutch mechanism. 2,029,167; Jan. 28.

Phelps Dodge Corporation. (See Niconoff, Dimitry, assignor.)

Phillips, Leland A., Rochester, N. Y. Ink pad for rubber stamps. 2,028,842; Jan. 28.

Phillips Petroleum Company. (See Anguish, Frank, assignor.)

Phillips Petroleum Company. (See Schulze, W. A., and Chaney, assignors.)

Phillips, Stephen M. (See Crecca, J. D., and Phillips.)

Pinaud, John A., Atlantic Highlands, N. J., assignor to Rand McNally & Company, New York, N. Y. Globe mounting. 2,029,282; Jan. 28.

Pitcairn, Alexander, Trail, British Columbia, assignor of one-third to D. Chow, Trail, British Columbia, Canada. Collapsible container or the like. 2,028,849; Jan. 28.

Pittsburgh Plate Glass Company. (See Hoffmann, Gilbert F., assignor.)

Pittsburgh Plate Glass Company. (See Noyes, W. A., and Hoffmann, assignors.)

Pittsburgh Plate Glass Company. (See Owen, William, assignor.)

Pittsburgh Steel Drum Company. (See Jesser, Albert E., assignor.)

Place, Bion C., assignor of one-half to G. E. Gagnier, Detroit, Mich. Securing trim panels. 2,028,902; Jan. 28.

Pocock, Oscar H., Ferndale, and L. Bonsetti, Detroit, Mich. Roof structure. 2,028,877; Jan. 28.

Pohlmann, Joseph J., South Hadley Center, assignor to The Beveridge-Marvellum Company, Holyoke, Mass. Decorative paper and making the same. 2,028,948; Jan. 28.

Pobeantsch, Max. (See Runge, W., and Pobeantsch.)

Pollard, Hugh E., assignor to Arrow Tools, Inc., Chicago, Ill. Chisel. 2,028,993; Jan. 28.

Pollitzer, Franz. (See Swan, O., and Pollitzer, assignors.)

Pollock, Robert T., New York, N. Y., assignor to Respatz, Inc., Cranston, R. I. Pressed fiber board and manufacture. 2,029,034; Jan. 28.

Pollon, Joseph F. (See Hansen, M., and Pollon.)

Pope, Charles S., assignor to Central Valve Mfg. Co., Chicago, Ill. Valve. 2,028,844; Jan. 28.

Potter, Joseph L., Indianapolis, Ind. Reel base-plate fishing-rod attaching means. 2,029,188; Jan. 28.

Prestage, Edwin, London, England. Heat exchange apparatus. 2,029,068; Jan. 28.

Price, Arthur E. (See Graham, G. M., Price, and Westcott.)

Prichard, Geo. W., et al. (See Burke, William H., assignor.)

Procter & Gamble Company, The. (See Reid, F., and Heitlage, assignors.)

Proctor, James H., Northbridge, assignor to Ace Racket Stringers (Foreign Rights) Limited, Sydney, New South Wales, Australia. Apparatus for the stringing of tennis rackets. 2,028,804; Jan. 28.

Pure Oil Company The. (See Wagner, Cary E., assignor.)

Radio Corporation of America. (See Barton, Loy E., assignor.)

Radio Corporation of America. (See Beverage, Harold H., assignor.)

Radio Corporation of America. (See Hansell, Clarence W., assignor.)

Radio Corporation of America. (See Kellogg, Edward W., assignor.)

Radio Corporation of America. (See Kendall, James M., assignor.)

Radio Corporation of America. (See Parkin, Laurence M., assignor.)

Radio Corporation of America. (See Ranger, Richard H., assignor.)

Radio Corporation of America. (See Roberts, Walter van B., assignor.)

Radio Corporation of America. (See Woods, Fred, assignor.)

Radio Corporation of America. (See Zworykin, Vladimir K., assignor.)

Radlof, Johannes, Berlin, Germany, assignor to General Electric Company. Double acting internal combustion engine. 2,029,189; Jan. 28.

Ragsdale, Mari J. W., Morristown, assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa. Piping boat suspension structure. 2,029,276; Jan. 28.

Raisch, William, Forest Hills, N. Y., and J. H. Fiddler, Jr., Glen Rock, N. J., assignors to Underpinning Foundation Company, Inc. Filler. 2,028,949; Jan. 28.

Rand McNally & Company. (See Pinaud, John A., assignor.)

Randall, Meredith S. (See Woodall, H. J., and Randall.)

Randall, Meredith S., assignor to Woodall Industries Incorporated, Detroit, Mich. Laminated panel. 2,029,240; Jan. 28.

Raney, Clemens E., Riverside, Ill. Phonograph. 2,028,193; Jan. 28.

Raney, Clemens E., Riverside, Ill. Phonograph. 2,029,151; Jan. 28.

Ranger, Richard H., Newark, N. J., assignor to Radio Corporation of America. Multiplex transmission. 2,028,905; Jan. 28.

Ray, Alvin M., Tacoma, Wash. Smoking stand. 2,029,192; Jan. 28.

Reach, William F., Springfield, Mass., assignor to A. G. Spalding & Bros., New York, N. Y. Racket frame. 2,029,183; Jan. 28.

Rechtin, Ida, Rewtickley, Pa. Pressing desserts, and apparatus. 2,028,806; Jan. 28.

Reed, Harold V., assignor, by mesne assignments, to Borg-Warner Corporation, Chicago, Ill. Clutch plate. 2,028,951; Jan. 28.

Reiss, Hays, assignor to Western Paper Converting Company, Salem, Oreg. Notebook binding. 2,028,994; Jan. 28.

Reinholt, William P., Irvington, N. J., assignor of sixty per cent to K. I. Clisby, Montclair, N. J. Oil burner. 1,028,801; Jan. 28.

Reid, Forestus, Cincinnati, and H. Heitlage, St. Bernard, Ohio, assignors to The Procter & Gamble Company, Cincinnati, Ohio. Labeling and wrapping machine. 2,029,020; Jan. 28.

Reid, Leland E., South Pasadena, Calif. Relay motor. 1,028,945; Jan. 28.

Reimer, Philip J., Neenah, Wis. Apparatus for and method of making paper. 2,028,962; Jan. 28.

Reinecker, J. E., A. G. (See Junge, Max, assignor.)

Republic Metalware Company. (See Morrison, Harry R., assignor.)

Respatz, Inc. (See Pollock, Robert T., assignor.)

Respro Inc. (See Hanley, Albert J., assignor.)

Richardson, Charles L., and A. F. Holden, assignors to H. N. De Witt, Toronto, Ontario, Canada. Phonograph mechanism. 2,029,119; Jan. 28.

Richardson, Burton M., Compton, Calif. Watchmaker's tool and method. 2,029,194; Jan. 28.

Richter, George A., assignor to Brown Company, Berlin, N. H. Cellulose pulp for esterification purposes and processing of same. 2,028,846; Jan. 28.

Richter, Kurt. (See von Bonse, J., and Richter.)

Ricks, Fred, and C. T. Jones, Leicester, England, assignors to United States Machinery Corporation, Paterson, N. J. Dust removing device. 2,028,837; Jan. 28.

Riddock, Charles M., Andover, Mass. Shoe sole applying machine. 2,029,195; Jan. 28.

Hiler, Ernest G., assignor to Sikes and Smith Company, Philadelphia, Pa. Adhesive applying mechanism. 2,028,878; Jan. 28.

Roark, William M., Perryton, Tex. Safety steering rod. 2,028,863; Jan. 28.

Robb, John D. (See Russell, A. N., and Robb.)

Robbins, W. A., et al. (See Hyatt, Benjamin R., assignor.)

Roberts, John F. (See Holden, R. M., and Roberts.)

Roberts, Joseph W., Portage la Prairie, Manitoba, Canada. Motor sleigh. 2,029,196; Jan. 28.

Roberts, Walter van B., Princeton, N. J., assignor to Radio Corporation of America. Multirange superheterodyne receiver. 2,029,035; Jan. 28.

Rochester Telephone Corporation. (See Vincent, William J., assignor.)

Roedding, Gordon E., assignor to Grand Rapids Brass Company, Grand Rapids, Mich. Latch. 2,028,954; Jan. 28.

Roedding, Gordon E., assignor to Grand Rapids Brass Company, Grand Rapids, Mich. Latch. 2,029,197; Jan. 28.

Rogers, Donald G., Ridgewood, N. J., assignor to National Aniline and Chemical Company, Inc., New York, N. Y. Preparation of alizarin and its salts. 2,028,877; Jan. 28.

Rogers, Francis M., assignor to Standard Oil Company, Whiting, Ind. Dehydrierizing petroleum oils. 2,028,964; Jan. 28.

Röhm & Haas Company. (See Turley, H. G., and Somerville, assignors.)

Roller-Smith Company. (See Wood, Joseph D., assignor.)

Roos, Axel J., Chico, Calif. Heater. 2,028,921; Jan. 28.

Roscoe, Edwin S., assignor to Taylman & Kybo Mfg. Co., Rochester, N. Y. Perforator. 2,028,940; Jan. 28.

Rose, Bernard L., assignor to The Standard Oil Company, Cleveland, Ohio. Making asphalt. 2,028,967; Jan. 28.

Rosenmund, Alfred L., Rockaway Borough, N. J., assignor to Stapling Machines Co. Sealing means for wirebound boxes. 2,029,196; Jan. 28.

Rosenthal, Annie, executrix. (See Rosenthal, Levi M.)

Rosenthal, Levi M., deceased, New York, N. Y., Annie Rosenthal, executrix, New York, N. Y. Rubber article and method of making the same. 2,028,806; Jan. 28.

Ross, James C., Seattle, Wash. All metal springless automatic faucet and valve. 2,028,823; Jan. 28.

Ross, Oscar A., New York, N. Y. Lubricant metering device. 2,029,186; Jan. 28.

Rossetti, Louis. (See Pocock, O. H., and Rossetti.)

Rottner, William J., Brooklyn, N. Y. Toy gun for projecting aeroplanes. 2,029,056; Jan. 28.

Rowe, Claude O., Santa Monica, assignor of one-half to W. Fillmore and L. A. Johnson, Los Angeles, Calif. Pencil sharpener. 2,028,834; Jan. 28.

Rowland, Dwight P. (See Horton, A. A., and Rowland.)

Ruage, Wilhelm, and M. Pobontsch, assignors to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany. Radio transmission system. 2,028,980; Jan. 28.

Russell, Andrew N., and J. D. Robb, National Trust Company Limited, executor of said J. D. Robb, deceased, assignors to Dominion Engineering Works Limited, Lachine, Quebec, Canada. Wood grinding machine. 2,029,125; Jan. 28.

Russell, Obed M. (See Dean, S. A., and Russell.)

Ryback, Adolph W., assignor to T. L. Smith Company, Milwaukee, Wis. Mixing apparatus. 2,029,178; Jan. 28.

Sales, Gabriel E. R., New York, N. Y. Expansion device. 2,028,881; Jan. 28.

Sandura Company. (See Jackson, James J., assignor.)

Sautier, Emile, Lambesc, assignor to Manufacture de Machines du Haut-Rhin S. A., Mulhouse-Bourtzwiller, (Haut-Rhin, France). Manufacture of cartridge case cups. 1,028,956; Jan. 28.

Schaeffer, John, assignor to The Van Brunt Manufacturing Company, Horicon, Wis. Power lift clutch mechanism. 2,029,127; Jan. 28.

Schilling, Heinrich, Ludwigshafen-on-the-Rhine, and W. Stadler, Ziegelhausen-on-the-Neckar, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Separation of unsaturated hydrocarbons from gas mixtures containing the same. 2,029,120; Jan. 28.

Schlichenmaier, Hans. (See Krämicin, G., Schlichenmaier and Schörnig.)

Schmidt, Carl W., Buffalo, N. Y. Flowerpot making machine. 2,029,084; Jan. 28.

Schmitz, Albert J., Milwaukee, Wis. Building block. 2,028,907; Jan. 28.

Schneider, George. (See Dreyfus, C., and Schneider.)

Schneider, Henry J., Quincy, Mass. Steam generator. 2,029,025; Jan. 28.

Schneider, Joseph, Inc. (See Cochran, Clarence F., assignor.)

Schönfelder, Herbert, Leipzig, Germany, assignor to Elisabeth Tietze, née Friedrich, Molkau/Leipzig, Germany. Stamp. 2,029,128; Jan. 28.

Schörnig, Ludwig. (See Krämicin, G., Schlichenmaier, and Schörnig.)

Schulze, Walter A., and L. V. Chaney, assignors to Phillips Petroleum Company, Bartlesville, Okla. Sweetening hydrocarbon oils. 2,029,094; Jan. 28.

Schwartz, Nathan, New York, N. Y. Connecting an exhalation valve, separator, or similar element with the face piece of a respirator, gas mask, or the like. 2,029,129; Jan. 28.

Schwartz, Paul A., Flushing, N. Y. Switch mechanism. 2,029,130; Jan. 28.

Scott, Thomas R., and T. E. D. Menzies, Aldwych, London, England, assignors to International Standard Electric Corporation, New York, N. Y. Electric cable. 2,029,048; Jan. 28.

Scott & Williams, Incorporated. (See Firsching, Joseph A., assignor.)

Scoville, Loren P., Flushing, assignor to The Texas Company, New York, N. Y. Bubble tray. 2,029,277; Jan. 28.

Scranton, De Hart G., Maplewood, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Processing of metal parts. 2,029,037; Jan. 28.

Seeger Refrigerator Company. (See Seeger, W. G., and Ahrens, assignors.)

Seeger, Walter G., and R. S. Ahrens, St. Paul, assignors to Seeger Refrigerator Company, St. Paul, Minn. Water cooler for refrigerators. 2,028,926; Jan. 28.

Seeman, Robert, Merrick, N. Y., and A. R. Wilson, Philadelphia, assignors to E. H. Pacy, Pittsburgh, Pa. Adjusting the length of structural members. 2,029,121; Jan. 28.

Segar, Lee, Troy, Pa. Handle. 2,029,189; Jan. 28.

Seitz, Frederick, Albany, N. Y. Jacking apparatus for motor vehicles. 2,028,980; Jan. 28.

Sell, Edwin A., Belleville, assignor to Joseph Dixon Crucible Company, Jersey City, N. J. Eraser. 2,029,000; Jan. 28.

Serge, Igor B., Rochester, N. Y. Magnetic circuit and construction thereof. 2,029,283; Jan. 28.

Shafer, Samuel, Jr. (See Miller, A. R., and Shafer.)

Shaffer, Ernest L., Vinton, Iowa. Swinging door mechanism. 2,029,200; Jan. 28.

Shaffer, Ernest L., Vinton, Iowa. Swinging door mechanism. 2,029,201; Jan. 28.

Shannon, Ray A., Kansas City, Mo. Piano keyboard chart. 2,028,909; Jan. 28.

Shaw, John L., Crouch End, London, England. Shirt. 2,028,810; Jan. 28.

Shay, William T., Pekin, Ill. Flying decoy. 2,028,849; Jan. 28.

Sheaffer, Osborne H., assignor to Massey-Harris Company, Limited, Toronto, Ontario, Canada. Dust for centrifugal separators. 2,028,965; Jan. 28.

Shepard, David C., St. Paul, Minn. Bottom construction for laminated containers. 2,029,091; Jan. 28.

Shepherd, Chester G., Prosport, Ill. High pressure safety plunger cock. 2,029,202; Jan. 28.

Sheridan, T. W. & C. E., Company. (See Kleinsorg, Paul E., assignor.)

Sherts, James H., Tarentum, Pa., assignor to Duplate Corporation. Apparatus for making laminated glass. 2,028,926; Jan. 28.

Sherts, James H., Tarentum, Pa., assignor to Duplate Corporation. Apparatus for making laminated glass. 1,028,927; Jan. 28.

Sherwin-Williams Company, The. (See Todd, J. D., May, and Newbury, assignors.)

Shoemaker, Milton J., Madison, Wis., assignor, by mesne assignments, to Carbide and Carbon Chemicals Corporation, New York, N. Y. Wrapper of transparent or ornamental character and making the same. 2,029,181; Jan. 28.

Simmons, Dual L. (See Simmons, Oliver G., assignor.)

Simmons, Leon E., Claremont, N. H., assignor to Sullivan Machinery Company. Cutter chain. 2,028,811; Jan. 28.

Simmons, Oliver G., Lakewood, Ohio, assignor, by mesne assignments, to D. L. Simmons. Method of and apparatus for generating hollow faced worms and the like. 2,028,929; Jan. 28.

Simmons, E. F., Company. (See Lynds, Fred H.)

Simons, Aaron, New York, N. Y. Process and apparatus for wire drawing. 2,029,089; Jan. 28.

Singer Manufacturing Company, The. (See Stearns, Jake H., assignor.)

Skelton, Owen E., Grosse Pointe Farms, Mich., assignor to Chrysler Corporation, Detroit, Mich. Wheel balance. 2,029,132; Jan. 28.

Sloane, William W., assignor to Goodman Manufacturing Company, Chicago, Ill. Drive mechanism for shaker conveyers. 2,029,133; Jan. 28.

Smalley, David E., Santa Ana, Calif. Keyhole illuminating means for doors. 2,029,002; Jan. 28.

Smith, George W., Pittsburgh, assignor to J. M. Hopwood, Dormont, Pa. Control system for boiler furnaces. 2,028,812; Jan. 28.

Smith, Lewis E., receiver. (See Storrie, William, assignor.)

Smith, T. L., Company. (See Ryback, Adolph W., assignor.)

Smyly, Arthur L., Chicago, Ill. Making a hard surfaced cement. 2,028,966; Jan. 28.

Società Italiana Pirelli. (See Corso, Giuseppe, assignor.)

Soderberg, Sten E. B., Passaic, assignor to Leslie Company, Lyndhurst, N. J. Temperature regulator. 1,029,203; Jan. 28.

Soler Manufacturing Corporation. (See Hetenyi, Paul, assignor.)

Solomon, Frank, New York, assignor to B. Brier, Long Beach, N. Y. Transfer ink. 2,029,204; Jan. 28.

Somerville, Ian C. (See Turley, H. G., and Somerville.)

Spalding, A. G., & Bros. (See Reach, William F., assignor.)

Spellmeyer, Erwin F. (See John, R., and Spellmeyer.)

Spiro, Harry, Chicago, Ill. Dentistry. 2,029,003; Jan. 28.

Stadler, Robert. (See Schilling, H., and Stadler.)

Standard Oil Company. (See Rogers, Francis M., assignor.)

Standard Oil Company, The. (See Rose, Bernard L., assignor.)

Standard Sanitary Manufacturing Company. (See Otte, Robert L., assignor.)

Stanley, Harry, Rocky River, and V. J. Moir, Cleveland Heights, Ohio. Tightening device. 2,029,134; Jan. 28.

Stanley, Harry, Rocky River, and V. J. Moir, Cleveland Heights, Ohio. Musical instrument. 2,029,135; Jan. 28.

Stapling Machines Co. (See Rosenmund, Alfred L., assignor.)

Stark, L. H. (See McDonald, William R., assignor.)

Stearns, Jake H., Bridgeport, Conn., assignor to The Singer Manufacturing Company, Elizabeth, N. J. Adjustable eccentric for sewing machines. 2,029,273; Jan. 28.

Stevens, Emmanuel, executrix. (See Stevens, Harry M.)

Stevens, Harry M., deceased, Schenectady, N. Y., by Emmanuel Stevens, executrix, Schenectady, N. Y., assignor to General Electric Company. Time element device. 2,029,136; Jan. 28.

Stevens, Harry M., deceased, E. Stevens, executrix, Schenectady, N. Y., assignor to General Electric Company. Electroresponsive device. 2,029,137; Jan. 28.

Stickel, Carl A., assignor to General Motors Corporation, Dayton, Ohio. Refrigerating apparatus. 2,029,279; Jan. 28.

Stillwell, George R., Plainfield, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Photo-electric tube. 2,029,040; Jan. 28.

Stokes and Smith Company. (See Rider, Ernest G., assignor.)

Storey, Ralph C. (See Ellis, G. H., and Storey.)

Storvic, William, Providence, R. I., assignor to L. E. Smith, receiver for Apco Mossberg Corporation. Brake shoe centralizing device. 2,029,148; Jan. 28.

Stout, Mark W., Jr., assignor of forty one-hundredths to J. C. Wynecoop, Wellpinit, Wash. Grading machine. 2,029,122; Jan. 28.

Stratford, Herbert R., assignor to H. B. Fay, Cleveland, Ohio. Stabilizing sheet vulcanized fiber. 2,028,932; Jan. 28.

Strieby, Maurice H., Maplewood, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Loaded transmission line. 2,029,041; Jan. 28.

Stuart, Robert, Forest Hills, N. Y. Sheet feeding and delivering mechanism. 2,028,813; Jan. 28.

Stuck, Harold D., assignor to John W. Bolton & Sons, Inc., Lawrence, Mass. Fitting Jordan shell linings. 2,028,113; Jan. 28.

Sullivan Machinery Company. (See Simmons, Leon E., assignor.)

Summer, Henry C., Wyberton, F. J. Taylor, and F. Langley, Kirton, England. Coin-freed delivery machine. 2,029,205; Jan. 28.

Sussin, Max H., assignor of one-half to F. L. Barchard, Chicago, Ill. Pressure fluid supply system and apparatus. 2,029,085; Jan. 28.

Svensson, Sjuna, Hissmosterna, Krokom, Sweden. Method of and an apparatus for charging cellulose digesters or the like. 2,029,066; Jan. 28.

Swan, George W., Flat Rock, Mich. Oscillating cultivator. 2,028,987; Jan. 28.

Swan, Otto, and F. Pollitzer, New York, N. Y. Dental restoration. 2,028,882; Jan. 28.

Sweet, Harold E. (See Lynds, Fred H., assignor.)

Szabo, Gustave V., New York, N. Y. Ash receptacle. 2,029,189; Jan. 28.

Tanning Process Company, The. (See Merritt, Matthew M., assignor.)

Tate, Edward H., Malden, Mass. Mop. 2,028,983; Jan. 28.

Taylor, Frederick J. (See Sumner, H. C., Taylor, and Langley.)

Taylor, John J., Barberton, assignor to The Ohio Brass Company, Mansfield, Ohio. Vibration damper and process of assembly. 2,028,930; Jan. 28.

Taylor, John J., Wadsworth, assignor to The Ohio Brass Company, Mansfield, Ohio. Conductor support. 2,028,931; Jan. 28.

Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H. (See Böhm, Otto, assignor.)

Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H. (See Runge, W., and Poboutsch, assignors.)

Texas Company, The. (See Carlstrom, John, assignor.)

Texas Company, The. (See Drake, Rollin L., assignor.)

Texas Company, The. (See Scoville, Loren P., assignor.)

Thomas, George J., Birmingham, assignor to Kelsey-Hayes Wheel Company, Detroit, Mich. Brake mechanism. 2,029,067; Jan. 28.

Thomas, Ralph B., assignor to Hygrade Sylvania Corporation, Salem, Mass. Lamp, tube, and similar devices. 2,028,884; Jan. 28.

Thompson, Jesse C. (See Kramer, P. H., and Thompson.)

Tietze, Elisabeth, née Friedrich. (See Schlenfelder, Herbert, assignor.)

Todd, James D., L. E. May, and W. L. Newbury, assignors to The Sherwin-Williams Company, Chicago, Ill. Manufacture of azo colors. 2,028,958; Jan. 28.

Todd, James D., L. E. May, and W. L. Newbury, assignors to The Sherwin-Williams Company, Chicago, Ill. Manufacture of azo colors. 2,028,959; Jan. 28.

Treanor, Edward D., Pittsfield, Mass., assignor to General Electric Company. Bushing for transformer casings. 2,029,140; Jan. 28.

Tremblay, Albert F., Union City, Ind. Glass feeding shelf. 2,028,960; Jan. 28.

Trouser Waist-Band Machine Co. Inc. (See Galkin, Joseph, assignor.)

Trusvend Limited. (See Hillhouse, Guy, assignor.)

Turley, Harold G., Moorestown, N. J., and I. C. Somerville, Fox Chase, assignors to Röhm & Haas Company, Philadelphia, Pa. Tanning. 2,029,068; Jan. 28.

Turner, William, Longsight, Manchester, England. Variable speed mechanism. 2,029,042; Jan. 28.

Twin Coach Company. (See Fageol, F. R., and W. B., assignors.)

Ulfers, Ira, Milwaukee, Wis. Rope lock. 2,028,885; Jan. 28.

Underpinning & Foundation Company. (See Raisch, W., and Fudeler, assignors.)

Union Special Machine Company. (See Hachlander, Hans, assignor.)

Union Special Machine Company. (See Le Vesconte, Harold J., assignor.)

Union Switch & Signal Company, The. (See Livingston, John W., assignor.)

United Research Corporation. (See Gillette, Clyde F., assignor.)

United Shoe Machinery Corporation. (See Goulthwaite, Joseph, assignor.)

United Shoe Machinery Corporation. (See Hadaway, John R., assignor.)

United Shoe Machinery Corporation. (See Hallam, H., and James, assignors.)

United Shoe Machinery Corporation. (See MacKenzie, Fred L., assignor.)

United Shoe Machinery Corporation. (See Ricks, F., and Jones, assignors.)

United States Gypsum Company. (See Anning, Harold E., assignor.)

U. S. Hydrogenation Corporation. (See McKee, Ralph H., assignor.)

Universal Oil Products Company. (See Day, Roland B., assignor.)

Universal Oil Products Company. (See Grosse, Aristid V., assignor.)

Universal Oil Products Company. (See Kinnaird, William R., assignor.)

Universal Oil Products Company. (See Morrell, Jacque C., assignor.)

Utilities Service Company. (See Nye, L. W., and Miller, assignors.)

Van Brunt Manufacturing Company, The. (See Schaeffer, John, assignor.)

Vander Cook, Raymond R., Inkster, and A. M. Lawson, Trenton, Mich., assignors to Pennsylvania Salt Manufacturing Company, Philadelphia, Pa. Purification of caustic soda solutions. 2,028,898; Jan. 28.

Varni, Alfredo, Pallanza, Italy. Method of and apparatus for molding concrete. 2,029,004; Jan. 28.

Vickers, Harry F., Detroit, Mich. Machine tool feed. 2,028,850; Jan. 28.

Vincent, Charles H., Utica, assignor to Packard Motor Car Company, Detroit, Mich. Door locking means. 2,028,852; Jan. 28.

Vincent, William J., assignor to Rochester Telephone Corporation, Rochester, N. Y. Telephone pay station apparatus. 2,028,851; Jan. 28.

Von Boose, Julius, Hermsdorf, Bollitz, and E. Richter, Leipzig, Germany, assignors to La Dispersion Cathodique, Brussels, Belgium. Forming thin metallic films by cathode disintegration. 2,028,868; Jan. 28.

Von Platen, Baltzar C. (See Alm, Johan H., assignor.)

Wagner, Cary R., assignor to The Pure Oil Company, Chicago, Ill. Polymerization of unsaturated hydrocarbons. 2,028,886; Jan. 28.

Waite & Bartlett Y-Ray Manufacturing Company. (See Goldfield, H. R., and Horsley, assignors.)

Walden, George H., Jr. (See Bunce, E. T., Walden, and Hammett.)

Walker, Charles R., assignor to Abrasive Products, Inc., South Braintree, Mass. Treating crystalline abrasives and treated product. 2,029,268; Jan. 28.

Walter, Paul. (See Eustis, W., and Walter.)

Warner, Earl S., Valleyville, Conn., assignor to Air-Flo Corporation, Boston, Mass. Device for spraying. 2,029,141; Jan. 28.

Watson, Claude G. (See Jenkins, Thomas M., assignor.)

Webber, Harriet A., Coronado, Calif. Knitting needle stitch holder. 2,029,005; Jan. 28.

Wedlake, Fred R., and H. Hart, Hyelcth, Minn. Latching and righting mechanism for dump cars. 2,029,006; Jan. 28.

Weinand, Klaus, Leverkusen-I. G. Werk, Germany, assignor to General Aniline Works, Inc., New York, N. Y. Anthrapyridone sulphonic acids and making them. 2,029,007; Jan. 28.

Weirauch, August F., Milwaukee, Wis. Sink support. 2,029,009; Jan. 28.

Welliver, Le Roy, et al. (See Dean, S. A., and Russell.)

Wemhöner, Wilhelm, Berlin, Germany. Carburetor for combustion engines. 2,029,142; Jan. 28.

Wendell, Rene E., Wilmette, and F. Hlavacek, Jr., Evanston, Ill.; said Wendell assignor to said Hlavacek. Flower support. 2,029,043; Jan. 28.

Westcott, William O. (See Graham, O. M., Price, and Westcott.)

Western Cartridge Company. (See Olsen, Frodrick, assignor.)

Western Electric Company. (See Serantoni, De Hart G., assignor.)

Western Paper Converting Company. (See Galloway, Robert L., assignor.)

Western Paper Converting Company. (See Rehm, Hays, assignor.)

Westinghouse Lamp Company. (See Blackburn, Philip W., assignor.)

Westlinning, Aaten, Lautawerk/Lausitz, Germany. Making cables. 2,029,044; Jan. 28.

Wheeler, Harley T., Dallas, Tex. Making of packing rings. 2,028,961; Jan. 28.

Whitney Metal Tool Company. (See Jensen, John, assignor.)

Whyte, Samuel, Redhill, Surrey, assignor to Electric and Musical Industries Limited, Middlesex, England. Sound record. 2,028,884; Jan. 28.

Wichmann, John C., Chicago, Ill. Air conditioner. 2,028,814; Jan. 28.

Wickersham, Harry P. (See Burns, E., and Wickersham.)

Wicks, Milton O., Glen Cove, N. Y. Venetian blind and mechanism for operating the same. 2,029,143; Jan. 28.

Wiegand, Erich, Berlin-Wilhelmsaue/Mark, Germany, assignor to General Electric Company. Electric discharge device or vacuum tube. 2,029,144; Jan. 28.

Wilder, Roy F., et al. (See Dean, S. A., and Russell.)

Williams, George N., assignor to Continental Steel Corporation, Kokomo, Ind. Method and machine for drawing or pulling wire. 2,029,206; Jan. 28.

Williams, Philip S., Oakland, Calif. Apparatus for measuring temperatures. 2,028,887; Jan. 28.

Wilson, Allen R. (See Seaman, R., and Wilson.)

Wilson, George B., and E. C. Bigsby, Erie, Pa. Motor. 2,029,145; Jan. 28.

Wilson, Ralph A., Chicago, Ill., assignor of one-half to George A. Christian, Moline, for and method of masking. 2,029,006; Jan. 28.

Winter, Arthur, Weehawken, N. J. Mechanical pencil. 2,028,855; Jan. 28.

Wirrer, Gottfried, Plainfield, N. J., assignor to International Motor Company, New York, N. Y. Water cooling system for internal combustion engines. 2,029,146; Jan. 28.

Wolff, Hugo. (See Kocherle, K., Wolff, and Krauch.)

Wood, Charles R., Red Boiling Springs, Tenn. Safety watch pocket for garments. 2,029,207; Jan. 28.

Wood, Henry A. W., assignor to Wood Newspaper Machinery Corporation, New York, N. Y. Web roll speed control. 2,029,045; Jan. 28.

Wood, Henry A. W., assignor to Wood Newspaper Machinery Corporation, New York, N. Y. Web splicing device. 2,029,046; Jan. 28.

Wood, John M., Cranston, assignor to Franklin Process Company, Providence, R. I. Valve. 2,028,815; Jan. 28.

Wood, Joseph D., Bethlehem, Pa. assignor to Roller-Smith Company. Circuit breaker. 2,028,963; Jan. 28.

Wood, Joseph H., Jr. (See Howe, R. W., Love, and Wood.)

Wood Newspaper Machinery Corporation. (See Wood, Henry A. W., assignor.)

Woodall, Herbert J., and M. S. Randall, assignors to Woodall Industries Incorporated, Detroit, Mich. Laminated panel. 2,028,983; Jan. 28.

Woodall Industries Incorporated. (See Randall, Meredith S., assignor.)

Woodall Industries Incorporated. (See Woodall, H. J., and Randall, assignors.)

Woods, Fred, Richmond, England, assignor to Radio Corporation of America. Radio direction finder. 2,028,856; Jan. 28.

Wright, Bryan N., et al. (See Hyatt, Benjamin S., assignor.)

Wright, Kindy C., St. Paul, Minn. Humidifying heat-saver. 2,029,208; Jan. 28.

Wynecoop, John C. (See Stout, Mark W., Jr., assignor.)

Yarnall-Waring Company. (See Archer, Alfred L., assignor.)

Yawman & Erbe Mfg. Co. (See Roscoe, Edwin S., assignor.)

Yewell, Paul R., Los Angeles, Calif. Separating minerals from ores. 2,029,080; Jan. 28.

Young, William G. (See Hansen, M., and Pollon, assignors.)

Yow, William P., Winston-Salem, N. C. Extension table. 2,029,280; Jan. 28.

Zak, Richard F., Westfield, Mass. Door service indicator. 2,029,209; Jan. 28.

Zworykin, Vladimir K., Haddonfield, N. J., assignor to Radio Corporation of America. Electrical communication system. 2,028,857; Jan. 28.

Sherrie, William, Providence, R. I., assignor to L. R. Smith, receiver for Apco Mossberg Corporation. Brake shoe centralizing device. 2,029,128; Jan. 28.

Stout, Mark W., Jr., assignor of forty one-hundredths to J. C. Wynecoop, Wellpinit, Wash. Grading machine. 2,029,122; Jan. 28.

Stratford, Herbert R., assignor to H. B. Fay, Cleveland, Ohio. Stabilizing sheet vulcanized fiber. 2,028,982; Jan. 28.

Strieby, Maurice E., Maplewood, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Loaded transmission line. 2,029,041; Jan. 28.

Stuart, Robert, Forest Hills, N. Y. Sheet feeding and delivering mechanism. 2,028,813; Jan. 28.

Stuck, Harold D., assignor to John W. Bolton & Sons, Inc., Lawrence, Mass. Fitting Jordan shell linings. 2,029,128; Jan. 28.

Sullivan Machinery Company. (See Simmons, Leon E., assignee.)

Sumner, Henry C., Wyberton, F. J. Taylor, and F. Langley, Kirton, England. Coin-freed delivery machine. 2,029,206; Jan. 28.

Sussin, Max H., assignor of one-half to F. L. Barchard, Chicago, Ill. Pressure fluid supply system and apparatus. 2,029,085; Jan. 28.

Svensson, Sjuna, Hlumeofors, Krokom, Sweden. Method of and an apparatus for charging cellulose digesters or the like. 2,029,066; Jan. 28.

Swan, George W., Flat Rock, Mich. Oscillating cultivator. 2,028,967; Jan. 28.

Swan, Otto, and F. Pollitzer, New York, N. Y. Dental restoration. 2,028,883; Jan. 28.

Sweet, Harold E. (See Lynde, Fred H., assignor.)

Szabo, Gustave V., New York, N. Y. Ash receptacle. 2,029,139; Jan. 28.

Tanning Process Company, The. (See Merritt, Matthew M., assignor.)

Tate, Edward H., Malden, Mass. Mop. 2,028,983; Jan. 28.

Taylor, Frederick J. (See Sumner, H. C., Taylor, and Langley.)

Taylor, John J., Barberton, assignor to The Ohio Brass Company, Mansfield, Ohio. Vibration damper and process of assembly. 2,028,930; Jan. 28.

Taylor, John J., Wadsworth, assignor to The Ohio Brass Company, Mansfield, Ohio. Conductor support. 2,028,931; Jan. 28.

Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H. (See Böhm, Otto, assignor.)

Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H. (See Runge, W., and Pobontsch, assignors.)

Texas Company, The. (See Carlstrom, John, assignor.)

Texas Company, The. (See Drake, Rollin L., assignor.)

Texas Company, The. (See Scoville, Loren P., assignor.)

Thomas, George J., Birmingham, assignor to Kelsey-Hayes Wheel Company, Detroit, Mich. Brake mechanism. 2,029,087; Jan. 28.

Thomas, Ralph B., assignor to Hygrade Sylvania Corporation, Salem, Mass. Lamp, tube, and similar devices. 2,028,884; Jan. 28.

Thompson, Jesse C. (See Kramer, P. H., and Thompson.)

Tietze, Elizabeth, née Friedrich. (See Schönfelder, Herbert, assignor.)

Todd, James D., L. E. May, and W. L. Newbury, assignors to The Sherwin-Williams Company, Chicago, Ill. Manufacture of azo colors. 2,028,968; Jan. 28.

Todd, James D., L. E. May, and W. L. Newbury, assignors to The Sherwin-Williams Company, Chicago, Ill. Manufacture of azo colors. 2,028,969; Jan. 28.

Treanor, Edward D., Pittsfield, Mass., assignor to General Electric Company. Bushing for transformer casings. 2,029,140; Jan. 28.

Tremblay, Albert F., Union City, Ind. Glass feeding shelf. 2,028,980; Jan. 28.

Trouser Waist-Band Machine Co. Inc. (See Galkin, Joseph, assignor.)

Trusound Limited. (See Hillhouse, Guy, assignor.)

Turley, Harold G., Moorestown, N. J., and I. C. Somerville, Fox Chase, assignors to Röhm & Haas Company, Philadelphia, Pa. Tanning. 2,029,068; Jan. 28.

Turner, William, Longsight, Manchester, England. Variable speed mechanism. 2,029,042; Jan. 28.

Twin Coach Company. (See Fageol, F. R., and W. R., assignors.)

Ulfers, Ira, Milwaukee, Wis. Rope lock. 2,028,885; Jan. 28.

Underpinning & Foundation Company. (See Raisch, W., and Fedeler, assignors.)

Union Special Machine Company. (See Hachlander, Hans, assignor.)

Union Special Machine Company. (See Le Vesconte, Harold J., assignor.)

Union Switch & Signal Company, The. (See Livingston, John W., assignor.)

United Research Corporation. (See Gillette, Clyde F., assignor.)

United Shoe Machinery Corporation. (See Gouldbourn, Joseph, assignor.)

United Shoe Machinery Corporation. (See Hadaway, John R., assignor.)

United Shoe Machinery Corporation. (See Hallam, H., and James, assignors.)

United Shoe Machinery Corporation. (See MacKenzie, Fred L., assignor.)

United Shoe Machinery Corporation. (See Ricks, F., and Jones, assignors.)

United States Gypsum Company. (See Anning, Harold E., assignor.)

U. S. Hydrogenation Corporation. (See McKee, Ralph H., assignor.)

Universal Oil Products Company. (See Day, Roland B., assignor.)

Universal Oil Products Company. (See Grosse, Aristid V., assignor.)

Universal Oil Products Company. (See Kinnaird, William E., assignor.)

Universal Oil Products Company. (See Merrell, Jacque C., assignor.)

Utilities Service Company. (See Nye, I. W., and Miller, assignors.)

Van Brunt Manufacturing Company, The. (See Schaeffer, John, assignor.)

Vander Cook, Raymond R., Inkster, and A. M. Lawson, Trenton, Mich., assignors to Pennsylvania Salt Manufacturing Company, Philadelphia, Pa. Purification of caustic soda solutions. 2,028,898; Jan. 28.

Varni, Alfredo, Pallanza, Italy. Method of and apparatus for molding concrete. 2,029,004; Jan. 28.

Vickers, Harry R., Detroit, Mich. Machine tool feed. 2,028,850; Jan. 28.

Vincent, Charles H., Utica, assignor to Packard Motor Car Company, Detroit, Mich. Door locking means. 2,028,852; Jan. 28.

Vincent, William J., assignor to Rochester Telephone Corporation, Rochester, N. Y. Telephone pay station apparatus. 2,028,851; Jan. 28.

Von Bonet, Julius, Strassburg, Baden, and K. Richter, Leipzig, Germany, assignors to La Dispersion Catalytique, Dranoutre, Belgium. Forming thin metallic films by cathode disintegration. 2,028,848; Jan. 28.

Von Platen, Baltzar C. (See Alm, Johan E., assignor.)

Wagner, Cary R., assignor to The Pure Oil Company, Chicago, Ill. Polymerization of unsaturated hydrocarbons. 2,028,886; Jan. 28.

Waite & Bartlett X-Ray Manufacturing Company. (See Goldfield, E. E., and Hornby, assignors.)

Walden, George H., Jr. (See Bonne, H. T., Walden, and Hammett.)

Walker, Charles R., assignor to Abrasive Products, Inc., South Braintree, Mass. Treating crystalline abrasives and treated product. 2,029,203; Jan. 28.

Walter, Paul. (See Eastis, W., and Walter.)

Warner, Karl S., Yalesville, Conn., assignor to Air-Flo Corporation, Boston, Mass. Device for spraying. 2,029,141; Jan. 28.

Watson, Claude G. (See Jenkins, Thomas M., assignor.)

Webber, Harriett A., Coronado, Calif. Knitting needle stitch holder. 2,029,096; Jan. 28.

Wedlake, Fred E., and H. Hart, Eveleth, Minn. Latching and righting mechanism for dump cars. 2,029,066; Jan. 28.

Weinand, Klaus, Leverkusen-I. G. Werk, Germany, assignor to General Aniline Works, Inc., New York, N. Y. Anthrapyridone sulphonic acids and making them. 2,029,067; Jan. 28.

Weirauch, August F., Milwaukee, Wis. Sink support. 2,029,069; Jan. 28.

Welliver, Le Roy, et al. (See Dean, S. A., and Russell.)

Wemböner, Wilhelm, Berlin, Germany. Carburetor for combustion engines. 2,029,142; Jan. 28.

Wendell, René R., Wilmette, and P. Hlavacek, Jr., Evanston, Ill.; said Wendell assignor to said Hlavacek. Flower support. 2,029,043; Jan. 28.

Westcott, William O. (See Graham, G. M., Price, and Westcott.)

Western Cartridge Company. (See Olson, Frederick, assignor.)

Western Electric Company. (See Scranton, De Hart G., assignor.)

Western Paper Converting Company. (See Galloway, Robert L., assignor.)

Western Paper Converting Company. (See Rahm, Hays, assignor.)

Westinghouse Lamp Company. (See Blackburn, Philip W., assignor.)

Westlinning, Autes, Lautawerk/Lausitz, Germany. Making cables. 2,029,044; Jan. 28.

Wheeler, Harley T., Dallas, Tex. Making of packing rings. 2,028,961; Jan. 28.

Whitney Metal Tool Company. (See Jensen, John, assignor.)

Whyte, Samuel, Redhill, Surrey, assignor to Electric and Musical Industries Limited, Middlesex, England. Sound record. 2,028,854; Jan. 28.

Wichmann, John C., Chicago, Ill. Air conditioner. 2,028,814; Jan. 28.

Wichersham, Harry P. (See Burns, E.; and Wichersham.)

Wicks, Milton G., Glen Cove, N. Y. Venetian blind and mechanism for operating the same. 2,029,142; Jan. 28.

Wiegand, Erich, Berlin-Wahlmannslust, Germany, assignor to General Electric Company. Electric discharge device or vacuum tube. 2,029,144; Jan. 28.

Wilder, Roy F., et al. (See Dean, S. A., and Russell.)

Williams, George N., assignor to Continental Steel Corporation, Kokomo, Ind. Method and machine for drawing or pulling wire. 2,029,206; Jan. 28.

Williams, Philip S., Oakland, Calif. Apparatus for measuring temperatures. 2,028,887; Jan. 28.

Williams, Philip S., and O. W. Johnson, Palo Alto, Calif. Apparatus for measuring temperatures. 2,028,887; Jan. 28.

Wilson, Allen R. (See Spencer, R., and Wilson.)

Wilson, George B., and R. C. Bagley, Erie, Pa. Motor. 2,029,145; Jan. 28.

Wilson, Ralph A., Chicago, Ill., assignor of one-half to George A. Chrittan. Means for and method of masking. 2,029,008; Jan. 28.

Winter, Arthur, Weehawken, N. J. Mechanical pencil. 2,028,859; Jan. 28.

Wirrer, Gottfried, Plainfield, N. J., assignor to International Motor Company, New York, N. Y. Water cooling system for internal combustion engines. 2,029,146; Jan. 28.

Wolf, Hugo. (See Koeberle, K., Wolf, and Krauch.)

Wood, Charles B., Red Boiling Springs, Tenn. Safety watch pocket for garments. 2,029,207; Jan. 28.

Wood, Henry A. W., assignor to Wood Newspaper Machinery Corporation, New York, N. Y. Web roll speed control. 2,029,045; Jan. 28.

Wood, Henry A. W., assignor to Wood Newspaper Machinery Corporation, New York, N. Y. Web splicing device. 2,029,046; Jan. 28.

Wood, John M., Cranston, assignor to Franklin Process Company, Providence, R. I. Valve. 2,028,815; Jan. 28.

Wood, Joseph D., Bethlehem, Pa., assignor to Roller-Smith Company. Circuit breaker. 2,028,963; Jan. 28.

Wood, Joseph H., Jr. (See Howe, R. W., Love, and Wood.)

Wood Newspaper Machinery Corporation. (See Wood, Henry A. W., assignor.)

Woodall, Herbert J., and M. S. Randall, assignors to Woodall Industries Incorporated, Detroit, Mich. Laminated panel. 2,028,962; Jan. 28.

Woodall Industries Incorporated. (See Randall, Meredith S., assignor.)

Woodall Industries Incorporated. (See Woodall, H. J., and Randall, assignors.)

Woods, Fred, Richmond, England, assignor to Radio Corporation of America. Radio direction finder. 2,028,856; Jan. 28.

Wright, Bryan N., et al. (See Hyatt, Benjamin S., assignor.)

Wright, Kindy C., St. Paul, Minn. Humidifying heat-saver. 2,029,208; Jan. 28.

Wynecoop, John C. (See Stout, Mark W., Jr., assignor.)

Yarnall-Waring Company. (See Aicher, Alfred L., assignor.)

Yawman & Erbe Mfg. Co. (See Roscoe, Edwin S., assignor.)

Yewell, Paul R., Los Angeles, Calif. Separating minerals from ores. 2,029,090; Jan. 28.

Young, William C. (See Hammel, M., and Pollon, assignors.)

Yow, William P., Winston-Salem, N. C. Extension table. 2,029,290; Jan. 28.

Zak, Richard F., Westfield, Mass. Door service indicator. 2,029,209; Jan. 28.

Zworykin, Vladimir K., Haddonfield, N. J., assignor to Radio Corporation of America. Electrical communication system. 2,028,857; Jan. 28.

LIST OF REISSUE INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 28TH DAY OF JANUARY, 1936

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Acid concentration, Nitric. L. Hechenbleikner. 19,837; Jan. 28.
Brake mechanism. W. H. Bassit. 19,835; Jan. 28.
Decalcomania. J. F. McNutt. 19,839; Jan. 28.
Fruit press. B. L. McKinstry. 19,838; Jan. 28.
Ornamental device for decorative purposes, Illuminated. R. J. Graf. 19,836; Jan. 28.
Tripod and fabric cover, Lamp. H. J. Wyatt. 19,840; Jan. 28.

LIST OF DESIGN INVENTIONS

Alphabet for forming monograms for wearing apparel or similar article, Decorative. C. Kenney. 98,305; Jan. 28.
Applique emblem or similar article for wearing apparel. C. Kenney. 98,309–5; Jan. 28.
Book end. K. L. Cooley. 98,284; Jan. 28.
Booth, Restaurant. M. Hisco. 98,372; Jan. 28.
Bottle. F. S. Barbiere. 98,382; Jan. 28.
Bottle. F. W. Gray. 98,296; Jan. 28.
Bottle. M. F. Stoner. 98,373; Jan. 28.
Brooch or similar article. J. W. Taylor. 98,374; Jan. 28.
Bucket or the like, Wine cooling. L. Guild. 98,315; Jan. 28.
Buckle. S. Putman. 98,368; Jan. 28.
Cabinet, Greasing apparatus. C. W. Ginter. 98,310; Jan. 28.
Cabinet, Refrigerator. R. E. Kruck. 98,321; Jan. 28.
Camera. G. E. Scheibell. 98,369; Jan. 28.
Case, Boudoir. M. C. Meyer. 98,380; Jan. 28.
Chest or similar article. M. C. Pumphrey. 98,366; Jan. 28.
Chopper, Food. R. W. Griswold. 98,313; Jan. 28.
Coat. A. Sisselman. 98,404–5; Jan. 28.
Container for sewers. P. W. Smith. 98,400; Jan. 28.
Cup, Paper. V. Heidrich. 98,323; Jan. 28.
Dish. L. Guild. 98,321; Jan. 28.
Dress. D. W. Price. 98,364; Jan. 28.
Dress. D. W. Price. 98,400–1; Jan. 28.
Dress. W. S. Woolfe. 98,412; Jan. 28.
Dress. M. Zahn. 98,413; Jan. 28.
Dresser or similar article. M. C. Pumphrey. 98,367; Jan. 28.
Emblem. A. J. Daniels. 98,294; Jan. 28.
Fabric, Upholstery. W. Guthrie. 98,314; Jan. 28.
Fender guide. G. F. Bahr. 98,288; Jan. 28.
Gauge, Air line. W. H. Longstreet. 98,290; Jan. 28.
Glass. J. B. Clark. 98,293; Jan. 28.
Glove. J. J. Fox. 98,301; Jan. 28.
Heater, Circulation. D. J. Howard. 98,297; Jan. 28.
Hook, Boot. J. A. Farnum. 98,389; Jan. 28.
Housing, Combination weiner roasting apparatus and display. L. J. Bohannon. 98,290; Jan. 28.
Jewelry charm or similar article. J. W. Taylor. 98,375; Jan. 28.
Kit, Sewing. G. Amato. 98,300; Jan. 28.
Lace. B. Edson. 98,298; Jan. 28.
Lace. F. Gehring. 98,302; Jan. 28.
Lace. H. W. Hucknall. 98,326; Jan. 28.
Lace. J. Waterfield. 98,378; Jan. 28.
Lace. J. D. Wiener. 98,379; Jan. 28.
Light, Dome. B. S. Floraday. 98,306; Jan. 28.
Lighter or the like, Pocket. T. M. Gibson. 98,303; Jan. 28.
Lighting fixture. A. A. Johnson. 98,320; Jan. 28.
Lighting unit. J. W. Gosling. 98,294; Jan. 28.
Mirror or the like, Hand. C. H. Lawrence. 98,398; Jan. 28.
Musical instrument. R. Doppers. 98,295–6; Jan. 28.
Musical instrument. V. Seaver. 98,370; Jan. 28.
Nonrepeating indicator. A. E. Babcock. 98,381; Jan. 28.
Pad, Memorandum. L. Guild. 98,316; Jan. 28.
Platter. L. Guild. 98,322; Jan. 28.
Rack, Display. S. C. Harley. 98,397; Jan. 28.
Rack, Necktie. A. E. Brothers. 98,383; Jan. 28.
Radiator or similar article. M. Stefanczyk. 98,406–10; Jan. 28.
Seat, Cycle saddle. R. W. Faulhaber. 98,306; Jan. 28.
Seat, Cycle saddle. R. W. Faulhaber. 98,387–90; Jan. 28.
Service station. L. D. Long. 98,358; Jan. 28.
Shaker, Combined salt and pepper. H. J. Bilson. 98,299; Jan. 28.
Shoe. H. D. Baldwin. 98,300; Jan. 28.
Shoe. P. Borda. 98,291–2; Jan. 28.
Shoe. J. Fishman. 98,307; Jan. 28.
Shoe. M. S. Goldman. 98,311–12; Jan. 28.
Shoe. A. Hurwelier. 98,327; Jan. 28.
Shoe. N. F. Liberty. 98,332–37; Jan. 28.
Shoe. J. McGee. 98,359; Jan. 28.
Shoe. A. Turiansky. 98,376–7; Jan. 28.
Shoe or similar article. C. G. Hirshman. 98,324; Jan. 28.
Stand, Display. R. E. Sieve. 98,371; Jan. 28.
Stand, Smoking. R. Schultz. 98,402–3; Jan. 28.
Standard, Milling machine. R. P. Graves. 98,305; Jan. 28.
Stove. J. Tiberio. 98,411; Jan. 28.
Table. M. C. Pumphrey. 98,365; Jan. 28.
Temple and temple support for an ophthalmic mounting, Combined. E. M. Spitzing. 98,407; Jan. 28.
Textile fabric. A. C. Kaplan. 98,320; Jan. 28.
Textile fabric or similar article of manufacture. J. F. Gaul, Jr. 98,309; Jan. 28.
Tray. L. Guild. 98,317; Jan. 28.
Tray. L. Guild. 98,319–20; Jan. 28.
Tray and lighter, Combination ash. W. A. Inglis and E. H. Bathke. 98,328; Jan. 28.
Tray, Ash. L. Guild. 98,318; Jan. 28.
Tray, Ash. J. H. Horsley. 98,325; Jan. 28.
Tray or similar article, Ash. M. C. Meyer. 98,381; Jan. 28.
Valve body, Plug. S. J. Nordstrom. 98,362–3; Jan. 28.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 28TH DAY OF JANUARY, 1936

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Acid anhydride condensation product and making the same, Polyhydric alcohol-polybasic acid-monobasic aliphatic. G. F. Hoffman. 2,028,906; Jan. 28.
Acid, Concentrating acetic. D. F. Othmer. 2,028,889–3; Jan. 28.
Acid manufacture, Sulphuric. C. E. Clark. 2,028,739; Jan. 28.
Acid, Synthesis of formic acid. H. Dreyfus. 2,028,766–8; Jan. 28.
Acids and making them, Anthraquinone sulphonic. E. Weinand. 2,029,697; Jan. 28.
Acids, Production of anhydrous. H. Herrmann and R. Hess. 2,029,073; Jan. 28.
Adhesive applying mechanism. R. G. Rider. 2,028,978; Jan. 28.
Adhesive tape and gauze dressings, Making. W. Kuntz and P. Walter. 2,028,290; Jan. 28.
Adjustable head support. J. C. Hintz. 2,028,979; Jan. 28.
Air conditioner. J. C. Wichmann. 2,028,914; Jan. 28.
Air vent for pipe lines under pressure, Automatic. B. Clevenger. 2,029,188; Jan. 28.
Aircraft. Heavy-crash construction for. H. M. Atwood. 2,029,213; Jan. 28.
Alarm, Electric fire. J. Garner. 2,029,697; Jan. 28.
Alizarin and its salts, Preparation of. D. G. Rogers. 2,028,879; Jan. 28.
Animal tissues, Preservation of. S. Sisslan. 2,029,248; Jan. 28.
Annealer, Bright. P. J. Heintzen. 2,028,941; Jan. 28.
Antenna. O. Beam. 2,029,015; Jan. 28.
Anthraquinone derivatives. O. Kränzlein, H. Schlichenmaier, and L. Schönig. 2,029,239; Jan. 28.
Aquarium. P. Neumann. 2,028,913; Jan. 28.
Articles, Apparatus for treating. T. C. Welch. 2,028,881; Jan. 28.
Ash receptacle. G. V. Shelp. 2,029,139; Jan. 28.
Asphalt, Making. R. L. Rose. 2,028,927; Jan. 28.
Automatic valve. A. J. Logette and E. H. Dalston. 2,028,858; Jan. 28.
Automobile insulation and floor board. C. J. Justheim. 2,029,024; Jan. 28.
Bag structure. R. L. Galloway. 2,028,974; Jan. 28.
Ball bearing. R. Arnou. 2,028,944; Jan. 28.
Bar clamp for bits. J. O. Ohlen. 2,029,192; Jan. 28.
Bearing; *See*—
Ball bearing. Radial plate bearing.
Cylindrical roller bearing.
Bearing and seal, Antifriction. F. O. Hughes. 2,029,073; Jan. 28.
Bearing for grease lubrication, Radial plain. N. A. Palmgren. 2,029,275; Jan. 28.
Bender. A. J. Root. 2,029,821; Jan. 28.
Dexter, Motor-driven. A. E. Church. 2,029,147; Jan. 28.
Bending brake. J. Jensen. 2,028,908; Jan. 28.
Beverage mixing device. M. J. Helmes. 2,029,234; Jan. 28.
Binding, Notebook. H. Rehm. 2,028,894; Jan. 28.
Bituminous mixing, Apparatus for. W. M. Hardcock and G. Loeffler, Jr. 2,028,743; Jan. 28.
Blind and mechanism for operating the same, Venetian. M. O. Wicks. 2,029,148; Jan. 21.
Block; *See*—
Building block.
Blowpipe tips, Making cutting. L. Campbell, Jr. 2,028,154; Jan. 28.
Board; *See*—
Leveling board.
Board and method of manufacture, Pressed fiber. E. T. Pollock. 2,029,024; Jan. 28.
Boat suspension structure, Flying. R. J. W. Ramsdale. 2,028,276; Jan. 28.
Books, re-covering. M. Herzberg. 2,029,181; Jan. 28.
Bottom construction for laminated containers. D. C. Shepard. 2,029,001; Jan. 28.
Bottom construction for the boat bodies of hydroairplanes, Cellular. H. M. Atwood. 2,029,047; Jan. 28.
Bottle holder. A. C. Blevins. 2,029,051; Jan. 28.
Braiding machine carrier. R. W. Hale. 2,028,734; Jan. 28.
Brake; *See*—
Bending brake. Hydraulic brake.
Brake for automobiles, Hydraulic safety. U. C. Hughes. 2,029,070; Jan. 28.
Brake mechanism. G. J. Thomas. 2,029,037; Jan. 28.
Brake shoe centralizing device. W. Roberts. 2,029,152; Jan. 28.
Breather valve. J. D. Crecca and S. M. Phillips. 2,028,784–6; Jan. 28.
Bridge construction. C. P. Disney. 2,028,741; Jan. 28.
Brush for motors and generators. A. V. Lundquist. 2,029,171; Jan. 28.
Bucket, Spinning. V. Panoff. 2,029,185; Jan. 28.
Building block. A. J. Schmitz. 2,028,927; Jan. 28.
Building construction. H. E. Aanjaz. 2,029,060; Jan. 28.
Bumper device, Automobile. W. L. Morrison. 2,028,945; Jan. 28.
Burner; *See*—
Oil burner.
Bushing for transformer casings. R. D. Treanor. 2,029,149; Jan. 28.
Buttons, Making shank. R. F. Conner. 2,029,255; Jan. 28.
Cable, Electric. T. R. Scott and T. R. D. Measles. 2,029,088; Jan. 28.
Cable, Interference preventing. J. J. Mascuch. 2,028,793; Jan. 28.
Cables, Making. A. Westlinning. 2,029,044; Jan. 28.
Camera attachment. J. Cree and J. W. Horn. 2,029,222; Jan. 28.
Camera mechanism. T. Kerling. 2,029,238; Jan. 28.
Camera, Photographic. M. Burger. 2,028,762; Jan. 28.
Camera, tripod head, Detachable. P. H. Getz. 2,029,220; Jan. 28.
Can; *See*—
Oil can.
Cans, Lining the inside of. J. H. March. 2,028,796; Jan. 28.
Cap, Tube. W. M. Glemke. 2,028,830; Jan. 28.
Car retarders, Apparatus for the control of railway. J. W. Livingston. 2,028,909; Jan. 28.
Carburetor air intake and vaporizer. A. G. Abate. 2,029,210; Jan. 28.
Carburetor for combustion engines. W. Wemhöner. 2,029,143; Jan. 28.
Carrier; *See*—
Braiding machine carrier. Tape carrier.
Carrier web for the formation of thin transparent films. E. M. Kratz and E. Gebauer-Fuelnegg. 2,028,930; Jan. 28.
Cartridge case rups, Manufacture of. E. Sautier. 2,028,996; Jan. 28.
Casting machine. A. D. Land. 2,028,790; Jan. 28.
Castings, Making tungsten and carbide. O. F. Marvin. 2,028,911; Jan. 28.
Cathode for discharge devices. P. W. Blackburn. 2,029,012; Jan. 28.
Cellular construction for airport pontoons. H. N. Atwood. 2,029,215; Jan. 28.
Cellular structure and making the same, Built-up. H. N. Atwood. 2,029,049; Jan. 28.
Cellulose digesters or the like, Method of and an apparatus for charging. S. Svensson. 2,029,066; Jan. 28.
Cellulose esters of organic acids, Reducing the viscosity of. C. Dreyfus and G. Schneider. 2,028,762; Jan. 28.
Cellulose esters of organic acids, Treating. C. Dreyfus and G. Schneider. 2,028,761; Jan. 28.
Cellulose pulp for esterification purposes and processing of same. G. A. Richter. 2,028,846; Jan. 28.
Cellulosic articles and preparing the same. H. Hibbert. 2,028,776; Jan. 28.
Cement, Making a hard surfaced. A. L. Smyly. 2,028,956; Jan. 28.
Centrifugal pump. O. Jacobsen. 2,028,783; Jan. 28.
Chain; *See*—
Cutter chain.

Water cooling system for internal combustion engines. G. Wirrer. 2,029,146; Jan. 28.
Wave communication system, Ultra short. C. W. Hansell. 2,028,966; Jan. 28.
Wave transmission network. H. W. Bode. 2,029,014; Jan. 28.
Web roll speed control. H. A. W. Wood. 2,029,045; Jan. 28.
Web splicing device. H. A. W. Wood. 2,029,046; Jan. 28.
Welder, Electric arc. M. Ito. 2,028,780; Jan. 28.
Wheel balance. O. B. Shelton. 2,029,132; Jan. 28.
Wheel measuring device. G. M. Graham, A. B. Price, and W. O. Westcott. 2,029,067; Jan. 28.
Window cleaning device. C. H. Caldwell. 2,028,738; Jan. 28.
Window fastener. O. P. Cadmus. 2,029,016; Jan. 28.
Window tightener. A. W. Greene. 2,029,068; Jan. 28.
Wing construction for airplanes, Honeycomb. H. N. Atwood. 2,029,214; Jan. 28.
Wire drawing, Process and apparatus for. A. Simons. 2,029,079; Jan. 28.
Wire, Method and machine for drawing or pulling. G. N. Williams. 2,029,204; Jan. 28.
Worms and the like, Method of and apparatus for generating hollow faced. O. G. Simmons. 2,028,929; Jan. 28.
Wrapper of transparent or ornamental character and making the same. M. J. Shoemaker. 2,029,181; Jan. 28.
X-ray tube mount. E. R. Goldfield and C. B. Horsley. 2,029,098; Jan. 28.

CLASSIFICATION OF PATENTS

ISSUED JANUARY 28, 1936

NOTE.—First number—class, second number—subclass, third number—patent number

1— 33: 2,028,348
2— 117: 2,028,349
182: 2,028,350
2,028,351
204: 2,028,352
3— 187: 2,028,353
2,028,354
4— 172: 2,028,355
205: 2,028,356
5— 13: 2,028,357
6— 131: 2,028,358
205: 2,028,359
15—104.08: 2,028,360
147: 2,028,361
149: 2,028,362
183: 2,028,363
17— 18: 2,028,364
18— 6: 2,028,365

U.S. GOVERNMENT PRINTING OFFICE: 1936

Patents Nos. 2,026,233 to 2,026,640

THE OFFICIAL GAZETTE

OF THE

United States Patent Office

Vol. 463—No. 1 TUESDAY, FEBRUARY 4, 1936 Price—$10 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $10.00 per annum, including annual index, $13.75; single numbers, 25 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Notice of Cancellation

U. S. PATENT OFFICE, *Washington, Jan. 15, 1936.*

A. G. Morse Co., its assigns or legal representatives take notice:

An application for cancellation having been filed in this Office by Lovell and Covel Company, Cambridge, Mass., to effect the cancellation of trade-mark registration of A. G. Morse Co., 210–220 W. Halstead Street, Chicago, Ill., No. 122,672, dated January 4, 1921, and the notice of such proceeding sent by registered mail to said A. G. Morse Co., at the said address having been returned by the post office undelivered, notice is hereby given that unless said A. G. Morse Co., its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the cancellation will be proceeded with as in the case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

RICHARD SPENCER,
First Assistant Commissioner.

Adjudicated Patents

(C. C. A. N. Y.) Fink patent, No. 1,791,267, for terrazzo strip, all claims except claim 8 *Held* invalid. *Fink v. V. Pecarlo, Inc.*, 79 F.(2d) 942.

(C. C. A. N. Y.) Fink patent, No. 1,914,115, for terrazzo strip *Held* invalid. *Id.*

Adverse Decisions in Interference

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,901,668, A. Alsaker, W. O. Hampton, and C. A. Koerner, Horizontal break disconnecting switch, decided January 12, 1936, claim 7.

Pat. 2,007,270, A. Y. Dodge, Lubricating device, decided January 15, 1936, claim 27.

Trade-Mark Registrations Canceled

151,111. Corsets. The Crown Corset Company, New York, N. Y. Registered January 24, 1922. Canceled January 11, 1936.

163,053. Medicinal tablets. Julia Donnelly, doing business as Vi-Tabs Co., New York, N. Y. Registered January 2, 1923. Canceled January 11, 1936.

169,427. Dress shirts and pyjamas. Goldstein and Fisher Co., Inc., New York, N. Y. Registered June 12, 1923. Canceled January 11, 1936.

266,682. Fresh grapes. Kern Fruit Co., Shafter, Calif. Registered January 28, 1930. Canceled January 11, 1936.

277,967. Spring water. Virginia Buffalo Springs Corporation, Buffalo Springs, Va. Registered December 2, 1930. Canceled January 11, 1936.

278,178. Spring water. Virginia Buffalo Springs Corporation, Buffalo Springs, Va. Registered December 9, 1930. Canceled January 11, 1936.

300,619. Sensitized photographic plates, films, and cinematographic films. I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Registered January 24, 1933. Canceled January 11, 1936.

300,775. Sacramental kosher wine. Misrach Wine Company, New York, N. Y. Registered February 7, 1933. Canceled January 8, 1936.

309,884. Canned fruits, vegetables, fish, tea, coffee, and mayonnaise dressing. A. Fink & Son, Inc., Newark, N. J. Registered January 23, 1934. Canceled January 11, 1936.

320,886. Hosiery. Chester H. Roth Co., Inc., New York, N. Y. Registered November 12, 1935. Canceled January 11, 1936.

Condition of Applications Under Examination at Close of Business January 18, 1936

Room No.	(Total number of applications awaiting action, excluding Trade-Mark Division, 32,852; Trade-Mark Division, 1,362. Oldest new case, September 21, 1933; oldest amended, September 19, 1933. The dates given are 1933 except where † indicates 1935.) DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

IN RE BRANDENBURG

No. 3,895. Decided November 25, 1935

[79 F.(2d) 744]

PATENTABILITY—SHOVEL BLADE.

Claims for a shovel blade *held* unpatentable over the prior art.

APPEAL from the Patent Office. Affirmed.

Mr. Francis H. Fassett and *Mr. Wm. Bohleber* for Brandenburg.

Mr. R. F. Whitehead and *Mr. Howard E. Miller* for the Commissioner of Patents.

GARRETT, *J.*:

Appellant brings before us for review a decision of the Board of Appeals of the United States Patent Office affirming the decision of the Examiner rejecting appellant's application, Serial No. 541,821, for a patent on shovels.

The application contains only two claims. These are numbered, respectively, 5 and 6. They read:

5. A shovel blade, each side edge of which curves toward the longitudinal meridian line to a point near the end of the blade, whence, by reverse curves, said edges continue to the end of the blade, thereby forming a share, said share being wider than it is long.

6. A shovel blade, each side edge of which curves toward the longitudinal meridian line to a point near the end of the blade, whence, by reverse curves, said edges continue to the end of the blade, thereby forming a share, said share being the same thickness as the blade and wider than it is long.

It appears that the foregoing claims were not in the application as originally filed, but were added by amendment during the prosecution of the case in the Patent Office.

The decisions of the tribunals of the Patent Office, while differing as to description of some details of the single reference cited, nevertheless concurred in holding appellant's shovel unpatentable in view of that reference which is a British patent entitled "Improvements in or relating to shovels and the like" issued in 1921 to James Richard Armstrong-Kelly.

Appellant has modified or altered the conventional "round-point" shovel of the type stated in the specification to be known in the trade as "plain back," used for excavating and for handling materials of various kinds, by providing an extension of the lower end of the blade, the extension itself being rounded and being narrower than that portion of the blade which is above it. It is this extension which appellant designates as a "share", his specification reciting that it is "so called because of its resemblance, in function at least, to a plow-share".

While the specification does not so state, we see no reason to question the correctness of the statement in appellant's brief that his shovel is made "from a single sheet of material". Also we accept as correct (although the specification says nothing upon the subject) the statement in claim 6 to the effect that the share portion of the blade is of the same thickness as the other portion, and the statement in both claims that the share is wider than it is long. The drawings justify these deductions.

The specification states:

* * * This improvement has two principal objects: (a) it facilitates entrance of the shovel into the earth or other material, and (b) it lengthens the life of the shovel.

The reference patent discloses a shovel "with a prong or pointed projection at the point or centre of the bottom or shovelling edge". The specification states, in substance, that such prong may be constructed integral with the blade of the shovel, or constructed as a separate part and riveted, or otherwise suitably affixed, to the blade.

As to the purpose of the invention in the reference patent, its specification declares, in effect, that it is to increase the efficiency and the life of the shovel—the same objective sought by appellant.

From the foregoing general description of the respective devices it is obvious that they are broadly similar in design and that both parties sought to solve the same problems, or accomplish the same purposes. In other words, appellant's "share" corresponds, at least broadly, to the "prong" or "pointed projection" of the reference patent, and, so far as we can see, notwithstanding appellant's argument *contra*, substantially the same function is performed by both "share" and "prong".

If, therefore, patentability may be found in appellant's device, such patentability must be predicated upon the limitations found in the claims.

The brief of appellant alleges with emphasis that appellant's shovel is made "from a single sheet of material," but this allegation is not contained in either claim, nor is it stated in the specification. Furthermore, we think it not unreasonable to interpret the teaching of the patent to be that the shovel there patented may be made of a single piece. Indeed, claim 2 thereof refers to a shovel having "the projection * * * fashioned in one piece with the blade of the shovel".

The only limitations, found in the claims, which are seriously urged as justifying a finding of patentability relate to the matter of dimension. Both claims recite that appellant's share is "wider than it is long" and claim 6, in addition, states that the share is of the same thickness as the blade".

Appellant's brief points out that upon the matter of width and length there is a discrepancy between the finding of the Examiner and the finding of the Board. The Examiner, referring to Figs. 1 and 2 of the patent drawings, found the "prong" of the patent to be "longer than it is wide," while the Board referred to it as being "approximately as wide as it is long, being possibly very slightly wider than long, the same as applicant's prong". Elsewhere the Board refers to the prong of the patent as being "spoon-shaped".

Seemingly, because of this discrepancy and some other differences in expression of the respective tri-

bunals of the Patent Office, the brief for appellant argues that the British patent should not, "either in law or equity, be regarded as a proper reference".

So far as it is sought to apply this argument to a proceeding in the Patent Office relative to securing a patent, we do not agree with the contention.

For information with respect to the width and length of appellant's "share" we have to rely solely upon his drawings. The same is true with respect to the "prong" of the reference patent. Claim 3 of the latter refers to the "prong" as being of "spearhead shape", but the specification has nothing to say as to width or length.

When we turn to the drawings of the patent, it is observed that the patentee gave several different forms. His Fig. 1, for example, shows a "prong" which, in outline, is oval in shape and is longer than it is wide, while the "prong" portion of the drawing in Fig. 11 is apparently wider than it is long. Other figures show other modifications as to these particular dimensions.

We do not, in fact, regard the feature of relative width and length of appellant's shovel as being critical upon the question of patentability, but, even if it were, we fail to find wherein appellant has with any definiteness distinguished in this regard.

There remains to be considered the feature of "thickness".

The specification of the patent definitely teaches that—"The blade where the prong merges into it is reinforced or strengthened by increasing its thickness to a suitable extent." Appellant's specification teaches nothing as to this, but, as has been stated, for the purposes of the case, we accept the teaching of the drawings as being sufficient to support the limitation, expressed in claim 3 in the words, "said share being the same thickness as the blade".

The question is, therefore, whether any invention resides in making the shovel and its extension or share uniform in thickness.

We find ourselves in entire agreement with the tribunals of the Patent Office in their holding to the effect that this conception did not require the exercise of inventive genius. When the nature of the device is considered this feature seems to us inconsequential so far as patentability is concerned.

The decision of the Board of Appeals is affirmed.

Affirmed.

U. S. Court of Customs and Patent Appeals

IN RE CROWELL.

No. 3,584. Decided November 25, 1935

[79 F.(2d) 746]

1. REISSUE—ESTOPPEL—CANCELLATION OF CLAIM IN ORIGINAL APPLICATION.

Certain claims of an application for reissue of a patent granted on a divisional application *Held* properly rejected on the ground of estoppel where a claim for the same subject matter had been cancelled from the parent application which had also matured into a patent.

2. SAME—NEW MATTER.

A claim of reissue application *Held* properly rejected as including matter not disclosed in original application on which patent was granted.

LENROOT, *J.*, dissenting as to claim 6.

APPEAL from the Patent Office. Affirmed.

Messrs. Milburn & Milburn, and *Messrs. Joseph F.* and *J. W. Milburn* for Crowell.

Mr. R. F. Whitehead and *Mr. Howard S. Miller* for the Commissioner of Patents.

HATFIELD, *J.*:

This is an appeal from a decision of the Board of Appeals of the United States Patent Office affirming the decision of the Primary Examiner rejecting appealed claims Nos. 1, 6, and 8 in appellant's application for the reissue of Patent No. 1,828,100.

The claims read:

(1). The method of cementing wells, which consists of: first, closing by a traveling plug, the bore of a normally substantially open well casing at a predetermined point intermediate its upper and lower ends; second, opposing, by fluid pressure from the top of the well, normally closed ports located in said casing above said predetermined point of casing-bore closure; third, forcing a liquid cementing mixture downwardly through said casing and outwardly through said ports; fourth, closing valves controlling said ports, thus holding the cement in the annular space outside the casing.

(6). The method of cementing wells, which consists of: first positioning the casing a short distance from the bottom of the well; second, establishing circulation through the casing and the annular space outside the casing; third, forcing by fluid pressure from the top of the well, a liquid cementing mixture downwardly through the casing; fourth, closing the bore of the casing at a predetermined point intermediate its upper and lower ends; fifth, continuing the application of fluid pressure to force said liquid cementing mixture outwardly through normally closed ports located in said casing above said point of closure of said casing; sixth, discontinuing pressure to allow spring-actuated valves of said ports to close, thus holding the cementing mixture in the annular space outside of the casing.

(8). The method of cementing wells, which consists of: first, establishing fluid circulation through the well-casing and through the annular space outside of the casing; second, inserting in its upper portion a plug carrying means slidingly fitting said casing; third, forcing a liquid cementing mixture into said casing above said plug and downwardly through said casing advancing said plug before it; fourth, closing the bore of said casing by the stoppage of said plug at a predetermined point intermediate the upper and lower ends of said casing; fifth, continuing the application of fluid pressure from the top of the well to force open normally closed ports in said casing above said predetermined point of closure, and to force said cementing fluid outwardly through said ports and into the annular space outside of the casing; sixth, releasing pressure from the top of the well to permit the valves controlling said ports to close, thus holding the cement in the annular space outside of the casing.

The references are: Perkins et al., 1,011,484, December 12, 1911; Crowell, 1,482,017, October 17, 1923; Crowell, 1,502,179, July 22, 1924; Crowell, 1,601,239, September 28, 1926; Davis et al., 1,641,741, September 6, 1927; McKee, 1,677,975, July 24, 1928; Boynton, 1,687,424, October 9, 1928; Halliburton, 1,860,666, May 31, 1932.

It appears from the record that the application upon which patent, No. 1,828,100, issued was a division of parent application Serial No. 171,851, filed March 1, 1927, which matured into patent, No. 1,828,099, October 20, 1931.

During the prosecution of the parent application, appellant cancelled claim 23 contained therein. It reads:

23. Well casing having an unobstructed open bore throughout its length, a normally closed lateral port in the casing adapted to open responsive to pressure in the casing, a plug slidable in the bore of the casing, and means for anchoring the plug in the unobstructed bore of the casing below the port and above the lower end of the casing so as to shut-off the entire bore of the casing below [the port and leave the entire bore of the casing unobstructed above the port].

The Board of Appeals held that as appealed claims 1 and 8 were for substantially the same subject-matter as that defined in cancelled claim 23, appellant was estopped from presenting them in the involved application. The Board rejected appealed claim 6 on the ground that it contained new matter not disclosed in the original specification.

It will be observed that appealed claim 1 differs from cancelled claim 23 in that the former states that the bore of the casing is "normally substantially open," whereas the latter specified a casing having an "unobstructed open bore throughout its length"; and that whereas the appealed claim provides for closing of valves controlling the ports in the casing, such valves are not expressly referred to in the cancelled claim.

Counsel for appellant contend that cancelled claim 23 is "only for a sub-combination," and that the provision for a normally substantially open bore of a casing, plus the additional step of closing valves controlling the ports in the casing, contained in appealed claim 1, calls for a patentable combination not disclosed in the prior art, nor claimed in the cancelled claim.

Appellant states in his specification that it is advantageous "to have the full bore, or substantially the full bore, of a string of casing available when carrying on drilling operations or washing down the string of casing, and it is also desirable when circulating a washing medium preparatory to a cementing operation to utilize the bore of the casing, which should not be substantially impeded or restricted, and then to supply the cementing mixture through the unobstructed bore of the casing, or, at least, through a bore of the casing not restricted or obstructed to such an extent as to seriously impede or prevent the operation referred to." Appellant frequently refers in his specification to the bore of the casing as being "unobstructed," "substantially unobstructed," and "substantially open," and it is perfectly clear that the bore of the casing must be substantially open in order to carry out appellant's process.

It will be observed, therefore, that appellant has used the terms "unobstructed," "substantially unobstructed," and "substantially open" interchangeably. Accordingly, for the purpose of this case, the term "unobstructed," contained in cancelled claim 23, should be interpreted as having the same meaning as the term "substantially open," contained in appealed claim 1. See Walker on Patents, (6th Ed.) Vol. 1, 227. Obviously then, a "casing having an unobstructed open bore throughout its length," means a casing having a substantially open bore.

It will further be observed that cancelled claim 23 provides for a "normally closed lateral port in the casing adapted to open responsive to pressure in the casing."

The Solicitor for the Patent Office insists that the quoted language in cancelled claim 23 clearly implies a means to close the port in the casing at the proper time after it is opened by pressure in the casing, and that as it is old, as disclosed in the Crowell reference, Patent No. 1,601,239, issued September 28, 1926, to close the ports in the casing by means, such as a "spring," it would not involve invention to add such element to the combination defined in cancelled claim 23.

We quote from that reference:

> It is a further object of the invention to provide an extremely simple but practical valvular control, adapted to normally positively close the valves, but readily yielding for opening thereof, when cement is forced downwardly through the casing. * * * * * *
>
> The shifting of valve 11 longitudinally of the casing rather than radially thereof, eliminates the possibility of the valvular control striking the wall of the well, irrespective of restrictions in the well bore, and full opening of the valve is thus assured.
>
> After discharge of all of the cement, the valve collar 11 is positively reseated by its spring 12, so as to close the discharge ports and thus permit the cement to harden without the possibility of it reentering the bore of the string of casing. The back pressure valve 7 is subsequently drilled out in usual manner to provide an unobstructed passage through the bore of the string of well casing.

If, as stated in cancelled claim 23, the lateral port in the casing is normally closed, but is adapted to open responsive to pressure in the casing for the purpose of permitting the cementing operation, a means adapted to close the port subsequent to the cementing operation is necessarily implied. That feature being old and well known to the art, as disclosed in the patent to Crowell, No. 1,601,239, it would not involve invention to add it to the combination defined in cancelled claim 23. We are of opinion, therefore, that appealed claim 1 is not patentably distinct from cancelled claim 23.

As pointed out by counsel for appellant, appealed claim 8 calls for a "plug carrying means slidingly fitting said casing," and the closing of the bore of the casing "by the stoppage of said plug at a predetermined point intermediate the upper and lower ends of said casing," whereas cancelled claim 23 calls for a "plug slidable in the bore of the casing, and means for anchoring the plug in the unobstructed bore of the casing below the port and above the lower end of the casing so as to shut-off the entire bore of the casing below [the port and leave the entire bore of the casing unobstructed above the port.]"

Counsel for appellant contend that the quoted language contained in cancelled claim 23 implies that it is the "means for anchoring the plug" which wholly or partially closes the bore of the casing, whereas, in fact, the bore of the casing is entirely closed by the plug itself, as stated in appealed claim 8. Counsel for appellant further point out that, in a decision by the Board of Appeals in a companion case, referred to in its decision in the case at bar, it was stated that appellant was the first "to provide a plug slidably fitting the casing and force it down into the casing to close it so that the bore is unobstructed up to the time the cementing is to occur," and that the anchoring means in appellant's device did not obstruct the bore in the casing.

It clearly appears in appellant's specification that the means for anchoring the plug does not in any way obstruct the bore of the casing, and that it is the plug itself which entirely closes the bore of the cas-

ing below the port. We quote from the specification:

Below the ports 4 the bore of the ported section of the casing preferably has an increased diameter forming an elongated annular recess 7 terminating in upper and lower shoulders 8 and 9 formed by continuations of the uniform bore of the string of casing; and the lower shoulder 9 forms a seat for a plug 10 adapted for expansion into recess 7, while the upper shoulder 8 is preferably inclined to permit ready expansion of the plug when it is lowered through the bore of the casing to the level of the recess.

In order to provide anchoring means for plug 10 in recess 7, the plug is shown as provided with an intermediate reduced diameter 11 adapted to receive arcuate locking slips 12 which are adapted to contract wholly within the outer periphery of the plug.

Bias springs 13 fixed to the plug in back of the slips engage the latter so as to tend to expand the same beyond the periphery of the plug, and expansion of the slips is preferably guided and limited by abutments 14 on the plug engaging in notches 15 in the slips. As the plug is lowered through casing A, the uniform bore of the latter contracts the slips to permit free passage of the plug, and when the plug is opposite recess 7, the annular enlargement formed thereby permits springs 13 to expand the slips so that they rest on shoulder 9 and thereby anchor the plug.

Packing is preferably mounted on the plug to insure a tight shutting-off of the casing when the plug is anchored in recess 7, the parts being so arranged that when the plug is anchored its packing closes the bore of the casing just below ports 4.

The plug referred to in cancelled claim 23 as a "plug slidable in the bore of the casing," and in appealed claim 8 as "a plug carrying means slidingly fitting said casing," is described in appellant's specification as "a plug," an "anchored plug," and a "plug * * * adapted for expansion" into the elongated annular recess in the bore of the casing.

Obviously then, the language

"a plug slidable in the bore of the casing, and means for anchoring the plug in the unobstructed bore of the casing * * * so as to shut-off the entire bore of the casing below [the port and leave the entire bore of the casing unobstructed above the port],"

contained in cancelled claim 23, in view of appellant's specification, could not reasonably be construed as meaning that the means for anchoring the plug either partially or substantially closes the bore of the casing.

The sixth step in appealed claim 8 relates to the closing of the valves controlling the ports in the casing.

Our discussion relative to the closing of the valves controlling the ports in the casing, called for in claim 1, is applicable to the sixth step in appealed claim 8, and we deem it unnecessary to repeat it.

We are of opinion that the Board of Appeals was right in holding that appealed claim 8 is not substantially different from cancelled claim 23.

Counsel for appellant challenge the correctness of the decision of the Board holding the doctrine of estopple applicable to the subject-matter of appealed claims 1 and 8, in view of the fact that cancelled claim 23, although for the same subject-matter, was contained in a "co-pending apparatus case"—the parent application, and not in the divisional application.

It should be said here, however, as stated by the Solicitor for the Patent Office, that the co-pending case referred to by counsel for appellant—

* * * was the parent of the application resulting in the patent sought to be reissued. In other words, appellant divided his parent case, got a patent on the divisional application and now seeks to reissue that patent. It is clear that any claims canceled in the parent case to get a patent could not be reasserted in a reissue of a patent granted on the parent case, and it seems equally clear that such claims should neither be allowed in a reissue application of a patent granted on a divisional application of the parent case. It would be a strange anomaly indeed if a deliberately cancelled claim which could not be revived in reissue application of a parent case could be revived by the more expedient of dividing the parent case and instead of seeking a reissue of the parent case, seek a reissue of the patent resulting on the divisional application. The proceedings in the divisional case are merely a continuation of those in the parent case.

[1] It may be that, in applying the doctrine of estoppel in this case, the Board of Appeals, as stated by counsel for appellant, "has gone further than any previous decision in rejecting a reissue on such ground." But, however that may be, we think the doctrine of estoppel is clearly applicable, and that appellant is estopped to claim subject-matter in the present application for reissue which he deliberately cancelled in claim 23 of the parent application. See *In re Murray, Jr.*, 20 C. C. P. A. (Patents) 1046, 64 F.(2d) 788, 433 O. G. 794, and cases cited.

As hereinbefore stated, appealed claim 6 was rejected by the Board of Appeals on the ground that it contained new matter not disclosed in the original specification.

The present application contains the following description of the invention defined in appealed claim 6, which, it is conceded by counsel for appellant, was not contained in the divisional application which matured into patent, No. 1,823,098:

As is well understood by those of skill in this art, various and diverse conditions are met in the process of shutting off water from oil wells. Sometimes, for instance, the casing becomes frozen and cannot be raised from the bottom so as to permit circulation or cementing through the bottom of the casing; at other times while the casing may be raised, caving of such character and to such an extent may have occurred that sufficient circulation cannot be obtained, nor, in such cases, can the cementing fluid be properly placed through the bottom of the casing or effectively to a sufficient height above the bottom of the casing. Again, sometimes a good formation seat is available, and at other times not. Occasionally a partial cementing may be accomplished through the bottom of the casing, but it may be deemed desirable to continue the operation of forcing the cementing fluid outwardly through one or more of a series of ports above the bottom of the casing in addition to the attempted cementing at the bottom of the well. In the process of my present invention, barriers may be used or omitted, and indicating plugs may be used or omitted during the course of cementing or attempting to cement through the bottom of the casing. The process of the present invention is adapted to all such varying conditions, the provisions for circulation or cementing, or both, through lateral ports intermediate the ends of the casing and located at any predetermined point or points, either separately or in conjunction with circulating or cementing, or both, through the bottom of the casing, during all of which operation any substantial built-in closure or partitioning off of the casing is avoided, constituting advantages which make my process of great adaptability and therefore of great value as an improvement in this art.

* * * * * *

Steps old in this art, consisting of circulating through the bottom of the casing and of cementing through the bottom of the casing, are not prevented or impeded in any manner by the improvement herein described; on the contrary, they are made part of the present method, and it is contemplated that said steps or either of them may be used in conjunction with either or both of the steps of circulating or cementing through ports in the casing intermediate the top and bottom of the casing, all of which are comprised as elements within my process of shutting off water from a well.

Counsel for appellant argue that the alleged new matter contained in the quoted excerpt amounts only to a statement of matters long known to the art; that such matter was inserted in the reissue application

"on the theory that the original description was defective or insufficient as not fully showing the uses of the invention";

that if the alleged new matter is entirely eliminated, the original specification upon which the reissue application is based amply supports appealed claim 6, if it be read in the light of the prior art; and that, therefore, the tribunals of the Patent Office erred in holding that claim 6 contains new matter.

[2] We are unable to concur in the views expressed by counsel for appellant. It is clear, we think, that the matter contained in the quoted excerpts does not relate merely to the uses of an invention already described, but, on the contrary, is, in fact, new matter, and discloses for the first time the combination of steps contained in appealed claim 6. We must hold, therefore, that the tribunals of the Patent Office reached the right conclusion. See *In re Collins*, 22 C. C. P. A. (Patents) 1058, 75 F.(2d) 1000, 458 O. G. 440, and cases cited.

For the reasons stated, the decision of the Board of Appeals is affirmed.

Affirmed.

LENROOT, *J.*, dissents as to claim 6.

Disclaimers

T. M. 112,715.—*The Sydney Ross Co.*, New York, N. Y. TRADE-MARK "KITATOS", ETC., FOR A PREPARATION FOR COLDS AND MALARIAL TROUBLES. Registered September 19, 1916. Disclaimer filed December 19, 1935, by the registrant, *The Sydney Ross Co.*

Hereby disclaims that portion of the particular description of goods relating to "malarial troubles".

1,837,845.—*David W. Thomas*, Youngstown, Ohio. CHOKER FOR CYLINDRICAL MEMBERS. Patent dated December 22, 1931. Disclaimer filed January 2, 1936, by the assignee, *The Niles Steel Products Company.*

Hereby enters this disclaimer to claims 3 and 4 of said Letters Patent.

1,876,271.—*Robert W. Doty*, Philadelphia, Pa. VIBRATOR MECHANISM. Patent dated September 6, 1932. Disclaimer filed January 8, 1936, by the patentee.

Hereby directs this disclaimer to that part of the claims in said patent which are in the following words, to wit:

"5. Vibrator mechanism comprising a unitary member to be vibrated, a plurality of vibrator housings secured to such unitary member and each supporting a shaft with an eccentric weight secured thereto, said weights extending from their respective shafts in the same angular direction and said shafts being set in approximately tandem alignment with each other, flexible couplings connecting the shafts of the vibrators so that they will rotate in synchronism with each other and means for imparting rotative motion to said coupled shafts.

"6. Vibrator mechanism comprising a unitary member to be vibrated, a plurality of vibrator housings secured to such unitary member and each supporting a shaft with an eccentric weight secured thereto, said weights extending from their respective shafts in the same angular direction, in combination with a motor actuated driving shaft and flexible couplings connecting the shafts of the motor and vibrators in tandem so that all so connected shafts will rotate in angular unison."

1,854,441.—*Alfred Alsaker*, *Weldon O. Hampton*, and *Charles A. Kearner*, Chicago, Ill. VERTICAL BREAK DISCONNECTING SWITCH. Patent dated Apr. 19, 1932. Disclaimer filed January 6, 1936, by the assignee, *The Delta-Star Electric Company*, the patentees joining and concurring.

Hereby enters this disclaimer to that claim which is numbered 7 in said patent, and which is in the following words, to wit:

"7. A switch including a movable switch blade, a contact at the end thereof, a second contact adapted to be engaged by the first contact and be wedged into firm engagement therewith, an insulator stack supporting the second contact, means for actuating the second contact to loosen the engagement between the two while the switch blade is maintained substantially stationary, and means for thereafter swinging said switch blade away from said second contact in a direction initially substantially axially of the insulator stack."

1,933,735.—*August Hund*, Bethesda, Md. MODULATION SYSTEM. Patent dated November 7, 1933. Disclaimer filed January 10, 1936, by the assignee, *Wired Radio, Inc.*

Hereby enters a disclaimer to claims 25 and 26 of said patent, which are in the following words, to wit:

"25. In a piezo-electric-crystal-controlled oscillation generator, mechanical means for varying the frequency at which the crystal tends to oscillate.

"26. In a radio transmitting system, an oscillation generator comprising a thermionic tube and associated circuits, means comprising a piezoelectric crystal for determining the oscillation frequency, and a movable element for varying the frequency at which the crystal oscillates."

TRADE-MARKS

OFFICIAL GAZETTE, FEBRUARY 4, 1936

[VOL. 463. NO. 1]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 1 of said act, a fee of ten dollars must accompany each notice of opposition.

CLASS 1

Raw or Partly-Prepared Materials

Ser. No. 371,960. THE UNITED STATES GRAPHITE CO., Saginaw, Mich. Filed Nov. 25, 1935.

CARBORITE

For Natural Amorphous Graphite.
Claims use since Nov. 7, 1935.

CLASS 2

Receptacles

Ser. No. 371,219. LEUTHERIC, INCORPORATED, New York, N. Y. Filed Nov. 5, 1935.

Dew-Dab

For Perfume and Cosmetic Dispensers Made of Base Metal.
Claims use since Oct. 26, 1935.

Ser. No. 372,584. BENJ C. BETHKE CO., Devon, Pa. Filed Dec. 18, 1935.

No claim is made to the wording apart from the mark as shown.
For Paper Bags or Containers.
Claims use since Nov. 6, 1935.

Ser. No. 373,012. CONTINENTAL PAPER & BAG CORPORATION, New York, N. Y. Filed Dec. 20, 1935.

SOUTHERN
MAID

For Paper Bags.
Claims use since Dec. 2, 1935.

CLASS 3

Baggage, Animal Equipments, Portfolios, and Pocketbooks

Ser. No. 371,753. BANNER MANUFACTURING COMPANY, INC., New York, N. Y. Filed Nov. 20, 1935.

SecroSide

For Handbags.
Claims use since Nov. 16, 1935.

CLASS 4

Abrasive, Detergent, and Polishing Materials

Ser. No. 350,834. JANVY, INC., Brooklyn, N. Y. Filed Apr. 28, 1934.

Softasilk

For Porcelain Cleaner, Hand Cleaner, Household Cleaner for Enamelware, Glassware, Woodwork, Carpet and Fabric Cleaner, and Soaps in Powdered Form.
Claims use since Apr. 4, 1934.

Ser. No. 369,220. FABRUDD MANUFACTURING CO., Long Island City, N. Y. Filed Jan. 14, 1935.

No claim is made to the words "Palm Beach" apart from the mark. The drawing is lined for orange.
For Liquid Shoe Cleaner.
Claims use since April, 1934.

Ser. No. 370,124. FLEETWOOD R. SCHUNK, doing business as Du Chaine Laboratories, Menomonee Falls, Wis. Filed Oct. 7, 1935.

duChaine's
Velvet
Shave

No claim is made to the word "Shave" apart from the mark.
For Brushless Shaving Cream.
Claims use since Jan. 5, 1934.

Ser. No. 370,310. HOUBIGANT, INC., New York, N. Y. Filed Oct. 12, 1935.

FOUGÈRE

For Soaps and Shaving Cream.
Claims use since 1899.

Ser. No. 370,312. HARRY R. LEWIS & CO., INC., Providence, R. I. Filed Oct. 12, 1935.

Lewisite
Cleanser

The word "Cleanser" is disclaimed apart from the mark.
For Cleansing Preparation for General Usage.
Claims use since May 6, 1935.

Ser. No. 371,626. EASTMAN KODAK COMPANY, Rochester, N. Y. Filed Nov. 16, 1935.

For Lacquer-Like Leather Dressing.
Claims use since 1916.

Ser. No. 371,644. LEEF BROS. INC., Minneapolis, Minn. Filed Nov. 16, 1935.

FROST-EX

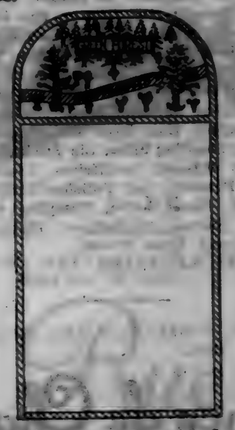
For Chemically Treated Textile Pad for Removing Frost, Sleet, Snow, and Ice from Automobile Windshields and Windows.
Claims use since Sept. 1, 1934.

Ser. No. 372,550. EVERETT & BARRON COMPANY, Providence, R. I. Filed Dec. 12, 1935.

VIX-ENE

For Leather Dressing for Waterproofing Shoes, Harness, Belts, and Other Leather Articles.
Claims use since Nov. 30, 1935.

CLASS 6



Chemicals, Medicines, and Pharmaceutical Preparations

Ser. No. 367,224. GEORGE A. COMINS, Portland, Oreg. Filed July 13, 1935.

The drawing is lined for blue.
For Preparation for Use as Scalp Treatment and Scalp Invigorator.
Claims use since November, 1932.

Ser. No. 367,250. WILLIAM C. MORGAN, doing business as Green Forest Remedy Co., North Bend, Oreg. Filed July 13, 1935.

The drawing is lined for brown and green.
For Preparation for Use as a Blood Purifier and for the Treatment of Rheumatism.
Claims use since February, 1935.

Ser. No. 369,441. THE COLEMAN & BELL COMPANY, Norwood, Ohio. Filed Sept. 18, 1935.

Strumia's Blood Stain

Trade-mark contains the facsimile signature of the surname of Max M. Strumia, M. D. The words "Blood Stain" are disclaimed apart from the mark.
For Blood Stain.
Claims use since Sept. 9, 1935.

Ser. No. 369,487. HOUSE OF WALMAR, Chicago, Ill. Filed Sept. 19, 1935.

The word "Chicago" is disclaimed apart from the mark. The drawing is lined for red and gold.
For Toilet Water, Colognes, Hair Lotions, Face Lotions, Cold Cream, Skin Cream, and Shampoo.
Claims use since Aug. 19, 1935.

Ser. No. 370,040. MICHAEL FURCAK, Yonkers, N. Y. Filed Oct. 5, 1935.

Rose Marie

For Medicine Recommended Especially for Young People, for the Relief of Fits and Convulsions.
Claims use since Sept. 28, 1926.

Ser. No. 370,070. CLARENCE C. WILKERSON, doing business as D. H. O. Manufacturing Company, Oklahoma City, Okla. Filed Oct. 5, 1935.

The words "Must bear this" are disclaimed apart from the mark.
For Herb Blend for Blood Stream Alteration.
Claims use since Sept. 15, 1935.

Ser. No. 370,253. HOUBIGANT, INC., New York, N. Y. Filed Oct. 11, 1935.

FOUGÈRE

For Perfumes, Eau Vegetal, Toilet Water, After-Shaving Lotion, Sachets, Sachet Powders.
Claims use since 1899.

Ser. No. 370,685. EUGENE O. WHITE, Rochester, N. Y. Filed Oct. 22, 1935.

VECVACO

For Post Mortem Cosmetic in Liquid Form.
Claims use since Aug. 28, 1930.

Ser. No. 371,220. LENTHERIC, INCORPORATED, New York, N. Y. Filed Nov. 5, 1935.

Tweed

For Perfumes, Toilet Water, Talcum, Dusting, and Sachet Powders, and Bath Oil.
Claims use since February, 1935.

Ser. No. 371,297. CALIFORNIA PACKING CORPORATION, San Francisco, Calif. Filed Nov. 7, 1935.

Del Monte

For Fish Oil.
Claims use since Oct. 17, 1935.

Ser. No. 371,316. DANIEL O'CONNOR, doing business as Our King Remedies, Detroit, Mich. Filed Nov. 7, 1935.

OUR KING
VITALIZER
FOR VIM, VIGOR AND VITALITY

The portrait is fanciful. All words except "Our King" are disclaimed apart from the mark.
For Tonic in Tablet Form Used for the Treatment of Acidosis, Colonitis, Constipation, Elimination of Faecal Matter, Rheumatism, Neuritis.
Claims use since July 1, 1935.

Ser. No. 371,667. ABBOTT LABORATORIES, North Chicago, Ill. Filed Nov. 18, 1935.

GLUCOPHYLLINE

For Compound Having Heart Stimulant and Diuretic Action.
Claims use since Sept. 20, 1935.

Ser. No. 371,712. E. R. SQUIBB & SONS, New York, N. Y. Filed Nov. 18, 1935.

CONTRUIN

For Hormonal Preparations to Be Used in the Control of Prostatic Hypertrophy.
Claims use since Sept. 13, 1935.

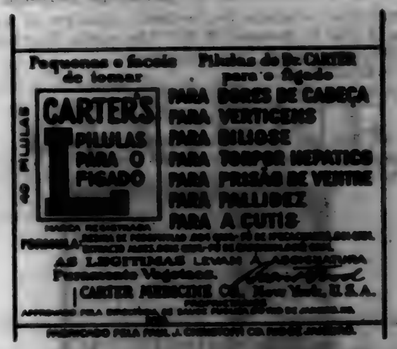
Ser. No. 371,713. E. R. SQUIBB & SONS, New York, N. Y. Filed Nov. 18, 1935.

GAMONE

For Follicle—Stimulating Hormonal Preparations.
Claims use since Sept. 13, 1935.

Ser. No. 371,728. COMFORT MANUFACTURING COMPANY, doing business as Craig-Martin, Chicago, Ill. Filed Nov. 19, 1935.

CRAIG-MARTIN



For Astringents, Astringent Cerates, Bleach Creams, Beauty Creams, Cold Creams, Cleansing Creams, Obesity Creams, Refreshing Creams, Vanishing Creams, Obesity Astringents, Dry Rouge, Liquid Rouges, Face Bleaches, Face Packs, Skin Whitener in Liquid, Cream, or Solid Form, Eyebrow and Eyelash Grower, Eye Drops, Eyebrow Pencils, Chemical Preparations for the Darkening of Eyelashes and Eyebrows, Hand Lotions, Skin Lotions, After Shaving Lotions, Pomades, Face Powders, Talcum Powders, Body Powders, Dusting Powders, Sachets, Hair Salves, Hair Elixirs, Dandruff Preparations, Hair Tonics, Hair Oils, Shampoos, Hair Dyes, Hair Dressing, Brilliantine, Bath Salts, Smelling Salts, Lip Sticks, Incense, Tooth Powders, Mouth Washes, Dentifrices, Tooth Pastes, Depilatories, Nail Powders, Nail Polishes, Nail Creams, Nail Bleaches, Witch Hazel Salve, Camphor Creams, Foot Powders, Corn Salves, Deodorants, Disinfectants, Bay Rum, Perfumes, and Toilet Waters.
Claims use since Nov. 5, 1930.

Ser. No. 371,835. VIMAY-CHANY, INC., Culver City, Calif. Filed Nov. 21, 1935.

Prince de Chany

For Perfume, Face Powder, Face Creams, Hand Lotions, and Eau de Cologne.
Claims use since May, 1934.

Ser. No. 371,850. CARTER MEDICINE COMPANY, New York N. Y. Filed Nov. 22, 1935.

All notations except "Carter's", "Carter Medicine Co.", "Brent Good", and the letter "L" are disclaimed apart from the mark. The colors red and black are claimed as features of the mark.
For Liver Pills.
Claims use since Oct. 31, 1935.

Ser. No. 372,007. LENA BROAD, doing business as Cahn Manufacturing Company, Philadelphia, Pa. Filed Nov. 26, 1935.

BUGERINE
SURE DEATH TO INSECTS

The words "Sure Death to Insects" are disclaimed apart from the name "Bugerine".
For Liquid Preparation for the Destruction of Insects (an Insecticide).
Claims use since July 5, 1935.

Ser. No. 372,104. L. KLEIN, INC., Chicago, Ill. Filed Nov. 29, 1935.

Elkay

For Glove Stretch.
Claims use since Jan. 12, 1934.

Ser. No. 372,135. LES PARFUMS DE MOLYNEUX, INC., New York, N. Y. Filed Nov. 30, 1935.

Rue Royale

For Perfume, Toilet Water, Face Powder, Talcum Powder, Bath Salts, Brilliantine, Bandoline, Rouge, Lipsticks, Dusting Powder, Sachet, Cold Creams, Lotion for the Skin and Hair, Powder and Rouge Compacts, and Vegetal.
Claims use since Nov. 21, 1935.

Ser. No. 372,144. THE RICHARDS CHEMICAL WORKS, Jersey City, N. J. Filed Nov. 30, 1935.

CHOLOPROL

For Chemical Substance Useful as a Softening, Finishing, or Lubricating Agent in Textile and Other Industrial Processing.
Claims use since August, 1933.

Ser. No. 372,145. THE RICHARDS CHEMICAL WORKS, Jersey City, N. J. Filed Nov. 30, 1935.

MAPROMIN

For Chemical Substance Useful as a Dispersive Agent in Textile and Other Industrial Processing.
Claim use since April, 1933.

Ser. No. 372,146. THE RICHARDS CHEMICAL WORKS, Jersey City, N. J. Filed Nov. 30, 1935.

MAPROMOL

For Chemical Substance Useful as a Softening or Emulsive and Wetting Out Agent.
Claims use since April, 1933.

Ser. No. 372,256. EDWIN M. ROSENBLUTH, doing business as Rose Manufacturing Company, Philadelphia, Pa. Filed Dec. 4, 1935.

TRI-OGEN

For Fungicides, Insecticides, and Disinfectants for Plants, Seeds, Seed Pods, Fruits, Nuts, and Tubers.
Claims use since July 11, 1932.

Ser. No. 372,315. DIXIE DUB COSMETICS, INC., doing business as Lady Orchid Cosmetics, Harrison, N. J. Filed Dec. 6, 1935.

Lady Orchid

For Cosmetics Such as Face Powder, Rouge, Talcum Powder, Lipsticks, Face Creams, Hand Creams, Skin Lotions.
Claims use since October, 1934.

Ser. No. 372,420. R. A. JACKSON, doing business as Us-It Distributors, Washington, D. C. Filed Dec. 9, 1935.

UZ-IT

For Antiseptic and Prophylactic Preparations.
Claims use since Aug. 19, 1932.

Ser. No. 372,559. ROBERT DANIELS, doing business as The Marvel Company, New York, N. Y. Filed Dec. 16, 1935.

MISSION

For Laxative Preparation.
Claims use since June 1, 1934.

Ser. No. 372,737. PARK LABORATORY COMPANY, INC., San Antonio, Tex. Filed Dec. 17, 1935.

"ORO-SOL"

For Preparation Used in the Treatment of Eye Irritation or Inflammation.
Claims use since November, 1932.

CLASS 9

Explosives, Firearms, Equipments, and Projectiles

Ser. No. 372,948. ATLAS POWDER COMPANY, Wilmington, Del. Filed Dec. 23, 1935.

APEX

For Explosives—Namely, Powder and Dynamite.
Claims use since June 1, 1915.

CLASS 16

Paints and Painters' Materials

Ser. No. 364,532. ACE HARDWARE CORPORATION, doing business as Ace Stores, Chicago, Ill. Filed May 4, 1935.

ACE STORES

No claim is made to the word "Ace" apart from the mark.
For Aluminum Bronze Paint, Gold Bronze Paint, Gold Bronze Powder, Aluminum Bronze Powder, Bronzing Liq-

uld, Colors in Oil, Paint Enamels, Japan "B" Dryer, Kalsomine Lacquers, Lacquer Thinners, White Lead, Oil Gloss Paint, Oil Paints, Flat Paints, Cold Water Paint, Interior Gloss Paint, Semi-Paste Paint, Stippling Paint, Paint Primers and Sealers, Varnish Remover, Paint and Varnish Remover, Varnish, Paste Wax, Liquid Wax, and Paint Undercoaters.

Claims use since Mar. 1, 1928.

Ser. No. 367,951. VEGETABLE OIL PRODUCTS COMPANY, INC., Los Angeles, Calif. Filed Aug. 2 1935.

SUPERBLEND

For Paint Oil.

Claims use since June 19, 1935.

Ser. No. 372,124. JOHN LUCAS & COMPANY, INC., Philadelphia, Pa. Filed Nov. 26, 1935.

Lucas
a Great Name in PAINTS

Applicant is owner of Trade-Mark Certificate #329,548 registered under the 10-year proviso of the Act of Feb. 20, 1905. No claim is made to the word "Paints" apart from the mark.

For Liquid and Paste Paint, Varnishes, Lacquers, Lacquer Thinners, Chemical Dry Colors, Natural Earth Pigment Dry Colors, Cold Water Paints, Calcimines, Paint Rises.

Claims use since June 1, 1924.

Ser. No. 372,515. HEWIT-GATES COMPANY, Corpus Christi, Tex. Filed Dec. 11, 1935.

"IT PETRIFIES"
Petra Stone

The words "It Petrifies" and "Stone" are disclaimed apart from the mark. The drawing is lined for red.

For Paints for Concrete, Stucco, Brick, or Stone.

Claims use since August, 1934.

Ser. No. 373,052. THE SHERWIN-WILLIAMS CO., Cleveland, Ohio. Filed Dec. 24, 1935.

CLEAROLIN

For Paints, (Ready Mixed, Paste Form and Dry), Paint Enamels, Lacquers, Japans, Varnishes, Stains, Paint Fillers, Kalsomine, Water Paints, White Lead, Dry Paint Colors, and Paint Pigments.

Claims use since Nov. 26, 1934.

CLASS 17

Tobacco Products

Ser. No. 372,020. LA INSULANA COMPANY, INC., Manila, P. I. Filed Nov. 26, 1935.

Monogram
MC

For Cigarettes.

Claims use since Sept. 10, 1935.

CLASS 20

Linoleum and Oilcloth

Ser. No. 372,868. DELAWARE FLOOR PRODUCTS, INC., Wilmington, Del. Filed Dec. 23, 1935.

DEL WARE

For Composition Floor Coverings—Namely, Rugs, and Yard Goods by the Roll.

Claims use since Feb. 18, 1935.

Ser. No. 372,865. DELAWARE FLOOR PRODUCTS, INC., Wilmington, Del. Filed Dec. 23, 1935.

LETHERITE

For Composition Floor Coverings—Namely, Rugs and Yard Goods by the Roll.

Claims use since Oct. 7, 1933.

Ser. No. 373,623. DELAWARE FLOOR PRODUCTS, INC., Wilmington, Del. Filed Dec. 24, 1935.

DIAMOND

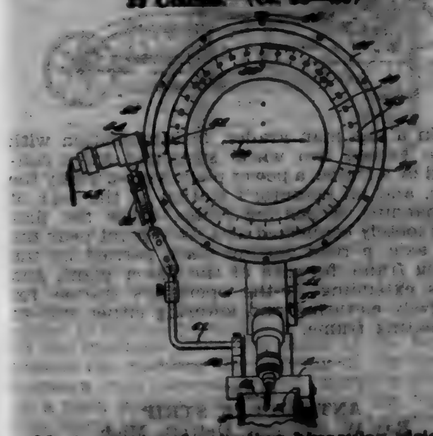
REISSUES

FEBRUARY 4, 1936



19,841

CLINICAL OPTICAL MENSURATION METHOD AND INSTRUMENT

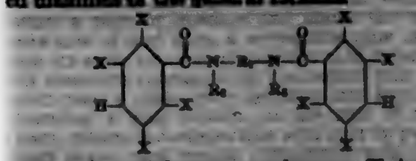
Albert Ames, Jr., and Gordon H. Gibson, Hanover, N. H., assignors to Trustees of Dartmouth College, Hanover, N. H., a corporation of New Hampshire

Original No. 1,944,871, dated January 26, 1934, Serial No. 655,611, August 11, 1923. Application for reissue March 11, 1935, Serial No. 10,496

23 Claims. (Cl. 88—39)

26. Apparatus for testing binocular vision for difference of the ocular images of the two eyes, comprising test target means with elements indicating dimensional properties thereof for forming in the respective eyes images whose dimensions may be compared, means for relating the conscious appearances of the corresponding ocular images of said target means for comparison thereof in binocular vision, means for changing the relative size of said images by adjusting the position of said elements until they assume a predetermined location in superposed appearance, and means for determining the amount of said adjustment.

19,842



UNSULFONATED DIACYLATED DIAMINES AND PROCESS OF MAKING SAME

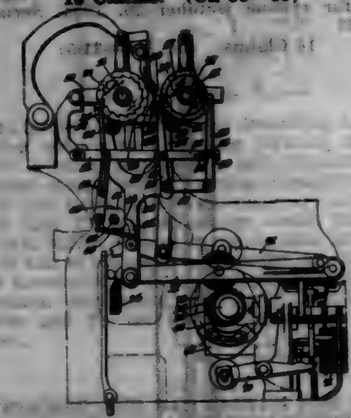
Guillaume de Montmollin, Jacob Dannan, Gérald Benhâte, and Hans Johner, Basel, Switzerland, assignors to Society of Chemical Industry in Basle, Basel, Switzerland

No Drawing. Original No. 1,630,836, dated February 22, 1923, Serial No. 564,402, September 22, 1931. Application for reissue May 13, 1935, Serial No. 21,333. In Switzerland September 27, 1930

12 Claims. (Cl. 260—124)

7. As new products the unsulphonated diacylated diamines of the general formula

wherein in each benzene nucleus one X stands for OH, the X in para position to the OH stands for alkyl or alkoxy, and the remaining X's stand for hydrogen, R_3 and R_5 meaning H or alkyl, and R_4 meaning an organic radical, which products are soluble in caustic alkalies, have a pronounced affinity for vegetable fibers when in solution in dilute alkalies, react with diazo-compounds with formation of azo-dyestuffs, and are split by saponifying agents into diamines and such hydroxycarboxylic acids of the benzene series in which the para-position to the OH-group is occupied by a substituent.



19,843

MECHANISM FOR KNITTING FULL-FASHIONED HOSIERY

Gustav Gastrich, Wyomissing, Pa., assignor to Textile Machine Works, Wyomissing, Pa., a corporation of Pennsylvania

Original No. 1,941,556, dated December 26, 1933, Serial No. 574,245, November 11, 1931. Application for reissue September 11, 1935, Serial No. 40,166

18 Claims. (Cl. 66—59)

14. In a full fashioned knitting machine having yarn carriers, narrowing points, separate devices for limiting the travel of said carriers and points; spindles for actuating said limiting devices; a reciprocative member; means operable by said reciprocative member for operating said spindles to impart either simultaneous movement to both of said spindles in one direction or independent movements in either direction to one of said spindles, and a cyclic control device interconnecting said reciprocative member and said spindle operating means to alternately effect said means to bring about a change in the operation thereof on the spindles at each reciprocation of said reciprocative member.

19,844

SUCTION CLEANER

William H. Kitto, Canton, Ohio, assignor to The Hoover Company, North Canton, Ohio, a corporation of Ohio

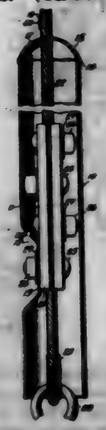
Original No. 2,003,865, dated May 28, 1935, Serial No. 709,963, January 31, 1924. Application for reissue December 19, 1935, Serial No. 55,283. In Great Britain January 5, 1924

8 Claims. (Cl. 243—3)

1. In a suction cleaner, a motor including a casing portion, a frame portion extending rigidly

at the side of said casing portion, an armature rotatably supported in said frame portion, a removable casing portion enclosing said frame portion and provided with an opening on one side,

a light reflector, socket, and bulb carried by said removable casing portion adjacent said opening and within the normal periphery of said casing portion, and current-carrying means connecting said socket with a source of electric current.



19,845

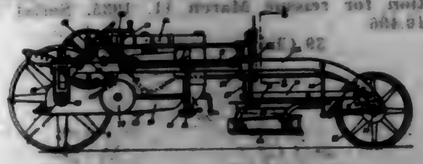
GUY WIRE PROTECTOR

Herbert E. Miller, Allentown, Pa., assignor to Utilities Service Company, Inc., Allentown, Pa., a corporation of Pennsylvania

Original No. 1,902,414, dated March 21, 1933, Serial No. 519,187, February 28, 1931. Application for reissue October 26, 1934, Serial No. 750,232

16 Claims. (Cl. 189—31.5)

14. In combination, a guy wire structure including a guy wire and a plurality of structural elements for clamping and anchoring said guy wire, a guy guard adapted to be positioned over said guy wire, a depression in said guy guard having an opening therein, and means, including a portion carried by said guy wire structure independently of said guy guard, for attaching said guy guard to said guy wire structure through said opening, said depression nesting a portion of said attaching means to prevent substantial protrusion of the attaching means above the mean surface of said guy guard, said attaching means having a portion overlying a portion of said guy guard adjacent said opening.



19,846

COMBINATION TRACTOR GRADER

Adolph Rensing, Minneapolis, Minn., and Andreas G. Rensing, deceased, late of Minneapolis, Minn., by Jacob Rensing and Adolph Rensing, joint executors, Minneapolis, Minn.; said Adolph Rensing and Andreas G. Rensing, assignors to Rensing Machinery Company, Minneapolis, Minn., a corporation of Minnesota

Original No. 1,766,252, dated March 19, 1929, Serial No. 451,788, March 12, 1921. Application for reissue June 14, 1930, Serial No. 461,247

12 Claims. (Cl. 37—126)

1. In a one man grader, in combination with not to exceed two wheel sustained axles connected by a frame, a power plant supported by the frame, and an operator's station at the rear of the machine, a floating frame below the first frame loosely connected at a fixed point near the front axle, a road cutting blade carried by the floating frame forward of the power plant, and means extending to the operator's station for selectively elevating and lowering either side of the floating frame.

19,847

ANTISQUEAK STRIP

Ray W. Springer, Detroit, Mich.

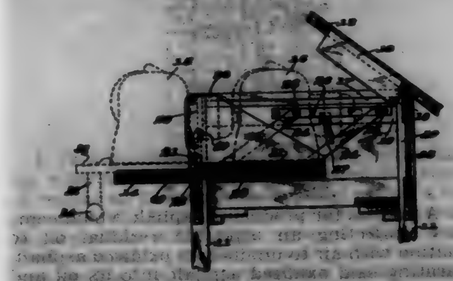
Original No. 2,007,549, dated July 9, 1935, Serial No. 703,852, December 22, 1932. Application for reissue September 3, 1935, Serial No. 39,071

9 Claims. (Cl. 296—138)

6. An antisqueak strip for use between adjacent structural parts comprising a web of porous fibrous material impregnated with a latex compound imparting a water resistant quality to the material, a bead extending along one edge of said web and including a covering finish strip, said web and bead being adhesively secured together.

PATENTS

GRANTED FEBRUARY 4, 1936



2,029,283

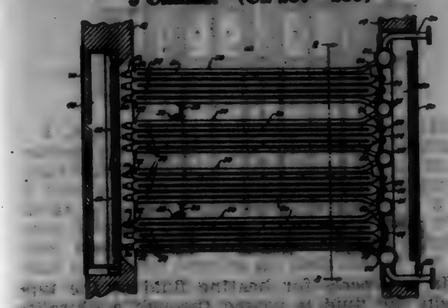
IRONING MACHINE CABINET

Henry W. Allerier, Peoria, Ill.

Application October 15, 1934, Serial No. 748,281

3 Claims. (Cl. 68—9)

1. An ironing machine cabinet having side walls, a rear wall and a top, said top being mounted for forward and rearward movement; an ironing machine housed in an inoperative position within the cabinet; a support at the front of the cabinet in such position as to maintain the machine in operative position thereon with the top of the machine above the plane of the top, and means for enabling the shifting of the machine between said inoperative and operative positions in a path intersecting the plane of the top, said top being shiftable rearwardly to accommodate movement of the machine in said path and said top being movable forwardly subsequent to the machine reaching operative position whereby it may serve as a support for fabrics ironed or to be ironed by said machine.



2,029,284

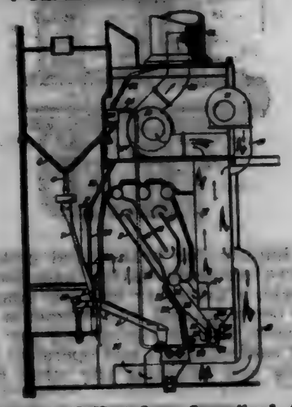
FLUID HEATER

Wilbur H. Armacost, New York, N. Y., assignor to The Superheater Company, New York, N. Y.

Application June 12, 1933, Serial No. 675,422

5 Claims. (Cl. 257—230)

1. A heater having a substantially vertical gas pass, a pair of headers one above the other at one side of said pass, a serpentine pipe unit having its ends connected into the said headers and its elements substantially horizontal and lying in said pass, a plate lying between said headers and forming a wall section on one side of said gas pass, means for supporting said unit in part from said plate, and means forming a wall for said gas pass opposite the said headers and plate.



2,029,285

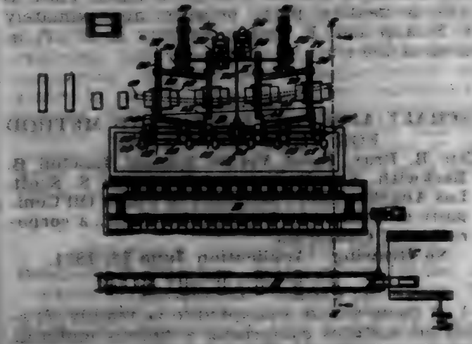
FURNACE

Joseph S. Bennett, Merion, Pa., assignor to American Engineering Company, Philadelphia, Pa., a corporation of Pennsylvania

Application November 3, 1932, Serial No. 642,959

7 Claims. (Cl. 110—165)

1. In a device of the class described, the combination with a fuel burning furnace, of a fuel hopper, a boiler provided in said furnace, baffles provided on said boiler forming passages through which the gases in said furnace are circulated, cinder and fly ash collecting means associated with said baffles, means for conducting the cinders and fly ash so collected to a hopper, an oscillatory spout associated with said hopper, and means for oscillating said spout to evenly distribute the cinders and fly ash so conducted in the fuel hopper.

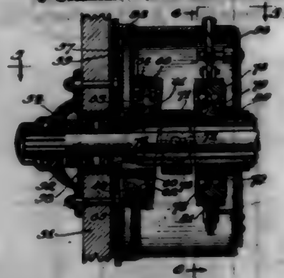


2,029,286

PROCESS AND APPARATUS FOR RAIL HANDLING AND TREATMENT

Quincy Bent, Friedensville, and Edward F. Kenney, Bethlehem, Pa., assignors to Bethlehem Steel Company, a corporation of Pennsylvania

Application January 21, 1932, Serial No. 587,869



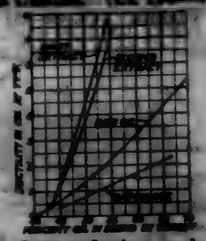
16 Claims. (Cl. 148—21.5)

1. In a process for treating rails, the steps of placing a hot rail in a position at a substantial angle to the vertical and yieldingly supporting the weight of the rail at a plurality of points spaced

along the length of the rail to permit substantially free alteration of shape of the rail in the plane of the web, and cooling the rail while thus supported.

2,029,257
MECHANISM FOR BRAKES AND CLUTCHES
William N. Boller, Oak Park, Ill., assignor to Peter Boller Machine Works, Chicago, Ill., a corporation of Illinois
Application May 20, 1935, Serial No. 22,361
9 Claims. (Cl. 188—2)

1. Mechanism for brakes and clutches comprising two elements having axes located at a small angle, a planetary member adapted to be engaged between said two elements to rotate therebetween, means restraining the movement of one of said elements and operative means for restraining and releasing the other element at will.

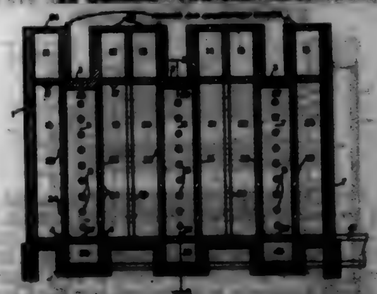


2,029,258
PETROLEUM RESIN
Ulric B. Bray, Palos Verdes Estates, Calif., assignor to Union Oil Company of California, Los Angeles, Calif., a corporation of California
No Drawing. Application April 19, 1932, Serial No. 606,277
5 Claims. (Cl. 196—74)

4. A process for the production of plastic resins from petroleum which comprises separating a cracked residuum into fractions by means of a solvent having a low solvent power for the asphaltic materials present in said residuum, separating asphaltic materials from the cracked residuum fractions dissolved in the solvent, extracting the dissolved cracked residuum fractions with a selective solvent for the more aromatic fractions, removing aromatic fractions dissolved in the said selective solvent and distilling said fractions to produce as a distillate a plastic resin having a specific gravity of about 1.084 to 1.126, a melting point between approximately 93° F. and 150° F. and a ductility at 77° F. in excess of 100 cm.

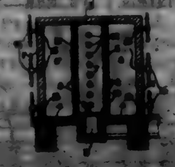
2,029,259
ASPHALT-ASBESTOS MASTIC AND METHOD FOR PRODUCING SAME
Ulric B. Bray, Palos Verdes Estates, Lawton B. Beckwith, San Pedro, and Frederick S. Scott, Los Angeles, Calif., assignors to Union Oil Company of California, Los Angeles, Calif., a corporation of California
No Drawing. Application June 23, 1934, Serial No. 732,115
12 Claims. (Cl. 106—31)

1. A paste which is adapted to be readily trowelled on surfaces comprising a fibrous material, asphalt, water, a stabilising agent, a de-emulsifying agent and a finely divided material which will adapt said mixture to be readily applied onto a surface by means of a trowel.



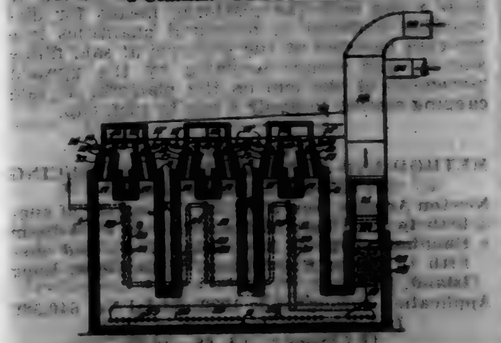
2,029,260
ASPHALTS AND METHOD FOR PRODUCING SAME
Ulric B. Bray, Palos Verdes Estates, and Lawton B. Beckwith, San Pedro, Calif., assignors to Union Oil Company of California, Los Angeles, Calif., a corporation of California
Original application August 7, 1933, Serial No. 684,934. Divided and this application December 18, 1934, Serial No. 758,072
13 Claims. (Cl. 196—76)

9. A process for producing asphalt which comprises subjecting an asphaltic residual oil to oxidation with air to produce an oxidized asphalt, separating said oxidized asphalt into its oil and bituman constituents by means of solvents, commingling said oil constituent with liquid sulphur dioxide to separate said oil constituent into a raffinate and extract, commingling said extract with said bitumen and subjecting said mixture to further oxidation with air whereby an asphalt is produced having a lower penetration for the same melting point and a relatively higher susceptibility to temperature change than said first mentioned oxidized asphalt.



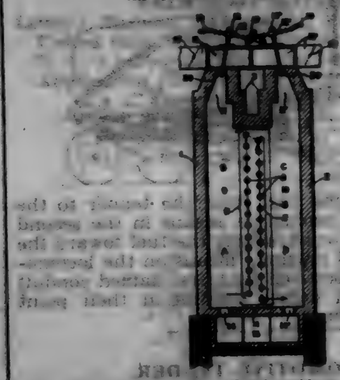
14. A composite asphalt produced from an oxidized asphalt in which substantially all of the oil constituent of the oxidized asphalt has been replaced with an oil having a flash point between approximately 375° F. and 425° F.

2,029,291
METHOD AND APPARATUS FOR HEATING FLUIDS
Joseph G. Alther, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of South Dakota
Application June 4, 1932, Serial No. 615,350
12 Claims. (Cl. 122—356)



1. In a process for heating fluid of the type wherein the fluid is passed through a plurality of banks of conduits of restricted cross section connected in series, each bank disposed within a separate heating zone, the improvement which comprises simultaneously subjecting opposite sides of each fluid conduit to convection heat by contact with directed streams of hot products of combustion, whereby to independently control the heat input over the entire surface of each conduit, and independently controlling the rate of heat input in each bank.

2,029,292
PROCESS OF HEATING FLUIDS AND APPARATUS THEREFOR
Joseph G. Alther, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of South Dakota
Application June 4, 1932, Serial No. 615,349
Renewed February 7, 1935
13 Claims. (Cl. 122—356)



1. In a process for heating fluid of the character wherein the fluid is passed through a conduit of restricted cross section disposed within a heating zone, the improvement which comprises simultaneously subjecting opposite sides of said fluid conduit to superimposed radiant and convection heat, whereby to obtain a high average rate of heating around the entire periphery of the conduit while independently controlling the rate of heating at various points along the path of flow of the fluid through the conduit.

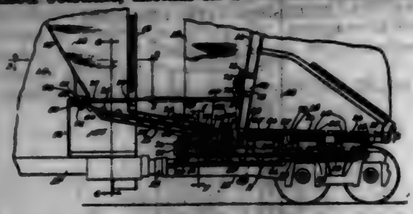
2,029,293
HEATING OF FLUIDS
Joseph G. Alther, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
Application August 10, 1933, Serial No. 684,861
3 Claims. (Cl. 196—118)

3. A process for heating fluid hydrocarbons to conversion temperature comprising passing the fluid hydrocarbons in a restricted stream through a heating coil embracing serially connected tubular elements disposed substantially in a common vertical plane intermediate a pair of parallel heat radiant walls substantially parallel to said plane and forming on each side of the heating coil a combustion zone substantially free of heat absorbing elements intermediate the walls and heating coil, projecting flames into said combustion zones on opposite sides of said coil and directing the flames angularly away from the coil and toward said walls so as to impart a high heat radiating capacity to a substantial portion of each of said walls, and so controlling the generation and projection of flames into said combustion zones as to substantially uniformly heat the opposite sides of any given portion of said heating coil.

2,029,294
HEATING OF FLUIDS
Joseph G. Alther, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
Application July 25, 1934, Serial No. 736,521
22 Claims. (Cl. 122—356)

1. In a process for the heating of fluids wherein fluid is passed in series through two adjacent parallel rows of tubes within a furnace and wherein each tube is subjected to heating by direct radiation from opposite sides, the improvement which comprises independently controlling the rate of heating in each row and in different portions of each row of tubes whereby to obtain the desired heating curve.

2,029,296
LOCOMOTIVE TENDER
Howard F. Anderson, Erie, Pa., assignor to The Standard Stoker Company, Incorporated, a corporation of Delaware
Application June 24, 1930, Serial No. 463,392
Renewed June 2, 1934
31 Claims. (Cl. 105—234)

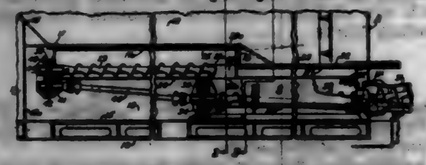


1. In combination in a locomotive tender having a base, a body portion including the conventional form and location of bulkheads and comprising fuel and water compartments separated by partition plates, a stoker conveyor extending within said water compartment and opening upwardly to receive fuel from said fuel compartment, and an alcove exteriorly of said water compartment disposed between said bulkheads to receive stoker drive mechanism.

2,029,296
MULTIPLE UNDERFEED STOKER
Benjamin F. Harrison, Glenns Ferry, Idaho, assignor to The Standard Stoker Company, Incorporated, a corporation of Delaware
Application November 5, 1931, Serial No. 573,669
Renewed July 11, 1935
11 Claims. (Cl. 110—44)

3. In combination with a locomotive having a firebox and tender provided with a fuel bin, a

stoker for conveying fuel from said bin to said firebox including a conduit mounted at its rearward end on the tender and at its forward end on the locomotive, a second conduit mounted on the locomotive and communicating with said first named conduit, means in said first named con-



duit for advancing fuel from the tender to the conduit on the locomotive, means in the second named conduit for advancing the fuel toward the firebox, and fuel crushing means on the locomotive interposed between said first named conduit and said second named conduit at their point of communication.

2,029,287

LOCOMOTIVE TENDER

William C. Peyton, New York, N. Y., assignor to The Standard Stoker Company, Incorporated, a corporation of Delaware

Application July 30, 1932, Serial No. 626,232
Renewed February 21, 1935
32 Claims. (Cl. 198—15)

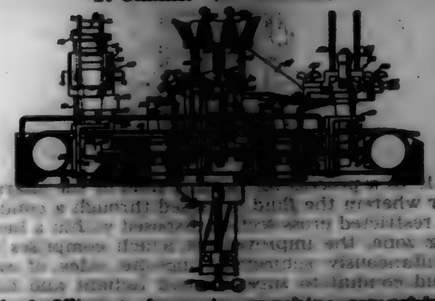
1. A locomotive tender of the class described having a fuel bunker provided with an apertured floor constituted by a plurality of apertured sections arranged in different elevations, each section being provided with a plurality of slidable plates for controlling its aperture.

2,029,296

LOCOMOTIVE TENDER

Charles J. Surdykowski, Tuckahoe, N. Y., now by judicial change of name Charles J. Surdy, assignor to Standard Stoker Company, Inc., a corporation of Delaware

Application November 23, 1932, Serial No. 643,973
Renewed July 5, 1935
15 Claims. (Cl. 198—15)



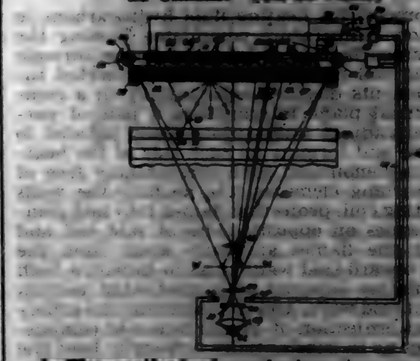
7. In combination with a locomotive tender, a stoker including a screw conveyor on the tender, a gear drive on the tender forward of said conveyor driving the same from its forward end, a second screw conveyor communicating with said first named screw conveyor and having its rearward end disposed in a plane below and offset laterally to one side of the forward end of said first named screw conveyor, a gear drive disposed rearward of said second named screw conveyor and for driving the same from its rearward end, a power shaft operatively associated with one of said gear drives and a jack shaft interposed between and associated with the first and second named gear drives for transferring motion from one to the other.

2,029,290

COMBINED FILLING AND CAPPING MACHINE

Swan F. Anderson, Rockford, Ill.

Application September 30, 1933, Serial No. 635,482
17 Claims. (Cl. 226—76)



1. A filling and capping machine comprising, in combination, mechanisms providing cup-dispensing, filling and capping stations arranged in spaced relation, a conveyor for supporting a succession of cups in spaced relation beneath said mechanisms and movable continuously past said stations, three platforms each located at one of said stations and adapted when raised to elevate a cup from said conveyor and present the same to one of said mechanisms, a common power-driven means operable to raise and lower said platforms in timed relation, means at the cup-dispensing station actuated by each upward movement of the platform at such station to drop a cup onto the platform, means for discharging material in measured quantities into the cups elevated by the platform at said filling station, and means actuated by the upward movement of the cup on the platform at said capping station to apply a cap to such cup.

2,029,300

METHOD AND APPARATUS FOR PRODUCING STEREOSCOPIC EFFECTS

Newton Ariston, New York, N. Y., assignor of one-fifth to Emil Pohl and one-half to F. William Buchhart, both of New York, N. Y., and one-fifth to Franz Bernheimer, Little Neck, Long Island, N. Y.

Application November 1, 1932, Serial No. 640,539
In Germany December 12, 1931
18 Claims. (Cl. 88—16.6)

1. The method of producing stereoscopic motion pictures, which comprises decomposing the projected images of a succession of pictures on a film into a plurality of bands and directing such bands upon spaced fields on a phosphorescent screen, and progressively moving said screen to cause related bands of successive pictures to be juxtaposed on said screen.

2,029,301

PROCESS OF PREPARING TETRA ALKYL LEAD

Louis S. Reber, Pennsgrove, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application June 9, 1933, Serial No. 675,969
12 Claims. (Cl. 260—11)

1. The process for preparing tetra alkyl lead which comprises contacting under reacting conditions, an organic halide with a lead monosodium alloy in the form of small substantially dust-free particles of a uniform size.

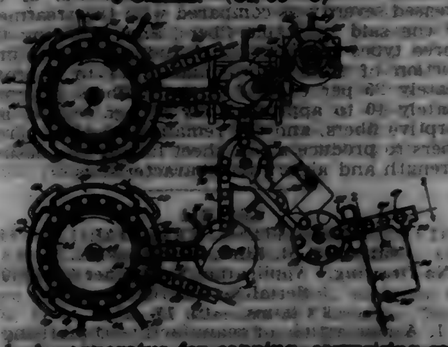
2,029,302

GASKET AND GASKET MATERIAL

George T. Balfe, Detroit, Mich., assignor to Detroit Gasket & Mfg. Co., Detroit, Mich., a corporation of Michigan

Original application January 12, 1929, Serial No. 331,331, now Patent No. 1,776,148, dated September 16, 1930. Divided and this application September 15, 1930, Serial No. 482,584
7 Claims. (Cl. 277—1)

[redacted]



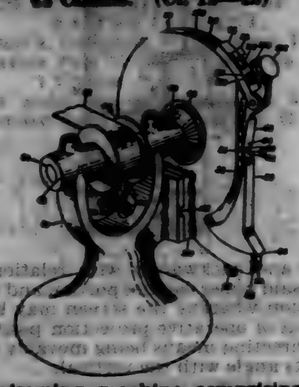
1. A gasket comprising accumulative layers of perforate metal and interposed therebetween fibrous cushion material, the metal layers being provided with a multiplicity of closely compacted inwardly punched projections adjacent the perforations in said sheets and embedded in the cushion material, thus preventing relative lateral movement of the cushion material and/or the metal layers.

2,029,306

APPARATUS FOR AND METHOD OF CANNING

Charles O. Ball, River Forest, Ill., assignor to American Can Company, New York, N. Y., a corporation of New Jersey

Application August 27, 1932, Serial No. 630,971
9 Claims. (Cl. 99—8)



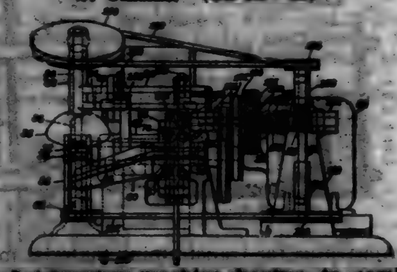
1. An apparatus for canning, comprising separate sealed sterilizing chambers respectively for a product to be canned, the can bodies to receive the product, can ends to be seamed to the filled cans, and sealed sterile passageways between said chambers, and rotary sealing valves for the entrance of cans to be filled and for the exit of filled cans, and for the sealing of all of said chambers so as to maintain a pressure of confined live steam in said chambers.

2,029,304

TRIMMING MACHINE

Lewis J. Bamard, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey

Application June 14, 1933, Serial No. 675,794
Renewed July 15, 1935
43 Claims. (Cl. 12—42)



1. A trimming machine comprising an anvil for supporting a projecting margin of a cover which is secured to a heel, a tool provided with a plurality of projections which are constructed and arranged to skive the projecting margin supported by the anvil by a series of cuts which progress generally toward the edge of said margin, and means for operating the tool.

2,029,305

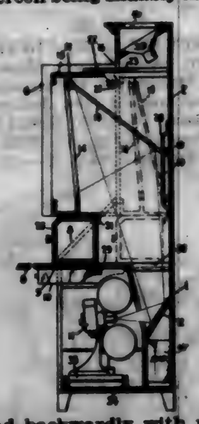
TRIMMING MACHINE

Lewis J. Bamard, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey

Application June 14, 1933, Serial No. 675,795
37 Claims. (Cl. 12—42)

1. A trimming machine having, in combination, a rotary anvil for supporting the margin of a piece of flexible sheet material fed over it, a cooperating stock-removing tool, and means for rotating said tool in a plane disposed at an angle to the plane of rotation of the anvil and in a direction to skive the margin by a series of operations which progress toward the edge of the margin.

2,029,306



MOVING PICTURE AND SOUND CABINET

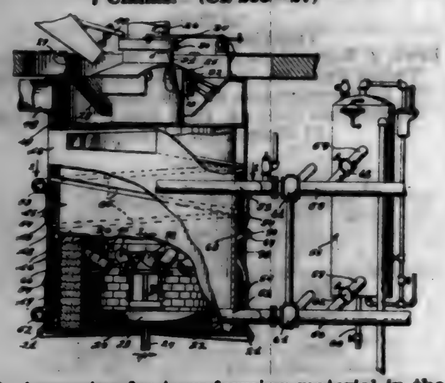
William R. Ball, Pelham Manor, N. Y.

Application December 16, 1933, Serial No. 702,822
7 Claims. (Cl. 88—16.2)

1. The combination with a cabinet comprising a lower portion and an upper portion of less depth

than said lower portion, of a motion picture projector in said lower portion, a picture screen at the front of said upper portion and means for directing the projecting light rays to said picture screen, said picture screen being slidably mounted to move

forwardly and backwardly with relation to and outside of said upper cabinet portion and over said lower portion whereby the screen may be moved into and out of operative projection position, said light ray directing means being movably mounted to adjust its angle with the vertical.



2,029,207

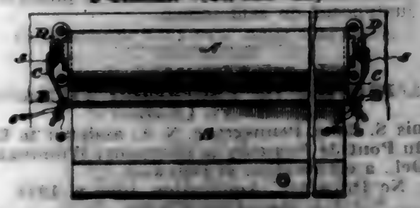
METHOD AND APPARATUS FOR MANUFACTURING PRODUCTS BY SUBJECTING A MATERIAL TO RELATIVELY HIGH TEMPERATURES

Lee R. Campbell, Hazel Park, Mich.

Application November 25, 1932, Serial No. 644,468

7 Claims. (Cl. 266—27)

1. Apparatus for transforming material in the solid state to a molten mass by the application of heat comprising, a furnace having a chamber for receiving a charge of the material to be heated and a charge of combustible material, means for discharging the combustible material in the chamber through the upper end of the latter, and means for feeding the material to be heated into the chamber around the combustible material including, a conveyor for conducting the material to be heated to a point above the upper end of the chamber, a distributor positioned to receive the material discharged from the conveyor and operable to feed the latter material into the chamber between the combustible material therein and the side walls thereof, and means for rotating said distributor by a step-by-step movement.



2,029,208

SHADE PROTECTOR

Daniel W. Causey, Norfolk, Va.

Application April 21, 1933, Serial No. 667,302

6 Claims. (Cl. 156—18)

1. A shade protector including the combination with a supporting bracket, of a flexible shade cover, flexible anchoring means in opposite edges of the cover, an arm carried by the bracket and having a portion disposed in the zone of said flexible anchoring means whereby the latter may be tied thereabout.

2,029,209

PREPARING PHOSPHATE CHARGING STOCK

Harry A. Curtis, Knoxville, Tenn., and Armand J. Abrams, Colbert County, near Sheffield, Ala., assignors to Tennessee Valley Authority, Wilson Dam, Ala., a corporation

No Drawing. Application August 22, 1934, Serial No. 740,363

13 Claims. (Cl. 23—124)

(Granted under the act of March 2, 1883, as amended April 30, 1928; 370 O. G. 757)

6. Steps in process of preparing phosphorus reduction furnace charging stock which comprise adding fine coking coal to a hot unsintered mixture of fine phosphate rock and fine silica and mixing the coal, phosphate rock and silica until the mixture contains semi-coke.

2,029,210

FELT AND PROCESS OF MAKING SAME

Pierre Dreweatt, Sandusky, Ohio, assignor to The Barrett Company, a corporation of New Jersey

No Drawing. Application February 4, 1926, Serial No. 86,996. Renewed January 27, 1934

32 Claims. (Cl. 92—3)

1. The process of producing roofing felt which comprises cooking jute fibers to produce fibers which when incorporated in the felt impart strength thereto, separately cooking vegetable fibers to produce absorptive fibers, separately cooking cereal fibers under conditions of increased severity as compared with the treatment of the said vegetable fibers, and admixing the three types of fibers thus produced in the proportion of from approximately 15 to approximately 25 per cent of strength fibers, approximately 40 to approximately 85 per cent of absorptive fibers, and the remainder cooked cereal fibers to produce a felt sheet having the desired strength and absorptive characteristics.

2,029,211

INSULATING MATERIAL

Nathaniel M. Elias, New York, N. Y.

No Drawing. Application September 26, 1930, Serial No. 484,766

3 Claims. (Cl. 75—1)

1. A new article of manufacture comprising a mass of cellular insulating material having a specific gravity less than unity, and metal serving as a binder for said insulating material and forming a coating or lining for the mass to constitute a finished surface for the article.

2,029,212

DYESTUFFS AND THEIR APPLICATION

George Holland Ellis and Frank Brown, Spondon, near Derby, England, assignors to Celanese Corporation of America, a corporation of Delaware

No Drawing. Application February 7, 1933, Serial No. 655,612. In Great Britain February 17, 1932

10 Claims. (Cl. 8—5)

1. Process for the coloration of organic derivatives of cellulose which comprises applying thereto an unsulphonated anthraquinone compound having as a substituent in the anthraquinone nucleus a phenylamino radicle having an alkyl group as a meta substituent.

2,029,213

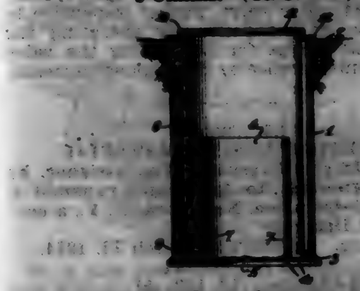
PRODUCTION AND APPLICATION OF NEW DYESTUFFS

George Holland Ellis and Frank Brown, Spondon, near Derby, England, assignors to Celanese Corporation of America, a corporation of Delaware

No Drawing. Application February 7, 1933, Serial No. 655,614. In Great Britain February 17, 1932

13 Claims. (Cl. 8—5)

1. Process for the coloration of organic derivatives of cellulose which comprises applying thereto an unsulphonated anthraquinone compound having as a substituent in the anthraquinone nucleus an ether substituted arylamino group of the benzene series.



2,029,214

GROUND-LEVEL CEMETERY VASE

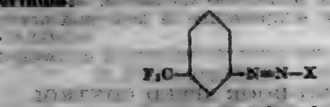
Stuart Ellis, Fredericksburg, Va.

Application April 15, 1935, Serial No. 16,519

6 Claims. (Cl. 47—41)

1. A ground-level cemetery vase comprising an outer casing, a vase support affixed to and extending part way up from the base of the outer casing, a cemetery vase of greater area than the vase support and adapted to rest thereon and invertible to a position in which its upper rim rests on the base of the outer casing, and a ring loosely encircling the vase and resting on the upper rim of the outer casing.

2,029,215



TRI-FLUORO-METHYL-PHENYL-AZO-DI-AMINO PYRIDINES AND PROCESS OF MAKING THE SAME

Max Engelmann, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

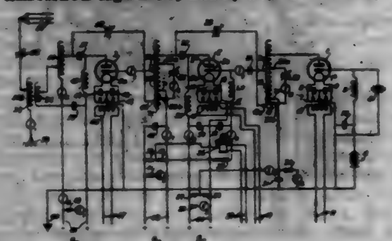
No Drawing. Application June 1, 1934, Serial No. 728,543

3 Claims. (Cl. 260—43)

2. The azo compounds obtainable by diazotizing meta-amino-tri-fluoro-methyl-benzene and coupling the same with an alpha-alpha'-di-amino-pyridine and which compounds have the formula:

in which X represents an alpha-alpha'-di-amino-pyridine.

2,029,216



SYSTEM OF AMPLIFICATION OF ALTERNATING CURRENT

Louis A. Gebhard, Washington, D. C.

Application July 21, 1931, Serial No. 552,247

7 Claims. (Cl. 250—17)

(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

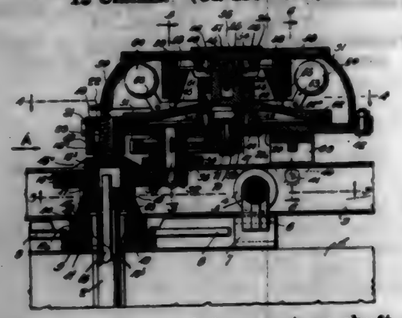
1. A radio transmitter circuit including a piezo electric crystal controlled oscillator having an input circuit and an output circuit, a power amplifier the input circuit of which is adapted to receive energy transferred from said oscillator, means including a single inductance winding in said oscillator output circuit for coupling the same with said amplifier input circuit and for transferring energy to said amplifier, and means including a keying-circuit relay for changing the grid bias applied to said amplifier and for causing said amplifier to transmit code signals.

2,029,217

GAS MAKING APPARATUS

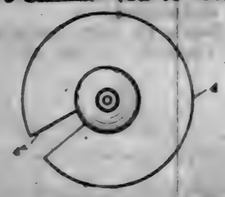
Jesse A. Guyer, Frederick E. Frey, and Walter F. Huppke, Bartlesville, Okla., assignors to Phillips Petroleum Company, Bartlesville, Okla., a corporation of Delaware

Application March 19, 1932, Serial No. 600,017



2 Claims. (Cl. 48—94)

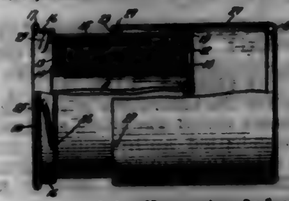
1. Gas generating apparatus particularly adapted for use in connection with highly endothermic catalytic gas producing reactions, said apparatus comprising a combustion chamber, a radiant heating chamber adjacent to but separated from said combustion chamber, a reaction tube extending through said radiant heating chamber, said tube comprising spaced catalyst containing chambers and intermediate connecting conduits, said conduits being of such length as to enable the reaction mixture passing therethrough between catalyst chambers to absorb sufficient heat from said radiant heating chamber to enable the reaction to proceed, in part at



least, in said chambers, whereby excessive preheat temperatures of said reaction mixture may be avoided, and additional means for selectively controlling the temperature of said mixture in said conduits.

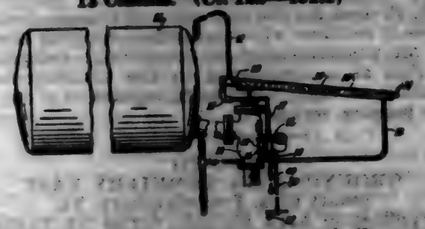
2,029,318
REVOLVING DOOR SPEED CONTROL
Thurlee M. Hagenbook, Evansville, Ind., assignor, by mesne assignments, to International Door Company, Evansville, Ind., a corporation of Illinois
Original application September 16, 1932, Serial No. 632,627. Divided and this application September 15, 1933, Serial No. 689,633
15 Claims. (Cl. 188—187)

1. In a speed control for a rotary shaft, the combination with a shaft rotatably mounted in a vertical position, a gear device driven by the said shaft, a speed control casing supported in a fixed position above said shaft, a driven gear journaled in said speed control casing and adapted to be meshed with the drive gear connected with the shaft, a plurality of control means within said speed control casing operated by said driven gear, and a friction brake within said speed control casing automatically and selectively actuated by said plurality of control means for applying a retarding load to the rotary shaft.



2,029,319
METER DISK
Frederick W. Hanks, Cleveland, Ohio
Application March 15, 1932, Serial No. 599,819
9 Claims. (Cl. 73—98)

1. In a device of the character described, a disk member, hemispherical members for mounting the same, resilient means for spreading said hemispherical members apart, and means for holding said disk-member and hemispherical members in assembly and providing adjustment of the spreading means.

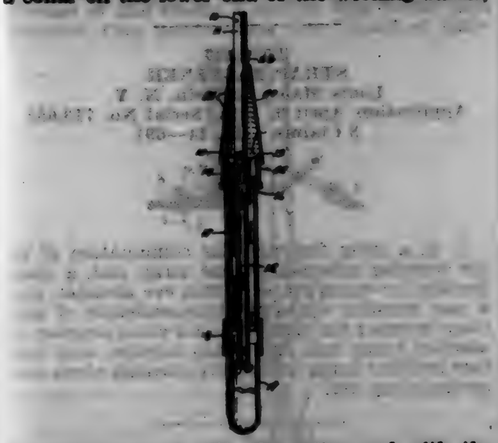


2,029,320
SPOOL AND PROTECTOR THEREFOR
Edmund Hoffman, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a corporation of New Jersey
Application February 20, 1931, Serial No. 517,220
4 Claims. (Cl. 206—52)

1. A spool and protector assembly, comprising a spool having fixed heads one of which is provided with an outside longitudinally extended cylindrical wall, a protecting shell open at both ends and adapted to enclose said spool, and having an edge turned back on itself adjacent one end thereof, and an interrupted screw thread

connection formed in the extended wall of said head and in the inner side of said turned back edge of said shell and effective upon rotation of said spool relative to said shell for locking said spool and shell together.

2,029,321
FEED WATER REGULATOR
William L. Hunter, Erie, Pa., assignor to Northern Equipment Company, Erie, Pa., a corporation
Application January 6, 1934, Serial No. 705,519
13 Claims. (Cl. 122—451.1)



1. Apparatus for feeding water to boilers, comprising a feed-water valve, means responsive to the operation of the boiler for operating the valve, manual means for positioning the valve without any interference by the responsive means.

2,029,322
SYNTHETIC TANNING MATERIAL
Alphons O. Jaeger, Greentree, Pa., assignor, by mesne assignments, to American Cyanamid & Chemical Corporation, New York, N. Y., a corporation of Delaware
No Drawing. Application March 12, 1934, Serial No. 715,164
23 Claims. (Cl. 149—5)

1. A synthetic tanning agent of the sulfonated diarylmethane type in the production of which at least one reaction step has been carried out in the presence of a decolorizing absorbent, the synthetic tanning agent being characterized by a light color and by the property of producing lighter shades of leather when employed as a tanning agent or bleaching agent.

2,029,323
SAND SEPARATOR
David Jones, Iraan, Tex., assignor of one-half to F. E. King
Application February 27, 1934, Serial No. 713,178
1 Claim. (Cl. 183—236)

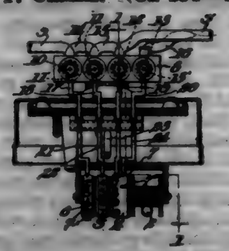
A gas anchor and sand separator comprising a container closed at its lower end, the upper end of the container having a spider formed with a central internally screw-threaded hub, a finely perforated head having a collar at its lower end for engagement with the upper end of the container, the hub being upwardly and inwardly conical and terminating in a collar adapted to fit around a working barrel, a working barrel extending thru the small upper end of the head, a collar on the lower end of the working barrel,

a nipple engaged with the collar and with the interior screw threads of the hub, and a pipe section engaged with the hub below the nipple and extending downward into the container, the pipe section being open at its lower end and terminating short of the lower end of the container.

2,029,324
APPARATUS FOR USE IN APPLYING PRESSURE TO SHOE BOTTOMS
Frank Kennison, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application April 26, 1934, Serial No. 725,537
43 Claims. (Cl. 12—33)

23. A pad box for use in applying pressure to shoe bottoms having, in combination, a pad comprising a fluid-filled vessel extending the full length of a sole and having a flexible wall for yieldingly supporting the forepart and shank portions of the sole, said vessel having also a flap integral with the flexible wall and overlying the rear portion of the vessel for supporting the heel portion of the sole, a casting for holding the flap yieldingly in sole-receiving position, gages mounted on the casting for positioning the heel portions of the sole and shoe relatively to each other on the pad, a cam for adjusting the casting heightwise to move the flap toward or away from the underlying portion of the vessel thereby positioning said flap for operating upon shoes having heels of different heights, said cam operating also to effect a corresponding heightwise adjustment of the positioning gages, and plates carried by the casting and movable longitudinally of the vessel for filling up all or a portion of the space created between the flap and the underlying portion of the vessel when said flap is moved away from said underlying portion.

2,029,325
COMPRESSION TUBING COUPLING
Edward H. Kocher, Bounton, N. J., assignor to Auto Research Corporation, a corporation of Delaware
Application December 17, 1930, Serial No. 502,990
11 Claims. (Cl. 285—122)



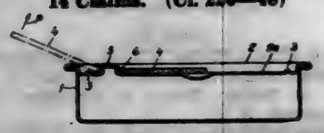
2. In a coupling arrangement including a pair of coupling elements and a pipe end, one of said members being provided with a socket carrying structure with an abutment to receive and stop said pipe end and the other taking the form of an annular nut body encircling said pipe end, said elements being firmly attached to each other by a threaded connection and each of said members being provided with opposite internal tapered coupling surfaces, the combination therewith, of a sleeve structure having opposed tapered surfaces tapered to a thin edge, one tapered surface engaging the corresponding tapered surface on one of the coupling members and the thin edge of the other tapered surface contacting with a more abrupt tapered surface on the other coupling member, said nut and said sleeve structure being provided with highly outwardly diverging contacting surfaces, the divergence being of such magnitude that upon deformation of the sleeve structure such deformation will not result in the sleeve expanding to wedge at the divergent surface of the nut.

2,029,326
COMBINATION POWER TOOL
Halford Lembke, Seattle, Wash.
Application August 6, 1934, Serial No. 738,725
11 Claims. (Cl. 255—41)

4. The combination in a power tool with a rotary driving member, and a reciprocable driven member, and pairs of balls revolvably seated in semi-spherical recesses in the adjoining faces of each member, whereby the rotary motion of the driving member is converted into reciprocating motion in the driven member.

2,029,327
AUTOMATIC LUBRICATING MECHANISM
Walter Maynard Lippincott, Lynbrook, N. Y., assignor to Potter, Pierce & Scheffler, a firm, Washington, D. C.
Application January 28, 1928, Serial No. 250,245
17 Claims. (Cl. 184—7)

1. In a lubricating device for automotive vehicles, in combination with a vehicle, means for

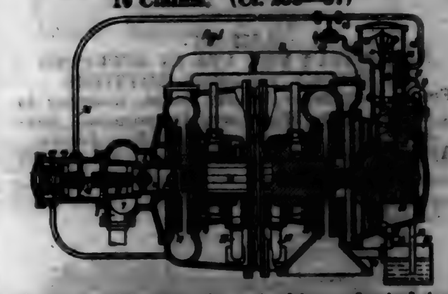


lubricating the chassis thereof, an odometer having indicating dials thereon, a plurality of serially arranged valves for periodically rendering said lubricating means operable, and means on said odometer dials for actuating said valves.

2,029,228
CONTAINER
Erik Ljungström, Lidingo-Brevik, Sweden, assignor to Aktiebolaget Transiteria, Stockholm, Sweden, a corporation of Sweden
Application February 9, 1933, Serial No. 655,893
In Sweden February 12, 1932
14 Claims. (Cl. 220—48)

1. A container having a wall portion to be displaced to provide the opening through which the contents of the container are to be removed, said wall portion being defined at least in part by a tearing line in the material of the container, an opening key, and attaching means pivotally mounting said key on said wall portion adjacent to said tearing line, said key having a position before use with the free end of the key inside the edge of the container and being pivotally movable to an operating position with a part of the key between the attached and the free ends thereof overlying a place of rupture in said tearing line and with the free end of the key outside the edge of the container, said attaching means being constructed and arranged to cause lifting of the material of said wall portion adjacent to said place of rupture upon lifting of the free end of said key when the key is in operating position, and said key being freely manipulable in said operating position by lifting of the free end of the key to break said tearing line at said place of rupture essentially by shearing.

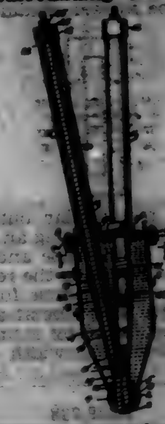
2,029,229
DEVICE FOR OPENING CANS
Erik Ljungström, Lidingo-Brevik, and Olof August Olsson, Stockholm, Sweden, assignors to Aktiebolaget Transiteria, Stockholm, Sweden, a Swedish corporation
Application July 18, 1934, Serial No. 735,844
In Sweden October 21, 1932
14 Claims. (Cl. 220—48)



1. A container having wall material defined at least in part by a tearing line adapted to be ruptured and torn to effect opening of the container by displacement of said wall material, a tearing member and attaching means for said tearing member located adjacent to a place of rupture in said line, said attaching means being formed from that portion of said wall material that is displaceable by virtue of said tearing line and providing wall structure engaging the attached end portion of said tearing member to retain the tearing member in attached relation when it is in an operating position with a portion of the tearing member overlying said place of rupture and with the free end of the tearing member subjected to pull in a direction away from the container, said attaching means and the attached portion of said tearing member co-operating upon such pull of the free end of the tearing member to effect initial breaking of the tearing line at said place of rupture.

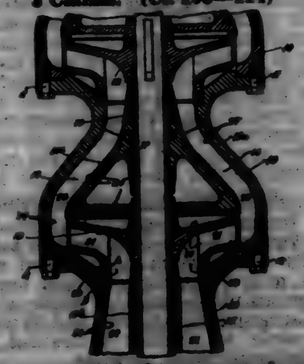
2,029,230
STRAP FASTENER
Louis Maas, Baldwin, N. Y.
Application April 9, 1934, Serial No. 719,653
8 Claims. (Cl. 24—69)

1. In a strap fastener, the combination of an eye member attached to one strap end, a clasp member co-operative with said eye member, and a cam member operating independently of said clasp member for clamping said clasp member to another strap end, said clasp member and said cam member being adjustably movable along said second strap end.



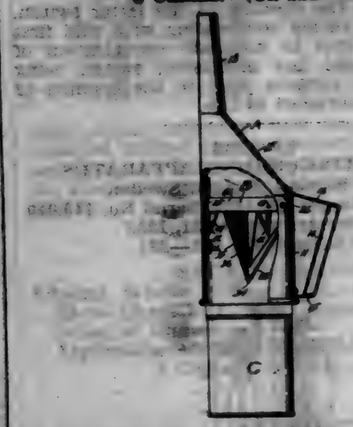
2,029,231
APPARATUS FOR REGULATING TURBO-MACHINES
Ulrich Meininghaus, Mulheim-Ruhr, Germany
Application May 17, 1932, Serial No. 671,641
In Germany June 1, 1932
10 Claims. (Cl. 253—57)

1. In combination in a turbine adapted to be impinged by an elastic fluid, a shaft, a plurality of stages of blade rows on said shaft adapted to cause successive acceleration of the working medium at full load by multiple expansion creating a plurality of pressure drops, and throttling means arranged in advance of some of the stages and operable to impart to the working medium a high velocity at partial load and to direct said medium at said high velocity into one of the turbine stages passing said medium at partial load, thereby producing at partial load a diminished number of pressure drops through the same number of stages as compared with operation at full load.



2,029,331
POTHEAD
Fred C. Meyer, Paterson, and George E. Moffat, East Paterson, N. J., assignors to The Okonite-Callender Cable Company, Incorporated, Paterson, N. J., a corporation of New Jersey
Application December 14, 1932, Serial No. 647,570
1 Claim. (Cl. 247—8)

A pothead construction for electric cables of the solid stranded conductor pressure type comprising in combination a casing, the lower end of which is secured to the enclosing pipe or sheath of the cable, said casing communicating with the interior of said cable sheath or pipe, a sealed cap for said casing, a pressure tube of insulating material secured to said cap, an insulated cable conductor received by said tube, said tube being sealed at the top and communicating with the interior of said casing, a barrier tube within said pressure tube surrounding the insulated cable

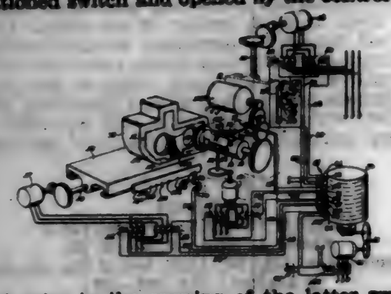


conductor, metal tape about the insulation of the conductor adjacent the lower part of said casing, a shielding cone about said tape, insulation about the lower end of said barrier tube terminating adjacent the upper end of said shielding cone, and a metal shield about said insulation, the lower end of said shield being in contact with said cone.

2,029,333
TURBINE WELL PUMP
De Mont G. Miller, San Marino, Calif., assignor to Johnston Pump Company, Los Angeles, Calif., a corporation of California
Application July 25, 1932, Serial No. 624,412
3 Claims. (Cl. 103—114)

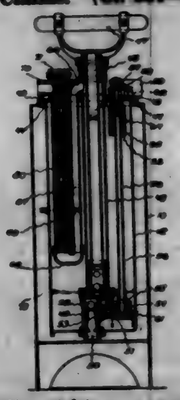
1. In a deep-well turbine pump structure suitable for pumping water containing abrasive material from a well, the combination of: a casting forming a bowl element positioned in an inaccessible position in said well beneath the surface of said water and providing passages for conducting said water upward, portions of said passages being inaccessible for smoothing, said bowl element providing an impeller chamber, said impeller chamber and said passages being coated with porcelain fused directly to clean irregular surfaces of the casting to form a hard abrasive-resistant smooth surface guiding a high-velocity stream of said water; a shaft extending into said impeller chamber; and a casting forming an impeller in said impeller chamber and providing an upper shroud and a lower shroud and vanes extending therebetween to provide impeller passages relatively inaccessible for smoothing, the walls of said impeller passages being coated with porcelain contacting and fused directly to a clean irregular surface of the casting forming said impeller to form hard abrasive-resistant smooth surfaces through which said water moves at high velocity, the outer edges of said vanes and the exterior surface of said upper and lower shrouds being also coated by said porcelain adhering to clean irregular surfaces of said casting.

2,029,334
LIQUID DISPENSING DEVICE
Elmer L. Hall, Wheaton, Ill.
Application July 20, 1932, Serial No. 623,354
3 Claims. (Cl. 221—33)



1. A liquid dispensing device, comprising in combination, a dispensing funnel adapted to move downwardly over and substantially enclose a sealed receptacle containing a liquid to be dispensed, and a cutter secured inside of said funnel and having cutting elements for cutting open the top end wall of the receptacle when said cutter and its funnel are forced down into and over said receptacle, said cutting elements tapering inwardly and upwardly from the side wall of said funnel into a common piercing apex disposed substantially centrally of the funnel, the liquid contents of said receptacle flowing through the opening so formed and into the said funnel when the latter is inverted.

2,029,335
CONTROL MECHANISM FOR MACHINE TOOLS
Alexander Oberhoffken and Hans Hanitz, Rockford, Ill., assignors to Ingersoll Milling Machine Company, Rockford, Ill., a corporation of Illinois
Application April 1, 1933, Serial No. 663,894
3 Claims. (Cl. 172—239)



1. In a control mechanism for machine tools having a plurality of relatively movable supports, mechanism for causing a predetermined cycle of relative movements between said supports including an electric motor for driving one of said supports during one part of said cycle, a control element moved unidirectionally and at constant speed throughout said cycle, a switch responsive to relative movement between said supports and arranged to be open at the beginning of said

part, to be closed in the initial relative movement between said supports, and to be opened after a predetermined movement thereof, a switch actuated by said control element to cause energization of said motor independently of said first mentioned switch and opened by the control ele-

ment prior to the opening of the latter switch, and a second switch cooperating with said first mentioned switch to maintain energization of said motor, said last mentioned switch being closed by said element prior to the opening of said second mentioned switch.

2,029,336
FIRE EXTINGUISHING APPARATUS
Bror Pålsson, Malmo, Sweden
Application August 15, 1934, Serial No. 740,016
In Sweden August 21, 1933
6 Claims. (Cl. 261—28)

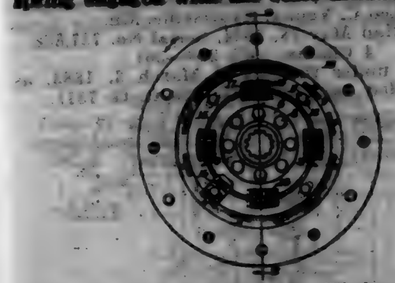
1. In fire-extinguishing apparatus of the character described and in combination, a portable receptacle having separate compartments to normally carry a relatively concentrated solution of a foaming agent and water respectively, a pump associated with said receptacle, and air intake pipe leading to the suction side of said pump and extending substantially to the bottom of said receptacle, and inlets for the liquid foaming agent and the water from the separate compartments of the receptacle to the suction side of the pump, said last mentioned inlets being arranged and connected with each other and with the air intake pipe near the bottom of the receptacle.

2,029,337
NOZZLE
William B. Parker, Placerville, Calif., assignor to California Spray-Chemical Corporation, Berkeley, Calif., a corporation of Delaware
Application November 21, 1932, Serial No. 643,563
4 Claims. (Cl. 299—140)

3. In apparatus of the character described, a conduit having an inlet end adapted to receive a high velocity stream of air, the discharge end of said conduit being flattened to form a narrow and substantially rectangular outlet, a tube disposed within the conduit and in longitudinal alignment therewith, the tube having an open inlet end adapted to receive a portion of the air stream, and being flattened at its discharge end in the same plane as said conduit is flattened to

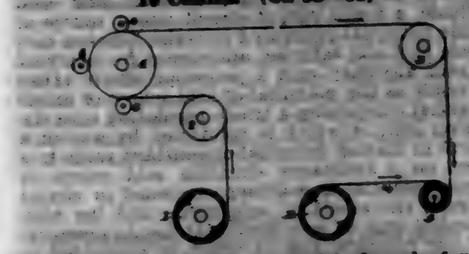
form a narrow rectangular outlet of uniform width throughout, there being an air passage between both sides of the tube and the side walls of the conduit for receiving the remainder of the air stream, and a spray nozzle for introducing a spray of liquid into said tube at a distance from the discharge end, whereby a uniform spray is produced throughout the width of said nozzle.

2,029,338
INSPIRATING NOZZLE
William B. Parker, Placerville, Calif., assignor to California Spray-Chemical Corporation, Berkeley, Calif., a corporation of Delaware
Application October 31, 1934, Serial No. 750,756
6 Claims. (Cl. 299—142)



1. A nozzle of the character described, comprising a frame, an air nozzle supported in said frame, a Venturi nozzle supported in said frame and axially spaced from and aligned with said air nozzle, and a conduit for liquid terminating in said Venturi nozzle, said air nozzle adapted to inspirate atmospheric air into and through said Venturi nozzle to produce a floating, fog-like mist of air-borne liquid particles.

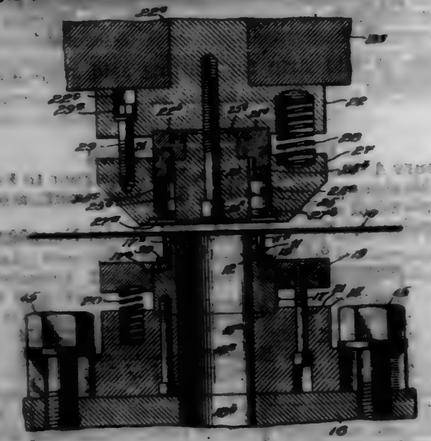
2,029,339
CLUTCH PLATE
Harold V. Reed, Chicago, Ill., assignor, by mesne assignments, to Borg-Warner Corporation, Chicago, Ill., a corporation of Illinois
Application January 13, 1933, Serial No. 506,253
15 Claims. (Cl. 192—68)



1. A clutch plate for friction clutches comprising a driving member and a driven member adapted for relative movement, and a plurality of springs operatively interposed under initial compression to form a cushion between said

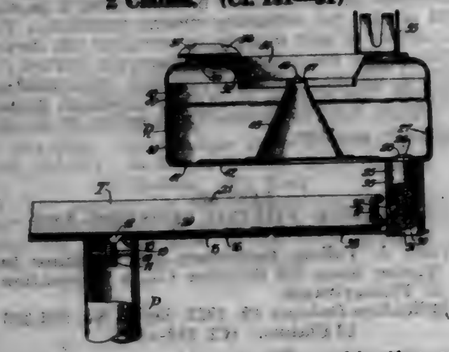
members with one end of each spring engaged with one member and the other end of each spring engaged with the other member and co-

acting to produce initial equilibrium of all of said springs and with all of said springs adapted for engagement at each end with both of said members.



2,029,340
MANUFACTURE OF BAGS
Thomas M. Royal, Philadelphia, Pa.
Application July 28, 1933, Serial No. 681,275
10 Claims. (Cl. 93—35)

1. In the preparation of multi-ply webs for the manufacture of multiwall paper bags, producing a printed web in continuous lengths, associating therewith a web of transparent material in continuous lengths and in direct contact with said printed surface, and causing said transparent web to be maintained in fixed position with respect to said printed web for subsequent formation into multiwall bags by the application of adhesive to said printed web prior to the association therewith of the transparent web; said webs being laterally spaced with respect to each other with one edge of the paper web projecting beyond the adjacent edge of the transparent web and one edge of the transparent web projecting beyond the adjacent edge of the paper web.



2,029,341
DIE MECHANISM FOR MOUNTING BUSHINGS
Fleck W. Sample and Robert D. Ross, Chicago, Ill., assignors to American Flange & Manufacturing Company, Chicago, Ill., a corporation of Illinois
Application May 18, 1932, Serial No. 612,118
8 Claims. (Cl. 153—3)

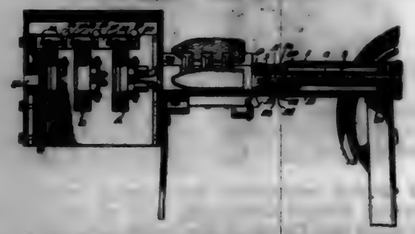
1. A unitary, single-stroke die structure for applying flanged bushings to a metallic wall which comprises a member having a tubular punch extension adapted to support a flanged bushing having a circular body surrounding said extension, a depressible bushing-positioning member surrounding said supporting member, a reciprocable punch member axially aligned with said punch extension, a depressible member surrounding said punch member and having a die surface corresponding to the shape of the bushing flange, and a curling anvil between said depressible member and said punch member spaced inwardly from the outer ends of the depressible member and punch member for curling the end of said bushing opposite its flange, whereby, at a single stroke a metallic wall interposed between

said punch extension and punch member is punched, formed around the body of said bushing and upon the flange of the latter and the end of the bushing is curled upon the wall formed thereround.

2,029,343
SMOKING STAND
Edward Schultz, Chicago, Ill., assignor to The Nagel-Chase Mfg. Co., Chicago, Ill., a corporation of Illinois
Application April 11, 1934, Serial No. 720,034
2 Claims. (Cl. 131—51)

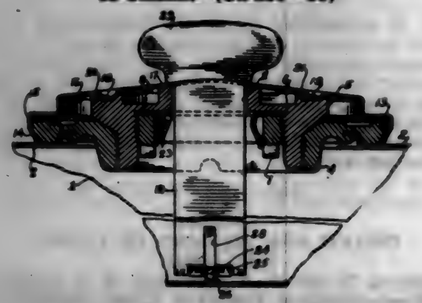
2. In a smoking stand, the combination of a vertical support, a tray rotatably carried by the support centrally over the upper end thereof, a receiver above the tray, and a vertical pivotal mounting for the receiver on the support at a point beyond the tray whereby the receiver is free to swing horizontally to positions over or away from the tray.

2,029,343
MULCH AND METHOD OF USING THE SAME
Frederick W. Sperr, Jr., Vineland, N. J., assignor of one-fourth to Horace B. Cooke, Greenwich, Conn.
Application April 12, 1933, Serial No. 665,695
6 Claims. (Cl. 47—9)



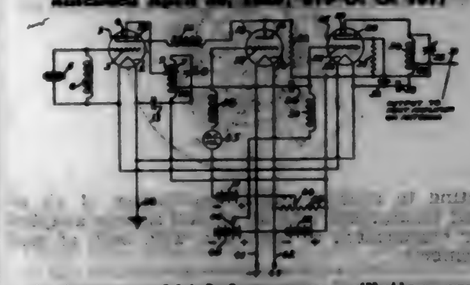
2. In combination, a strip of metal screening adapted to be laid as a mulch between rows of

growing plants and lever means attached to the



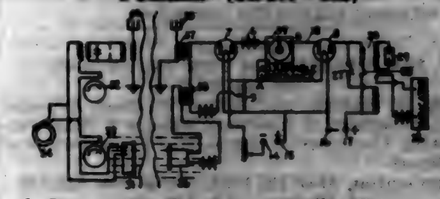
ends of said strip for shifting said strip longitudinally.

2,029,344
GREEN CORN CUTTER
Henry A. Sheiden, Buffalo, N. Y., assignor to Food Machinery Corporation, San Jose, Calif., a corporation of Delaware
Application December 14, 1931, Serial No. 580,981
8 Claims. (Cl. 130—9)



1. A machine for removing kernels from the cobs of green corn comprising kernel removing means, ear feed means consisting of an intermittently reciprocating member comprising a tubular member and a plunger movable through said tubular member, and a yielding member holding the plunger retracted within the tubular member, means for moving said associated members in unison for moving a positioned ear into said kernel removing means, means for stopping movement of said tubular member after a partial feed stroke the actuating means continuing the movement of said plunger to complete the movement of the ear entirely through the kernel removing means, and compressing said yielding member, the release of said compression acting to replace said reciprocating member to its inoperative position.

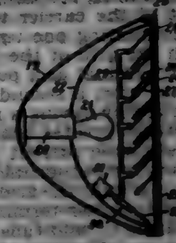
2,029,345
COMBINED FILLING CLOSURE AND GAUGE ROD
Frank A. Talbot, Baltimore, Md., assignor to Quaker State Oil Refining Co., a corporation of Pennsylvania
Application October 19, 1933, Serial No. 694,356
13 Claims. (Cl. 220—86)



1. A tank, a filling neck fixed thereon, a closure plug detachably connected to said neck, a seal covering said neck and plug, said seal and plug being provided with registering slots to receive a gauge rod.

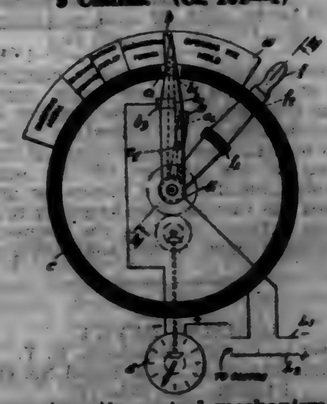
2,029,346
OSCILLATOR
Albert Hoyt Taylor, Washington, D. C., and Lee C. Young, Hyattsville, Md.
Application May 28, 1934, Serial No. 727,838
4 Claims. (Cl. 250—36)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A source of high frequency oscillations comprising an electron tube having a cathode, an anode, a control grid and an auxiliary grid element, frequency determining means connected between said control grid element and said cathode, a tuned output circuit and a source of anode potential connected in series between said anode and said cathode, and means for applying to said auxiliary grid a potential which varies inversely as the potential of said source of anode potential comprising a triode regulating tube the control grid of which is connected by way of a source of biasing potential of constant value to a point on a resistance shunting said source of anode potential, a resistance included in circuit between the anode of said triode and the high potential side of said source of anode potential the low potential side of which is connected to the cathode of said triode, and an inductive connection between said auxiliary grid and the anode of said triode.



2,029,347
MEANS AND METHOD OF DISTANCE FINDING
Edwin K. Turner, Jr., West Roxbury, Mass., assignor to Submarine Signal Company, Boston, Mass., a corporation of Maine
Original application September 26, 1927, Serial No. 220,719. Divided and this application August 2, 1929, Serial No. 382,695
4 Claims. (Cl. 177—352)

1. In a system for measuring the distance with the aid of radio and submarine compressional waves sent simultaneously and repeatedly from a sending station, a receiving system including a radio and submarine receiver, a receiving circuit, means for impressing said signals upon the same receiving circuit said receiving circuit including a plurality of vacuum tubes having adjustable impedance means coupled between vacuum-tube stages for delaying the recovery of the tube connected in circuit after said impedance means following the operation of the circuit by the signal, an indicator operably connected in the output of said receiving circuit,



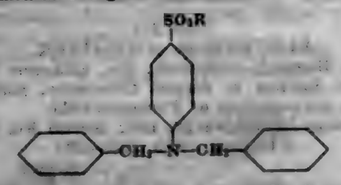
and a scale for indicating distance whereby after initial operation of the indicator said impedance may be adjusted so that the second signal will just not operate said indicator.

2,029,348
HEADLIGHT SYSTEM
John W. Van Denburg, White Plains, N. Y.
Application May 16, 1934, Serial No. 725,865
7 Claims. (Cl. 240—43)

1. A lighting system for use on vehicles which comprises a source of light on the vehicle, reflector means for directing light rays from said source to form a relatively narrow beam and swinging said beam back and forth, a screen disposed across the path of vision of an observer of objects illuminated by said beam, said screen including transparent and non-transparent areas arranged alternately in a row, and means oscillating said screen lengthwise of said row in synchronism with said beam.

2,029,349
AUTOMATIC CONTROL MECHANISM
Karl Friedrich Wagner, Stuttgart, Germany, assignor, by mesne assignments, to Magnesium Development Corporation, Newark, N. J., a corporation of Delaware
Application February 23, 1932, Serial No. 594,759
In Germany February 25, 1931
5 Claims. (Cl. 161—1)

1. An automatic control mechanism comprising driving means, main operating means, a clutch adapted to couple said driving means with said main operating means, means for electrically actuating said clutch, means for shutting off the current supply to said clutch-actuating means when a predetermined position of said main operating means has been attained, a contact member adapted to perform a movement of predetermined speed and duration, electrically actuated means adapted to cause such movement, means for restoring the current supply for actuating the said clutch at the termination of the movement of said contact member, and means adapted to establish the current supply to said movement-causing means incidentally with the shutting off of the current supply to said clutch-actuating means, said last-mentioned current-establishing means being adapted to shut off the current supply to said movement-causing means incidentally with the restoration of the current supply to said clutch-actuating means.



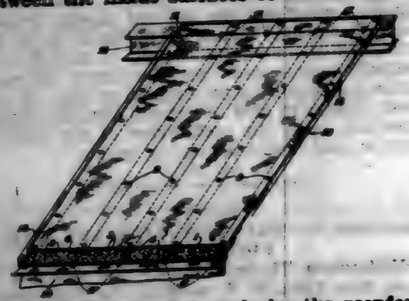
2,029,350
PROCESS OF TREATING SILK AND SILK PRODUCTS
Leo Wallerstein, Thomas Hawley, and Rowland A. Gale, New York, N. Y., assignors to Wallerstein Company, Inc., New York, N. Y., a corporation of New York
No Drawing. Application April 19, 1932, Serial No. 606,256
9 Claims. (Cl. 8—3)

1. The process of treating raw silk coated or covered with its natural gum, so that its gum may be more readily removed subsequently, which process consists in impregnating the silk with a protease preparation, and drying the impregnated silk without removal of any substantial amount of the silk gum.

9. As a new article of manufacture, a substantially dry silk containing substantially all of its gum which silk has been impregnated with a gum modifying proteolytic enzyme preparation and which silk possesses substantially the appearance and weaving properties of untreated silk containing its natural gum, which impregnated gum is in such modified form that it can be substantially and readily removed by treatment with hot water.

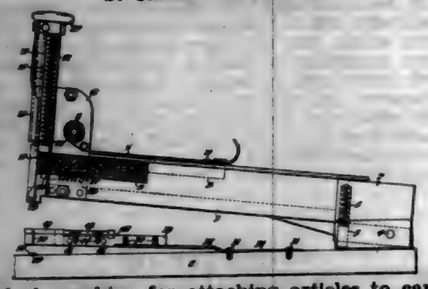
2,029,351
DYEING PROCESS
Alec Wormald, Blackley, England, assignor to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application June 20, 1934, Serial No. 731,571. In Great Britain June 26, 1933
4 Claims. (Cl. 8—6)

1. The process for the application of sulfuric ester salts of leuco vat dyestuffs to textiles, which comprises the addition to the ester salts of a compound of the general formula



where R stands for an atom or radical conferring solubility in water, said compound being free of the corresponding salt of mono-benzyl-sulfanilic acid.

2,029,352
REENFORCED INSULATING ROOF SLAB
Charles J. Beckwith, Brooklyn, N. Y., assignor to Johns-Manville Corporation, New York, N. Y., a corporation of New York
Application April 15, 1932, Serial No. 606,367
7 Claims. (Cl. 108—1)

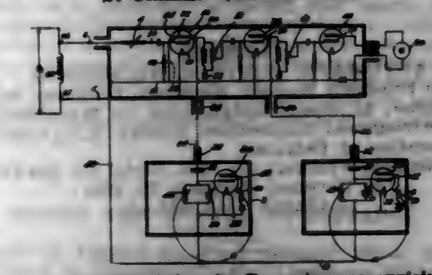


1. A panel comprising an inwardly disposed thermal insulating member, stone-like facing units juxtaposed on each side of the insulating

member, and spaced reenforcing bars extending between the inside surfaces of the facing units,

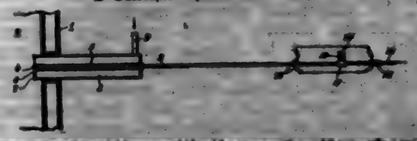
the insulating member and also the reenforcing bars being secured to the facing units.

2,029,253
MACHINE FOR ATTACHING ARTICLES TO OTHER OBJECTS
Herbert A. Bickford, Warwick, R. I., assignor to Boston Wire Stitcher Company, Portland, Maine, a corporation of Maine
Application August 10, 1934, Serial No. 739,274
27 Claims. (Cl. 1—3)



1. A machine for attaching articles to cards and other objects comprising means movable to engage the article to position it on the object, and means acting at right-angles to the plane of movement of the positioning means for applying a fastener to attach the article to the object, said positioning means acting to guide the fastener into place with respect to the article.

2,029,354
ELECTRICAL AMPLIFIER
Paul N. Bossart, Swissvale, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania
Application December 30, 1932, Serial No. 649,571
9 Claims. (Cl. 250—20)

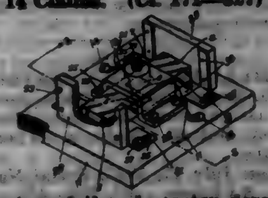


5. In combination, a first amplifier including an electron tube having a plate, a grid and a cathode for amplifying in its plate circuit a carrier telephone current supplied to its grid circuit; a detector, means to couple the input of said detector to the plate circuit of the first amplifier for producing in its output a voice frequency telephone current corresponding to the modulation of the carrier telephone current; a second amplifier including an electron tube having a plate, a grid and a cathode, means to couple the grid circuit of said second amplifier to the output of the detector for amplifying in its plate circuit the voice frequency telephone current; a first copper oxide rectifier characterized by having a rapidly falling resistance for voltages greater than that of the carrier telephone current, means for connecting one terminal of said first rectifier with the grid of the first amplifier tube and its other terminal at a point effectively the cathode of said tube, a second copper oxide rectifier characterized by having a rapidly falling resistance for voltages greater than that of the voice frequency telephone current passed by the detector, and means for connecting one terminal of said second rectifier with the grid of the second amplifier tube and its other terminal at a point effectively the cathode of said tube, whereby the telephone voltages are amplified at substantially full amplifying power of said first and second amplifiers and unusual random voltages are amplified at a much reduced ratio.

2,029,355
ELECTRIC METER
Edward Lindley Bowles, Wellesley Farms, Mass.
Application October 13, 1928, Serial No. 309,360
27 Claims. (Cl. 175—183)

1. A vacuum-tube A. C. meter comprising a plurality of coupled vacuum tubes, means for connecting the vacuum tubes to a source of voltage to be measured, an indicating instrument connected in the output circuit of one of the tubes for measuring the voltage of the source, a vacuum-tube amplifier, and means for detachably coupling the vacuum-tube amplifier to a first-named tube without affecting the connection of the first-named tubes to the connecting means.

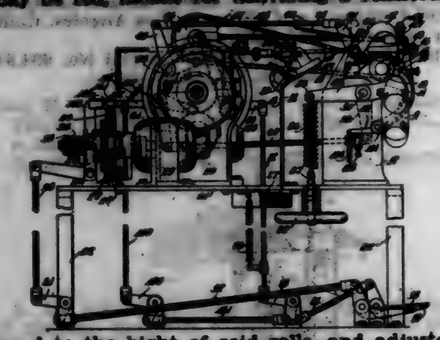
2,029,356
IGNITING DEVICE
Iver G. Carlsen, Rosebank, N. Y.
Application August 21, 1933, Serial No. 687,556
1 Claim. (Cl. 158—10)



The combination with the combustion chamber of a furnace and means for supplying fuel thereto, of an ignition tool for said furnace comprising a relatively long ignition pipe having its open forward end adapted to be inserted into the furnace chamber; an air valve mounted upon said ignition pipe at the rear end thereof and comprising a valve body for closing the rear end of the ignition pipe, a valve chamber upon said valve body in communication with said ignition pipe, a gravity check valve in said valve body and a perforated dust cap enclosing said check valve body, a pair of spark plugs mounted in said ignition pipe, a gas supply pipe extending into said ignition pipe and terminating therein adjacent the said spark plugs, a gas control valve in said gas supply pipes and means operable upon the manipulation of said gas control valve for opening and closing an electric circuit to the said spark plugs.

2,029,357
FLUID FLOW CONTROL DEVICE
William A. Claypat, Dayton, Ohio, assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application September 12, 1934, Serial No. 742,517
6 Claims. (Cl. 138—190)

1. A fluid flow control device for a passage in a hydraulic shock absorber, comprising in combination, two valves one supported by the other, the one adapted to provide for a fluid flow through said passage in one direction the other valve adapted to provide a divided flow of fluid in the opposite direction; and a thermostatically controlled device for regulating the one of said divided flows of fluid in response to temperature changes.

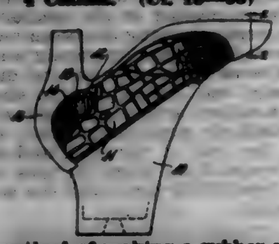


2,029,358
ELECTROMECHANICAL VIBRATOR
James Kilton Clapp, Auburndale, Mass., assignor to General Radio Company, Cambridge, Mass., a corporation of Massachusetts
Application June 30, 1932, Serial No. 618,416
14 Claims. (Cl. 171—327)

3. Apparatus of the character described comprising a piezo-electric crystal having electrodes integral therewith on opposite sides thereof, two oppositely disposed holding members between which the body is held against bodily movement out of a predetermined position, means for suppressing supersonic radiation from the vibrator including baffles adjacent to the ends of the crystal, and means for adjusting the baffles.

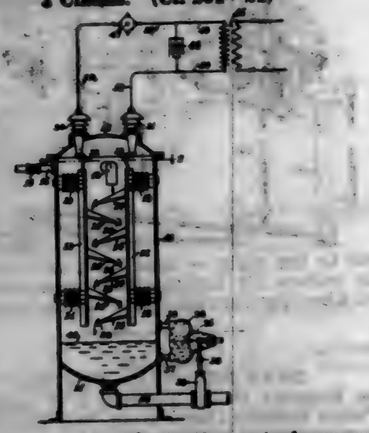
2,029,359
APPARATUS FOR SHIRRING RUBBER ARTICLES
Arthur E. Collins, Cuyahoga Falls, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application April 28, 1934, Serial No. 721,497
18 Claims. (Cl. 154—30)

1. Apparatus for shirring a margin of a rubber article and simultaneously applying a band thereto, said apparatus comprising a pair of separable shirring rolls between which the article may be fed, means for delivering a reinforcing



band to the bight of said rolls, and adjustable cam means for automatically separating said rolls when the shirring of the article is complete.

2,029,360
HEAT RECOVERY SYSTEM
Dion Kanouse Dean, Rahway, N. J., assignor to Foster Wheeler Corporation, New York, N. Y., a corporation of New York
Application August 23, 1935, Serial No. 37,447
14 Claims. (Cl. 92—2)



1. A heat recovery system comprising a digester, means for withdrawing steam and vapors from said digester, means for condensing the steam and vapors, and means for recovering heat in the form of low pressure steam from said steam and vapors.

2,029,361
METHOD OF PRODUCING SURFACES OF COMMINUTED MATERIAL
Alvin L. Diller, Belmont, and Leslie H. L'Hollier, Waltham, Mass., assignors to Hood Rubber Company, Inc., Watertown, Mass., a corporation of Delaware
Application June 8, 1934, Serial No. 729,724
4 Claims. (Cl. 18—58)

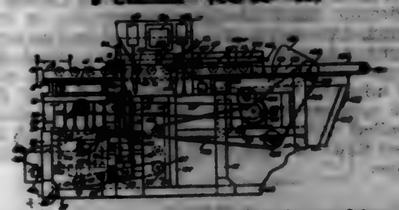
1. The method of making a rubber article having a surface of comminuted material which comprises depositing upon a support a layer of adhesive liquid comprising a coagulant for rubber, depositing thereupon a layer of comminuted material, depositing upon the latter in adhesion therewith a layer of rubber at least a portion of which is coagulable, and removing the layered structure from the support.

2,029,362
ELECTRIC DEHYDRATOR
Lyle Dillon, Los Angeles, Calif., assignor to Union Oil Company of California, Los Angeles, Calif., a corporation of California
Application October 23, 1933, Serial No. 694,837
3 Claims. (Cl. 204—24)

1. A process for dehydrating petroleum emulsions which comprises supplying emulsion to be treated to the surface of an electrode, allowing the said emulsion to fall freely from said electrode and impinge upon a second electrode, establishing an edge discharge from said first mentioned electrode in the direction of flow of said emulsion and maintaining an intense electric field between said electrodes and subjecting said falling stream of emulsion to the high potential gradient resulting from said electric field.

2,029,363
MECHANICAL HAMMER
Robert Rex Downie, Beaver Falls, Pa.
Application March 27, 1933, Serial No. 663,039
Renewed May 14, 1935
12 Claims. (Cl. 262—14)

9. In combination, a machine for providing power; a boom pivoted on the machine to swing vertically; means to swing the boom horizontally; a stick pivoted to swing vertically on the outer end of the boom; a power-actuated line for lifting the boom and supporting the stick in outreaching position; and a blow-delivering maul body of relatively great mass rigidly secured on the outer, free end of the stick and adapted to strike downward blows when the stick is extended outwardly beyond the boom and the boom lifting line is released.



2,029,364
PLUMB GAUGE
John Fabien Duby, Boston, Mass.
Application February 23, 1932, Serial No. 594,515
4 Claims. (Cl. 33—203)

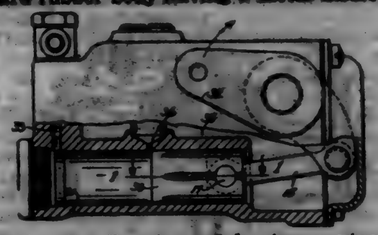
1. A device for testing wheel cant including a hollow body portion, elongated gauge head supporting members connected to said body, gauge head units adapted to be held in a predetermined position on said supporting members, indicating means pivotally supported within said body portion, said means comprising a weighted pointer

and a scale member, a pivot shaft for said pointer, said shaft being positioned to one side of the center of gravity with respect to the pointer member, in order that the proportions of said body portion may be minimized.

2,029,365
CONCRETE BLOCK MACHINE
Louis Gelbman, Yonkers, N. Y.
Application December 9, 1930, Serial No. 501,629
9 Claims. (Cl. 25—41)

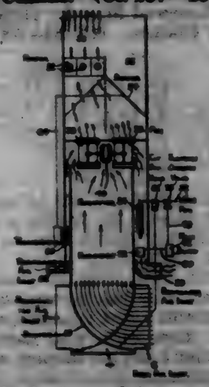
1. A mold for a concrete block machine, comprising members for forming the outsides of the blocks, cores for forming the inner sides of the blocks, and elements connecting said members and cores and having knife shaped upper edges so that material to be molded will not remain thereon and cause pallets placed in the mold to assume untrue positions.

2,029,366
SOLID LUBRICATING MATERIAL
Harvey D. Geyer, Dayton, Ohio, assignor, by mesne assignments, to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application July 17, 1933, Serial No. 680,740
5 Claims. (Cl. 247—47)



1. A flexible lubricating strip for interposition between spring leaves, comprising: a fabric strip having a cushion layer of resilient non-metallic material on one surface thereof and a coating of dry lubricant bonded to the other surface thereof.

2,029,367
COMPOSITE RUBBER PISTON
Harvey D. Geyer, Dayton, Ohio, assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application August 2, 1934, Serial No. 736,178
5 Claims. (Cl. 103—225)



1. A one-piece unitary piston for a hydraulic brake cylinder, comprising: an integrally molded

flexible rubber piston head and hard rubber body, said hard rubber body having a metal insert vul-

canized in situ therein and having a pivot attachment means for connection to a connecting rod.

2,029,368
METHOD AND APPARATUS FOR CONDITIONING AIR
George B. Goldthwaite, South Easton, Mass., assignor to B. F. Sturtevant Company, Hyde Park, Mass., a corporation of Massachusetts
Application December 15, 1931, Serial No. 581,174
3 Claims. (Cl. 257—126)

1. The method of supplying conditioned air to an enclosure which consists in continuously withdrawing air from the enclosure, selectively adding thereto either air withdrawn from the enclosure or fresh air, controlling the humidity of the total air by adding moisture to only said first-mentioned withdrawn air and only when fresh air is to be added thereto, and delivering the entire air to the enclosure.

3. Unit air conditioning apparatus having, in combination, a casing having a main fresh air inlet and a main recirculated air inlet, means for selectively opening one of the inlets, an auxiliary recirculated air inlet, means responsive to the position of the inlet opening means for humidifying the air admitted through the auxiliary inlet when the fresh air inlet is open, means for cutting off humidification of the auxiliary air when the fresh air inlet is closed, and means for heating both portions of the air.

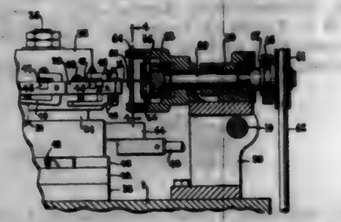
2,029,369
MONOLITHIC CEMENTITIOUS PIPE
Eric P. Halliburton, Los Angeles, Calif.
Application October 10, 1933, Serial No. 692,925
5 Claims. (Cl. 138—66)

1. A pipe comprising a monolithic cementitious body, a metallic liner, a casing, and a plurality of non-metallic elements embedded in the cementitious body and extending from the liner to the outer surface of said body to said casing.

2,029,370
CUSHIONING STRUCTURE
Carl H. Heidenbrand, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application March 6, 1933, Serial No. 659,654
10 Claims. (Cl. 5—351)

1. An upholstery unit comprising a plurality of resilient members extending in crossed relation through said unit, said members comprising reticulated fibrous sheet material formed of resilient fibers held together at their crossing positions to form sheet material looped in sinuous folds, said members being of reduced resilience in zones thereof to provide determinately different resistance to compression in different portions of the unit.

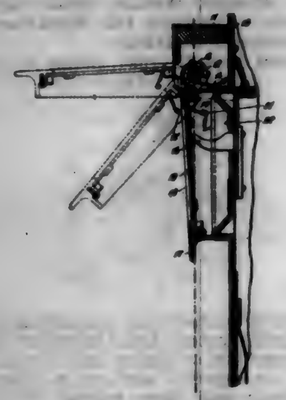
2,029,371
ARTICLE OF FOOTWEAR AND METHOD OF PRODUCING SAME
Walter R. Hickler, Weston, Mass., assignor to Hood Rubber Company, Inc., Watertown, Mass., a corporation of Delaware
Application June 27, 1934, Serial No. 732,651
4 Claims. (Cl. 36—32)



1. An article of footwear comprising a flexible but inextensible rubber tread member containing a high proportion of fibers, said tread member having on its exposed surfaces a layer of wax through which said fibers extend, said layer of wax and extending fibers being burnished to closely resemble sole leather.

3. The method of producing a rubber article resembling leather which comprises mixing fibers and rubber to form a vulcanizable composition, vulcanizing the composition, buffing a surface of the resulting article to depress the rubber below the ends of the fibers, filling the interstices between the projecting fibers with a wax, and burnishing the resulting surface to lay the fibers along the surface.

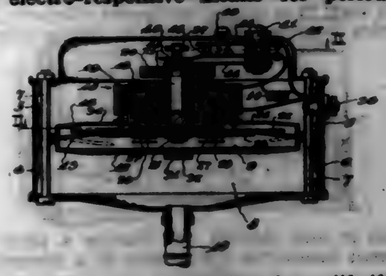
2,029,372
ROLLER ATTACHMENT
Alfred Hofmann, Palisade, N. J., assignor to Alfred Hofmann Needle Works, Inc., Union City, N. J., a corporation of New Jersey
Original application June 20, 1934, Serial No. 731,446. Divided and this application February 26, 1935, Serial No. 7,259
2 Claims. (Cl. 90—23)



1. In a machine for processing the end of a knitting needle the combination comprising a

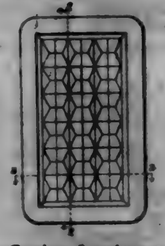
support having bearings therein, a shaft slidably and rotatably mounted in said bearings, said support including a housing enclosing one end of said shaft, a plurality of rollers rotatably mounted on the end of the shaft within said housing, a cover plate closing the housing, a work piece guiding

member mounted on the cover plate, means for causing rotation of said shaft in said bearings, and means for effecting reciprocation of said shaft in said bearings as it revolves, said guide serving to introduce a work piece between said rollers.



2,029,373
FIRE ALARM BOX DOOR
Paul P. Herni, Newark, N. J.
Application October 18, 1930, Serial No. 489,686
3 Claims. (Cl. 177—372)

1. In a fire alarm box, the combination of a frame having a handle for operating an alarm, a movable panel in front of the handle, an apertured flap bearing on one surface thereof visible indicia pertaining to the operation of the handle, a pivot on the frame above the handle for one side of the flap, the opposite side of the flap being supported in suspended position against the panel with the aperture therein in registry with the handle, whereby the flap swings downwardly by gravity over the handle about its pivot to display its indicia when released by movement of said panel.



2,029,374
ELECTROMAGNETIC PUMP
Junius W. Hemsley, Toledo, Ohio
Application November 20, 1934, Serial No. 753,874
12 Claims. (Cl. 230—55)

1. Fluid pumping apparatus comprising a chamber, means for periodically expanding and contracting said chamber, means providing a passageway communicating with the interior of the chamber, a valve controlling said passageway, and electro-responsive means for periodically

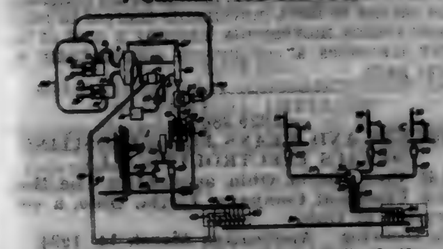
actuating the valve in synchronism with the periodic expansion and contraction of said chamber.

2,029,375
REFLECTOR
Cleveland A. James, Philadelphia, Pa., assignor to W. P. Montgomery, Atlantic City, N. J., and John M. Zerbey, Philadelphia, Pa.
Application February 16, 1931, Serial No. 518,248
Renewed May 22, 1935
12 Claims. (Cl. 88—78)

1. A triple reflector having one surface in the form of an isosceles right triangle, the other two surfaces being trapezoids, and each of the surfaces being at right angles to each other.

2,029,376
METHOD FOR MAKING A CATALYST
Henry Joseph, Rosedale, N. Y., assignor to General Chemical Company, New York, N. Y., a corporation of New York
No Drawing. Application March 13, 1931, Serial No. 523,162
19 Claims. (Cl. 23—234)

1. The method of preparing a vanadium catalyst which comprises forming a mixture of a finely divided carrier and an organic gum, adding to the mixture a solution of a vanadium compound, and then heating the mass so formed to oxidize the organic material contained therein and to produce a vanadium catalyst.



2,029,377
DECORATIVE PATENT LEATHER AND METHOD OF MAKING THE SAME
Benjamin J. Kaplan, Brookline, Mass.
Application October 19, 1934, Serial No. 747,767
11 Claims. (Cl. 41—33)

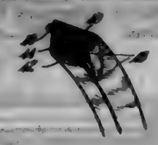
10. As a new article of manufacture, decorative patent leather comprising leather having the usual patent surface coating thereon with a decorative discontinuous layer of contrasting color incorporated in such coating.

11. That method in making patent leather having a decorative surface patent coating comprising as steps the providing of the tanned leather with a background layer of predetermined substantially uniform color, baking said layer, applying to said background layer a discontinuous layer of contrasting color to form a pattern layer, applying a coating of japanner's varnish, and baking and sunning the leather to form the patent coating with the design incorporated thereon.

2,029,378
STEERING MECHANISM
Charles V. Keens, Philadelphia, Pa., assignor to American Engineering Company, Philadelphia, Pa., a corporation of Pennsylvania
Application September 27, 1933, Serial No. 691,171
7 Claims. (Cl. 103—52)

1. In a device of the class described, the combination with a pump, of means for regulating the discharge of said pump including a reciprocable member and a differential gear, resilient means interposed between said differential gear and said member, projections extending laterally from said member, a yoke having cam faces thereon adapted to engage said projections, a fluid motor for actuating said yoke against the tension of said resilient means when the pressure developed by the pump exceeds a predetermined value, to reduce the stroke of the pump, one or more springs for resisting the operation of said fluid motor, a bracket mounting for said springs, means including a lever operatively connecting said springs to said yoke, and means for adjusting said springs.

2,029,379
METHOD OF MAKING ORNAMENTED RUBBER ARTICLES
Leslie H. L'Hollier, Waltham, and Alvin L. Diller, Belmont, Mass., assignors to Hood Rubber Company, Inc., Watertown, Mass., a corporation of Delaware
Application February 27, 1934, Serial No. 713,166
3 Claims. (Cl. 18—58)

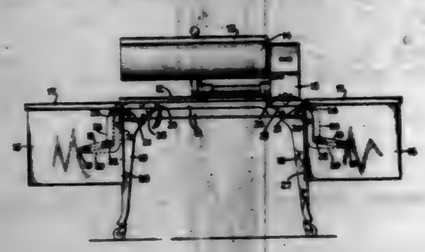


3. The method of producing an ornamented rubber article which comprises ejecting liquid dispersed rubber from a nozzle onto a supporting surface to form a gossamer design, depositing thereupon a layer of rubber of a contrasting appearance and removing the said layer with the rubber of the design adhered to the surface thereof.

2,029,380
APPARATUS FOR AND METHOD OF CEMENTING WELLS
Sanford E. Manning, Houston, Tex., assignor to The R. S. M. Company, Inc., Houston, Tex., a corporation of Texas
Application August 11, 1930, Serial No. 474,449
15 Claims. (Cl. 166—21)

11. A method of setting screen pipe in wells comprising pumping a plurality of spaced superposed charges of cementitious material downwardly through the casing, discharging one of said charges at the lower end of said screen and then discharging the next superposed charge at the upper end of said screen.

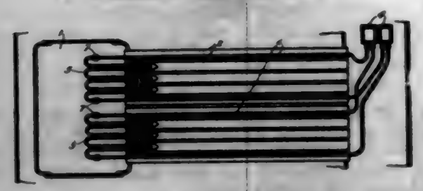
2,029,381
ENDLESS BELT
Allan B. Merrill and George H. Stewart, Akron, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application April 30, 1932, Serial No. 608,488
8 Claims. (Cl. 74—234)



6. An endless, V-type transmission belt comprising a resilient rubber body portion, a pair of flexible cabled core elements embedded therein at the neutral zone of the belt, and a textile cover enclosing the rubber body.

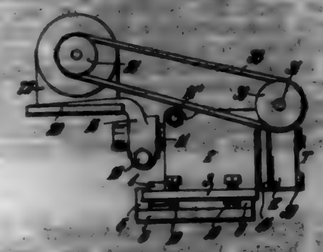
2,029,382
PROCESS FOR PRODUCING HIGH MOLECULAR WEIGHT COMPOUNDS FROM PETROLEUM OIL
David R. Merrill, Long Beach, Calif., assignor to Union Oil Company of California, Los Angeles, Calif., a corporation of California
No Drawing. Application November 20, 1933, Serial No. 698,578
8 Claims. (Cl. 196—13)

1. A process for the production of high molecular weight hydrocarbons which comprises com-



mingling a cracked residuum pitch with a solvent capable of dissolving high molecular weight hydrocarbons from said pitch but to leave an insoluble residue, separating a solvent solution of high molecular weight hydrocarbons from the insoluble residue, commingling said high molecular weight hydrocarbons with an aromatic solvent, treating said high molecular weight hydrocarbons and aromatic solvent with acid and separating said aromatic solvent from said acid treated high molecular weight hydrocarbons.

2,029,283
IRONING MACHINE
Charles E. Mergenstern, Binghamton, N. Y., assignor to Nineteen Hundred Corporation, Binghamton, N. Y., a corporation of New York
Application November 12, 1934, Serial No. 752,614
9 Claims. (Cl. 68—9)



1. In a machine of the class described a main support, a cover member, and means connecting said support and member arranged to permit movement of said member from a position above said support to a position with its top at substantially the level of the top of said support and beyond the ends of the same, said means comprising a pair of links connected at fixed pivots to said support and member and maintaining the top of said member constantly horizontal.

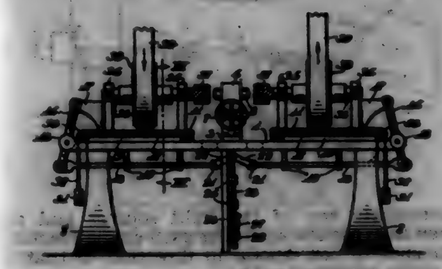
2,029,284
SUPERHEATER
Heinrich Peperkorn, Kassel-Wilhelmshohe, Germany, assignor to The Superheater Company, New York, N. Y.
Application December 14, 1934, Serial No. 757,433
In Germany February 7, 1934
4 Claims. (Cl. 122—462)

1. In apparatus of the class described, the combination of a return tubular boiler having a return chamber, a smoke box and smoke tubes connecting them, superheater headers in the smoke box, tubular superheater elements in the return chamber, each of said superheater elements comprising a plurality of parallel hair pin loops connected to form a continuous steam path, the loops each located in part in the return chamber and in part in the smoke tubes, and tube lengths, two to each superheater element, extending through smoke-tubes and connecting the ends of the elements to the headers.

2,029,285
MACHINE TOOL
Julian L. Perkins, West Springfield, Mass.
Application January 19, 1935, Serial No. 2,544
12 Claims. (Cl. 82—1)

1. A machine of the class described comprising in combination, a support, a tool carrier slidable therein, means to impart a rotary movement to one end of said carrier and means at the other end of the carrier to limit movements thereof to rocking and sliding movements whereby a part of the carrier traverses a continuous substantially elliptical path.

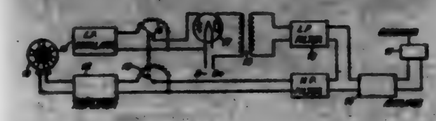
2,029,286
PROCESS AND MEANS FOR DEPOSITING METALS ELECTROLYTICALLY
Paul R. Pine, Elyria, Ohio, assignor to The Harshaw Chemical Company, Elyria, Ohio, a corporation of Ohio
No Drawing. Application March 14, 1934, Serial No. 715,481
20 Claims. (Cl. 204—1)



2. An electro-deposition bath, comprising a solution providing ions of the metal to be deposited by electrolysis and a sulphuric acid reaction product of an oleoresin, said reaction product being pre-formed outside the bath.

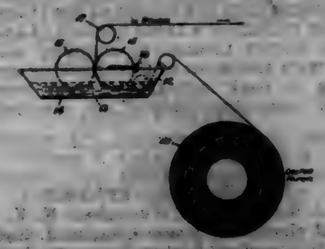
2,029,287
METHOD AND MEANS OF ELECTRO-DEPOSITION
Paul R. Pine, Elyria, Ohio, assignor to The Harshaw Chemical Company, Elyria, Ohio, a corporation of Ohio
No Drawing. Application May 4, 1934, Serial No. 723,267
12 Claims. (Cl. 204—1)

1. An electro-depositing bath, comprising a solution of a compound of a metal to be deposited by electrolysis, and a sulphuric acid reaction product of an organic compound having substantially a terpenic type nucleus, said reaction product having been pre-formed.



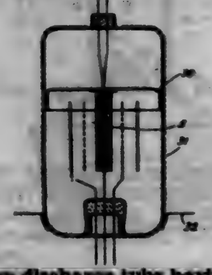
2,029,288
HEAD SHAPING MACHINE
Thomas A. Richardson, Verona, and Charles W. Dawson, Oakmont, Pa., assignors to Woodings-Verona Tool Works, Verona, Pa., a corporation of Pennsylvania
Application June 30, 1934, Serial No. 733,368
1 Claim. (Cl. 90—14)

A machine for shaping the ends of spike maul heads, comprising a bed plate, a pair of carriages slidably mounted thereon for movement toward and away from each other, a chuck mounted on the bed plate between the carriages for supporting a spike maul head, a milling cutter journaled in each carriage adjacent an end of said head, means for driving the cutters, a lever fulcrumed on each end of the bed plate and pivoted to the adjacent carriage, a pedal, means connecting the pedal to each lever for rocking the levers when the pedal is depressed and simultaneously moving the carriages toward each other to thereby



bring the cutters into cutting engagement with the opposite ends of the maul head, and means for automatically moving the carriages away from said head when the pedal is released.

2,029,289
RECORDING AND REPRODUCTION OF ELECTRICAL IMPULSES
Abraham Ringel, Merchantville, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application February 1, 1933, Serial No. 654,667
21 Claims. (Cl. 179—100.1)



1. The method of sound recording and reproducing which includes superimposing on the audio impulses a control current of inaudible frequency, raising the level of said control current when the volume of said impulses is relatively low and lowering said level when said volume is relatively high, reproducing said current and impulses, and controlling the volume of said reproduced impulses in accordance with said reproduced current.

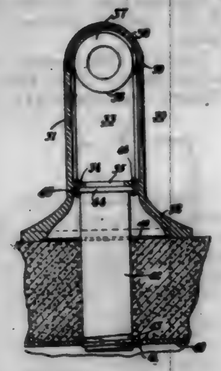
2,029,290
WATERPROOFED PLASTIC PAPER AND METHOD OF PRODUCING THE SAME
Earle V. Rodgers, Kenilworth, N. J.
Application June 8, 1933, Serial No. 674,822
4 Claims. (Cl. 91—68)

1. The method of producing a waterproofed plastic product, which comprises treating creped paper with a non-aqueous solution containing a pigment and a stearate and an organic solvent.

2,029,291
ELECTRON DISCHARGE TUBE
Hans Otto Rosenstein, Wolfgang Kautter, and Horst Rothe, Berlin, Germany, assignors to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, a corporation of Germany
Application June 28, 1934, Serial No. 732,774
In Germany July 5, 1933
1 Claim. (Cl. 250—27.5)

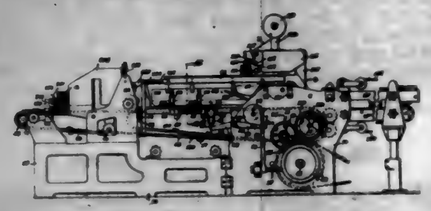
An electron discharge tube having an envelope, an indirectly heated cathode positioned within said envelope and having a sleeve closed at one end, a heater extending within said sleeve and provided with leads extending thru one end of said envelope, concentric electrodes surrounding said cathode sleeve, leads from said cathode and said concentric electrode extending thru the opposite end of said envelope from said heater leads, a shield extending transverse of the envelope into proximity of the envelope, and electrically connected to said cathode sleeve, a metallic coating on the outside of said envelope capacitively connected to said transverse shield and a transverse shield exterior of and adjacent the end of the envelope thru which the leads from said cathode and said concentric electrode extend and electrically connected to said outside metallic coating.

2,029,292
ROLLER SKATE
Albert Frederick William Ruske, San Francisco, Calif.
Application September 11, 1933, Serial No. 689,023
5 Claims. (Cl. 280—173)



1. A roller skate comprising a foot rest, a pair of side pieces supporting the same and having registering front and rear slots therein, the front slots being forwardly inclined in an upward direction and the rear slots being rearwardly inclined in an upward direction, wheels having axles, grooved collars on the axles and being slidable in the slots and spring means urging the wheels toward the lower ends of the slots.

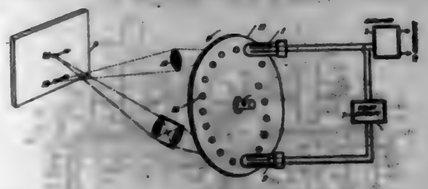
2,029,293
FLOOR OUTLET FIXTURE HOUSING
Edward B. Sargent, Mount Lebanon, Pa., assignor, by mesne assignments, to H. H. Robertson Company, Pittsburgh, Pa., a corporation
Application March 18, 1932, Serial No. 599,679
2 Claims. (Cl. 247—6)



1. In an electrical floor outlet fixture housing, the combination comprising a hollow body portion

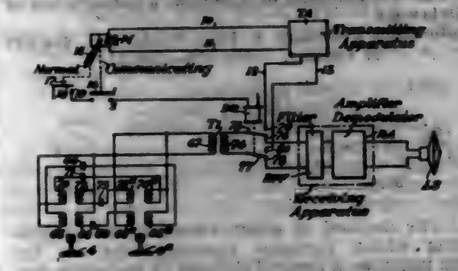
having the lower end flared outwardly to form a base for the housing and an apertured member within said body portion, a standpipe having an outwardly extending flange adapted to be received

within the flare on said body portion beneath said apertured member, and means cooperating with said apertured member and said flange for securing said body to said standpipe.



2,029,394
BOX BLANK FOLDING MECHANISM
Melvin H. Sidebotham, West Newton, Mass., assignor to Specialty Automatic Machine Company, Medford, Mass., a corporation of Massachusetts
Application July 2, 1934, Serial No. 732,353
27 Claims. (Cl. 93—41)

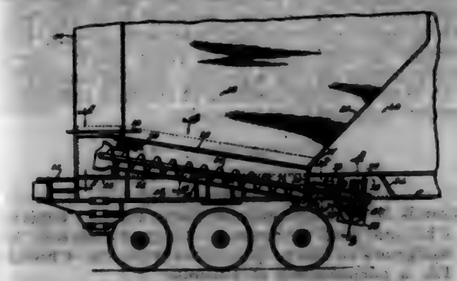
1. A blank folding machine having carriers for the blanks, folders for turning side portions of the blanks toward each other, and mechanism for causing the carriers to travel at diminishing speed followed by accelerated speed with intermediate stoppages to temporarily arrest movement of the blanks during operative movement of the folders.



2,029,395
TELEVISION SYSTEM
Theodore A. Smith, Ridgewood, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application June 11, 1929, Serial No. 369,973
4 Claims. (Cl. 178—6)

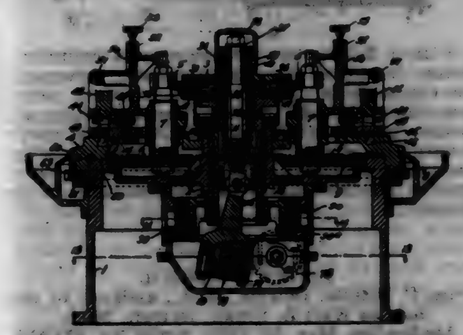
2. In a television receiving system, a scanning element having a series of apertures arranged about the periphery thereof, a plurality of light sources arranged to produce light of an intensity corresponding to the intensity of light and shadow on individual elements of a picture surface, a screen, a means provided by said scanning element for independently projecting the intensity of each of said light sources from diametrically opposite apertures upon the said screen at similar and corresponding points, means for delaying the action of each of said light sources with respect to the other whereby corresponding picture intensities are produced in a sequential and time-delayed manner and an optical system positioned

intermediate one of the light sources and the screen to cause the scanning path of the resulting light spot to correspond in direction to that of the other scanning path.



2,029,396
APPARATUS FOR COMMUNICATION SYSTEMS
Andrew J. Sorensen, Edgewood, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania
Application July 11, 1934, Serial No. 734,854
2 Claims. (Cl. 179—82)

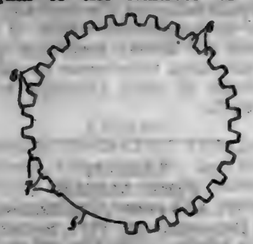
1. In combination with railway train-carried telephone apparatus comprising transmitting apparatus including a microphone and a generator for supplying a carrier telephone current and receiving apparatus including a demodulator and a loud speaker capable of reproducing the audio frequencies of a carrier telephone current, a first circuit on a train including a winding and a condenser tuned to resonance at a first predetermined frequency of the carrier telephone current, a second circuit on the train including a winding and a condenser tuned to resonance at a second predetermined frequency of said telephone current, a relay, another winding electrically coupled with both said first and second circuits, a first circuit means for coupling said other winding with the output of the transmitting apparatus including a front contact of said relay, a second circuit means for coupling said other winding with the input of the receiving apparatus including a back contact of said relay, and manually controlled means for governing said relay.



2,029,397
LOCOMOTIVE TENDER
Charles J. Surdykowski, Tuckahoe, N. Y., now by judicial change of name Charles J. Surdy, assignor to Standard Stoker Company, Inc., a corporation of Delaware
Application November 23, 1929, Serial No. 407,245
26 Claims. (Cl. 105—234)

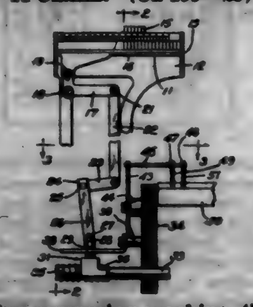
1. A locomotive tender frame comprising a horizontal main under-frame plate member, and a

rearwardly and downwardly extending depression in said plate member forming a stoker trough.



2,029,398
GEAR GENERATING MACHINE
William E. Sykes, Buffalo, N. Y.
Application December 12, 1932, Serial No. 646,793
18 Claims. (Cl. 90—9)

1. In a gear generating machine, the combination of a tooth generating device carrying a series of cutters movable on said device and adapted to perform successive tooth generating steps, means for producing a planetary motion of a gear blank whereby the blank revolves about its own axis and travels in succession past said successive portions of the generating device in cutting relation thereto, means for reciprocating said generating device transversely of the plane of travel of the blank for cutting the blank, whereby successive portions of the generating device operate in succession on said gear blank and the generation of the teeth on the blank is completed when said blank has passed the several portions of the generating device, and mechanism for retracting the cutters on the generating device and maintaining them out of contact with the blank during the return non-cutting stroke of the generating device.



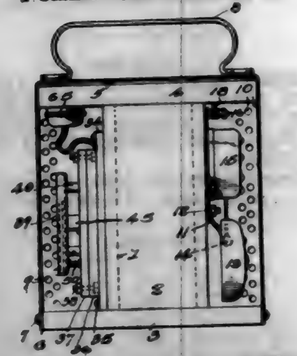
2,029,399
GEAR CUTTER
Walter Henry Try, Staines, England, assignor to William E. Sykes, Buffalo, N. Y.
Application May 19, 1933, Serial No. 671,574
In Great Britain June 1, 1932
2 Claims. (Cl. 29—103)

1. A gear cutting tool of gear wheel type having a series of peripheral teeth of uniform pitch disposed in a circle concentric with the axis of the tool, and an untoothed peripheral portion, said series comprising a set of similar teeth preceded by one or more teeth of different dimensions, and the number of teeth in said set being at least equal to the number of teeth to be

formed on the gear which is produced by the tool.

2,029,400
RAIL SHIFT MECHANISM FOR LINE CASTING AND COMPOSING MACHINES
Lester M. Walden, Chicago, Ill., assignor to Teletype Corporation, Chicago, Ill., a corporation of Delaware
Application October 27, 1933, Serial No. 695,494
11 Claims. (Cl. 199—29)

1. In a line composing machine, the combination of a matrix assembling block, a rail shiftable into alternative positions for modifying the reception of selectively released matrices within said block, means for shifting said rail, and a retarded motion mechanism for deferring the response of said rail including a duplex driving mechanism for initiating motion in two directions at a reduced speed, means for actuating said mechanism at a derived speed, and a linkage movable in two directions by alternative portions of said mechanism for accordingly imparting selective responses to said rail at said reduced speed.

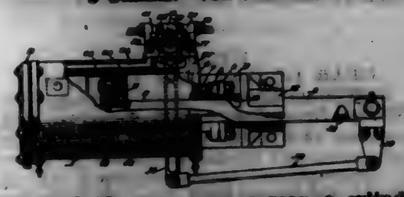


2,029,401
METHOD OF AND APPARATUS FOR OBTAINING OPTICAL EFFECTS BY ELECTRICAL MEANS
George William Walton, London, England
Application January 14, 1932, Serial No. 586,664
In Great Britain January 19, 1931
16 Claims. (Cl. 88—61)

1. The method of producing a refractive effect upon light with the aid of an electrically stressed

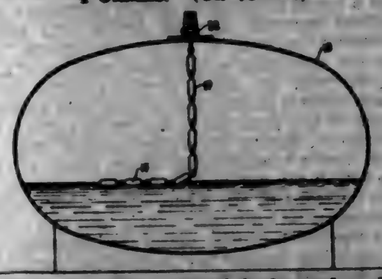
light transmitting medium disposed in the path of said light which comprises establishing in the direction of said path, an electrostatic stress having at least a component which is constant at any one point but differs from one point to another in a direction transverse to said path and passing a beam of light through said medium along said path.

2,029,402
FIRE ALARM
John W. Alexander, Clarendon, Va.
Application December 28, 1931, Serial No. 583,561
1 Claim. (Cl. 177—311)



The combination in a fire alarm with a holder, a battery therein, and an alarm mounted on the holder, of a removable top plate for the holder having holes and open-end slots, terminal posts on the battery projecting into two of said holes and terminal posts of the alarm projecting into two other holes, a resilient conductor blade in one slot having a free end in contact with an alarm terminal and another free end projecting into the open end of its slot, a second conductor blade having a free end in contact with a battery post and its other end projecting into the open end of its slot, a thermostat mounted on the holder and a connecting plug electrically connected therewith, blades on said plug for frictional engagement with the ends of the blades in the open end slots, and a third conductor blade in a slot of the top plate having its resilient ends in contact with a battery post and an alarm post respectively.

2,029,403
DEVICE FOR CONVEYING FINELY DIVIDED MATERIAL
Arno Andreas, Munster, Germany
Application October 1, 1931, Serial No. 566,275
In Germany April 5, 1930
1 Claim. (Cl. 198—128)

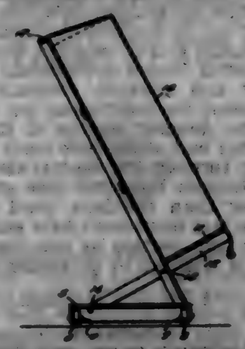


In a device for conveying finely divided materials, a turbine including a propeller and a housing therefor, an inlet conduit communicating with the housing and inclined to the vertical at such an angle that the entering material flows uniformly down the lower wall thereof, the axis of said conduit being disposed at an angle to the axis of rotation of said propeller, a hopper from which material is released into said inlet conduit, and an intermediate conduit from said hopper to said inlet conduit intersecting said inlet conduit at substantially a right angle, one of said conduits having a portion thereof constricted with respect to the opening of the first mentioned conduit adjacent said housing.

2,029,404
REVERSE GEAR
Francis N. Bard, Highland Park, Carl L. Charles, Chicago, and Thomas C. Gray, Evanston, Ill., assignors to Baroo Manufacturing Co., Chicago, Ill., a corporation of Illinois
Application April 20, 1933, Serial No. 667,506
5 Claims. (Cl. 121—38)

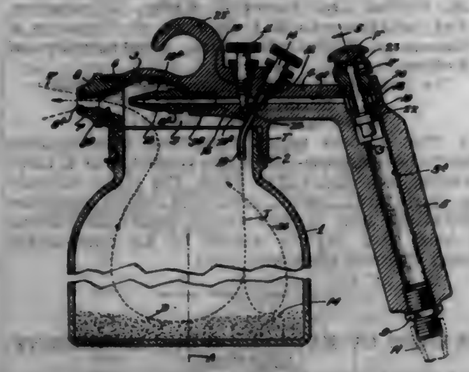
1. In a fluid power reverse gear, a cylinder, a piston mounted for reciprocatory movements therein, a piston rod extending from one side of said piston through one end of said cylinder, and means for resisting movement of said piston toward the end of said cylinder through which the piston extends to compensate for the difference in effective areas of the two sides of the piston.

2,029,405
FLOAT CONTROL
Lynn C. Beadle, Detroit, Mich., assignor of one-half to Karl B. Segall, Detroit, Mich.
Application May 20, 1933, Serial No. 671,978
4 Claims. (Cl. 73—32)



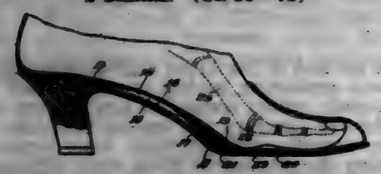
1. For use with a liquid body and a datum, wherein the vertical distance between the body and the datum may vary, and wherein advantage is to be taken of changes or variations of said vertical distance, even those which amount to less than unity fractions of the maximum possible variation in said vertical distance, a float control comprising a counterbalanced means mounted to move with respect to the datum in accordance with changes in said vertical distance, the movement of the means generally corresponding to but being less than the change in said vertical distance, and a float supported by said means and by said liquid body, and forming a means-moving load for said means, which load varies in amount in correspondence to the changes in said vertical distance, the float comprising a chain-like assemblage of three or more individual relatively movable connected float links whose interspacing is a relatively small fraction of the maximum possible variation of said vertical distance whereby variations in said vertical distance equal to the float interspacing and thus amounting to less than unity fractions of the maximum possible variation are translated into corresponding, though reduced, movements of the means.

2,029,406
AIR OR GAS FILTER UNIT
Hans E. Birkholz, Louisville, Ky., assignor to American Air Filter Company, Inc., Louisville, Ky., a corporation of Delaware
Application March 27, 1931, Serial No. 525,231
4 Claims. (Cl. 98—84)



1. An air filtering unit comprising a rectangular housing having an inlet opening in the lower portion of its rear wall, an outlet opening in its front wall and a normally closed lid at its top, a partition spaced from the rear wall and extending upwardly from the bottom to a point short of the top, a filter medium extending from said partition toward the front wall of said casing, said partition and filter medium cooperating to divide the housing into an inlet chamber which extends from the inlet opening to the filter medium and an outlet chamber which extends from the filter medium to the outlet opening, and means in the outlet chamber for causing a flow of air between said openings.

2,029,407
DISPLAY STAND
Benjamin Ehrenstein, Youngstown, Ohio
Application April 5, 1935, Serial No. 14,912
1 Claim. (Cl. 211—23)



A display rack of the class described, comprising a rectangular shaped base constructed of angle iron, an inverted U-shaped frame pivotally mounted at its ends to opposite sides adjacent the front corners of said sides, and extending upwardly and rearwardly of said base, the upper transverse edge of said frame lying beyond the vertical plane of the rearmost portion of the base, cleats secured at one end to each end of the frame adjacent the rear corner thereof, and being inclined upwardly and forwardly and projecting beyond the inverted U-shaped frame, said cleats being secured to said frame at a point of crossing, and a platform disposed on the projected portion of said cleats.

2,029,408
POWDER-SPRAYING APPLIANCE
Svend Bramsen, Fritz Wahlin, and Eric Gustafsson, Chicago, Ill., assignors to Binks Manufacturing Company, Chicago, Ill., a corporation of Delaware
Application June 29, 1933, Serial No. 678,220
17 Claims. (Cl. 91—8)

6. A pneumatic appliance for spraying dry comminuted material, comprising an upright receptacle housing the material; a cover member fitted upon the mouth end of the receptacle and provided at its forward edge with a discharge bore; the cover member having an air passage extending into it and presenting its outlet portion coaxial with the said discharge bore and spaced rearwardly from the rear end of the said discharge bore; the diameter of the outlet end of the said air passage being a minor fraction of the diameter of the rear end of the discharge bore; the cover member also being provided with a second air passage for projecting air downwardly into the receptacle in a jet of smaller diameter than the rear end of the said discharge bore.

2,029,409
ARCH SUPPORT SHOE
Louis C. Brand, Ottawa, Ill.
Application May 29, 1935, Serial No. 24,087
2 Claims. (Cl. 36—71)

1. An arch support shoe comprising an arch support extending longitudinally beneath the inner sole on the shank of the shoe, secured to the shoe at its rearward end and unattached at its forward end, said support consisting of a metal stiffener having an upper surface longitudinally convex and a flattened outer end portion, said convex portion being of less length than the shank over which it extends, whereby the flattened end portion projects over and is spaced from the hinge

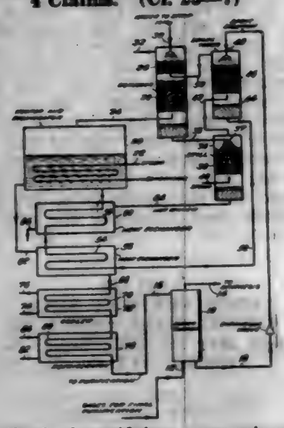
portion between the tread and shank portions of the sole, an upper crowned resilient pad secured to the forward end portion of the stiffener to overlie approximately one-third of the stiffener surface and protruding beyond the forward end, and a flat lower pad secured to the under side of the stiffener and protruding forwardly and sidewise of the forward portion of the upper pad and bridging the hinge portion of the tread and shank.

2,029,410

CHEMICAL PRODUCTS AND PROCESSES FOR PRODUCING SAME

Wallace H. Carothers, Fairville, Pa., and Arnold M. Collins and James E. Kirby, Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application April 11, 1933, Serial No. 665,554
25 Claims. (Cl. 260—2)



1. The process which comprises polymerizing chloro-2-butadiene-1,3 in the presence of a film-forming material taken from the class consisting of natural resins, synthetic resins, cellulose derivatives and polymerizable materials having at least two carbon atoms in an open-chain joined by more than one bond.

2,029,411

METHOD OF REGENERATING ABSORBENT LIQUIDS

Axel Christensen, Rye, N. Y., assignor, by mesne assignments, to Chemical Construction Corporation, a corporation of Delaware

Application January 12, 1933, Serial No. 651,337
4 Claims. (Cl. 23—7)

1. A method of purifying ammoniacal cuprous solutions containing carbon monoxide and carbon dioxide, which comprises heating the solution thereby expelling the carbon monoxide and carbon dioxide together with some ammonia, scrubbing the mixture of gases while still hot, in counter flow with cold water to absorb the ammonia, permitting the carbon dioxide and carbon monoxide passing through the scrubbing water to escape, heating the scrubbing water to expel the ammonia, and reabsorbing the ammonia into the ammoniacal cuprous solution in which the gases and vapors from the heated scrubbing water, which are not absorbed by the ammoniacal cuprous solution, are returned to the gases and vapors undergoing scrubbing with water.

2,029,412

MANUFACTURE OF ESTERS OF LEVULINIC ACID

Gerald J. Cox and Mary L. Dodds, Pittsburgh, Pa., assignors, by mesne assignments, to Niacet Chemicals Corporation, New York, N. Y., a corporation of New York

No Drawing. Application December 19, 1934, Serial No. 758,267
3 Claims. (Cl. 260—106)

1. The method of preparing esters of levulinic acid which comprises esterifying without previous purification a syrup of levulinic acid obtained by decomposing carbohydrates with a mineral acid.

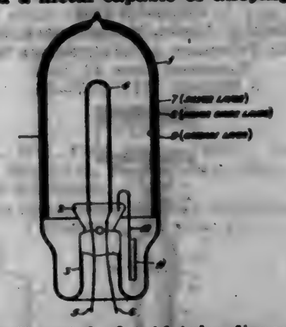
2,029,413

BAND BUCKLE

Willie Henry Davis, Angola, La., assignor of one-half to Armand Lacoste, New Roads, La.

Application March 17, 1934, Serial No. 716,141
1 Claim. (Cl. 24—23)

A bale band consisting of a plate composed of spring metal and being thin, flat and substantially rectangular, said spring plate having two side and one central slots, said slots being substantially parallel to one another and having bars between the side and central slots, said plate having side walls outwardly of the side slots, one of the bars at one side of the central slot being continuous from end to end, the other bar at the opposite side of the said central slot being interrupted and having a gap therein setting up communication between the central slot and the adjacent side slot, said gap being made more to one side of the central longitudinal portion of the bar than the other whereby to provide a comparatively rigid short leg and a long flexible leg normally in the plane of the plate and movable out of said plane and having at its inner side a cam wall tapering from the widest portion at substantially the base of the long spring leg in diminishing thickness toward the free flexible end of said leg, one end of the bale band being looped downwardly through the central slot and upwardly through one of the side slots about the continuous bar to form two bights in the doubled portion of the bale band end, the other end of the bale band being looped downwardly through the central slot and thence upwardly through the other side slot, said slots being longer than the bale band is wide, the bight of the last mentioned bale end adapted to ride on the cam portion at one side and at the other side is enabled to be swung out through said gap.



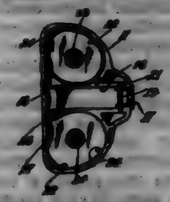
2,029,414

PHOTO-ELECTRIC TUBE AND THE METHOD OF MAKING SAME

Jan Hendrik de Boer, Johannes Bruynes, and Marten Cornelis Teves, Eindhoven, Netherlands, assignors to Radio Corporation of America, a corporation of Delaware

Application July 1, 1933, Serial No. 678,554
In Germany July 23, 1932
11 Claims. (Cl. 250—27.5)

1. A photo-electric tube comprising an anode and a photoelectric electrode containing alkali-metal, and a metal capable of alloying with the



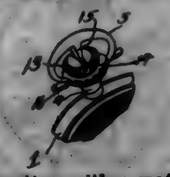
excess alkali-metal of said tube disposed outside the vicinity of said electrode.

2,029,415

PICTURE DISPLAY DEVICE

Oliver C. Dennis, Wilmette, Ill.

Application May 24, 1934, Serial No. 727,303
4 Claims. (Cl. 40—28)



1. In a picture display device, a bi-part molded casing having two correspondingly shaped members for fitting together to provide film carrying compartments at the top and bottom of said casing, a film carried in the compartment, a removable guide plate for guiding the film from one compartment to the other, a film-viewing aperture at one side of the casing, and a film-lighting aperture at the other, and means permitting finger movement directly on the film to move said film from one compartment to the other.

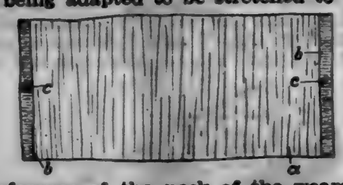
2,029,416

WATCH ATTACHMENT

August H. Fischer, Wolsey, S. Dak.

Application July 1, 1935, Serial No. 29,344
3 Claims. (Cl. 58—73)

1. The combination with a watch stem extending outwardly from a watch and adapted to tension a watch spring within the watch, and a pivoted chain bow, of means carried by the chain bow and cooperating with the stem for preventing retrograde rotation of the stem.



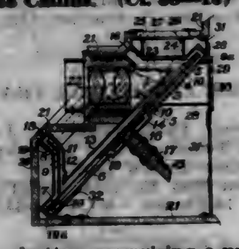
2,029,417

NECK PROTECTOR FOR USE WITH HAIRDRESSER'S WRAPPERS OR THE LIKE

Arthur Förster, Gerlitz, Germany

Application August 9, 1934, Serial No. 739,806
In Germany September 1, 1933
1 Claim. (Cl. 2—50)

A neck protector for use with hair dressers' wrappers and the like, said protector comprising an elongated strip of crepe paper, said protector being stretchable in its longitudinal direction substantially throughout its entire width and prior to use being substantially shorter than the circumference of the neck of the wearer, said protector being adapted to be stretched to the full



circumference of the neck of the wearer when in use, and an adhesive situated at both ends of said strip of crepe paper, whereby said ends may be permanently joined while the strip surrounds the neck of the wearer, so that the strip must be torn in order to remove it after use.

2,029,418

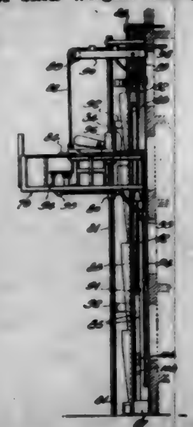
REFLEX SHUTTER

Max Friedland, New York, N. Y.

Application March 6, 1933, Serial No. 659,742
28 Claims. (Cl. 88—16)

1. A reflex shutter comprising a primary shutter, a secondary shutter and means for producing regular reflection, an outer casing comprising a front primary wall, a rear primary wall, an inner secondary wall, an outer secondary wall and connecting walls, the primary shutter and said reflecting means of the reflex shutter being situated between the front and rear primary walls, the secondary shutter being situated between the inner and outer secondary walls, the front primary wall and the inner secondary wall being situated at an angle to each other between the secondary shutter and the reflecting means of the reflex shutter, said angle being less than a straight angle, the front and rear primary walls having aligned apertures for the admission of light to a sensitive film, the inner and outer secondary walls having aligned apertures constituting means for viewing light reflected by the reflecting means of the reflex shutter, the reflex shutter being situated within the outer casing and means for imparting motion to the reflex shutter.

2,029,419



FIRE ESCAPE

Benjamin Gilowitz, New York, N. Y., assignor of one-fourth to William Joseph, New York, N. Y.

Application September 13, 1934, Serial No. 743,889
1 Claim. (Cl. 187—15)

In a car ascent and descent controlling means, a hollow weight and means for connecting it with the car to ascend when the car descends and vice versa, said hollow weight having an open upper end and an internal abutment spaced downwardly from said upper end, a self-closing valve at the upper end of the weight path for discharging wa-

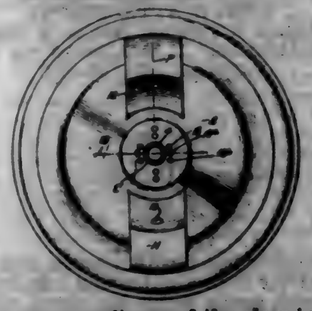
ter into said weight when it reaches the limit of its ascent, said valve having a downwardly projecting operating portion receivable in said open upper end of said weight and positioned to be

struck and raised by said abutment to open said valve, and means for emptying the water from said weight when it reaches the limit of its descent.

2,029,420
CONCENTRIC CONDUCTOR TRANSMISSION SYSTEM
Estill I. Green, East Orange, N. J., assignor to American Telephone and Telegraph Company, a corporation of New York
Application May 23, 1929, Serial No. 365,518
10 Claims. (Cl. 178—44)

9. A coaxial conductor transmission system comprising inner and outer conductors of different effective resistivities, the ratio of the internal diameter of the outer conductor to the external diameter of the inner conductor being the optimum for low attenuation of waves lying near the top of the frequency band transmitted.

2,029,421
CONCENTRIC CONDUCTOR TRANSMISSION SYSTEM
Estill I. Green, East Orange, and Frank A. Leibe, Dunellen, N. J., assignors to American Telephone and Telegraph Company, a corporation of New York
Application February 2, 1932, Serial No. 590,496
11 Claims. (Cl. 178—44)

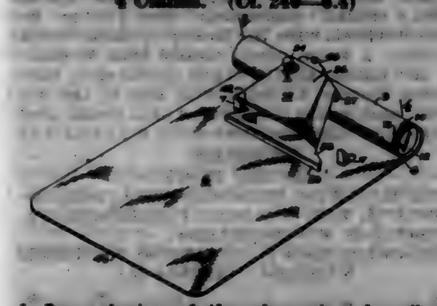


1. A high frequency transmission circuit comprising two concentrically arranged cylindrical conductors connected one as a return for the other and insulated from each other by a substantially non-gaseous dielectric, the ratio of the inner diameter of the outer conductor to the outer diameter of the inner conductor being such that the attenuation of the circuit will be a minimum for frequencies above the voice range.

2,029,422
CONDENSER
Herbert C. Guild, Mamaroneck, N. Y.
Application February 4, 1932, Serial No. 590,857
Renewed June 22, 1935
8 Claims. (Cl. 257—35)

1. A condenser comprising a multiplicity of substantially vertical pipes, each closed at its upper end and having its lower end rigidly secured in a laterally extending header, means for supplying condensible gas for upflow in all of said pipes and for draining condensate from the lower end thereof, guide means engaging the upper ends of all of said pipes to permit free longitudinal expansion and contraction thereof, and means for maintaining a freely downflowing film of water on the exterior vertical surface of each pipe, each pipe having such cross-section as to permit upflow of gas in regions more remote from the inner walls of the tubes and downflow of condensate and gas adjacent said walls.

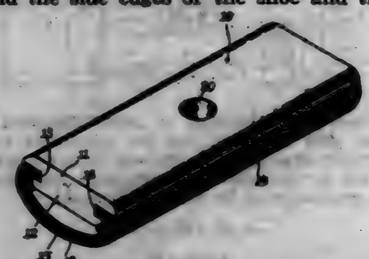
2,029,423
AIR NOZZLE FOR FLAT SPRAYING APPLIANCES
Eric Gustafsson, Chicago, Ill., assignor to Binks Manufacturing Company, Chicago, Ill., a corporation of Delaware
Application February 23, 1935, Serial No. 8,699
10 Claims. (Cl. 299—140.1)



1. In a spray appliance of the class in which a forwardly projected stream of generally liquid material is flattened in a plane diametric of said stream by the conjoint action of forwardly converging air jets which have their axes in a second plane diametric of the said stream and at right angles to the first named plane, means for forwardly projecting two counterpart pluralities of air jets respectively at opposite sides of the said stream with each of the said pluralities symmetrically disposed in relation to one of the said planes, with the constituent jets of each of the said pluralities sufficiently close to each other and to the said stream so that atmospheric pressure will cause each such plurality of jets to merge with the said stream before the said converging air jets act upon the stream.

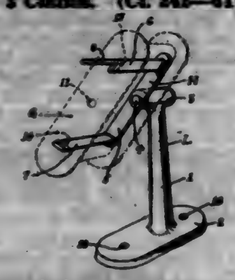
2,029,424
PIPE
Charles A. Hill, Port Huron, Mich., assignor to Mueller Brass Co., Port Huron, Mich., a corporation of Michigan
Application September 16, 1933, Serial No. 689,740
1 Claim. (Cl. 138—47)

As an article of manufacture, a pipe in which the smooth inner surface produced by the process of piercing, drawing, or extrusion, has been treated by an abrasive to produce irregularities throughout the entire inner surface thereof, for retaining a film of liquid on the interior surface of said pipe, thereby reducing the coefficient of friction between the wall of the pipe and the mass of moving liquid.



2,029,425
COMBINATION CLIP BOARD AND LIGHT
Raymond Kayler, near Los Angeles, and Ray E. Kenney, Los Angeles, Calif.
Application November 21, 1933, Serial No. 698,998
4 Claims. (Cl. 240—6.4)

1. In a device of the character described, a portable, substantially flat plate providing a writing surface, a container carried by said plate adapted to receive an electric battery, a clip pivotally mounted on said container, spring means urging said clip toward said plate to releasably clamp a plurality of sheets of paper upon the plate, a reflecter on said clip and opening in an inclined direction downwards and toward said plate, an electric light bulb disposed within said reflector, and means providing an electrical circuit operatively connecting said bulb to said battery.

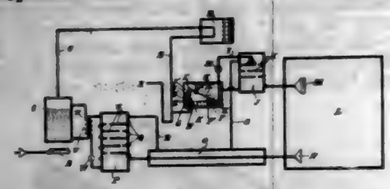


2,029,426
RUBBING DEVICE
Ralph H. Kingdon, Maywood, Ill., assignor to Sears, Roebuck and Co., Chicago, Ill., a corporation of New York
Application September 14, 1934, Serial No. 743,257
7 Claims. (Cl. 15—231)

1. A device of the character described comprising, in combination, an elongated block having a pair of longitudinally extending grooves in the respective side edges thereof, a shoe made of resilient material and positioned adjacent and in spaced relation to the lower face of said block and having its side edges bent upwardly and then inwardly to enter the respective grooves, and sheet-like rubbing material held against the bottom face of said shoe with its side edges wrapped around the side edges of the shoe and thereby

clamped in said grooves, the lower portions of the side edges of the block being rounded to provide cam surfaces for spreading said shoe when the latter is pressed onto the block to permit the side edges thereof to enter the groove, the lower surfaces of said grooves being perpendicular to the direction of the attaching movement of the shoe to hold the shoe and rubbing material firmly in place.

2,029,427
SPOOL AND WINDER THEREFOR
David W. Klau, New York, N. Y.
Application January 12, 1934, Serial No. 706,378
3 Claims. (Cl. 242—41)

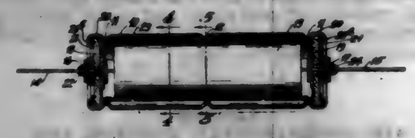


1. A ribbon winder comprising a part providing a bearing and having means by which it may be mounted upon a suitable support, a rotor rotatably mounted in said bearing including a pair of arms about which the ribbon may be wound said arms being spaced apart and being disconnected at their outer ends so that the ribbon may be slid freely endwise off said arms, and one of said arms having an extending portion constituting a handle by which to rotate the rotor.

2,029,428
AIR CONDITIONING METHOD AND APPARATUS
Donald B. Knight, Brooklyn, N. Y., assignor to Refrigeration Research Corporation, Brooklyn, N. Y., a corporation of New York
Application August 17, 1932, Serial No. 629,133
8 Claims. (Cl. 62—176)

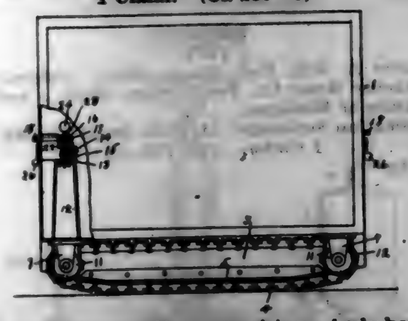
3. In a system for refrigerating and conditioning air wherein the air is dried at a constant temperature by absorption and subsequently cooled by the evaporation of water and the diffusion of the evaporated water vapor into the air, a method of controlling the dew point of the air

which consists in evaporating the water from a solution of lower vapor pressure than the vapor pressure of water, maintaining a predetermined and optional concentration of the solution in the



evaporator, maintaining a predetermined and optional dew point of the air admitted to the evaporator, and passing the air thus cooled and regulated as to both dew point and temperature to the enclosure to be air conditioned.

2,029,429
ATTACHABLE HANDLE FOR PAPER CUPS
Sydney R. Koons, Cleveland, Ohio
Application August 25, 1933, Serial No. 686,755
4 Claims. (Cl. 16—114)



4. An attachable handle for a paper cup having a bead at the rim consisting of a sheet-like member having at its upper corners opposing shoulders adapted to grip beneath the bead and inside of the cup, and having finger grip openings at each side of its median line adapted to be compressed at the upper portion to effect engagement and to spread to tighten said engagement at the bead and a cross member having portions engaging the strip at the lower portion to limit separation at the portion of the strip engaging the sides of the cup.

2,029,430
TUBULAR CONDENSER
Louis Kopinski, Cicero, Ill., assignor to John E. Fast & Company, Chicago, Ill., a corporation of Illinois
Application May 14, 1934, Serial No. 725,511
7 Claims. (Cl. 175—41)

1. A condenser comprising a metal tube, closures of insulating material secured in the ends of the tube, the tube being rolled inwardly on both sides of the closure, a rolled paper condenser body enclosed by the tube and closures and having a metal lead extending from each end of the body and through a closure, an insulating envelope between the condenser body and the metal tube, and means for maintaining a substantial annular space between most of the metal tube and said envelope, whereby the capacity between the condenser body and the metal tube is reduced.

2,029,431
PORTABLE CONTAINER
Robert J. Lewis, Baltimore, Md.
Application June 10, 1933, Serial No. 675,262
1 Claim. (Cl. 280—3)

A portable container comprising a body having doors in the side thereof, a shaft mounted at each corner of the body on the under surface thereof, a spur wheel rigidly secured to each of said shafts, a chain at each end of the body, said chains connecting two shafts running parallel to the sides of the body, rollers carried by said chain and upon which the body travels, a sprocket wheel rigidly fixed to each of said shafts, two shafts mounted on each side of the body near the end and above the shafts on the under surface of the body, sprocket wheels loosely mounted on the last named shafts and each having teeth on one side thereof, a clutch splined on each of said last named shafts and each having teeth on one side thereof adapted to co-operate with the teeth of the loosely mounted sprocket wheels, means for throwing the clutch in and out of contact with said loosely mounted sprocket wheels, chains connecting the rigidly fixed sprocket wheels with the loosely mounted sprocket wheels, a worm wheel rigidly fixed to each of said last named shafts, crank shafts each having a worm thereon to mesh with one of the worm wheels, and means for turning said crank shafts.

2,029,432
METAL DOOR
Marvin G. Martin, Philadelphia, Pa., assignor to The J. G. Brill Company, Philadelphia, Pa., a corporation of Pennsylvania
Application April 9, 1934, Serial No. 719,672
6 Claims. (Cl. 189—46)

1. In a metal door, one piece front and rear sections having marginal flanges arranged adjacent and in parallel overlapping engagement with each other, means connecting said sections, said sections having registering window openings bounded by continuous offsets pressed in each section, the material of the rear section being folded over the material of the front section entirely around the window openings in such a manner as to provide a pane receiving shoulder.

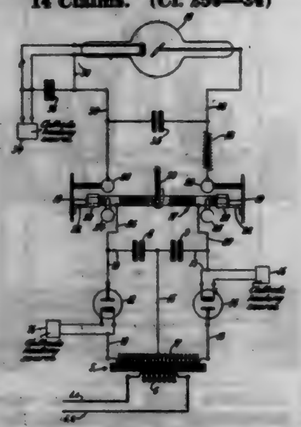
2,029,433
GAME TABLE
John Kearsley Mitchell, Bryn Mawr, Pa.
Application November 17, 1934, Serial No. 753,445
6 Claims. (Cl. 311—103)

1. A table of the type described having a framework to which legs are pivotally connected, a flat

central member, an apron, legs adapted to fold up behind said apron, and a drawer having a false front adapted to lie in the plane of the

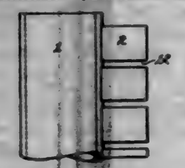
apron and a true front spaced therefrom so as to provide space for a leg between the two, and means for connecting the true front and the false front.

2,029,434
TABLE CONSTRUCTION
John Kearsley Mitchell, Bryn Mawr, Pa.
Original application November 17, 1934, Serial No. 753,445. Divided and this application June 10, 1935, Serial No. 25,711
4 Claims. (Cl. 311—108)



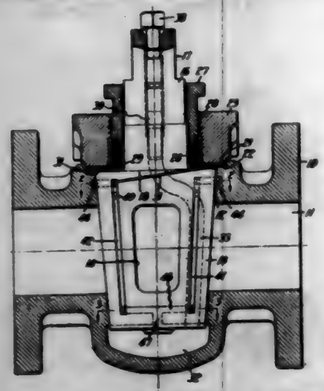
1. An improved game table comprising, in combination, a frame having an internal shelf thereabout, arched bracing members secured to adjacent frame members and spaced from the corners thereof, a panel member set in the central upper portion of the table frame and forming a playing surface, securing members fastened to the under side of said panel member and adapted to engage the frame bracing members, the said securing members including adjustable fastening means, a resilient cover member disposed over the panel member and underneath the edges thereof and a fabric cover member stretched over the top of the panel member to form a playing surface and folded under and secured to the bottom of said panel.

2,029,435
APPARATUS FOR PRODUCING SHEATHED ARTICLES
Charles F. Moody, Yonkers, and Earle A. Mitchell, Hastings-on-the-Hudson, N. Y., assignors to Phelps Dodge Copper Products Corporation, New York, N. Y., a corporation of Delaware
Application October 2, 1934, Serial No. 746,436
8 Claims. (Cl. 18—6)



6. In an apparatus for covering a core by the strip method including means for covering a core with a coating of strip rubber, means for turning the covering longitudinally upon the core thus coated comprising a corrugated roller rotated at an inclination to the axis of the core and acting on the coating to turn the coating, means for covering the core thus coated with an additional coating of rubber and a vulcanizing chamber to cure the insulation.

2,029,436
X-RAY SYSTEM FOR REDUCING STEEPNESS OF WAVE FRONT
Montford Merrizan, Montclair, N. J., assignor to Westinghouse X-Ray Company, Inc., a corporation of Delaware
Application March 25, 1932, Serial No. 601,071
14 Claims. (Cl. 250—34)

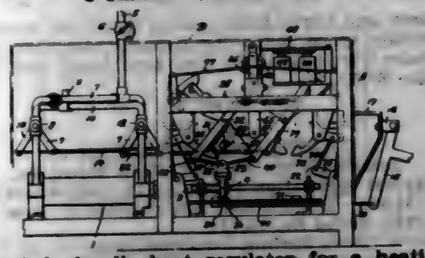


6. In an X-ray system, an X-ray tube, a source of high potential electrical energy for energizing said tube, switching means operable to connect said X-ray tube to said source, and a condenser connected in parallel with said X-ray tube and said source and energizable with said tube from said source upon operation of said switching means, said condenser adapted to become charged by the initial supply of energy from said source upon operation of said switching means to cause the energy supplied to said X-ray tube to gradually rise from zero to maximum in a minute period of time.

2,029,437
HEAT CONDUCTING TUBE
Thomas E. Murray, deceased, late of Brooklyn, N. Y., by John F. Murray, Joseph B. Murray, and Thomas E. Murray, Jr., executors, Brooklyn, N. Y., assignors to Metropolitan Engineering Company, a corporation of New York
Original application May 23, 1924, Serial No. 715,369. Divided and this application July 15, 1931, Serial No. 550,903
18 Claims. (Cl. 257—262)

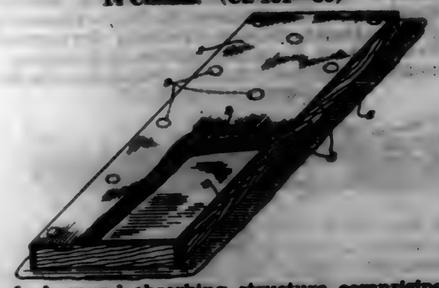
1. A tubular unit of the character described adapted to be exposed externally to high temperatures and to carry a liquid to be heated, constituting a complete unitary article of manufacture and consisting of a long steel tube of small diameter compared with its length and of small wall thickness compared with its diameter and separately formed flange members each of which is of less length than the tube and has a free outer edge and each of which is separately welded at its inner edge to said tube, said flange members being in longitudinal alinement with each other parallel with the axis of the tube and being separated from one another by short intervals.

2,029,438
PLUG VALVE
Sven Johan Nordstrom, Piedmont, Calif., assignor to Merco Nordstrom Valve Company, San Francisco, Calif., a corporation of Delaware
Application June 1, 1931, Serial No. 541,218
23 Claims. (Cl. 251—93)



1. In a rotatable plug valve, a valve casing having a passageway therethrough for flow of fluid and also having a tapered valve seat formed transversely of the passageway, a tapered valve plug rotatably disposed within the seat, means including a lubricant reservoir, a lubricant chamber adapted to receive viscous lubricant therefrom under pressure and a duct connecting said reservoir and chamber for hydraulically jacking the plug from its seat, and means effective for yieldably urging the plug into its seat and for sealing the casing at the large end of the plug, said last means including cooperating sealing surfaces together with an attenuated lubricant duct connecting said surfaces and said lubricant chamber.

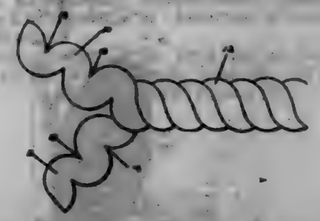
2,029,439
FENCE POST
Neil A. Ochiltree, Peoria, Ill., assignor to Concrete Engineering Company, Omaha, Nebr., a corporation of Nebraska
Application December 2, 1932, Serial No. 645,385
2 Claims. (Cl. 189—29)



1. A metal fence post comprising a post body provided with lateral projections and an anchor rigidly secured thereto consisting of a metal cylinder surrounding said body and transversely flattened to provide a central tubular part in snug gripping relation with said body and lateral double walled wings.

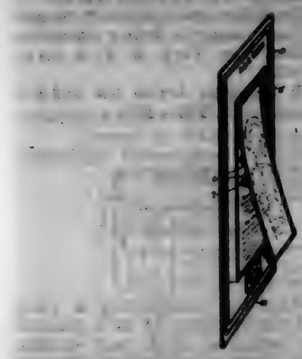
2,029,440
HYDRAULIC HEAT REGULATOR
Mark Olsen, Detroit, Mich.
Application June 27, 1935, Serial No. 28,783
3 Claims. (Cl. 236—84)

1. A hydraulic heat regulator for a heating plant comprising a reciprocating member, means actuated thereby for adjusting the dampers of the heating plant, a cylinder, a piston therein connected with the reciprocating member, means including inlet and exhaust valve means in each end for introducing water into the ends of cylinder and exhausting the water therefrom for reciprocating the piston, latchable spring actuated means arranged in sets, one set acting to open an inlet valve in one end and an exhaust valve in the other end and the other set opening the other valves, thermostatic control means for releasing one or the other of the spring means to open its valves, sets of means for returning said spring means to latched position and closing the valves and means whereby the resetting means are operated by movement of the reciprocating member.



2,029,441
ACOUSTICAL STRUCTURE
John S. Parkinson, Somerville, N. J., assignor to Johns-Manville Corporation, New York, N. Y., a corporation of New York
Application December 12, 1933, Serial No. 701,962
14 Claims. (Cl. 181—30)

1. A sound-absorbing structure comprising a facing member maintained under tension and adapted to be set in vibration by incident sound and lightweight, yieldable, non-vibratile, vibration-damping material disposed behind and in contact with the said facing member at an internodal position thereon.



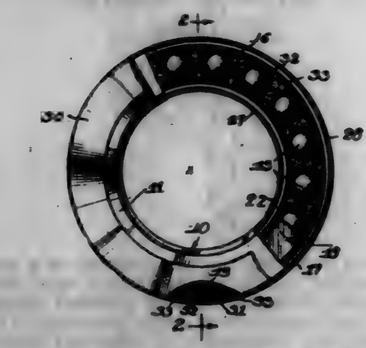
2,029,442
COMPOSITE STRIP
Julius Rabinowitz, New York, N. Y.
Application March 16, 1935, Serial No. 11,186
2 Claims. (Cl. 29—1)

1. A composite strip comprising a plurality of component strips each of such component strips having notches extending from the edge substantially to the middle line and arranged alternately at opposite edges of the strip, and said component

parts being twined about each other with the bottoms of the notches in each component part substantially in contact with the bottoms of the notches in the other strip.

2,029,443
COMBINATION CALENDAR AND COIN CONTAINER
Oscar Tillman Sanders, Nashville, Tenn.
Application January 17, 1934, Serial No. 706,986
1 Claim. (Cl. 232—37.9)

A coin holder and display comprising a base sheet having perforations formed in the upper part therein adapted to receive coins, a back sheet secured over said perforations, a strap forming a part of said base sheet removed from the periphery of said perforations, a front sheet adapted to receive a pictorial display secured above said perforations and having its sides and bottom unsecured, said front sheet extending over said perforations to form the cover therefor but spaced from the lower edge of said base sheet, a calendar mounted in the space immediately below the lower edge of said front sheet, each perforation having calendar indicia in connection therewith, said calendar and calendar indicia being exposed upon the lifting of said front sheet.

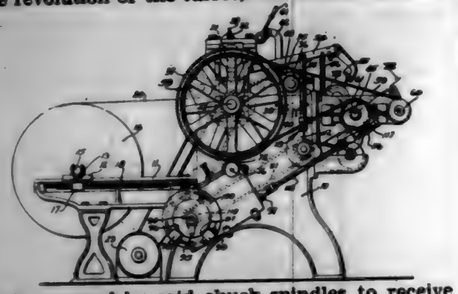


2,029,444
MAGAZINE LOADER
Raymond F. Schiveley, Houston, Tex.
Application April 18, 1934, Serial No. 721,281
1 Claim. (Cl. 1—43.6)

A loader for a magazine comprising a pan-shaped container, the bottom of the container having a slot cut therethrough, said slot extending substantially across the bottom and one end of the slot terminating at the corresponding side of the container and being open, the margins of the material on each side of the slot converging downwardly, an arch-like hood over the open end of the slot and secured to the material of the bottom of the container and forming a maga-

zine holder shaped to receive one end of a magazine.

2,029,445
BEARING
Frank Schubert, Detroit, Mich., assignor to Bearings Company of America, Lancaster, Pa., a corporation of Delaware
Application November 22, 1934, Serial No. 754,224
8 Claims. (Cl. 308—201)

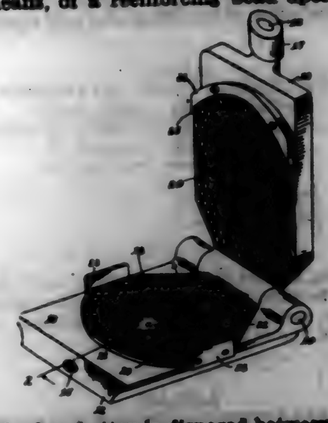


1. The combination with a bearing having members arranged to roll between races and a retaining member for the rolling members, of lubricating means comprising a distributing member of hard porous material in contact with the rolling member to supply lubricant thereto, and a reservoir member carried by the retaining member adapted to supply lubricant to the distributing member.

2,029,446
ART OF PAPER CONVERSION
Frederick Charles Schneider, Green Bay, Wis., assignor to Hudson Sharp Machine Company, Green Bay, Wis., a corporation of Wisconsin
Application August 9, 1933, Serial No. 684,405
14 Claims. (Cl. 242—56)

12. In a device of the character described, the combination with a turret and an eccentric driving wheel, of chuck spindles rotatable upon fixed axes in said turret and provided with driven members engageable by said wheel to receive

motion therefrom at a predetermined point in the revolution of the turret, and rewinding mandrels engaged by said chuck spindles to receive motion therefrom.

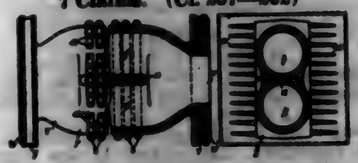


2,029,447
AUGER BIT
Howland M. Swain, Wilmington, Ohio, assignor to The Irwin Auger Bit Company, Wilmington, Ohio, a corporation of Ohio
Application December 13, 1934, Serial No. 757,284
5 Claims. (Cl. 145—116)

1. In an auger bit the combination of a screw flight portion, and a shank portion, said shank portion comprising sections of different configuration joined by zones of softer material so that the shank can be severed at intervals between the sections of different configuration.

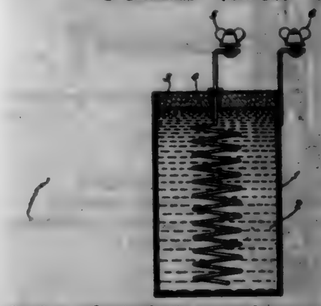
2,029,448
CAKE BAKING IRON
Harry G. Tatosian, Bridgeport, Conn., assignor, by mesne assignments, to Ice Cream Cone Machine Corporation, New York, N. Y., a corporation of New York
Application January 29, 1932, Serial No. 589,567
3 Claims. (Cl. 53—10)

1. A cake baking device comprising two irons hingedly connected together and adapted to close in parallel and spaced relation to one another, opposed grooved baking faces on the respective irons, a portion of each of said baking faces being bounded by an arcuate shoulder, the respective shoulders being adapted to register with one another when the baking irons are closed together, and means carried on one of said baking irons adjacent the shoulder thereof and adapted when the baking irons are closed to rest adjacent the shoulder of the other baking iron, whereby to provide for the formation within the space defined among the arcuate shoulders and the aforesaid means, of a reenforcing head upon a cake



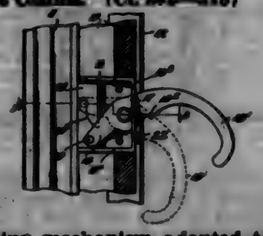
formed when batter is disposed between the baking irons and the latter closed together.

2,029,449
COOKING RANGE CONSTRUCTION
Jacob Teller, New Rochelle, and Arthur P. Schulz, New York, N. Y., assignors to Teller Stove Designing Corporation, New York, N. Y., a corporation of New York
Application March 14, 1932, Serial No. 598,813
7 Claims. (Cl. 126—41)



1. A range construction comprising a range body having a cooking top formed in a plurality of front and rear sections, said rear sections having burner grids thereon, a broiler compartment formed at and below the plane of said grid sections disposed at the intermediate portion of said body, and open at its top, a cover for said compartment forming the other of said sections forward of said grid sections, a broiler pan support mounted within said broiler compartment, and a burner carried on the lower side of said cover.

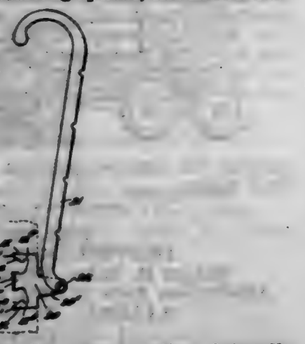
2,029,450
HEAT EXCHANGER
Heinrich Christian Truchsen, Crefeld, Germany, assignor to the firm Lissen & Co., Crefeld, Germany
Application December 3, 1932, Serial No. 645,593
In Germany December 18, 1931
7 Claims. (Cl. 257—262)



1. A heat exchanger arranged in a furnace or other source of heat in the path of the waste gases, comprising in combination heating elements, united in groups, ribs on said heating elements forming one cast-piece with their heating element, and needles cast on said ribs.

2,029,451
ELECTROLYTIC CONDENSER
Willem Christiaan van Geel and Hendrik Emmens, Eindhoven, Netherlands, assignors to Radio Corporation of America, a corporation of Delaware
Application February 25, 1933, Serial No. 656,962
In the Netherlands June 30, 1931
5 Claims. (Cl. 175—315)

1. An electrolytic condenser comprising a metallic electrode, an oxide coating on said metallic electrode, an electrolyte consisting of a solution of acid phosphate, and alcohol of the group including glycerol, for the purpose of preventing an attack on said oxide coating.



2,029,452
COMBINATION SASH AND SCREEN LATCH
Joseph N. Victor, Allentown, Pa.
Application December 15, 1933, Serial No. 702,625
8 Claims. (Cl. 292—218)

1. A latching mechanism adapted to be used with windows of the casement type having two swinging sashes which are disposed in parallel planes when closed, comprising, in combination, two catch members adapted to be secured respectively to the free edges of such sashes, a support adapted to be secured to the window frame member and having a portion which lies between the sashes when the sashes are in closed position, and a latch member pivotally mounted upon said support for swinging movements about an axis parallel to the planes of the sashes when closed and having spaced catch engaging portions which may be brought into latching engagement with both catches when moved in one direction and which may be moved in the opposite direction to disengage such catches.

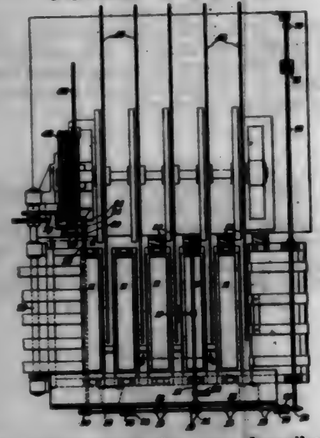
2,029,453
DEVICE FOR SECURING ARTICLES OF HARDWARE TO WOODEN MEMBERS
Joseph N. Victor, Allentown, Pa.
Application December 15, 1933, Serial No. 702,627
2 Claims. (Cl. 16—1)

1. A device of the class described comprising a flat relatively thin base portion to which an article of hardware may be secured, and three anchoring elements integral with said base and disposed in the plane thereof, said elements being substantially parallel and the two outer elements being spaced from the intermediate element to provide two wood receiving spaces, the intermediate element having its stem portion laterally undercut to provide recesses for swelling wood fiber and the two outer elements being bendable in the plane of the device by wood pressure as the device is forcibly inserted.

2,029,454
MEANS AND METHOD OF PERFORATING WELL CASINGS
Walter T. Wells, Glendale, Calif., assignor to The Technicraft Engineering Corporation, Los Angeles, Calif., a corporation of California
Application July 7, 1934, Serial No. 734,171
19 Claims. (Cl. 81—188)

1. The combination with a gun type perforator adapted to be submerged in an incompressible medium; of an air receiver secured to the perforator, said receiver being closed at its upper end and open at its lower portion whereby said medium compresses air therein when submerged.

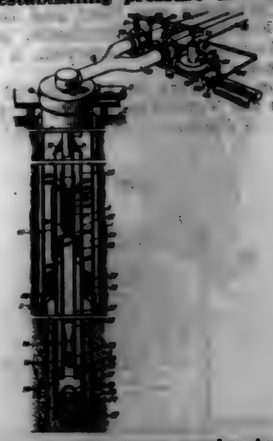
2,029,455
GRADE FINDING MECHANISM
Fred D. Wilson, Harvey, Ill., assignor to Western-Austin Company
Application July 21, 1932, Serial No. 623,992
22 Claims. (Cl. 37—156)



3. In a road machine provided with a road working tool capable of diagonal adjustment around a vertical axis, mechanism for angularly adjusting said tool with respect to the plane of the road bed or surface upon which the tool is operating, a fluid gauge at the operator's station

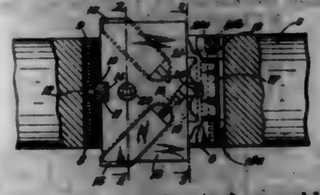
actuated by the angular position of said tool for indicating the angle thereof, and means for trans-

mitting the angular position of the tool to the fluid gauge.



2,029,456
TRIPPING MECHANISM
Robert B. Zuber, Birmingham, Ala.
Application April 16, 1931, Serial No. 530,717
9 Claims. (Cl. 198—21)

1. In apparatus of the type described, a cooling wheel, a conveyor to convey work pieces thereto, driving means therefor, clutch mechanism to connect the driving means to said wheel and automatically operating tripper mechanism to engage with said work piece at a determined position on said conveyor to thereby operate said clutch mechanism to rotate the wheel through a prescribed degree of orientation, said wheel operating during said rotation to lift the said work piece from said conveyor, means to disengage said clutch at the end of said prescribed degree of rotation and braking means to terminate the rotation of the wheel, and means to operatively support said tripper mechanism along said conveyor in a plurality of positions to accommodate the same to varying lengths in said work piece.

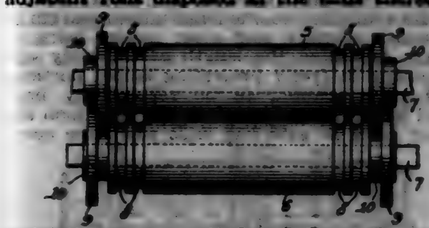


2,029,457
APPARATUS FOR FLOWING WELLS
Herbert F. Beardmore, Oklahoma City, Okla., assignor of one-half to Indian Territory Illuminating Oil Company, Bartlesville, Okla., a corporation of New Jersey
Application July 20, 1934, Serial No. 737,621
24 Claims. (Cl. 103—231)

1. Apparatus for flowing fluid from the bottom of a well including means at the bottom of the well for initially inducing flow of well fluid, means forming a reservoir above the bottom of the well to collect the induced flow, means for injecting a pressure medium into the well, an educer mechanism for intermittently discharging the pressure medium into the reservoir to blow the collected fluid from the reservoir, and means for establishing pressure differentials on

opposite sides of said educer mechanism to effect intermittent operation thereof.

2,029,458
BORING TOOL
Herman Berg, Cleveland, Ohio, assignor to The Kelly Reamer Company, Cleveland, Ohio, a corporation of Ohio
Application May 28, 1934, Serial No. 727,868
7 Claims. (Cl. 77—56)



1. In a boring or reaming tool assembly, a boring bar having a slot formed therethrough, a tool block mounted in said slot, and a clamping assembly positioned between the tool block and adjacent end wall of the slot; said assembly comprising a clamping block having an elongated face adapted to exert clamping pressure on the tool block and rear cam portions at opposite extremities thereof, cam blocks disposed between said cam portions and the adjacent end wall of the slot, and a draw bolt connecting said cam blocks for contracting the latter into engagement with the cam portions and thereby move the clamping block into clamping position with respect to the tool block, each of said cam portions being relatively abrupt at its starting point to effect an initial relatively short and rapid throw of the clamping block and thereafter tapering off gradually to provide greater leverage for the cam blocks when the actual clamping action takes place.

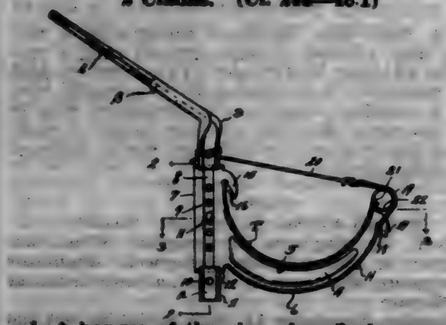
2,029,459
ROLL FOR CLOTHES WRINGERS
George Fred Blume, Philadelphia, Pa.
Application July 25, 1935, Serial No. 33,165
2 Claims. (Cl. 68—23)

1. Wringer rolls embodying cooperating members, each member having annular grooves formed in the periphery thereof and disposed adjacent to the end thereof, the grooves of one roll alining with the grooves of the adjacent roll and

providing passageways, and cooperating disks on adjacent rolls disposed at the ends thereof for

restricting movement of wafer past the ends of the rolls.

2,029,460
DRINK VENDING MACHINE
Thomas Brady, West Caldwell, N. J.
Application February 27, 1931, Serial No. 518,893
7 Claims. (Cl. 226—31)



1. In a vending machine of the character described, a main beverage reservoir, an auxiliary reservoir connected to said main reservoir for receiving beverage flowing by gravity therefrom, said auxiliary reservoir being of lesser capacity than said main reservoir and having an air vent at its top for permitting the escape of vapors, means for heating the beverage within said auxiliary reservoir, a liquid measuring valve connected to said auxiliary reservoir, said liquid measuring valve having a hollow valve body therewithin of a size for receiving a predetermined quantity of beverage, and coin controlled means for causing the operation of said measuring valve to effect the dispensing of beverage from said hollow valve body.

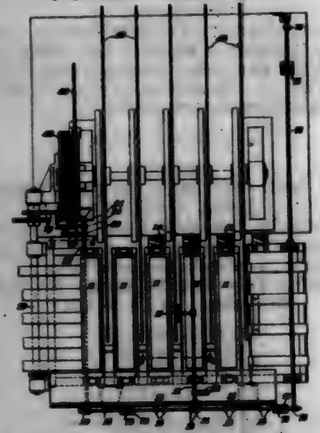
2,029,461
REMOTE CONTROL FOR RADIO RECEIVERS
Chester E. Brush, Chicago, Ill., assignor to E. H. Scott
Application September 5, 1931, Serial No. 561,430
4 Claims. (Cl. 250—20)

1. In a heterodyne radio receiver, a first detector stage, means for tuning said first stage resonant to an incoming signal, an oscillator coupled to said first stage for generating a sine wave adapted to be mixed with the incoming wave to provide a beat frequency wave, an intermediate frequency amplifier resonant to the beat frequency wave, a detector for rectifying the signal, an audio frequency amplifier to amplify the output of the detector, and means to convert the signal to audibility, a second oscillator coupled to said first stage, means to convert said first tuned stage to a substantially aperiodic stage and simultaneously switch-out the first oscillator and switch-in the second oscillator whereby the set may be controlled from a remote point by the second oscillator.

2,029,462
HANGER FOR EAVES TROUGHS
Conrad A. Carbaugh, Fulton County, Pa.
Application February 2, 1935, Serial No. 4,715
2 Claims. (Cl. 248—48.1)

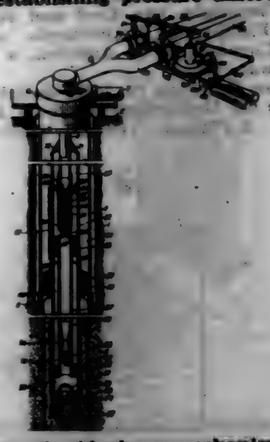
1. A hanger of the class described comprising an elongated channel supporting member, a trough holding member comprising a trough engaging arm, a plate carried by one end portion of the arm and having a rib snugly engaging within the channel member, and flanges at the opposite end portions of the plate having openings through which the supporting member is disposed with the rib within the channel, said flanges extending beyond the rib, the openings in the flanges conforming to the contour of the rib and of a size greater than the rib in cross section to permit the channel supporting member to snugly engage through said openings of the flanges.

2,029,463
PACKING FOR HOMOGENIZERS
John A. Clark, St. Johnsbury, Vt., assignor to Manton-Gaulin Manufacturing Company, Inc., St. Johnsbury, Vt., a corporation of Vermont
Application September 25, 1933, Serial No. 691,339
1 Claim. (Cl. 286—35)



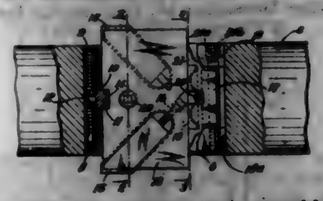
In an apparatus having a stationary cylinder block provided with a bore having a threaded enlarged outer end and a reciprocable plunger extending into said bore, the combination therewith of a stuffing box surrounding said plunger comprising an outer sleeve threaded in said enlarged outer end of the cylinder and having an inner packing receiving chamber extending from its inner end to a point adjacent the outer end, the outer end portion of said sleeve being internally threaded, an adjustable inner sleeve of a length substantially equal to the length of the outer sleeve, said inner sleeve being externally threaded for engagement with the internally threaded portion of the outer sleeve and normally

actuated by the angular position of said tool for indicating the angle thereof, and means for transmitting the angular position of the tool to the fluid gauge.



2,029,456
TRIPPING MECHANISM
Robert B. Zuber, Birmingham, Ala.
Application April 16, 1931, Serial No. 530,717
9 Claims. (Cl. 198—21)

1. In apparatus of the type described, a cooling wheel, a conveyor to convey work pieces thereto, driving means therefor, clutch mechanism to connect the driving means to said wheel and automatically operating tripper mechanism to engage with said work piece at a determined position on said conveyor to thereby operate said clutch mechanism to rotate the wheel through a prescribed degree of orientation, said wheel operating during said rotation to lift the said work piece from said conveyor, means to disengage said clutch at the end of said prescribed degree of rotation and braking means to terminate the rotation of the wheel, and means to operatively support said tripper mechanism along said conveyor in a plurality of positions to accommodate the same to varying lengths in said work piece.

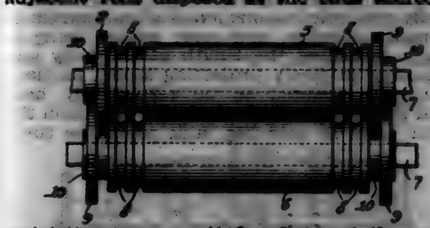


2,029,457
APPARATUS FOR FLOWING WELLS
Herbert F. Beardmore, Oklahoma City, Okla., assignor of one-half to Indian Territory Illuminating Oil Company, Bartlesville, Okla., a corporation of New Jersey
Application July 30, 1934, Serial No. 737,621
24 Claims. (Cl. 103—231)

1. Apparatus for flowing fluid from the bottom of a well including means at the bottom of the well for initially inducing flow of well fluid, means forming a reservoir above the bottom of the well to collect the induced flow, means for injecting a pressure medium into the well, an educer mechanism for intermittently discharging the pressure medium into the reservoir to blow the collected fluid from the reservoir, and means for establishing pressure differentials on

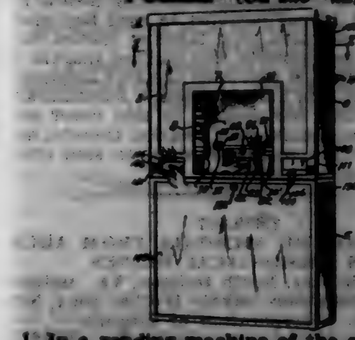
opposite sides of said educer mechanism to effect intermittent operation thereof.

2,029,458
BORING TOOL
Herman Berg, Cleveland, Ohio, assignor to The Kelly Reamer Company, Cleveland, Ohio, a corporation of Ohio
Application May 28, 1934, Serial No. 727,988
7 Claims. (Cl. 77—58)



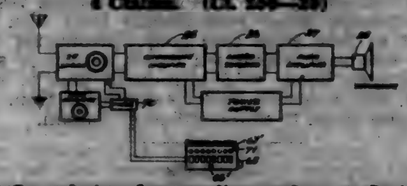
1. In a boring or reaming tool assembly, a boring bar having a slot formed therethrough, a tool block mounted in said slot, and a clamping assembly positioned between the tool block and adjacent end wall of the slot; said assembly comprising a clamping block having an elongated face adapted to exert clamping pressure on the tool block and rear cam portions at opposite extremities thereof, cam blocks disposed between said cam portions and the adjacent end wall of the slot, and a draw bolt connecting said cam blocks for contracting the latter into engagement with the cam portions and thereby move the clamping block into clamping position with respect to the tool block, each of said cam portions being relatively abrupt at its starting point to effect an initial relatively short and rapid throw of the clamping block and thereafter tapering off gradually to provide greater leverage for the cam blocks when the actual clamping action takes place.

2,029,459
ROLL FOR CLOTHES WRINGERS
George Fred Blume, Philadelphia, Pa.
Application July 25, 1935, Serial No. 33,165
2 Claims. (Cl. 68—23)



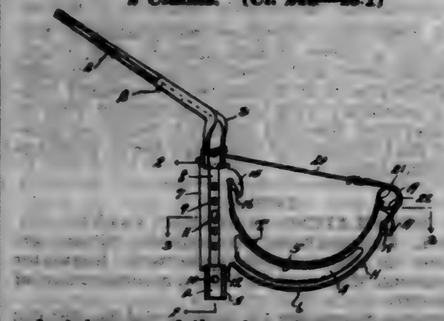
1. Wringer rolls embodying cooperating members, each member having annular grooves formed in the periphery thereof and disposed adjacent to the end thereof, the grooves of one roll alining with the grooves of the adjacent roll and

providing passageways, and cooperating disks on adjacent rolls disposed at the ends thereof for



restricting movement of water past the ends of the rolls.

2,029,460
DRINK VENDING MACHINE
Thomas Brady, West Caldwell, N. J.
Application February 27, 1932, Serial No. 595,893
7 Claims. (Cl. 225—21)



1. In a vending machine of the character described, a main beverage reservoir, an auxiliary reservoir connected to said main reservoir for receiving beverage flowing by gravity therefrom, said auxiliary reservoir being of lesser capacity than said main reservoir and having an air vent at its top for permitting the escape of vapors, means for heating the beverage within said auxiliary reservoir, a liquid measuring valve connected to said auxiliary reservoir, said liquid measuring valve having a hollow valve body therewithin of a size for receiving a predetermined quantity of beverage, and coin controlled means for causing the operation of said measuring valve to effect the dispensing of beverage from said hollow valve body.

2,029,461
REMOTE CONTROL FOR RADIO RECEIVERS
Chester E. Brush, Chicago, Ill., assignor to E. H. Scott
Application September 5, 1931, Serial No. 561,458
4 Claims. (Cl. 250—20)

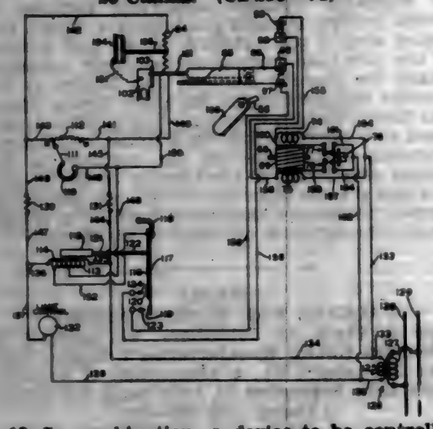
1. In a heterodyne radio receiver, a first detector stage, means for tuning said first stage resonant to an incoming signal, an oscillator coupled to said first stage for generating a sine wave adapted to be mixed with the incoming wave to provide a beat frequency wave, an intermediate frequency amplifier resonant to the beat frequency wave, a detector for rectifying the signal, an audio frequency amplifier to amplify the output of the detector, and means to convert the signal to audibility, a second oscillator coupled to said first stage, means to convert said first tuned stage to a substantially aperiodic stage and simultaneously switch-out the first oscillator and switch-in the second oscillator whereby the set may be controlled from a remote point by the second oscillator.

2,029,462
HANGER FOR EAVES TROUGHS
Conrad A. Carbaugh, Fulton County, Pa.
Application February 2, 1935, Serial No. 4,715
2 Claims. (Cl. 248—48.1)

1. A hanger of the class described comprising an elongated channel supporting member, a trough holding member comprising a trough engaging arm, a plate carried by one end portion of the arm and having a rib snugly engaging within the channel member, and flanges at the opposite end portions of the plate having openings through which the supporting member is disposed with the rib within the channel, said flanges extending beyond the rib, the openings in the flanges conforming to the contour of the rib and of a size greater than the rib in cross section to permit the channel supporting member to snugly engage through said openings of the flanges.

2,029,463
PACKING FOR HOMOGENIZERS
John A. Clark, St. Johnsbury, Vt., assignor to Manton-Gaulin Manufacturing Company, Inc., St. Johnsbury, Vt., a corporation of Vermont
Application September 23, 1933, Serial No. 691,239
1 Claim. (Cl. 286—35)

In an apparatus having a stationary cylinder block provided with a bore having a threaded enlarged outer end and a reciprocable plunger extending into said bore, the combination therewith of a stuffing box surrounding said plunger comprising an outer sleeve threaded in said enlarged outer end of the cylinder and having an inner packing receiving chamber extending from its inner end to a point adjacent the outer end, the outer end portion of said sleeve being internally threaded, an adjustable inner sleeve of a length substantially equal to the length of the outer sleeve, said inner sleeve being externally threaded for engagement with the internally threaded portion of the outer sleeve and normally



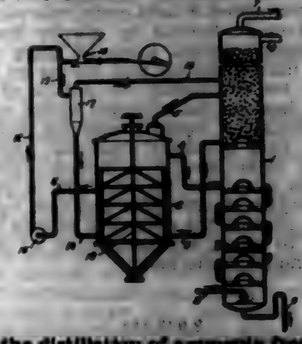
positioned substantially outside the packing receiving chamber, and packing rings normally positioned in said chamber and projectable along the plunger when the outer sleeve is removed from the cylinder block and the inner sleeve is threaded therethrough.

2,029,454
FINGER RING
Alfred E. Coleman, Corvallis, Oreg.
Application February 18, 1935, Serial No. 6,923
6 Claims. (Cl. 63—15)

4. A twin ring structure comprising a primary ring, a crown on said primary ring, a projection adjacent said crown, an aperture through said projection that is adapted to movably contain a secondary ring and a secondary ring in said aperture, the said aperture being so positioned that the axes of the rings are in substantial coincidence.

2,029,465
MODULATING ELECTRIC VALVE
Lewis L. Cunningham, Minneapolis, Minn., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application November 11, 1933, Serial No. 697,686
29 Claims. (Cl. 236—74)

19. In combination, a device to be controlled which is biased to move to an extreme position, a single rotary electrical motor associated with said device for moving the same to a position other than its biased position and including a plurality of windings, a controller for energizing the windings sufficiently to cause the motor to move the device to a new position against its bias, and switching means controlled by movement of said device for energizing only part of said windings of the motor to cause the same to maintain the device in the position to which it had been moved when the energization of the motor windings was changed.

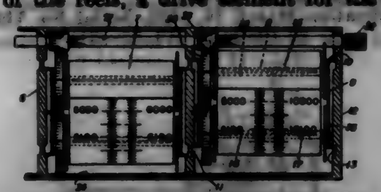


2,029,466
TRAVELING BAG
Max Damm, Newark, N. J.
Application May 21, 1934, Serial No. 726,750
3 Claims. (Cl. 190—45)

1. A frameless luggage roll, comprising a substantially cylindrical body having closed ends and provided at its top side with a substantially rectangular mouth opening, a cover section hingedly connected to one longitudinal margin of said mouth opening, said cover section being of a length exceeding the length of the body and terminating in freely projecting lappet portions at its ends adapted to be respectively bent around into overlapping relation to and upon the exterior faces of said bag ends when the cover

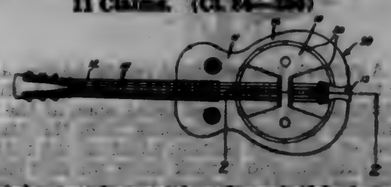
section is closed, releasable fastening means for securing said lappet portions to said bag ends, separable cooperative slide fastener means connected with the opposite longitudinal margin of said mouth opening and with the free longitudinal margin of said cover section, a substantially rigid reenforcing bar secured to said cover section in central longitudinal relation thereto, and a single carrying handle secured to said cover section and reenforcing bar.

2,029,467
DISTILLATION OF AMMONIA FROM AQUEOUS AMMONIACAL BRINES
George Gerald Day, North Holston, Va., assignor to The Mathieson Alkali Works, Inc., New York, N. Y., a corporation of Virginia
Application June 7, 1934, Serial No. 729,391
8 Claims. (Cl. 202—37)



1. In the distillation of ammonia from aqueous ammoniacal brines, the improvement which comprises circulating the brine from a distillation column to a reaction vessel, maintaining a liquid body containing free lime in the reaction vessel, withdrawing liquor substantially inert with respect to lime from said body, introducing dry lime into said withdrawn liquor, returning said withdrawn liquor with introduced lime to said body, and returning lime-treated brine from the reaction vessel to said distillation column.

2,029,468
MOTOR VEHICLE SERVICE INDICATOR
Lillian E. Deibler, Chevy Chase, Md.
Application October 16, 1933, Serial No. 693,333
5 Claims. (Cl. 40—56)

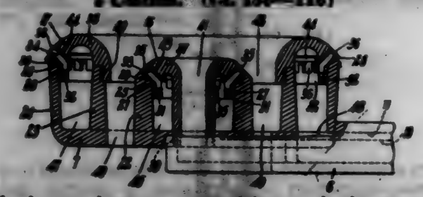


1. An indicator of the class described comprising a casing having a plurality of window openings, a reel support mounted for reciprocating

movement within the casing adjacent each of the openings, a pair of reels rotatably carried by each support, a web for each pair of reels movable across the respective openings upon rotation of the reels, a drive element for the reels

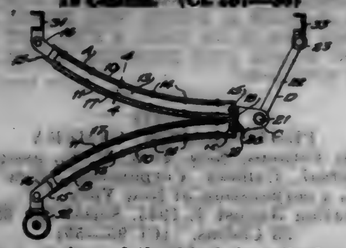
and a pivoted lever for each support for selectively moving the supports to operatively engage or disengage the reels with respect to the drive element and a sliding connection for the lever for locking the same in operative or inoperative position.

2,029,469
RESONATOR FOR STRINGED MUSICAL INSTRUMENTS
Rudolph Dopyera, Los Angeles, Calif.
Application October 11, 1933, Serial No. 693,111
11 Claims. (Cl. 84—296)



1. A hanger for a stringed musical instrument, said hanger including a depending skirt, said depending skirt having a pair of vertically spaced, resonator engaging portions thereon.

2,029,470
NOSE PAD CONNECTION FOR EYEGLASS FRAMES
Edgar R. Durgin, Newark, N. J., assignor to New Jersey Optical Company, Newark, N. J., a corporation of New Jersey
Application April 24, 1934, Serial No. 722,431
3 Claims. (Cl. 88—49)



1. A nose pad connection for eyeglass frames, comprising an arm affixed to a lens rim of the frame, a pressed yoke frame integral with the free end of said arm, said yoke frame having a fulcrum bar extending substantially horizontally and aligned with the axis of said arm, a bottom bar extending parallel to said fulcrum bar and spaced downwardly therefrom, and laterally spaced vertical side bars transverse to said fulcrum bar and said bottom bar, a nose pad member, and a knuckle forming means transverse to the vertical axis of said nose pad member, said means comprising a knuckle tongue of a thickness substantially equal to the spacing of said fulcrum and bottom bars, said knuckle tongue having one end rigidly affixed to said nose pad member and its other end free, said tongue being bent around and pivotally engaged on said fulcrum bar and fitting snugly between said side bars and between said fulcrum and bottom bars with its free end in closed substantially abutting relation to its fixed end.

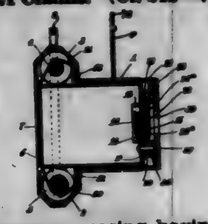
2,029,471
GAS BURNER
Bernard Field, Brookline, and George J. J. Clark, Whitman, Mass.
Application February 12, 1935, Serial No. 6,926
3 Claims. (Cl. 158—116)

1. A gas burner comprising a body member having a plurality of circular, upstanding concentrically arranged flanges embodied therein, certain of said flanges having frusto conical surfaces provided thereon and certain of said flanges having a passage for secondary air located therebetween, a facing member on each of said conical surfaces forming a seat thereon, a funnel shaped jet member mounted upon each of said seats and having a plurality of radial slots provided therein, burner heads detachably secured to said body member and co-operating therewith to form fuel chambers therein, facing members interposed between said jet members and said burner heads, said burner heads being adapted to clamp the jet members against their respective seats, whereby fuel ducts are formed at said slots between the facing members, said ducts communicating with their respective fuel chambers and the ducts from one chamber being adapted to discharge jets of flame across said passage for secondary air to preheat said air and adjacent to the wall of an adjacent fuel chamber whereby the fuel therein will also be preheated as it passes therethrough prior to combustion, and means to supply gaseous fuel to said fuel chambers.

2,029,472
SPRING FOR VEHICLES
Louis D. Foley, Louisville, Ky.
Application May 31, 1935, Serial No. 24,439
10 Claims. (Cl. 267—34)

1. In a spring of the kind described, a spring member comprising an upper elongated plate of spring metal, a lower elongated plate of spring metal, and a pair of channel bars extending along the said plates and secured thereto to hold said plates in spaced relation.

2,029,473
SUPERCHARGING DEVICE FOR OIL PUMPS
Charles E. Fee, Bakersfield, Calif.
Application January 29, 1934, Serial No. 708,714
10 Claims. (Cl. 103—5)

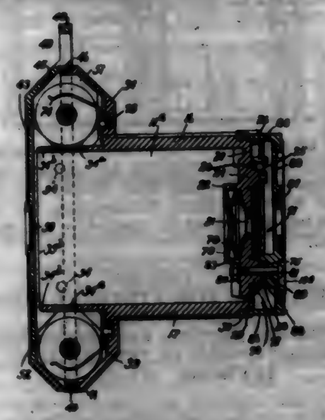


1. In combination, a reciprocating pump adapted for operation within a well; a rotary

pump adapted for operation within a well; and means operatively connecting one pump to the

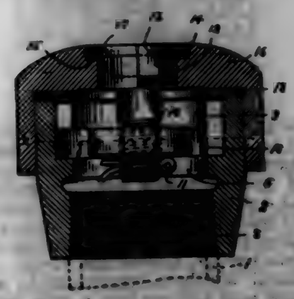
other so that upon operation of the reciprocating pump the rotary pump would be actuated to forcibly inject fluid into the reciprocating pump.

2,029,474
PHOTOGRAPHIC CAMERA
Otto W. Githens, Indianapolis, Ind., assignor to Universal Camera Corporation, New York, N. Y., a corporation of New York
Application March 7, 1933, Serial No. 659,912
21 Claims. (Cl. 242—71)



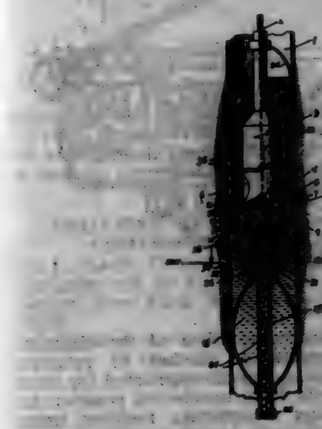
1. In a camera, a casing having an aperture, a film in cooperative relation with said aperture, a spool on which the film is wound, a head for said spool having a wedge-shaped groove the bottom of which is sloping with respect to the horizontal axis of the spool, a knob, and means operated by said knob projecting in the groove of said spool head.

2,029,475
PHOTOGRAPHIC CAMERA
Otto W. Githens, New York, N. Y., assignor to Universal Camera Corporation, New York, N. Y., a corporation of New York
Application August 4, 1933, Serial No. 683,595
23 Claims. (Cl. 95—59)



1. In a camera, a casing having an apertured front wall, a shutter cooperating with the aperture, an operating lever for said shutter, and a single rivet for holding in assembled position the operating lever, shutter and casing.

2,029,476
PHOTOGRAPHIC CAMERA
Otto W. Githens, New York, N. Y., assignor to Universal Camera Corp., New York, N. Y., a corporation of New York
Application March 10, 1934, Serial No. 714,909
23 Claims. (Cl. 95—31)

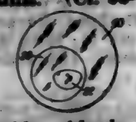


1. A camera comprising a casing having a portion forming a light chamber having a shutter aperture at the front and being open at the rear, chambered portions extending from the top and bottom of said first portion adjacent the rear end of the camera, and a back cover for said camera having side walls receiving the rear ends of the side walls of said first portion and having portions complementary to said first mentioned chambered portions to form chambers for film spools, and said back cover being formed with an integral extension formed with a sight opening.

2,029,477
TANK FILLING PIPE CLOSURE
Edward A. Gould and Hester De Caigny, Duluth, Minn.
Application April 24, 1935, Serial No. 18,963
2 Claims. (Cl. 138—89)

1. A pipe closure of the type described comprising a male portion for attachment to the pipe, a female portion slidably mountable externally upon said male portion, a holding bolt axially mounted within said female portion and having a circular shilled socket in its head for engagement with a suitable wrench, the upper portion of said head being flush with the upper surface of said female portion, and means screw-threadedly carried by said bolt for selective engagement or disengagement with the interior of said male member by rotation of said bolt.

2,029,478
MEANS AND METHOD OF PERFORATING DEEP WELLS
Marcus W. Haimes, Long Beach, Calif., assignor to Technicraft Engineering Corp., Los Angeles, Calif., a corporation
Application October 3, 1934, Serial No. 746,674
9 Claims. (Cl. 81—183)

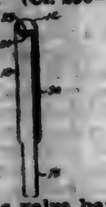


1. The combination with a submergible gun adapted to be fired while submerged; of a chamber connected with said gun said chamber containing a quantity of a compressible medium under pressure sufficient to flow from said chamber against the pressure of the liquid in which the gun is submerged; and means for discharging said medium into the region of gun-fire.

2,029,479
MULTIFOCAL OPHTHALMIC LENS AND BLANK THEREFOR
James H. Hammon, Vincennes, Ind.
Application May 31, 1932, Serial No. 612,706
6 Claims. (Cl. 88—54)

1. A fused multifocal lens blank comprising a main blank portion having a countersink of a single curvature therein, and a composite button comprising an exterior carrier portion formed of glass of the same index of refraction as said main blank portion and an interior segment of a different index of refraction, embedded in said exterior carrier portion so as to provide a shoulder therearound to permit preservation of the initial shape and area of the vision field of said segment in the finished lens, said button having a complemental single curvature on one of its surfaces throughout its entire area and being fused to said countersink in a position such that the portion of the surface of single curvature corresponding to said interior segment is located at a predetermined fixed point with respect to the center and deepest point of said countersink to thereby produce the desired prism in the segment vision field in the finished lens without changing the shape and area of said segment field.

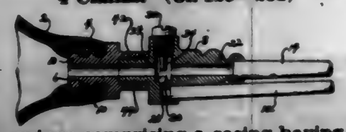
2,029,480
MULTIFOCAL OPHTHALMIC LENS AND BLANK THEREFOR
James H. Hammon, Vincennes, Ind.
Original application May 31, 1932, Serial No. 613,706. Divided and this application March 27, 1934, Serial No. 717,632
4 Claims. (Cl. 88—54)



1. A fused trifocal lens blank comprising a main blank portion of one index of refraction having a countersink of a single curvature therein, and a composite button comprising an exterior carrier portion formed of glass of a second index of refraction, and a segment of glass of a third index of refraction embedded in said carrier portion so as to provide a shoulder therearound, said button having a complemental single curvature on one of its surfaces throughout its entire area and being fused to said countersink in a position such that the portion of the surface of single curvature corresponding to said segment is located at a predetermined fixed point with respect to the center and deepest point of said countersink to thereby produce the desired prism in the segment vision field in the finished lens without changing the shape and area of said segment field.

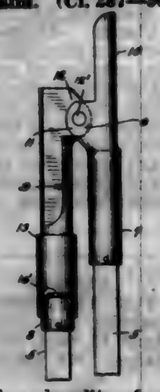
2,029,481
ESTERIFICATION OF CELLULOSIC MATERIALS
Joseph F. Haskins, Wilmington, Del., and William F. Underwood, Waynesboro, Va., assignors to Du Pont Cellophane Company, Inc., New York, N. Y., a corporation of Delaware
No Drawing. Application March 29, 1933, Serial No. 663,373
11 Claims. (Cl. 18—54)

1. The method of making an ester of cellulose which comprises reacting at about 35° C. upon one of a group of substances consisting of regenerated cellulose, cellulose, and lowly esterified or etherified cellulose with a bath containing an aliphatic monocarboxylic acid anhydride, a substantially constant amount of the addition product of pyridine and hydrogen chloride, one of said last-named constituents being present in an uncombined state.



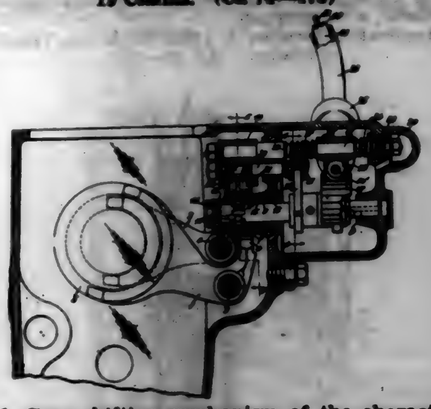
2,029,482
CATHODE FOR THERMIONIC VALVES
Adolf Haslauer, East Orange, N. J.
Application April 14, 1934, Serial No. 720,508
3 Claims. (Cl. 250—27.5)

3. In a thermionic valve having a supporting post, a cathode comprising, a cylinder formed from a strip of sheet metal having a cut out opening in one end portion thereof, the side edge portions of the strip being folded toward opposite surfaces of the strip and interlocked one with another, thereby providing the cylinder with a



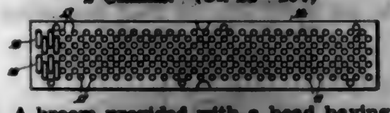
longitudinal reenforcing joint, the portions of said sheet metal strip at the sides of said cut out opening forming a continuation of said joint beyond the end of said cylinder, said joint continuation serving as an attaching tab.

2,029,483
WATER SYRINGE
James J. Holland, Parkesburg, Pa.
Application August 15, 1934, Serial No. 739,879
4 Claims. (Cl. 128—231)



2. A syringe comprising a casing having a longitudinally extending passageway and a transversely extending passageway communicating with said longitudinally extending passageway; a removable stop plug having its inner end extending into the junction of said passageways, a rigid fluid exhaust tube joined to said casing, a rigid fluid inspiratory exhaust tube substantially paralleling said exhaust tube joined to said casing and having a larger cross-sectional area than said exhaust tube passageway, a valve seat in said casing located adjacent the mouth of said inspiratory tube, a valve adapted to move freely between the inner end of said plug and said valve seat, means to draw fluid through both the exhaust and the inspiratory tubes and to discharge the fluid only through the discharge tube, said valve closing the inspiratory tube whereby fluid may not be exhausted therethrough.

2,029,484
FISHING ROD
John R. Howard and Boyd Biggers, Concord, N. C.
Application March 18, 1933, Serial No. 661,691
1 Claim. (Cl. 287—96)



In a fishing rod, a plurality of sections, a hinge member pivotally connecting the adjacent ends of the sections, said hinge member comprising pivotally connected sections, one section of said hinge member having longitudinal cut-out portions disposed on opposite sides thereof and providing longitudinal shoulders, the opposite section of said hinge member having a central longitudinal cut-out portion defining lateral fingers, the sections of said hinge member being pivotally connected whereby the fingers of one section move through the longitudinal cut-out portion and engage the longitudinal shoulders bracing the sections, and a sleeve movable over the fingers holding the fingers into engagement with the longitudinal shoulders.

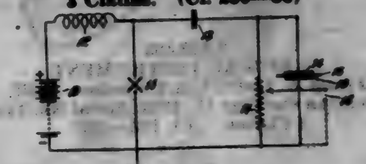
2,029,485
GEAR SHIFTING MECHANISM
Elmer G. Keating, Bloomfield, Mo.
Application October 18, 1933, Serial No. 694,046
19 Claims. (Cl. 74—473)

1. Gear shifting mechanism of the character described comprising a number of relatively shiftable elements, a spindle supported for longitudinal movements from unselected position and subsequent turning movements, resilient means for shifting said spindle longitudinally, cooperative locking elements controlled by said spindle and said resilient means respectively for locking said spindle against turning while said spindle remains in said unselected position, means for turning said spindle after longitudinal movement thereof, and mechanisms operative by said spindle for shifting said elements by said turning movements of said spindle after said spindle has been moved longitudinally from said unselected position.

2,029,486
BROOM
Justus H. Kinney, Boston, Mass.
Application June 29, 1934, Serial No. 733,011
2 Claims. (Cl. 15—197)

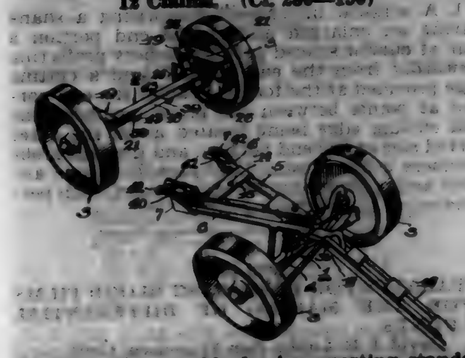
1. A broom provided with a head having projecting perpendicularly therefrom a plurality of normally separated U-shaped members of flat-sided spring metal arranged transversely and regularly spaced in parallel rows, one row overlapping an adjacent row, the free ends being adapted under sweeping pressure to be moved between and into alinement with said adjacent row while under spring tension tending to return said members to their original positions upon removal of said pressure.

2,029,487
ILLUMINATED CAUTERY ELECTRODE
Arnold Kleine, Flushing, N. Y., assignor to Comprex Oscillator Corp., New York, N. Y., a corporation of New York
Application February 16, 1934, Serial No. 711,474
4 Claims. (Cl. 240—2)



1. An illuminating device for a cautery electrode in which a pair of rigidly spaced conducting rods have an operative cauterizing loop bridging their forward ends, said device comprising a lamp bulb, a socket for the bulb, and means for mounting the socket closely alongside of

said rods with its axis parallel to said rods and in shunted electrical relation to said rods; said means comprising a pair of conductive supports



carried by said socket and adapted to engage said rods, respectively, and means for connecting said supports in mutually insulated relation to the socket terminals, respectively.

2,029,488
NEGATIVE RESISTANCE CRYSTAL CONTROLLED OSCILLATOR
Earl L. Koch, Chicago, Ill., assignor, by mesne assignments, to Earl L. Koch Holding Corporation, New York, N. Y., a corporation of New York
Application April 16, 1932, Serial No. 605,643
3 Claims. (Cl. 250—36)

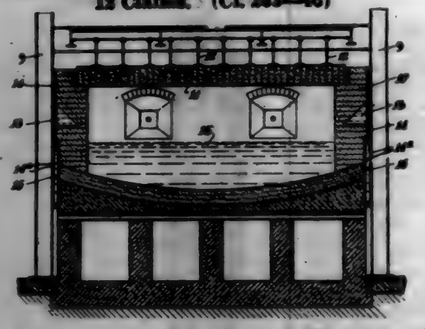
1. In combination, an output circuit including a source of energy, a negative resistance device including a radio frequency choke, a piezo electric crystal means for energizing said device from said source of energy, a condenser in series with said crystal, said condenser and crystal series being connected in shunt with said negative resistance device with the condenser positioned between said crystal and a positive electrode in said device, and a potentiometer in parallel with said crystal and output terminals for said combination connected to said potentiometer.

2,029,489
TRANSPORT TRUCK
Charles Edward Kohl, Harvey, Ill., assignor to Western-Austin Company
Application September 19, 1933, Serial No. 633,727
12 Claims. (Cl. 280—150)

1. A truck assembly for transporting standard constructions of slow moving vehicles such as shovels, crawler type tractors, road rollers and the like, comprising front and rear sections provided with supporting wheels and an axle, a frame forming a part of said front section and mounted on and carried by the axle of said section, and supporting members forming a part of the rear section and mounted on and carried by the axle of said rear section, said frame and members adapted to be connected to the vehicle for sustaining and carrying the weight thereof.

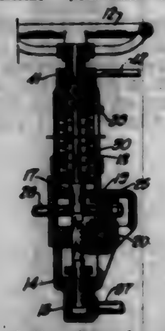
2,029,490
METHOD AND MEANS FOR CONTROLLING DEEP WELL GUNFIRE FOR PERFORATING CASINGS
Wilfred G. Lane, Los Angeles, Calif., assignor to The Technicraft Engineering Corporation, Los Angeles, Calif., a corporation of California
Application December 20, 1932, Serial No. 648,049
25 Claims. (Cl. 81—18)

1. Apparatus for perforating well casing or the like comprising a tubing string, a gun body, connected to said tubing string, provided with a plurality of gun units each adapted, when discharged, to drive projectiles through a surrounding casing, and coactive means carried by said tubing string and said gun body, responsive to successive accumulations and releases of pressure within said tubing string for successively discharging projectiles from the several gun units.



2,029,491
GUN TYPE FORMATION TESTER
Wilfred G. Lane, Los Angeles, Calif., assignor to The Technicraft Engineering Corporation, Los Angeles, Calif., a corporation of California
Application August 25, 1934, Serial No. 741,409
14 Claims. (Cl. 166—1)

1. A gun type formation tester comprising: a sample receiving means; and an initially sealed



gun and projectile instrumentality for unsealing said sample receiving means and forming an avenue of communication from a surrounding formation into said sample receiving means said instrumentality and said sample receiving means forming a tool entity adapted to be lowered or raised in a well bore.

2,029,481
METALLURGICAL FURNACE OF THE SUSPENDED ARCH TYPE
Karl A. Lindner, Roselle Park, N. J., assignor to American Smelting and Refining Company, New York, N. Y., a corporation of New Jersey
Application May 31, 1933, Serial No. 673,674
12 Claims. (Cl. 263—46)

1. In a metallurgical furnace of the suspended arch type, means for anchoring the refractory side walls of said furnace whereby vertical movement and failure of said side walls is prevented, said means comprising anchoring devices bearing downwardly on said side walls.

2,029,483
FLUID CONTROL DEVICE
Harry W. Link, Philadelphia, Pa., assignor, by mesne assignments, to American Engineering Company, Philadelphia, Pa., a corporation of Pennsylvania
Application April 20, 1934, Serial No. 721,540
2 Claims. (Cl. 103—38)

1. In a device of the class described, the combination with a variable stroke pump, of stroke adjusting means for said pump, a bracket secured to one side of said pump, having an open framework, a vertically disposed cylinder mounted at the lower end of said bracket having a piston operating therein, means connecting said cylinder to the pressure side of said pump, a substantially tubular extension provided at the upper end of said bracket, an extended cap secured to said extension, a vertically disposed rod slidably mounted in said bracket, and extending upwardly through said tubular portion and cap, said rod abutting the upper end of said piston, a rack integral with the lower end of said rod, a segmental gear journaled in said bracket meshing with said rack, a substantially horizontal rack secured to said stroke adjusting means also meshing with said segmental gear, a coil spring mounted in said tubular extension and cap, adapted to exert a downward pressure on said rod to move said stroke adjusting means toward on-stroke position, and means for adjusting the compression of said spring.

2,029,494
TREATMENT OF TOBACCO
Bert Loewenthal, New York, N. Y., assignor to Federal Tobacco Corporation, a corporation of New York
No Drawing. Application February 13, 1933, Serial No. 656,588
25 Claims. (Cl. 131—4)

1. The method of preparing tobacco which comprises removing gum, oils, nicotine and mineral matter from the leaf in an acid bath containing nitric and phosphoric acids.

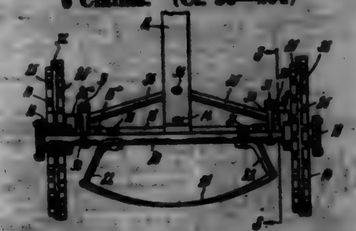
2,029,495
SURGICAL INSTRUMENT
Frank A. Lowe, San Francisco, Calif.
Application October 17, 1934, Serial No. 748,613
2 Claims. (Cl. 128—305)

1. A surgical instrument comprising a shank having an enlarged and curved end portion a pair of curved spaced probe members projecting forwardly from the end portion, and a cutting edge provided at the forward end of the end portion at points between the probe members, the said cutting edge being located along the outer curved side of the end portion, and the said probe members being substantially parallel to one another and positioned in separate planes, each perpendicular to the cutting edge.

2,029,496
APPARATUS FOR PREPARING BLOOD FILMS FOR THE MAKING OF DIFFERENTIAL COUNTS
David J. B. Lubin, San Francisco, Calif.
Application April 24, 1935, Serial No. 17,988
4 Claims. (Cl. 88—29)

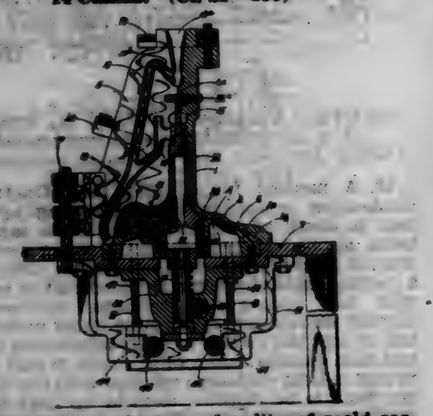
1. In an apparatus for preparing a film of blood between a pair of cover-slips, a base member, a block mounted on the base and longitudinally

movable thereon, means on the block for receiving and securing one of the cover-slips, said second cover-slip adapted to be placed on top thereof, means on the base engageable with the second cover-slip to hold it against movement when the



block and the first cover-slip are moved longitudinally on the base, and means on the block for receiving and supporting the second cover-slip when the first cover-slip is moved from in under the same.

2,029,497
METHOD OF SECURING HEELS TO SHOES
Solomon Molk, Lynn, Mass.
Application May 3, 1934, Serial No. 723,736
1 Claim. (Cl. 12—147)



The method of attaching a heel to a shoe which comprises providing the heel with a plurality of separate double pronged fasteners, one prong of said fasteners being driven into the heel seat of the heel and the other prong of said fasteners being of such length as to not pass through the insole whereby the heel may be brought into a relatively close proximity to the heel seat of a shoe in order that a proper and precise positioning of the heel may be obtained, said prongs when driven in being adaptable to have sufficient engagement with the heel seat of the shoe to hold the heel temporarily in place, and then permanently securing the heel positioned as aforesaid to the shoe by nails driven through the heel seat into the heel from inside the shoe.

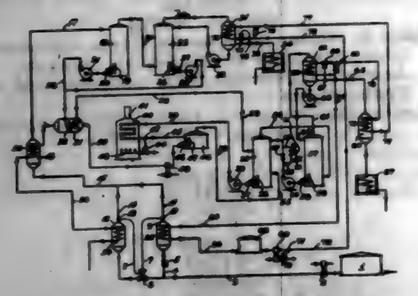
2,029,498
LAWN MOWER
Herbert B. Newton, Brookline, Mass.
Application August 2, 1934, Serial No. 738,636
6 Claims. (Cl. 56—294)

1. A tall grass and weed mower comprising a carrying frame having external and internal bearings, traction wheels journalled on the external bearings, a rock-shaft journalled in the internal bearings, spider arms fixed to the rock-shaft, a blade fixed to said arms and maintained thereby with its cutting edge parti-helical and substantially equidistant at all points from the shaft, and mechanism for rocking the shaft in its bearings to impart forward and backward oscillating movements to the blade.

2,029,499
METAL MOLD
Allen B. Norton and Marius Guyot, Cleveland, Ohio, assignors to Aluminum Company of America, Pittsburgh, Pa., a corporation of Pennsylvania
Application January 2, 1930, Serial No. 418,362
14 Claims. (Cl. 22—126)

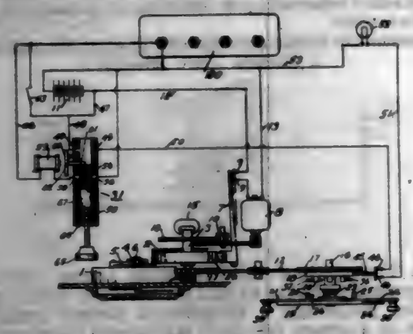
7. In a mold, a base, a plurality of mold sections including a pair of sector shaped sections conjointly pivoted to each other and to said base, and a third sector shaped section pivoted to one of said pair of sections, said mold sections being arranged to fit together to define a casting cavity, and means for clamping said mold sections together.

2,029,500
COMPOSITE PICTURE
Willis H. O'Brien, Los Angeles, Calif., assignor to Radio Corporation of America, a corporation of Delaware
Application September 13, 1933, Serial No. 689,169
5 Claims. (Cl. 88—16)



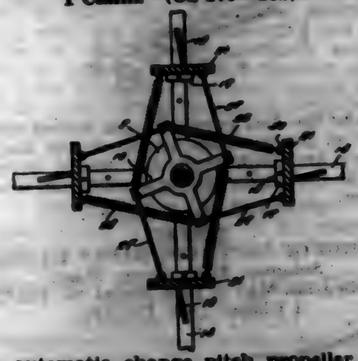
1. The method of eliminating screen surface irregularity effects in motion pictures which includes projecting a background picture component on a screen, vibrating said screen transversely of the direction in which said component is projected, and taking a series of photographs of said projected image while the screen is vibrating.

2,029,501
METHOD AND APPARATUS FOR DISTILLATION OF OIL
Alexander Griffith Pope, Los Angeles, Calif., assignor to Union Oil Company of California, Los Angeles, Calif., a corporation of California
Application September 26, 1928, Serial No. 308,500
31 Claims. (Cl. 196—71)



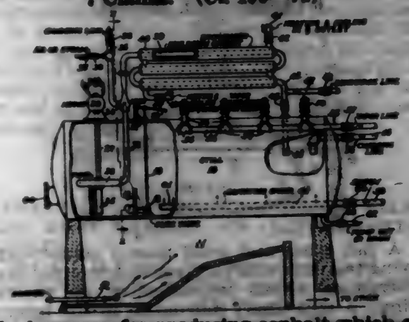
1. A method of distillation which comprises vaporizing a liquid, condensing the vapors by heat

exchange with a cooling fluid and preheating the liquid, passing to said vaporization, by heat exchange with the cooling fluid passing from said heat exchange with said vapors.



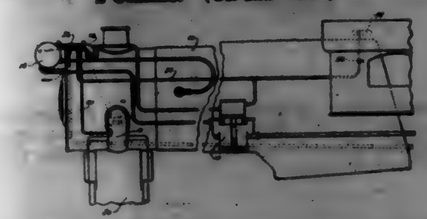
18. A method for distilling and fractionally condensing petroleum oils comprising applying heat to distill off the desired fractions, said heat being applied in proportion to the quantity of desired fractions present in the stock, circulating a cooling liquid through a closed circuit in contact with said vapors for fractional condensation thereof, circulating said cooling liquid under control to cool the vapors to a predetermined degree and then passing said cooling liquid in said closed circuit in heat exchange relation with the incoming stock to be distilled to yield up heat to said stock in proportion to the amount of heat absorbed during condensation of vapors.

2,029,502
AUTOMATIC CONTROL SYSTEM FOR AUTOMOBILE LIGHTS
George Paulson, Erie, Pa., assignor of one-third to George J. Miller, Erie, Pa.
Application August 2, 1934, Serial No. 738,093
5 Claims. (Cl. 161—1)



1. In a device of the class described, in combination, an illuminating circuit, a second circuit, a source of power for said circuits, a switch for breaking said illuminating circuit manually, means operated by the energy in said second circuit for automatically closing said manually operated switch when said second circuit is energized, said closing means preventing the permanent opening of said switch without permanent manual intervention when the second circuit is energized, and automatically operated selective means in said illuminating circuit for opening and closing said illuminating circuit at predetermined times.

2,029,503
AUTOMATIC CHANGE PITCH PROPELLER
Charles Peterson, Iron Mountain, Mich., assignor of forty per cent to Axel Nelson, Florence, Wis.
Application June 23, 1935, Serial No. 28,135
1 Claim. (Cl. 170—163)



An automatic change pitch propeller of the class described comprising a hub, blade shafts radiating from said hub, said blade shafts having secured thereon spiral splines, airfoils mounted on said shafts and slidable along said splines on rotation of said airfoils, and equalizer rotatably mounted on said hub having spaced arms radiating therefrom, there being provided an arm for each blade radiating shaft, a connecting rod having one end connected to one side of each of said airfoils and the other end to one of the arms of the equalizer, a retracting spring having one end connected to each side of the airfoils at a point on the opposite side of the shaft to which the connecting rod is connected the other end of the retracting spring being connected to another of the arms of the equalizer, the springs and connecting rods of diametrically related aero foils being diametrically opposed, and of such a character that centrifugal movement of the airfoils is coordinatedly transmitted through the equalizer and exerted upon the spring means for coordinatedly positioning said airfoils at greater or less angulations to the plane in which the blade shafts lie.

2,029,504
METHOD FOR PRODUCING OXIDIZED ASPHALTS
Edward G. Ragatz, Los Angeles, Calif., assignor to Union Oil Company of California, Los Angeles, Calif., a corporation of California
Application November 6, 1933, Serial No. 696,288
7 Claims. (Cl. 196—74)

1. A process for producing asphalt which comprises commingling oil with oxygen containing gas at an elevated oxidising temperature sufficient to oxidize the greater part of said oil into asphalt and subsequently maintaining said oxidized asphalt at a higher elevated temperature sufficient to polymerize oil fractions in said oxidized asphalt and under sufficient pressure to prevent material distillation of vaporizable oil fractions.

2,029,505
BALANCED AUTOMATIC VALVE
Emanuel Rawson, North Bergen, N. J., assignor to The Superheater Company, New York, N. Y.
Application January 9, 1934, Serial No. 705,841
2 Claims. (Cl. 122—441)

1. In a locomotive having a boiler, a feed water heater normally supplied with exhaust steam from the locomotive engine, a pump connected to feed water to said boiler through said heater, piping between said boiler and said pump for supplying live steam to the latter, a valve in said piping controlling the pressure of steam therein for regulating the rate of operation of said pump, and a connection between said piping and heater for supplying live steam to said heater during operation of said pump; a valve member in said connection balanced to be unaffected by the pressure of live steam in said connection; a piston connected with said valve member and subject to the engine operating pressure for normally maintaining said valve member in closed position; and spring means acting on said valve member in opposition to said engine operating pressure for moving it to open position at a definite engine operating pressure irrespective of the pressure of live steam supplied to said pump and heater through said piping and connection under the control of said valve.

2,029,506
SOAP STABILIZER
Robert M. Reed, Cincinnati, Ohio, assignor to The Procter & Gamble Company, Cincinnati, Ohio, a corporation of Ohio
No Drawing. Application August 22, 1933, Serial No. 685,356
6 Claims. (Cl. 87—16)

1. The process of stabilizing soap products which comprises incorporating therewith para-tertiary-amyl phenol.

2,029,507
METHOD OF MAKING HOLLOW FORGED VALVES
William Seringeour, Washington, D. C.
Application December 15, 1934, Serial No. 758,566
3 Claims. (Cl. 29—156.7)

1. The method of forming a hollow poppet valve from a metal blank having a diameter intermediate that of the desired head and stem diameters, which comprises shaping the outer surface of that portion of the blank which is to constitute the outer head wall to the form of a semi-spherical surface having a projecting bead at the diameter thereof, reducing the diameter of the blank at the portions adjacent said bead, and pressing the said portions of the blank to

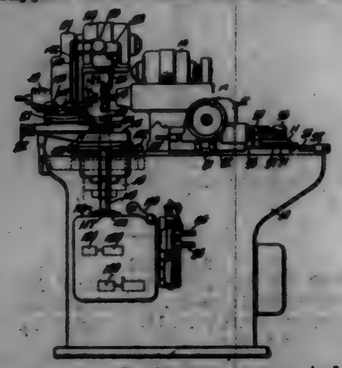
form a valve head having the metal of said bead at the rim thereof.

2,029,508
METHOD OF MAKING HOLLOW ARTICLES
William Seringeour, Washington, D. C.
Application March 27, 1935, Serial No. 13,348
10 Claims. (Cl. 29—156.7)

1. The method of forming a hollow valve which comprises punching a solid cylindrical blank to form a hollow tube having an end wall of substantially the thickness of the side wall thereof, working down the tubular portion of the blank from a portion adjacent said end wall to form an elongated stem, and pressing the end wall axially to form a valve head.

2,029,509
ARYLAMIDES OF 2,3-HYDROXYNAPHTHOIC ACIDS.
Wilfred Archibald Sexton, Huddersfield, England, assignor to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application January 19, 1934, Serial No. 706,145. In Great Britain December 23, 1931
4 Claims. (Cl. 260—124)

1. Naphthalene derivatives having the following general formula:



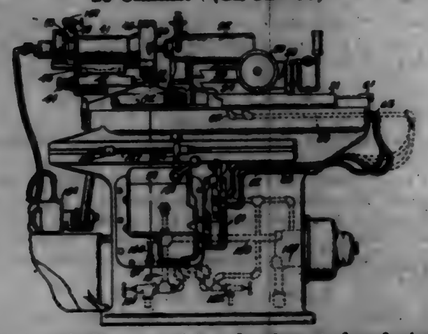
in which R and R' represent aryl radicals of the benzene or naphthalene series.

2,029,510
HYDRAULIC BALL RACK GRINDER
Amos P. Steiner, Edgar P. Wine, and Harold E. Balsiger, Waynesboro, Pa., assignors to Landis Tool Company, Waynesboro, Pa., a corporation of Pennsylvania
Application August 30, 1929, Serial No. 389,492
23 Claims. (Cl. 51—97)

23. In a grinding machine, the combination of a bed, a grinding wheel support, a grinding wheel mounted thereon for rotation, fluid pressure means for moving said grinding wheel support rapidly transversely of said bed to position the

grinding wheel for grinding, means for controlling the movement of the wheel support for producing a slow continuing grinding feed of the wheel support in the same transverse direction,

including a screw, fluid pressure operated means for rotating said screw, and automatic means for initiating the operation of said last-named fluid pressure means when said grinding wheel is positioned for grinding.



2,029,511

HYDRAULIC RAIL RACK GRINDER

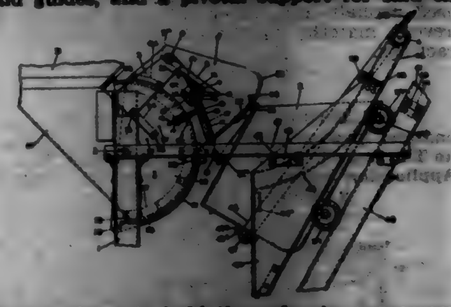
Amos P. Steiner, Edgar P. Wine, and Harold E. Balsiger, Waynesboro, Pa., assignors to Landis Tool Company, Waynesboro, Pa., a corporation of Pennsylvania

Application October 22, 1929, Serial No. 401,500

16 Claims. (Cl. 51—97)

1. A grinding machine having a head-stock support, a head-stock mounted on the support, means for oscillating the head-stock support, and means for rotating the head-stock, a grinding wheel, means for moving the grinding wheel axially and transversely of the head-stock, all of said means being fluid operated and a single control lever for controlling operation of all of the said means, and independent control means for causing the grinding wheel to move axially of the work to position the grinding wheel in wheel dressing position, substantially as set forth.

2,029,512



MATERIAL HANDLING MECHANISM

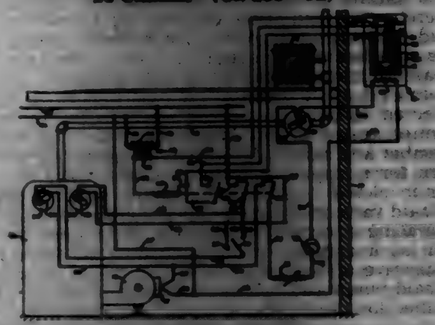
Orval E. Strawn, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, a corporation of Ohio

Application April 8, 1931, Serial No. 528,141

23 Claims. (Cl. 214—122)

1. In material handling apparatus, the combination with a chute, of a valve having the shape of a segment of a cylinder, arcuate guides for said valve, vertical enclosure plates connected to the outer edges of the valve and spaced from said guides, and a pivotal support for said en-

closure plates to hold the valve in engagement with the guides, the plates having egress openings adapted to occupy their lowest positions when the valve is open.



2,029,513

TEMPERATURE CONTROL SYSTEM

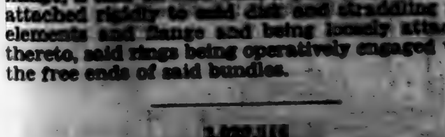
Daniel G. Taylor, Minneapolis, Minn., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware

Application April 28, 1926, Serial No. 104,153

13 Claims. (Cl. 236—91)

1. In a system of the class described, steam heating means for heating a building, a controller responsive to outside atmospheric conditions, heating means for the controller, means responsive to the temperature of the controller for energizing both of said heating means, and means to prevent energization of the controller heating means until the building heating means is about to heat the building.

2,029,514



THREAD CUTTING TOOL

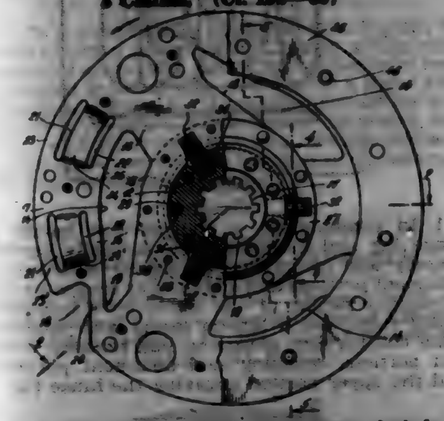
Robert Thomsen, Arlington, N. J., assignor to Dardelet Threadlock Corporation, New York, N. Y., a corporation of Delaware

Application April 28, 1934, Serial No. 722,257

1 Claim. (Cl. 10—141)

A tap for cutting Dardelet internal screw threads, characterized in that said tap has a body threaded and fluted to provide lands with a helical series of thread groove cutting teeth in interrupted sequence on the lands in succession around the tap to reduce strain on the tap, a helical series of thread groove cutting teeth in uninterrupted sequence immediately following said interrupted teeth, a helical series of thread crest trimmers immediately following said uninterrupted teeth and having cutting edges inclined slightly toward the tap axis longitudinally of the tap, the land surfaces at and between the bases of all of the groove cutting teeth on the lands in advance of said crest trimmers being nearer the tap axis than said crest-trimming edges to avoid all crest-trimming action in advance of

said crest trimmers, a helical series of groove-entering guide teeth in uninterrupted sequence immediately following said crest trimmers, and a helical series of groove-entering guide teeth in interrupted sequence immediately following said uninterrupted guide teeth.



2,029,515

CLUTCH TRANSMITTING DISK

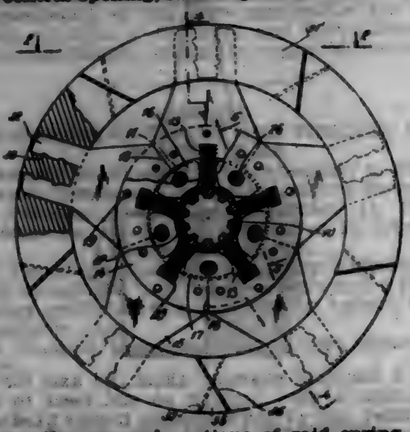
Elmer V. J. Tower, North Syracuse, N. Y., assignor, by direct and mesne assignments, of one-half to The Russell Manufacturing Company, Middletown, Conn., a corporation of Connecticut, and one-half to Brown-Lipe Gear Company, Toledo, Ohio, a corporation of New York

Application March 8, 1930, Serial No. 434,256

3 Claims. (Cl. 192—68)

1. A clutch plate which comprises a hub having a flange provided with radial pockets, a plurality of spring bundles, one in each pocket and projecting outwardly beyond the periphery of the flange, a disk on said hub, a pair of dished rings attached rigidly to said disk and straddling said elements and flange and being loosely attached thereto, said rings being operatively engaged with the free ends of said bundles.

2,029,516



TRANSMITTING ELEMENT

Elmer V. J. Tower, North Syracuse, N. Y., assignor, by direct and mesne assignments, of one-half to The Russell Manufacturing Company, Middletown, Conn., a corporation of Connecticut, and one-half to Brown-Lipe Gear Company, Toledo, Ohio, a corporation of New York

Application May 2, 1930, Serial No. 449,597

4 Claims. (Cl. 192—68)

1. A transmitting element for use in a clutch which comprises a hub having a circumferential flange provided with a plurality of angularly spaced recesses, a plurality of leaf spring elements one for each recess having a portion seated in the recess and another portion lying exposed outside the recess, a disc having an opening through which the hub extends, the disc including a pair of rings on opposite faces thereof in part defining said central opening, said rings having recesses to

receive the exposed portions of said spring elements, means securing the disc and hub together and permitting them a limited degree of relative angular movement, the spring elements being flexed in and resisting said movement, friction material carried by the disc and means engaging the opposite sides of said spring elements to prevent their lateral displacement.

2,029,517

DISTRIBUTOR MEMBER FOR STOKERS

Edwin Archer Turner, New York, and Charles J. Sardy, Tuckahoe, N. Y., assignors to The Standard Stoker Company, Incorporated, a corporation of Delaware

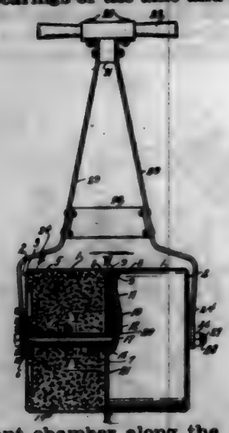
Application November 15, 1934, Serial No. 753,992

4 Claims. (Cl. 110—101)

1. In combination, a firebox having an upstanding wall with a firing opening therein, a distributor member in said firing opening, and means for supporting said member from the firebox wall comprising pins extending toward each other from the opposite side portions of the firebox wall forming the sides of the firing opening and downwardly opening grooves in the adjacent ends of said member receiving said pins.

2,029,518

GARDEN ROLLER MANUFACTURE



David B. Budd, Amsterville, Mich., and Frank C. Spohr, Toledo, Ohio

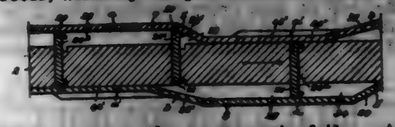
Application August 23, 1934, Serial No. 741,154

4 Claims. (Cl. 55—43)

1. A garden roller section comprising a tread, end pieces, a hub centered by the end pieces, one of said end pieces having opening means for pour-

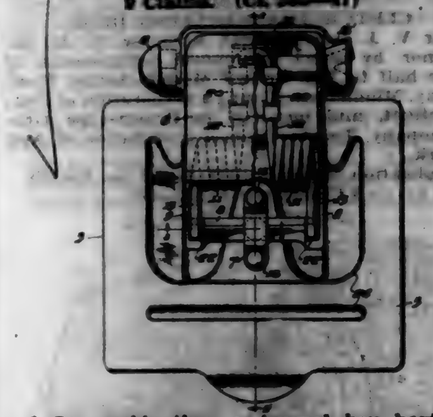
ing of a cast therein, said hub having key projection means to cooperate with the cast, an axle having spaced bearings terminally of the hub, said spaced bearings of the axle and hub provid-

ing a lubricant chamber along the axle for the bearings, a duct through an end piece to said chamber, and a roller propelling handle fixed with the axle.



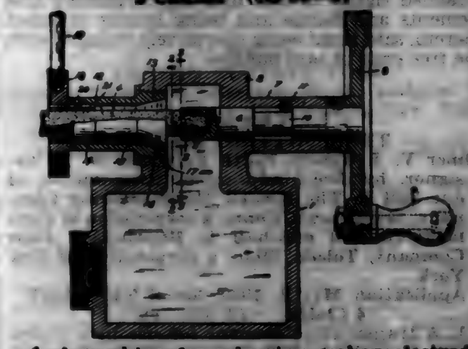
2,029,519
STOKER
Washington T. Cappe, Baltimore, Md., assignor to The Standard Stoker Company, Incorporated, a corporation of Delaware
Application April 10, 1935, Serial No. 15,516
3 Claims. (Cl. 198—15)

1. In a locomotive and tender, a stoker conveying system including a conduit having a fuel receiving and transferring portion and a fuel discharge portion, said conduit portions being arranged in endwise communication, screw conveying means disposed within the fuel receiving and transferring portion of said conduit, a conveying screw in the fuel discharge portion of said conduit, the screw conveying means in said fuel receiving and transferring conduit portion being free at its forward end and spaced from the rearward end of the conveying screw in said fuel discharge conduit portion, driving means for said screws, a shaft operatively connecting said driving means with the screw conveying means in the fuel receiving and transferring portion of said conduit and shafting at one end universally connected with the screw in the discharge portion of said conduit and at the other end operatively connected with said driving means.



2,029,520
PUMP OR MOTOR
William J. Carey, Cleveland Heights, Ohio
Application July 12, 1934, Serial No. 735,029
14 Claims. (Cl. 103—139)

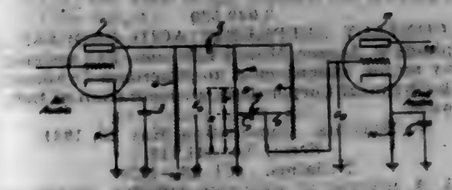
1. In a pump or motor of the class described, in combination, a rotor, a pumping chamber in which said rotor operates, blades mounted in the rotor and axially movable with respect to the latter to engage at one end with a wall of said pumping chamber, while the opposite end is free from the opposite wall of said chamber at a predetermined point in the travel of the blades with the rotor, whereby the pressure fluid acting upon



the blades during the movement of the rotor is adapted to shift the blades to maintain one end thereof in fluid tight contact with a wall of the chamber.

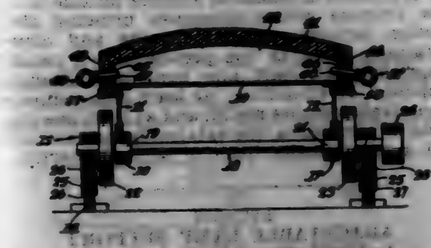
2,029,521
JOURNAL BOX
Glenn F. Couch, Rochester, N. Y., assignor to The Symington Company, New York, N. Y., a corporation of Maryland
Application November 20, 1930, Serial No. 497,636
9 Claims. (Cl. 308—47)

1. In combination, a journal box having a hinge lug and a lid assembly pivotally carried thereby and comprising a retainer with spring abutment portions and a lid proper connected adjacent the center of the latter by a ball-and-socket joint, and a torsion spring with intermediate coil portions seated on said retainer, lower end portions engaging said abutment portions, and the upper portion engaging the hinge lug.



2,029,522
MACHINE FOR SALVAGING CARBONS
Wallace E. Cross, Detroit, Mich.
Application January 21, 1935, Serial No. 2,340
5 Claims. (Cl. 83—1)

1. A machine for salvaging carbon electrodes comprising a support, a shaft rotatable and lon-



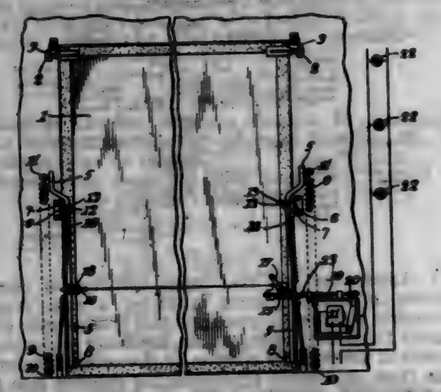
gitudinally slidable on said support, a common means for rotating and sliding said shaft, an annular cutting tool terminally mounted on said shaft, a sleeve coaxial with said shaft detachably mounted on said support in spaced relation to the cutting tool, a collet mounted in said sleeve and longitudinally slit to form with the sleeve a chuck adapted to clamp a carbon electrode in coaxial relation with said cutting tool, means carried by said sleeve resisting rotation of said collet, means for effecting contraction of the collet, and means for limiting sliding actuation of said shaft.

2,029,523
TONE COMPENSATED VOLUME CONTROL
Leslie F. Curtis, Springfield, Mass., assignor to United American Bosch Corporation, Springfield, Mass., a corporation of New York
Application September 11, 1934, Serial No. 743,534
9 Claims. (Cl. 179—1)

1. In a compensated volume control circuit, an audio source, a potentiometer having a resistance connected across said source, a variable resistance connected in series with said source, a slider arm on said potentiometer, a movable contact on said variable resistance, a condenser connected between said slider arm and said movable contact, and an output connection between said condenser and said movable contact.

2,029,524
PROCESS OF MAKING EXPANDED VERMICULITE
Paul S. Denning, Joliet, Ill., assignor to F. E. Schundler & Co., Inc., a corporation of Illinois
Application January 21, 1932, Serial No. 587,950
6 Claims. (Cl. 252—1)

1. A method of expanding vermiculite which consists of suddenly subjecting the material to a high temperature within an enclosed space for not over fifteen seconds, agitating the mass during exposure and then suddenly subjecting the mass to atmospheric temperature and submerging the same in water, removing the excess moisture and immediately thereafter exposing the mass to a high temperature within a closed space for not to exceed fifteen seconds and finally suddenly subjecting the mass again to atmospheric temperature.



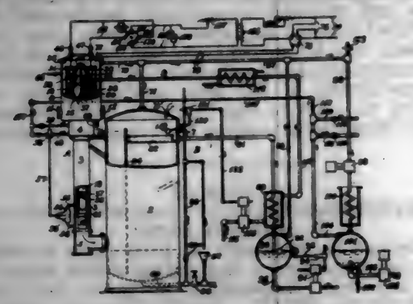
4. A method of expanding vermiculite material which consists in suddenly introducing the same into an elongated passage, having heat applied thereto from a plurality of nozzles distributed along substantially the entire length of the passage and directed transversely to the flow of material, causing the material to pass along said passage and be heated from said nozzles and simultaneously causing the turning of the particles independently of the heat application for exposing all sides to the heat, and then substantially immediately cooling the expanded material.

2,029,525
TRANSPARENT TISSUE AND PROCESS OF MAKING SAME
Carleton Ellis, Montclair, N. J., assignor to Ellis-Foster Company, a corporation of New Jersey
No Drawing. Application November 14, 1929, Serial No. 407,292. Renewed May 31, 1934
4 Claims. (Cl. 91—68)

1. Paper carrying a transparency augmenting resin including a urea aldehyde resin and a plasticising synthetic resin including an acetone formaldehyde resin.

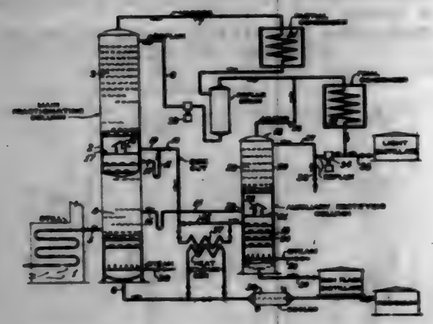
3. Glassine paper carrying a urea aldehyde resin.

2,029,526
DOOR OPENING APPARATUS
William D. Ferris, Sterling, Ill., assignor to Frantz Manufacturing Co., Sterling, Ill., a corporation of Illinois
Application July 14, 1933, Serial No. 680,442
4 Claims. (Cl. 20—19)



1. In an automatic self-opening garage door of the class wherein springs are employed for opening the door, when the latter is unlocked, the combination of locking mechanism for attachment to the inner side of the door, and electromagnetic control mechanism forming no part of said locking mechanism and adapted and designed for attachment to the doorway in position to engage and move said locking mechanism into unlocking position on the door, thereby to unlock the latter.

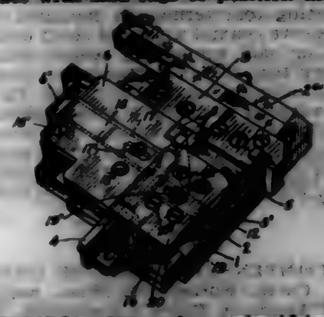
2,029,527
ELECTRICAL DEHYDRATOR
Harmon F. Fisher, Los Angeles, Calif., assignor to Union Oil Company of California, Los Angeles, Calif., a corporation of California
Application May 8, 1933, Serial No. 669,844
8 Claims. (Cl. 204—24)



1. A process for dehydrating petroleum emulsions comprising flowing the emulsion to be treated downward through an elongated vertical in-

terrupted electric treating field, injecting gas into the downward flowing emulsion and causing said

gas to rise through said emulsion in said treating field.



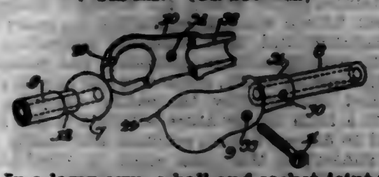
2,029,528
FRACTIONAL DISTILLATION
Earle W. Gard, Palos Verdes Estates, Calif., assignor to Union Oil Company of California, Los Angeles, Calif., a corporation of California
Application May 21, 1932, Serial No. 612,782
9 Claims. (Cl. 196—139)

7. Apparatus for fractional distillation comprising in combination a vaporizer, a main fractionating column to condense and fractionate the vapors from the vaporizer, an auxiliary vaporizer, means to withdraw a portion of the reflux condensate from said main fractionating column and to transfer said withdrawn reflux condensate to said auxiliary vaporizer, an auxiliary fractionating column, means to pass vapors from said auxiliary vaporizer through said auxiliary fractionating column, means to withdraw overhead fractions from said auxiliary fractionating column, and means to transfer reflux condensate from said auxiliary fractionating column to a point in the main fractionating column lower therein than the reflux condensate withdrawal means.

2,029,529
TYPOGRAPHIC MOLD
Maurits C. Indahl, Rydal, Pa., assignor to Lanston Monotype Machine Company, Philadelphia, Pa., a corporation of Virginia
Application August 9, 1934, Serial No. 739,866
9 Claims. (Cl. 199—93)

1. A typographic mold comprising type blocks, each having a cast forming surface and each provided with a lateral positioning lug extending parallel to said cast forming surface, and a point block having positioning surfaces adapted to contact with said lugs to position and main-

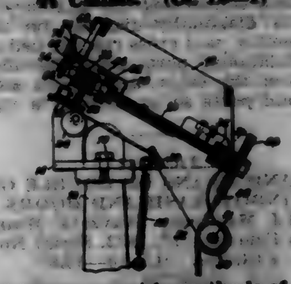
tain the cast forming surfaces of said type blocks at definite point size positions.



2,029,530
CONTACT SULPHURIC ACID PROCESS
Alphons O. Jaeger, Mount Lebanon, Pa., assignor, by mesne assignments, to American Cyanamid & Chemical Corporation, a corporation of Delaware
No Drawing. Application May 29, 1931, Serial No. 541,118
7 Claims. (Cl. 23—175)

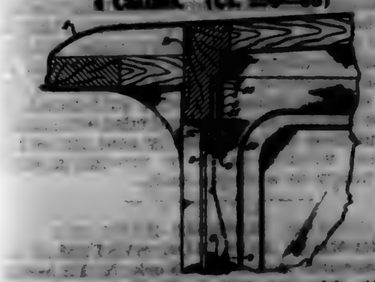
1. A process of oxidizing sulphur dioxide to sulphur trioxide, which comprises bringing about reaction between sulphur dioxide and oxygen containing gases in the presence of a catalyst comprising massive fragments of diatomite brick with which are associated at least one nonbase exchanging catalytically active compound of vanadium and at least one promoter.

2,029,531
CONTACT SULPHURIC ACID PROCESS
Alphons O. Jaeger, Mount Lebanon, Pa., assignor, by mesne assignments, to American Cyanamid & Chemical Corporation, a corporation of Delaware
No Drawing. Application May 29, 1931, Serial No. 541,119
4 Claims. (Cl. 23—175)



1. A process of oxidizing sulphur dioxide to sulphur trioxide which comprises bringing about reaction between sulphur dioxide and oxygen containing gases in the presence of a catalyst comprising at least one nonbase exchanging compound of vanadium, at least one compound of an alkali forming metal, and at least one compound of aluminum, the catalyst being associated with a catalytically inactive siliceous carrier.

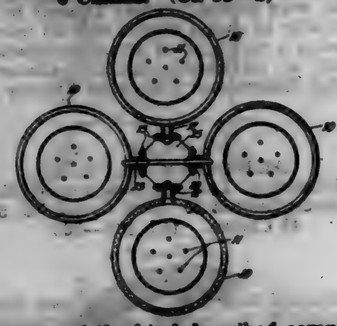
2,029,532
ADJUSTABLE LAMP SUPPORT
Arthur A. Karcher, Fostoria, Ohio
Application July 14, 1933, Serial No. 680,443
7 Claims. (Cl. 287—12)



4. In a lamp arm, a ball and socket joint therefor comprising a member with a ball on the end thereof, another member with a pair of clamping jaws on the opposite sides of the end thereof, forming a ball socket between them, for said ball, and providing an articulated support for the lamp, one jaw being rigidly fastened to the member, the other jaw being loose on the opposite side of the member, so that this other jaw has a clamping action at both ends thereof, a ball clamping action at one end and a member clamping action at the other end, and a screw extending through the two jaws, between the ball and the second mentioned member, said screw being loose in one jaw and screw threaded in the other jaw, whereby relatively adjustable clamping jaws are provided, with the second mentioned member clamped between the jaws at one end of the latter, and with said ball clamped between them at the other end.

2,029,533
METHOD OF AND APPARATUS FOR OPERATING ON THE SOLE EDGES OF RUBBER-SOLED SHOES
Fay D. Kinney, Smithbridge, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application June 1, 1933, Serial No. 674,782
44 Claims. (Cl. 12—1)

1. That improvement in methods of closing the sole edge of a rubber-soled shoe by pressing the sole edge against the adjacent portion of the upper or foxing characterized by the progressive application of pressure to successive portions of the sole edge in a direction extending crosswise of the sole edge from the tread surface toward the upper.



2,029,534
MOTOR VEHICLE
Archer L. Knapp, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a corporation of Michigan
Application November 25, 1930, Serial No. 498,979
4 Claims. (Cl. 296—66)

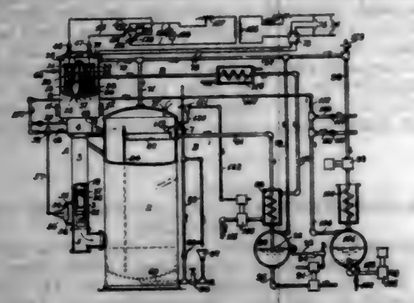
2. In a motor vehicle, the combination of a header bar; a visor comprising a plurality of sheet metal plates arranged in alignment, the adjacent marginal portions of adjacent plates being hinged together to allow the plates to swing relatively in planes transverse to the planes of the plates,

and a hinge pin engaging said adjacent marginal portions, the engagement of the sections with the pin frictionally maintaining the plates in any angular position of adjustment; and means securing a visor end plate against the rear face of the header bar.

2,029,535
MEANS FOR POACHING EGGS
Adrian L. Langel, Chicago, Ill., assignor to Chicago Metallic Manufacturing Company, a corporation of Illinois
Application May 16, 1935, Serial No. 21,794
6 Claims. (Cl. 53—1)

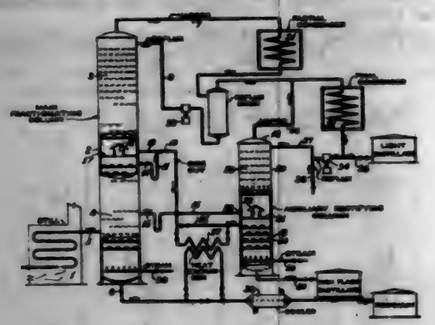
1. A device of the kind described comprising a plurality of receptacles, an individual handle for each receptacle, each individual handle being formed with a tapered portion, and a handle common to all of said receptacles and having tapered pocket-like portions for detachably holding the tapered portions of said individual handles.

2,029,536
MAP CABINET
Robert B. Lawton, Chicago Heights, Ill., assignor to Weber Costello Co., Chicago Heights, Ill., a corporation of Illinois
Application June 15, 1934, Serial No. 730,717
7 Claims. (Cl. 40—33)



1. In a device of the character described, a frame structure, a bar adapted to support a display sheet, and means removably and replaceably connecting said bar and display sheet as a unit to said frame structure, said means comprising a bracket on said structure defining a laterally flared opening to receive one end of said bar, and a bar securing element disposed adjacent the other end of said bar operating to restrain said bar against forward displacement relative to said structure.

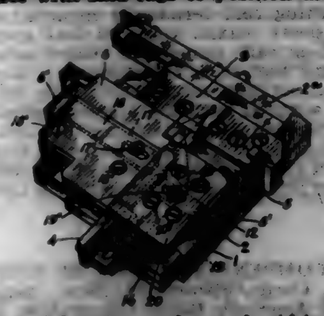
2,029,537
DEFORMABLE PLATE FOR VARIABLE CONDENSERS
Kurt Lucas, Berlin, Germany, assignor to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, a corporation of Germany
Application August 24, 1931, Serial No. 558,947
In Germany October 16, 1930
7 Claims. (Cl. 175—41.5)



1. Condensers especially of the multiple-unit type, comprising one or more deformable elec-

terrupted electric treating field, injecting gas into the downward flowing emulsion and causing said

gas to rise through said emulsion in said treating field.



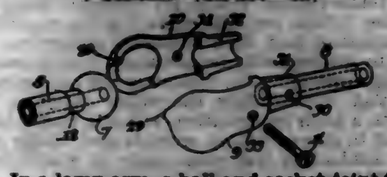
2,029,528
FRACTIONAL DISTILLATION
Earle W. Gard, Palos Verdes Estates, Calif., assignor to Union Oil Company of California, Los Angeles, Calif., a corporation of California
Application May 21, 1932, Serial No. 612,782
9 Claims. (Cl. 196—139)

7. Apparatus for fractional distillation comprising in combination a vaporizer, a main fractionating column to condense and fractionate the vapors from the vaporizer, an auxiliary vaporizer, means to withdraw a portion of the reflux condensate from said main fractionating column and to transfer said withdrawn reflux condensate to said auxiliary vaporizer, an auxiliary fractionating column, means to pass vapors from said auxiliary vaporizer through said auxiliary fractionating column, means to withdraw overhead fractions from said auxiliary fractionating column, and means to transfer reflux condensate from said auxiliary fractionating column to a point in the main fractionating column lower therein than the reflux condensate withdrawal means.

2,029,529
TYPOGRAPHIC MOLD
Maurits C. Indahl, Rydal, Pa., assignor to Lanston Monotype Machine Company, Philadelphia, Pa., a corporation of Virginia
Application August 9, 1934, Serial No. 739,866
9 Claims. (Cl. 199—93)

1. A typographic mold comprising type blocks, each having a cast forming surface and each provided with a lateral positioning lug extending parallel to said cast forming surface, and a point block having positioning surfaces adapted to contact with said lugs to position and main-

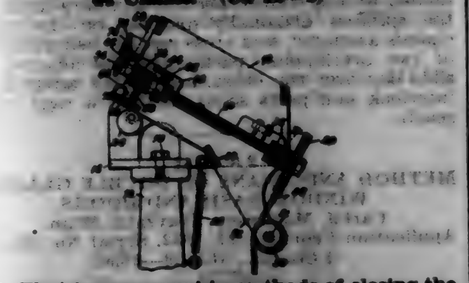
tain the cast forming surfaces of said type blocks at definite point size positions.



2,029,530
CONTACT SULPHURIC ACID PROCESS
Alphons O. Jaeger, Mount Lebanon, Pa., assignor, by mesne assignments, to American Cyanamid & Chemical Corporation, a corporation of Delaware
No Drawing. Application May 28, 1931, Serial No. 541,118
7 Claims. (Cl. 23—175)

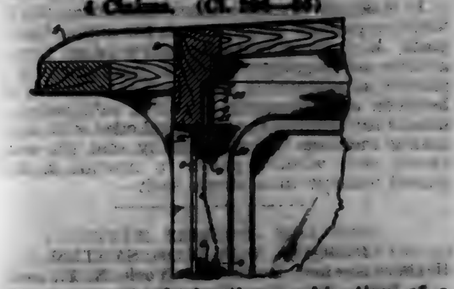
1. A process of oxidizing sulphur dioxide to sulphur trioxide, which comprises bringing about reaction between sulphur dioxide and oxygen containing gases in the presence of a catalyst comprising massive fragments of diatomite brick with which are associated at least one nonbase exchanging catalytically active compound of vanadium and at least one promoter.

2,029,531
CONTACT SULPHURIC ACID PROCESS
Alphons O. Jaeger, Mount Lebanon, Pa., assignor, by mesne assignments, to American Cyanamid & Chemical Corporation, a corporation of Delaware
No Drawing. Application May 28, 1931, Serial No. 541,119
4 Claims. (Cl. 23—175)



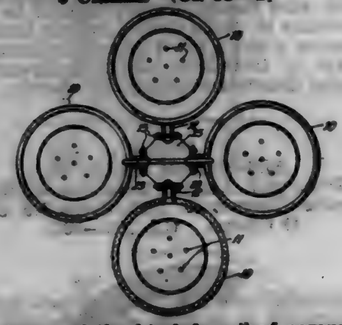
1. A process of oxidizing sulphur dioxide to sulphur trioxide which comprises bringing about reaction between sulphur dioxide and oxygen containing gases in the presence of a catalyst comprising at least one nonbase exchanging compound of vanadium, at least one compound of an alkali forming metal, and at least one compound of aluminum, the catalyst being associated with a catalytically inactive siliceous carrier.

2,029,532
ADJUSTABLE LAMP SUPPORT
Arthur A. Karcher, Fostoria, Ohio
Application July 14, 1933, Serial No. 680,443
7 Claims. (Cl. 287—13)



4. In a lamp arm, a ball and socket joint therefor comprising a member with a ball on the end thereof, another member with a pair of clamping jaws on the opposite sides of the end thereof, forming a ball socket between them, for said ball, and providing an articulated support for the lamp, one jaw being rigidly fastened to the member, the other jaw being loose on the opposite side of the member, so that this other jaw has a clamping action at both ends thereof, a ball clamping action at one end and a member clamping action at the other end, and a screw extending through the two jaws, between the ball and the second mentioned member, said screw being loose in one jaw and screw threaded in the other jaw, whereby relatively adjustable clamping jaws are provided, with the second mentioned member clamped between the jaws at one end of the latter, and with said ball clamped between them at the other end.

2,029,533
METHOD OF AND APPARATUS FOR OPERATING ON THE SOLE EDGES OF RUBBER-SOLED SHOES
Fay D. Kinney, Southbridge, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application June 1, 1933, Serial No. 674,762
44 Claims. (Cl. 12—1)



1. That improvement in methods of closing the sole edge of a rubber-soled shoe by pressing the sole edge against the adjacent portion of the upper or foxing characterized by the progressive application of pressure to successive portions of the sole edge in a direction extending crosswise of the sole edge from the tread surface toward the upper.

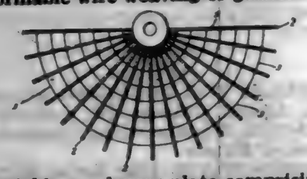
2,029,534
MOTOR VEHICLE
Archer L. Knapp, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a corporation of Michigan
Application November 25, 1930, Serial No. 498,979
4 Claims. (Cl. 296—35)

2. In a motor vehicle, the combination of a header bar; a visor comprising a plurality of sheet metal plates arranged in alignment, the adjacent marginal portions of adjacent plates being hinged together to allow the plates to swing relatively in planes transverse to the planes of the plates, and a hinge pin engaging said adjacent marginal portions, the engagement of the sections with the pin frictionally maintaining the plates in any angular position of adjustment; and means securing a visor end plate against the rear face of the header bar.

2,029,535
MEANS FOR POACHING EGGS
Adrian L. Langel, Chicago, Ill., assignor to Chicago Metallic Manufacturing Company, a corporation of Illinois
Application May 16, 1935, Serial No. 21,794
6 Claims. (Cl. 53—1)

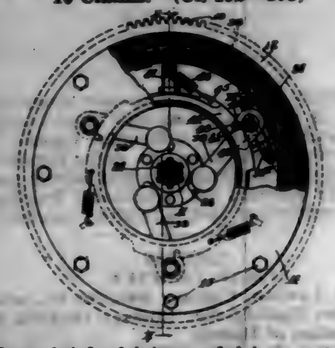
1. A device of the kind described comprising a plurality of receptacles, an individual handle for each receptacle, each individual handle being formed with a tapered portion, and a handle common to all of said receptacles and having tapered pocket-like portions for detachably holding the tapered portions of said individual handles.

2,029,536
MAP CABINET
Robert B. Lawton, Chicago Heights, Ill., assignor to Weber Costello Co., Chicago Heights, Ill., a corporation of Illinois
Application June 15, 1934, Serial No. 730,717
7 Claims. (Cl. 40—83)



1. In a device of the character described, a frame structure, a bar adapted to support a display sheet, and means removably and replaceably connecting said bar and display sheet as a unit to said frame structure, said means comprising a bracket on said structure defining a laterally flared opening to receive one end of said bar, and a bar securing element disposed adjacent the other end of said bar operating to restrain said bar against forward displacement relative to said structure.

2,029,537
DEFORMABLE PLATE FOR VARIABLE CONDENSERS
Kurt Lucas, Berlin, Germany, assignor to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, a corporation of Germany
Application August 24, 1931, Serial No. 558,907
In Germany October 16, 1930
7 Claims. (Cl. 175—41.5)

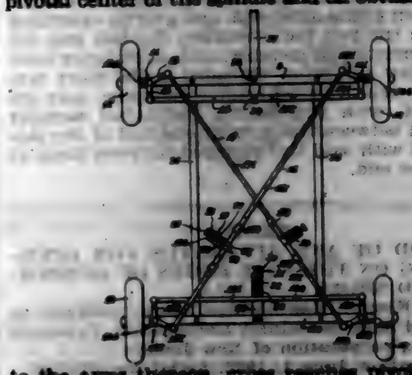


1. Condensers especially of the multiple-unit type, comprising one or more deformable elec-

trodes for the adjustment of the capacity characteristic, with this characteristic feature that the deformable electrode surface is constituted by a deformable wire weaving or gauze.

4. A variable condenser plate comprising a deformable wire gauze member formed by means of a plurality of radial fingers and an interwoven part having a plurality of arcuately-shaped portions laid at increasing radial distances along said radial fingers and supported thereby.

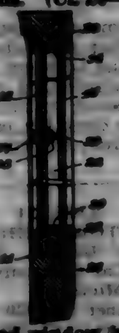
2,029,538
AUTOMATIC CLUTCH
Kenneth E. Lyman, Lake Forest, Ill.
Application August 30, 1933, Serial No. 687,434
10 Claims. (Cl. 192—105)



1. In a clutch, driving and driven power transmitting members, a clutching element contributing to a releasable driving connection between said members, a centrifugal device for controlling said clutching element, a thrust imparting member mounted for universal wabbling movement between the centrifugal device and said clutching element and a mounting for said member yieldable in the direction of the thrust imparted thereby.

2,029,539
CONDENSATION PRODUCT AND PROCESS
Joseph B. Niederl, New York, N. Y.
No Drawing. Application August 2, 1934, Serial No. 738,049
10 Claims. (Cl. 260—154)

1. A method of producing condensation products which comprises reacting an alkenol with an aryl hydroxy compound having a free reactive nuclear position in the presence of a katenoid condensing agent having an acid reaction.

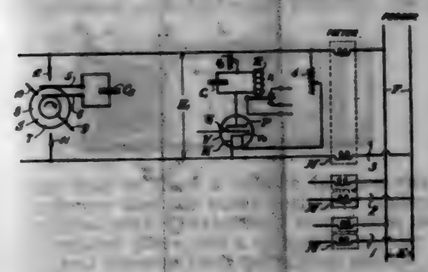


2,029,540
TRAILER
William Porteous, Fresno, Calif.
Application October 1, 1935, Serial No. 43,042
2 Claims. (Cl. 280—103)

1. In a vehicle having two axles held in parallel relation a spaced distance apart, a spindle pivotally attached at each end of each axle, said spindles being adapted to be swung on an approximately horizontal plane, an arm on each spindle disposed radially from said pivot at approximately right angles to the spindle, a tie pivotally attached at either end to the arms on the spindles assembled with the front axle and a separate tie similarly connecting the arms on the spindles assembled with the rear axle, auxiliary arms on said spindles extending radially from the pivotal center of the spindle and on obtuse angles

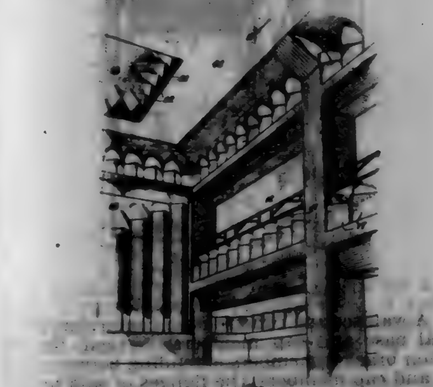
to the arms thereon, cross reaches pivotally attached to and connecting the auxiliary arms on the spindles diagonally disposed on the truck chassis assembly, said cross reaches being formed of two overlapping parts normally adapted to slide one over the other, and means adapted to interlock said parts so as to form a rigid cross reach.

2,029,541
METHOD AND MEANS OF DOUBLE GLAZING WINDOW SASH AND DOORS
Carl J. Mathieson, Wayzata, Minn.
Application February 17, 1932, Serial No. 593,488
4 Claims. (Cl. 20—56.5)



1. A double glazed window including, the main window-pane, a window sash for supporting said pane, a complemental window-pane receiving groove, an auxiliary window positioned in said groove, a removable non-resilient spacing strip between corresponding edges of said panes, and means for binding the marginal edge with a cushioning molding to hermetically seal the air between said window-panes to provide a double glazed window in a single sash.

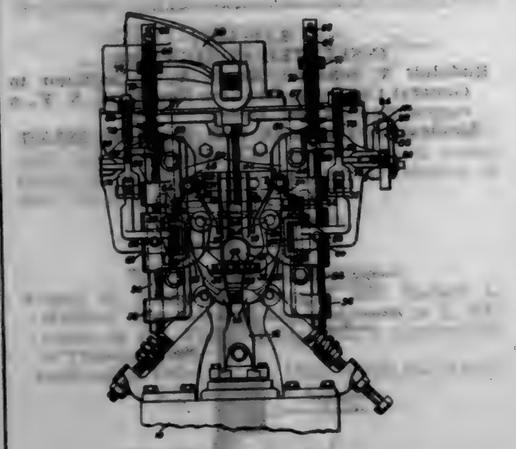
2,029,542
REMOTE CONTROL SYSTEM
Herbert Spencer Polin, New York, N. Y., assignor to Polin, Inc., New York, N. Y., a corporation of Delaware
Application April 9, 1932, Serial No. 604,258
21 Claims. (Cl. 115—329)



1. Control apparatus comprising a space discharge device including an anode and a cathode

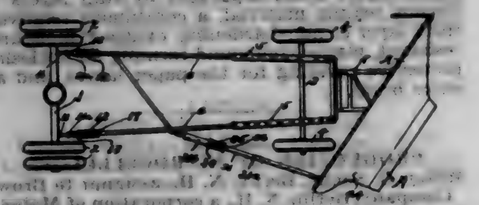
connected respectively to opposite conductors of an electrical power supply line, said tube having a control grid connected through high impedance

to at least one said conductor and actuating means interposed in said anode connection responsive to interruptions in the space current of said device.



2,029,543
METHOD OF AND MEANS FOR CREATING AND DISPLAYING DECORATIVE EFFECTS WITH LIGHT
Winslow Reiss, New York, N. Y.
Application February 24, 1931, Serial No. 517,998
37 Claims. (Cl. 240—3)

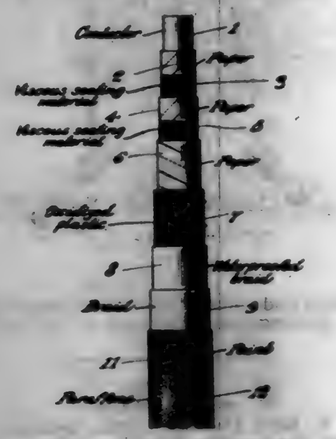
1. In combination with a plain surface of a building, a plurality of lighting elements adjacent said surface, and an irregular surface adjacent said plain surface and lighting elements to effect diffusion of light rays in predetermined directions and to cut off passage of rays of light in other predetermined directions whereby patterns in lights and shadows are created on said plain surface.



2,029,544
COUNTER-SHAPING MACHINE
Fred Ricks, Leicester, England, assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application May 29, 1934, Serial No. 728,149
In Great Britain June 6, 1933
15 Claims. (Cl. 12—46)

1. A counter-shaping machine comprising molds for shaping the side and rear portions of a counter, and members mounted for movement about axes extending heightwise of the faces of

the molds and for movement longitudinally thereof for shaping flange portions of the counter.



2,029,545
SNOW PLOW
Lester T. Ross, Crestline, Ohio, assignor to The Burch Corporation, Crestline, Ohio, a corporation
Application December 26, 1934, Serial No. 759,266
5 Claims. (Cl. 37—42)

1. In a snow plow or the like, push bars adapted to be mounted upon a vehicle, said push bars including a rear section adapted to be anchored to the vehicle, a forward section telescopically receiving the rear section so as to permit relative movement therebetween, a sleeve having a forwardly presented abutment face slidably mounted on the forward section, said forward section having a slot therein, a pin extending through said sleeve, slot and rear section, thereby fixing said sleeve to said rear section but permitting relative movement between the sleeve and the forward section, said forward section being further provided with a fixed rearwardly presented abutment face spaced from the first mentioned abutment face, a spring encircling said forward section intermediate said abutment faces and acting upon said faces to normally maintain said forward section forwardly extended while acting as a shock absorber on relative rearward movement of the section, means for suspending the front ends of the push bars from the vehicle while permitting relative longitudinal movement of the same with respect to the vehicle incident

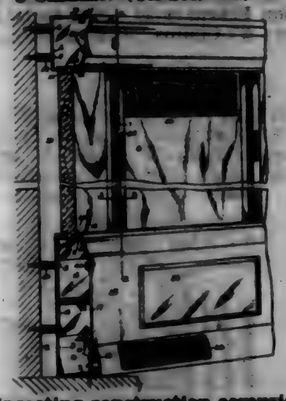
to telescopic movement of the push bar sections, and means at the front end of the push bars for supporting a plow blade.

2,029,546
INSULATED CONDUCTOR
Rudolph A. Schaisel, Rome, N. Y., assignor to General Cable Corporation, New York, N. Y., a corporation of New Jersey
Application August 22, 1929, Serial No. 387,597
8 Claims. (Cl. 173—264)

8. An article of manufacture comprising, in combination, a conductor, a plurality of overlying layers of helically wrapped paper tape, adjacent paper layers being separated by thin layers of viscous sealing material, a continuous relatively thick layer of non-hardening, oxidized, moisture-resistant, plastic compound forming an enclosing protective covering for the paper layers, and an outer braid.

2,029,547
PRODUCTION OF NITROCELLULOSE
Milton O. Schur, Berlin, N. H., assignor to Brown Company, Berlin, N. H., a corporation of Maine
No Drawing. Application June 17, 1930, Serial No. 461,854. Renewed July 8, 1935
12 Claims. (Cl. 260—146)

11. A process which comprises hydrolyzing sheets of interfelted cellulose fibers with a dilute solution of mineral acid, thereby reducing the solution viscosity of the cellulose and reducing the size of fiber units in the sheets but without substantial loss of such reduced fiber units, and nitrating the resulting acid-hydrolyzed cellulose fibers associated with substantially all of such reduced fiber units to produce nitrocellulose of low solution viscosity.



2,029,548
ORCHARD HEATER
Harold F. Semmerhays, Riverside, Calif., assignor to Riverside Sheet Metal Works, Inc., Riverside, Calif., a corporation of California
Application July 18, 1932, Serial No. 623,131
2 Claims. (Cl. 158—91)

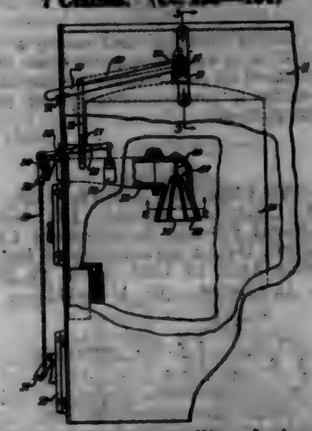
1. In an orchard heater, a stack provided with draft openings of rectangular form and of substantial width, and louvers formed in the wall of the stack below and above said openings respectively, the louvers below said openings being inclined inwardly in an upward direction, and the

louvers above said openings being inclined outwardly in a downward direction.

2,029,549
WAINSCOTING CONSTRUCTION
John W. Winterich, Cleveland, Ohio
Application June 2, 1932, Serial No. 615,114
3 Claims. (Cl. 189—35)

1. A wainscoting construction comprising horizontal base and cap members, vertical, flanged mullion bracket members extending between said base and cap members, the flanges of said bracket members being yielding and longitudinally recessed to form U-shaped channels adapted to receive decorative panels, trim members detachably secured to the base and cap and bracket members, the trim for the mullion bracket members engaging the trim for the cap and base members with its upper and lower ends respectively, and means for securing the base, cap and bracket members to the wall of a building.

2,029,550
CONDENSER
Ralph K. Albert, Howell, Mich., assignor to Howell Electric Motors Company, Howell, Mich., a corporation of Michigan
Application December 10, 1932, Serial No. 642,833
7 Claims. (Cl. 175—315)



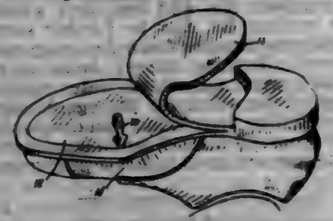
1. A ring shaped condenser can comprising an annular plate having, at its inner periphery and integral therewith, a cylindrical wall extending therefrom and merging therewith at its end and adapted to receive an annular condenser unit, a

radially outwardly projecting bead formed adjacent the end of said wall for holding the condenser unit against retraction, a cover for the unit, said cover comprising an annular plate the inner periphery of which cooperates with the cy-

lindrical wall to form a closure for one end of the condenser and the outer periphery including a cylindrical portion extending to the first mentioned annular plate and a circumferentially extending seal between each cylindrical portion and the annular plate of the other cylindrical portion.

2,029,551
TEMPERATURE CONTROL DEVICE FOR FURNACES
Robert M. Baker, Toledo, Ohio
Application August 23, 1934, Serial No. 741,122
7 Claims. (Cl. 236—104)

1. A temperature controlling device for a furnace provided with a furnace body, a housing enclosing said body and a draft damper, said device comprising a fulcrum on the top of said body responsive to thermal expansion or contraction of said body, a bar extending across said housing, a pivotal mounting for opposite ends of said bar enabling axial turning movements thereof, a lateral extension on an intermediate portion of said bar resting on said fulcrum, lever and link means connecting said bar with said damper for actuating same upon turning movements of said bar, and means for raising or lowering one end of said bar for predetermining the action thereof.



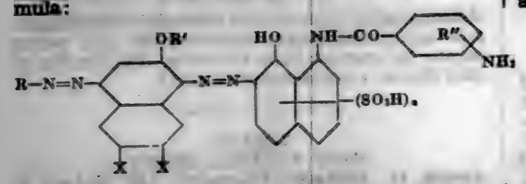
2,029,552
METHOD AND MACHINE FOR MAKING TAPERED TUBES
George E. Bannbert, Pasadena, Calif.
Application October 11, 1932, Serial No. 637,112
22 Claims. (Cl. 205—7)

16. A machine for drawing tapered tubes embodying: a die formed of a plurality of rotatable die elements arranged in tangent relation with each other, said die elements having tapered grooves in their peripheries which co-operate to form a die opening at their region of tangency; power means for drawing work through said die opening; means actuated by said power means for rotating said die elements in one direction so as to contract said die opening in timed relation with

the longitudinal movement of work therethrough; and additional means operated by said power means for momentarily reversing the rotation of said dies at a predetermined point.

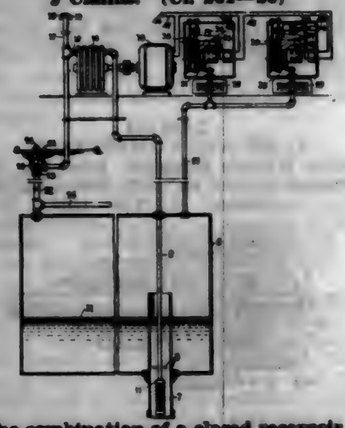
2,029,553
SHOE FITTING INDEX
Arnold G. Bartschi, Oakmont, and Robert L. Huffine, Wynnewood, Pa., assignors to J. Edwards & Co., Philadelphia, Pa., a corporation of Pennsylvania
Application February 25, 1935, Serial No. 8,194
5 Claims. (Cl. 36—1)

1. The combination of a shoe including a sole, a narrow, transversely extending index strip embedded in the sole of the shoe, said index being composed of material visibly differentiated from foot and shoe structure under the action of X-rays, said index underlying the articulation of the first metatarsal and proximate phalange of the great toe.



2,029,554
PUMP AND COMPRESSOR
Charles William Berggren, Brooklyn, N. Y.
Application August 24, 1932, Serial No. 630,393
1 Claim. (Cl. 103—121)

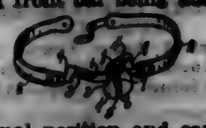
In a rotary high pressure pump, the combination with a stationary unbroken piston housing having a leak escape passage near one end, of a piston and drive comprising a movable concentric ring occupying part of the housing, a drive shaft and face plate also occupying part of the housing behind the ring and contacting the ring, bolts detachably connecting the ring to the face plate, an inner pump ring located within the outer ring and of less diameter leaving a pump chamber between, an off-center stationary journal shaft supporting the inner ring, movable division plates between the edges of the two rings, an extension resistance bushing fast to the drive shaft back of the face plate and within the housing, a removable end plate having inlet and outlet passages therein and supporting the stationary ring bearing.



2,029,555
AZODYESTUFFS
José Stephen Petrus-Blumbergen, Delft, Netherlands, assignor to General Aniline Works, Inc., New York, N. Y., a corporation of Delaware
No Drawing. Application April 12, 1932, Serial No. 604,881. In Germany April 20, 1931
6 Claims. (Cl. 260—82)

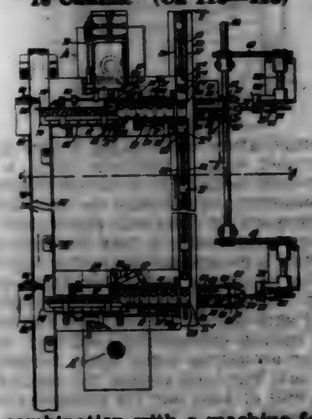
1. The new azodyestuffs of the general formula:

wherein "R" stands for a radical of the benzene or naphthalene series containing a sulfonic or carboxylic acid group, one X stands for hydrogen and the other X stands for hydrogen or a sulfonic acid group, R' stands for alkyl, n stands for one of the numbers one and two, and wherein the benzene nucleus R'' may be further substituted by substituents selected from the group consisting of halogen, alkyl and alkoxy, being in form of their alkali metal salts dark, water soluble powders, dyeing the cellulosic fibre generally bluish shades, which by diazotizing and developing with a yellow component yield green shades of excellent clearness and good fastness properties.



2,029,556
CARBURETOR
Elmo L. Brown, Asheville, N. C.
Application December 21, 1933, Serial No. 703,469
9 Claims. (Cl. 261—26)

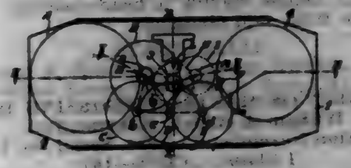
1. The combination of a closed reservoir adapted to be partially filled with volatile liquid hydrocarbon; means for forcing a gas under pressure through such hydrocarbon and for accumulating under pressure in the reservoir, gas thus carbureted; a filling fitting for the reservoir, said fitting having a filling opening and a vent intermediate the filling opening and said reservoir, a vent connection leading from said vent to a discharge point remote from said fitting; and a closure for the filling opening in said fitting, said closure having a position in which it closes the filling opening and isolates said reservoir from said vent, and a position through which it must pass in the process of opening in which it maintains the filling opening closed and connects said vent with said reservoir.



2,029,557
ECCENTRIC TRUSS
James W. Buckley, Weatherford, Tex.
Application April 4, 1933, Serial No. 664,317
2 Claims. (Cl. 128—104)

1. In a truss of the class described consisting of a belt having clamping side members for engaging the body of a patient, a front bar carried by said members and made rigid therewith and adapted to engage the body above the plane of said belt adjacent each of its points of contact with said belt, and a pad carried by said bar and adapted to engage said body below the plane of said belt, said front bar being adapted to swing

from its normal position and cause a twisting movement of said side members when the pressure is increased on said truss, whereby said front bar will cause a greater pressure of said pad against the patient.

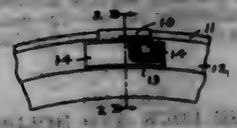


2,029,558
CAN FEEDING APPARATUS
George W. Chalmers, Summit, Ill., assignor to International Patents Development Company, Wilmington, Del., a corporation of Delaware
Application April 18, 1932, Serial No. 605,292
18 Claims. (Cl. 113—115)

1. In combination with a machine for operating on cans, apparatus for feeding cans to said machine comprising: a supply conveyor; a runway having feeding-in and feeding-out sections offset with respect to each other at the place of operation of said machine on the can; and mechanism for moving cans intermittently from the feeding-in section to the feeding-out section of the runway, which also moves cans from said conveyor into the feeding-in section of the runway and pushes cans one against another through said runway.

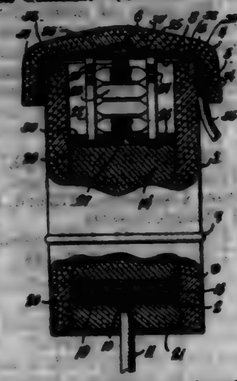
8. In apparatus for feeding cans, the combination of a continuously moving supply conveyor; a runway transversely arranged in respect thereto; a stop for arresting the can on the conveyor which has passed the runway, so as to position a succeeding can in line with the runway; and mechanism for pushing the last mentioned can into the runway, for releasing the other can, and for arresting the forward movement of the next can on the conveyor approaching the runway.

2,029,559
WATCH MOVEMENT FOR FANCY WATCHES
Henri Colomb, Tavannes, Switzerland
Application August 5, 1932, Serial No. 627,639
In Switzerland September 4, 1931
10 Claims. (Cl. 58—50)



5. In a watch of the character described, an oblong plate, concentric hands-carrying spindles mounted at the intersection of the major and minor axes of said plate, a spring actuated driving barrel, a balance, intermediate gears and pinions, all having their axes mounted on one side of the minor axis of said plate, and a weighted winding mechanism having the actuating weight positioned on the opposite side of said minor axis of the plate.

2,029,560
CRYSTALLIZATION OF DEXTROSE
Charles J. Copland, North Kansas City, Mo., assignor to International Patents Development Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application August 24, 1934, Serial No. 741,275
2 Claims. (Cl. 127—58)



1. In the method of crystallising dextrose solutions by cooling, with agitation, in a crystalliser in which the crystals are developed in a portion of the solution introduced initially into the crystalliser and the rest of the solution introduced at intervals incrementally: the improvement which comprises reducing the super-saturation at an intermediate stage of the operation by use of an increment of solution having a substantially lower density than the rest of the solution.

2,029,561
WHEEL BALANCING WEIGHT
Virgil L. Du Sang, Kokomo, Ind.
Application April 4, 1934, Serial No. 718,915
3 Claims. (Cl. 301—5)

1. For balancing a wheel having a rim with an edge extending upwardly and outwardly, the combination of a weight shaped to be confined substantially under the projection of said edge, and a clip carrying the weight and compressibly engaging over the edge to extend around and downwardly on the inner side thereof, said clip being made out of spring steel, and said weight being cast over a barbed foot of the clip.

2,029,562
PROTECTIVE DEVICE
Ralph H. Earle, Wauwatosa, Wis., assignor to Line Material Company, South Milwaukee, Wis., a corporation of Delaware
Application February 27, 1933, Serial No. 658,714
22 Claims. (Cl. 175—36)

1. In a protective device, an insulating tubular housing, a metal plate located within said housing adjacent one end thereof, means for holding said metal plate in place, a second metal plate spaced from said first mentioned plate, a mass of granular material located between said plates, a spark gap connected to said second plate and located within said housing, and a metal seal connected to said second plate and exactly conforming to the interior of said housing.

15. In a protective device, an insulating tubular housing, a spark gap and a mass of granular material contained within said housing, a cup-shaped metal cap closing the upper end of said housing, a soft metal seal molded between said cap and said housing and bonded to said cap and interlocking with said housing, and means for holding said granular material within said housing.

21. In a protective device, the combination of a spark gap assembly formed as a unitary, rigid unit, a granular mass of material electrically connected to said spark gap, a metal plate between said spark gap assembly and said granular material and permanently contacting with both said spark gap assembly and said granular material, said metal plate being permanently attached to said spark gap assembly and forming a unitary portion with said spark gap assembly, and an insulating housing surrounding said spark gap assembly and said mass of material, said spark gap assembly having its individual elements inherently retained in assembled condition independent of its assembly within said housing.

2,029,563
DISHWASHING MACHINE
James E. Elkington, San Francisco, Calif.
Application August 23, 1933, Serial No. 686,431
1 Claim. (Cl. 198—221)

In a dishwashing machine, a casing; parallel tracks arranged lengthwise of said casing for sup-

porting dish racks thereon; guides beneath each of said tracks; a slide in each guide beneath each track, each slide being held in its respective guide by the overlying track; both sides being held together in fixed relation, being movable in unison on a fixed horizontal plane and in a longitudinal direction relative to the tracks; dogs pivotally mounted on the sides of said slides at spaced points thruout the length thereof, said dogs being movable above and below the horizontal plane of the tracks to engage and disengage the dish racks on said tracks in accordance with the movement of the slides.

2,029,564
WEARING APPAREL

William F. Gowdy, Milford, Mass., assignor to Archer Rubber Company, Milford, Mass., a corporation of Massachusetts

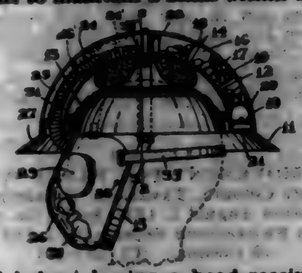
Application February 27, 1935, Serial No. 8,421
7 Claims. (Cl. 2—88)

1. A raincape having a body portion consisting of thin, flexible and easily torn water-repellent sheet material, said cape having a narrow elongate slit in its body material and a flap member of thin, flexible sheet material having an attaching portion adhesively united to the body material of the cape at the region of the slit, the slit passing through said attaching portion, the attaching portion and the body material of the cape having registering holes of substantial diameter at the opposite ends of the slit thereby to prevent elongation of the slit by tearing, the flap being turned back over its attaching portion and concealing the slit.

2,029,585
ROTARY PRINTING PRESS

Sydney Thomas Cecil Hardy, Gladesville, Sydney, New South Wales, Australia, assignor to Sun Newspapers Limited, Sydney, New South Wales, Australia, a company of New South Wales

Application March 14, 1935, Serial No. 11,136
7 Claims. (Cl. 101—378)



1. Improvements in means for securing stereo plates on the cylinder of a rotary printing press, comprising a rod mounted longitudinally in said cylinder in parallelism with the axis of the cylinder, comprising two plate-securing dogs slidably mounted on said rod, a member positively and releasably engageable with said rod in alternative fixed positions, means on said member for positively engaging one of said dogs to secure the same in selected and definite position on said rod, and a second member positively and releasably engageable with said rod in alternative fixed positions and acting as an abutment on the rod for the other of said dogs.

2,029,566
HELMET

Arno E. Herzer, Upper Darby, Pa.

Application April 10, 1934, Serial No. 719,870
11 Claims. (Cl. 128—141)

1. A helmet provided with a filter chamber and a gas mask chamber open at the front to permit withdrawal of a gas mask into wearing position, and means to maintain a mask within the chamber, said helmet having a head-receiving space separate from said chambers.

2,029,567
METHOD OF MAKING EMBOSSING DIES

William S. Hough, Kokomo, Ind.

Application November 15, 1934, Serial No. 753,243
1 Claim. (Cl. 76—107)

The method of making embossing dies which comprises the following steps: first outlining a letter, numeral or symbol in a rigid plate by cutting a plurality of narrow slots which are discontinuous so that the outlined letter, number or symbol remains in the plate; then superimposing said plate upon another plate and while said plates are held relatively motionless, marking upon the second plate by a marking instrumentality thrust through said slots so as to obtain an outline on the second plate of the letter, number or symbol outlined on the first plate; then completing the cutting of the outlined letter, number or symbol, placing it on the second plate within the aforesaid marked outline, and securing it rigidly in the position defined by said markings.

2,029,568
PROCESS FOR PRINTING ACETATE ARTIFICIAL SILK

Wolfgang Jacob, Basel, and Arthur Schürch, Riehen, near Basel, Switzerland, assignors to firm of Society of Chemical Industry in Basle, Basel, Switzerland

No Drawing. Application October 15, 1934, Serial No. 748,424. In Switzerland October 21, 1933
12 Claims. (Cl. 8—5)

1. Process for printing acetate artificial silk, consisting in printing acetate artificial silk with dyestuffs containing metal in complex union which are sparingly soluble to insoluble in water.

2,029,569
SASH LOCK AND HOLDER

David Jones, Ottawa, Ontario, Canada, assignor, by direct and mesne assignments, of one-fourth to Paul B. Smith, one-fourth to Robert G. Thomson, and one-fourth to Charles Rivers, all of Ottawa, Ontario, Canada

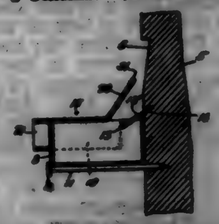
Application December 17, 1934, Serial No. 757,819
3 Claims. (Cl. 292—343)

1. A reversible device of the character described comprising a single piece of suitable material bent on itself to form a horizontally extending head portion, upwardly extending spaced arms integral with the head, and downwardly extending crossed legs integral with said head.

2,029,570
SPARK PLUG

Armen A. Kasarjian, Jackson Heights, N. Y.

Application December 30, 1932, Serial No. 649,455
Renewed May 21, 1935
10 Claims. (Cl. 123—169)



1. In an assembly of the character described, an ignition circuit including a body of matter comprising a mixture of finely divided conductive and non-conductive materials interspersed with respect to one another in the body, said conductive and non-conductive materials being of substantially the same specific gravity.

2,029,571
TURPENTINE GUM CUP COVER

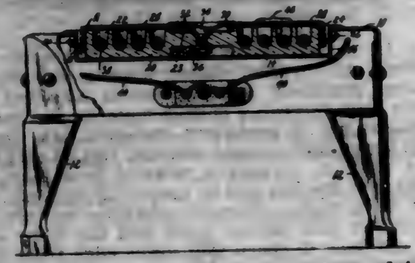
Bryant B. Kelly, Lumber City, Ga.

Application April 29, 1935, Serial No. 18,936
3 Claims. (Cl. 47—11)

3. A gum cup of the character described comprising a pan for mounting on a tree below a cut thereon, a cover slidably mounted on said pan and having a shield closely approaching said cut and overlying the inward part of the pan and protecting the entrance of the gum from the cut into the pan, said cover including depending guide tabs slidably engageable with the opposite sides of the pan.

2,029,572
MANUFACTURE OF YEAST

George W. Kirby, New York, and Charles N. Frey, Scarsdale, N. Y., assignors to Standard Brands Incorporated, New York, N. Y., a corporation of Delaware



No Drawing. Application January 28, 1932, Serial No. 589,042
5 Claims. (Cl. 195—28)

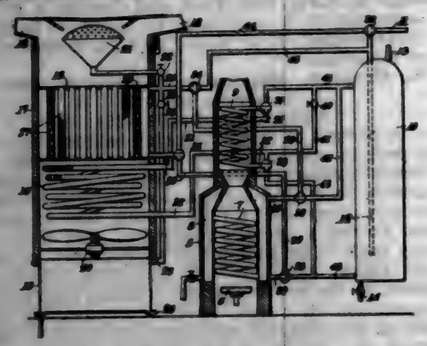
1. A process of manufacturing bakers' yeast of low protein content which includes providing, in a yeast nutrient solution containing yeast assimilable sugar and a yeast assimilable inorganic nitrogen compound, a high protein type of stock yeast having a protein content of over 50% on a dry basis in an amount of at least 30% of the total sugar, calculated as molasses, which is present in the yeast nutrient solution during the propagation of yeast therein, propagating the yeast in the nutrient solution with aeration, and during the period of propagation limiting the yeast assimilable inorganic nitrogen nutriment to about 4% to about 12% expressed as ammonium sulfate and based upon the total sugar calculated as molasses whereby there is produced a high yield of yeast of good baking and improved keeping qualities, and having a protein content substantially less than that of the stock yeast added to the yeast nutrient solution.

2,029,573
STOVE CONSTRUCTION

Andrew S. Knapp and Howard Smith, Belleville, Ill., assignors to Knapp-Monarch Company, Belleville, Ill., a corporation of Missouri

Application August 17, 1933, Serial No. 685,583
15 Claims. (Cl. 219—37)

12. In a stove construction, a stove plate, a frame having an opening therein for said stove plate and supporting means underlying said stove plate to support it relative to the frame and covering means for said stove plate comprising an inverted dish-shaped metal shield and ears on the peripheral edge of said shield bent under the edge of said frame surrounding the opening therein to retain said stove plate against said supporting means.



2,029,574
AIR CONDITIONER AND WATER HEATING SYSTEM

Charles O. Kaudeen, Brooklyn, N. Y.

Application April 2, 1933, Serial No. 664,240
7 Claims. (Cl. 257—2)

1. A combined heating, cooling and hot water furnishing system comprising a heater, a hot water storage tank, an air circulation conduit, a heat exchanger in said air circulation conduit and regulatable flow connections for connecting said heater direct to said heat exchanger for air heating service and for connecting said heater and said heat exchanger to said water storage tank for air cooling and water heating service.

and a waste heat utilizing coil in said heater connected to heat water in the storage tank while

the heater is connected to the heat exchanger in the first described relation.

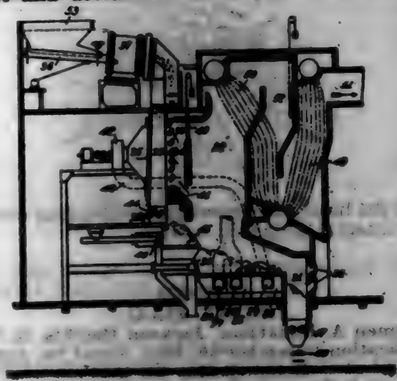
2,029,575

TOASTER BASE ASSEMBLY

William B. Kechner, St. Louis, Mo., assignor to Knapp-Monarch Company, St. Louis, Mo., a corporation of Missouri

Application May 27, 1935, Serial No. 23,686
18 Claims. (Cl. 53—5)

1. In a base assembly of the character described, an inverted dished base, a plurality of spaced shoulders formed therein adjacent the lower edge thereof, a bottom plate having spaced portions on its periphery engaging said shoulders for supporting said base and feet on said bottom plate to support it relative to a table top surface or the like and to space it therefrom, said feet being higher than the distance between the bottom of said bottom plate and the lower edge of said base to space said lower edge from such surface, the portions of the periphery of said bottom plate intermediate said first-mentioned portions being spaced from said base to permit air circulation between said periphery and said base.



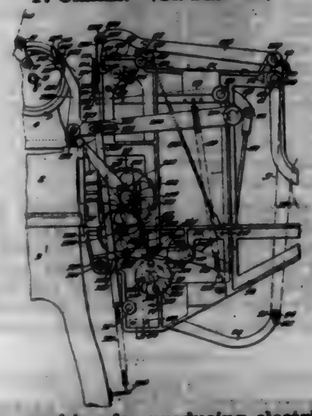
2,029,576

APPARATUS FOR BURNING LOW-GRADE FUELS, ESPECIALLY REFUSE

Viktor Kolb, Frankfort-on-the-Main, Germany, assignor to American Lurgi Corporation, New York, N. Y., a corporation of New York

Application March 31, 1934, Serial No. 718,486
In Germany May 20, 1932
2 Claims. (Cl. 110—15)

1. A furnace for burning refuse, comprising a rectangular combustion chamber, a grate closing the combustion chamber at the bottom and having a plurality of air chambers therebelow for supplying air for combustion, a drying shaft disposed laterally above the grate and having certain of its walls perforated, a blower arranged to draw gases of combustion from the combustion chamber above the grate, through the perforated walls of said drying shaft and through the refuse disposed therein and to deliver the resulting gases into the air chamber furthest away from said drying shaft, a device for charging the drying shaft and devices for moving the dried refuse



out of the bottom end of the drying shaft on to the grate.

2,029,577

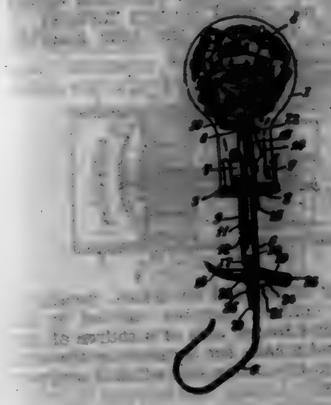
MACHINE FOR WINDING ELECTRICAL COILS

Arthur W. Le Boeuf, Cranston, R. I., assignor to Universal Winding Company, Boston, Mass., a corporation of Massachusetts

Application April 9, 1933, Serial No. 664,293
17 Claims. (Cl. 242—10)

1. In a machine for producing electrical coils, the combination of means for winding a conductor, means for feeding a strip of insulating material, a measuring bar movable across the path of the strip to draw out a loop of predetermined length, a lever for operating the measuring bar, a cam for moving the lever in one direction, a stop for limiting the movement of the lever in the opposite direction, and ratchet-operated means for progressively displacing the stop to regulate the range of action of the measuring bar.

2,029,578



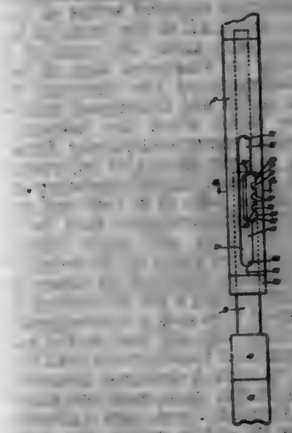
FLASHLIGHT

Georg Maiser, Dessau in Anhalt, Germany, assignor to Agfa Ansco Corporation, Binghamton, N. Y., a corporation of New York

Application February 24, 1933, Serial No. 658,414
In Germany February 27, 1932
5 Claims. (Cl. 67—30)

1. A flash light lamp comprising a transparent bulb made of a non-burning material having an opening communicating with the atmosphere, a

material of the group consisting of loosely crumpled foil of magnesium having a thickness



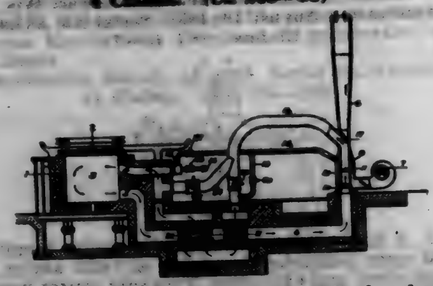
of less than 0.04 mm. and wire of magnesium having a diameter of less than 0.1 mm. in said bulb, and means for igniting said magnesium.

2,029,579

JARRING TOOL

Ira J. McCullough, Huntington Park, Calif., assignor to James A. Kammerdiner, Los Angeles, Calif.

Application May 22, 1933, Serial No. 672,164
11 Claims. (Cl. 255—27)



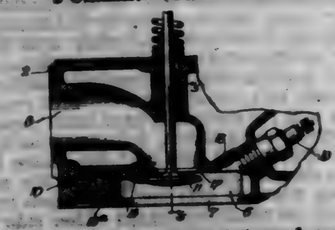
1. A jarring tool including, a tubular section, a stem section extending into the tubular section, the sections being related for limited relative longitudinal movement, the tubular section having a longitudinal slot in its wall open to its exterior, a lug on the stem section movable in the slot and adapted to cooperate with the ends of the slot to limit relative longitudinal movement of the sections and to provide a jarring action, there being spaced notches in a side of the lug and a wall of the slot forming teeth adapted to cooperate to releasably hold the sections against relative longitudinal movement, the teeth being releasable by a strain on the sections in either direction, and means whereby the teeth of the lug slide past the teeth of the slot upon the release of the teeth.

2,029,580

COMBUSTION CONDITIONING SYSTEM FOR SOAKING PITS

Gustav A. Merkt, Worcester, Mass., assignor to Morgan Construction Company, Worcester, Mass., a corporation of Massachusetts

Application November 4, 1933, Serial No. 696,668
4 Claims. (Cl. 263—15)

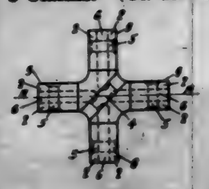


1. In a furnace of the class described, a heating chamber having an intake and an offtake, an air supply to said intake, to support combustion therein of the furnace's fuel supply, means for blowing air outwardly through a furnace exit passage to entrain the burned gases delivered through said offtake, a connection from said exit passage to said intake, permitting diversion to the latter of a portion of the mixture of air and burned gases, for tempering the flame produced by said combustion, means for procuring, selectively, the delivery of said diverted mixture to said intake either at the mixture temperature or at a higher temperature, resulting from preheating by the outgoing burned gases, and means for controlling the volume of air from said air supply to said intake and the volume of diverted mixture to said intake.

2,029,581

INTAKE VALVE DEFLECTOR

Jesse Roger Merriam, Waukesha, Wis., assignor to Waukesha Motor Company, Waukesha, Wis., a corporation of Wisconsin



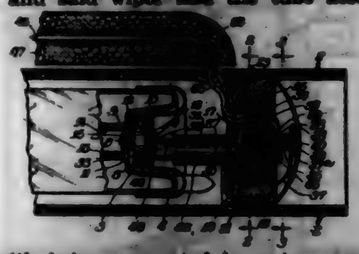
Application May 6, 1932, Serial No. 609,625
5 Claims. (Cl. 123—191)

2. In combination in an internal combustion engine, a cylinder, a piston operating in the cylinder, a head provided with inlet and burned gas outlet passages opening through the head over the cylinder area, overhead valves controlling said passages, a deflector on the under face of the head and extending downwardly therefrom about the inlet valve for a portion of the circumference thereof remote from the exhaust valve, and a deflecting element extending from the inner end of the deflector and inclined toward the surrounding wall of the combustion chamber, said element terminating short of said wall and defining therewith a restricted passage for the charge, said deflector being of a height to partially close the space between the under face of the head and the upper face of the inlet valve

when the latter is in open position thereby causing the entering charge to flow toward and over the hot exhaust valve in contact therewith.

2,029,582
FOLDING DIP OR MINNOW NET BOW
Gustav C. Moldenhauer, Manitowoc, Wis.
Application August 19, 1933, Serial No. 685,967
3 Claims. (Cl. 43—7)

1. A bow head consisting of a center member and arms positioned in planes at right angles to each other and extending from said center member, a partition extending downwardly from the center member, the center member and the extensions having coextensive channels, a cross member traversing each channel adjacent the outer end thereof, said cross members being adapted to receive bows thereon and bows slidably and pivotally mounted on said cross members.



2,029,583
SASH LOCK
John A. Obenchain, Tampa, Fla.
Application October 9, 1935, Serial No. 44,377
2 Claims. (Cl. 292—4)

1. In a sash lock, a casing, intersecting slidable bolts mounted therein, a link pivotally connected at its ends relative to the bolts and disposed in an inclined position to said bolts whereby one is operated through said link by manipulation of the other, latch means carried by the manipulable bolt adapted to engage the casing with the bolt in either its extended or retracted position, to secure both bolts in either respective position, said manipulable bolt being rotatable with respect to the other bolt for operating said latch means, the latter comprising a lateral lug of a length equal to the sliding limit of said bolt, the casing having an orifice shaped and sized to permit the passage of said lug, whereby said lug, may, upon rotation of said bolt, be made to engage either side of the casing adjacent said orifice.

2,029,584
CONNECTER FOR X-RAY TUBES
Oscar H. Pieper, Rochester, N. Y.
Original application October 15, 1931, Serial No. 568,905. Divided and this application August 23, 1935, Serial No. 37,437
5 Claims. (Cl. 201—56)

1. A connecter for use in an X-ray machine wherein an X-ray tube is mounted for turning about its axis and is provided at its cathode end with a pair of filament terminals, said connecter comprising an insulating member, a pair of tubes mounted in said insulating member, spring pressed contact members mounted in and respectively electrically connected to said tubes, a contact member carried by said insulating member, a wiper carried by one of said tubes and movable over said last mentioned contact member, the latter and said wiper and the tube associated

therewith being connected in series, means for connecting the contact member carried by said insulating member to one side of a source of electrical energy, and means for connecting the other of said sleeves to the other side of said source of electrical energy.

2,029,585
FASTENER UNIT
George E. Prentice, Berlin, Conn.
Application December 24, 1934, Serial No. 758,973
2 Claims. (Cl. 24—205)

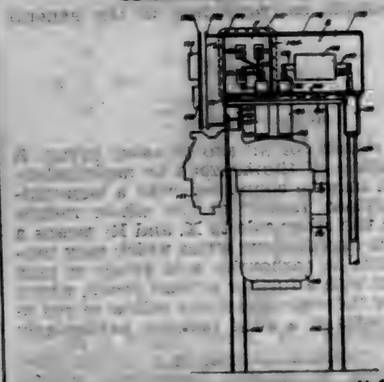
1. A fastener of the class described having flexible stringers supporting opposed series of complemental fastener units, all of the units of both series being substantially alike, the units of the opposed series being so staggered and of such dimensions longitudinally of the fastener that when those of one series are interposed between those of the other series when the fastener is closed, the interposed parts collectively form a substantially solid column devoid of intervening crevices, each unit of each series consisting of a block of material having jaws at its rear end uniting it to its respective stringer, each unit having substantially parallel upper and lower surfaces and being of a transverse width at its front end greater than the distance between its upper and lower faces, each unit having a pin projecting upwardly from its upper face and a corresponding socket in its lower face, the pin and socket each being of greater dimension transversely than from front to rear but of less transverse dimension than the front end of the unit, each pin having an uninterrupted beveled front face extending substantially across its entire width, the socket of each unit being separated from the front face of the unit by a wall, each such wall having a pin guiding channel in its lower edge operative to receive the beveled face of the pin of a unit of the other series and to prevent relative lateral movement of the units as the latter move into interlocking position, each channel having an upper wall whose transverse contour substantially corresponds to that of the upper part of the pin.

2,029,586
CEMENT BLOCK
Philip S. Rendell, Toledo, Ohio
Application May 1, 1935, Serial No. 19,136
1 Claim. (Cl. 72—41)

A wall construction formed of a plurality of over-lapping blocks arranged in courses, the blocks having openings and the ends of the blocks having channels that form openings through the courses, the said openings located in registering relation with the openings in the contiguous courses of the wall and forming vertical passageways throughout the height of the wall, the wall having alternate courses of pairs of blocks extending along inner and outer edge parts of the

first named blocks and located between the top and bottom parts of the said first named blocks, the second named blocks in each course thereof located in parallel and spaced relation and forming horizontal passageways intermediate the first named blocks and extending throughout the length of the wall and communicating with the registering openings that extend vertically throughout the height of the wall.

2,029,587
HYDRAULIC CUSHION
Fredrich J. Rode, Toledo, Ohio
Application June 8, 1935, Serial No. 25,690
7 Claims. (Cl. 267—1)



1. In a press of the class described, movable blank holding means, a piston connected to said means, a cylinder in which said piston operates, and a centrifugal pump operable to constantly supply fluid pressure to said cylinder to act on said piston to resist movement thereof in one direction, said pump being in constant and open communication with said cylinder.

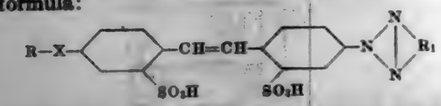
2,029,588
FILM-FORMING COMPOSITIONS
Leo Rosenthal, Leverkusen-Wiesdorf, and Reinhard Habermehl, Cologne-Deutz, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany
No Drawing. Application November 27, 1933, Serial No. 700,422. In Germany December 6, 1932
5 Claims. (Cl. 134—47)

1. A composition essentially comprising a chlorinated rubber material and a sulfur-bearing product from the interaction of sulfur and at least one aliphatic homologue of benzene selected from the group consisting of toluene, xylene and ethylbenzene in the presence of aluminium chloride.

2,029,589
METAL CLAD SWITCHING UNIT
Allen M. Rossman, Chicago, Ill., assignor to Rossman Engineering Company, a corporation of Illinois
Application March 31, 1930, Serial No. 440,606
31 Claims. (Cl. 175—296)

1. A self-contained switching unit for distributing electric energy, having a vertically disposed fabricated frame structure, an oil circuit breaker removably mounted within said structure, a plurality of bus bars, switching and control equipment, stationary circuit connections, and fabricated sheet metal enclosures disposed on said frame structure for enclosing said bus bars, said equipment and said circuit connections, and for determining said unit for dielectric-filled outdoor or indoor service or for air insulated service.

2,029,590
ROTARY MOTOR OR PUMP
Frank W. Schaaf, Sioux City, Iowa, assignor to McGraw Electric Company, Chicago, Ill., a corporation of Delaware
Application July 3, 1930, Serial No. 465,577
Renewed September 8, 1933
9 Claims. (Cl. 103—121)

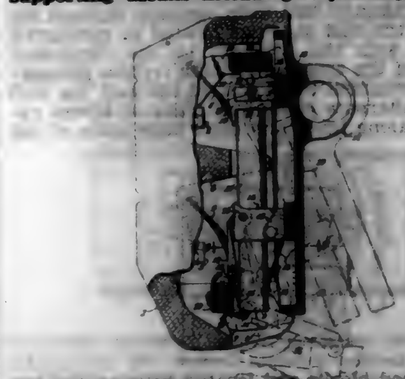


2. In a device of the character described, a chambered member, a member within the chambered member, said members being mounted in relatively displaceable relation, a sealing device movable across a space between the two members, the device having paired, non-parallel sealing portions rigidly connected with each other, each of said members having a recess, the mouths thereof opening into the space between the members, each of said sealing portions being seated in one of said recesses and being constrained for rectilinear movement therein, responsive to the rela-

tive displacement of said members, in directions toward and from the mouth of its associated recess.

2,029,591
AZODYESTUFFS
Hans Schindhelm and Carl Theo Schultis, Frankfort-on-the-Main-Fechenheim, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a corporation of Delaware
No Drawing. Application July 24, 1934, Serial No. 736,782. In Germany July 25, 1933
5 Claims. (Cl. 260—44.1)

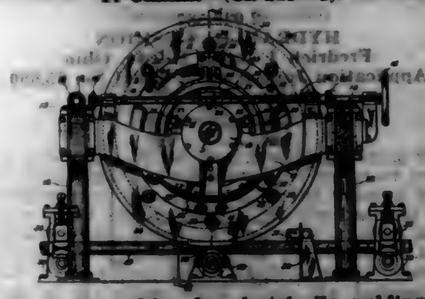
1. Azodyestuffs corresponding to the general formula:



wherein X stands for an azo or azoxy group, R means a radicle of the benzene or naphthalene series which may be connected with a benzothiazolic or arylazo radicle or the whole radicle attached on the other side to X, and R_1 means a radicle of the naphthalene series which may contain a sulfonic or carboxylic acid group or may be connected with a further arylazo group, which dyestuffs dye the vegetable fibers yellow to red to brownish shades of a good fastness particularly to light.

2,029,592
MANUFACTURE OF YEAST
Alfred Schultz, New York, N. Y., assignor to Standard Brands Incorporated, New York, N. Y., a corporation of Delaware
No Drawing. Application December 29, 1931, Serial No. 583,711
7 Claims. (Cl. 195—28)

1. An aeration process for manufacturing bakers' yeast of high yield and improved quality, which comprises preparing a nutrient solution containing yeast assimilable sugar, nitrogen and phosphorus materials, adding to such nutrient solution a high protein type of stock yeast having a protein content of over 50% on a dry basis, propagating the yeast in said solution with aeration, and limiting the amount of phosphorus nutriment to between 1.25 and 2% expressed as mono-ammonium phosphate and based on the sugar material calculated as molasses so as to produce a yeast product having a protein content of less than 50% on a dry basis.

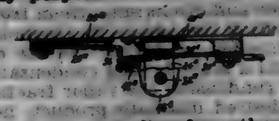


2,029,593
DROP-OUT FUSE
William O. Schultz, South Milwaukee, and Alwin G. Steinmayer, Milwaukee, Wis., assignors to Line Material Company, South Milwaukee, Wis., a corporation of Delaware
Application February 23, 1935, Serial No. 7,862
19 Claims. (Cl. 200—116)

1. A drop-out fuse comprising a stationary body portion having stationary upper and lower contacts, a fuse tube assembly including a fuse tube having an upper contact normally detachably connected to the upper stationary contact, said fuse tube assembly having movable supporting means adjacent its lower end for normally supporting said fuse tube assembly, and a fuse link extending from the upper contact of the fuse tube through the fuse tube and to the movable supporting means and normally restraining said movable supporting means against motion with respect to said fuse tube assembly, said movable supporting means including a yieldingly urged

contact finger for contacting with the lower of said stationary contacts.

2,029,594
APPARATUS FOR ELECTRIC WELDING
Frank L. Sessions, Lakewood, Ohio
Application July 20, 1932, Serial No. 623,764
17 Claims. (Cl. 219—4)

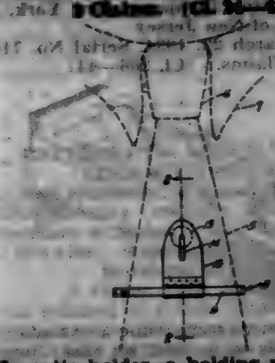


15. In a machine for electrically welding together edges of work disposed on opposite sides of a seam, two circular electrodes insulated from each other, a generator of electric current comprising a stator and a rotor, means securing said electrodes to said stator, means for feeding said work into position wherein said electrodes contact with the work on opposite sides of said seam, means rotatably supporting said stator and electrodes whereby they may rotate as said work is fed into contact with the electrodes, a motor having a stator and a rotor, means connecting together said stators, means connecting together said rotors whereby rotation of the rotor of the motor will rotate the rotor of the generator to generate current, means for passing the current thus generated through said electrodes and through said seam, and braking means acting on said stators and electrodes.

2,029,595
THERMOSTAT CONSTRUCTION
Howard Smith, Belleville, Ill., assignor to Knapp-Monarch Company, Belleville, Ill., a corporation of Missouri
Application July 17, 1933, Serial No. 680,546
5 Claims. (Cl. 200—138)

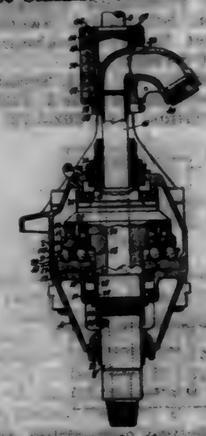
1. In an appliance having an electrically heated plate, a thermostat construction comprising leaf springs adjacent said plate and in planes parallel thereto, contacts thereon, means responsive to temperature of the plate for separating said contacts and means for adjusting said contacts comprising a bell crank pivoted to said plate,

having a first leg parallel thereto and engaging one of said leaf springs and a second leg extending substantially perpendicular from said plate and



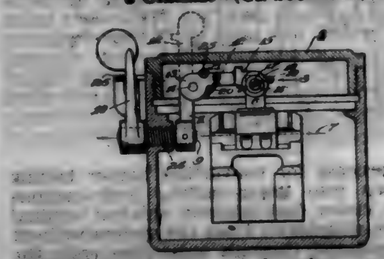
an adjusting shaft extending from the peripheral edge of said plate, parallel thereto and engaging said second leg, said shaft being longitudinally movable to swing said bell crank about its pivot.

2,029,596
AUTOMATIC COFFEE MAKER
John E. Smith, Belleville, Ill., assignor to Knapp-Monarch Company, Belleville, Ill., a corporation of Missouri
Application December 19, 1932, Serial No. 647,843
2 Claims. (Cl. 53—3)



1. In an automatic coffee maker, a liquid coffee receptacle, a perforated coffee cup thereabove for holding granulated coffee, a water receptacle above said coffee cup, a passageway for providing communication between said water receptacle and said coffee cup, a normally closed valve in said passageway, electro-responsive means for opening said valve when said means is energized, an electric heater element for said water receptacle, current supply terminals and a temperature responsive switch responsive to the temperature of the water in said water receptacle rising to a predetermined degree, whereupon said switch completes the circuit from said terminals through said electro-responsive means whereby to fully open said valve and retain it fully opened upon such predetermined degree of temperature being reached, said heating element and temperature responsive switch being connected in series between said terminals and said electro-responsive means being connected in shunt with said switch whereby upon opening of said switch due to said temperature rise, said heating element and said electro-responsive means are connected in series.

2,029,597
TIE HOLDER
Michael Thomas, Los Angeles, Calif.
Application April 30, 1935, Serial No. 17,486
3 Claims. (Cl. 24—49)

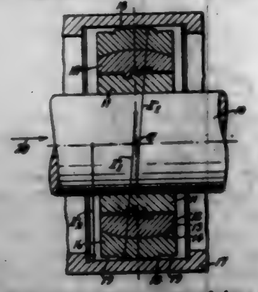


1. In a tie holder, a holding member adapted to pass around the tie, and a fabric tab secured to said member, said tab having a button hole.

2,029,598
SWIVEL
Edward Timbs, Los Angeles, and Demery A. Murphy, Torrance, Calif., assignors to The National Superior Company, Toledo, Ohio, a corporation of Delaware
Application October 22, 1934, Serial No. 749,374
20 Claims. (Cl. 255—25)

1. In a rotary swivel, the combination of a body having a supporting shoulder, a sleeve rotatably positioned axially of and projecting therefrom the body, means cooperating with the sleeve and the body to form a bearing enclosure at one end, a thrust carrying member supported on said shoulder, a cover, releasable means to secure the cover to said body, means on said cover to secure the thrust carrying member on said shoulder, a main supporting bearing between the sleeve and the thrust carrying member, and an upthrust bearing between the sleeve and the thrust carrying member, said sleeve, thrust carrying member and bearings being insertable and removable as a unit relative to said body upon the cover being detached from the body.

2,029,599
MEANS FOR ACTUATING ENCLOSED ELECTRIC SWITCHES
Nils A. Terablom, Chicago, Ill., assignor to Appleton Electric Company, a corporation of Illinois
Application October 22, 1934, Serial No. 749,421
3 Claims. (Cl. 200—172)



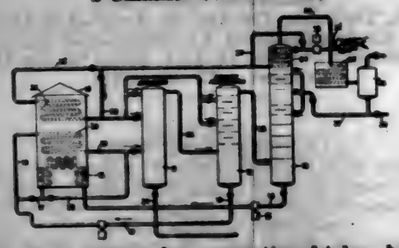
1. In combination, a housing, a switch arranged within said housing and having a pivoted switch arm to operate the switch, of an actuating member extending through a wall of the housing and rotatable therein about a continuation of the pivotal axis of said switch arm, said actuating member being screw-threaded in said wall thereby to compel any fluid passing through the wall along said member to follow a path that is much longer than the thickness of the wall, and means on the inner end of said member to interlock the

same with said arm and compel the arm and the actuating member to swing in unison with each other whenever either moves angularly in either direction.

1,923,000
BEARING

August Gunnar Ferdinand Wallgren and Carl Gustaf Jansson, Stockholm, Sweden, assignors to Aktiebolaget Nomy, Stockholm, Sweden, a corporation of Sweden

Application February 26, 1934, Serial No. 712,966
In Germany March 3, 1933
22 Claims. (Cl. 308—73)



1. Bearing structure comprising an inner rotating member, an outer rotationally stationary member universally movable with respect to said inner member, and a fixed member for supporting said outer member, said outer member and said fixed member having cooperating surfaces including a curved surface on said outer member for causing the axis of rotation of the bearing to be displaced radially with respect to said fixed member in a direction away from said cooperating surfaces upon movement of said outer member from a plane normal to said axis.

1,923,001
CONVERSION OF HYDROCARBON OILS

George D. White, Port Arthur, Tex., assignor to The Texas Company, New York, N. Y., a corporation of Delaware

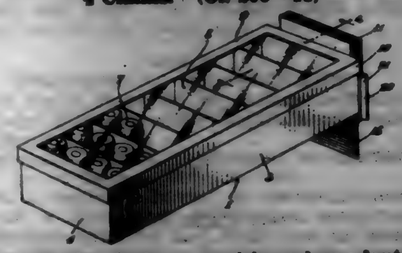
Application April 30, 1934, Serial No. 723,965
2 Claims. (Cl. 196—48)

1. In a process for converting higher boiling hydrocarbons into lower boiling hydrocarbons suitable for motor fuel, wherein cracked residual products are withdrawn from the system without being recirculated through a heating coil; the improvement which comprises passing a combined stream of oil of the character hereinafter specified through a heating coil maintained at a cracking temperature, maintaining the oil in said coil for a time sufficient to effect conversion of higher boiling hydrocarbons into lower boiling hydrocarbons, discharging the converted products from said coil into an enlarged chamber wherein separation of the vapors and unvaporized residual products is effected, maintaining the oil in said enlarged chamber at an active cracking temperature to cause further cracking thereof, withdrawing all of the residual products from the chamber and discharging them from the system, separating the vapors by fractionation into a vapor fraction, a higher boiling condensate fraction and a lower boiling condensate fraction, separately condensing the vapor fraction to produce the desired distillate product, heating the lower boiling condensate fraction in a separate heating coil to a cracking temperature materially higher than that for said first mentioned heating coil to effect substantial conversion of said lower boiling fraction, thereafter immediately combining a portion of said highly heated lower boiling fraction with said higher boiling fraction, passing the combined stream to said first mentioned heating coil, and passing the remainder of said highly heated lower boiling fraction directly to said enlarged chamber to aid in maintaining a cracking temperature therein.

1,923,002
INTERNAL COMBUSTION ENGINE

Nils Fredrik Andersson, Trollhättan, Sweden, assignor to Aktiebolaget Svenska, Stockholm, Sweden, a corporation of Sweden

Application April 7, 1924, Serial No. 705,484
In Germany April 13, 1923
14 Claims. (Cl. 123—172)

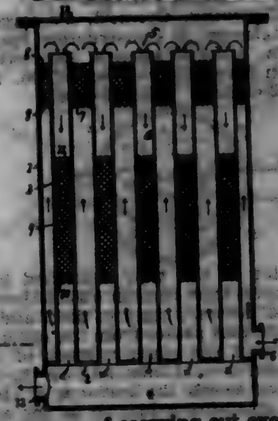


1. In an oil-cooled internal combustion engine of the kind in which cooling oil is forced over the cylinder parts in thin films, a cylinder head structure comprising a lower part providing combustion chamber walls having valve seat and spark plug openings therein, an upper part having valve guides and gas passages therein, and separate means interposed between portions of said parts shaped to guide cooling oil in thin films over substantially the entire area of said combustion chamber walls.

1,923,003
DISPLAY DEVICE

George H. Andrews, Yonkers, N. Y., assignor to The Spool Cotton Company, New York, N. Y., a corporation of New Jersey

Application March 22, 1924, Serial No. 716,706
4 Claims. (Cl. 206—44)



1. A display device comprising a box adapted to contain materials to be sold, an easel hinged to one end of said box whereby it may be brought within the box or into supporting position outside thereof, and a cover beneath which said easel is disposed when within the box, said cover when in place on the box having a flange extending over said end of the box and engaging the easel to hold said easel against the end of the box when in supporting position.

1,923,004
CARRYING OUT EXOTHERMIC CATALYTIC GAS REACTIONS

Joseph Bayer, Ludwigshafen-on-the-Rhine, Alfred Hallmeier, Cologne, and Karl Hencky, Leverkusen, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany

Application February 10, 1931, Serial No. 514,782
In Germany February 23, 1929
5 Claims. (Cl. 23—288)

1. The process of carrying out exothermic catalytic gas reactions which comprises passing the gas to be reacted upon in a plurality of passages, arranged in parallel to each other, first through substantially free space in said passages and then through catalytic material promoting the desired reaction arranged in the last part of said passages, collecting the gas leaving said plurality of passages in a space common to all of said passages, then introducing said gas, in a direction of flow opposite to that of the gas in said first plurality of passages, into another plurality of passages, arranged in parallel to each other, therein passing said gas first through substantially free space while being in heat exchange relation to the catalytic material in said first plurality of passages and then passing the gas in the last part of said second plurality of passages through catalytic material promoting the reaction and being in heat exchange relation to the gas in the substantially free space of said first plurality of passages.

1,923,005
REFINING OF SOUTH TEXAS LUBRICATING OIL

Wilson Hull Beardsley, Houston, Tex., assignor to Sinclair Refining Company, New York, N. Y., a corporation of Maine

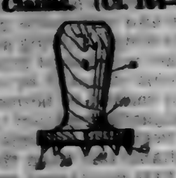
No Drawing. Application March 9, 1932, Serial No. 597,819
1 Claim. (Cl. 196—46)

In the refining of South Texas lubricating oil stocks having an acid number substantially exceeding 0.2 with sulphuric acid, the improvement which comprises subjecting the oil to a preliminary neutralization treatment insufficient to reduce the acid number of the oil to 0.2, thereafter subjecting the oil to treatment with sulphuric acid and adding an amount of water approximating 1.5–3.0% by volume on the oil to assist the separation of the sludge formed.

1,923,006
HIGH PRESSURE JOINT FOR PRESSURE VESSELS

Kurt Breitschneider, Dortmund, Germany

Application June 12, 1922, Serial No. 568,005
In Germany June 14, 1927
7 Claims. (Cl. 220—3)



1. A closure for pressure vessels comprising a thin elastic ferrous metal packing ring having a modulus of elasticity of the order of 30,000,000, being provided with an internal wedge section and being adapted to be temporarily sprung outwardly without permanent deformation upon the application of pressure against said wedge section, closure means exposed to the internal pressure of said vessel provided with an external wedge section cooperating with said internal wedge section of said packing ring adapted to press against said packing ring upon rise of pressure within said vessel and to thereby spring said ring against the wall of said vessel in the manner stated and follower means for retaining said packing ring between said cooperating wedge sections.

1,923,007
CAN PUNCH

Frederick W. Brenner, Philadelphia, Pa.

Application January 26, 1925, Serial No. 3,570
4 Claims. (Cl. 164—119)

1. A can punch comprising a handle, a plate attached to the handle the point of attachment being centrally of the plate, and a series of punch members extending upon the side of the plate opposite the handle, with the pressure from the handle being transmitted to the plate along a circular line adjacent to and interiorly of the punch members, each of said punch members having been previously punched from the plate.

1,923,008
PILLOW

Samuel Buchman, Pittsburgh, Pa.

Application August 12, 1932, Serial No. 628,871
1 Claim. (Cl. 5—339)

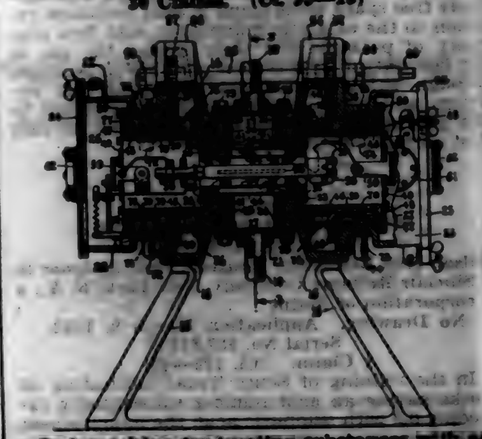
In a pillow arranged to be stuffed with feathers or like filling, the combination with a conventional pillow casing formed of a bag of flexible

textile material, of a relatively small bag of flexible textile material sewed into the edge seam of the casing and lying within the latter, said bag having an open mouth at the seam of the casing, said bag being arranged for the insertion therein of means for forcing air throughout and through the casing and its contents to renovate and remove dust from said contents.

2,029,609
WELL TOOL
Erwin Burns, Los Angeles, and Harry P. Wickersham, Huntington Park, Calif.
Application August 7, 1933, Serial No. 684,021
16 Claims. (Cl. 255—28)

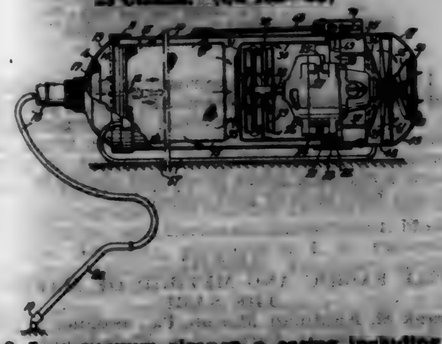
1. A well tool including, two sections adapted to be connected in an operating string, means holding the sections against relative rotation and longitudinal movement in both directions releasable by a tensile strain on the sections, and means operative after release of the first mentioned means to hold the sections against relative longitudinal movement and releasable by a strain on the sections for effecting a jarring action between the sections, the last mentioned means including parts on the sections adapted to cooperate one with the other and related to be moved one past the other out of engaging relation upon separating movement between the sections whereby the sections are detachable one from the other after the release of the first mentioned means.

2,029,610
WINDOW VENTILATOR
Harry E. Campbell, Baltimore, Md., and Alisten Sargent, Breaxville, N. Y., assignors to Campbell Metal Window Corporation, New York, N. Y., a corporation of Maryland
Application January 21, 1933, Serial No. 652,834
12 Claims. (Cl. 98—94)



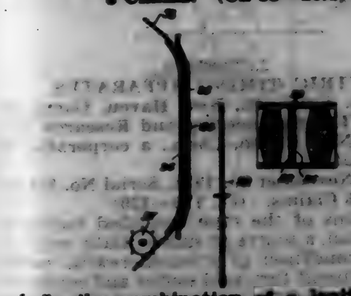
1. A ventilator comprising a casing of elongated box-like form with an air inlet and an air outlet, partition means in said casing dividing the interior thereof into a narrow entrance space receiving air through said inlet and adjacent one long side of the casing, a second space between said entrance space and the side of the casing remote from said entrance space and adjacent one end of the casing and receiving air from said entrance space, air moving means in said second space, and a delivery space extending from said second space to the remote end of the casing and extending between said entrance space and the side of the casing remote from said entrance space and receiving air from said second space and discharging air through said outlet, and noise absorbing means disposed in said delivery space to provide an extended and distributed surface in contact therein with the air moving therethrough.

2,029,611
DISK FILTER
Walter L. Chewning, Cynwyd, Pa., assignor to United Engineers & Constructors Inc., Philadelphia, Pa., a corporation of Delaware
Application May 19, 1934, Serial No. 724,839
7 Claims. (Cl. 210—157)



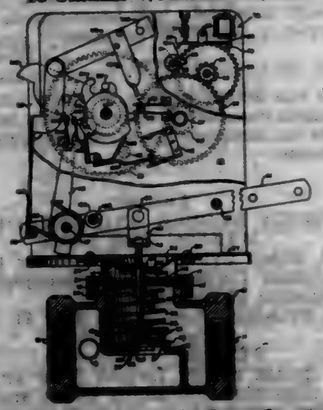
1. In a filter of the type described having a casing having an inlet and an outlet therein, the combination of a rotary stack of disks and spacers between which fluid passes from the outer surface to the interior of the stack, a stack of cleaning blades arranged in said inlet and on the exterior of the stack to sweep the surfaces of the disks, and a shield structure arranged in the casing in said inlet and surrounding said stack of cleaning blades and defining a well of relatively quiescent liquid at the region of the cleaning blades and having an open bottom.

2,029,612
ACTIVE RAY TREATING DEVICE
Harry M. Creighton, East Norwalk, and Edward C. Bernitt, Norwalk, Conn., assignors to The R. U. V. Engineering Corporation, South Norwalk, Conn., a corporation of Delaware
Application October 2, 1931, Serial No. 567,371
Renewed June 27, 1935
20 Claims. (Cl. 99—15)



2. A machine for treating substances with active rays comprising a treating chamber, a pair of concentric transparent tubes disposed within said chamber, a source of active rays disposed within said tubes, a tube wiper in contact with the outside tube, and means for rotating said tubes as a unit about the ray source and past the wiper to wipe a surface of the outside tube.

2,029,613
VACUUM CLEANER
Erik Edström, Stockholm, Sweden, assignor to Electrolux Corporation, Dover, Del., a corporation of Delaware
Application June 14, 1933, Serial No. 675,679
In Germany December 7, 1932
23 Claims. (Cl. 183—35)

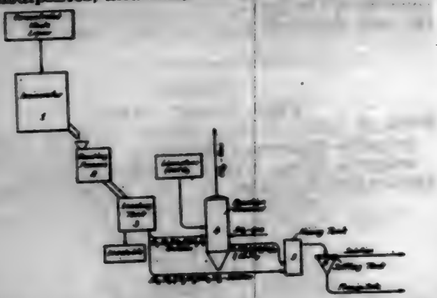


2. In a vacuum cleaner, a casing including a main member and a cap, said cap having an air port therein, air deflecting means for guiding flow of air through said port, a filter in said casing, and means internally of said casing and passing through said filter and said air deflecting means for securing said cap to said main member.

2,029,614
APPARATUS FOR TAKING OR PROJECTING LENTICULATED FILMS
Fritz Fischer, Berlin-Charlottenburg, Felix Strecker, Berlin-Siemensstadt, and Hans Neugebauer, Berlin-Lichterfelde, Germany, assignors to Siemens & Halske, Aktiengesellschaft, Siemensstadt, near Berlin, Germany, a corporation of Germany
Application February 24, 1933, Serial No. 657,123
In Germany February 25, 1932
8 Claims. (Cl. 88—16.4)

1. In the combination of a lenticulated film and an objective adapted to transmit light passing through the lenticulations on the film, a color filter through which said light also passes, said filter having a plurality of zones of different colors whose sum gives substantially the composition of white light, said filter also having outer zones, the color of an outer zone being substantially the same as that of the zone adjacent the opposite outer zone, the sum of the area of one of said outer zones and that of the zone adjacent to the opposite outer zone being substantially equal to the sum of the area of the opposite outer zone and the zone adjacent said one outer zone.

2,029,615
TWO-STAGE VALVE
Willis H. Gille, St. Paul, Minn., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application November 11, 1932, Serial No. 697,685
18 Claims. (Cl. 236—74)



1. In combination, a single valve normally biased to closed position, electrical means for opening said valve maintaining it in open position against its bias, and means in control of said electrical means upon an initial small demand for heat for causing the electrical means to move said valve to a relatively large open position and thereafter automatically allow said valve to return to an intermediate open position and maintain it therein, and manual means for moving the valve to an intermediate open position, releasably latching the valve in such position and for closing a valve opening circuit for the electrical means upon a failure of electrical power, whereby said valve will be opened further upon a resumption of power to release said latching means and return the valve to automatic control.

2,029,616
PROCESS FOR PREPARING ALKALI SULPHITE OR ALKALI BISULPHITE SOLUTIONS FROM WASTE LIQUORS OBTAINED IN THE DIGESTION OF CELLULOSE WITH ALKALI SULPHUR COMPOUNDS
Gustaf Haglund, Stockholm, Sweden, assignor to Patentaktiebolaget Grändal-Ramen, Stockholm, Sweden
Application April 16, 1931, Serial No. 529,300
In Germany January 16, 1931
11 Claims. (Cl. 92—129)

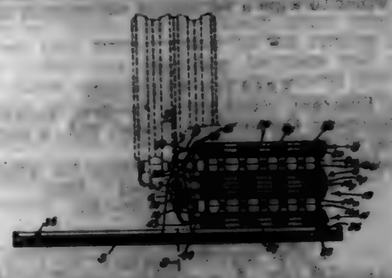
7. The process for preparing a solution of alkali metal salts of sulphurous acid from waste liquor resulting from a cellulose digestion process employing cooking liquor containing alkali metal sulphur compounds, which comprises treating the waste liquor to eliminate organic compounds and to form a solution of alkali metal compounds containing an alkali metal sulphate and substantially free from sulphides and thiosulphates, subjecting the solution to the action of sulphur dioxide and one or more calcium compounds capable of reacting with sulphurous acid to form

calcium bisulphite until the alkali metal salts contained in the solution have been converted to bisulphites, and subjecting the resulting solu-

tion to the action of one or more alkali metal compounds capable of reacting with calcium bisulphite to form one or more insoluble calcium compounds.

2,029,617
SPONGE RUBBER AND METHOD OF MAKING THE SAME
Glen S. Hiers, Cynwyd, Pa., assignor to Collins & Aikman Corporation, Philadelphia, Pa., a corporation of Delaware
No Drawing. Application July 31, 1933, Serial No. 682,182
9 Claims. (Cl. 18—59)

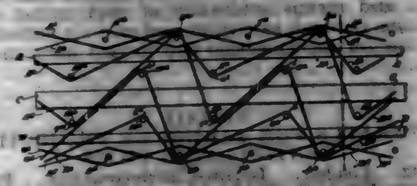
1. A sponge rubber formed from an aqueous rubber dispersion containing borax and a vegetable gum coagulable by said borax, and a cell-forming agent.



2,029,618
PRODUCTION OF ALCOHOLS
Heinrich Hopff, Ludwigshafen-on-the-Rhine, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany
No Drawing. Application May 11, 1931, Serial No. 536,670. In Germany May 22, 1930
20 Claims. (Cl. 260—153)

1. The process for the production of non-tertiary alcohols, which comprises acting with an alkylene oxide in the presence of a Friedel-Crafts condensing agent on an organic compound selected from the group consisting of hydrocarbons, non-substituted heterocyclic compounds and mono-halogen derivatives of both, at a temperature up to 100° C.

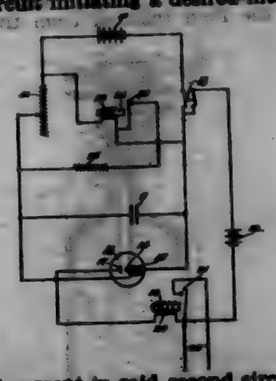
2,029,619
PURIFICATION OF OXIDATION PRODUCTS
Joseph Hidy James, Pittsburgh, Pa., assignor to Clarence P. Byrnes, trustee
No Drawing. Application July 15, 1932, Serial No. 622,643
7 Claims. (Cl. 87—9)



1. In the treatment of oily liquid partial oxidation products containing oxygen derivatives of aliphatic hydrocarbons to produce a lubricant, the steps consisting of fractioning said oily liquid products into fractions of different average molecular weight containing similar bodies in the range from alcohols to oxygenated acids, reacting a heavier fraction with a relatively small percentage of sulphuric acid at a temperature materially above 45° C., removing excess free sulphuric acid, and then removing oil-soluble sulphonates, leaving a lubricant substantially free from gum-forming compounds and oil-soluble sulphonates but containing oxygenated acids.

2,029,620
WAFFLE COOKER
Henry C. Johnson, Los Angeles, Calif.
Application July 12, 1935, Serial No. 31,652
2 Claims. (Cl. 53—10)

1. A waffle cooker comprising a base, supporting means upstanding from said base, a plurality of waffle containers assembled in a superimposable relation to each other, means to hinge said containers to said supporting means to swing about a common hinge pivot, and means to electrically heat each of said containers.

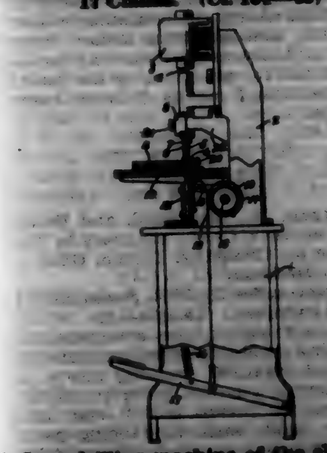


2,029,621
PILE FABRIC AND METHOD OF MAKING THE SAME
Frank M. Kaufman, Marion, Pa., assignor to Collins & Aikman Corporation, Philadelphia, Pa., a corporation of Delaware
Application April 12, 1933, Serial No. 665,725
4 Claims. (Cl. 139—391)

1. A pile fabric comprising a ground containing ground wefts and pairs of pile warps interlaced therein, each pile warp forming alternately a long loop and a short pile loop and the short loop of one warp of a pair being aligned with a long loop of the other warp of such pair, and the warps of such pair being looped under the same ground wefts.

2,029,622
ELECTRIC TIMING APPARATUS
Frederick G. Kelly, Jr., New Haven, Conn., assignor to The Engineering and Research Corporation, New Haven, Conn., a corporation of Connecticut
Application November 20, 1933, Serial No. 703,612
6 Claims. (Cl. 175—339)

1. Apparatus of the type described including, in combination, a source of substantially constant E. M. F., a condenser in series therewith, means to close the circuit thru said source and condenser to charge the condenser at a desired rate, a glow tube having an anode, a cathode and a control element, the condenser being in parallel with the anode and control element of said tube, a circuit connected between the anode and cathode of said tube including a source of current, a switch element and a current flow indicating means, said tube permitting the flow of current in said second circuit only upon the attainment of a predetermined potential in said condenser, the closing of said first circuit initiating a desired interval and



the flow of current in said second circuit ending said interval.

2,029,623
WORKING UP OF NATURAL AND INDUSTRIAL SALT MIXTURES
Carl Kircher and Fritz Mueller, Ludwigshafen-on-the-Rhine, and Hermann Sussenguth, Mannheim, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany
No Drawing. Application November 2, 1929, Serial No. 404,507. In Germany December 10, 1928
1 Claim. (Cl. 23—49)

The process which comprises subjecting a mixture of potassium nitrate and ammonium chloride to extraction with anhydrous liquid ammonia containing ammonium nitrate and then with substantially anhydrous liquid ammonia and removing the solution thereby obtained from the remainder.

2,029,624
PAPER SLITTING AND SLOTTING MACHINE
James Edgar Lee, Olaf T. Gylleck, and Freeman Barney, Grand Haven, Mich., assignors to The Challenge Machinery Company, Grand Haven, Mich., a corporation of Michigan
Application December 3, 1934, Serial No. 755,672
17 Claims. (Cl. 164—43)

1. In a drilling machine of the class described adapted to drill and cut a plurality or pack of sheets or the like having a table adapted to receive said sheets, a support above the table, and a drill removably mounted on the support, said drill being adapted to cut the said sheets, the combination of a back gauge mounted upon the table, said sheets being located against the gauge whereby they may be drilled, a slitting mechanism movably attached to the said support, said drill being removed when the slitting mechanism is attached in position and means of predetermined dimension adapted to be inserted between the back gauge and the sheets whereby the slit which may be cut by the slitting mechanism is positioned in a predetermined relationship relative to the first cut which is made in the sheets.

2,029,625
V-SLOT PAPER CUTTER
James Edgar Lee, James Wesley Lee, Olaf T. Gylleck, and Freeman Barney, Grand Haven, Mich., assignors to The Challenge Machinery Company, Grand Haven, Mich., a corporation of Michigan
Application August 24, 1935, Serial No. 37,788
9 Claims. (Cl. 164—15)

1. In a drilling machine of the class described adapted to drill and cut a plurality or pack of sheets or the like having a table adapted to receive said sheets, a support above the table, and a drill removably mounted on the support, said drill being adapted to cut the said sheets, the combination of a back gauge mounted upon the table, said sheets being located against the gauge whereby they may be drilled, a slitting mechanism movably attached to the said support, said drill being removed when the slitting mechanism is attached in position, said slitting mechanism having a pivoted blade rotatable to two positions and means of predetermined dimension adapted to be inserted between the back gauge and the sheets whereby the two slots which may be cut by the slitting mechanism are positioned in a predetermined relationship relative to the first cut which is made in the sheets.

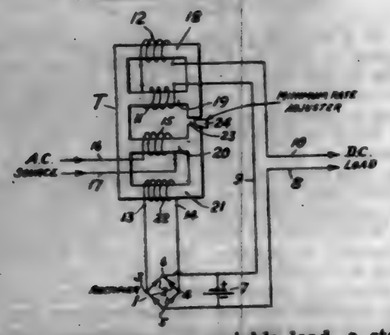
2,029,626
SCRUBBING MITT
Clarence E. Lierley, Los Angeles, Calif.
Application October 7, 1935, Serial No. 43,868
3 Claims. (Cl. 69—8)

2. A mitten of the kind described having a pocket formed by an applicator portion on one side thereof and a finger-grippable flap on the opposite side thereof, said mitten having a thickened body portion at the base of said pocket which has a pointed outer extremity and an inner part positioned to be engaged by the tips of the fingers of the operator.

2,029,627
MANUFACTURE OF BASIC REFRACTORY MATERIAL
Richard L. Lloyd, Great Neck, N. Y., and Reed W. Hyde, Summit, N. J., assignors to Dwight & Lloyd Metallurgical Company, New York, N. Y., a corporation of New Jersey
No Drawing. Application July 19, 1932, Serial No. 623,236
10 Claims. (Cl. 106—9)

1. Method for the manufacture of refractory

material, which comprises comminuting a raw material selected from the group consisting of magnesite and dolomite, mixing therewith fine sized fluxing materials, bonding said mixture with an hydraulic cement comprising an oxychloride of an alkaline earth compound, converting said bonded mixture into coarse sized pieces, as compared to the fine raw materials, adding fuel, and burning the mixture by forced draft combustion of the intermixed fuel, whereby high temperatures are obtained at which the raw materials are transformed into a clinkered, hard burned refractory product.



2,029,623

MEANS FOR CONTROLLING THE CHARGE AND DISCHARGE OF A STORAGE BATTERY

Edward L. Lord, Glenside, Pa., assignor to The Electric Storage Battery Company, Philadelphia, Pa., a corporation of Pennsylvania

Application March 28, 1932, Serial No. 601,600

8 Claims. (Cl. 171—314)

7. In combination, a variable load, a storage battery connected with said load, a transformer having a primary and a secondary, a flux path for by-passing a portion of the flux of said transformer from said secondary, a rectifier having its input terminals connected with said secondary and its output terminals connected with said battery, and means effective when said load is increased for increasing the reluctance of said path to increase the charging current flowing into said battery.

2,029,629

SYSTEM AND APPARATUS FOR RELEASE OF FLUIDS

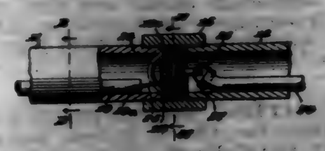
Daniel Mapes, Upper Montclair, N. J., assignors to Walter Kidde & Company, Inc., New York, N. Y., a corporation of New York

Application October 21, 1931, Serial No. 570,102

11 Claims. (Cl. 169—11)

10. In combination, a fluid container having an opening and a closure for the opening, a body formed with a chamber, an operating member in the form of a piston in said chamber, an inlet for admitting an operating fluid into the chamber above the operating member to actuate the same, an opening member associated with said operating member, said opening member being operable by said operating member to open said closure, an outlet port normally closed off by the operating member from the space above the operating member and uncovered by movement thereof to release the operating fluid only after the opening of the closure member has been effectively completed, and a normally closed fluid conducting passage adapted to be opened by movement of the operating member to connect the space above the closure with the outlet, whereby the fluid released from the container

may also be discharged through the outlet when the passage has been opened by movement of the operating member.



2,029,630

WATER PIPE

Samuel McMichael, Round Hill, Va., assignor, by mesne assignments, of one-fifth to Rachel C. Smith, Berryville, Va.

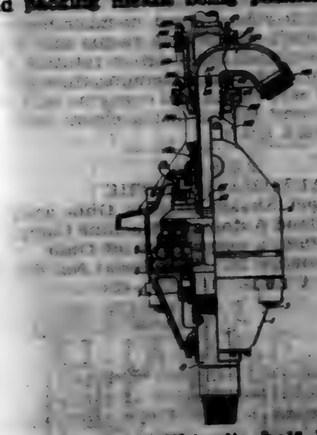
Application August 13, 1934, Serial No. 739,696

6 Claims. (Cl. 138—88)

1. In fluid handling apparatus, in combination, a fluid container, expansion-absorbing means comprising a compressible core and rubber walls positioned within said container, whereby the expansion of fluid within the container is absorbed by said means, and fastening means secured to the ends of said expansion-absorbing means and to said container for maintaining the position of said first-mentioned means linearly respecting said container.

2,029,631

SWIVEL



John S. Morgan, Jr., Inglewood, and Demery A. Murphy, Torrance, Calif., assignors to The National Superior Company, Toledo, Ohio, a corporation of Delaware

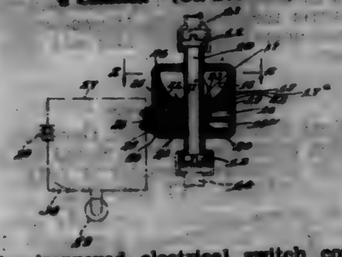
Application November 26, 1934, Serial No. 754,866

14 Claims. (Cl. 255—25)

1. In a rotary swivel, the combination of a bearing housing including upper and lower members connected together, a rotary sleeve having a fluid conducting passage being rotatably supported on bearing means within said housing, a wash pipe, said wash pipe being reversible end for end, means connected with said bearing housing to non-rotatably secure either end of said wash pipe axially of said sleeve, packing means carried by the rotary sleeve and surrounding the wash pipe to form a fluid tight rotary connection between the wash pipe and the sleeve,

said packing means being positioned axially of

the wash pipe within its half length farthest removed from its secured end.



2,029,632

CENTRIFUGAL ELECTRICAL MERCURY SWITCH

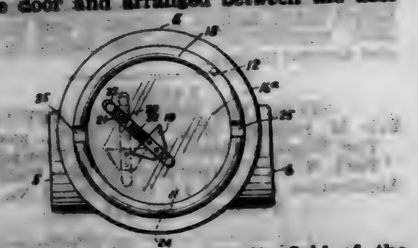
Guy S. Moore, Salem, Mass., assignor of fifty-one per cent to Eugene B. Fraser, Lynn, Mass., and twenty-four per cent to Fred H. Rowe, Gloucester, Mass.

Application January 5, 1934, Serial No. 705,407

4 Claims. (Cl. 200—89)

1. An improved electrical switch comprising an internally cup-shaped rotor, a stationary casing enclosing said rotor, brush contact members mounted in said casing, annular rings embedded in said rotor adapted to engage said brushes, mercury located in the cup cavity of said internal cup shaped rotor, a spiral groove located in the surface of said cavity, electrical contacts located in the bottom of said spiral groove and connecting with said rings, mercury located in said cavity adapted to engage said contacts in said grooves when said rotor is at a rest position.

2,029,633



FLOW INDICATOR

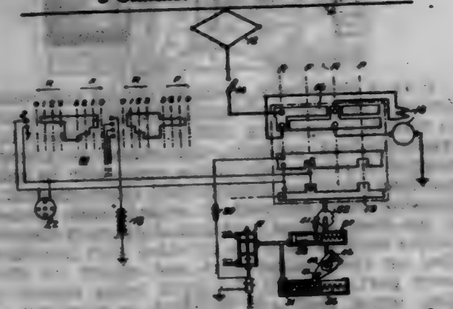
Karl Mahlstedt, Philadelphia, Pa., assignor to Schutte & Koerting Company, Philadelphia, Pa., a corporation of Pennsylvania

Application September 24, 1934, Serial No. 745,375

3 Claims. (Cl. 116—117)

3. A fluid flow indicator comprising the combination of a hollow casing of opaque diamagnetic material and having a fluid-way and provided with a circular seat and sleeve defining an opening, a magnetized clapper depending in the fluid-way, a diamagnetic opaque door seated on the seat, a spacer ring and a clamping ring arranged in the sleeve, a window interposed between the rings with space between it and the door, and an indicator of magnetic material suspended from the door and arranged between the door

and window and in the magnetic field of the clapper.



2,029,634

PNEUMATIC DRIVE SYSTEM

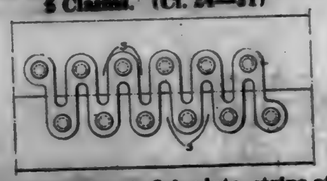
Charles Peter, West Allis, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a corporation of Delaware

Application October 10, 1932, Serial No. 637,025

3 Claims. (Cl. 121—40)

1. In a fluid pressure operated system, a shaft to be rotated, a fluid pressure operated motor and a single valve controlling the flow of fluid under pressure to said motor, said motor comprising a main piston for stepwise rotation of said shaft in the same direction, a ratchet mounted on said shaft to drive the same, a pawl arranged for operation by the main piston for engagement with the ratchet, an auxiliary piston, said main and said auxiliary pistons moving along parallel axes, a latch wheel mounted on said shaft, and a latch arranged for movement by the auxiliary piston and for engagement with the latch wheel to retain said shaft in position.

2,029,635

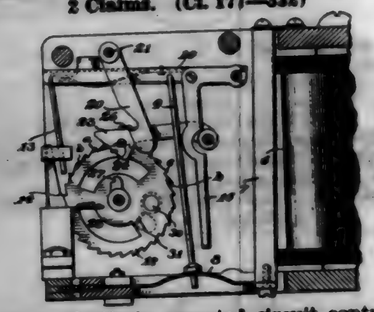


FISHPLATE FOR LATERALLY JOINING TWO OR MORE METALLIC STRIPS

Alfred Birdy Rahsen, Sandviken, Sweden

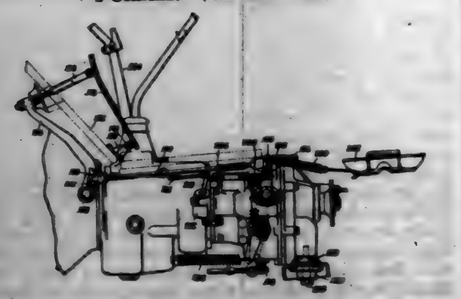
Application March 22, 1934, Serial No. 717,126

In Sweden April 8, 1933



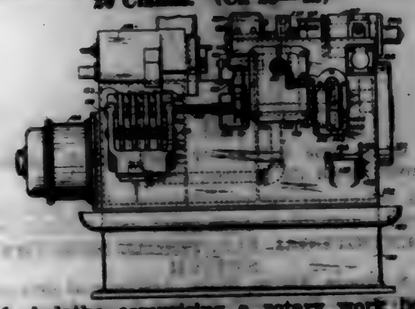
5 Claims. (Cl. 24—31)

1. In combination, a fish plate, strips of metallic belting of the same thickness having their ends in alignment, means for securing said fish plate to only one flat side of the metallic belting, leaving the other flat side completely smooth, said fish-plate having slits extending from two opposite edges of the plate alternately in zigzag and all crossing a plane coinciding with the butted



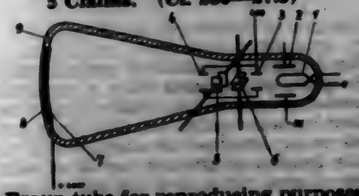
edges of the strips when joined, said fish-plate being adapted to travel along the above mentioned plane both in a straight and in a curved path, respectively, from one pulley to another and around pulleys.

2,029,636
SELECTIVE SIGNALING DEVICE
Eric M. Rickard, New York, N. Y., assignor to The Western Union Telegraph Company, New York, N. Y., a corporation of New York
Application October 13, 1932, Serial No. 637,653
2 Claims. (Cl. 177—332)



1. In a selectively operated circuit controlling device, a step-by-step toothed element, operating to control a signaling circuit when brought to a predetermined position, comprising an electromagnet, a pivoted armature responsive to short and long impulses through said electromagnet, a stepping pawl adapted to actuate said element in the operation of said armature, said element having some of its teeth provided with faces bevelled on their upper part and square on their lower part, some of the teeth being square on their upper part and bevelled or undercut on their lower part, and some of the teeth having uncut faces, being square on both upper and lower parts, said upper bevelled, lower bevelled and uncut teeth being disposed in a predetermined arrangement, and a retaining pawl operated by said armature and mounted so as to engage the upper part of said teeth upon the occurrence of a short impulse and to engage the lower part upon the occurrence of a long impulse, whereby said lower bevelled teeth are held by said retaining pawl only upon the occurrence of a short impulse, said upper bevelled teeth are held only upon the occurrence of a long impulse, and said uncut teeth are held upon the occurrence of either a short or a long impulse.

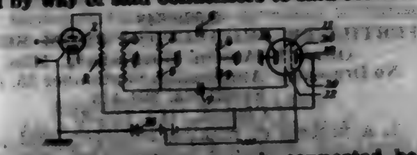
2,029,637
COMBINED FREEWHEELING AND POWER BRAKE UNIT
Edward A. Rockwell, New York, N. Y.
Application February 10, 1933, Serial No. 656,091
4 Claims. (Cl. 188—149)



1. In a power brake unit a casing, an output rock shaft rockably supported by the side walls of said casing, a yoke-shaped member mounted on said rock shaft within said casing and keyed to said rock shaft against relative rotation with respect thereto, and a pin extending through the bottom wall of said casing and engaging said yoke member to prevent lateral displacement with respect to said rock shaft.

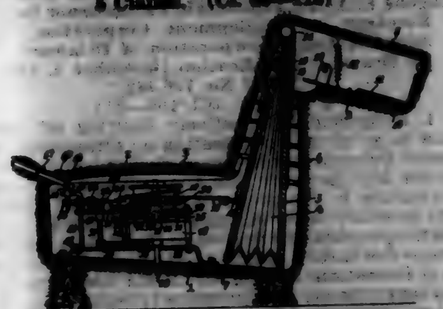
2,029,638
AUTOMATIC LATHE
Harry W. Ruppel, Shaker Heights, Ohio, assignor to The Cleveland Automatic Machine Company, Cleveland, Ohio, a corporation of Ohio
Application January 25, 1932, Serial No. 653,432
20 Claims. (Cl. 29—42)

1. A lathe comprising a rotary work holder having a chuck, fluid operated chuck opening and closing means, a fluid operated stock feeding device, a fluid operated turret and mechanism operated by the fluid ejected from said fluid operated turret for controlling the actuation of the said chuck operating means and said stock feeding device.



2,029,639
BRAUN TUBE
Kurt Schlesinger, Berlin, Germany
Application December 28, 1932, Serial No. 648,615
In Germany December 24, 1931
5 Claims. (Cl. 250—27.5)

1. A Braun tube for reproducing purposes comprising an envelope, a cathode and an anode mounted in operative relationship thereto, means for deflecting the cathode ray, a layer of a fluorescent substance mounted at one end of said envelope, and a thin, homogeneous, coherent, metallic coating mounted on the side of the fluorescent layer facing said cathode.



2,029,640
AUDION ARRANGEMENT FOR SHORT WAVE TELEVISION PURPOSES
Kurt Schlesinger, Berlin, Germany
Application July 17, 1934, Serial No. 735,690
In Germany July 19, 1933
4 Claims. (Cl. 250—27)

1. An audion arrangement for grid-detection, more particularly in the case of television signals modulated on a carrier frequency comprising a transformer coupled to the output of a carrier frequency amplifier, the secondary of said transformer being tuned by its natural capacities to said unmodulated carrier frequency, a multi-electrode valve at least comprising an anode, a cathode, and two control grids, said cathode being connected to earth, two sudion condensers, the middle tapping point of said secondary connected to earth, the ends of said secondary connected by way of said condensers to said control-

grids, two leak resistances each connected between one of said grids and earth and two damping resistances each connected between the one end of said secondary and earth across the two halves of said secondary.

2,029,641
SOUND PRODUCING DEVICE
Anthony G. Schaack, Los Angeles, Calif.
Application April 30, 1934, Serial No. 723,182
5 Claims. (Cl. 46—118)

1. A sound producing device comprising a spring retracted reciprocable member, which device produces a sound the volume of which is proportional to the velocity of movement of the reciprocable member, in combination with a driving mechanism comprising a drum, a cord looped about said drum and connected at one end to said spring retracted member, means for rotating said drum in a direction to tighten said one end of said cord, a cam mechanism comprising a plate member and a follower member, one of which members is coupled to said drum for movement therewith and the other of which members is connected to the other end of said cord and mounted for reciprocatory movement toward and away from said drum in response to relative movement between said cam members, whereby when said drum is rotated the cord is intermittently snubbed into driven relation with said drum to shift said spring retracted sound producing member, and slackened to slip around said drum and release said spring retracted sound producing member in a manner determined by the shape of said cam plate.

2,029,642
METHOD OF MAKING SECONDARY AROMATIC AMINES
Waldo L. Semon, Silver Lake Village, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
No Drawing. Application June 22, 1933, Serial No. 677,273
14 Claims. (Cl. 260—128)

1. The process which comprises separately forming a salt of a phenol and a primary aromatic amine, and heating the salt to cause its condensation to produce a secondary amine.

10. The method which comprises preparing a poly-hydroxy benzene in an aqueous solution, adding a primary aromatic amine to precipitate the poly-hydroxy benzene as its amine salt, and heating the salt to cause its condensation to produce a secondary amine.

2,029,643
FLOWER HOLDER
Ida M. Sinclair, Cuyahoga Falls, Ohio
Application August 3, 1935, Serial No. 34,583
7 Claims. (Cl. 47—41)

1. A flower holder comprising a base and a plurality of flower supporting members attached to said base, each of said members being formed from a single length of wire, the intermediate portion of which is in substantially the form of an M.

2,029,644
CAR SPRING MOUNTING
John J. Tatum, Baltimore, Md.
Application June 3, 1932, Serial No. 615,184
17 Claims. (Cl. 267—3)

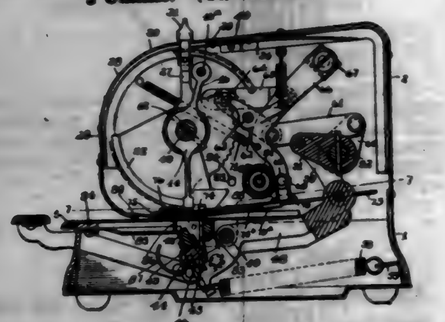
1. A spring structure comprising a backing member having end pockets and a plurality of pairs of intermediate pockets, said intermediate pockets being arranged in transverse alinement, a semi-elliptic spring having its ends engaging the end pockets, and coiled springs engaging the intermediate pockets and arranged for cooperation with the semi-elliptic spring to yieldingly support a load resting thereon.

2,029,645
STRUCTURAL ELEMENT
Hugh L. Waugh, Ferndale, Mich., assignor to Stran-Steel Corporation, Detroit, Mich., a corporation of Michigan
Application December 18, 1933, Serial No. 703,091
6 Claims. (Cl. 189—37)

1. In a structural element, flanged members having substantially co-planar flanges and flanges extending in the same direction from the inner edges of said co-planar flanges and formed with longitudinal transversely curved corrugations, an intermediate member between said last mentioned flanges and having a portion substantially uniformly spaced from each to form

laterally spaced curved slots to receive and retain fastening elements, and means inwardly of

said corrugations for rigidly securing said flanged members and intermediate member in assembled relation.



2,029,646

INKING MECHANISM FOR CHECK WRITERS

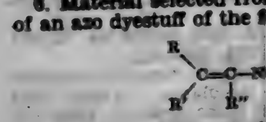
Herman C. Welter, Rochester, N. Y., assignor to Hall-Welter Co., Inc., Rochester, N. Y., a corporation of New York

Original application December 19, 1930, Serial No. 503,515. Divided and this application June 5, 1933, Serial No. 674,496

2 Claims. (Cl. 101—97)

1. In a check writer, the combination with a casing including spaced side walls, one of which has an opening, a hinged pad, a holder therefor and means for effecting reciprocatory movement of the holder, of a re-inker for said pad comprising a rod and a roller freely revoluble thereon, the shaft and its roller being insertable through said opening, a supporting plate for one end of the shaft comprising a closure for said opening, and means on the other of said walls for releasably supporting the inner end of said rod.

2,029,647



ETHYLENE AZO DYESTUFFS AND THEIR MANUFACTURE

Robert Wisinger, Bonn-on-the-Rhine, Germany, assignor to General Aniline Works, Inc., New York, N. Y., a corporation of Delaware

No Drawing. Application February 17, 1934, Serial No. 711,730. In Germany February 16, 1933

10 Claims. (Cl. 260—96)

6. Material selected from the group consisting of an azo dyestuff of the formula:

in which R and R' each signify an aryl radical or an aryl radical substituted by an auxochrome, R''' signifies a member of the group consisting of hydrogen, chlorine, bromine, and iodine atoms, and nitro, carboxyl, carbonyl, sulfonic acid, alkyl, aryl, and aralkyl groups, and R''' represents an aryl radical and the acid addition product of such an azo dyestuff.

2,029,648

FERTILIZER PRODUCTION FROM SEWAGE

Oliver V. Austin, Hattiesburg, Miss.

No Drawing. Application September 28, 1933, Serial No. 691,411

5 Claims. (Cl. 71—8)

3. A process of making fertilizer, said process comprising confining concentrated sewage and while so confined subjecting the same to steam at high pressure and high temperature for a few minutes, then suddenly releasing the sewage and steam from confinement whereby to cause the cell structure of the sewage to be explosively disintegrated.

2,029,649

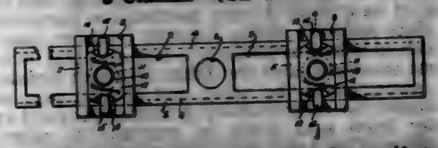
REDUCING WATER FLOW IN OIL WELLS

Eugene E. Ayres, Pittsburgh, Pa., assignor to Gulf Research & Development Corporation, Wilmington, Del., a corporation of Delaware

No Drawing. Application December 5, 1934, Serial No. 756,132

5 Claims. (Cl. 166—21)

1. A method of selectively shutting off water flow in an oil well penetrating oil formations and water formations wherein carbon dioxid is forced under high pressure into the well and the water formation in the presence of calcareous matter, the pressure being sufficient to overcome hydrostatic pressure in the water formation and to cause the carbon dioxid to penetrate far back in said formation, the carbon dioxid dissolving calcareous matter, and pressure is released, to deposit insoluble calcareous matter of increased bulk in the water formations, plugging them.



2,029,650

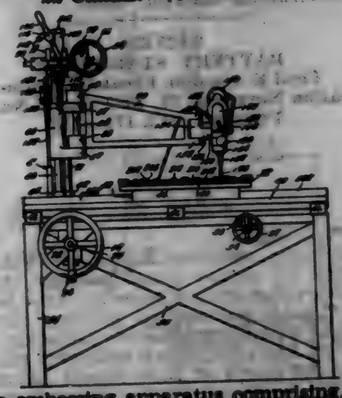
DRILL JIG

William Betz, Detroit, Mich.

Application January 14, 1933, Serial No. 651,800

3 Claims. (Cl. 77—62)

1. A drill jig comprising a base for resting on the work and provided with an elongated opening defining a pair of spaced parallel bars, the outer sides of said bars being formed with a groove, a block provided in its bottom with a pair of spaced longitudinal grooves arranged to receive the respective bars so that the bottoms of the grooves slide on the tops of said bars and the opposite sides of the grooves slidably engage the opposite sides of the bars, set screws traversing the outer sides of said block and engaging in the respective grooves in the outer sides of the bars so as to lock the block in adjustable positions on said bars, said block being formed in its top with a transverse groove into which the said bottoms of the grooves open, said block being further formed with a vertical bore placed between said grooves and between the sides of said transverse groove, a drill bushing having a tubular shank fitting in said bore and a lateral shoulder on its upper end conformably seating in said transverse groove and resting on the tops of said bars appearing in the open portion of said bottoms, and screw clamp means threaded into the floor of said transverse groove outwardly of said open portions of the bottoms, said clamp means having a lateral arm arranged to swing over and forcibly engage the top of the bushing as the screw means is turned in a direction to thread the same into said floor.



2,029,651

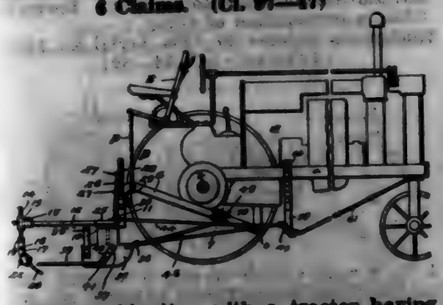
EMBOSSING APPARATUS

John J. Brand, Washington, D. C.

Application April 22, 1935, Serial No. 17,704

22 Claims. (Cl. 101—3)

1. An embossing apparatus comprising, a stationary support, a pulsating hammer, a hammer mounting structure connected with the hammer and carried by the support, means mounted on the support for moving the hammer mounting structure with respect to the support, and a gauge associated with the hammer mounting structure for registering the movement of the hammer.



2,029,652

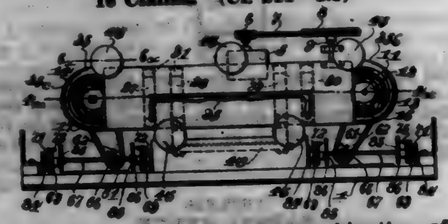
CULTIVATOR ATTACHMENT FOR TRACTORS

Joseph W. Capps, Portales, N. Mex., assignor of one-half to Emmit Sidney Capps, Pecos, Tex.

Application August 6, 1935, Serial No. 35,012

6 Claims. (Cl. 97—47)

1. The combination with a tractor having a pair of rearwardly extending pivoted beams, and means for raising or lowering the rear ends of said beams, of transversely extending base members operatively connected to the beams for vertical movement therewith, pairs of runners mounted upon the undersides of said base members, cultivator shovels carried by the base members and extending rearwardly therefrom, a draw bar operatively connected to the tractor and extending transversely across the same, an operative connection between the outer pairs of runners and the draw bar and between the inner pairs of runners and the beams, and an operative draft connection between the base members and said draw bar.



1,823,453

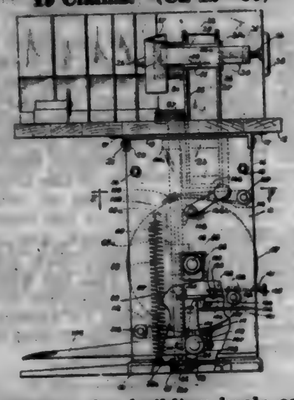
DISPLAY DEVICE

Saul H. Chazan, Rochester, N. Y.

Application September 16, 1933, Serial No. 633,484

16 Claims. (Cl. 211—1.5)

1. In a display device the combination of a tubular frame having an intermediate tubular section, end tubular sections, sleeves connecting said sections, each of said sleeves having a flange thereon extending only to the outside diameter of said tubular sections intermediate the ends thereof against which the sections abut, the outer ends of the end sections being flattened, upright shafts mounted to turn in the end sections, rectangular frames supporting the end sections, means for rotating said shafts in said end sections.



2,029,654

HEEL FORMING MACHINE

Charles H. Coulson, Hanover, Pa.

Application March 13, 1935, Serial No. 10,942

19 Claims. (Cl. 12—50)

1. A machine for building heels comprising a magazine for lifts, a table upon which the heel blanks are built, a reciprocating means for forcing the table and blanks to a predetermined distance within the magazine, means for actuating the reciprocating means, means operated by the reciprocating means for causing the actuating means to be released when the reciprocating means has substantially completed its stroke, and means for returning the reciprocating means to an inoperative position.

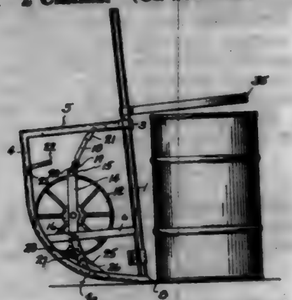
1,619,455

APPARATUS FOR STRAINING SUGAR CANE JUICE

Andrew C. I. Coulter, Naalehu, Territory of Hawaii

Application May 22, 1934, Serial No. 726,981

15 Claims. (Cl. 210—149)

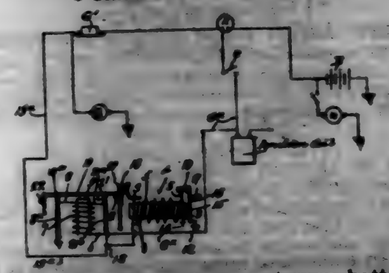


1. A straining apparatus for association with a series of sugar mills including carriers for con-

veying bagasse from one mill to another, said apparatus including a screen and a sugar juice delivery trough disposed above the screen for distributing the juice substantially evenly thereto,

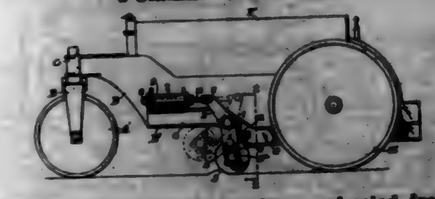
said trough having an edge over which the juice is adapted to discharge onto the screen and said edge being inclined downwardly relatively to the bottom of the trough in the direction of flow of the juice.

2,029,656
BARREL TRUCK
Harry Dawson, Everett, Wash.
Application October 20, 1934, Serial No. 749,225
2 Claims. (Cl. 280—53)



1. A truck of the character described, comprising a truck frame having a pair of rockers at its forward end on which the truck may rock from a substantially upright position to load carrying position, a wheel frame disposed between the rockers, a pair of wheels mounted in said wheel frame; said frame being pivotally connected at a point eccentric of the wheels to the truck frame, and adjustable from a position at which said wheels are within the limits of the rockers to a position for supporting the truck, and a pair of dogs pivotally mounted in the truck frame and having operative connection with the wheel frame to be moved thereby from a position within the rockers to a position extended forwardly thereof when the wheel frame is in position that the truck may be supported by the wheels.

2,029,657
METHOD FOR CONVERTING HYDROCARBON FLUIDS INTO FUEL GAS
Frederick E. Frey, Walter F. Happke, and Jesse A. Guyer, Bartlesville, Okla., assignors to Phillips Petroleum Company, Bartlesville, Okla., a corporation of Delaware
Application March 19, 1932, Serial No. 600,018
5 Claims. (Cl. 48—214)

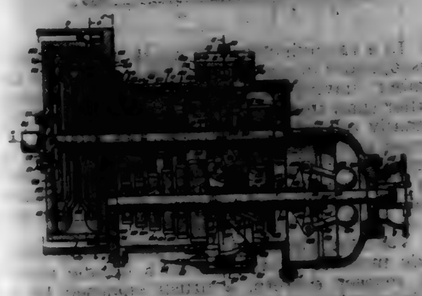


1. A continuous process for the manufacture of clean fuel gas, wherein hydrocarbon reforming reactions and water gas reactions are caused to proceed simultaneously in the presence of a catalyst, said process comprising preliminarily admixing steam and hydrocarbon fluids of the propane-butane type in predetermined proportions; passing said mixture through a series of externally heated catalysts; heating the mixture intermediate the catalysts to compensate for loss of heat due to the endothermic character of the water gas reactions; and adding hydrocarbon fluids to the mixture at intervals during said passage, whereby the resultant gas contains substantial quantities of hydrocarbons and water gas and is of predetermined calorific value.

2,029,658
BATTERY STABILIZER
Cecil E. Gordon, Pocatello, Idaho
Application November 25, 1933, Serial No. 644,398
7 Claims. (Cl. 171—313)

1. In a charging system, a storage battery, a generator for charging the battery, a grounded normally open switch connected with the output of the generator; means tending to close the switch; and electromagnetic means independent of the switch circuit whereby when the voltage at the generator rises above a predetermined point the said first mentioned means will be permitted to operate to close the switch thereby grounding the generator and diverting the excess generated current from the electromagnetic means.

2,029,659
ROAD ROLLER
Carl F. Greiner, Springfield, Ohio, assignor to The Buffalo-Springfield Roller Co., Springfield, Ohio, a corporation of Ohio
Application October 20, 1934, Serial No. 749,236
3 Claims. (Cl. 94—50)



1. In a road vehicle having a wheeled frame; arms journaled on the frame adjacent the center of the vehicle; a ground roller carried by the lower ends of said arms adapted to support the greater portion of the weight of the vehicle when the roller is in operative position contacting with the ground; abutments carried by the frame adapted to take the thrust from the arms and to fix the operative position of the roller; and means for simultaneously pivoting the arms through equal arcs, said means maintaining said arms in firm contact with the abutments when the roller is in operative position; said abutments and means coacting to rigidly support the arms with respect to the frame.

2,029,660
DISPENSING CONTAINER
Clarence A. Johnston, Pecos, N. Mex.
Application January 24, 1935, Serial No. 3,215
1 Claim. (Cl. 206—46)

A device of the class described, comprising an elongated tubular casing having its lower end provided with an annular outwardly extending projection forming an internal annular groove and an external shoulder, a plunger having an outwardly extending flange at its bottom extending into the groove with its upper end projecting from the upper end of the casing, said upper end of the casing having an inwardly extending flange, the inner edge of which is spaced from the upper part of the plunger, a tubular container encircling the plunger and passing through the space between the flange at the upper end of the casing and the plunger, said container having an outwardly extending flange at its lower end contacting the internal wall of the casing, the upper end of the container being rounded and having an opening therein and a cap for fitting over the container and the casing and having its lower end engaging the shoulder of the casing.

2,029,661
TRANSMISSION
George O. Jones, Ludowici, Ga.
Application July 14, 1933, Serial No. 680,451
19 Claims. (Cl. 74—336.5)

1. In a variable speed transmission, a source of power, a flywheel rotated by said source, opposed clutching areas on the flywheel, a plurality of clutching means adapted to clutch each clutching area, driven members operatively connected to each of the clutching means, and means to select which clutching means shall engage the clutching areas.

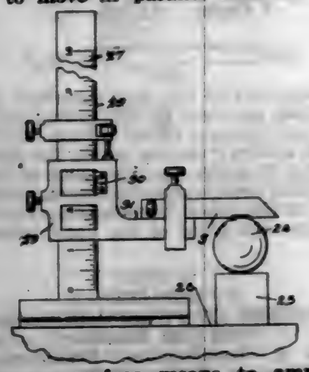
2,029,662
DISPLAY TRAY
Frank H. Kersen, Louisville, Ky.
Application April 24, 1934, Serial No. 722,153
Renewed July 8, 1935
1 Claim. (Cl. 229—2.5)

A display tray of the class described comprising a bottom part and an upstanding flange, said bottom part having a raised portion, the edges of which are spaced from the flange, the raised portion having its major part flat, with its edge portions curving downwardly and outwardly and the flat part of the raised portion being located in a plane above the plane of the upper edge of the flange.

2,029,663
RECOVERY OF PHOSPHORUS FROM DILUTE GASES
Friedrich P. Kerschbaum, Frankfort-on-the-Main, Germany, William H. Waggaman, Baltimore, Md., and Stapleton D. Gooch, Pembroke, Fla., assignors, by mesne assignments, to Pembroke Chemical Corporation, a corporation of Florida
No Drawing. Application November 3, 1930, Serial No. 494,442. Renewed August 10, 1934
1 Claim. (Cl. 23—223)

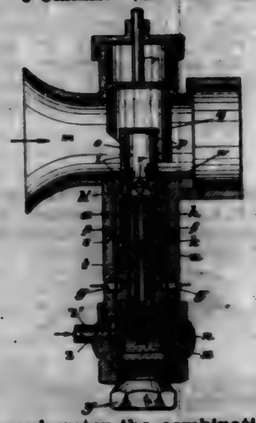
A process of removing phosphorus from blast furnace gases relatively dilute in this element, comprising passing the gases relatively slowly through a series of condensers, spraying the gases with water, in each condenser, maintained at progressively lower temperatures, rapidly recirculating the bulk of water in the first condenser so as to insure a recontacting of a given quantity of gas with the recirculating medium, maintaining the water in the first condenser at temperatures between 110° to 212° F., maintaining the water in the second condenser at temperatures between 65° and 110° F. and maintaining the water in the final condenser at temperatures between 32° to 65° F.

2,029,664
METHOD OF BAKING A LOAF OF BREAD
Lemuel L. Lassiter, Greensboro, N. C.
Application November 24, 1934, Serial No. 754,651
2 Claims. (Cl. 107—54)



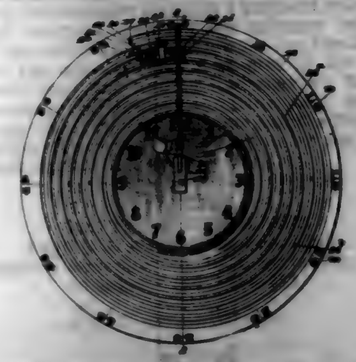
1. The method of making a loaf of bread, consisting in wrapping the unleavened dough around a form of desired shape, baking the loaf with the form inside, cutting out a section of the baked loaf, removing the form to leave a hole for the insertion of an edible filling, inserting said filling, and replacing the cut out section of the loaf.

2,029,665
SCRIBER INDICATOR
Frank Markowicz, Detroit, Mich.
Application June 4, 1932, Serial No. 615,377
5 Claims. (Cl. 33—172)



1. An indicator comprising a hollow body having a flat reference surface and a scribing point

at one end of said reference surface; a member movable into and relative to said body, a plane surface for contacting objects to be measured on said moving member, said plane surface being adapted to move in parallel relationship with



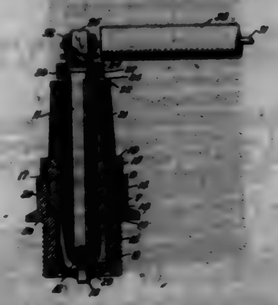
said reference surface, means to amplify the movement and means for indicating the amplified movement of said movable plane surface with regard to said reference surface and said scribing point.

2,029,666
CARBURETOR
Walter Markwart, Chemnitz/Niederwiesa, Germany, assignor to Marklin Apparatebau Gesellschaft mit beschrankter Haftung, Chemnitz, Germany, a corporation of Germany
Application February 9, 1933, Serial No. 656,611
In Germany May 25, 1932
6 Claims. (Cl. 261—62)

1. In a carburetor the combination of an induction channel, a mixture delivery pipe provided with holes opening into the induction channel, an atomizing chamber in connection with the open end of the delivery pipe, a float chamber communicating with the atomizing chamber through a calibrated orifice, an atomizing jet tube adapted to receive fuel from the float chamber through said calibrated orifice and discharging the fuel in said atomizing chamber, an air nozzle pipe disposed concentrically around the jet tube, and a concentric casing surrounding the air nozzle pipe and having openings at its lower end connecting the bottom of the atomizing chamber with the annular space between the casing and the air nozzle pipe, said casing terminating at its upper end in a conical member.

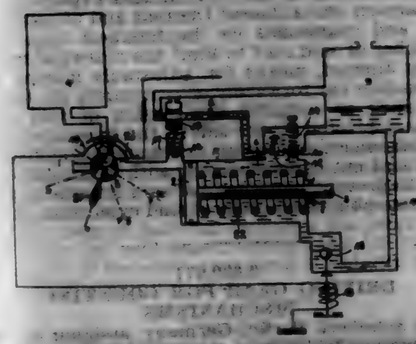
2,029,667
PROGRAM CLOCK
Charles Joseph Maxwell, Dallas, Tex.
Application September 26, 1935, Serial No. 43,054
6 Claims. (Cl. 161—4)

1. In a program clock, a face plate, a driven shaft projecting through the center of the face plate, said face plate provided with a circular groove having its center in the shaft and a spiral groove surrounding the circular groove and leading into the said circular groove, a minute hand fixed to the shaft and having a hinged portion swingable outwardly from the face plate, a carriage slidably received by the hinged portion of the hand and having rollers received by the spiral groove, removable contacts adapted to be placed along the spiral groove, and a swingable contact on the carriage adapted to engage the removable contact for closing a circuit to an alarm.



2,029,668
SUCTION NOZZLE OF VACUUM CLEANING APPARATUS
Lionel Frank McCardle, Darwenton Mews, England
Application May 21, 1934, Serial No. 726,452
In Great Britain March 2, 1933
10 Claims. (Cl. 15—158)

1. In a vacuum cleaner a nozzle comprising two telescopically mounted nozzle members, the inner member having a nozzle opening materially smaller than that of said outer member and being normally out of contact with the surface to be cleaned and so arranged that by telescoping said members the nozzle opening of the inner member may be brought into contact with the surface to be cleaned within the area of the nozzle opening of the outer member.



7. Vacuum cleaning apparatus comprising a nozzle member provided with a handle movable with respect thereto, a brush enclosed by said nozzle member, means for supporting said brush including spring means for holding said brush away from the surface to be cleaned, said handle being so connected and arranged with respect to said nozzle member and said brush supporting means that pressure thereon will move said handle with respect to said nozzle member to force said brush into contact with the surface to be cleaned within said nozzle member.

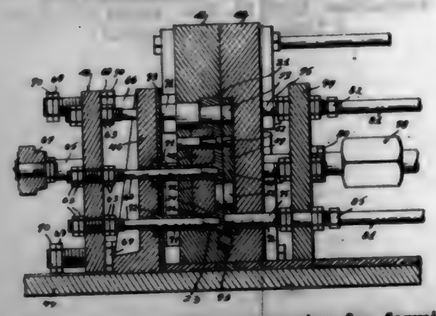
2,029,669
SPARK PLUG
Edward B. Newcomb, Bloomfield, N. J., assignor to Eclipse Aviation Corporation, East Orange, N. J., a corporation of New Jersey
Original application May 1, 1930, Serial No. 449,039. Divided and this application November 5, 1934, Serial No. 751,601
8 Claims. (Cl. 123—169)

1. In a spark plug, the combination of a hollow body interiorly threaded at its upper end, and having an internal shoulder therein, an insulated electrode positioned within said body, a cupped electrode within said body and having a flange engaging said shoulder, a gland threaded into said body and having an inclined bottom portion in engagement with said flange, said gland surrounding said insulated electrode but separated therefrom, an annular groove formed in the interior surface of said gland, and a sleeve of compressible material interposed between said gland and said insulated electrode and resting at its lower end on said inclined bottom portion, said sleeve being forcibly compressed within said gland so as to fill said annular groove, thus forming a gas-tight seal between said electrode and said gland.

2,029,670
BRAKE SYSTEM
Henri Pieper, Brussels, Belgium
Application August 17, 1934, Serial No. 740,332
In Belgium August 24, 1933
18 Claims. (Cl. 303—1)

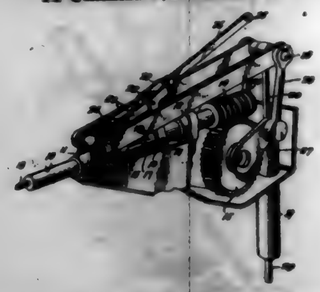
1. In a brake system, a wheel having a braking surface a brake shoe, a power member for moving the brake shoe into contact with the braking surface, hydraulic means for resisting the application of the brake shoe against the braking surface, and means operable upon movement of the shoe into contact with the braking surface for controlling the hydraulic means to resist further movement of the shoe toward the braking surface and the increase of pressure between the shoe and braking surface.

2,029,671
SEPARATING DEVICE
Marius D. Prince, Los Angeles, Calif.
Application April 13, 1935, Serial No. 16,231
3 Claims. (Cl. 210—51.5)



1. A separating device comprising a separating member formed in two leaves hinged together to be swung into alignment with each other or folded one over the other, a pair of levers pivoted at one end to one of said leaves, and a pivot secured in one of said levers and extending through a longitudinal slot in said other lever to permit said levers to be swung together and said separating member to be swung parallel to said levers, or to permit said levers to be swung apart and said separating member to be swung at right angles to one of said levers.

2,029,672
OIL LEVEL GAUGE
Henry Lamar Rankin, Tampa, Fla.
Application May 17, 1934, Serial No. 726,601
10 Claims. (Cl. 73—129)



1. In a device of the class described, the combination of a liquid container having an opening therein into one side of which a gauge rod may be freely inserted to measure the content of said container, and a wiper device coacting with the other side of said opening in such a manner that the said rod may be shifted from the first mentioned side to the wiper side into coaction with said wiper device when it is desired to wipe the rod while the latter remains in the opening aforesaid.

2,029,673
PERMANENT MOLDING APPARATUS
Randolph J. Roshirt, Arthur T. Bateman, and Andrew Irvine, Detroit, Mich., assignors to Bohn Aluminum and Brass Corporation, Detroit, Mich., a corporation of Michigan
Application August 15, 1933, Serial No. 685,946
10 Claims. (Cl. 22—136)

1. Permanent molding apparatus for forming a cylinder head casting having a plurality of combustion chambers therein, comprising sections relatively movable toward each other and cooperating in their innermost position to form a permanent mold cavity corresponding in contour to the shape of the casting, means for separating said sections subsequent to the pouring operation, means engaging one outer face of the casting to clamp the opposite face into engagement with the adjacent mold section during separation of the sections, and means other than last named means for subsequently ejecting the casting from the aforesaid section.

2,029,674
WINDMILL
Henry Schlachter, Beatrice, Nebr.
Application February 13, 1935, Serial No. 6,366
11 Claims. (Cl. 170—75)

1. A windmill including a wind wheel and a clutch, said wind wheel having radially pivoted vanes movable outwardly under the action of centrifugal force to change the pitch of said vanes and to automatically engage said clutch at a predetermined speed of rotation of said wind wheel.

2,029,675
WINDOW SHADE
Philip M. Schlamp, Miami, Fla.
Application December 15, 1934, Serial No. 757,696
7 Claims. (Cl. 160—10)

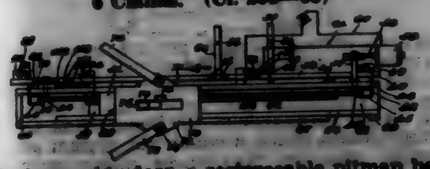
1. A window shade, comprising an elongated body formed of two sheets of material each having a series of open areas, the said areas of one sheet lying in a predetermined relation with the areas of the other sheet, the body being supportable before a window opening, and means between and oscillatable transversely of the sheets

for relatively shifting the sheets of the body whereby the relative positions of the openings are changed.

2,029,676
FOLDING FLEXIBLE ROOF OR CURTAIN
Arthur Grover Schleicher, Allentown, Pa.
Application October 1, 1934, Serial No. 746,429
2 Claims. (Cl. 296—143)

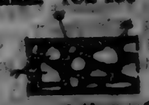
1. In a vehicle having sides, a casing forwardly of the tops of said sides, tracks on the top edges of said sides extending into said casing, a folding roof slidable bodily on said tracks to positions in which it is fully housed within or fully withdrawn from said casing, said roof comprising transverse parallel members slidable relatively toward and from each other, a flexible cover secured to said transverse members determining their maximum range of relative separation, latching means adjacent the rear ends of said sides automatically operable to retain the rear transverse member at the limit of roof expansion, an expansion bar adjacent the rear end of said casing and engageable by the foremost transverse member of said roof to limit the rearward movement thereof, means for adjustably moving the expansion bar forwardly or rearwardly for taking up slack or reducing the tension of said roof, keepers pivoted on one side of the innermost parallel member, and means for moving said keepers into and out of engagement with said expansion bar to prevent movement of said innermost parallel member rearwardly of said expansion bar.

2,029,677
DRIVING GEAR FOR COUNTING MECHANISMS
Paul Schubert, Berlin, Germany, assignor to Allgemeine Elektricitäts-Gesellschaft, Berlin, Germany
Application December 5, 1934, Serial No. 756,123
In Germany December 20, 1933
6 Claims. (Cl. 74—143)



1. A mechanical movement particularly for counting mechanisms, comprising a wheel having one set of teeth of different pitches, a pawl cooperating with the ratchet teeth, and means

for operating the pawl, said teeth of different pitches averaging the amount of lost motion



between the ratchet and pawl when the extent of movement of the pawl varies somewhat.

2,029,678
DOOR OPERATING MECHANISM
Joseph W. Scroggs, Norman, Okla.
Application July 18, 1934, Serial No. 735,687
6 Claims. (Cl. 268—63)

1. A movable door, a reciprocable pitman head and connecting means between the door and pitman head, said pitman head having a slot, a reciprocator having a block occupying and being smaller than the slot providing delayed-motion means, a pair of locking bars and means above the pitman head to which they are movably connected in positions diverging from each other, a keeper on the pitman head with the opposite sides of which keeper the respective bars are engageable to lock the pitman head at the substantial end of each of its reciprocations, means to shift the reciprocator, the pick-up of the pitman head being delayed by the idle movement of the block in the slot, and means on the block for moving the locking bars thus releasing the keeper from such engagement during the delay.

2,029,679
INSULATION
Frans William Sevig, Abel Bergqvist, and Karl Erie Olsson, Stockholm, Sweden, assignors to Kooperativa Forbundet Forening u. p. a., Stockholm, Sweden
Application December 22, 1933, Serial No. 703,544
In Sweden June 3, 1933
11 Claims. (Cl. 154—45)

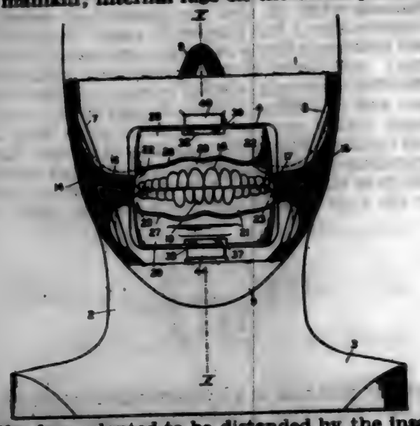
1. An insulation consisting of a material reflecting rays of heat, comprising a plurality of superposed foils having the mechanical character of paper and individually consisting of a transparent mass of material having a low heat conductivity, the said mass forming each foil having particles of material possessing a metallic lustre imbedded within the mass.

2,029,680
ATTACHMENT FOR LISTER PLANTERS
Claude K. Shedd and Edgar V. Collins, Ames, Iowa, dedicated to the free use of the Public
Application December 15, 1934, Serial No. 757,809
5 Claims. (Cl. 111—13)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

3. An attachment for a lister planter, comprising a bearing adapted to be secured to the rear portion of the lister planter frame and substantially in rear of a plow of the lister planter and disposed with its axis horizontal and extending transversely of the planter, a shaft journalled in said bearing, a freely swinging arm secured to said shaft and extending substantially rearwardly therefrom, an axle secured to the rear end of said arm and extending parallel to said shaft, a multi-blade rotary scraper journalled upon said axle and having a hub with a plurality of scraper blades extending radially therefrom and adapted to scrape soil from the sides and bottom of a furrow formed by the plow of said planter, a bracket rigidly se-

cured to said arm at an intermediate point thereon and extending substantially upwardly therefrom, a pendant lever pivotally connected to the upper portion of said bracket and depending therefrom, a second shaft rigidly secured to the lower end of said pendant lever and extending parallel to said axle, a hollow roller mounted and rotating freely on said second shaft and suitably secured against endwise movement thereon and adapted to engage a blade of said rotary scraper, and means comprising a trip bar, and a rotating disc driven by said lister planter, for periodically moving said hollow roller forward to intermittently release said rotary scraper.

2,029,681
TURBINE ROTOR CONSTRUCTION
Carl R. Soderberg, Swarthmore, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application May 31, 1934, Serial No. 728,225
5 Claims. (Cl. 253—39)



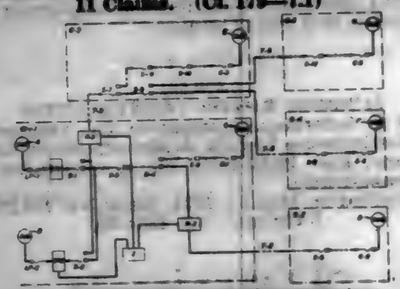
1. In an elastic-fluid turbine, a rotor of the drum type including a blade-carrying body comprised by a single steel forging having an axial bore and being of relatively large radial thickness; said rotor having means for circulating elastic fluid through the bore and said body having internal circumferential grooves opening into the bore; the external surface of the body, the internal surface of the bore and the groove surfaces providing for rapid and substantial uniformity of temperature changes of the body in consequence of exposure thereof to elastic fluid.

2,029,682
DENTAL MANIKIN
Martin O. Squires, San Francisco, Calif.
Application May 12, 1933, Serial No. 670,716
6 Claims. (Cl. 32—71)

1. A hollow dental manikin having elastic portions simulating the mobile mouth and cheek

area of the human face; dentures insertable in the manikin; internal lugs on the cheek portions

of the face adapted to be distended by the insertion of said dentures.



2,029,653

TELEPHONE SYSTEM

Ray L. Stokely, Floral Park, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Application August 2, 1934, Serial No. 738,263

11 Claims. (Cl. 179—7.1)

1. In a multi-office telephone system, subscribers' lines, means including a charging trunk for extending a calling one of said lines to a called line in the same office, means including said charging trunk and an outgoing trunk for extending said calling line to a called line in another office, a meter for said calling line, means in said charging trunk for operating said meter, timing apparatus associated with said charging trunk for controlling said meter operating means only on local calls, and timing apparatus associated with said outgoing trunk for controlling said meter operating means on interoffice calls.

2,029,654

PROCESS FOR MAKING DOUGH FORMS AND PRODUCT

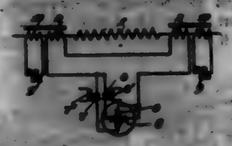
Guido Tanzi, Brooklyn, N. Y., assignor, by mesne assignments, to B. Filippone & Co. Inc., Passaic, N. J., a corporation of New Jersey

Application March 28, 1933, Serial No. 662,672

5 Claims. (Cl. 107—54)

1. A dough body of arch-like form and having constricted end portions, said body having longitudinal ribs which are spaced from each other, said ribs having depressions intermediate the same, said body having a lateral zone which is free from said depressions.

2,029,685



SUPERVISION OF THE DIELECTRIC LOSSES OF A CONDUCTOR

Wilhelm Thal, Nowawes, near Potsdam, Germany, assignor to Siemens & Halske, Aktiengesellschaft, Siemensstadt, near Berlin, Germany, a corporation of Germany

Application November 30, 1932, Serial No. 645,011

In Germany December 4, 1931

4 Claims. (Cl. 175—183)

1. In an arrangement for supervising the dielectric losses which a conductor system of substantial capacity experiences under operating voltage, a current transformer located at the beginning of said conductor system, a current transformer of the same characteristics located at the end of said conductor system, the primary windings of said current transformers being connected in series with said conductor system, the transforming ratio of said transformers being so selected that in the event of a perfect insulation of the conductor the currents or voltages induced in the secondaries of said transformers will be equal to each other, a direct current measuring instrument, means for connecting said secondaries with each other in opposition, a separately controlled synchronous switch, means for connecting said secondaries with said instrument by way of said switch in such a way that the difference between the currents or voltages induced in the said secondaries will act on said instrument, and means for controlling said synchronous switch in phase with the operating voltage in the conductor system.

2,029,686

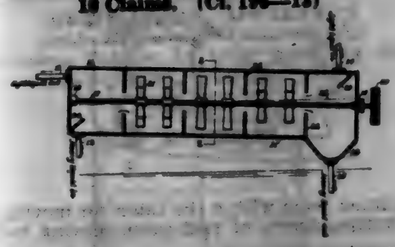
CENTER EXPANDING POCKET

Heinz Wehner, West Bend, Wis., assignor to Amity Leather Products Co., West Bend, Wis., a corporation of Wisconsin

Application March 18, 1935, Serial No. 11,666

2 Claims. (Cl. 150—39)

1. A lady's hang-bag comprising a body including expanding end walls having a plurality of folds, an interior pocket for the body extending longitudinally of the same including a pair of side walls, means securing the side walls at one end between certain folds of one end wall of the body, means securing the inner wall of the pocket at one end between certain folds of the other end wall of the body, and a gusset connecting the adjacent end of the outer wall of the pocket to the last-mentioned end of the inner wall of the pocket.



2,029,687

CONTINUOUS PROCESS FOR COUNTER CURRENT CONTACTING OF TWO LIQUIDS

Robert E. Wilson, Chicago, Ill., assignor to Standard Oil Company, Chicago, Ill., a corporation of Indiana

Application December 18, 1931, Serial No. 581,927

10 Claims. (Cl. 196—13)

5. A process for the continuous countercurrent contacting of two liquids in a series of zones arranged in an approximately horizontal lineal relationship to each other and comprising two end zones and a plurality of intermediate zones, said process comprising admitting a stream of one of said liquids into one of said end zones, flowing said stream through all of said zones in succession, admitting a stream of the other of said liquids into the end zone opposite said last-mentioned end zone, flowing said stream of said first-mentioned liquid through all of said zones in succession in a direction opposed to the direction of flow of said stream of said second-mentioned liquid and in continuous uninterrupted contact therewith, continuously partially commingling said two streams throughout said intermediate zones as thoroly as possible without producing such thoro emulsification as to interfere with countercurrent flow, separating said partially commingled streams in each of said end zones and separately removing the two resultant liquids from opposite end zones restraining the passage of all but the most thoroly commingled portions of said two streams from passing from zone to zone.

2,029,688

PROCESS AND APPARATUS FOR CONTACTING TWO MATERIALS

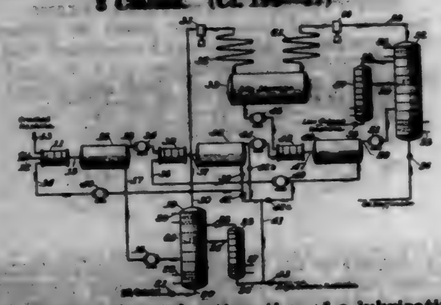
Robert E. Wilson, Chicago, Ill., assignor to Standard Oil Company, Chicago, Ill., a corporation of Indiana

Application December 8, 1933, Serial No. 645,533

6 Claims. (Cl. 196—13)

3. In apparatus for the countercurrent contacting of two liquids, a generally horizontal elongated chamber, a series of transverse baffles provided with openings at their tops and bottoms, said baffles partially dividing said chamber into two end compartments and a plurality of intermediate compartments, said passages which permit liquid strata at the top and bottom of said chamber to flow from one of said compartments to the next, a second series of transverse baffles, the members thereof located between the members of said first mentioned series of baffles and extending upward from the bottom of said chamber and downward from the top of said chamber, agitation means located within and confined to said intermediate compartments, means for introducing one of said two liquids into one of said end compartments, means for introducing the other of said two liquids into the other of said end compartments and means for withdrawing a resultant liquid from each of said end compartments.

5. In apparatus for the counter-current contacting of two liquids, a generally horizontal elongated chamber, a series of transverse baffles provided with openings at their tops and bottoms, said baffles dividing said chamber into two end compartments and at least three intermediate compartments, said compartments communicating with each other through said passages which permit liquid strata at the top and bottom of said chamber to flow from each of said compartments to the next adjacent compartment, a series of baffles extending upward from the bottom of said chamber and downward from the top of said chamber, the members of said last-mentioned series of baffles located between the members of said first-mentioned series of baffles, rotary agitation means located within and confined to said intermediate compartments, means for selectively adjusting the rate of rotation of said agitation means, means for introducing one of said two liquids into one of said end compartments, means for introducing the other of said two liquids into the other of said end compartments, and means for withdrawing a resultant liquid from each of said two end compartments.



2,029,689

SOLVENT FRACTIONATION

George L. Parkhurst, Chicago, Ill., assignor to Standard Oil Company, Chicago, Ill., a corporation of Indiana

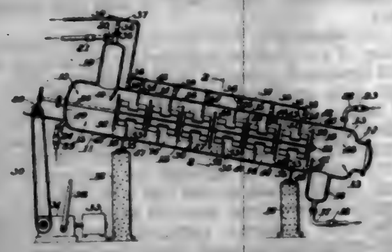
Application April 29, 1933, Serial No. 668,583

8 Claims. (Cl. 196—37)

1. In the solvent fractionation of a lubricating oil stock the steps which comprise mixing said stock with a substantial amount of liquid sulfur dioxide and a substantial amount of a vapor phase cracked naphtha containing at least 25% olefins and separately recovering an extract fraction and a raffinate fraction.

2,029,690

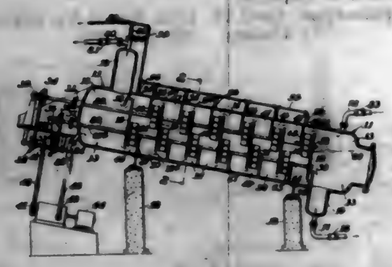
PROCESS AND APPARATUS FOR CONTACTING TWO LIQUIDS



Robert E. Wilson, Chicago, Ill., assignor to Standard Oil Company, Chicago, Ill., a corporation of Indiana

Application July 10, 1933, Serial No. 679,660

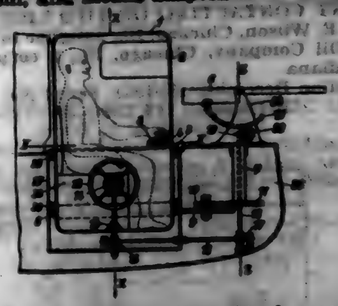
11 Claims. (Cl. 196—45)



7. A process for contacting a liquid with a second liquid not completely miscible with said

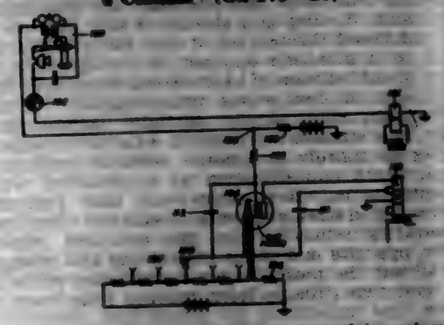
first-mentioned liquid and having a specific gravity substantially different from that of said first-mentioned liquid, which comprises flowing said first-mentioned liquid in succession through a vigorous agitation zone and a relatively quiescent zone while in contact with said second liquid and simultaneously flowing said second liquid in a direction opposed to the direction of flow of said

first-mentioned liquid in succession through a second vigorous agitation zone while in unrestricted contact with said first-mentioned liquid in said first-mentioned relatively quiescent zone and then through a second relatively quiescent zone while in unrestricted contact with said first-mentioned liquid in said first-mentioned vigorous agitation zone.



2,029,691
COUNTERCURRENT CONTACTOR
Jack Robinson, Wood River, Ill., assignor to Standard Oil Company, Chicago, Ill., a corporation of Indiana
Application August 12, 1933, Serial No. 684,854
9 Claims. (Cl. 196—46)

1. Apparatus for the countercurrent contacting of two fluids, comprising a generally horizontal casing, a plurality of baffles partially dividing said casing into a plurality of compartments, and independent agitation means located in and confined to diagonally disposed portions of said compartments.

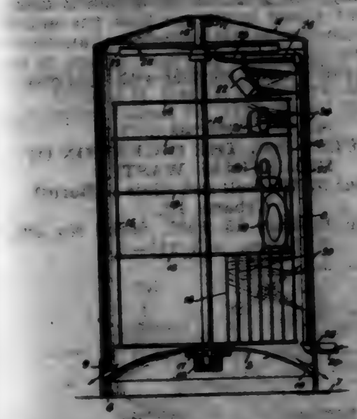


2,029,692
FIREARM EQUIPMENT FOR AIRCRAFT
Ernst Zindel, Dessau, Germany
Application February 23, 1933, Serial No. 658,164
In Germany February 20, 1932
10 Claims. (Cl. 89—37)

1. A fire-arm equipment for aircraft comprising an air-tight cabin movable relative to the craft for the accommodation of a gunner, a fire arm arranged outside said cabin, means adapted to be actuated by the gunner from within the cabin for moving the cabin, means operatively connected to said cabin-moving means for moving the gun in conformity with the movement of the cabin, and means adapted to be actuated by

the gunner from within the cabin for moving the gun independently of said cabin-moving means.

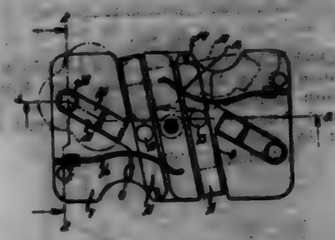
1,823,851
TELEPHONE SYSTEM
Lynn T. Anderson, East Orange, N. J., and Frank K. Low, Brooklyn, N. Y., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application September 7, 1934, Serial No. 743,963
6 Claims. (Cl. 179—16)



1. In a signaling system, an impulsing circuit, means for closing said circuit, a gaseous conductor tube having a control electrode, a cathode and an anode, said control electrode being connected to said impulsing circuit and normally negatively biased when said circuit is open to a potential below the ionization potential of said tube, a relay having two windings serially included in the cathode-anode circuit of said tube, a condenser connected between the cathode and a point between said windings and means operative upon the closure of said impulsing circuit for changing the potential on said control electrode whereby said tube intermittently ionizes and deionizes under the control of said condenser to operate and hold said relay operated.

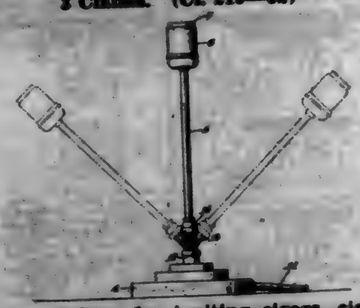
1,823,854
ESTERIFICATION PROCESS
William J. Bannister, Terre Haute, Ind., assignor to Commercial Solvents Corporation, Terre Haute, Ind., a corporation of Maryland
No Drawing. Application July 29, 1934, Serial No. 737,536
5 Claims. (Cl. 260—105)

1. In a process for the production of an aliphatic ester of a carboxylic acid, the said ester having a boiling point in excess of 120° C. but not substantially less than 50° C. below the boiling point of the said acid, the step which comprises introducing the esterifying alcohol into the acid



to be esterified, at a temperature ranging from approximately the boiling point of the formed ester to approximately 20° C. below said boiling point, and removing the resulting vapors of the formed ester, water, and excess alcohol.

2,029,695
DISHWASHING APPARATUS
Guido E. Barozzi, Woodcliff, N. J.
Application October 27, 1933, Serial No. 695,476
9 Claims. (Cl. 141—9)



1. In a dishwashing apparatus, that improvement which comprises a bottom member sloping downwardly and outwardly from its center toward its periphery, and a hollow upright enclosing shell corresponding in cross-sectional form to the shape of said bottom member and supported on said bottom member in coterminous relation thereto and at a distance therefrom to provide an exit opening at the periphery of said sloping bottom member for the escape of water waste.

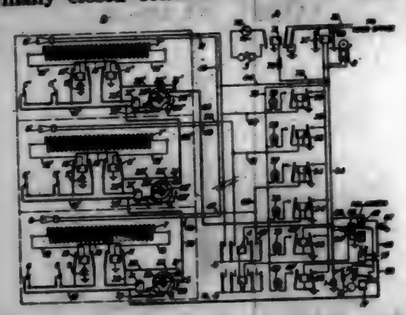
2,029,696
KEY HOLDER
John M. Bennett, Detroit, Mich.
Application January 2, 1934, Serial No. 704,864
3 Claims. (Cl. 70—96)

1. In a key holder of the class described a supporting body; a pair of side plates each mounted in spaced relation to one of the side faces of said supporting body, said supporting body having an opening formed therein; a resilient member mounted, adjacent one end, on said supporting body and extended to overlie, at its opposite end, said opening and having at said opening a head for providing a support for mounting a key swingably between said supporting body and said plates and projectable at the head bearing end into said opening for permitting the movement of said head to inoperative position.

2,029,697
LIGHTER
Louis H. Best, Galva, Ill., assignor to John H. Best & Sons, Inc., Galva, Ill., a corporation of Illinois
Application August 24, 1934, Serial No. 741,299
3 Claims. (Cl. 219—32)

1. In a lighter for igniting cigars, cigarettes and the like and adapted to be mounted on a counter or the like and including a heating element freely movable in any direction from a normal position to facilitate ignition of a cigar, cigarette or the like, a base sufficiently weighted to retain its position on the counter or the like when the heating element is moved from its normal position, a standard for the heating element, and a spring interposed between the lower part of the standard and the top of the base and connecting the standard to the base and urging the heating element into its normal position, the opposite ends of said spring being embedded in said base and said standard and encased therein whereby said end portions of said spring are retained against displacement upon flexing of said spring when said heating element is moved from its normal position.

2,029,698
WAVE TRANSMISSION NETWORK
Hendrik W. Bode, New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application April 28, 1933, Serial No. 668,313
13 Claims. (Cl. 178—44)



1. A wave transmission network comprising two equal ladder-type sections and a bridged-type central portion connected in series therebetween, the impedance branches of said central portion being primarily reactances, said ladder sections being symmetrically located with respect to said central portion, and said ladder sections and said central portion cooperating to provide a network having the same transmission characteristics as a given lattice-type network.

2,029,699
ALARM SYSTEM
Langford J. Bowne, Howard Beach, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application September 29, 1933, Serial No. 691,513
3 Claims. (Cl. 175—330)

1. The combination of a relay, a normally closed circuit for said relay, said relay being re-

sponsive to breaks of varying lengths of time in said closed circuit, said relay having normally closed contacts, a second relay normally energized over the normally closed contacts of said first relay, a circuit for said second relay including the normally closed contacts of said first relay, a

second circuit for said second relay, means in said second circuit to hold said second relay operated for a predetermined time interval after said first relay releases the normally closed contacts of said first relay, and a contact released by said second relay at the end of the predetermined time interval.

2,029,700
INCLINATION RESPONSIVE DEVICE FOR AIRCRAFT

Johann Maria Boykow, Berlin-Lichterfelde-West, Germany, assignor to Deutsche Luftfahrt- und Handels-Aktien-Gesellschaft, Berlin, Germany, a corporation of Germany

Application October 11, 1933, Serial No. 637,347
In Germany October 14, 1931
9 Claims. (Cl. 73—2)

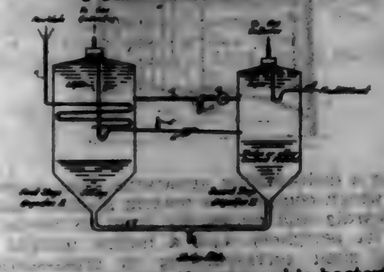
1. In a device of the character described, the combination of two cylindrical nozzle members of stream-line cross section arranged on the exterior of an aircraft and extending lengthwise thereof, the longitudinal symmetry plane of one of said members being parallel to the plane determined by the longitudinal and the upright axes of the aircraft, the longitudinal symmetry plane of the other nozzle member being parallel to the plane determined by the longitudinal and the transverse axes of the aircraft, two nozzles located on the first-mentioned nozzle member at equal distances from its front edge, two nozzles located on the other nozzle member at equal distances from its front edge, two differential pressure-gauges, conduits connecting each of said gauges with the two nozzles of the respective nozzle member, and a device, controlled by both of said pressure-gauges, for indicating the horizontal and the vertical transverse components of the relative wind.

2,029,701
SOAP PULVERIZER AND DISPENSER

Arthur K. Burditt, Roselle Park, N. J.

Application August 26, 1933, Serial No. 686,399
3 Claims. (Cl. 146—61)

1. A soap dispenser combining a casing; a support therefor; a manually rotatable shaft journaled in said casing; a plurality of cutting disks of substantially uniform diameter secured to said shaft, each of said disks having a continuous serrated periphery with portions thereof deflected laterally to opposite sides of the normal plane of the disk, said disks being so arranged on said

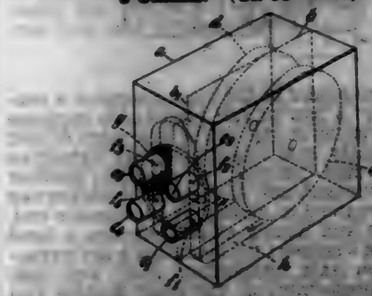


shaft that the path of a deflected portion of one disk overlaps the path of an adjacent disk and at different phase angles so that the action of one disk counteracts the tendency of another disk to shift the soap laterally; and means to maintain a cake of soap in contact with said disks.

2,029,702
PROCESS FOR THE DIGESTION OF INDUSTRIAL WASTES

Arthur M. Buswell and Clair S. Boruff, Urbana, Ill.

Application January 23, 1932, Serial No. 588,490
3 Claims. (Cl. 210—2)

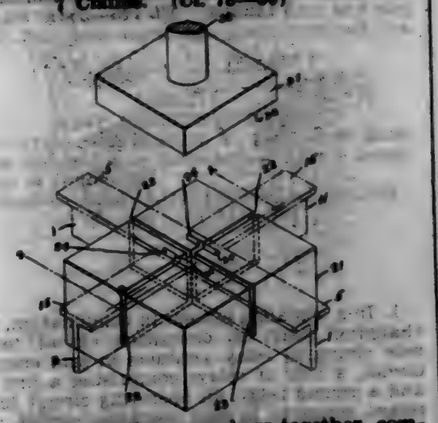


1. In a process for the anaerobic bacterial digestion of fermentable liquid organic wastes having a non-settleable solid content substantially in excess of three parts by weight per thousand parts of total liquid waste by the action of methane-producing bacteria at hydrogen ion concentrations suitable for the methane-producing activity of said bacteria, the improvement which comprises maintaining the total free and combined volatile organic acid content of the liquid undergoing treatment below three parts by weight calculated as acetic acid per thousand parts by weight of said liquid.

2,029,703
CINEMATOGRAPH APPARATUS

Benjamin Elias Lubeschez, Harrow, England

Application August 14, 1933, Serial No. 685,128.
Renewed August 14, 1935. In Great Britain August 16, 1932
3 Claims. (Cl. 88—16.6)



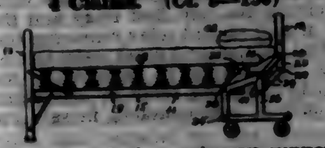
1. Cinematograph apparatus comprising in combination a casing, four lenses with substan-

tially parallel axes lying substantially at the corners of a rectangle on one wall of said casing, a rotary sector shutter associated with the said lenses and adapted for covering and uncovering the lenses in succession, an aligned film track associated with two of the lenses at adjacent corners of the said rectangle, another aligned film track associated with the other two lenses, means for passing the film along one of said tracks, turning the film through substantially 180° and then along the other of said tracks, and film operating mechanism for moving in succession that part of the film associated with each lens.

2,029,704
SWAGING AND ALIGNMENT DIE

Samuel B. Dallas, Baltimore, Md.

Application August 27, 1934, Serial No. 741,704
7 Claims. (Cl. 78—99)

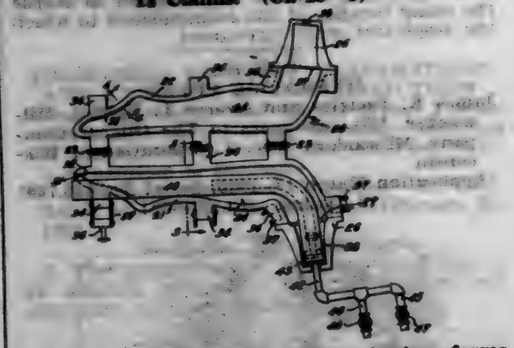


1. A die for jointing cross-bars together, comprising a die block having a plurality of cross-cut recesses therein to receive and take T-bars to be joined together, swaging pyramids provided on the surface plane of the block above and adjacent to the walls of said slots and disposed to make digging contact into the flanges of the T-bars to be jointed, and means for swaging for the die block.

2,029,705
FOLDING BED

Josiah A. Dewey, Oakland, Calif., assignor of one-half to Archie H. Upton and one-half to Ida M. Upton, both of Stinson Beach, Calif.

Application September 25, 1931, Serial No. 565,126
Renewed October 14, 1933
4 Claims. (Cl. 5—156)



1. In a folding bed, a primary support, a bed bottom having planar and cooperative sections hingedly connected at mutually opposed extremities thereof, means pivotally mounting a said section on said support for swinging to an upended position about an axis intermediate thereof and parallel to the axis of hinging of the sections, the plane of said axes being angularly related to that of the latter said section, and link means pivotally mounting the other said section on said support whereby this section is arranged to be and remain horizontal during the said swinging of the first section.

2,029,706
METHOD AND APPARATUS FOR MAKING HOSIERY FORMS

William J. De Witt, Auburn, N. Y., assignor to Shoe Form Co., Inc., Auburn, N. Y., a corporation of New York

Original application February 28, 1933, Serial No. 658,988. Divided and this application March 1, 1935, Serial No. 8,345

13 Claims. (Cl. 18—3)

6. In an apparatus for making hosiery forms from a tube, a mold in which the tube is expanded into the hosiery form, said mold comprising two movable sections by which the mold is opened or closed each section containing a depression the walls of which determine the outer contour of the form, one of said sections having in the wall thereof a recess through which the end of the tube to be treated extends, the wall of the other section acting when the mold is closed to clamp the portion of the tube in the recess and close the tube, tongues projecting into the depressions from the section walls at the recess portion of the mold and means for introducing fluid pressure into the tube to expand the same.

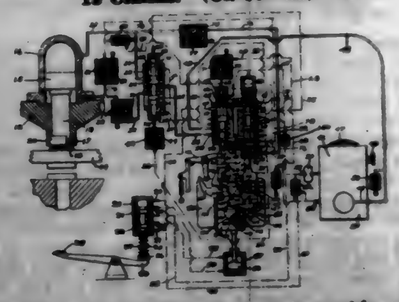
2,029,707
SUPPORTING BRACKET FOR FIRE EXTINGUISHERS

Fred Albert Dedelin, Glen Ridge, N. J., assignor to Pyrene Manufacturing Company, Newark, N. J., a corporation of Delaware

Application May 4, 1934, Serial No. 723,828
1 Claim. (Cl. 248—313)

A supporting bracket for use with various fire extinguishers of the hand pump type having bottom ends of different shapes, comprising a frame member adapted to be mounted in a supported

position, a bottom-supporting member extending outwardly from said frame member and including a perforated conical bottom formed with a plurality of concentric seats of different curvatures adapted to receive said differently shaped bottom ends and hold them against lateral displacement, and a handle-locking arm fixed on said frame-member and provided with stepped portions located at different levels with relation to said bottom-supporting member and adapted to overlie the pump handles of the extinguishers to which the respective seats correspond.



2,029,706

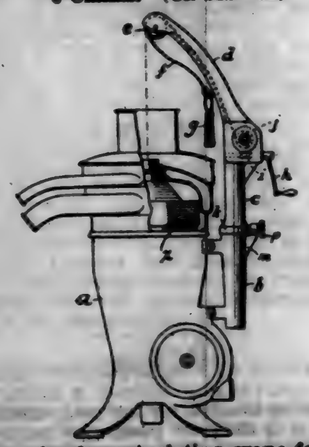
HYDRAULIC PRESS

James K. Douglas and George L. Holden, Milwaukee, Wis., assignors to The Oilgear Company, Milwaukee, Wis., a corporation of Wisconsin

Application March 14, 1930, Serial No. 435,750

13 Claims. (Cl. 60—53)

10. The combination of a reciprocable member, a pump fed hydraulic circuit for operating the same, an auxiliary pump, a reversing valve in said circuit actuated by pressure generated by said auxiliary pump, and a pilot valve automatically operable in response to predetermined pressures in said circuit for controlling said reversing valve to cause the same to effect reciprocation of said member.



2,029,709

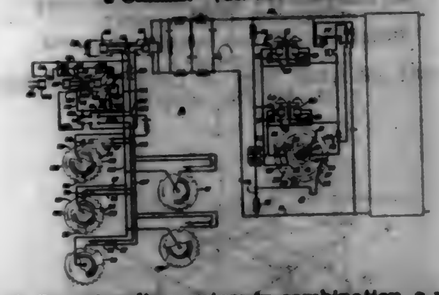
BOWL-MANIPULATING CRANE FOR CENTRIFUGAL MACHINES

Eugene T. Field, Poughkeepsie, N. Y., assignor to The De Laval Separator Company, New York, N. Y., a corporation of New Jersey

Application May 16, 1933, Serial No. 671,296

6 Claims. (Cl. 212—61)

1. In a bowl manipulating crane for centrifugal machines, the combination of a frame comprising a crane-supporting socket, a crane turnable in said socket and comprising an arm adapted to be swung into position to bring its upper end into a definite overhanging central position relative to the frame, locking members respectively carried by the frame and turnable with the crane and adapted, when the crane is swung into said definite central position, to positively interlock, and means other than said locking members to frictionally lock the crane when it is swung into other positions.



2,029,710

SELECTIVE SIGNALING SYSTEM

Joseph C. Field, Maplewood, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Application April 23, 1934, Serial No. 721,368

3 Claims. (Cl. 175—353)

1. In a signaling system in combination, a pole changing relay, an energizing circuit for said pole changing relay, contacts in said energizing circuit, a pair of relays comprising a first relay and a second relay, an operating circuit for said relays, contacts, in said operating circuit, means to close said contacts in said operating circuit, said first relay operating to close the contacts in said energizing circuit, a second set of contacts closed by said first relay, said second set of contacts completing a locking circuit for said first relay and closing the operating circuit for energization of said second relay, a shunt around said second relay, said shunt being normally open at said contacts in said operating circuit, make-before-break contacts controlled by said second relay, the break contacts being in said shunt, and make-before-break contacts in the second set of contacts controlled by said first relay, the make contacts being in the locking circuit for said first relay and preparing the operating circuit for energization of said second relay, the make contacts of said second relay completing a shunt circuit for said first relay and the break contacts of said second relay removing the short-circuit from said second relay, said pair of relays operating in sequence to control the operation of said pole changing relay in accordance with closures only of said contacts in said operating circuit.

2,029,711

DOOR CHECK

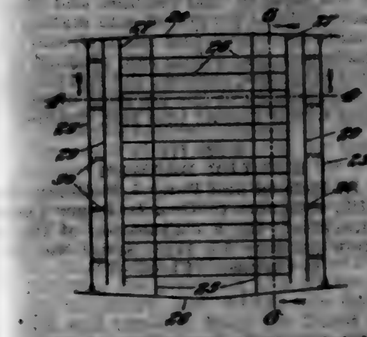
Paul E. Frantz, Cleveland, Ohio, assignor to The Apex Electrical Manufacturing Company, Cleveland, Ohio, a corporation of Ohio

Application February 1, 1932, Serial No. 588,634

2 Claims. (Cl. 16—56)

2. In a device of the character described, the combination with a door supporting hinge and screw means for securing said hinge to a supporting structure, of a block of soft, yielding, elastic material detachably carried by the head of said screw means in position to be pinched between the hinge and a part of the door located near the axis thereof when the door is swung to its open position, whereby the said block opposes the

movement of the door over an appreciable distance and thus gradually brings the door to a stop after it has been opened a predetermined distance.



2,029,712

SHIP CONSTRUCTION

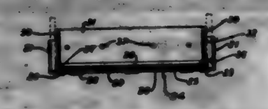
Hugo P. Frear, New York, N. Y., assignor to Bethlehem Shipbuilding Corporation, Ltd., a corporation of Delaware

Application June 19, 1934, Serial No. 731,239

11 Claims. (Cl. 114—79)

1. In a ship structure, a load sustaining wall, boundary walls normal to said load sustaining wall, spaced girders supported by and attached to two oppositely disposed of said boundary walls and attached to said load sustaining wall, spaced stiffening beams continuous through supported by and attached to said girders and attached to said load sustaining wall, the ends of said stiffening beams jutting beyond said girders respectively and terminating short of the two remaining of said boundary walls respectively, stiffening members attached to said load sustaining wall parallel to said girders and in close proximity to and supported by the ends of the said stiffening beams respectively, and other stiffening members attached to said load sustaining wall parallel to said girders and parallel to and directly supported by the said two remaining of said boundary walls respectively.

2,029,713



FLOOR

Clarence A. Hach, Long Island, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York

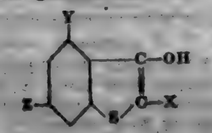
Application April 12, 1934, Serial No. 720,261

12 Claims. (Cl. 20—2.5)

1. In a floor unit, a horse shoe shaped frame, a multiperforate metal reinforcing member attached thereto, and plastic material molded on

the member and in the interstices thereof and serving to space the ends of the frame rigidly.

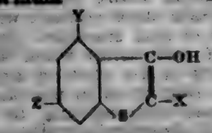
2,029,714



THIOINDIGO DYESTUFF PREPARATIONS AND A PROCESS OF PREPARING THEM

Alfred Hagenbücker and Rudolf Brune, Frankfort-on-the-Main-Hoechst, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a corporation of Delaware

No Drawing. Application February 17, 1931, Serial No. 516,506. In Germany February 22, 1930



10 Claims. (Cl. 260—53)

7. The process which comprises oxidizing in an alkaline medium a hydroxythionaphthene compound of the general formula

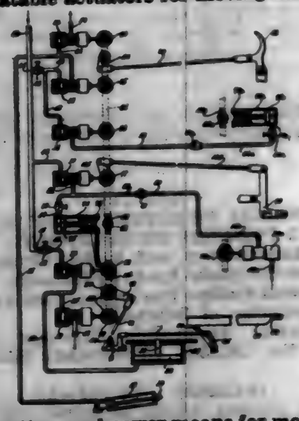
wherein X means hydrogen or carboxyl, Y hydrogen or methyl, Z chlorine or ethoxy, to the corresponding thioindigo dyestuff in the presence of a quantity of a compound of the group consisting of a salt, an oxide and a hydroxide of a metal of the group consisting of iron, nickel, copper, chromium and aluminium, amounting to less than one molecular proportion for each molecular proportion of dyestuff to be obtained by the oxidation.

9. The dyestuff preparations substantially identical with the products obtainable by the process which comprises oxidising in an alkaline medium a hydroxythionaphthene compound of the general formula

wherein X means hydrogen or carboxyl, Y hydrogen or methyl, Z chlorine or ethoxy, to the corresponding thioindigo dyestuff in the presence of a quantity of a compound of the group consisting of a salt, an oxide and a hydroxide of a metal of the group consisting of iron, nickel, copper, chromium and aluminium, amounting to less than one molecular proportion for each molecular proportion of dyestuff to be obtained by the oxidation.

2,029,715

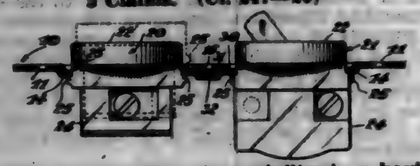
CONTROL MECHANISM FOR GARMENT PRESSING MACHINES



Angus F. Hanney, Norwood, Ohio, assignor to The American Laundry Machinery Company, Norwood, Ohio, a corporation of Ohio

Application August 5, 1933, Serial No. 683,815

11 Claims. (Cl. 45—6)

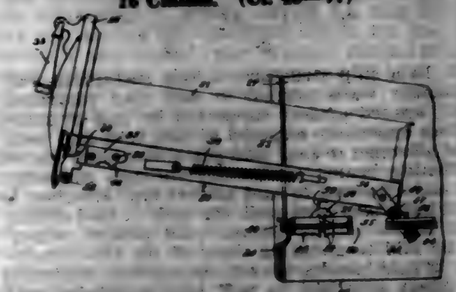


1. In a press of the class described, the combination of a head, a bed having translatory and reciprocatory movement toward and from the head, a fluid motor for causing each movement, inlet and outlet valves for controlling the flow

and exhaust of fluid pressure to and from each motor, rotatable actuators for moving said valves

in one direction, and power means for moving said valves in the opposite direction.

2,029,716
ELECTRIC FITTING
Povl D. Hartmann, New York, N. Y., assignor to Beaver Manufacturing Company, Newark, N. J., a corporation of New Jersey
Application June 1, 1933, Serial No. 673,806
5 Claims. (Cl. 247—20)

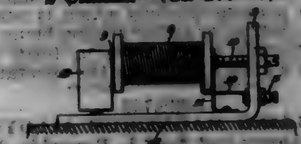


1. The combination of a metallic strap having an opening therein, an electric fitting casing having external stop members adjacent the top thereof and having external shoulders below said stops, said casing being passed through said opening until said stops contact with the top of the strap, one of said shoulders engaging under the bottom of said strap when said casing is shifted laterally in the opening, and a plate secured beneath said strap in position to decrease the size of said opening and to engage over another of said shoulders on said casing, whereby said casing is substantially locked against movement in the opening.

2,029,717
BEARING
John O. Heinze, Detroit, Mich., assignor, by direct and mesne assignments, to Heinze Development Company, a corporation of Michigan
Application November 2, 1932, Serial No. 696,261
1 Claim. (Cl. 308—203)

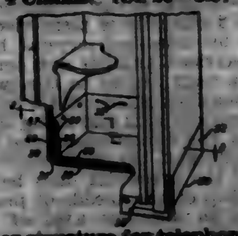
An anti-friction bearing for interposition between a journal and a supporting structure provided with an inwardly open channel, said bearing comprising a series of wheels to roll in contact with said journal and having axial pintles extending from opposite sides thereof, an annular cage comprising mating inner members meeting at their peripheries over and spaced from the outer sides of the peripheries of said series of wheels and offset laterally to form annular shoulders with the portion of said cage outwardly of said shoulders projecting into said open channel of said supporting structure and formed at their inner edges with annular tracks at opposite sides of and extending toward said wheels and against which tracks said pintles travel, outer annular side plates engaging the outer sides of said mating inner members and with their inner peripheral edges adjacent the surface of said journal and each formed with an annular shoulder to engage over said annular shoulders on the mating inner members of said cage and with outwardly projecting peripheral portions to project into said channel of the supporting structure between the sides of said channel and the sides of the said annular portion of said mating members of said cage within said channel, and a layer of yieldable material within said channel of said supporting structure between the surfaces thereof and the surfaces of the portions of said cage and plates which project into said channel.

2,029,718
BROILER DRAWER
Stanley H. Holmes and Peter L. Hellman, Rockford, Ill., assignors to Gen. D. Roper Corporation, Rockford, Ill., a corporation of Illinois
Application January 13, 1933, Serial No. 651,234
16 Claims. (Cl. 45—77)



1. In a drawer structure, a drawer disposed in a drawer compartment, roller means forwardly located in said compartment and adapted to have the drawer rest thereon for movement into and out of the compartment, a track disposed lengthwise of the compartment in the same horizontal plane with the roller means and terminating behind and in spaced relation to the aforesaid roller means, and roller means rearwardly located on the drawer and movable vertically through the space in front of the track so as to be operable along the top and bottom of the track, whereby to support the drawer in any operative position with respect to the compartment, said roller means being adapted to run off the front end of the track when the drawer is moved forwardly to a certain position, whereby to permit removal of the drawer from the compartment.

2,029,719
DISPLAY DEVICE
Charles W. Hostock, Flushing, N. Y.
Application May 9, 1935, Serial No. 20,547
5 Claims. (Cl. 40—125)

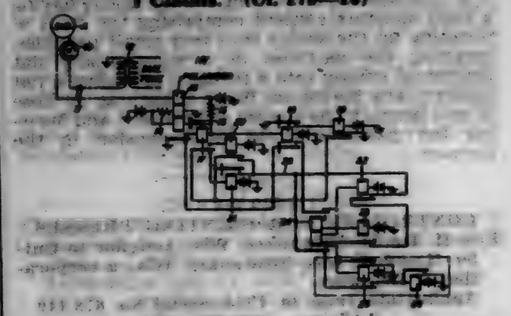


5. In a display device, a base, a sheet of transparent plastic material secured thereto with coloring material interposed between said sheet and base to constitute a background, and display characters penetrating into the outer surface of said sheet to an extent less than perforation so as to be embedded in said sheet.

2,029,720
AUDIBLE ELECTRIC SIGNAL
Carl Ignell, Chicago, Ill.
Application July 9, 1934, Serial No. 734,221
9 Claims. (Cl. 177—7)

1. In an electric signal for use with alternating current, a one-piece frame including substantially right angularly extending parts, an armature, a resilient support secured at one end to said frame and at its other end to one end of the armature, a striker secured to the other end of the armature and extending toward the supporting frame, a coil supported on said armature and retained in position thereon by the support and the striker, the flow of alternating current through said coil alternately magnetizing and demagnetizing the armature and striker whereby the coil, armature and striker are alternately attracted and repelled from the frame to cause the striker to strike and disengage said frame and thereby produce a loud sound, and adjusting means carried by the other part of said frame and engageable with the supported end of said armature to limit movement of the striker away from said frame.

2,029,721
FLOOR
Arthur M. Isaacson, Flushing, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application April 13, 1934, Serial No. 720,381
4 Claims. (Cl. 20—2.5)



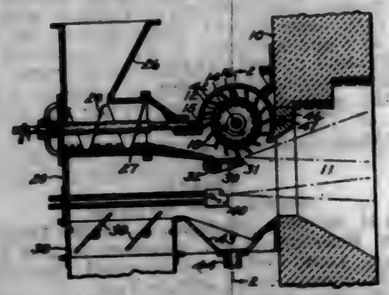
1. In a floor structure for telephone booths and the like, a unitary U-shaped frame, and a floor member of plywood supported thereon at the edge portions only of the floor member.

2,029,722
METHOD OF REFINING FATS AND OILS
Vernon Jersey, Cleveland, Ohio, assignor to S. M. A. Corporation, Cleveland, Ohio, a corporation of Ohio
No Drawing. Application June 7, 1933, Serial No. 674,777
5 Claims. (Cl. 87—12)

1. The method of refining edible oils that are liquid at ordinary temperatures and which contain appreciable amounts of carotene and a substantial amount but not more than approximately 10% of free fatty acids which comprises adding an aqueous solution of an alkaline material to the oil in the presence of air at substantially normal atmospheric pressure in an amount approximately just sufficient to combine with the free fatty acids present, slowly stirring the mixture to avoid inclusion of air, maintaining the temperature at about that of normal room temperature until neutralization is complete, warming the mixture to a temperature not greater than 60° C., allowing the mass to stratify and separating the refined product.

2,029,723
SIGNALING SYSTEM
Lewis H. Johnson, Madison, N. J., and Frank K. Low, Brooklyn, N. Y., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application April 27, 1935, Serial No. 18,508
7 Claims. (Cl. 179—16)

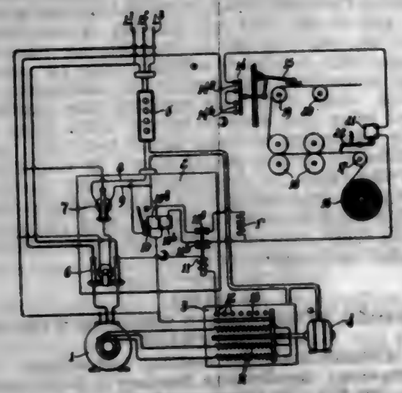
1. In a signaling system, a line, a signal sender, a signal receiving relay, a circuit including said line and sender and one winding of said signal receiving relay, a signal register, an auxiliary signal relay, a slow-to-release relay for operatively connecting the contacts of said signal receiving relay with said register, the auxiliary signal relay and slow-to-release relay being directly controlled by said signal receiving relay, a condenser, and a circuit closed by said signal receiving relay for holding said relay operated for a short interval of time, said holding circuit comprising a second winding of said signal receiving relay, said condenser and the winding of said auxiliary signal relay.



2,029,724
NITRIDED STEEL AND A PROCESS FOR ITS PRODUCTION
Wilhelm Kroll, Luxemburg, Luxemburg
No Drawing. Application January 6, 1934, Serial No. 705,973. In Germany January 16, 1930
14 Claims. (Cl. 148—16)

1. As a new article of manufacture, a steel having a nitrided surface layer and containing from .1 to 5% of beryllium, the principal portion of the remainder being iron.

7. The process of improving the hardness of steel containing from .1 to 5% of beryllium, the

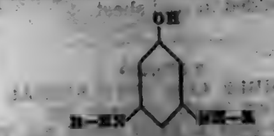


principal portion of the remainder being iron, which process consists in chilling the steel from a temperature above that of aging and subsequently nitriding it superficially while heating it to a temperature of from 400 to 600° C.

2,029,725
METHOD AND APPARATUS FOR BURNING SEWAGE SLUDGE
Max H. Kuhner, Worcester, Mass., assignor to Riley Stoker Corporation, Worcester, Mass., a corporation of Massachusetts
Application March 24, 1933, Serial No. 662,570
9 Claims. (Cl. 110—8)

1. The method of burning sewage sludge having a high moisture content comprising the steps of breaking up the sludge into very small particles, spraying the particles in a substantially flat horizontal stream into a furnace, providing a flat substantially horizontal flame of burning oil close to and beneath the stream of particles, and burning the particles while in suspension in the furnace.

2,029,726
CONTROLLER FOR PRINTING PRESSES
Erle H. Laabs, Milwaukee, Wis., assignor to Cutler-Hammer, Inc., Milwaukee, Wis., a corporation of Delaware
Application June 30, 1933, Serial No. 678,449
6 Claims. (Cl. 164—43)



1. In a printing press controller, in combination, stopping means, web severing means, each of said means having a control winding, a supply circuit for said windings including the latter in a series relation and a control switch for said circuit operable automatically upon web breakage.

2,029,727
SYMMETRICAL DI-(ARYLAMINO)-HYDROXYBENZENES AND A PROCESS OF PREPARING THEM
Leopold Lazio and Oskar Haller, Offenbach-on-the-Main, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a corporation of Delaware
No Drawing. Application August 25, 1932, Serial No. 629,852. In Germany September 3, 1932
8 Claims. (Cl. 260—126)

1. The process which comprises heating in aqueous solution phloroglucine with alkali metal bisulfites and non-nitrated aryiamines of the benzene and naphthalene series in the proportion of about two mols of aryiamine to one mol. of phloroglucine.

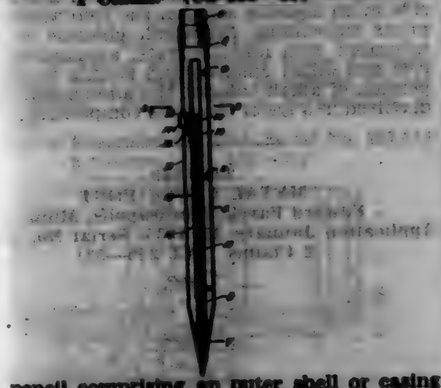
5. The compounds of the following general formula

wherein R represents a radical of the naphthalene series or a benzene nucleus which is substituted by halogen, alkoxy or amino groups, being crystallized compounds which have in form of their alkali salts a good affinity for the vegetable fiber.

2,029,728
ROLLING MAGNESIUM ALLOYS
Robert D. Lowry and Fred L. Reynolds, Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich., a corporation of Michigan
No Drawing. Application February 12, 1934, Serial No. 710,837
4 Claims. (Cl. 148—11.5)

3. In a method of improving the ductility of a relatively non-ductile annealed rolled magnesium base alloy product, the steps which consist in alternately bending and straightening the product at a temperature between 40° and 275° F., so as to stress the metal without substantially changing its thickness, and thereafter annealing the same.

2,029,729
PIEZOELECTRIC QUARTZ CRYSTAL
René Lucas, Paris, France, assignor to Compagnie Generale de Telegraphie Sans Fil, Paris, France, a corporation of France
Application December 4, 1933, Serial No. 700,554
In France December 3, 1932
2 Claims. (Cl. 171—327)

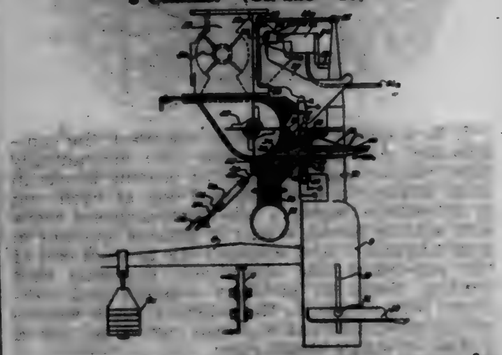


2. A piezo-electric device comprising a mosaic consisting of a plurality of piezo-electric crystals ranged side by side each crystal having three axes, one electrical, another axis ternary, and a third axis at right angles to the two preceding axes, the dimensions of the crystal being the same along the electrical axis and along the said third axis, whereas the dimension in the ternary axis is slightly different, the ratio between this dimension and the preceding ones being equal to the relationship of the speeds of propagation of elastic waves in different axes of the crystal, the latter thus presenting the same fundamental frequency of vibration in the three axes and electrodes extending along the surface of said mosaic.

2,029,730
COMBINED RECORDER AND REPRODUCER
Rudolph F. Mallina, Little Neck, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application February 15, 1932, Serial No. 593,332
11 Claims. (Cl. 179—100.1)

1. Means for ascertaining the character of sound recorded in a delicate medium comprising a plurality of media including a delicate medium and a rugged medium, means for impressing both types of media with the same sound, and means for reproducing the sound from the rugged medium.

2,029,731
SELF-FEEDING PENCIL
Theodore H. Maurer, Richmond Hill, N. Y.
Application July 12, 1934, Serial No. 734,849
1 Claim. (Cl. 120—19)



A pencil comprising an outer shell or casing, a barrel within said casing for containing a writing lead, said casing and said barrel having registering slots lengthwise thereof, a cap adapted to be placed over the top of the writing lead and having, at its lower end, prongs adapted to grip the lead, a lug secured to the cap and extending thru said slots for manipulation of the lead, said barrel having an outwardly extending serrated flange within said casing, said flange being formed from the material punched to form the last mentioned slot, and a leaf spring secured to said lug and having a V-shaped portion adapted for engagement with the serrations of said flange.

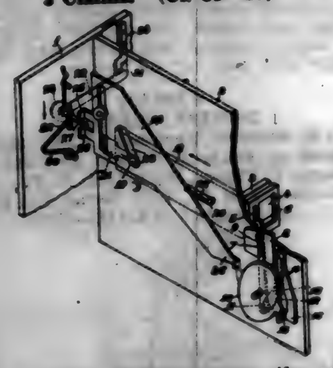
2,029,732
FLOOR
Rollin H. McCarthy, Manhasset, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application April 11, 1934, Serial No. 720,120
10 Claims. (Cl. 52—3.5)

1. A floor unit comprising a unitary frame having an upstanding peripheral flange, and a preformed floor unit associated with the frame and having an upstanding peripheral flange predeterminedly spaced from the peripheral flange of the frame unit.

2,029,733
BAG FILLING MACHINE
William M. McNeil, Chicago, Ill., assignor to United States Gypsum Company, Chicago, Ill., a corporation of Illinois
Application April 27, 1931, Serial No. 533,693
6 Claims. (Cl. 226—48)

1. In a valve bag filling machine, means for supporting the bag in an approximately vertical position, a source of supply from which said bag is filled with material, means for automatically cutting off said supply of material when said bag is filled, an adjustable nozzle leading from the source of supply to the bag opening and slidably associated with said cut-off means, and a flange engaging said nozzle and adapted to be so adjusted so as to adjust said nozzle and its sliding clearance with said cut-off means.

2,029,734
DENTAL SYRINGE
Charles R. Meitzler, Rochester, N. Y., assignor of one-half to Oscar H. Pieper and one-half to Alphonse F. Pieper, Rochester, N. Y.
Application July 21, 1933, Serial No. 681,019
19 Claims. (Cl. 128—257)



3. A syringe comprising a discharge outlet, a valve controlling said outlet, a fluid chamber communicating with said outlet, a displacement element movable in said chamber, and operating means for said valve connected with said element for retracting the same when said valve is being closed to create a partial vacuum for the purpose of preventing drippage from said outlet.

2,029,735
AUTOMOTIVE BODY AND FRAME
Daniel Lee Minott, Portland, Oreg., assignor of one-half to Robert F. Tuggle and one-half to Herman R. Bierndorf, both of Portland, Oreg.
Application October 7, 1931, Serial No. 567,425
2 Claims. (Cl. 280—112)

1. In a device of the class described, the combination, in a wheeled vehicle, of a substantially rigid vehicle chassis, a pair of bearing blocks in axial alignment and disposed one at each end of the vehicle chassis, a sub-frame disposed below said bearing blocks, a pair of bearing spindles in axial alignment and disposed one at each end of the sub-frame and operatively engaging said bearing blocks to pivotally support said sub-frame with respect to the vehicle chassis, whereby the sub-frame and any load carried by it is in a state of stable equilibrium.

2,029,736
MOTION PICTURE CAMERA
Kurt Mersbach, Berlin-Grunewald, Germany
Application August 4, 1932, Serial No. 627,490
In Germany August 4, 1931
3 Claims. (Cl. 88—17)

1. In a motion picture camera, the combination of two members forming a film guide, one of said members being movable relatively to the other from an operative to an inoperative position, film-feeding means, power actuated driving means including a rotatable projection for transmitting motion to said film-feeding means, and a detent connected with the movable member of the film guide and adapted, when said movable member is adjusted to its inoperative position, to extend into the path of said rotatable projection to prevent the transmission of a feeding motion to the film-feeding means as long as said movable member is not in its operative position.

2,029,737
ATTACHING MEANS FOR HANDLES
Erwin H. Mueller, Grosse Pointe Park, Mich.
Application March 28, 1935, Serial No. 13,472
3 Claims. (Cl. 287—53)

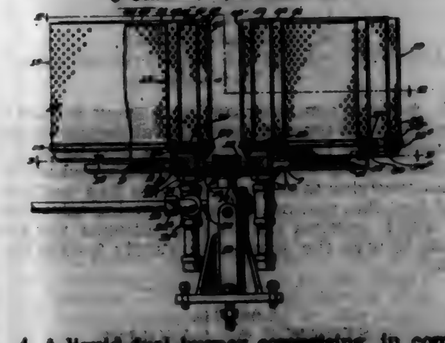
1. In a device for the purpose described the combination of a member split longitudinally inward from one end and formed with a bore extending transversely of said split end with the longitudinal axis of the bore coincident with the said split, a handle member formed with a socket

to receive the split end of said member, and a spring within said transverse bore to spread the split parts of the member apart and frictionally hold the split ends engaged within the handle socket.

2,029,738
PROCESS FOR THE PRODUCTION OF ALKALI NITRATE
Philipp Oswald, Hoechst, and Walter Geisler, Frankfort-on-the-Main-Hoechst, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany
No Drawing. Application March 29, 1935, Serial No. 13,786. In Germany April 7, 1934
4 Claims. (Cl. 23—103)

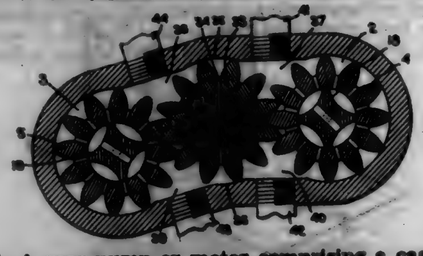
1. In the production of alkali nitrate by the reaction of ammonium nitrate with alkali chloride in an aqueous solution the step which comprises suspending the alkali chloride in a lye saturated with alkali nitrate, ammonium chloride and alkali chloride and adding to the suspension of alkali chloride the ammonium nitrate dissolved in a lye of the same composition.

2,029,739
METAL FENCE POST
Edward Pavek, Minneapolis, Minn.
Application January 26, 1935, Serial No. 2,417
2 Claims. (Cl. 256—53)



1. A fence post of angular form in cross section and made of plate-like material, said post having vertically spaced notches cut in one side thereof, the portions between said notches being reversely bent to form a shallow light or trough adapted to receive a vertically extending locking member, said notches extending to and through the vertical edge of said side so that the horizontal strands of a wire fence may be disposed therein and the vertical strands of said fence may be disposed in said light or trough whereby the fence can be held by said post over a wide vertical extent and said locking member is very accessible in said light or trough.

2,029,740
EARTH ANCHOR
Max Reemer, Chicago, Ill., assignor to General Outdoor Advertising Co., Inc., Chicago, Ill., a corporation of New Jersey
Application January 4, 1935, Serial No. 480
3 Claims. (Cl. 189—93)

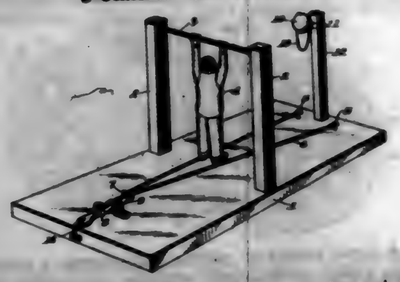


1. An earth anchor for a guy member comprising an upper plate and a lower plate mounted on said guy member, each having a peripheral series of openings, a series of leaves each having a reduced lug at each end, and each lug entering an opening in one of said plates, said leaves being initially bent at its midpoint so as to bow outwardly and being weakened at said point so that said leaves collapse outwardly when the plates are caused to approach.

2,029,741
OIL BURNER
Oscar C. Schroeder and Stanley Perry, Chicago, Ill.; said Perry assignor to Automatic Burner Corporation, Chicago, Ill., a corporation of Illinois
Application November 21, 1930, Serial No. 497,314
6 Claims. (Cl. 158—87)

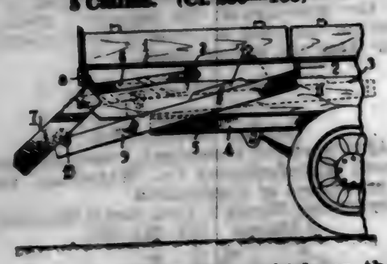
4. A liquid fuel burner comprising, in combination: a base ring formed with spaced, concentric upwardly opening annular channels; an inverted channel shaped member located above the space between said channels and above the level of, and forming no part of, the channels in said base, radially filling said space and with at least portions of its lower edges spaced from said ring; means supporting said member, shells, certain of which are perforated, supported respectively at the outer periphery of the outer channel, at the inner periphery of the inner channel and at the inner and outer peripheries respectively of said inverted channel member to define inner and outer combustion chambers and an air chamber therebetween; means to supply air to said air chamber; and means to supply vaporized fuel to the annular chamber defined by said inverted channel member comprising a vaporizing chamber formed in a portion of said annular chamber and means to supply liquid fuel to said vaporizing chamber.

2,029,742
BALANCED GEAR PUMP OR MOTOR
William C. Sieverts, Quincy, Mass.
Application April 23, 1935, Serial No. 17,836
7 Claims. (Cl. 103—126)



1. A gear pump or motor comprising a casing having outer cylindrical sections and inlet and outlet chambers intermediate of said cylindrical sections, cooperating cylindrical chambered gears closely fitting and rotatably mounted in said cylindrical sections having interdental ducts communicating with the chambers of said gears, fixed shafts fitting within said annular gears having longitudinally extending main recesses positioned to communicate through said interdental ducts respectively with said inlet and outlet chambers, and complementary longitudinal recesses diametrically opposite respectively to the aforesaid main recesses with ports in said hub establishing direct communication between said main and complementary recesses, whereby fluid pressure will be transmitted from the inlet and outlet chambers through said interdental ducts, and main and complementary recesses, to balance the pressures on the respective gears, and means for applying power to or for transmitting power from one of said gears.

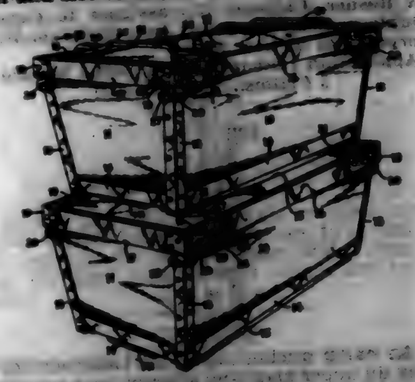
2,029,743
LIQUID DISPENSER
Donald L. Spender, Waterbury, Conn., assignor to Scovill Manufacturing Co., Waterbury, Conn., a corporation of Connecticut
Application March 7, 1935, Serial No. 9,702
4 Claims. (Cl. 221—96)



1. In a liquid dispenser, supporting means, an elongated tubular casing secured to the supporting means and having a closed inner end and an opening in its side, a relatively long tubular plunger closely fitting and slidably mounted in the casing and having an open inner end, a discharge outlet in its outer end and openings in its sides to register with those of the casing, a pin in the casing and extending through the plunger to limit the movement of the plunger tube within the casing, a spring within the tubes engaged by said pin to normally retain the plunger tube in position to insure the registration of the side openings, the said plunger tube having an extended annular flange on its outer free end portion surrounding the discharge outlet.

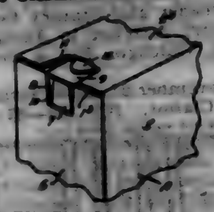
2,029,744
ANIMATED MECHANICAL TOY
Gladstone M. Steel, Chillicothe, Ohio
Application September 13, 1935, Serial No. 41,128
2 Claims. (Cl. 46—145)

1. A mechanical toy of the character set forth comprising a base, an upright frame arising from the central portion of said base, a rigid automaton suspended from said frame for turning movement about a substantially horizontal axis, and an elastic band mounted in connection with said base and arranged to engage with the lower portion of said automaton when said band is suddenly released following extension thereof.



2,029,745
RETRACTABLE STEP FOR VEHICLES AND THE LIKE
Edgar E. Stiner, Sharps Chapel, Tenn.
Application June 3, 1935, Serial No. 24,755
5 Claims. (Cl. 280—166)

1. In combination with a vehicle or the like having a body and a generally horizontal space beneath the body, a step assembly, means connecting the step to the vehicle comprising guide means on the vehicle and an element carried by the upper end of the step assembly slidable in said guide means whereby the step may be slid into said space or extended therefrom and rotated so as to depend in extended, operative position from the vehicle, and bracing means pivotally connected to the lower end portion of the step and adapted to bear against a fixed part of the vehicle for limiting said rotation and supporting the step in extended position.

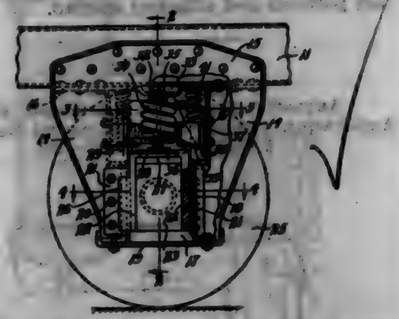


2,029,746
NESTING BOX WITH STACKING IRONS
Nathan Tufts and Edward T. Johnson, Greenfield, Mass., assignors to The New England Box Company, Greenfield, Mass., a corporation of Massachusetts
Application September 7, 1932, Serial No. 631,954
21 Claims. (Cl. 220—97)

1. In combination with a nestable box, means secured at opposite sides of the box and providing slots therein, and a stacking iron having its ends slidable within said slots and adapted to engage the walls thereof, the engagement between said iron and slot walls preventing pivotal movement

of said stacking iron when in box stacking position.

2,029,747
DISPENSING RECEPTACLE
Frank J. Venning, Cleveland Heights, and Frank J. Yelp, Euclid, Ohio, assignors to The Union Salt Company, Cleveland, Ohio, a corporation of Ohio
Application July 12, 1935, Serial No. 31,092
10 Claims. (Cl. 229—17)



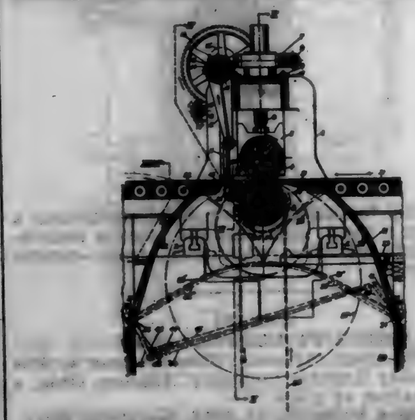
1. A paper container having a spout formed in one side wall thereof and integral therewith and movable to a pouring position, a flap forming a part of the top wall of said container and having a tab overlying said spout, a second flap overlying said first flap and having a reinforcing tab thereon which overlies said first mentioned tab and tends to urge the same downwardly toward said spout.

2,029,748
STORAGE OF GASOLINE
Harold C. Weber, Milton, Mass., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of South Dakota
Application March 14, 1932, Serial No. 598,717
6 Claims. (Cl. 23—235)

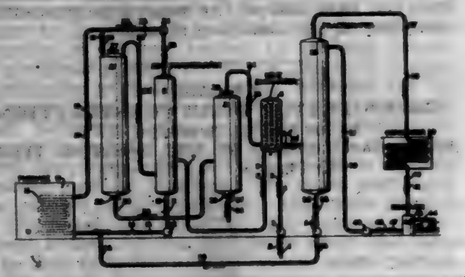
1. The method of preventing deterioration of gasoline containing gum and color forming constituents during storage thereof over prolonged time periods, which comprises generating nascent hydrogen beneath the surface of the gasoline in storage, permitting the hydrogen to freely contact with the gasoline, and maintaining an atmosphere of the hydrogen above the surface of the gasoline during the storage period to prevent access of oxidising gases to the gasoline.

2,029,749
RUNNING GEAR FOR RAILWAY CARS
Edwin W. Webb, Chicago, Ill., assignor to Standard Car Truck Company, Chicago, Ill., a corporation of New Jersey
Application July 27, 1933, Serial No. 682,383
4 Claims. (Cl. 105—223)

1. A running gear for cars comprising pedestals attached directly to the car body, said pedestals having lateral openings therein, journal boxes mounted for both vertical and lateral movement within the openings of said pedestals, springs resiliently supporting said car body from said journal boxes, lateral motion devices associated with said springs and permitting lateral motion of said journal boxes relative to said pedestals, and stabilizing devices within the lateral openings of said pedestals for snubbing downward movement of said pedestals relative to said journal boxes.



2,029,750
SIGN
Ruth Young, Enid, Okla.
Application November 6, 1934, Serial No. 751,769
1 Claim. (Cl. 40—36)



A sign including a body portion, transversely disposed bars forming a part of the body portion and spaced from the ends of the body portion providing compartments at the ends of the body portion, said bars having narrow slots, said bars having recesses formed in the outer edge thereof, shafts mounted in the compartments, finger pieces on the shafts whereby the shafts may be rotated, a web having indicia thereon, wound on the shafts and movable through the slots of the bars, both walls of the slots contacting the web holding the web in an extended condition, a spring member mounted in each compartment and bearing against the web normally holding the web and shafts against movement and transparent side members fitted within the recesses of the bars closing the sides of the body portion and through which the indicia on the web may be viewed.

2,029,751
METAL ROLLING MILL
James L. Adams, Jr., Youngstown, Ohio
Application June 7, 1923, Serial No. 644,661
27 Claims. (Cl. 80—31.1)

3. In a continuous belt rolling mill, the combination comprising a pair of spaced mill housings, a plurality of substantially parallel power-driven work-rolls mounted between said housings, a power-operated roll withdrawal and re-inserting means operatively connected permanently to one of said work-rolls, a power-driven ring-ingot transporting and entering means operative transverse to axis of one of said work-rolls, and containing a ring-ingot lift means operative to centre ring-ingot with roll axis substantially, a track for said ring-ingot transporting means attached permanently to inside faces of said housings and which substantially spans the belt rolling space in mill, and a mill entering live-roll table of the over-head type and mounted to provide suitable clearance for said ring-ingot transporting means over said track.

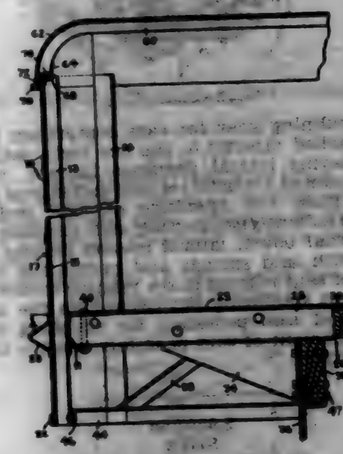
2,029,752
TREATMENT OF PETROLEUM
John B. Barnes, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of South Dakota
Application December 2, 1931, Serial No. 578,765
5 Claims. (Cl. 196—62)

1. A process for treating crude petroleum oil containing natural gasoline which comprises heating the crude oil sufficiently to vaporize the natural gasoline and separating the resultant gasoline-containing vapor from fractions of the crude heavier than gasoline, passing said fractions in a restricted stream through a heating zone and heating the same therein to cracking temperature under pressure, discharging the thus heated fractions into an enlarged reaction zone maintained under cracking conditions of temperature and pressure, introducing said gasoline-containing vapor into said reaction zone and subjecting the same to the cracking conditions prevailing therein, separating the reaction products into vapors and residue, and dephlegmating and condensing the vapors.

2,029,753
TOOL FOR LAPPING VALVE SEATS
Herbert A. Berkman, Chicago, Ill., assignor to Zim Manufacturing Company, a corporation of Illinois
Application July 21, 1934, Serial No. 736,279
8 Claims. (Cl. 51—209)

4. A tool for lapping valve seats, comprising a stem and a head; said head including a detachable, stiff, smooth continuous, frusto-conical metal shell.

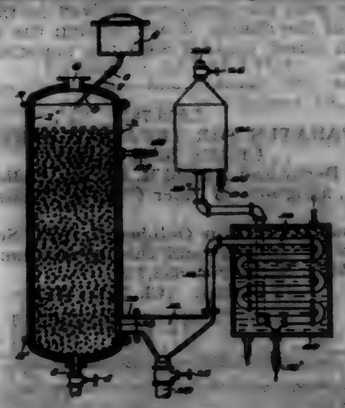
2,029,754
RECEIPT CONTROL FILE
Harold W. Clark, Alliance, Ohio, assignor to The McCaskey Register Company, Alliance, Ohio, a corporation of Ohio
Application February 13, 1935, Serial No. 6,344
7 Claims. (Cl. 211—51)



1. A control file including a base, a tray supported upon said base, means for clamping receipts and the like in said tray, and a locking plate upon the base cooperating with the clamping means for locking the tray against removal from the base and at the same time preventing operation of the clamping means.

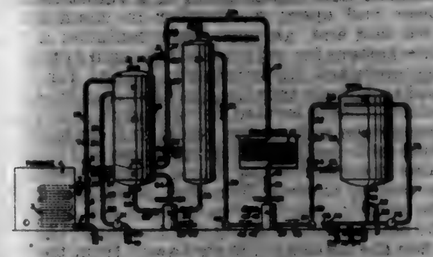
2,029,755
REFRIGERATOR DOOR CONSTRUCTION
Isidor Cohen, Brooklyn, N. Y.
Application February 26, 1934, Serial No. 712,665
12 Claims. (Cl. 20—35)

1. A refrigerator door comprising a frame having a pair of parallel stile portions and a pair of members at the top and bottom connected at the ends thereof to said stile portions, and a pair of metal members each attached to an inner surface of one of the stile members, and having extensions at the upper and lower ends thereof contacting the inner surface of the top and bottom portions and attached thereto.



2,029,756
VEHICLE BODY
Augustine Davis, Jr., Cincinnati, Ohio
Application January 26, 1933, Serial No. 653,623
5 Claims. (Cl. 296—28)

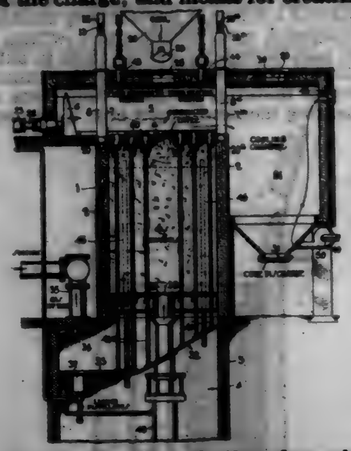
1. In a truck or trailer body of the type having a panel on each side, a plurality of longitudinally spaced upright posts supporting each panel, a longitudinally extending frame with which the posts of each panel are connected at their upper ends, and a longitudinal angle member for connecting with the posts to support them from the bolsters of the truck or trailer, a construction including posts in contact with the outside face of the angle member and extending below the angle member by which they are connected with the bolsters so that a substantial manufacturing tolerance in the length of the posts is permissible and no accurate fitting of the posts required during assembly, welded connections between the posts and angle member for fastening the posts to the angle member without locating and registering openings for fastenings or securing fastening means, and a panel against the outside faces of the posts, secured to the posts and extending with said posts below said angle member so that said panel forms both the side wall and skirting of the body.



2,029,757
PROCESS OF IMPROVING HYDROCARBON LIQUIDS
Roland B. Day, Palos Verdes Estates, Calif., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of South Dakota
Application February 21, 1931, Serial No. 517,698
1 Claim. (Cl. 196—26)

A process for improving gasoline by removal of sulphur and gum and color-forming constituents which comprises treating gasoline vapors with ammonium chloride in the presence of zinc

at a temperature sufficiently high to decompose the ammonium chloride.



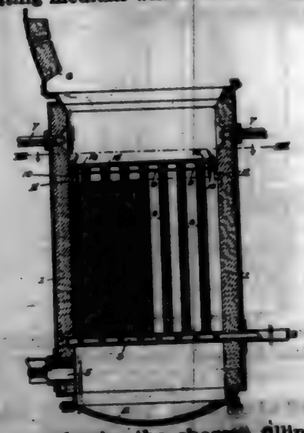
2,029,758
TREATMENT OF HYDROCARBON OILS
Roland B. Day, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
Application June 11, 1934, Serial No. 730,124
3 Claims. (Cl. 196—26)

1. A process for refining cracked hydrocarbon distillates which comprises treating the distillate with added aqueous hydrogen chloride in the presence of brass under conditions such as to remove therefrom gum-forming olefins which are readily reactive with sulphuric acid, and thereafter desulphurizing the distillate by sulphuric acid treatment.

2,029,759
APPARATUS FOR THE TREATMENT OF CARBONACEOUS MATERIAL
Ira H. Derby and Harold R. Horner, Indianapolis, Ind., assignors to Peter C. Reilly, Indianapolis, Ind.
Original application January 4, 1930, Serial No. 418,612. Divided and this application July 25, 1933, Serial No. 681,871
9 Claims. (Cl. 202—99)

7. In an apparatus of the character described, the combination of a retort; a lifter mounted for vertical movement in said retort, said lifter having openings extending vertically therethrough; means for actuating the lifter; means for forming and maintaining a series of spaced and vertically disposed channels extending through a charge placed in the retort and resting upon the lifter; a combustion chamber located at the upper end of the retort; means for introducing a combustion medium into contact with the exposed face of the charge; and means for creating a suction downwardly through the channels in the charge and through the openings in the lifter.

2,029,760
APPARATUS FOR TREATING CARBONACEOUS MATERIAL
Ira H. Derby and Harold R. Horner, Indianapolis, Ind., assignors to Peter C. Reilly, Indianapolis, Ind.
Application October 5, 1932, Serial No. 636,610
11 Claims. (Cl. 202—103)



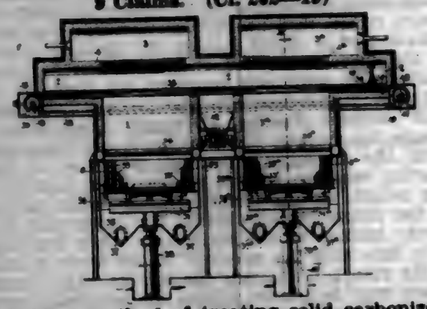
1. In an apparatus for treating charges of carbonizable material having preformed channels of inert material extending therethrough from the upper to the lower face of the charge, the combination of a retort having an opening formed in the lower portion thereof; a chamber in communication with said opening; an open top receptacle; a removable bottom for the receptacle, said bottom having openings therethrough; means for moving said receptacle into the retort from the chamber aforesaid; a source of fluid heating medium located in the upper portion of the retort; means located in the lower portion of the retort for contacting the removable perforate bottom of the receptacle when the same is in line with the opening in the lower portion of the retort, for raising the bottom and a charge which may be placed within the receptacle upon said perforate bottom, to position the charge within the retort free of the receptacle; and means connected to the lower portion of the retort for drawing the heating medium downwardly therethrough and through the channels in the charge positioned within the retort.

2,029,761
METHOD OF FORMING CHARGES
Ira H. Derby and Harold R. Horner, Indianapolis, Ind., assignors to Peter C. Reilly, Indianapolis, Ind.
Application October 6, 1932, Serial No. 636,611
5 Claims. (Cl. 202—34)

1. That method of forming a charge of solid carbonizable material with a view of subjecting

the same to the action of a fluid heating medium to distil and carbonize the same, which comprises placing a series of horizontally spaced, vertically disposed open-ended tubes within a receptacle, said tubes terminating close to but short of the lower end thereof; filling the tubes with a permeable material infusible under the action of the heating medium which is at a temperature

to distil or carbonize the charge; filling the receptacle about said tubes with the material to be treated; and, finally, withdrawing the tubes, thereby forming a plurality of spaced channels defined by the permeable material opening at opposite faces of the charge, with the last named material outspread at the lower ends of the channels.



2,029,762

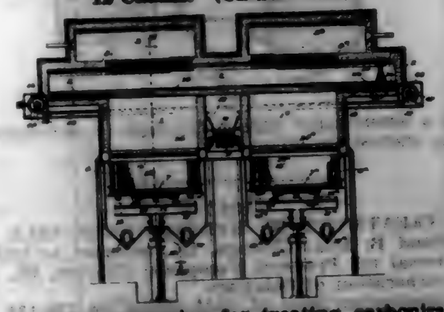
METHOD OF TREATING CARBONACEOUS MATERIAL

Ira H. Derby and Harold R. Horner, Indianapolis, Ind., assignors to Peter C. Reilly, Indianapolis, Ind.

Application October 6, 1932, Serial No. 636,612

9 Claims. (Cl. 202—19)

1. That method of treating solid carbonizable material to distil and carbonize the same, which comprises forming a charge thereof within a receptable and also producing a plurality of spaced channels extending through the charge in a substantially vertical direction; filling said channels with a granular material inert to the temperature of the heating medium employed to distil and carbonize the charge, said filling being exposed at the upper and lower ends of the channels; positioning the receptacle with the charge therein in line with the open end of a retort; forcing the charge out of the receptacle and into the retort without materially disturbing the charge; subjecting the upper exposed surface of the charge to the action of a fluid having a temperature sufficient to carbonize the material at and adjacent said surface and drawing such medium, together with the distillates evolved in the treatment of the charge, down through the channels and in direct contact with the material of the charge.



2,029,763

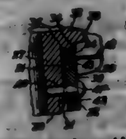
APPARATUS FOR TREATING CARBONACEOUS MATERIAL

Ira H. Derby and Harold R. Horner, Indianapolis, Ind., assignors to Peter C. Reilly, Indianapolis, Ind.

Original application October 6, 1932, Serial No. 636,612. Divided and this application August 18, 1933, Serial No. 685,779

12 Claims. (Cl. 202—121)

1. In an apparatus for treating carbonizable material, the combination of a retort having its lower end open; a chamber in communication with said end; an open top receptacle; a removable bottom for said receptacle, said bottom having openings therethrough; means for moving said receptacle into the chamber and beneath the retort; means located below and in line with the lower open end of the retort for contacting the removable bottom of the receptacle and raising the same thereby moving it and a charge which may be resting thereon from the receptacle and into the retort; means movable into the openings in the bottom for arresting the descent of the charge when the bottom is lowered away from the charge and back into the receptacle; means for introducing a gaseous heating medium into the retort above the charge and into contact with the upper exposed surface thereof; and means for drawing the heating medium downwardly through the charge.



2,029,764

BUNG RING CONSTRUCTION

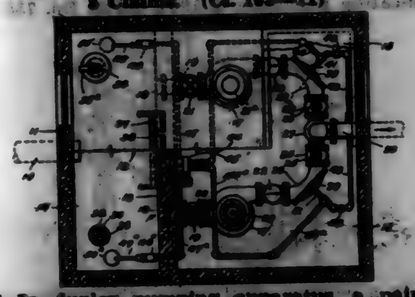
Charles H. Draper, Cleveland Heights, and Walter C. Greeser, Cleveland, Ohio, assignors to The Draper Manufacturing Company, Cleveland, Ohio, a corporation of Ohio

Application January 4, 1933, Serial No. 650

14 Claims. (Cl. 285—49)

1. In bung ring construction for a metallic container, a wall provided with a tubular neck projecting inwardly therefrom forming a bung opening, a bung ring having a sleeve telescoped within said neck, the bung ring being provided at its outer end with a flange lapping said neck and container wall, means preventing the bung ring from being withdrawn from the neck, and

separate means extending through the bung ring sleeve and neck securing the bung ring against rotation in the neck.



2,029,765

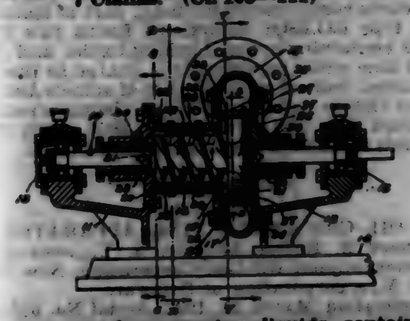
PUMPING APPARATUS

Augustus C. Durdin, Jr., Chicago, Ill., assignor to Chicago Pump Company, Chicago, Ill., a corporation of Illinois

Application April 7, 1934, Serial No. 719,443

5 Claims. (Cl. 103—11)

1. In duplex pumping apparatus, a pair of sequentially operated pumps, each having fluid pressure operated capacity regulating means, and sequentially operating waste valves for regulating the amount of pressure admitted to said capacity regulating means; pipe connections between the capacity regulating means and waste valves, and a valve for connecting the initially operated waste valve with the capacity regulating means of the initially operated pump.



2,029,766

SCREW FEED CENTRIFUGAL PUMP

Augustus C. Durdin, Jr., Niles Center, Ill., assignor to Chicago Pump Company, Chicago, Ill., a corporation of Illinois

Application August 18, 1934, Serial No. 740,381

7 Claims. (Cl. 103—111)

1. A pump for pumping liquids containing solids or semi-solids, comprising a casing having a cylindrical part and a volute part opening thereto, some of the faces of the cylindrical and volute parts being flat, a screw conveyor rotating in the cylindrical part and an impeller rotating in the volute part, there being an inlet in the cylindrical part of the casing adjacent the flat wall thereof, said screw conveyor and impeller having edges traveling throughout their entire extent in close proximity to the flat faces of the casing, and means for maintaining free clearance spaces between said flat faces of the casing and edges of the screw conveyor and impeller comprising cutting elements on the casing entering said clearance spaces and co-operating with said entire edge portions of the screw conveyor and impeller to shear off material that is carried to said clearance spaces.

2,029,767

MECHANICAL LEAD-PENCIL

Wynn E. Eisenhauer, Halifax, Nova Scotia, Canada

Application September 13, 1934, Serial No. 743,816

In Canada November 13, 1933

11 Claims. (Cl. 120—18)

1. A pencil including two parts, one of said parts being rotatable with respect to the other in response both to the natural writing movements of the thumb and fingers between which the pencil is gripped when in use and to the friction of the pencil lead on the writing surface, and a lead feeding mechanism operating automatically in response to rotation of said rotatable part.

2,029,768

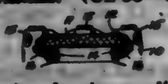
PRINTED FABRIC AND METHOD OF MAKING SAME

Duncan Ferguson, New Haven, Conn., and Herbert H. Sebell, Garden City, N. Y., assignors to Sidney Blumenthal & Co., Inc., New York, N. Y., a corporation of New York

Application September 1, 1934, Serial No. 742,386

7 Claims. (Cl. 91—67.9)

1. The method of making a pile fabric which includes, applying a design to the flat side by printing thereon, causing the printing composition to show through on the pile face of the backing fabric without affecting the projecting portions of the pile, coating said flat side with a binder, and drying the material.

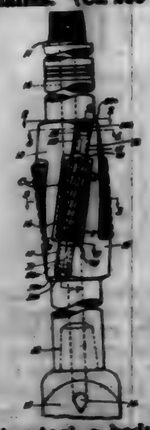


2,029,769

MOUNTING FOR THE CRYSTAL OF A WRIST WATCH CASING

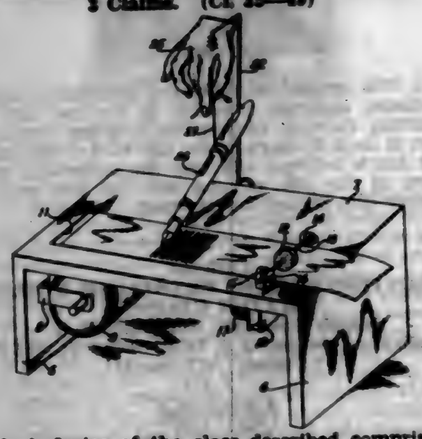
Joseph Goldblatt, New York, N. Y.

Application December 4, 1934, Serial No. 755,875



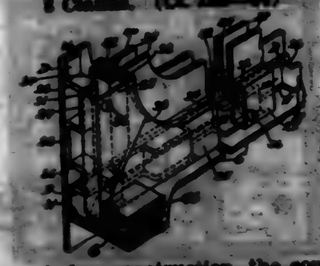
2 Claims. (Cl. 58—91)

1. A watch casing having a dial opening with an inwardly tapered wall and spaced seats ar-



ranged in the tapered wall, and a crystal peripherally contacting the tapered wall and being supported on the seats, the material of the wall above the seats being turned over on the crystal to grip the latter and hold it in contact with the wall of the opening.

2,029,770
ROLLER CUTTER REAMER
John Grant, Los Angeles, Calif.
Application October 26, 1934, Serial No. 750,059
15 Claims. (Cl. 255—73)

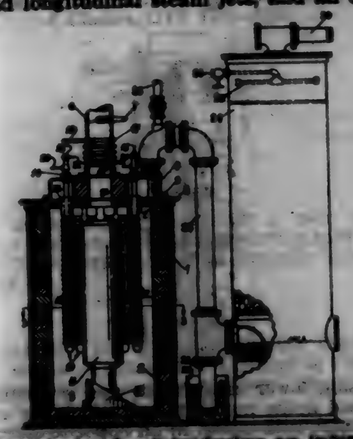


1. In a reaming tool, a body, a pair of spaced spindle carriers on the body in fixed alinement with relation to each other and having alined bores, a cylindric cutter carrying spindle with end portions fitting the bores, and keys engaging the spindle and the carriers to prevent spindle rotation in the carriers, one of the keys being integrated with the spindle and removably fitting a carrier, the other key being integrated with the other carrier and removably fitting the spindle, the spindle and a carrier being slotted to take the said key fits.

2,029,771
DISPLAY DEVICE
John Dewitt Gray, Chicago, Ill.
Application September 5, 1933, Serial No. 688,697
3 Claims. (Cl. 35—49)

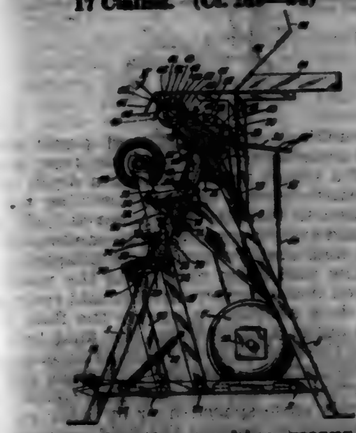
1. A device of the class described comprising a writing surface, means for moving a strip of paper over said surface, an arm, a fountain pen freely suspended from said arm close enough to said paper to cause the pen to press lightly against said paper, and means for swinging said arm to and fro.

2,029,772
WINDOW CONSTRUCTION
William T. Griffin, Barwick, Pa., assignor to American Car and Foundry Company, New York, N. Y., a corporation of New Jersey
Application December 4, 1934, Serial No. 756,345
8 Claims. (Cl. 268—94)



1. In a window construction, the combination of top, bottom, and side members forming a window opening, means projecting beyond said members into said opening to thereby form a shoulder surrounding the opening, a window unit in said opening, means attached to said shoulder and adapted to receive clamping and positioning means for said unit.

2,029,773
PROCESS FOR OBTAINING PRODUCTS CONTAINING SPINELS
Ture Robert Hedlund, Stockholm, Sweden
No Drawing. Application May 17, 1933, Serial No. 671,591. In Sweden September 16, 1932
13 Claims. (Cl. 75—23.5)



1. A process for producing highly refractory products consisting in the main part of spinels of the type RO.R$_2$O$_3$, comprising fusing raw materials containing spinel-forming oxides and silica and lime while regulating the charge so that the solidified molten mass consists of spinels and silicates rich in calcium, the latter being present to at least 20% and removing at least partly compounds of calcium from the solidified mass.

2,029,774
OIL GAS GENERATING APPARATUS
Leonard B. Harris, Bayside, N. Y., assignor to International Oil-Gas Corporation, New York, N. Y., a corporation of Delaware
Application March 14, 1933, Serial No. 661,485
5 Claims. (Cl. 48—94)

1. An oil gas generating apparatus comprising a furnace having an exit for waste gases at its upper portion, a header outside of said furnace through which said exit passes, a plurality of retorts around said exit opening into said header and extending into said furnace and having their lower ends closed, a plurality of tubes extending respectively into said retorts and stopping short of their closed ends, a multiple-jet burner having a circular row of openings positioned at one end of each of said inner tubes and adapted to introduce a circular row of jets of steam into each one of said tubes, and individual admixers adapted to introduce oil within each of said circular rows of jets, a portion of said nozzle openings being positioned so as to cause steam jets to project longitudinally adjacent the inner walls of said tubes to shield the same and prevent contact thereof with said oil, and another portion of said nozzle openings being positioned to cause converging steam jets to be projected intermediate said longitudinal steam jets, and an oil distributing device for introducing an intermittent stream of oil into each of said atomizing devices in predetermined quantities for operating all of said retorts simultaneously and at predetermined periods.

2,029,775
FUR TREATING MACHINE
Frederick W. Herrmann, Ridgewood, N. J.
Application June 21, 1934, Serial No. 731,591
17 Claims. (Cl. 149—24)

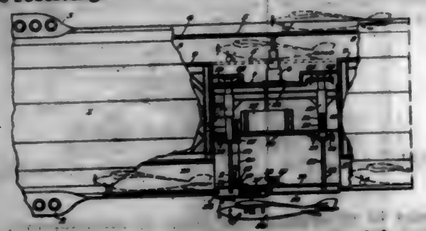
1. In a fur treating machine, means comprising a stretching roller and a pressing drum to hold a fur pelt in position against said stretching roller while being stretched, and means for buffing the hide side of the fur pelt while being stretched.

2,029,776
CASH REGISTER
Max Jacob, Bielefeld, Germany, assignor to firm Anker-Werke Aktiengesellschaft, Bielefeld, Germany
Application November 8, 1930, Serial No. 493,674
7 Claims. (Cl. 235—6)

1. In a machine of the class described, manually operated means for determining the kind of operation of the machine, a plurality of sets of value retaining devices comprising a plurality of racks divided into packets one for each denomination, a differential mechanism, an auxiliary adding mechanism adapted to mesh directly with said differential mechanism and with said racks,

means to determine the time of engagement of said racks with said auxiliary adding mechanism, said last named means being controlled by said manually operated means.

2,029,777
VALVE
William R. Kinnaird, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
Application December 23, 1932, Serial No. 648,690
7 Claims. (Cl. 251—30)



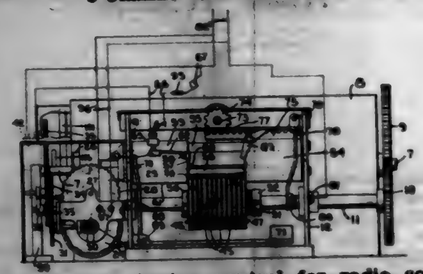
5. A valve for controlling the flow of fluids comprising, in combination, a main valve body having inlet and outlet ports, a stationary seating member within the main body having a port through which a main stream of fluid flowing through the valve may pass, a movable seating member in adjustable relationship to the stationary seating member, means for adjusting the position of the movable seating member relative to the stationary seating member whereby to control the flow of fluid through the valve, said valve body being provided with a fluid chamber located outside the path of flow of said main stream of fluid passing through the valve, within which chamber the movable seating member is mounted, means for conducting a fluid into said chamber, said movable seating member being provided with means comprising ports on its outer periphery for permitting the passage of fluid from said chamber between the movable seating member and the walls of said chamber into the main stream of fluid passing through the valve.

2,029,778
AIRCRAFT
Henry E. Krammer, Hempstead, N. Y.
Original application July 15, 1931, Serial No. 551,057. Divided and this application July 11, 1933, Serial No. 679,974
11 Claims. (Cl. 244—2)

1. An aircraft having a storage compartment in its lower portion, a vertically slidable hoist

disposed in said compartment, and an airplane landing device actuated by said hoist, said device receiving and releasing an airplane when be-

low the surface of said aircraft and receiving and discharging it into the storage compartment when raised.



2,029,779

AUTOMATIC TUNING CONTROL FOR RADIO COMMUNICATION APPARATUS

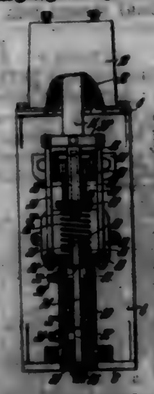
Francis T. Leahy, Jr., Brookline, Mass.

Application January 11, 1934, Serial No. 706,210

3 Claims. (Cl. 250—20)

2. Automatic tuning control for radio communication apparatus comprising a variable condenser, a plurality of index members each member independently adjustable relative to the adjustment of said condenser, means to adjust said index members into selected relative positions with said condenser determined by the resonance point thereof at a selected wave-length, friction means acting to maintain said index members in their selected relative positions, a constantly rotating motor, driving means operable to engage and disengage said motor and said condenser, controlling means coacting with one at a time of said index members to engage and disengage said driving means to resonate the apparatus at the wave-length determined by the active index member and means to present said controlling means successively to the indexing members at predetermined time intervals.

2,029,780



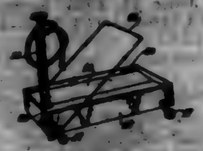
FUEL FEEDING APPARATUS

Moses K. Maser and Sidney C. Friedman, Springfield, Mass.

Application March 21, 1934, Serial No. 716,679

7 Claims. (Cl. 103—53)

1. An apparatus of the class described comprising, a solenoid and an armature, a cylinder and a piston, the said armature and piston being reciprocable in said solenoid and cylinder, a guide member between said solenoid and cylinder, a member associated with said armature guided in said guide member, connections between said armature and piston, a circuit closing device including an operating member a yieldable member associated with said armature for engaging said operating member as the armature reciprocates, the said connections including a cross-head carried by said armature having depending rods and a lower cross-head thereon connected to said piston, a spring urging the piston upwardly relative to said lower cross-head, and a spring between said guide member and said lower cross-head to urge said piston in an opposite direction.



2,029,781

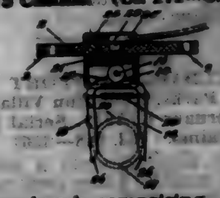
RECEIVING AND TRANSFERRING DEVICE

John C. McLean, Cleveland, Ohio, assignor to The M and M Company, Cleveland, Ohio, a corporation of Ohio

Application January 11, 1934, Serial No. 706,143

3 Claims. (Cl. 251—89)

1. A combined receptacle and pump device adapted to receive the fluid removed from a fluid system of a motor vehicle having a drain outlet located relatively close to a floor or other surface and adapted to transfer the removed fluid back into the said system comprising in combination, a relatively long and low receptacle adapted to fit between the said drain outlet and the relatively close spaced floor or other surface, said receptacle having a deck adapted to receive the fluid from the drain outlet and to direct the fluid into the receptacle, the said deck constituting an enclosure for the receptacle so that the receptacle may be removed from between the said drain outlet and the relatively close spaced floor or other surface without spilling or wasting the fluid contained in the receptacle, marginal means projecting upwardly from the deck to prevent splashing of the removed fluid upon the floor or other surface, said deck having an opening in one end thereof through which the removed fluid passes as it flows from the deck into the receptacle, sump means arranged in the bottom of said receptacle and positioned beneath and substantially in alignment with the said opening, a drain plug for said sump, a detachable pump having a cylinder adapted to extend through said opening and extend into said sump means, means for removably supporting the pump in an upright position within said opening, said supporting means including engaging means connected to said cylinder and adapted to extend out and engage the deck portion adjacent the opening, and a conduit attached to the pump for transmitting the fluid from the pump directly back into the fluid system of the motor vehicle.



2,029,782

MOTOR BRUSH ASSEMBLY

Samuel Nelson Mead, Amesbury, Mass.

Application May 25, 1934, Serial No. 727,267

5 Claims. (Cl. 171—328)

5. A motor brush comprising a pair of flat blades, a common pivot for supporting said blades so that they engage edgewise opposite sides of a slip ring.

2,029,783

COKING OF HYDROCARBON OILS

Lev A. Mekler, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of South Dakota

Application December 28, 1931, Serial No. 583,507

5 Claims. (Cl. 202—5)

2. A process for coking heavy hydrocarbon oils, which comprises discharging the oil onto the exterior surface of a cylinder rotating within a heating zone, generating a coking heat in the heating zone exteriorly of said cylinder and transmitting the same directly to the oil discharged onto the cylinder, continuing the discharge of oil onto the cylinder until a substantial quantity of the coke has formed thereon, and removing the coke from the exterior surface of the cylinder, by spraying a cooling medium onto a portion of the coke layer accumulated on the cylinder.

2,029,784

WATERTIGHT WATCHCASE

Ernest Marf, La Chaux-de-Fonds, Switzerland

Application April 20, 1935, Serial No. 17,503

In Switzerland April 24, 1934

2 Claims. (Cl. 58—90)

1. In a rectangular fancy watch the combination of a watch case having a faying surface provided with a groove, an elastic packing sunk into this groove, a glass made of transparent, resilient material and provided with a border all round to fit the elastic packing, a bezel made of resilient material and fitting the border of said glass, the faying surfaces of case and bezel in one of the two directions of the rectangle being in each of two cooperating surfaces the one arcuate and the other plane and means being provided for bending the bezel to the glass to press the latter upon said packing.

2. In a rectangular fancy watch the combination of a watch case having a faying surface provided with a groove, an elastic packing sunk into this groove, a glass made of transparent, resilient material and provided with a border all round to fit the elastic packing, a bezel made of resilient material and bent to fit the borders of said glass, two headed studs fixed to each small side of the case, two clasps carrying horns for attaching a wrist band thereto and provided with slots to be slid over said headed studs, and locking pins stuck through the clasps into the end faces of the case and adapted to maintain the clasps fast to the case.

2,029,785

TREATMENT OF HYDROCARBON OIL

Jacque C. Morrell, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of South Dakota

No Drawing. Application February 18, 1932, Serial No. 593,577. Renewed April 8, 1935

4 Claims. (Cl. 196—36)

2. A process for refining cracked hydrocarbon oil of motor fuel boiling range and containing mono- and di- and tri-olefins to remove color and gum forming components and to reduce the sulphur content thereof, which comprises subjecting the hydrocarbon oil while entirely in vapor phase to the action of a solution containing sulphuric and phosphoric acids.

2,029,786

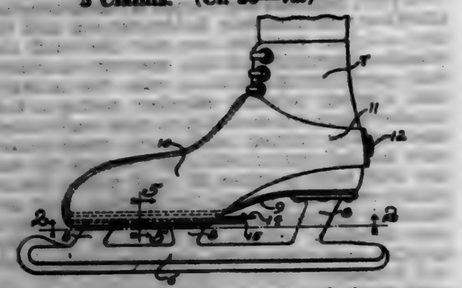
CATALYST

William Whalley Myddleton, Hanworth, England, assignor to Robinson Bindley Processes Limited, Sutton, England

No Drawing. Application July 19, 1933, Serial No. 681,222. In Great Britain July 26, 1932

4 Claims. (Cl. 23—236)

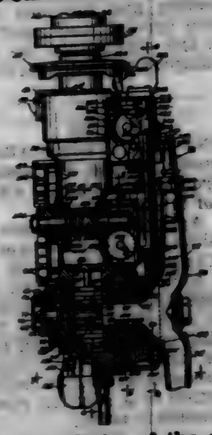
1. The process of preparing a nickel catalyst consisting in mixing nickel oxide with silicon ester, effecting coagulation by the addition of ammonia, breaking into granules and drying and subjecting the granules to the action of heat in an atmosphere of hydrogen or other reducing gas.



2,029,787

FOOT PROTECTING DEVICE FOR SKATERS

Albert A. Ohler, Detroit, Mich.

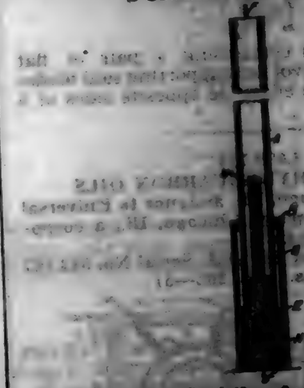


Application March 12, 1934, Serial No. 715,868

5 Claims. (Cl. 36—7.2)

1. A foot protecting device for skaters comprising a unitary fabric covering adapted to overlie the toe and instep of a shoe, and having a free edge which lies beneath and extends backward from the toe and along and beneath the side edges of the sole of the shoe, and part way only across the underside of the sole, and a releasable and resilient member extending backward from the toe engaged with said free edge and adapted to constantly draw and hold said fabric covering closely and neatly engaged with the top of the shoe.

2,029,788
TANK WASHING APPARATUS
William Ostling, Los Angeles, Calif., assignor to The Pyrate Corporation of Nevada, a corporation of Nevada
Application February 2, 1935, Serial No. 5,699
18 Claims. (Cl. 239—68)



1. In a cleaning device of the class described, the combination of: a stationary feed pipe; supporting means for said feed pipe; a housing unit mounted on the end of said feed pipe for rotation about the axis of said feed pipe; a nozzle unit mounted in said housing for rotation about an axis normal to the axis of said housing; means for producing a continuous rotation of said nozzle unit about its axis; a cam member secured to said nozzle unit; a push rod slidably supported by said housing unit with one end engaging said cam; a pawl carrier swingably supported on said housing unit and adapted to be engaged by the other end of said push rod; a pawl in said pawl carrier; ratchet means rotatably supported on said housing unit in engagement with said pawl; a worm rigidly connected with said ratchet means; and a worm gear secured to said feed pipe and engaging said worm.

12. In a cleaning device of the class described, the combination of: a stationary feed pipe; a housing rotatably mounted on the end of said feed pipe, said housing having a transverse nozzle chamber with openings in the sides of said housing; a cage member mounted in said nozzle chamber through said side openings and having wall ports communicating with the interior of said housing; a nozzle member having a hollow spindle rotatably mounted in said cage member, said spindle having wall ports communicating with the interior of said cage; means for securing said cage member in said nozzle housing; thrust receiving means for holding said nozzle member against transverse movement in said cage member; means for rotating said nozzle spindle; and means for simultaneously rotating said housing.

18. For use in a tank cleaning device of the class described, the combination of: a housing; a nozzle member mounted in internal communication with said housing for rotation about an axis normal to the axis of said housing; a hollow boss formed on said housing; a turbine shaft extending through said hollow boss; bearing means in the ends of said boss supporting said turbine shaft; means including conduits in said housing for delivering lubricant into the mid-portion of said hollow boss; oppositely disposed threads on said shaft for conveying said lubricant from the mid-portion of said boss to said bearings; a turbine wheel on one end of said shaft; gear means connecting the other end of said shaft with said nozzle member; and means for directing a power liquid from said housing against said turbine wheel.

2,029,789
YIELDABLE SUPPORT
Roland Dane Parks, Houghton Village, Mich.
Application February 6, 1933, Serial No. 655,414
2 Claims. (Cl. 248—356)

2. In a support of the class described, two intersliding metal pipes aligned for relative telescopic movement, a "plastic" metallic element of lead or lead alloy contained or cast within the outer of the above mentioned pipes, an orifice associated with the inner of the above mentioned pipes that excessive pressures along the intersliding axis will only cause said "plastic" element to be extruded through said orifice to allow telescopic yield without endangering the strength as a column of the support as a whole.

2,029,790
FLINGING DEVICE FOR BALL GAMES
Robert Bernhard Philipp, Reutlingen, Germany, assignor to Cerbaliguswollwarenfabrik m. b. H., Reutlingen, Germany
Application May 2, 1933, Serial No. 668,916
In Germany June 24, 1932
6 Claims. (Cl. 272—96)

1. A throwing and catching device for ball games, comprising in combination a catching basket, a handle projecting centrally from one end of said basket, an extension on the other end of said basket forming a rolling surface for the ball, said extension having a curved portion adjacent said basket merging into a straight portion at its free end, said straight portion having a straight edge at its end situated above the extended longitudinal axis of said handle, and side walls along said extension, the upper edges of said walls merging into the straight end edge of said extension.

2,029,791
HAIR CLIPPER BLADE
Giuseppe Picchino, West New York, N. J.
Application May 22, 1935, Serial No. 22,775
2 Claims. (Cl. 30—2)

2. Hair clipper blades comprising a pair of plates, one superposed on the other, one of said plates having at its front edge a series of elongated tapering teeth disposed in a plane at an angle to the plane of the plate, each tooth being thicker at one end than at the other, the second

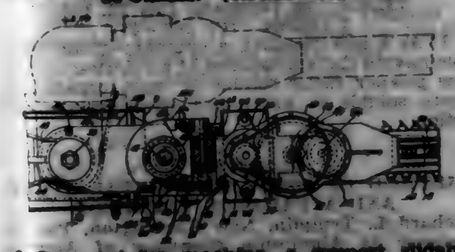


plate having a corresponding set of teeth arranged with their outer surfaces in shearing contact with the inner surfaces of the first mentioned teeth to clip the hair in graduated lengths.

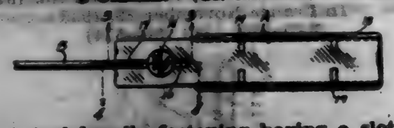
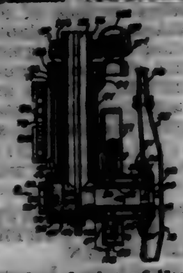
2,029,792
HAIR CUTTING COMB
Giuseppe Picchino, West New York, N. J.
Application February 20, 1935, Serial No. 7,315
2 Claims. (Cl. 132—18)



1. A hair cutting guide comb, comprising a series of spaced-apart tapering teeth, each tooth having a front face and an inclined rear face converging to the lower edge of the front face, said inclined rear faces constituting a guide surface along which the hairs may be cut in graduated lengths, and a handle member projecting rearwardly from the teeth above the inclined faces thereof.

2,029,793
MINING MACHINE
Charles A. Pratt, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a corporation of Illinois
Application October 8, 1928, Serial No. 310,319
Renewed August 2, 1934
36 Claims. (Cl. 262—58)



1. In a mining machine, a support slidable along the mine bottom and adapted to rest on and be held in a stationary position with respect to the mine bottom during the cutting operation, cutting mechanism connected to said support for movement therealong including a motor, a cutter bar having a cutter chain movable thereabout, means driven by said motor for driving said cutter chain about said cutter bar, and mechanisms carried by said support for feeding said cutting mechanism longitudinally thereof and for swinging said cutter bar with respect to the sides and forward end of said support.

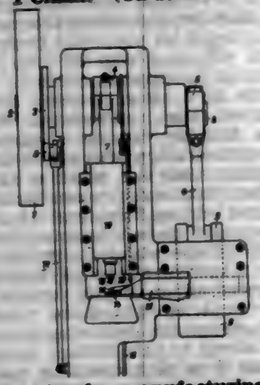
2,029,794
TOOL HANDLE FASTENING
Hugo Bottstedt, Aldan, Pa.
Application November 27, 1934, Serial No. 754,947
2 Claims. (Cl. 279—25)

1. A tool handle fastening having a slot and offsets from the slot forming a tapered socket in combination with a tool having a tang fitting the slot with tapered offsets fitting the tapered socket, and means to exert pressure in the direction of the taper tending to force the tapered section into the tapered socket.

2,029,795
APPARATUS FOR CLEANING TANKS AND THE LIKE
Clare Richard, Los Angeles, Calif., assignor to The Pyrate Corporation of Nevada, a corporation of Nevada
Application July 13, 1934, Serial No. 734,987
Renewed August 10, 1935
23 Claims. (Cl. 239—65)

7. A tank cleaning device of the class described embodying: a nozzle member; housing means rotatably supporting said nozzle member for rotation about a substantially horizontal axis; means rotatably supporting said housing for rotation about a vertical axis; means for rotating said nozzle member and means intermittently operated by a liquid jet projected from said nozzle member for effecting step by step rotation of said housing on its supporting means.

17. For use in a tank cleaning device of the class described, the combination of: a nozzle member; a housing having a passage therethrough communicating with said nozzle member and supporting same for rotation about a substantially horizontal axis; means for delivering a pressure liquid into said housing; a turbine wheel rotatably mounted on said housing; means operated by said turbine wheel for driving said nozzle member; a turbine nozzle adjustably mounted on said housing adjacent said turbine wheel for directing a liquid jet against the vanes thereof; and conduit means for delivering pressure liquid from said housing to said turbine nozzle.



20. For use in a tank cleaning device of the class described, a nozzle unit embodying: a hollow axle; a bearing flange on the inner end of said hollow axle; a hub member on said hollow axle; a bearing nut on the outer end of said hollow axle; anti-friction bearings interposed between said bearing flange, said bearing nut and said hub member; flange means on the outer end of said hub member; and a nozzle member secured to said flange means, said nozzle member having a central opening communicating with the passage through said hollow axle.

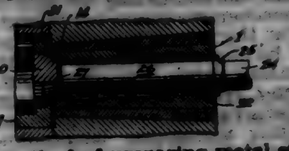
2,029,796
VIBRATION DAMPENER
François Marie Michel Bernard Salomon, Paris, France
Application November 21, 1934, Serial No. 754,120
In France November 29, 1933
7 Claims. (Cl. 74—574)

1. An arrangement for protecting rotary shafts against speed oscillations, vibrations and jerks due to disturbing forces comprising a fly wheel, means for securing said fly wheel to said shaft, a plurality of rigid parts rigidly carried by the fly wheel and provided with convex guiding surfaces, a plurality of rigid masses independent from one another and from the shaft and provided with a contact surface adapted to bear against the guiding surface of a corresponding rigid part, said masses being adapted to rock with very slight friction over the guiding surface of the corresponding rigid part under the opposite action of the disturbing forces and of the centrifugal forces applying the contact surfaces of the masses against the guiding surfaces of the rigid parts.

2,029,797
APPARATUS FOR THE MANUFACTURE OF CUPS FROM WHICH CARTRIDGE CASES CAN BE COLD DRAWN
Emile Sautier, Ensisheim, France, assignor to Manufacture de Machines du Haut-Rhin S. A., Mulhouse-Bourtzwiller, Haut-Rhin, France
Application August 24, 1934, Serial No. 741,273
In Switzerland September 16, 1933
1 Claim. (Cl. 29—34)

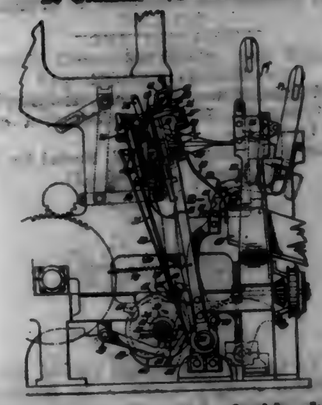
In an apparatus for manufacturing cups from which cartridge cases may be cold drawn the combination of a framing comprising a table portion provided with guides for a horizontal slide and with two vertical perforations one the feeding conduit of the work piece the other the ejecting conduit for the punched article and an upright portion with guides for vertical slides, a horizontal slide, as mentioned, carrying a pivotally held insertion finger and ending in the upper part of a shearing knife, an annular knife forming the lower part of the shearing and sunk in the table portion as the orifice of said feeding conduit, a die forming the orifice of said ejecting conduit, a first vertical slide adapted to operate the horizontal slide by means of a cam groove as guide for a roller held by the horizontal slide and of toggle members, a second vertical slide, provided with punching means, a crank shaft mounted in the upright portions of the frame and provided with eccentrics for working said vertical slides, a pin combined with another eccentric and adapted to assist said insertion finger in conveying the shorn off blanks to the die, and a ejecting device combined with further eccentrics and adapted to remove the punched articles.

2,029,798
HOSE COUPLING THREAD TERMINUS INDICATOR
John C. Scholkin, Wooster, Ohio
Application April 20, 1934, Serial No. 722,076
1 Claim. (Cl. 285—45)



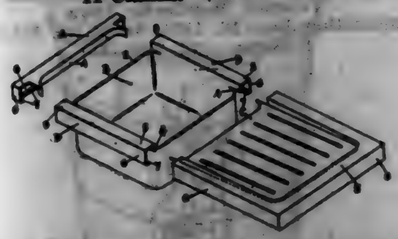
A threaded hose coupling having wrench engaging lugs of conventional type with the ends of the threads on mating parts co-axial with one of the lugs on each part, and having indicating means on said lugs for showing the proper positioning of the parts for quick threaded engagements.

2,029,799
PROCESS FOR PRODUCING TETRAZOLES OF THE CAMPHOR GROUP AND PRODUCTS THEREFROM
Karl Friedrich Schmidt, Ludwigshafen-on-the-Rhine, Germany, assignor to E. Bilhuber, Inc., Jersey City, N. J., a corporation of New Jersey
No Drawing. Application July 17, 1934, Serial No. 735,631. In Germany July 22, 1933
7 Claims. (Cl. 260—44)



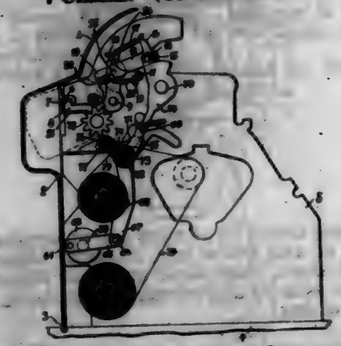
1. As a new product, a camphor-group tetrazole having the appearance of a colorless crystalline powder easily soluble in most organic solvents, soluble in water and of strong analeptic action.

2,029,800
METHOD OF PREPARING METAL STOCK AND APPARATUS THEREFOR
Richard L. Templin, New Kensington, Pa., assignor to Aluminum Company of America, Pittsburgh, Pa., a corporation of Pennsylvania
Application June 22, 1934. Serial No. 731,877
5 Claims. (Cl. 78—82)



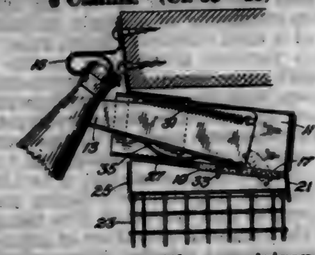
1. In the method of preparing metal stock the step which comprises upsetting a metal billet by forces acting parallel to the longitudinal axis thereof while restricting the flow of metal in a lateral direction to cause the said billet initially to assume at one end a form of increased cross sectional area while initially retaining its original form throughout the major portion of its length, and allowing the initial increase in cross sectional area to progress throughout the length of the billet until it has assumed an upset form of increased cross sectional area throughout substantially its entire length.

2,029,801
SHUTTLE CHANGING LOOM
Lewis S. Vose, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a corporation of Massachusetts
Application August 9, 1934, Serial No. 739,097
20 Claims. (Cl. 139—230)



1. In a shuttle changing double shuttle loom having two active shuttles which are picked together, means to eject both active shuttles on the same shuttle changing operation of the loom, mechanism to place two reserve shuttles into action to replace the ejected shuttles, and means to prevent operation of the mechanism if either active shuttle fails to be ejected.

2,029,802
SINK AND DRAINING BOARD, PARTICULARLY FOR DOMESTIC USE
Owen Thomas Webber, London, England
Application August 11, 1934, Serial No. 739,477
In Great Britain July 6, 1934
11 Claims. (Cl. 4—189)

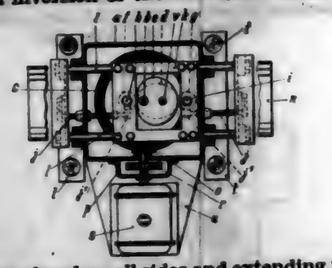


1. An integral metal sink and draining board unit built up of a number of parts welded together which comprise an end fillet member, at least one self contained sink and a draining board interchangeable with said end fillet member each provided with an edge of such configuration as to engage and partially interlock with a corresponding edge of an adjacent part and welded together at said edges.

2,029,803
LOCKING MECHANISM
Albert S. Wheelbarger, Dayton, Ohio, assignor, by mesne assignments, to Central United National Bank, Cleveland, Ohio, as trustee
Application September 23, 1931, Serial No. 564,555
7 Claims. (Cl. 225—139)

1. In a register, a totalizer, a door, serving as a closure for said totalizer, operating means for said totalizer, means controlled by said operating means to lock said door when the register is operated, a printer, and means controlled by the printer to unlock said first mentioned means when the printer is actuated.

2,029,804
DEVICE FOR CATCHING CROWN CORKS AND LIKE BOTTLE-CLOSURES
Frank Edward Williamson, Reigate, England
Application December 12, 1934, Serial No. 757,222
In Great Britain February 23, 1934
6 Claims. (Cl. 85—46)



6. A device for use with a contrivance for removing bottle-closures, comprising an inclined chute in two telescopic parts and opening at its lower end for discharge to a receptacle, one part being a fixture and the rear end of the other part being slidably guided in it, resilient means acting between the two parts to cause the said other part to project from the said one part, and resilient means arranged to support the front end of the said other part.

2,029,805
SHAKING CONVEYER
Friedrich Appelberg, Bochum, Germany, assignor to Gebrueder Eickhoff, Maschinenfabrik und Eisengiesserei, Bochum, Germany
Application August 9, 1934, Serial No. 739,190
In Germany August 24, 1933
3 Claims. (Cl. 198—220)

1. A shaking conveyer comprising a prime mover, a vertical shaft adapted to be driven thereby, two cam disks rigid to said shaft, a member co-operable with said cam disks and adapted to transmit their rotary motion to the

conveyer trough as reciprocating motion, antifriction rollers interposed between said cam disks and transmitting members and adapted to be interchanged relatively to said cam disks in order to obtain inversion of the conveying direction, a

flat casing closed on all sides and extending transversely of and below said conveyer trough, said vertical shaft, cam disks and said transmitting member with its antifriction rollers being lodged in said casing.

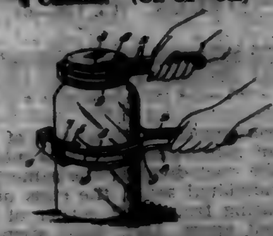
2,029,806
OBJECTIVE
Ludwig Bertele, Dresden, Germany, assignor to the firm Carl Zeiss, Jena, Germany
Application May 29, 1935, Serial No. 24,038
In Germany July 8, 1932
3 Claims. (Cl. 88—57)

1. A rapid objective comprising six lenses arranged in axial alignment in three groups separated from one another by two air spaces, the first group consisting of a single collective front member of a high refractive index glass, the second group forming a meniscal middle member consisting of three lenses cemented together with the negative bounding surface facing the image and having an axial thickness greater than one quarter and less than one half of the focal length of the objective, and the third group forming a collective rear member consisting of two lenses cemented together with the lens facing the image being dispersive and the other lens being collective, and the radius of curvature of the cemented surfaces of said rear member being smaller than half the focal length of the objective, and said cemented surface being concave toward the object.

2,029,807
METHOD OF HEAT TREATING WELDED CONTAINERS
Harry S. Blumberg, New York, N. Y., assignor to M. W. Kellogg Company, New York, N. Y., a corporation of Delaware
No Drawing. Application January 9, 1934, Serial No. 705,979
3 Claims. (Cl. 148—21.5)

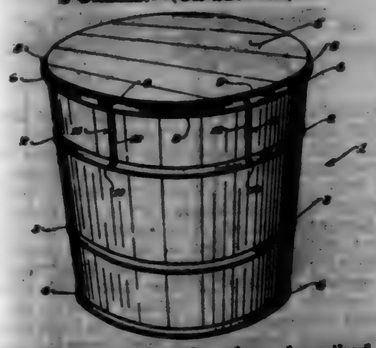
1. The method of heat treating an electric arc welded chrome alloy steel container whose base metal is a chromium steel containing from 4% to 6% of chromium and the remainder exclusive of carbon and impurities of iron and whose weld metal is an austenitic chromium-nickel-iron alloy of low carbon content that includes as a constituent thereof an element taken from the group of titanium, columbium and tantalum of greater carbide forming tendency than chromium in such an amount as to combine with substantially all of the carbon in the weld metal which comprises heating the container to a temperature at which recrystallization takes place in the base metal and solution of carbides takes place in the weld metal, holding the container at this temperature for a sufficient length of time to allow the changes in the base metal to proceed to practical completion, slowly cooling the container to a temperature below the critical range of the base metal at a controlled rate to promote the attainment of the fully annealed condition by the base metal and to precipitate the carbides in a harmless state in the weld metal, reheating the container to a temperature below the critical range of the base metal but substantially approaching the critical range of the base metal, holding the container at the temperature to which it is reheated for a length of time to enable the base metal to approach final equilibrium state, and cooling the container to ordinary temperature.

2,029,866
WOOD FLOOR
Frank E. Bruce, Memphis, Tenn., assignor to E. L. Bruce Company, Memphis, Tenn., a corporation of Delaware
Application September 10, 1934, Serial No. 743,459
6 Claims. (Cl. 20—7)



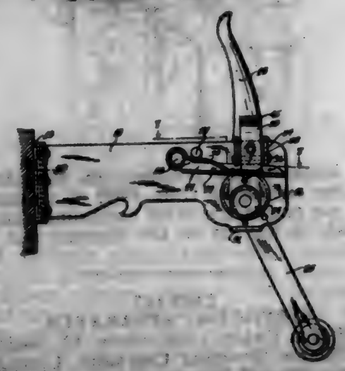
1. A wood floor laid on a substantially permanently plastic mastic, an expansion space for the floor, an expansion joint, in the expansion space, of plastic material which is sufficiently stiff at normal temperatures to hold the floor from sliding out of place, and sufficiently plastic to permit movement of the floor by flowing under the sustained pressure due to expansion of the wood from moisture absorption, the material of the expansion joint being substantially stiffer than the mastic in which the floor is laid, under the conditions of use in the floor.

2,029,869
JAR LIFTER
William F. Connelly, Farley, and William F. Yeoman, Monticello, Iowa
Application June 18, 1934, Serial No. 731,189
1 Claim. (Cl. 294—28)



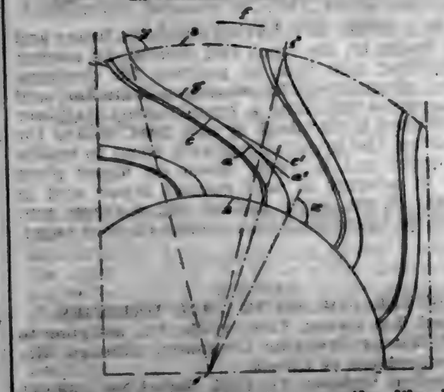
An implement of the character described comprising companion members each formed from a strand bent intermediate its length to form a bridge having arms extending from its ends, the arms being bent intermediate their ends to form jaws having shanks extending diagonally therefrom, a handle extending between and carried by each pair of shanks, said members being disposed in crossed relation to each other with one member extending between the arms of the other member, the arms of the inner member being each crimped inwardly to form a U-shaped portion at the junction of its jaw and shank forming portions and the arms of the outer member having their intermediate portions offset inwardly and at the junction of their jaw and shank forming portions being crimped outwardly to form U-shaped portions engaged through the U-shaped portions of the arms of the inner member to pivotally connect said members.

2,029,810
JAR HOLDER
William F. Connelly, Farley, and William F. Yeoman, Monticello, Iowa
Application June 18, 1934, Serial No. 731,181
4 Claims. (Cl. 81—3.1)



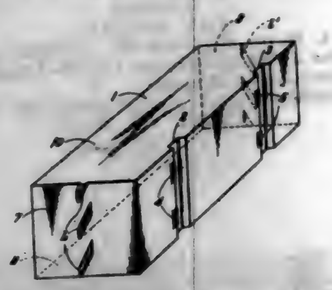
1. A jar holder comprising a pair of members each formed of a single strand doubled upon itself between its ends and presenting straight handle sections and arcuate jaw sections terminating in oppositely extending studs, and a link having openings to be engaged by said studs whereby the cooperating members will be connected.

2,029,811
COVER RETAINING MEANS
Elmer M. Davis, Chicago, Ill., assignor to Swift and Company, Chicago, Ill., a corporation of Illinois
Application February 27, 1932, Serial No. 595,574
5 Claims. (Cl. 217—59)



1. In a container of the class described, fastening means comprising a perforated depending skirt rigidly affixed to the cover of said container and overhanging the outer side thereof and a perforated hoop rigidly affixed to the outer wall of said container spaced from and below said depending skirt and wire ties passing through the perforations in said depending skirt and the said perforations in said hoop.

2,029,813
CAN OPENER
Harry L. Dasey, St. Louis, Mo., assignor to Dasey Churn & Manufacturing Co., St. Louis, Mo., a corporation of Missouri
Application August 16, 1934, Serial No. 740,038
4 Claims. (Cl. 30—3)



1. A can opener including in combination a base plate, a blade spaced from the plane of the base plate, a feeder roll mounted for rotation in a plane between said blade and base plate, and means rockingly mounting said blade on the base plate, including laterally projecting elements on said base plate and blade, and a pin pivotally connecting said elements, the blade being thereby adapted to rock in a direction away from the feeder roll.

2,029,812
GUIDING VANE FOR FANS OR THE LIKE
René De Mey, Brussels, Belgium
Application October 23, 1933, Serial No. 694,861
In France and Germany October 25, 1932
12 Claims. (Cl. 230—114)

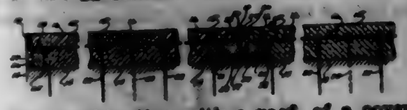
1. A guide vane for fans or the like having an inlet edge as viewed from the front (that is to say in the direction of advance of the fluid along the axis of rotation) of curved form and inclined in the direction of rotation of the associated blade and said edge approaching and joining the peripheral line of the vaning by a portion reaching the said periphery at an angle of incidence of the order of 90°.

2,029,814
BRICK
Frank B. Dunn, Conneaut, Ohio
Application October 9, 1933, Serial No. 692,749
11 Claims. (Cl. 94—14)

1. A brick having a diagonally extending lug projecting outwardly from each of its ends, the lug on one end of the brick extending diagonally oppositely to the lug on the opposite end of the brick.

2,029,815
DREDGING APPARATUS
Willard Rea Ewing, Libertyville, Ill., assignor to McWilliams Dredging Company, Chicago, Ill., a corporation of Illinois
Application August 18, 1934, Serial No. 740,475
8 Claims. (Cl. 37—67)

6. In a dredge boat having a gallows frame and an A frame on the front end thereof, an anchor for holding said boat in position for dredging and an arrangement for moving said anchor, said arrangement including a boom having its lower end pivoted to the deck of said boat, means for supporting the upper end of said boom to enable said upper end to swing about an upper pivot point in advance of said gallows frame and in the rear of the upper end of said A-frame and means for supporting said anchor on said boom.



2,029,816
CUTTER FOR HYDRAULIC DREDGES
Willard Rea Ewing, Libertyville, Ill., assignor to McWilliams Dredging Company, Chicago, Ill., a corporation of Illinois
Application October 17, 1934, Serial No. 748,681
5 Claims. (Cl. 37—67)

2. In a hydraulic dredge having a pump, a cutter comprising a number of blades fixed to each other and arranged to rotate about a common axis, and non-fouling guards on said blades for preventing logs, stumps and debris from interfering with the operation of said blades or said pump, each of said guards consisting of a solid member rigidly secured to the outside of a blade and extending from a point near the cutting edge of the blade to a point some distance in the rear

of said blade, the outer and rearward portion of said member being curved.

2,029,817
ROOF COVERING
Donald B. Fegles, Minneapolis, Minn.
Application December 5, 1932, Serial No. 645,639
11 Claims. (Cl. 189—6)

1. The combination with a roof, of a covering for the roof comprising sectional metallic joint strips on the roof dividing the same into a plurality of individual areas, the ends of the joint strips radiating from each corner of each area being spaced apart, each joint strip having a pair of legs laterally spaced apart, a slab of cementitious material cast in each area, and means for closing the voids between the ends of the joint strips at their lines of intersection, comprising connecting members having channel shaped arms telescoping with the laterally spaced legs of said joint strips, whereby each slab is free for expansion or contraction in all directions independent of adjacent slabs.

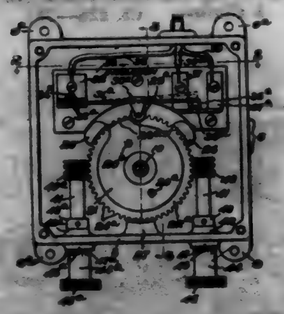
2,029,818
DOOR OPERATING MECHANISM
Burritt G. Fleming, Columbus, Ohio
Application March 22, 1934, Serial No. 716,823
4 Claims. (Cl. 262—56)

1. In door operating mechanism, a door movable between positions of doorway opening and closure, a releasable device for retaining said door in its position of closure, means connected with said door and operable upon the release of said device to move said door automatically to its position of doorway opening, door closing means including a drum, a cable connected at one end with said drum and at its other end with said door, a pair of spaced guides around which the intermediate portion of said cable is trained, a vertically movable weight member provided with a guide for engagement with said cable between said spaced guides, means operable upon the rotation of said drum to clamp the intermediate portion of said cable against longitudinal movement whereby to effect the elevation of said weight member and to retain said weight member in its elevated position, and remotely controlled release means for releasing said weight member, drum rotation and cable clamping means, whereby to utilize the descent of said weight member through said cable to effect the closing of the door.

2,029,819
DIFFERENTIALLY HEAT-TREATED CAST STEEL WHEEL
Alfred W. Gregg and Raymond H. Frank, Columbus, Ohio, assignors to The Ramney-Floyd Company, Columbus, Ohio, a corporation of Ohio
No Drawing. Application July 5, 1933, Serial No. 679,276
2 Claims. (Cl. 295—37)

1. A cast steel wheel possessing differentially hardened tread and axle regions and formed from the following ingredients in substantially the relative proportions given:

	Percent
Carbon	.25 to .40
Manganese	.90 to 1.50
Molybdenum	.20 to .40
Chromium	.10 to 1.00
Silicon	.20 to .50

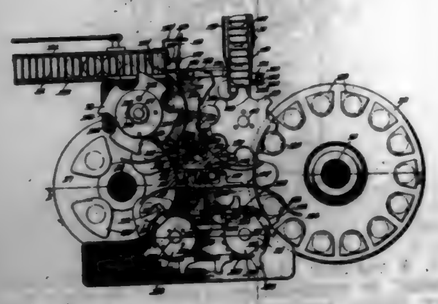


the balance being iron with the exception of incidental impurities such as phosphorus and sulphur.

2,029,820
TIE FOR EXTENSION TRACKWAYS
Lloyd E. Harvey, Logan, Ohio, assignor of one-half to James H. Keith, Gloucster, Ohio
Application July 19, 1933, Serial No. 681,151
3 Claims. (Cl. 238—10)

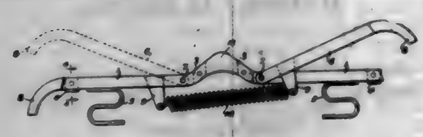
1. Rail holding means for extension trackways comprising a bar, inner and outer clamps mounted upon each end of said bar, each of said clamps being formed to provide an elongated body mounted on the upper surface of said bar, said body terminating in a rail-engaging head having a shoulder for abutment with the longitudinal edge of the base flange of a rail seated in a normal upright position on said bar, said head being additionally provided with a vertical flange disposed to directly engage the inner surface of a vertical web of a rail and an intermediate shoulder disposed between said first-named shoulder and said flange, said intermediate shoulder being shaped to receive the head of a rail disposed in an inverted position with the ball thereof in engagement with said bar, and means for securing said clamps in holding engagement with rails mounted on said bar.

1,629,831
CIRCUIT CONTROLLER
Edgar F. Hathaway, Wellesley, and Walter Bixby, Dorchester, Mass.
Application October 25, 1924, Serial No. 749,938
11 Claims. (Cl. 200—47)



1. A variable circuit-controlling switch comprising, in combination, a switch housing, a rotary driven element therein, an eccentric fast on said element, an inner gear rotatably mounted on the eccentric, a ring gear surrounding said gear and having an internal series of teeth engageable with said inner gear and also having an external series of teeth, positioning means for the ring gear, a worm meshing with said external teeth of the ring gear to hold it stationary or adjustably to turn it, a movable contact element in the circuit to be controlled, a rotary cam adapted to control said contact to make or break the circuit, positive coupling means between the inner gear and said cam, and adjusting means to turn said worm thereby to vary the contact-controlling position of the cam.

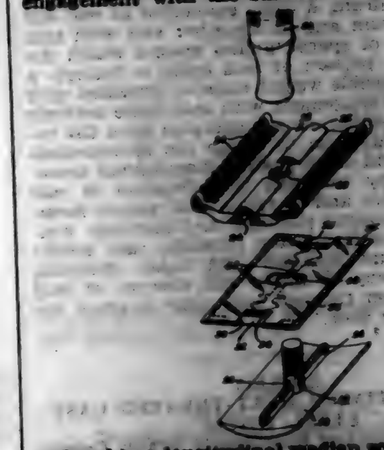
2,029,821
BOLSTER
William C. Hedgcock, Wilmette, Ill., assignor to American Steel Foundries, Chicago, Ill., a corporation of New Jersey
Application January 23, 1931, Serial No. 510,596
14 Claims. (Cl. 105—230)



1. In a bolster, the combination of top and bottom chords and connecting side walls forming substantially a box section, a center bearing on the upper of said chords, a center post connecting said chords, side bearings on the upper of said chords spaced from said center bearing, lightening holes in said upper chord intermediate the center and side bearings, struts adjacent said side bearings and connecting said chords, aligned apertures in the spaced side walls intermediate the upper and lower chords and between said lightening holes and said struts, said struts each having a brace extending longitudinally of said bolster and depending from said upper chord, the lower edge of each of said braces merging into its respective strut adjacent the top thereof and disposed wholly above said apertures whereby said apertures are adapted to permit the unrestricted passage of brake rigging through the bolster.

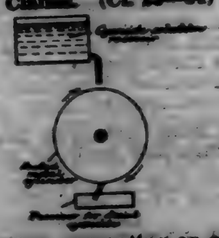
2,029,823
FILLING AND CLOSING MACHINE
George J. Huntley and John S. Bartley, Baltimore, Md., assignors to Crown Cork & Seal Company, Inc., Baltimore, Md., a corporation of New York
Application July 28, 1932, Serial No. 625,455
8 Claims. Cl. 226—75)

1. In a receptacle filling and closing machine, a rotary filling mechanism, a rotary closing mechanism, an endless conveyor for moving receptacles from the filling mechanism to the closing mechanism, said conveyor moving about vertical axes and arranged to move receptacles in a substantially straight line from the filling mechanism to the closing mechanism, the position of said conveyor with respect to the filling and closing mechanisms being adjustable to accommodate receptacles of various diameters.



2,029,824
BUMPER
William B. La Pointe, Los Angeles, Calif., assignor to Louis R. Hildreth, Columbus, Ohio
Application June 11, 1934, Serial No. 729,990
9 Claims. (Cl. 293—55)

1. A bumper comprising an intermediate member composed of spaced sets of spaced superimposed horizontal bars, end members, each end member having thereon a pair of spaced bars pivoted between the sets of spaced bars, each pair of bars having thereon a lug, and a spring acting on the lugs to hold the pairs of bars together.



2,029,825
PROTECTED BLADE FOR SAFETY RAZORS
Felix J. Lewando, South Boston, Mass., assignor to Gillette Safety Razor Company, Boston, Mass., a corporation of Delaware
Application August 15, 1933, Serial No. 685,236
10 Claims. (Cl. 30—90)

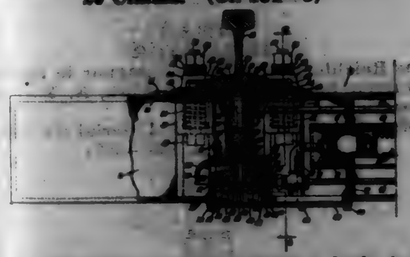
1. A protected safety razor blade having cutting edges and an internal slot of substantially the same length as said edges, and a uniformly flexible protective cover maintained in slipping engagement with the surface of the blade and

reduced in a longitudinal median zone to a length not greater than the length of the said slot.

2,029,826
DEHYDRATION OF SOLUTIONS
Alexander Douglas Macallum, Niagara Falls, N. Y., assignor, by mesne assignments, to E. I. du Pont de Nemours and Company, a corporation of Delaware
Application May 4, 1931, Serial No. 535,006
12 Claims. (Cl. 23—94)

1. A process for evaporating an aqueous solution of a substance which tends to hydrolyse at elevated temperatures, comprising bringing said solution into contact with a heating means maintained at a temperature above the boiling point of said solution at such rate that said solution is substantially instantaneously evaporated to dryness before substantial decomposition of said substance occurs and the pressure during the evaporation being such that the temperature of the evaporating solution is maintained above the temperature at which substantial hydrolysis would normally occur.

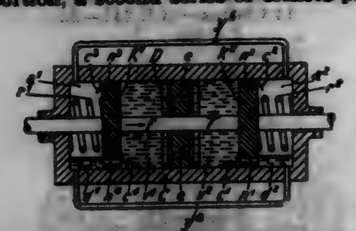
2,029,827
MACHINE FOR CONTINUOUSLY INSERTING BOTTOMS AND LIDS IN FINISHED VESSEL WALLS OF PAPER, CARDBOARD, AND THE LIKE
Christian Major, Tubingen, Germany
Application September 26, 1934, Serial No. 745,586
In Germany February 2, 1933
20 Claims. (Cl. 93—55)



1. A machine for continually inserting bottoms and lids in finished hollow bodies made of paper, cardboard and the like, comprising in combination drawing presses for said lids and bottoms, separate, heated drying channels leading out from each of said presses, an assembling machine at the other end of said drying channels, means for conveying said lids and bottoms separately

through said channels to said assembling machine at an adjustable speed exceeding that of the assembling machine to store lids and bottoms in said channels for maintaining a feed of lids and bottoms to said assembling machine even in the case of interruption in the working of said lid and bottom drawing presses, a machine for winding the hollow bodies of paper, cardboard or the like, a drying chamber extending from said winding machine, a feed channel for the wound hollow bodies leading from said drying chamber to said assembling machine, means for separately conveying the wound hollow bodies from said

winding machine through said drying chamber to said feeding channel connected to said assembling machine adapted to receive the finished vessels from said assembling machine, a heated conveyor adapted to deliver the sterilized vessels from said steriliser to a known filling machine, a hot air pipe leading to said steriliser, branch pipes leading from said steriliser to said drying chamber and said drying channels, and a fan adapted to draw hot air through said hot air pipe into said steriliser and force it through said branch pipes into said drying chamber and drying channels.

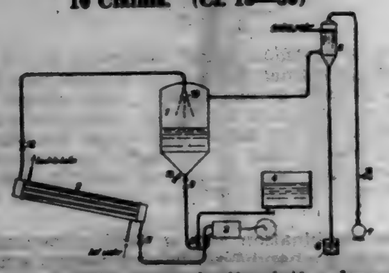


2,029,828
RAIL LUBRICATOR
Robert S. Measie, Montclair, N. J.
Application July 7, 1931, Serial No. 549,266
20 Claims. (Cl. 184—3)

1. A rail lubricator comprising a body in the general form of a tie serving to connect and support the rails of a track, and actuating means principally within said body adapted to be operated by the passage of rolling stock along said rails to feed lubricant from said body to one of said rails.

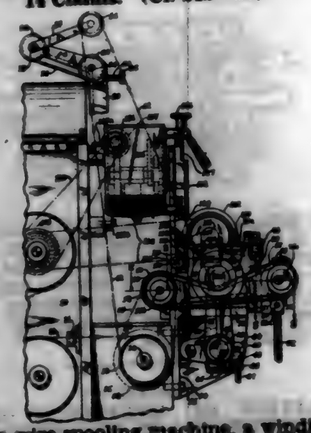
2,029,829
SYSTEM FOR ENSURING FLUID-TIGHTNESS FOR HORIZONTAL HYDRAULIC CYLINDERS
George Louis René Jean Mesnier, deceased, late of Paris, France, by Yvonne Lucie Mesnier, born Bonnamy, administratrix, Paris, France,
Original application May 6, 1933, Serial No. 669,771. Divided and this application March 15, 1934, Serial No. 715,767. In France May 10, 1932
4 Claims. (Cl. 188—88)

1. A fluid-tight hydraulic device capable of operating as a shock absorber, comprising: a cylinder, a rod passing through this cylinder, two pistons rigid with said rod and having a sliding fit relative to the cylinder to ensure of fluid tightness therebetween, a liquid filling the cylinder between the pistons, a first series of orifices passing through each of said pistons at their lower portion, a second series of orifices passing



through each of the said pistons at their upper portion, a flap valve on the inner face of each piston opening toward the center of the cylinder opposite each of the lower orifices, and a flap valve on the outer face of each piston opening away from the center of the cylinder opposite each of the upper orifices.

2,029,830
PREPARATION OF DYESTUFFS OF THE TRIPHENYLMETHANE SERIES AND RELATED SUBSTANCES
Avery A. Morton, Watertown, and Joseph E. Stevens, Cambridge, Mass.
No Drawing. Application March 12, 1931, Serial No. 522,180
7 Claims. (Cl. 260—57)

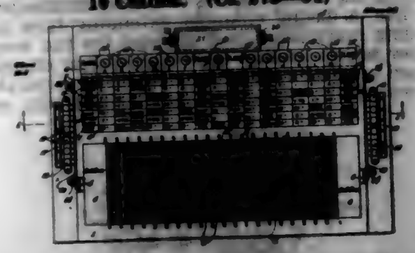


1. The condensation in the presence of an alkali metal of a compound containing a carbonyl group of the class of esters, acid chlorides, anhydrides, quinones and ketones with a halide of a tertiary aryl amine which is N-di-substituted by two radicals from the class consisting of alkyl and aryl hydrocarbon radicals.

2,029,831
PROCESS FOR CONCENTRATING RUBBER LATICES
Alfred Eduard Petersen, Frankfort-on-the-Main, and Wilhelm Genscake, Gonsenheim, near Frankfort-on-the-Main, Germany, assignors to Metallgesellschaft Aktiengesellschaft, Frankfort-on-the-Main, Germany, a corporation of Germany
Application May 6, 1932, Serial No. 609,660
In Germany May 9, 1931
10 Claims. (Cl. 18—59)

1. A process for concentrating latices by evaporation, which comprises heating the latex to be concentrated whilst avoiding the formation of steam and introducing said latex in a state presenting a large surface, into a vacuum evaporator at a temperature which is higher than the boiling temperature of the latex under the pressure prevailing in the evaporator.

2,029,832
BELT DRIVEN WIRE SPOOLER
William D. Pierson, Waterbury, Conn., assignor to The Waterbury Farrel Foundry & Machine Company, Waterbury, Conn., a corporation of Connecticut
Application February 19, 1932, Serial No. 594,044
14 Claims. (Cl. 242—25)



1. In a wire spooling machine, a winding spool, a driving shaft, a swinging cradle member pivoted at one end on said shaft, a driving pulley fixed upon said driving shaft, an idler pulley mounted on the free end of said cradle member, an endless belt connecting said pulleys, the width of said belt being substantially less than the width of said spool, said spool being located intermediate said pulleys, and means for traversing said belt across the width of said spool.

2,029,833
WEEDER AND SEEDER
George Pirich, Minneapolis, Minn.
Application August 13, 1934, Serial No. 739,587
1 Claim. (Cl. 111—95)

The combination with a weed-extracting tool comprising a handle-acting stem and an arm projecting from one end of the handle in outwardly diverging relation to the axis thereof and having its free end portion outwardly offset to afford a backwardly diverging rake-acting head, of a seed magazine terminating in a nozzle arranged to discharge along the rear face of the diverging arm and onto the rear face of the backwardly diverging rake head.

2,029,834
ELECTRICALLY OPERATED GAME APPARATUS
James M. Prentice, Holyoke, Mass., assignor to The Electric Game Company, Holyoke, Mass., a corporation of Massachusetts
Application February 1, 1930, Serial No. 425,138
10 Claims. (Cl. 273—94)

1. In an electrically operated football game, comprising, a board member, a field of play indicated thereon, intersecting lines on the board member forming spaces, the plays of the game being indicated in the said spaces, the spaces being arranged in groups and each group being designated by a letter or other character, a series of numbered contacts at each end of the said board for each player, electrical means adjacent the group character for indicating a play or plays of both designated group when any one contact of both of said series is operated simultaneously, an accompanying reference chart having said designated group characters thereon corresponding for each play of a group to be made and having numerals corresponding to said series of numbered contacts, means on the board for concealing or shielding the numbered contacts from each player, and electrical connections between the numbered contacts and the group indicating means.

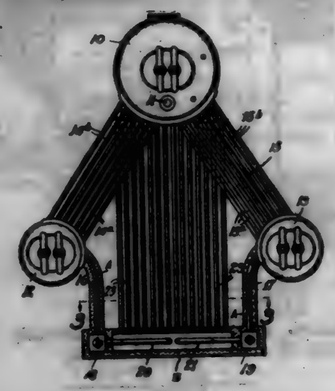
2,029,835
APPLICATOR
Hans Reichle, Bronx, N. Y., assignor to Northam Warren Corporation, New York, N. Y., a corporation of New York
Application September 8, 1934, Serial No. 743,187
1 Claim. (Cl. 128—269)

An applicator for distributing body deodorant or the like upon flat skin surfaces, comprising: a handle member, a broad, rigid, double-faced blade carried by said handle member and constituting therewith a paddle-like structure, and well means in said blade for holding a quantity of lotion and automatically feeding the same to either face of said blade when brought into flat contact with the skin surface to be coated, said well means consisting of a plurality of parallel non-communicating bores each having a diameter of approximately one-twelfth of one inch and extending completely through said blade from face to face thereof so as to be individually chargeable by simple immersion of the blade in

lotion and automatically gradually dischargeable by flat contact of either blade face with the skin surface to be treated.

2,029,836
MOLDING COMPOSITION AND MOLDED ARTICLES MADE THEREFROM
Kurt Ripper, Vienna, Austria
No Drawing. Application September 27, 1929, Serial No. 395,750. In Austria October 17, 1928
17 Claims. (Cl. 260—3)

1. The process of making condensation products which consists in reacting with formaldehyde upon thiourea and urea in combination in an acid solution of a hydrogen ion concentration corresponding to the value pH=3, the thiourea and urea being present in equimolecular proportions and the formaldehyde being employed in a ratio of 1½ molecules to 1 molecule of each of the two other starting substances (thiourea and urea), and heating the mixture until there is effected the formation of a hydrophobe mixed condensation product which separates from a sample of the reaction mixture on cooling.



2,029,837
BLOW-OFF VALVE
John V. Schmid, Philadelphia, Pa.
Application November 2, 1929, Serial No. 404,218
Renewed June 27, 1935
26 Claims. (Cl. 251—89)

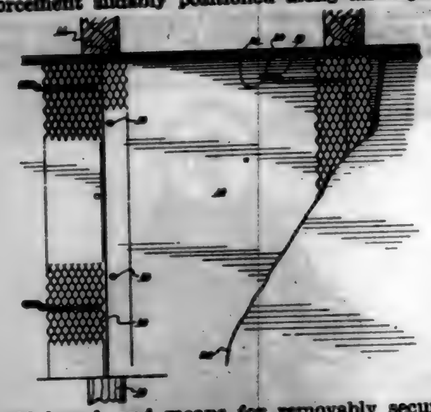
1. In a valve, a body having an inlet and an outlet, a control member in said body arranged to open and close communication between said inlet and said outlet, manually operated means for non-rotatably moving said control member axially relative to said body, and means actuated by said moving means for imparting a rotary movement to said control member near the end of its axial movement in valve opening direction.

2,029,838
STEAM GENERATOR
Henry J. Schneider, Quincy, Mass.
Application April 24, 1933, Serial No. 667,554
7 Claims. (Cl. 122—329)

1. A boiler comprising a substantially horizontal upper drum, two lower smaller substantially horizontal drums defining the upper lateral boundaries of a fire-box, a multiplicity of water tubes connecting respective lower drums to said upper drum, a multiplicity of water tubes extending downwardly from respective lower drums and defining a foundation for the sides of a fire-box, water tubes communicating with the last

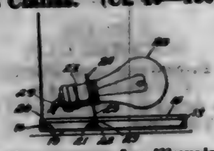
named tubes arranged in the base of the fire-box, and a multiplicity of water tubes arranged in the back wall of the fire-box and communicating with the tubes in the base of the fire-box and the upper drum.

2,029,839
MACHINE GUN
Reginald F. Sedgley and Martin Wurser, Philadelphia, Pa.
Application April 27, 1933, Serial No. 668,186
8 Claims. (Cl. 89—2)



1. In an automatic gun, including a breech block and sear, of an impact member carried by said breech block, having limited relative longitudinal movement on said breech block, and advancing due to its momentum on the closing of the breech and means in the path of said impact member effective to actuate the sear and release the firing pin to render the gun automatic.

2,029,840
PLASTERBOARD REENFORCEMENT
Robert J. Sterling, Chicago, Ill., assignor to United States Gypsum Company, Chicago, Ill., a corporation of Illinois
Application December 10, 1934, Serial No. 756,774
6 Claims. (Cl. 72—124)



1. An article of manufacture comprising a building board, a strip of expanded metal reen-

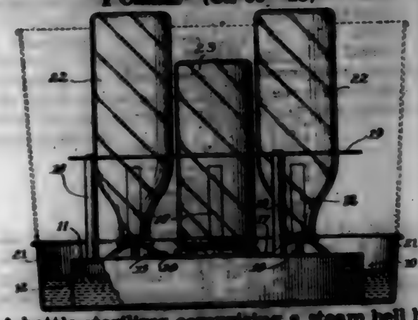
forcement slidably positioned along an edge of

said board, and means for removably securing said strip to a face of said board.

2,029,841
ADVERTISING WINDOW ILLUMINATION
William Templin, Glen Ellyn, Ill., assignor to Briede & Rogovsky, Inc., Chicago, Ill., a corporation of Illinois
Application November 30, 1934, Serial No. 755,258
6 Claims. (Cl. 40—130)

6. Illuminating means for illuminating articles on display in a window, comprising a base adapted to be positioned in front of said articles, a lamp mounted on said base and a translucent replaceable combined reflector and advertising device formed of non-frangible fibrous material detachably secured to the base, said reflector having a front, top and ends but open at the back, and bearing display matter thereon.

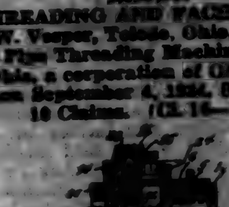
2,029,842
BICYCLE WITH HORSE RIDING ACTION
Philip F. Thau, New York, N. Y.
Application December 14, 1934, Serial No. 757,435
6 Claims. (Cl. 280—34)



1. In a bicycle and the like with a horse riding action, a horizontal frame, a front steering wheel and mechanism mounted on the front thereof, a rear wheel support for the rear of said frame, a crank mechanism for driving the rear wheel support, a rear rod connected with said crank and extending at an inclination upwards, a front rod pivotally connected with the front of said frame and extending rearwards and upwards, and at the top end pivotally connected with the top of said rear rod, a seat on said rods, a substantially horizontal foot lever pivotally mounted intermediate of its ends on said frame, and a link substantially parallel to said rear rod and connecting the rear end of the foot lever with said front rod.

2,029,843
PERPETUAL CALENDAR RULER
Francis V. Toppin, Lyndhurst, N. J.
Application April 6, 1935, Serial No. 15,036
9 Claims. (Cl. 40—118)

1. A perpetual calendar ruler, comprising a ruler, a frame removably mounted thereon, a cover engaging said frame and formed with several window openings, several rollers mounted across each of the ends of said frame, several endless belts mounted between said rollers and printed or inscribed with perpetual calendar data and having portions thereof selectively viewable through said window openings, and means for moving said endless belts.



2,029,844
STERILIZER
Herbert H. Tyler, Berwyn, Ill., assignor of one-half to Charles A. Pipenhagen, Chicago, Ill.
Application January 18, 1934, Serial No. 706,579
1 Claim. (Cl. 99—18)

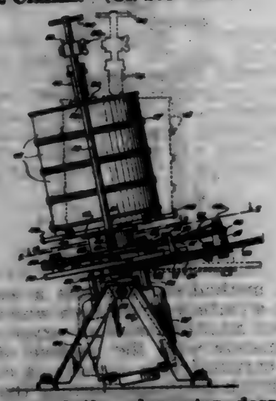
A bottle sterilizer comprising a steam bell having the general shape of an inverted open pan adapted to be placed in any boiling vessel to collect steam formed therein, a plurality of tubular nozzles projecting upwardly from said pan in spaced relation, and a bottle-supporting plate rigidly mounted upon said pan in spaced relation thereto, said plate having openings concentric with said nozzles adapted to permit inverted bottles to be applied to the sterilizer with the nozzles entering therefrom through the bottle necks and with the extremities of the bottles in contact with the pan, said pan being provided with upwardly bellied portions around each nozzle and said bellied portions being provided with radial ribs to provide free drainage of liquid from the inverted bottles.

2,029,845
GASKET FOR REFRIGERATOR CABINETS AND THE LIKE
Ethan W. Vare, Erie, Pa., assignor to General Electric Company, a corporation of New York
Application January 30, 1935, Serial No. 4,166
10 Claims. (Cl. 20—69)

1. A gasket for refrigerator cabinets and the like comprising a longitudinal strip of resilient material having a resilient striking bead on one side thereof and extending along said resilient strip near one longitudinal edge thereof, the other side of said resilient strip being concave in cross-section when unstressed, and an anchoring bead extending along the other longitudinal edge of

said resilient strip for securing said strip to a cabinet structure, said longitudinal edge of said resilient strip near said striking bead forming a narrow seat under relatively high concentrated pressure for the edge of said gasket when positioned on the cabinet structure.

2,029,846
COUPLING
Edmund J. van Hemke, Chicago, Ill., assignor to American Electric Fusion Corporation, Chicago, Ill., a corporation of Illinois
Application January 2, 1934, Serial No. 705,943
2 Claims. (Cl. 285—96)



1. A hose coupling comprising a tubular compression nipple to receive a compressible hose end, said nipple having its inner surface threaded and tapered, with the larger diameter of the taper at the end of the nipple into which the hose is first inserted and with the smaller diameter materially less than the outside diameter of said hose end, whereby the nipple may be threaded on to said hose end and whereby said act of threading will progressively compress the hose end within the nipple and thereby reduce the inside diameter of the hose end, and a connection having threaded engagement with said nipple and also having an externally threaded tubular stem adapted to be threaded into said compressed hose end and of sufficiently large diameter to cause the threads of the nipple to bite into the compressed hose end in the nipple, the threads on said stem and on said inner surface of the nipple being of opposite hand.

2,029,847
THREADING AND FACING TOOL
William W. Vesper, Toledo, Ohio, assignor to The Toledo Pipe Threading Machine Company, Toledo, Ohio, a corporation of Ohio
Application September 4, 1934, Serial No. 742,611
10 Claims. (Cl. 10—129)

1. A frame including a pair of opposing rings, chasers for cutting a helical way on an article of work, each of said rings having outwardly extending grooves forming a series of seats engaged by the chasers for angularly fixing the rings as to each other, and relatively angularly shiftable facer cutting means held longitudinally of the work into operative position as to the work by the chasers' cooperation with the work.

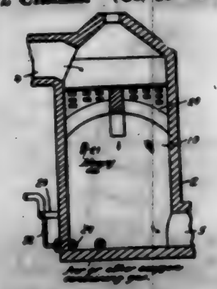
2,029,848
VIBRATING SCREEN
William L. Wettlaufer, Buffalo, N. Y., assignor to The W. S. Tyler Company, Cleveland, Ohio, a corporation of Ohio
Application November 28, 1932, Serial No. 645,015
2 Claims. (Cl. 209—237)

1. Apparatus of the character described including a motor, a frame supported by said motor, a screen carried by said frame, means including said motor for vibrating said screen and means for pivotally supporting said assembly at a point between said motor and said screen so said frame and motor may be adjusted as a unit relative to said supporting means, whereby the angle of inclination of said screen may be varied at will, said motor serving to counterbalance the weight of said frame and screen.

2,029,849
WALKING TOY
Francis Reginald Bowman Whitehouse, Edgbaston, Birmingham, England
Application October 17, 1935, Serial No. 45,371
In Great Britain May 20, 1935
12 Claims. (Cl. 46—105)

1. A walking toy comprising front and rear body parts, surfaces on both of said body parts which are adapted to engage the ground or its equivalent, a pivotal connection between said body parts having a horizontal and transverse axis, and means for raising the forward end of

said front part so that the rear end of the latter is moved forwardly in relation to said rear part, said body parts being so arranged that said front part rocks forwardly on release and drags said rear part after it, whereby the toy as a whole is caused to progress forwardly with a walking action.



2,029,850

CARBURETTED WATER GAS PROCESS

Leslie Alvin Angus, Owosso, Mich., assignor to Semet-Solvay Engineering Corporation, New York, N. Y., a corporation of New York

Application May 26, 1932, Serial No. 613,657

2 Claims. (Cl. 48—205)

1. The method of operating a water gas set involving a carburetor through which are passed blast gases admixed with an oxygen-containing gas alternately with the passage of water gas which is enriched with oil forming carbonaceous deposits which comprises burning the blast gases in the carburetor during the blasting step and concurrently with the burning of the blast gases effecting removal of the carbonaceous deposits formed in a preceding water gas making step by introducing additional oxygen-containing gas in contact therewith and during the succeeding water gas making step adding oil to the water gas, the cracking of the oil in the water gas making step and the removal of the carbonaceous deposits being accomplished without the introduction of extraneous fuel into the carburetor and so as to avoid the maintenance of a substantial body of carbonaceous deposits therein.

2,029,851

PRODUCT AND PROCESS OF PREPARING SAME

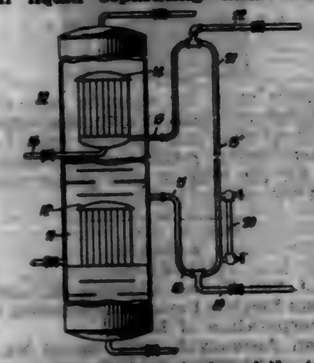
James A. Arvin, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application April 8, 1932, Serial No. 604,126

16 Claims. (Cl. 134—26)

14. A coating composition containing a varnish solvent and the pentaerythritol ester of a monobasic carboxylic acid of the group consisting of unsaturated monobasic aliphatic carboxylic acids having at least 16 carbon atoms and having an iodine number of at least 120 and mixtures of said acids.

2,029,852



LIQUID TRAPPING DEVICE

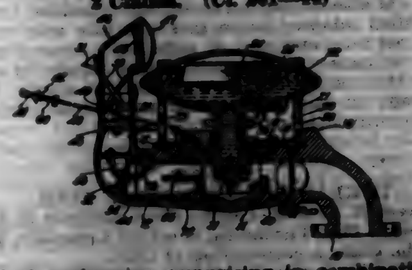
Lyman A. Bliss, New York, N. Y., assignor to The Linde Air Products Company, New York, N. Y., a corporation of Ohio

Application December 22, 1932, Serial No. 648,622

3 Claims. (Cl. 302—163)

1. In a device of the character described, the combination with an apparatus including a liquid heating and vaporizing chamber having a vapor space and a second chamber located in heat exchanging relation with respect to the first chamber and adapted to receive vapor therefrom, of a passage member extending from an exit of the vapor space of said first named chamber to an inlet of said second named chamber, said passage member including a relatively vertically extending portion, a trap device at the base of said vertical portion disposed below said vapor exit and provided with a through passage for vapor and with liquid separating and withdrawing

means, and a second trap device at the top of said vertical portion and disposed above said inlet of said second chamber and provided with a through passage for vapor; said vertical portion of said passage member being of a length proportioned to provide a predetermined hydrostatic head and resistance against the rising of liquid therein when liquid tends to pass from the first named trap device into the second, said passage member and trap devices being arranged to provide a relatively free path for vapor passing from the vapor space of the first named chamber to said second named chamber.



2,029,853

CARBURETOR

Vito Campanella, New York, N. Y.

Application July 18, 1935, Serial No. 31,961

2 Claims. (Cl. 261—44)

1. A carburetor comprising in combination a mixing chamber, a fuel reservoir mounted above said mixing chamber and having an outlet, a valve seat extending within said mixing chamber and having apertures extending through the walls thereof into said mixing chamber, a hollow valve member rotatably connected to the outlet of said reservoir and seated upon said valve seat, said valve member having outlet apertures therein for register with the first mentioned apertures to establish communication between said reservoir and said mixing chamber and for movement out of registration therewith, and manual actuating means for imparting turning movements to said valve member.

2,029,854

AUTOMATIC VARIABLE SPEED DRIVE FOR TEXTILE MACHINES

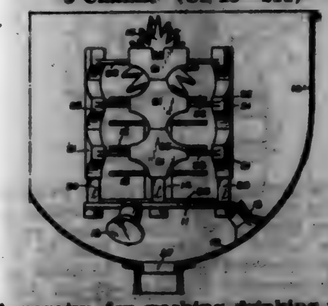
Ernest Cassidy, North Adams, Mass., assignor to The James Hunter Machine Company, North Adams, Mass., a corporation of Massachusetts

Application August 3, 1932, Serial No. 627,861

10 Claims. (Cl. 271—2.2)

1. In apparatus for operating on continuous material, in combination, means governing the forward feed of the material operating at spaced points in the length of the material, power-transmitting devices for such governing means including a drive-shaft, a pair of opposed cones yieldingly pressed toward each other and having their axis disposed so as to swing about the axis of the drive-shaft, a pulley actuating the governing means, a belt between the cones and the pulley, means controlled by the material between the said spaced points to swing the cones about the axis of the drive-shaft to change the spacing of the axis of the cones from that of the pulley, and means for driving the opposed cones from the drive-shaft.

2,029,855



APPARATUS FOR WASHING DRINKING VESSELS

Cornelius Chambers, Shirley, Birmingham, England

Application March 16, 1934, Serial No. 715,868

In Great Britain December 16, 1933

5 Claims. (Cl. 15—211)

1. Apparatus for washing drinking vessels including a washing unit having a base, a central post on said base, inner washing elements on said post, spaced pillars on said base, outer washing elements on said pillars, each of said outer elements including a block of rubber having integral therewith a resilient projecting washing fin, and the outer elements on adjacent pillars being spaced sufficiently to accommodate a handle on a drinking vessel being washed.

2,029,856

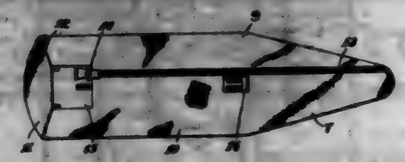


TABLE COVERING

Antoinette D. Gallotte, Wissinoming, Ill.

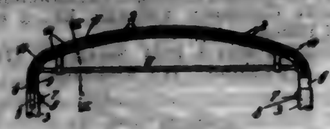
Application November 22, 1933, Serial No. 698,216

2 Claims. (Cl. 61—10)

1. A readily attachable and detachable covering comprising a body portion having edges forming marginal portions adapted to fit over and under the edges of a table and provide a placket between their abutting edges, said marginal portions permitting the covering to be applied to the table with said portions close together, a fastening element including a slidable clip cooperating with a single group of pin fastener elements ex-

tending without interruption throughout the length of the placket for drawing the covering snugly about the table, one of the marginal portions being provided with an opening separated from said placket whereby to accommodate a removable brace element which is adapted to be applied to the underside of the table through said opening after the cover is in place.

2,029,857



TROLLEY SYSTEM

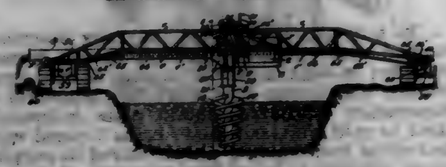
Ottmar Conradty, Nuremberg, Germany, assignor to C. Conradty, Nuremberg, Germany, a firm

Application October 25, 1933, Serial No. 695,112

In Germany October 27, 1932

3 Claims. (Cl. 191—55)

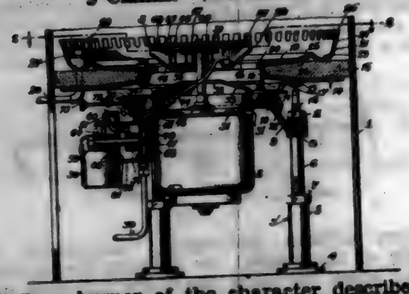
1. A current-collector, comprising a standard-member, an upwardly arched collector-center-rod mounted on said member, said rod being longitudinally slitted to render it radially resilient, a carbon-contact member mounted on said rod, and means for tension-staying the ends of said rod toward each other.



2,029,858

DREDGE

Boyden O. Couch, Grant, Fla.



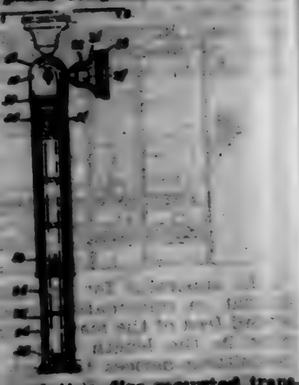
Application May 18, 1935, Serial No. 22,234

11 Claims. (Cl. 37—77)

1. In a dredging device, the combination comprising, a supporting frame adapted to rest on the banks of and to extend over and be moved along the watercourse to be dredged, an intake conduit or pipe movably carried on said frame and adapted to move longitudinally along the same, a water-circulating device in said conduit, power means connected with said circulating device, and a longitudinally movable discharge pipe connected with and extending from said intake conduit and along said frame to a point beyond one end thereof to afford the discharge of dredged material beyond the confines of said watercourse.

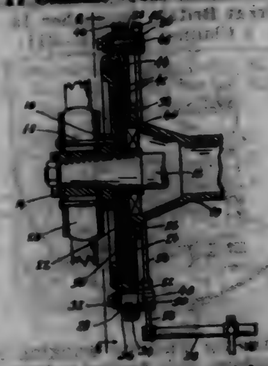
2,029,859
OIL BURNER
Frank Cosnell, Plainfield, N. J.
Application June 23, 1932, Serial No. 618,988
5 Claims. (Cl. 158—4)

1. In a burner of the character described, a fire ring having a grooved lower portion and an upstanding wall notched on the upper edge for forming a plurality of spaced heat radiating fingers, a centrally apertured heat insulating plate for supporting said fire ring, and a drain ring having a depending annular flange extending into the aperture in said plate and the periphery extending beneath the inner edge of said fire ring for draining excessive oil from the fire ring.



2,029,860
REFRIGERATOR DISPLAY CASE
Roland P. Daemicke, Chicago, Ill., assignor to The Daemicke Company, Chicago, Ill., a corporation of Illinois
Application May 5, 1934, Serial No. 724,091
3 Claims. (Cl. 62—89.5)

1. In a display case of the character described provided with refrigerating coils in the bottom embedded in a downwardly sloping slab of temperature conducting and retaining compound, a temperature conducting metal plate intimately sealed to said slab, said plate being formed with upstanding food holding ribs arranged in parallel spaced relation to provide a plurality of sloping air circulating passages therebetween, said ribs terminating short of the longitudinal edges of the plate and tapering into the main portion of the plate.

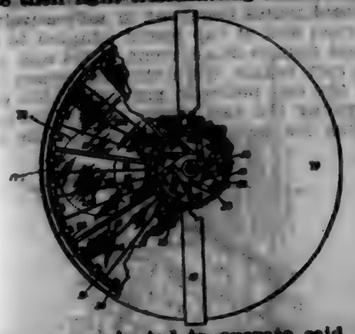


2,029,861
ADJUSTABLE HEAD FOR FLASHLIGHTS
William Dabgin, New York, N. Y.
Application March 22, 1935, Serial No. 12,283
6 Claims. (Cl. 240—10.67)

1. An adjustable head for a flashlight, comprising a casing having a cylindrical lower portion and a semi-sphere shell top portion formed with an elongated opening on a great circle extending from the top thereof to one side, a shutter within said casing and extending across said elongated opening and having a tubular portion engaging through said elongated opening, and pivotally mounted upon said casing on an axis passing through the center of said semi-sphere and at right angles to a plane longitudinally through

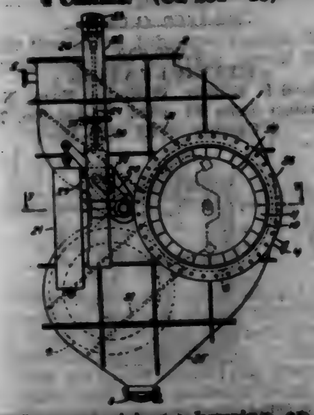
said opening, an insulation disc mounted transversely in the open end of said cylindrical portion of the casing, elements mounted on said disc and extending to the vicinity of said axis, a lamp socket mounted through said tubular portion, and members pivotally connected with said element at said axis and connected with the lamp socket to support the lamp socket.

2,029,862
ELECTRICAL DISK BRAKE
Adiel Y. Dodge, South Bend, Ind., assignor to Bendix Brake Company, South Bend, Ind., a corporation of Illinois
Application January 17, 1935, Serial No. 2,245
17 Claims. (Cl. 188—164)



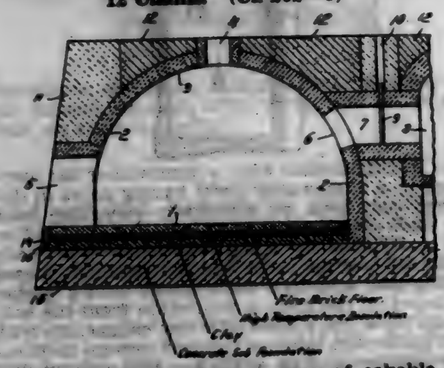
1. A friction disk brake comprising a plurality of coaxial disks adapted to be compressed magnetically, alternate disks of said plurality being formed of high and low carbon steel respectively.

2,029,863
CHROMOSCOPE
Richard W. Earle, Los Angeles, Calif.
Application March 24, 1933, Serial No. 662,443
21 Claims. (Cl. 240—3.1)



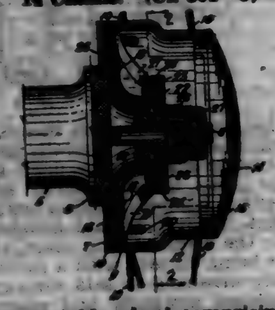
1. In combination with a color screen having a succession of differently colored transparencies; means for moving said screen to intercept a beam of light at a speed which will cause projection of

a chromatic blending of the colors of said transparencies; shutter mechanism movable with said transparencies and adjustable to determinedly regulate their light-transmitting areas; and sta-



tionary means adapted to operate said moving shutter mechanism to determinedly control the transmitting area of a transparency of a selected color so as to vary the chromatic composition of the projected color blend.

2,029,864
HOT GAS VALVE
Laurits Elgaard, Kew Gardens, N. Y., assignor to Semet-Solvay Engineering Corporation, New York, N. Y., a corporation of New York
Application December 16, 1931, Serial No. 581,230
4 Claims. (Cl. 251—18)

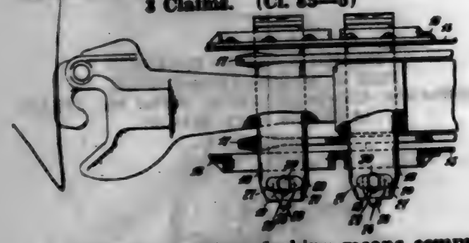


1. A valve comprising a housing, an inlet port and an outlet port on opposite sides of said housing, valve seats circumscribing said ports on the interior of said housing, a frame within said housing adapted to rotate between two extreme positions, an eccentrically disposed slot in said frame, a valve disc having a pin projecting from one face thereof, a second valve disc having a recess in one face thereof, said pin projecting through said slot and adapted to slide therein in a direction transaxial with respect to the pin and transradial with respect to the axis of rotation of the frame, said recess loosely engaging the projecting end of said pin, means for maintaining the engagement of said pin with said recess, said discs being adapted to register with said ports when the frame is near one extreme position, lugs on said discs, stops at said ports engaging said lugs when the discs are in registry with said ports and preventing their further movement, wedges on said frame adapted to engage wedge blocks on said discs to force said discs against said valve seats, said wedge blocks being engaged by said wedges by the relative movement of said frame with respect to said discs by rotation of said frame to said one extreme position.

2,029,865
PROCESS OF COKING HYDROCARBON MATERIAL AND COKE OVEN FOR PRACTICING SAID PROCESS
Alvan Harlan Gallaher, Plainfield, N. J., assignor to The Barrett Company, New York, N. Y., a corporation of New Jersey
Application April 22, 1930, Serial No. 446,234
12 Claims. (Cl. 202—6)

1. A process of coking a mass of cokable hydrocarbon material which is liquid or liquefiable by heat, which comprises introducing the hydrocarbon material into a hot coke oven heated by the coking of a previous charge, supplying the heat for coking the hydrocarbon material first to the upper portion of the mass while impeding the flow of heat from the base of the oven into the lower portion of the mass, and then supplying heat to the mass progressively downward to coke the material progressively downward.

2,029,866
DEMOUNTABLE WHEEL
Paul A. Haberl, Denver, Colo.
Application October 29, 1934, Serial No. 750,479
14 Claims. (Cl. 301—9)



1. A demountable wheel comprising in combination with a rotary element having an axial extension and a series of socketed lugs, a hub-member having an end-plate apertured to admit the socketed lugs, a follower movable on the extension, dogs carried by the follower and cooperating with the socketed lugs to rigidly connect the hub-member to the rotary element, and a driving-element acting upon the follower, and adapted to hold it in an adjusted position in which the dogs are in operative relation to the lugs.

2,029,367
AUTOMATIC LOCK FOR DUMBWAITERS
Steve Halmi, New York, N. Y.
Application March 6, 1935, Serial No. 9,598
4 Claims. (Cl. 187—61)

1. In conjunction with a dumbwaiter car operating in a dumbwaiter shaft having doors in different elevations, an automatic operating latch for each door comprising a bracket mounted on the material of the dumbwaiter shaft, a pivotally mounted bolt upon the bracket, resilient means urging said bolt into engagement with a keeper mounted on the door, a projection from the bolt, a cam upon the dumbwaiter car engageable with said projection to move the bolt into an inoperative position, and an angle iron mounted on said dumbwaiter car and arranged with one of its arms extending across said cam to shield the cam when the door is opened.

2,029,568
DRAFT KEY RETAINER LOCKING MEANS
Victor H. Harbert, Chicago, Ill., assignor to Illinois Railway Equipment Company, Chicago, Ill., a corporation of Illinois
Application December 8, 1934, Serial No. 756,855
3 Claims. (Cl. 85—5)

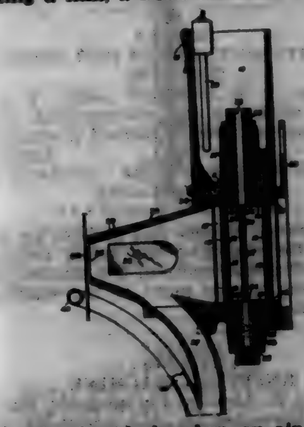
1. Draft key retainer locking means comprising a main member having vertically spaced arms adapted to receive the end of a draft key therebetween, the arms at their outer ends being formed to effect holding relation with the retainer so that removal of said member is prevented while the retainer is in place, the top of said member being formed with a slotway, and a bendable strip arranged in said slotway with its free end disposed upwardly and adapted to be bent laterally across the top of the key retainer.

2,029,569
ROOFING STRUCTURE
Edward Hering, Beverly, N. J., assignor to United States Pipe and Foundry Company, Burlington, N. J., a corporation of New Jersey
Application February 24, 1934, Serial No. 712,989
1 Claim. (Cl. 108—10)

In a roof structure made up of roof beams, roofing plates supported on said beams formed with upwardly extending ribs or flanges on their side edges and with a hood like structure extending from the bottom edge of the plate centrally upward toward but not to the top edge of the plate, said plates being set in successively staggered rows and of cap pieces adapted to extend over said flanges of adjacent plates and secured to the roof beams, the improved means for securing the cap pieces in position which consists in providing the cap pieces with a downwardly extending lug perforated to receive the hooked

end of a hook bolt and formed on its lower end with a seat adapted to engage one end of a locking bar and in combining therewith in the erection of the roof, a locking bar adapted to engage with the lower end of the lug of the cap piece and to rest upon a flange of the roof beam, said locking bar being provided with a bolt hole to give passage to a hook bolt, a hook bolt engaged in the lug of the cap piece and extending through the bolt hole in the locking bar and a nut screwing on the lower end of the hook bolt and against the underside of the locking bar.

2,029,570
REFRIGERATION
Clifford F. Holden, Williston Park, N. Y.
Application June 22, 1934, Serial No. 731,955
3 Claims. (Cl. 62—46)



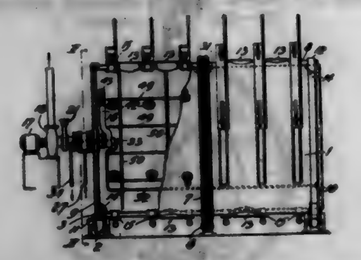
1. In a refrigerator construction, a plurality of drip pans extending inwardly from the side walls of the refrigerator body, said drip pans having their adjacent inner edges spaced from each other, refrigerant supporting racks supported by said drip pans, and extensions projecting from said refrigerant supporting racks, said extensions lying in the space between the adjacent inner edges of the drip pans in spaced relation therewith.

2,029,571
CINEMATOGRAPH APPARATUS
Arthur Percy Johnson, Wylde Green, Birmingham, England
Application November 2, 1934, Serial No. 751,973
In Great Britain November 11, 1933
13 Claims. (Cl. 88—24)

1. A cooling unit for use with cinematograph apparatus including a body having in its upper part a reserve tank and in its lower part a chamber, a transparent panel in each of two opposite sides of said chamber, liquid circulating passage

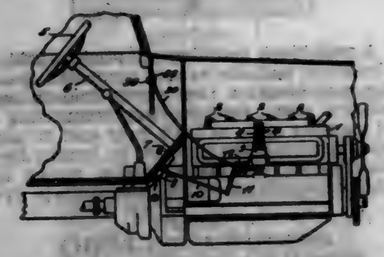
between said tank and said chamber, cooling liquid in said tank and said chamber, said chamber being adapted to be arranged with said transparent panels interposed in the light beam for projecting a film, a hood attached to said body

at one side of said chamber, an air supply conduit communicating with said hood, and means located in said tank for heating the liquid to a temperature sufficient to eliminate condensation on the transparent panels of said chamber.



2,029,572
FIELD TILLER
Oscar Benjamin Johnson, Ensign, Kans.
Application December 11, 1934, Serial No. 757,946
2 Claims. (Cl. 55—30)

1. A tilling implement comprising a shaft providing an axis of rotation, tilling elements mounted on the shaft for rotation, each of said elements being approximately one-half of a disk, said elements being arranged axially in spaced relation to each other, and said elements being oppositely disposed about said axis, alternately.



2,029,573
APPARATUS FOR PREPARATION OF MALT
Augustinus Edvard Jonssen, Stockholm, Sweden
Application May 9, 1933, Serial No. 670,102
In Sweden February 24, 1933
1 Claim. (Cl. 195—23)

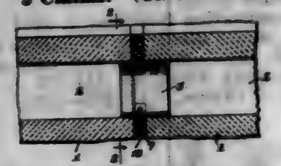
Apparatus for carrying out the germination step in the preparation of malt from grain, comprising a malting drum arranged to rotate about a horizontal axis, a plurality of air inlet valves arranged in the wall of the drum and distributed in a number of peripheral rows along the drum, said valves being individually adjustable independently of each other with regard to the area of passage, means for controlling said valves to close and open during the rotation of the drum comprising curved rails extending in the circumferential direction of the drum opposite said rows of valves, means for varying the length of said rails, means for varying the angular position of said rails in relation to the axis of the drum, an air suction conduit leading from the

interior of the drum, and means for sucking an air current through said valves, said drum and said air suction conduit.

2,029,574
METHOD FOR OBTAINING THE OPTIMUM POSITION OF IGNITION CONTACTS IN INTERNAL COMBUSTION ENGINES
Leo B. Kimball, New Haven, Conn., assignor to Fuel Development Corporation, a corporation of Delaware
Original application February 1, 1934, Serial No. 709,313, now Patent No. 2,018,893, dated October 29, 1935. Divided and this application March 7, 1934, Serial No. 714,443
2 Claims. (Cl. 123—117)

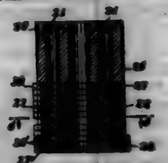
1. The method of controlling the advance and retardation of the spark ignition in internal combustion engines, which comprises, primarily advancing the times of ignition concurrently with initial degrees of throttle valve opening, and thereafter manually producing definite retardation of the first mentioned times of ignition over certain limited portions of the range of throttle valve openings during greater power output, to effect high fuel efficiency over all portions of said range and to eliminate knocking which would otherwise occur incident to the use of poor grades of fuel or bad conditions in the combustion chambers of the engine.

2,029,575
CLASP AND HOOK STAY
Joseph J. Kispert, Hamden, Conn., assignor to I. Newman & Sons, Inc., New Haven, Conn., a corporation of Connecticut
Application April 30, 1935, Serial No. 19,690
3 Claims. (Cl. 2—36)



1. A stay for front laced corsets, comprising a hook bar having a plurality of hooks connected therewith, a plurality of plates connected to said bar and extending from one edge thereof, each of said plates having an offset portion, and

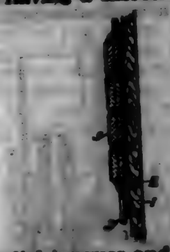
a flexible offset bar having the center part connected with the center of said plates and the



end portions positioned to rest against said offset portions when the stay is in use.

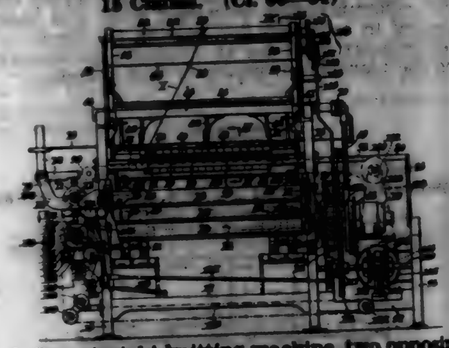
2,029,876
WALL BLOCK COUPLING
Franklin S. Klein, Malverne, N. Y.
Application December 18, 1934, Serial No. 758,132
5 Claims. (Cl. 72—107)

1. A wall block coupling adapted to bridge the gap between wall blocks and form with passages in the wall blocks a continuous smooth conduit for electric wires, said coupling comprising a tubular member open at both ends and of uniform internal diameter throughout its length forming an unobstructed passage, and a flange or rib around the tubular member intermediate its ends.



2,029,877
IDENTIFICATION DEVICE
Peder M. Knudsen, Katonah, N. Y.
Application February 16, 1935, Serial No. 6,934
4 Claims. (Cl. 40—70)

1. An identification device, comprising a member and a plurality of discs in juxtaposition, and said member and discs being formed with a plurality of straight passages from one end to the other, said discs being formed with additional passages, identification markers in said additional passages, and said discs being movable to be rotated to positions in which the identification markers of any discs may be aligned with the passages in said member.



2,029,878
REENFORCED WALL STRUCTURE
Joseph Kublanow, Pittsburgh, Pa.
Application February 10, 1934, Serial No. 710,679
2 Claims. (Cl. 72—18)

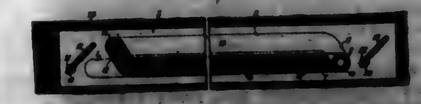
2. A brick veneer wall comprising a base material, metal spacing and reenforcing members secured thereto having laterally extending spacing and supporting elements integrally formed thereon, and facing slabs mounted on said metal spacing members having a smooth outer face on one

side and parallel tongues and grooves on the opposite side for engaging the metal reenforcing elements with one or more of the tongues of said slabs engaging one or more of the spacing and supporting elements.

2,029,879
KNITTING MACHINE
George W. Lindley, Philadelphia, Pa.
Application December 23, 1932, Serial No. 648,534
15 Claims. (Cl. 66—84)

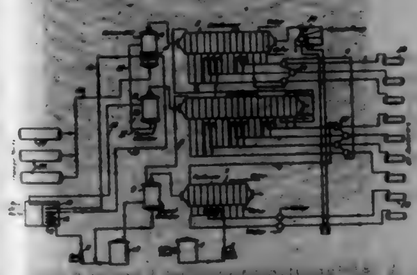
1. In a straight knitting machine, two opposing contrariwise actuated sets of needles; means for serving yarn to the needles for formation of fabric loops; a reciprocating carrier for laying another yarn transversely of the fabric between the loops respectively formed by the two sets of needles; and means for automatically thrusting said carrier inward at the completion of its strokes in opposite directions to hold the inlay yarn against the backs of the needles of one set when such needles are raised, and thereby to prevent it from being fouled as the other set of needles rises.

2,029,880
ELASTIC FABRIC
George W. Lindley, Philadelphia, Pa.
Application March 31, 1933, Serial No. 663,683
12 Claims. (Cl. 66—182)



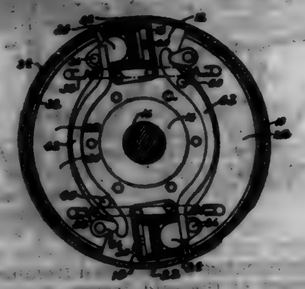
8. A double faced knitted fabric comprising elastic weft threads disposed between the opposite faces of the fabric and secured in place by separate pairs of warp thread loop chain portions extending from face to face of the fabric and forming said opposite faces of the fabric.

2,029,881
METHOD FOR PRODUCING TITANIUM DIOXIDE
William T. Little, Westfield, N. J., assignor, by mesne assignments, to American Zirconium Corporation, Baltimore, Md., a corporation of Maryland
No Drawing. Application April 23, 1934, Serial No. 721,870
13 Claims. (Cl. 23—202)



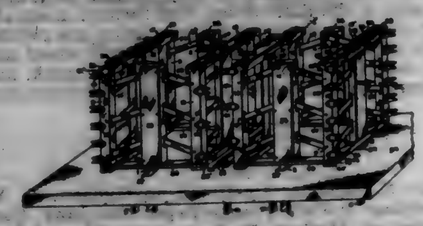
1. In a process for preparing titanium dioxide, the step which comprises hydrolyzing a titanium salt solution by heating in the presence of a solid alkali titanate.

2,029,882
SLOT CLOSER
Leo C. Luke, Independence, Kans., assignor to The Atchison Revolving Door Co., Independence, Kans., a corporation of Delaware
Application December 26, 1934, Serial No. 759,290
11 Claims. (Cl. 20—18)



5. In combination with the central spindle of a revolving door, a stationary member having a slot formed therein engaging said spindle, said spindle being shiftable along said slot, a plate disposed above said member and formed with a slot engaging said spindle, said slot having an angularly disposed end, and means including a pair of angularly disposed slots and pins engaging said last-named slots for securing said plate to said stationary member.

2,029,883
DISTILLATION OF TAR
Alexander A. MacCubbin, Montclair, and Joseph Zavertnik, Jr., Harrington, N. J., assignors to The Barrett Company, New York, N. Y., a corporation of New Jersey
Application August 14, 1930, Serial No. 475,194
12 Claims. (Cl. 196—77)

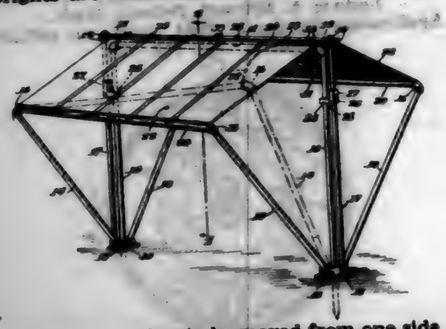


4. The method of distilling hydrocarbon material which comprises distilling the material, separating the vapors and liquid residue produced thereby, heating the residue by indirect heat transfer from heated hydrocarbon material passing to the first mentioned distillation stage, and subjecting the said residue to a second distillation effected under a vacuum.

2,029,884
BRAKE MECHANISM
Ludwig A. Majneri, Detroit, Mich.
Application October 6, 1933, Serial No. 692,507
2 Claims. (Cl. 188—78)

1. In a brake mechanism the combination of a rotatable drum, a supporting plate adjacent said drum, brake shoes for frictional engagement with the inner periphery of said drum, operating means for each shoe disposed diametrically opposite each other, each engaging one end of each shoe, a lever pivotally supported on said plate having its opposite ends respectively in engagement with the opposite ends of one of said shoes, said pivot being intermediate the ends of said lever and adjacent the end of said shoe opposite the applying means, and resilient means normally holding the shoes away from engagement with the inner periphery of said drum.

2,029,885
BOX DISMEMBERING MACHINE
Leon Mann, Mount Vernon, N. Y.
Application July 25, 1934, Serial No. 736,864
13 Claims. (Cl. 254—124)

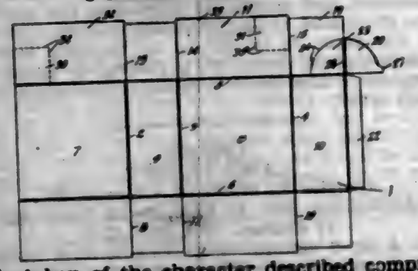


1. In a box or case dismembering or knocking down machine mechanism adapted to be positioned inside the box comprising expansible members, and means for expanding the same in two directions against and for causing portions of the same to be forced in between vertical and horizontal inner walls thereof at connected portions of said walls to separate said walls from each other.

2,029,886
LAWN CANOPY
Charles X. Marshall, Chicago, Ill.
Application July 13, 1935, Serial No. 31,242
17 Claims. (Cl. 135—7.1)

1. A lawn canopy embodying a rigid upright frame, uprights pivotally mounted at their lower ends on opposite sides of the said frame, a flexible member extending across and disconnected from the top of said frame and secured at its ends to the respective uprights and constituting the connection between the uprights on opposite sides of the frame whereby the flexible member

will be moved across said frame when the said uprights are moved about their pivots to cause

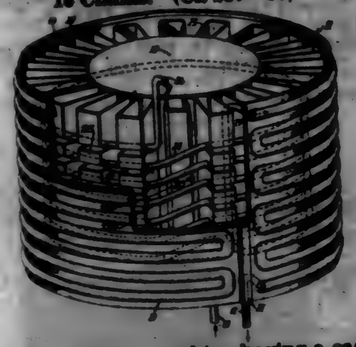


the flexible member to be moved from one side to the other side of the said frame.

2,029,557
NUMBERING HEAD WHEEL AND METHOD OF MAKING SAME
George J. Matt, Brooklyn, N. Y., assignor to Roberts Numbering Machine Company, Brooklyn, N. Y., a corporation of New York
Application January 22, 1934, Serial No. 707,884
3 Claims. (Cl. 101—401.2)

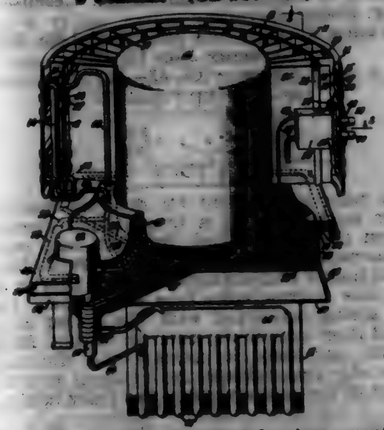
1. A numbering head wheel embodying therein a digit wheel having a sequence of spaced platens about the perimeter thereof, and a plurality of high and a plurality of deep ratchet teeth upon one side of the digit wheel, and formed integrally with the material thereof, there being one ratchet tooth adjacent each platen, said digit wheel and said ratchet teeth being of hard steel stock, and having a bearing opening extending therethrough.

2,029,558
BOX
Henry L. Metzger, Castleton-on-Hudson, N. Y., assignor to Fort Orange Paper Company, Castleton-on-Hudson, N. Y., a corporation of New York
Application February 12, 1935, Serial No. 6,296
3 Claims. (Cl. 229—17)



1. A box of the character described comprising front, back and side panels and flaps connected to each of said panels and infolded to form closures for the ends of said box, one of said first infolded flaps being provided with a portion lying within the box in a plane substantially at right angles to said flap when the box is closed and adapted to be drawn out to form part of a pouring spout for the contents of said box; each of said flaps being substantially coextensive in width with its associated panel and connected to said panel throughout said width.

2,029,559
FLY SCREEN
William B. J. Mayer, Rolling Springs, Texas
Application June 20, 1935, Serial No. 27,247
2 Claims. (Cl. 156—97)



2. A screen of the class described including frames superimposed and fixed together, one of the frames being an inner frame, a foraminous panel fixed to the inner frame across the upper portion thereof, and other foraminous panels severally and progressively fixed to the other frames in overlapping relation, and slotted bars extending across the several frames at the upper ends of said other panels.

2,029,590
CONDENSER FOR REFRIGERATING MACHINES
Delbert F. Newman, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application December 1, 1934, Serial No. 755,530
10 Claims. (Cl. 257—96)

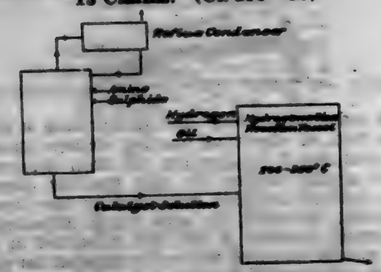
1. A refrigerating machine having a casing, an air cooled condenser including a cylindrical member surrounding said casing in spaced relation thereto, a support of heat conducting material connecting said casing and said cylindrical member, and a heat-dissipating refrigerant conduit carried by said support intermediate said casing and said cylindrical member and extending about said casing.

2,029,591
CONDENSER FOR REFRIGERATING MACHINES
Delbert F. Newman, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application May 27, 1935, Serial No. 22,619
8 Claims. (Cl. 257—96)

1. A refrigerating machine having a casing, an air cooled condenser including a cylindrical member having an extended refrigerant passage formed therein, said cylindrical member surrounding said casing in spaced relation thereto, a support of heat conducting material connecting said casing and said cylindrical member, said condenser also including a second cylindrical member having an extended refrigerant passage formed therein, said second cylindrical member surrounding said first mentioned cylindrical member in spaced relation thereto, and a second support of heat conducting material connecting said cylindrical members.

2,029,592
ROADWAY CONSTRUCTION
Russell C. Olmsted, Cliffside, N. J.
Application October 18, 1933, Serial No. 693,277
10 Claims. (Cl. 94—13)

1. An expansion joint for concrete roadways formed of slabs, said joint comprising recesses formed in the abutting faces of the slabs, a precast packing positioned between and partially filling the space between the abutting faces of the slabs, and a viscous packing carried in said recesses and movable from the recesses to the space between the abutting edges of the slabs upon contraction of the slabs.



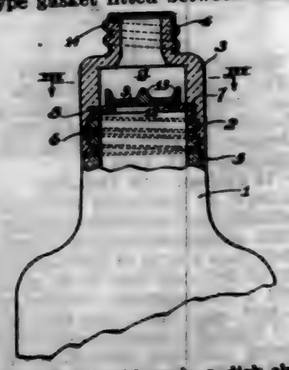
2,029,593
PROCESS FOR MAKING CONDENSATION PRODUCTS
Kurt Ripper, Vienna, Austria
No Drawing. Application March 8, 1931, Serial No. 520,472. In Austria December 15, 1930
18 Claims. (Cl. 260—9)

1. The process of producing hydrophobe urea-thiourea-formaldehyde reaction products which comprises reacting 1 mol of a mixture of thiourea and urea with less than 2 mols of formaldehyde without addition of external heat in an aqueous medium having a hydrogen-ion concentration of about $C_H=10^{-3}$, the amount of thiourea contained in the said mixture being sufficient to prevent formation of white insoluble formaldehyde-urea products.

2,029,594
MOLDING COMPOSITION
Kurt Ripper, Vienna, Austria
No Drawing. Original application March 5, 1931, Serial No. 520,472. Divided and this application September 17, 1932, Serial No. 633,682. In Austria December 15, 1930
10 Claims. (Cl. 106—22)

1. The process of producing an organic composition suitable for injection-molding or die-casting which comprises reacting 1 mol of thiourea with less than 2 mols of formaldehyde without addition of external heat in an aqueous medium having a hydrogen-ion concentration between $C_H=10^{-4}$ and about $C_H=10^{-3}$ to prevent formation of insoluble thiourea-methylene compounds, mixing a fibrous material with the resulting liquid product and drying the mixture to a point where it is practically dry but still contains enough moisture to be flowable under pressure.

2,029,595
PROCEDURE FOR THE HYDROGENIZING AND/OR SPLITTING OF COAL, TARS, MINERAL OILS, AND THE LIKE
Wilhelm Rittmeister, Dessau/Anhalt, Germany, assignor, by mesne assignments, to E. I. du Pont de Nemours & Co., Wilmington, Del., a corporation of Delaware
Application June 1, 1933, Serial No. 673,580
In Germany June 2, 1932
13 Claims. (Cl. 196—53)



1. Procedure for the hydrogenizing of coal, coal distillates, tars, cresols, mineral oils, distillation residues and the like, characterized in that the initial materials are treated with hydrogen at enhanced pressures and enhanced temperatures in the presence of a catalyst obtained by dissolving a sulphide of a metal of the 6th group of the periodic system in a strong base of the group consisting of the primary and secondary amines.

2,029,596
BOTTLE CLOSURE
Israel Rosenbloom and Russell Bern, Pittsburgh, Pa., assignors to Buffalo Distilling Company, Braddock, Pa., a corporation of Pennsylvania
Application June 9, 1934, Serial No. 729,839
1 Claim. (Cl. 215—21)

A non refillable bottle closure comprising a bottle neck provided with a helical thread, a dome shaped covering shell having a pouring spout at

its upper end and a threaded skirt at its lower end threadably secured to said bottle neck and fixedly attached thereto by a layer of cement disposed between said skirt and the exterior of said neck, an inwardly projecting shoulder in said shell extending over the mouth of said bottle neck above the threads at the end thereon, a hollow washer-type gasket fitted between said shoulder

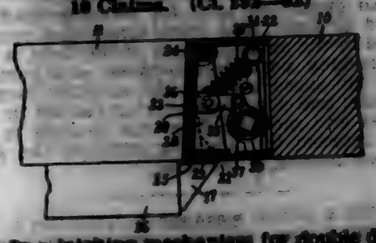
and the mouth of said neck, a disk shaped valve of lesser diameter than the interior of said shell seated by gravity on said gasket above the opening therein, a plurality of spaced upwardly projecting bosses on the upper side of said valve for preventing it closing the spout opening in the shell when the assembly is inverted, and means of closing said spout.

2,029,837
ELECTRIC IRON
Ludwig Schilling, Poughkeepsie, N. Y.
Application October 22, 1934, Serial No. 749,379
2 Claims. (Cl. 219—23)

1. A sad-iron heating unit comprising a stand for the iron, an electrical heating element mounted in said stand for heating the iron thereon, a current supply means for said heating element and a control therefor operated by the iron, a thermostat mounted in said stand adjacent to the heating element, a tell-tale mounted in said stand, means operated by the thermostat for moving said tell-tale to indicate when the temperature of the heating element has reached a predetermined degree of heat.

2,029,896
METHOD OF PURIFYING MAGNESIUM
Walther Schmidt and Adolf Beck, Bitterfeld, Germany, assignors, by mesne assignments, to Magnesium Development Corporation, a corporation of Delaware
No Drawing. Application May 10, 1933, Serial No. 670,393. In Germany January 3, 1929
10 Claims. (Cl. 75—17)

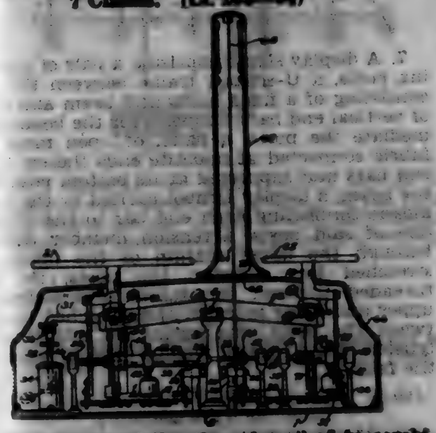
1. The method of removing iron impurities from magnesium comprising dissolving in the molten metal, by the application of temperatures above about 700° C., a purifying substance selected from manganese, silicon and manganese chloride, in a quantity sufficient to form primary crystals on cooling of the melt while simultaneously combining with the said impurities, cooling the melt to a temperature not exceeding about 700° C., and separating the crystals containing the purifying substance and the impurities from the melt.



2,029,899
RULER ATTACHMENT
Wilhelm Stahl, Lahr, Baden, Germany, assignor to firm of Albert Nestler Actien Gesellschaft, Lahr, Baden, Germany
Application November 28, 1934, Serial No. 755,241
In Germany July 17, 1933
1 Claim. (Cl. 33—107)

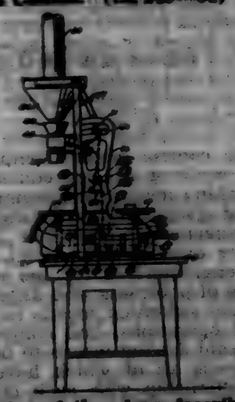
In a ruler attachment for drawing machines, a ruler holder having a longitudinal groove, a plate on the ruler fitting into the said groove, a two-armed lever mounted to be rotatable on the said holder and engaging with its shorter arm in the one narrow edge face of the said plate, and a spring connected with the longer arm of the said lever and acting thereon in such fashion that the said plate is pressed with the second narrow edge face against the adjacent longitudinal face of the said groove in the ruler holder.

2,029,900
FIBROUS ESTERIFICATION OF CELLULOSE
Russel H. Van Dyke, Cyril J. Staud, and Harry Le B. Gray, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New York
No Drawing. Application July 29, 1932, Serial No. 626,226
4 Claims. (Cl. 260—191)



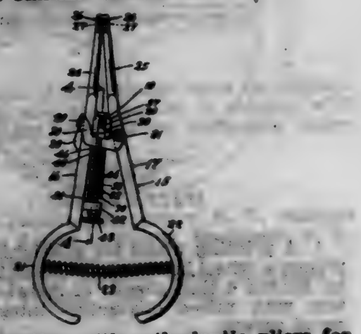
1. In the process of preparing a cellulose ester in fibrous form in which the cellulose is pretreated with an acid and subsequently acylated in a bath containing a predetermined amount of said acid, of a fatty acid anhydride, and of an inert diluent; the step which comprises reducing the acid content of the pretreated cellulose to said predetermined amount and simultaneously providing the predetermined amount of diluent for the acylation bath by washing the pretreated cellulose with a liquid which is a non-solvent for the fibrous ester.

2,029,901
EXIT DOORLOCK
Henry G. Voight, New Haven, Conn., assignor to Sargent & Company, New Haven, Conn., a corporation of Connecticut
Application December 12, 1934, Serial No. 757,188
10 Claims. (Cl. 292—92)



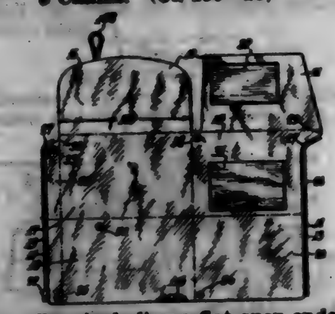
2. In a latching mechanism for double doors, a casing applied to one of said doors adjacent the edge thereof and having a latch bolt adapted to project therefrom, a bolt-engaging member movably mounted adjacent the edge of the other door, said member being adapted to move from a position flush with the edge of said second door to a position projecting from said edge into the space between the doors to engage said latch bolt, and said member being movable toward non-projecting position by contact with said first door when said second door is opened.

2,029,902
WEIGHING SCALE
Foster V. Waltz, Toledo, Ohio, assignor to Toledo Scale Manufacturing Company, Toledo, Ohio, a corporation of New Jersey
Application February 9, 1933, Serial No. 5,784
7 Claims. (Cl. 265—24)



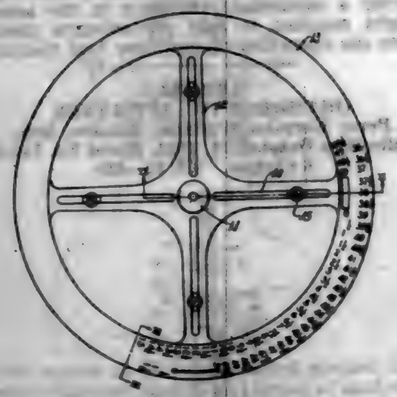
1. In a device of the class described in combination, an oscillatively mounted lever, a load support mounted upon said lever, a counterpoise support, to set in opposition to a load on said load support and connected to said lever, a pendulum mounted below said lever and adapted to oscillate in a plane bisecting the plane of oscillation of said lever, the moment of said pendulum being additive to the weight moment of a counterpoise on said counterpoise support, and an indicator secured to said pendulum to indicate weight of loads on said load receiver.

2,029,903
WEIGHING SCALE
Mark A. Weshorly, Toledo, Ohio, assignor to Toledo Scale Manufacturing Company, Toledo, Ohio, a corporation of New Jersey
Application July 27, 1932, Serial No. 624,946
12 Claims. (Cl. 249—64)



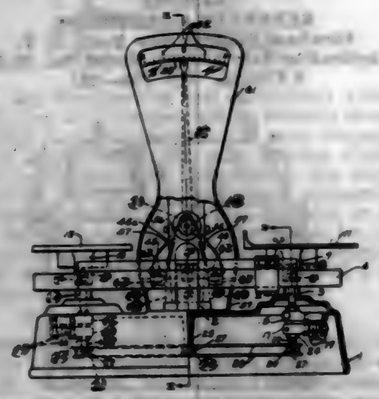
2. In a device of the class described, in combination, fast material feeding means, slow material feeding means, weighing mechanism, a photoelectric element, means for causing a variation in the amount of light supplied to said photoelectric element, means operatively connecting said light varying means to said weighing means, means whereby a variation in the amount of light supplied to said photoelectric element affects the operation of said fast feed means, and means whereby a subsequent variation in the amount of light supplied to said photoelectric element affects the operation of said slow feed means.

2,029,904
ORTHODONTIC APPLIANCE
Percy Norman Williams, Tucson, Ariz.
Application October 10, 1934, Serial No. 747,655
6 Claims. (Cl. 32—66)



5. In combination with orthodontic pliers for applying and locking wire ligatures, spring means for normally closing the beaks of said pliers, a holder on said pliers for the ends of a ligature wire, means at the end of each plier beak to support an intermediate portion of said ligature wire, and means for adjusting said holder to vary the tension of said ligature wire.

2,029,905
REVERSIBLE HANDBAG
Abraham Benner, New York, N. Y.
Application July 2, 1935, Serial No. 30,459
8 Claims. (Cl. 150—28)

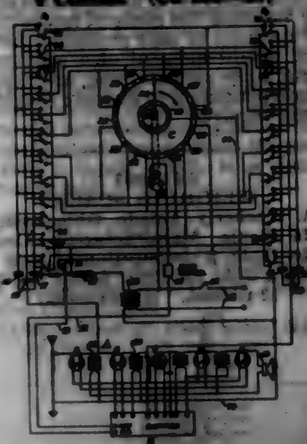


1. A handbag including a flat open ended elongated tubular element affording a continuous through passage provided with unitarily-connected, non-detachable interior and exterior flaps, said element being longitudinally split from end to end for reversibility and having means for interconnecting the edges at said split, said element being folded on itself with its fold portions releasably interconnected to provide open pockets extending alongside of each other, the split in the element lying between the pockets, said interior flap removably overlying the split area of the element adjacent to the openings of the pockets.

2,029,906
COMPOSITE STRUCTURE
Geoffrey H. Bennett, Toledo, Ohio, assignor to Toledo Scale Manufacturing Company, Toledo, Ohio, a corporation of New Jersey
Application September 18, 1934, Serial No. 743,491
6 Claims. (Cl. 101—401.1)

1. A printing wheel for a weighing scale comprising a wheel body of light weight molded plastic having a thin sheath of metal over one portion with raised characters integral with the metal sheath.

2,029,907
WEIGHING SCALE
Stanley Q. Bennett, Toledo, Ohio, assignor to Toledo Scale Manufacturing Company, Toledo, Ohio, a corporation of New Jersey
Application February 15, 1933, Serial No. 656,876
4 Claims. (Cl. 265—59)

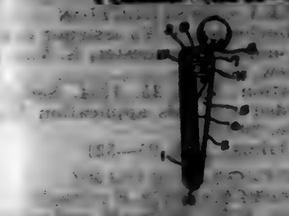


1. In a device of the class described, in combination, weighing mechanism including a load supporting lever, said lever having two parallelly extending arms marked with like indicia, cross sections of said arms being substantially U shaped, a load offsetting poise mounted upon one of the said arms and having an index cooperating with the indicia of said arm, an index mounted upon the other of said arms and cooperating with the indicia thereof, said index being light in weight as compared to said poise and means lying within said U whereby equal but opposite movement is imparted to said index.

2,029,908
DISPLAY SIGN
William H. Hoschke, Jr., Mount Lebanon, Pa., assignor, by mesne assignments, to American Chain Company, Inc., a corporation of New York
Application July 11, 1933, Serial No. 679,841
7 Claims. (Cl. 40—125)

7. A display sign comprising a pair of supporting posts, a U-shaped frame between the posts consisting of a fixed horizontal beam and a pair of vertical end bars, supports for the beam intermediate the posts, a panel of open mesh wire fabric connected at opposite ends thereof to the end bars and supported at its bottom edge upon the beam, a display symbol carried by the fabric, means connecting each end bar to the adjacent one of said posts, a tension member threaded through the upper margin of the fabric and stretched taut between the posts, tie wires threaded through the fabric intermediate its upper and lower margins and stretched taut between the posts, and means for adjusting the tension of the tension member, the tie wires and the fabric.

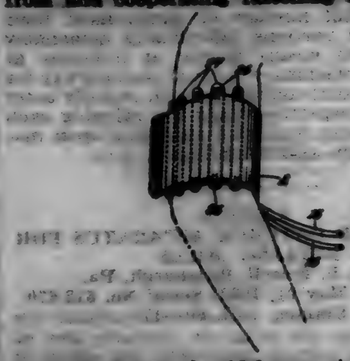
2,029,909
AUTOMATIC RADIO RECEIVING APPARATUS
Joseph L. Oswald, New York, N. Y., assignor, by mesne assignments, to Wired Radio, Inc., New York, N. Y., a corporation of Delaware
Application July 1, 1933, Serial No. 678,319
6 Claims. (Cl. 250—20)



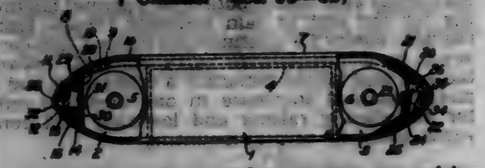
1. A radio control system comprising, circuit means for receiving and reproducing radio programs, switching means for altering the connections of said circuit means to produce different circuit arrangements, one after the other in sequence, for causing said circuit means to be differently characterized for the reception and reproduction of programs, and driving means for actuating said switching means to perform said sequence of operations, and control means for controlling said driving means to be actuated at different speeds all of which have an integral multiple relationship with each other, whereby said sequence of different characterizations of said circuit means can be performed in selectively different time intervals having an aliquot time inter-relationship with a program broadcast time interval.

2,029,910
THREAD FLUID TREATING DEVICE
Henry R. Childs, Kingsport, Tenn., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New York
Application March 6, 1934, Serial No. 714,255
5 Claims. (Cl. 18—8)

1. In a machine for fluid treating thread, a wire mesh screen, means for guiding thread into contact with a portion of said screen, and means for filling the interstices of the screen with a thread treating fluid.



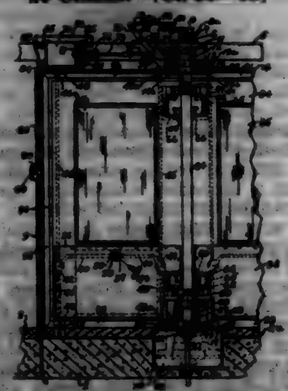
2,029,911
REAR VIEW MIRROR
William H. Colbert, Brookeridge, Pa., assignor to Liberty Mirror Works, a corporation of Pennsylvania
Application July 12, 1935, Serial No. 31,001
4 Claims. (Cl. 88—96)



1. In a rear view mirror, a mirror plate and a supporting bracket therefor comprising a casing member of sheet metal extending across the back of the plate with its side edges closely adjacent the rear face of the plate and its central portion spaced away therefrom to provide a housing space, said casing having at one end a closure wall extending transversely of said housing space and provided with a hook fitting around the edge of the mirror plate, a supporting stud extending through said closure wall and rigidly attached thereto, a clamping plate in said housing space with one edge constituting a hook and fitting around the edge of the mirror plate in opposition to said first mentioned hook, and screw adjusting means carried by the closure wall and adapted to move the clamping plate across the back of the mirror plate.

2,029,912
STHYGMOMANOMETER BANDAGE
Frank Cosser, Finsbury Park, London, England
Application May 22, 1934, Serial No. 726,922
In Great Britain December 22, 1933
2 Claims. (Cl. 128—327)

1. A sphygmomanometer bandage comprising a bag portion enclosing an inflatable bag, a binding strip portion continuous with and of a length to extend around the arm and over said bag portion, a plurality of transverse stiffening stays in said strip portion arranged to provide a relatively rigid reaction wall for pulsations in the bag when the latter is inflated, certain of said stays in the strip portion being longer than the width of the strip so that their ends project therefrom and cooperating fastening means on the projecting ends of said longer stays for adjustably securing said bag portion in contact with the arm with the strip portion extending thereover.



2,029,913
CAMERA LATCH
Chester W. Crumrine, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New York
Application May 14, 1935, Serial No. 21,431
7 Claims. (Cl. 95—32)

1. A latch mechanism for cameras comprising a camera body, a back hingedly attached thereto, the hinge including a pintle and pintle supports permitting the pintle to slide a predetermined distance in its support, and latch elements carried by the camera body and back opposite to the hinge pintle and adapted to be disengaged by sliding the back on its hinge relatively to the camera body.

2,029,914
REVOLVING DOOR
Stanley C. Dreher, Cincinnati, Ohio
Application October 16, 1933, Serial No. 693,749
20 Claims. (Cl. 20—18)

1. In a revolving door, in combination with a doorway, a series of wings radially diverging

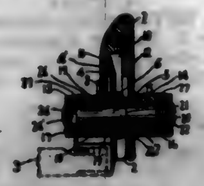
from the central part of the doorway, a mounting at said central part, confined away from the central mid-height area of the doorway and rotatable on a vertical axis, to which mounting each one of the full number of wings have their radially inner portions individually detachably connected, and means spaced at intervals at radially outer stationary parts of the doorway for detachable pivotal connection with radially outer parts of the respective wings for swinging each wing singly away from said mounting upon disconnection from said mounting.

2,029,915

FEEDER AND CATCHER APPARATUS FOR ROLLING MILLS

Joseph E. Fawell, Pittsburgh, Pa.

Application May 21, 1932, Serial No. 612,670
8 Claims. (Cl. 80—47)



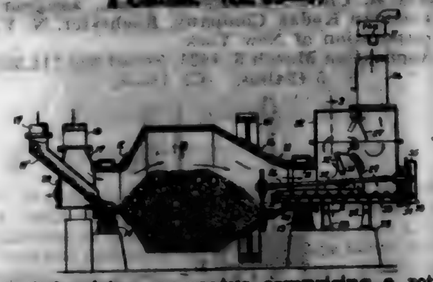
7. In combination with the rolls of a sheet rolling mill, spaced parallel supports extending at right angles to the roll pass and adapted to receive material delivered therefrom, an endless conveyor having spaced runs located between and paralleling said spaced supports, a pivotal mounting for the end of said conveyor remote from the mill, means for continuously driving said conveyor in a direction to carry material toward the mill and means including a crank arm and a motor adapted to rotate in one direction only for periodically raising and lowering said conveyor about its pivotal mounting.

2,029,916

PAPER TRIMMER

Charles L. Friermood, Springfield, Ohio, assignor to Charles K. Hullinger, receiver for the Ridgely Trimmer Company, Springfield, Ohio, a corporation of Ohio

Application June 27, 1935, Serial No. 28,629
5 Claims. (Cl. 164—34)



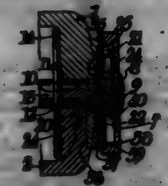
5. In a paper trimmer, a body having a recess and a pair of aligned oppositely extending trunnions, an axle carried by one of said trunnions and having a threaded connection therewith so as to be capable of axial adjustment, said axle extending across said recess and loosely into the opposite trunnion, a cutting disk located in said recess and loosely mounted on said axle, a sleeve slidably mounted on said axle in said last mentioned trunnion, the inner end of said sleeve having a flange, a screw in said last mentioned trunnion having a shoulder to engage and move said sleeve, said axle having a shoulder on the opposite side of said disk from said sleeve and a loose washer between said last mentioned shoulder and said disk.

2,029,917

PULVERIZATION

Martin Frisch, New York, N. Y., assignor to Fuller Wheeler Corporation, New York, N. Y., a corporation of New York

Application March 30, 1935, Serial No. 691,915
4 Claims. (Cl. 83—4)



1. Pulverizing apparatus comprising a rotatable drum having an end trunnion providing an outlet for the drum, a classifier having an inlet member associated with said trunnion, means for withdrawing fluid from said classifier, a screw conveyor in said classifier and extending within said trunnion, a baffle providing a plurality of vertical passages in said classifier, said conveyor being situated at the bottom of said passages, and a screen at the bottom of one of said passages above said conveyor and disposed between the baffle and the drum outlet.

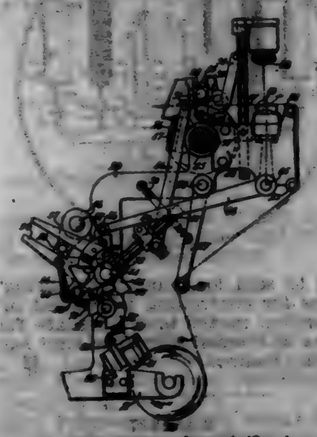
2,029,918

CAMERA CONSTRUCTION

Carl C. Fuerst, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New York

Original application April 25, 1934, Serial No. 722,247. Divided and this application May 7, 1935, Serial No. 20,127
7 Claims. (Cl. 95—32)

1. In a film winding mechanism for cameras, the combination with a camera body, a removable back adapted to cover an opening in the camera body, spool chambers and an exposure frame carried by the camera, a forming carried by the camera and supporting a spool winding shaft extending through an aperture therein, a flange and slot connection between the camera back and body lying partially beneath the forming and making a light-tight connection, a winding knob mounted on the shaft and having an annular flange lying close to said forming and enclosing a pawl and ratchet adapted to prevent rotation of the knob and spool winding shaft in one direction.



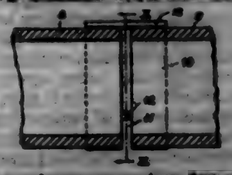
2,029,919

WEB REGISTERING DEVICE

Frederic B. Fuller, Springfield, Mass., assignor to Package Machinery Company, Springfield, Mass., a corporation of Massachusetts

Application June 16, 1933, Serial No. 677,550
28 Claims. (Cl. 271—3.6)

1. In a web feeding device of the type in which the rate of feed of the web is controlled by the phase relation or position of indicia on the web relative to a detecting device, that construction of detecting device which comprises means movable at a speed different from the surface speed of the web and in the line of the web's motion, and mechanism responsive to variations in the phase in the cycle of the machine at which coincidence between said means and the indicia on the web occurs for varying the rate of feed of the web.



3. In a web feeding device of the type in which the amount of feed of the web is controlled by the phase relation or position of indicia on the web relative to a detecting device, that construction of detecting device comprising a light source, a photo-electric cell, and means for causing relative movement between the light source and the photo-electric cell along the path line of the web-borne indicia.

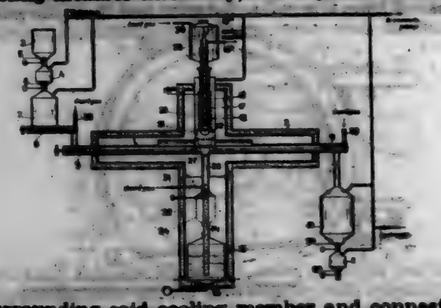
2,029,920

DRAIN TILE CONNECTER

Maurice R. Gutman, Lynbrook, N. Y.

Application March 17, 1934, Serial No. 716,118
8 Claims. (Cl. 61—10)

1. A drain pipe connecter for receiving pipe ends, comprising a band of generally annular form having a peripherally-extending slot over a portion of its circumference, and inwardly-extending stop shoulders adjacent to the ends of said slot.



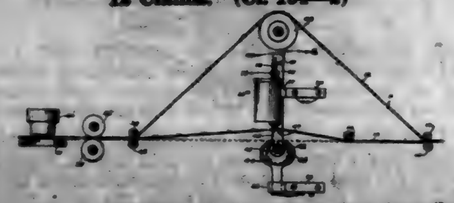
2,029,921

APPARATUS FOR PRODUCING SUBSTANTIALLY PURE MAGNESIUM

Fritz Hansgirg, Radentheln, Carinthia, Austria, assignor to American Magnesium Metals Corporation, Pittsburgh, Pa., a corporation of Delaware

Original application February 2, 1933, Serial No. 655,967. Divided and this application October 13, 1933, Serial No. 693,478. In Austria February 11, 1932
10 Claims. (Cl. 202—23)

1. Apparatus for the distillation of magnesium comprising a distillation chamber provided with a conveyor for moving the magnesium material through it, a condenser connected to said chamber and comprising a cooling member extending substantially vertically, means for cooling said cooling member internally, and a jacket member



surrounding said cooling member and connected to said chamber to cause the incoming vapors to bathe the lowermost portion of said cooling member; and a receiver for the product of distillation connected to said condenser.

2,029,922

METHOD OF AND MACHINE FOR UNITING LAYERS OF MATERIAL

John T. Heckel and Ralph S. Walker, Indianapolis, Ind., assignors to Gold Dust Corporation, New York, N. Y., a corporation of New Jersey

Original application March 30, 1932, Serial No. 601,782. Divided and this application January 26, 1934, Serial No. 708,438
12 Claims. (Cl. 154—2)

1. In a machine of the character described, means to guide a traveling web of material, means periodically to urge a portion of said web upwardly, and means synchronized with the second named means for depositing a bit of adhesive upon the raised portion of the web, said second-named means being constructed and arranged to cause said portion of the web to fall away rapidly substantially immediately after the adhesive has been deposited.

6. A method of uniting layers of material comprising passing a web of material along a given path, intermittently displacing portions of said web to the proximity of a point of discharge of adhesive, quickly withdrawing the web when a bit of adhesive has been discharged thereon and superimposing another web of material on the first mentioned web.

2,029,923

SAFETY APPLIANCE FOR FLANGED WHEELS

James A. Herbert, Cleveland, Ohio; Elizabeth A. Herbert, executrix of said James A. Herbert, deceased, assignor of one-fourth to Gilbert Morgan, Cleveland, Ohio

Application July 29, 1932, Serial No. 625,795
9 Claims. (Cl. 104—279)

1. A device of the type described, comprising a locomotive pilot truck having flanged wheels ar-

from the central part of the doorway, a mounting at said central part, confined away from the central mid-height area of the doorway and rotatable on a vertical axis, to which mounting each one of the full number of wings have their radially inner portions individually detachably connected, and means spaced at intervals at radially outer stationary parts of the doorway for detachable pivotal connection with radially outer parts of the respective wings for swinging each wing singly away from said mounting upon disconnection from said mounting.

2,029,915

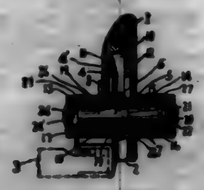
FEEDER AND CATCHER APPARATUS FOR ROLLING MILLS

Joseph E. Fawell, Pittsburgh, Pa.

Application May 21, 1932, Serial No. 612,670

8 Claims. (Cl. 80—47)

7. In combination with the rolls of a sheet rolling mill, spaced parallel supports extending at right angles to the roll pass and adapted to receive material delivered therefrom, an endless conveyor having spaced runs located between and paralleling said spaced supports, a pivotal mounting for the end of said conveyor remote from the mill, means for continuously driving said conveyor in a direction to carry material toward the mill and means including a crank arm and a motor adapted to rotate in one direction only for periodically raising and lowering said conveyor about its pivotal mounting.



2,029,916

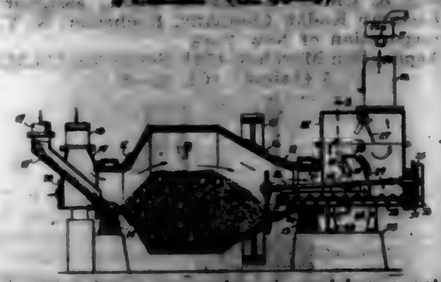
PAPER TRIMMER

Charles L. Friermood, Springfield, Ohio, assignor to Charles K. Hullinger, receiver for the Ridgely Trimmer Company, Springfield, Ohio, a corporation of Ohio

Application June 27, 1935, Serial No. 28,625

5 Claims. (Cl. 164—84)

5. In a paper trimmer, a body having a recess and a pair of aligned oppositely extending trunnions, an axle carried by one of said trunnions and having a threaded connection therewith so as to be capable of axial adjustment, said axle extending across said recess and loosely into the opposite trunnion, a cutting disk located in said recess and loosely mounted on said axle, a sleeve slidably mounted on said axle in said last mentioned trunnion, the inner end of said sleeve having a flange, a screw in said last mentioned trunnion having a shoulder to engage and move said sleeve, said axle having a shoulder on the opposite side of said disk from said sleeve and a loose washer between said last mentioned shoulder and said disk.



2,029,917

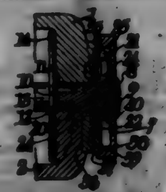
PULVERIZATION

Martin Frisch, New York, N. Y., assignor to Foster Wheeler Corporation, New York, N. Y., a corporation of New York

Application March 26, 1932, Serial No. 601,915

5 Claims. (Cl. 83—9)

1. Pulverizing apparatus comprising a rotatable drum having an end trunnion providing an outlet for the drum, a classifier having an inlet member associated with said trunnion, means for withdrawing fluid from said classifier, a screw conveyor in said classifier and extending within said trunnion, a baffle providing a plurality of vertical passages in said classifier, said conveyor being situated at the bottom of said passages, and a screen at the bottom of one of said passages above said conveyor and disposed between the baffle and the drum outlet.



2,029,918

CAMERA CONSTRUCTION

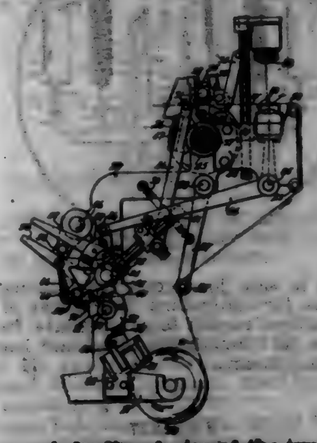
Carl C. Fuerst, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New York

Original application April 25, 1934, Serial No. 722,247. Divided and this application May 7, 1935, Serial No. 20,127

7 Claims. (Cl. 95—32)

1. In a film winding mechanism for cameras, the combination with a camera body, a removable back adapted to cover an opening in the camera body, spool chambers and an exposure frame carried by the camera, a forming carried by the camera and supporting a spool winding shaft extending through an aperture therein, a flange and slot connection between the camera back and body lying partially beneath the forming and making a light-tight connection, a winding knob mounted on the shaft and having an annular flange lying close to said forming and enclosing a pawl and ratchet adapted to prevent rotation of the knob and spool winding shaft in one direction.

2,029,919



WEB REGISTERING DEVICE

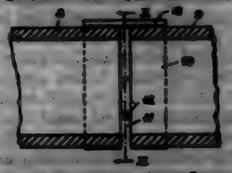
Frederic B. Fuller, Springfield, Mass., assignor to Package Machinery Company, Springfield, Mass., a corporation of Massachusetts

Application June 16, 1932, Serial No. 617,550

28 Claims. (Cl. 271—6.6)

1. In a web feeding device of the type in which the rate of feed of the web is controlled by the phase relation or position of indicia on the web relative to a detecting device, that construction of detecting device which comprises means movable at a speed different from the surface speed of the web and in the line of the web's motion, and mechanism responsive to variations in the phase in the cycle of the machine at which coincidence between said means and the indicia on the web occurs for varying the rate of feed of the web.

3. In a web feeding device of the type in which the amount of feed of the web is controlled by the phase relation or position of indicia on the web relative to a detecting device, that construction of detecting device comprising a light source, a photo-electric cell, and means for causing relative movement between the light source and the photo-electric cell along the path line of the web-borne indicia.



2,029,920

DRAIN TILE CONNECTER

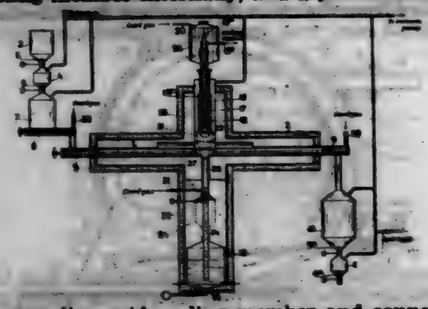
Maurice R. Gutman, Lynbrook, N. Y.

Application March 17, 1934, Serial No. 716,118

8 Claims. (Cl. 61—18)

1. A drain pipe connecter for receiving pipe ends, comprising a band of generally annular form having a peripherally-extending slot over a portion of its circumference, and inwardly-extending stop shoulders adjacent to the ends of said slot.

2,029,921



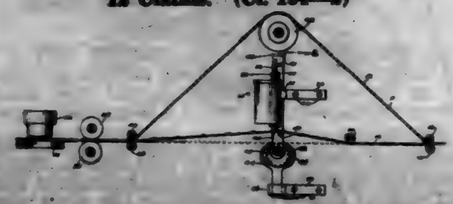
APPARATUS FOR PRODUCING SUBSTANTIALLY PURE MAGNESIUM

Fritz Hansgirg, Eisenthein, Carinthia, Austria, assignor to American Magnesium Metals Corporation, Pittsburgh, Pa., a corporation of Delaware

Original application February 3, 1932, Serial No. 655,987. Divided and this application October 13, 1933, Serial No. 693,470. In Austria February 11, 1932

10 Claims. (Cl. 204—70)

1. Apparatus for the distillation of magnesium comprising a distillation chamber provided with a conveyor for moving the magnesium material through it, a condenser connected to said chamber and comprising a cooling member extending substantially vertically, means for cooling said cooling member internally, and a jacket member surrounding said cooling member and connected to said chamber to cause the incoming vapors to bathe the lowermost portion of said cooling member; and a receiver for the product of distillation connected to said condenser.



2,029,922

METHOD OF AND MACHINE FOR UNITING LAYERS OF MATERIAL

John T. Heckel and Ralph S. Walker, Indianapolis, Ind., assignors to Gold Dust Corporation, New York, N. Y., a corporation of New Jersey

Original application March 20, 1933, Serial No. 661,782. Divided and this application January 26, 1934, Serial No. 708,433

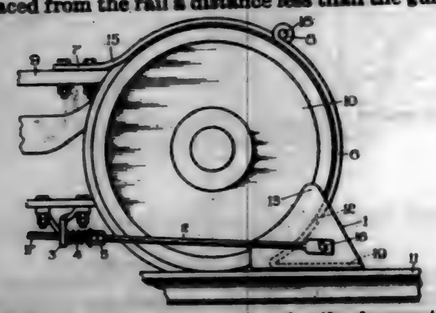
12 Claims. (Cl. 154—2)

1. In a machine of the character described, means to guide a traveling web of material, means periodically to urge a portion of said web upwardly, and means synchronized with the second named means for depositing a bit of adhesive upon the raised portion of the web, said second-named means being constructed and arranged to cause said portion of the web to fall away rapidly substantially immediately after the adhesive has been deposited.

6. A method of uniting layers of material comprising passing a web of material along a given path, intermittently displacing portions of said web to the proximity of a point of discharge of adhesive, quickly withdrawing the web when a bit of adhesive has been discharged thereon and superimposing another web of material on the first mentioned web.

2,029,923

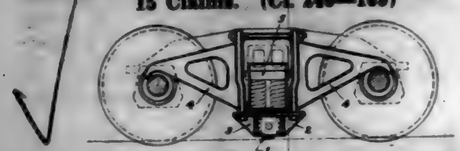
SAFETY APPLIANCE FOR FLANGED WHEELS



James A. Herbert, Cleveland, Ohio; Elizabeth A. Herbert, executrix of said James A. Herbert, deceased, assignor of one-fourth to Gilbert Morgan, Cleveland, Ohio

Application July 29, 1932, Serial No. 625,795

9 Claims. (Cl. 104—270)

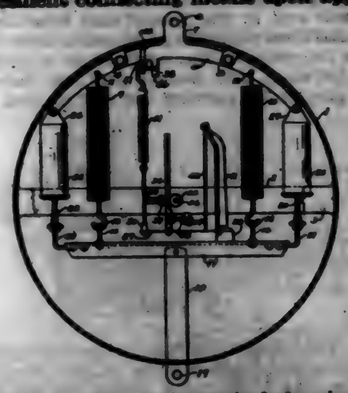


1. A device of the type described, comprising a locomotive pilot truck having flanged wheels ar-

ranged to run on rails, an antiderailing block, a connection between the block and the truck to support the block in stationary spaced relation with the wheel and its rail, said block being spaced from the rail a distance less than the guid-

ing height of the flange, whereby the locomotive can run at full speed without contact between rail and block, but at all times with the wheel guarded against any obstruction large enough to lift the wheel flange above the rail.

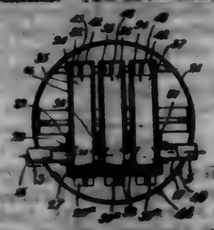
2,023,924
SAFETY APPLIANCE FOR TRUCKS OF RAILWAY CARS
James A. Herbert, Cleveland, Ohio; Elizabeth A. Herbert, executrix of said James A. Herbert, deceased, assignor of one-fourth to Gilbert Morgan, Cleveland, Ohio
Application September 2, 1932, Serial No. 631,480
15 Claims. (Cl. 246—169)



1. In a safety device for railway cars having supporting wheels, brakes for said wheels, control means for said brakes, and means associated with said control means for operating the same upon the falling of any one of said cars, to apply the brakes on all the other cars and prevent the application of the brakes upon the fallen car.

2,023,925
CELLULOSE ORGANIC ESTER COMPOSITIONS CONTAINING A PROPIONYL ESTER OF GLYCEROL
David C. Hull, Kingsport, Tenn., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New York
No Drawing. Application April 10, 1933, Serial No. 665,335
10 Claims. (Cl. 106—48)

1. A composition of matter comprising a cellulose organic acid ester and, as a plasticiser therefor, a compound selected from the group consisting of glycerol diproprionate and glycerol dipropionate monoacetate.

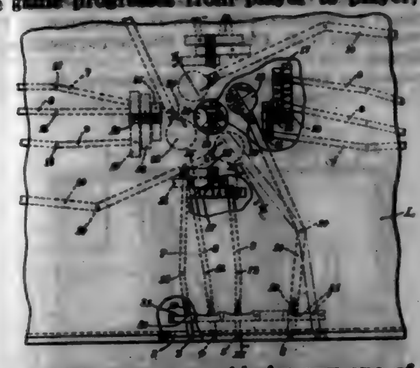


2,023,926
WEIGHING SCALE
Samuel N. Hurt, Toledo, Ohio, assignor to Toledo Scale Manufacturing Company, Toledo, Ohio, a corporation of New Jersey
Application February 2, 1935, Serial No. 4,618
7 Claims. (Cl. 265—69)

1. In a device of the class described, in combination, spring load-counterbalancing means, indicator-operating means, resilient means connecting said load-counterbalancing means and said indicator-operating means, means for flexing said resilient connecting means upon application

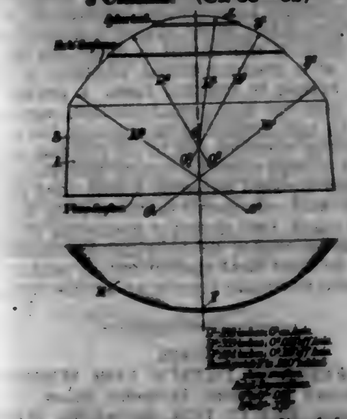
of a load to said load-counterbalancing means, and means for controlling the extent of flexure of said resilient means to compensate for effects of changes in temperature upon said load-counterbalancing means.

2,023,927
WATER HEATER
Thomas H. Ireland, Rockville Centre, N. Y.
Application September 23, 1934, Serial No. 745,841
6 Claims. (Cl. 257—254)



1. A heat exchanger device comprising a casing having a continuous bore extending longitudinally therethrough, a plurality of tubes radiating from said bore at spaced intervals longitudinally thereof, the chambers of said tubes opening into and being in communication through said bore, means arranged longitudinally of said tubes and extending through said bore for subdividing the tubes into independent circulating passages placed in communication with each other at the free end of the tubes said last named means comprising plates, and the casing having spaced passages in alinement with said tubes and communicating with the bore of said casing to provide attachment and detachment of the plates with respect to said tubes.

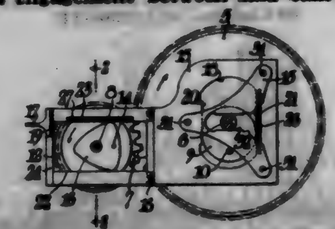
2,023,928
RECORDING SAFETY GAME BOARD
Hubert F. Kranis, West Palm Beach, Fla., assignor to Recording Card Table Company, Inc., West Palm Beach, Fla., a corporation of Florida
Application August 11, 1933, Serial No. 684,668
7 Claims. (Cl. 272—143)



1. A game board of the class described including parts providing a playing surface, a rotatably mounted member having indicia thereon regarding the duties of the different players, and a plurality of members one for each player operable to rotate said rotatable member thereby to

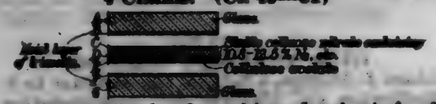
indicate the changed duties of the players as the game progresses from player to player, to-

gether with means movable by any one of said plurality of members to cover and conceal the indicia on said rotatable member.



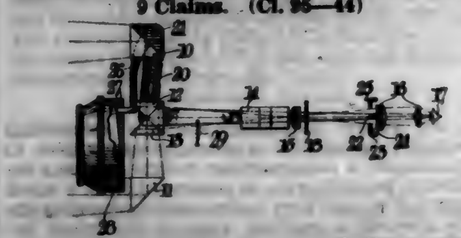
2,023,935
CATADIOPTRIC UNIT
Richard W. Lace, Elizabeth, N. J., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New York
Application February 21, 1933, Serial No. 657,831
3 Claims. (Cl. 88—83)

1. A lens for use in a catadioptric unit and having one plane surface and the other surface convex and divided into a series of coaxial zones, the center zone being a portion of a spherical surface, the outer zones being toric in contour and the average focal points of the several zones being coincident, whereby the total spherical aberration is less than that of an equivalent single spherical surface and a controlled amount of diffusion is introduced due to the differences in the signs of the spherical aberration of the adjacent portions of the successive zones.



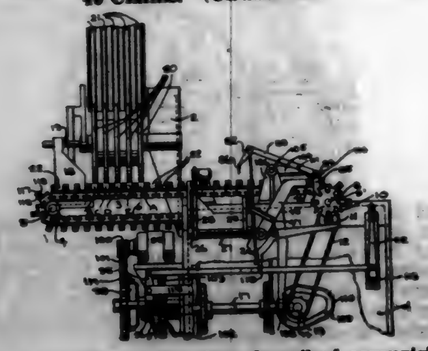
2,023,936
CAM FOLLOWER FOR A STRIP ADVANCING MECHANISM
Louis D. Martin, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New York
Application November 30, 1934, Serial No. 755,459
3 Claims. (Cl. 74—34)

1. In a device of the character described, the combination with a movable cam composed of a non-metallic composition which is susceptible to change in size with change in atmospheric conditions, of a cam follower having a pair of juxtaposed surfaces for engaging opposite surfaces of said cam, and including a resilient portion carrying one of said surfaces and for insuring continuous engagement between said cam surfaces



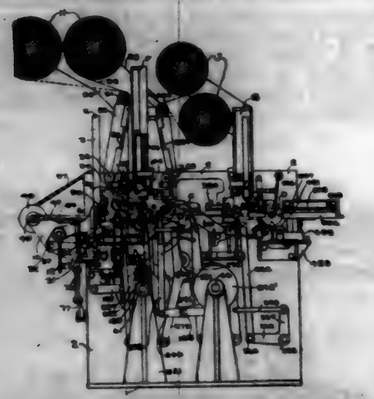
and said follower surfaces, said resilient portion also being flexible for movement with respect to said follower without altering the condition of continuous engagement between said cam and follower and being flexed upon change in the size of said cam, which change in size results from change in atmospheric conditions.

2,023,931
LAMINATED GLASS AND METHOD OF MAKING THE SAME
James G. McNally, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New York
Application July 28, 1932, Serial No. 625,709
4 Claims. (Cl. 49—81)



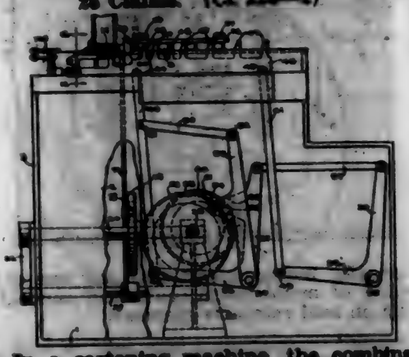
1. The method of making laminated glass which comprises placing a sheet of cellulose organic ester having on each face thereof an adherent coating of a stable cellulose nitrate having a nitrogen content of 10.8–12.5%, a viscosity of not more than 50 seconds, and an ash of not more than .4%, between sheets of glass, interposing a thin layer of triacetin between the contiguous surfaces of glass and cellulose nitrate, and uniting the sheets by heat and pressure.

2,023,932
RANGE FINDER FOR CAMERAS
Joseph Mihalyi, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New York
Application September 6, 1934, Serial No. 742,948
9 Claims. (Cl. 95—44)



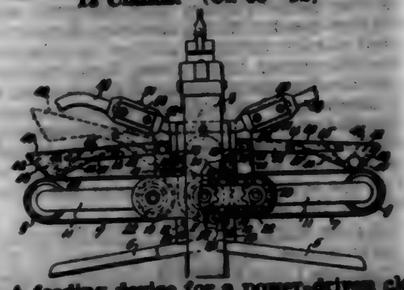
1. A photographic camera including a casing, a lens mount carried by the casing and having a part movable for focusing, a range finder mounted on said casing and provided with an operating lever adapted to be actuated in strict accordance with the focusing adjustment of the movable part of the lens mount, and means for actuating said operating lever independently of the movable part of said lens mount.

2,029,933
RAZOR BLADE PACKAGING MACHINE
Michael J. Milmoe, Chicago, Ill., assignor to F. B. Redington Company, Chicago, Ill., a corporation of Illinois
Application July 2, 1929, Serial No. 375,616
40 Claims. (Cl. 226—14)



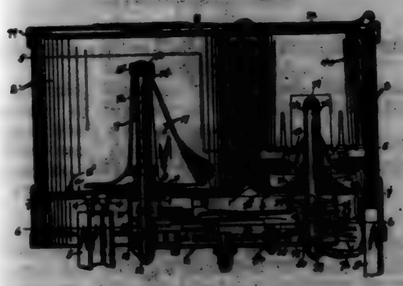
1. A machine of the class described comprising means for receiving a predetermined number of articles formed in a stack, a single means for detecting when there are less than the required number of articles in said stack, and a normally inoperative ejector operated by said detecting means for ejecting the stack of articles from the receiving means in the event that there are less than the required number of articles therein.

2,029,934
GUM WRAPPING MACHINE
Michael J. Milmoe, Chicago, Ill., assignor to F. B. Redington Co., Chicago, Ill., a corporation of Illinois
Application July 26, 1930, Serial No. 471,935
37 Claims. (Cl. 93—7)



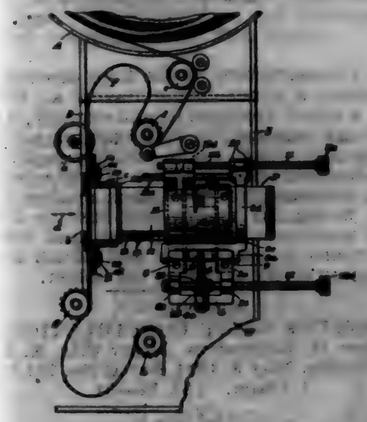
1. An article packaging machine comprising means for supporting a plurality of articles to be packaged, a reciprocating member, means for removing an article to be packaged from a stack supported by said first means and for moving the same towards a position where a wrapping operation is to take place, and supplemental means for moving said article toward said position after said article has been moved a predetermined distance by said article removing means and while said reciprocating member is returning to its original position, said supplemental means being adapted to begin its action upon said article while the article is still under motion due to being moved by said removing means.

2,029,935
CARTON FEEDING MECHANISM
Michael J. Milmoe, Chicago, Ill., assignor to F. B. Redington Co., Chicago, Ill., a corporation of Illinois
Application December 12, 1930, Serial No. 502,984
26 Claims. (Cl. 226—2)



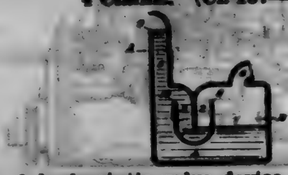
1. In a cartoning machine, the combination with a conveyor having a plurality of article receiving pockets, a hopper for receiving a plurality of cartons, a transport member having a stripping member carried thereby and movable relatively thereto, means for moving said stripping member in timed relation to the movements of said conveyor, means for normally holding said stripping member in operative position to remove a carton from said hopper as said transport moves along its path of movement, a detecting member arranged at a predetermined position to detect when an article is missing from a pocket presented at said last mentioned position, and means operated by said detecting mechanism for moving said stripping member out of its normal path of movement if and when an empty pocket is found to be empty by said detector a sufficient amount to prevent said stripper from stripping a carton from said stack, said detector operating in such a manner as to render said stripping member inoperative to feed that carton out of said hopper which would normally receive an article from said pocket.

2,029,936
SAFETY FEEDING DEVICE FOR WRINGERS
Henry L. Merin, Holyoke, Mass.
Application July 17, 1931, Serial No. 551,423
13 Claims. (Cl. 68—32)



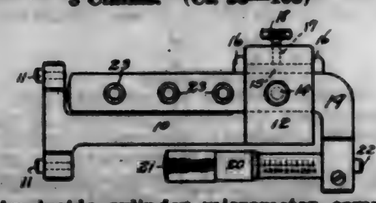
1. A feeding device for a power-driven clothes wringer which comprises a belt for feeding clothes to or from the wringer rolls, means to drive the belt, a pivotally mounted guard overlying the belt, the free edge of the guard being provided with a rigid, downwardly extending blunt edged, weighted smoothing member normally contacting with the belt and beneath which the clothes are drawn by the belt in their passage to the wringer rolls.

2,029,937
COMBINED WASHING AND DRYING MACHINE
Jabez Curry Nelson, Syracuse, N. Y., assignor to Easy Washing Machine Corporation, Syracuse, N. Y., a corporation of Delaware
Application May 6, 1931, Serial No. 535,542
5 Claims. (Cl. 68—15)



1. In a device of the class described, a washing vat substantially square in cross section in which an agitator is oscillatably mounted, a drying vat substantially square in cross section in which a centrifuge is mounted, a common base for the washing and drying vats whereby they may be mounted in juxtaposition and through which the drive shafts for the agitator and centrifuge pass, said common base having depressed portions conforming in shape to and being adapted to receive, the bottoms of the vats.

2,029,938
PROJECTION APPARATUS
David F. Newman, Rockville Centre, N. Y., assignor to Trans-Lux Daylight Picture Screen Corporation, New York, N. Y., a corporation of Delaware
Application July 21, 1934, Serial No. 736,390
11 Claims. (Cl. 88—24)

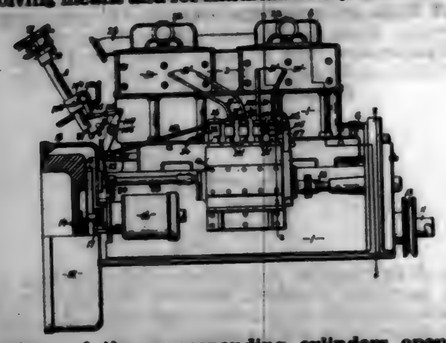


1. The combination with the vertical wall dividing a projector mechanism housing into compartments, of vertical guiding means, a bracket adjustable along said guiding means, means carried by the horizontal section of said bracket for supporting a projection lens, and manually operable screw-threaded means for adjusting said bracket in either of opposite vertical directions along said guiding means.

2,029,939
HYDROSTATIC VALVE, MORE PARTICULARLY FOR SIPHON DISCHARGE APPARATUS
Ruggero Niccolai, Rome, Italy
Application June 22, 1934, Serial No. 731,997
In Italy August 22, 1933
4 Claims. (Cl. 137—106)

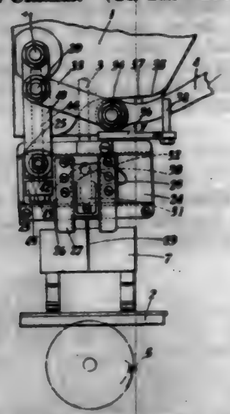
1. A hydrostatic valve device characterised by two parallelly disposed inverted siphons, one of which descends to a lower point than the other and is provided with a large chamber, in which the liquid with its free surface can make a vertical stroke which corresponds to the total stroke of the arm of the other siphon, the said arm being connected to the chamber, means for supplying gas to the said chamber and to the said arm under variable pressure, and the other two arms of both siphons being connected and carried upwardly into a hydraulic loading circuit provided with an overflow, the capacity of the chamber corresponding to the above-mentioned stroke being sufficient to contain the quantity of liquid which flows back out of the above-mentioned discharge conduit when the gas under varying pressure forces the liquid out of the siphon so that it falls to a minimum level, which is higher than that of the other siphon.

2,029,940
MICROMETER
William Pinola, Altoona, Pa.
Application August 11, 1933, Serial No. 684,716
3 Claims. (Cl. 33—165)



1. An inside cylinder micrometer comprising an inverted T-shaped base provided with two aligned hardened steel points for engaging one of the cylinder walls; a yoke; means for securing the yoke to the T-shaped frame; a micrometer head carried by the said yoke; means for advancing the point of the micrometer until the opposite cylinder wall is engaged; means for reading the exact diameter of the cylinder and means for retracting the micrometer point.

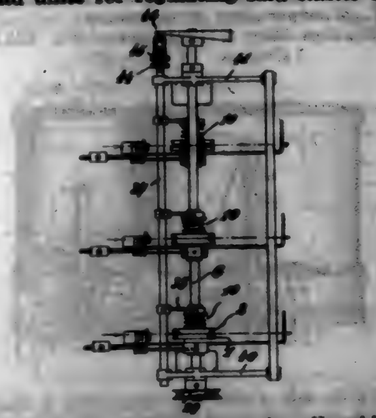
2,029,941
INTERNAL COMBUSTION ENGINE "DIESEL"
Henry Pokorney, Rome, N. Y.
Application February 18, 1932, Serial No. 593,942
8 Claims. (Cl. 123—139)



1. In an engine of the character described, a plurality of cylinders arranged in line, each cylinder having an air inlet and a valve for opening and closing said inlet, means for operating said valves, a fuel pump for each of said cylinders, a plunger for each of said pumps, a pivoted arm for engaging each of said plungers, revolving means for periodically engaging said arms to actuate said plungers, and means operable at will for

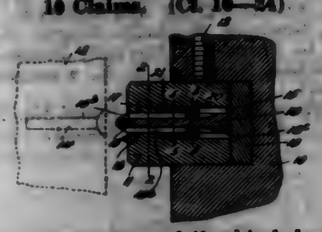
selectively disengaging said arms from said revolving means and for simultaneously holding said

valves of the corresponding cylinders open to reduce the load on the engine when starting.



2,029,542
SEWING MACHINE
Naham Rapaport and Edward West Armstrong, Belfast, Northern Ireland, and Oliver George Hutchinson, Brighton, England
Application November 18, 1932, Serial No. 643,276
In Great Britain November 30, 1931
33 Claims. (Cl. 112—158)

1. In a sewing machine, the combination of means for reciprocating the needle axially, means for throwing the needle to and fro laterally to a variable extent in a plane transverse to the line of sewing, a rotary hook actuable in timed relationship with the needle reciprocating and throwing means, manually-controlled means for varying the extent of the needle throwing at the will of the operator, and means varying the height at which the needle reciprocates in dependence on the variable lateral throw imparted to the needle and thereby ensuring proper presentation of the needle thread loops to the hook in all of the variable lateral positions of the needle.



2,029,543
YARN AND THREAD TENSIONING MECHANISM FOR COP WINDING AND LIKE TEXTILE MACHINES
Wilhelm Reimers and Gustav Kahlisch, Gladbach-Rheydt, Germany, ass'gnors to W. Schlafhorst & Co., Gladbach-Rheydt, Germany, a German corporation
Application July 18, 1934, Serial No. 735,888
In Germany April 4, 1934
2 Claims. (Cl. 242—150)

1. Yarn tensioning mechanism comprising in combination a plurality of tensioning units, each consisting of two rotatable brake disks arranged for yarn to pass with friction between them, elastic means whereby one disk of each unit is urged towards the other disk, means common to all said units for regulating said elastic means,

driving mechanism common to all said units, for each of said units a friction coupling connecting it to said driving mechanism, and for each of said units a stop motion device adapted on breakage of yarn to uncouple the unit from said driving mechanism.

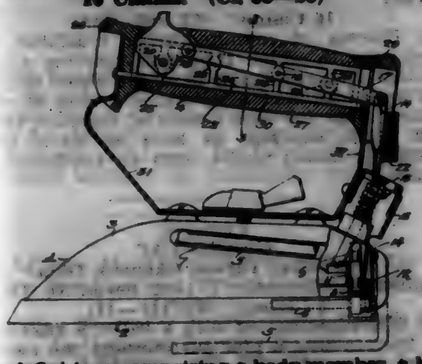
2,029,544
RECESS FORMING PUNCH AND HOLDER
Vincent James Reddy, Providence, R. I., assignor to American Screw Company, Providence, R. I., a corporation of Rhode Island
Application November 7, 1934, Serial No. 751,946
10 Claims. (Cl. 10—24)

1. In a construction of the kind described, in combination, a punch holder having an opening therein, a punch mounted in said opening, a locking bushing arranged in said opening and surrounding said punch, said bushing and punch having interengaging surfaces thereon to limit forward movement of said punch relative to the bushing, means for holding said bushing against forward movement in said holder, and interengaging means on said holder and punch to prevent rotation of the punch in the holder.

2,029,545
DENTURE VALVE CONSTRUCTION
Milton M. Rubinstein, Jersey City, N. J.
Application May 8, 1934, Serial No. 724,556
1 Claim. (Cl. 32—3)

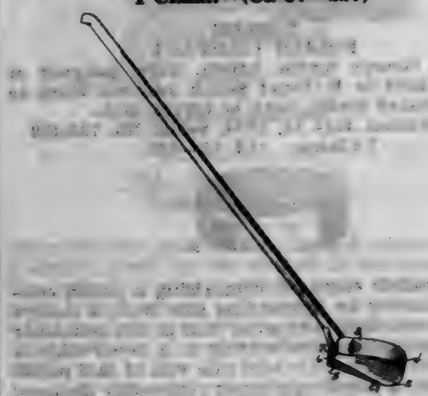
In combination, a denture including a base adapted to fit over the gum, said base having an air passageway for the withdrawal of air from between the gum and the base, a hollow valve one face of which is an elastic substantially flat diaphragm normally closing said passageway but adapted to open the same by its responsiveness to a difference in air pressure on its opposite faces created by suction induced by the user.

2,029,546
PROCESS OF MAKING PHOTOGRAPHIC EMULSIONS
Max Schmid, Riehen, near Basel, Switzerland, assignor to Society of Chemical Industry in Basle, Basel, Switzerland
No Drawing. Application December 8, 1933, Serial No. 701,531. In Switzerland December 10, 1932
4 Claims. (Cl. 95—7)



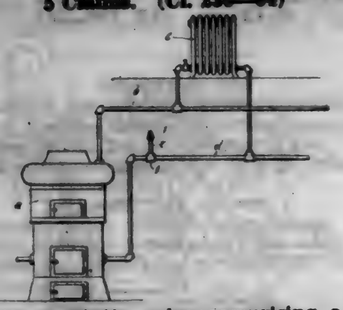
1. Process of making photographic silver halide gelatine emulsions by mixing the components necessary for the preparation of the emulsions and ripening the emulsions, consisting in withdrawing during the ripening of the silver halide gelatine emulsion at least two portions thereof, of different degrees of ripeness, and then uniting them.

2,029,547
FACIAL MASK AND METHOD OF MAKING THE SAME
Ruth M. Schmitt, New York, and Cornelia M. Bell, New Rochelle, N. Y.
Application July 21, 1935, Serial No. 31,063
9 Claims. (Cl. 128—146)



1. A facial mask, comprising a body of waxed paper, an inner layer of gauze, and upper and lower tapes, said gauze layer and said tapes having wax connection with said paper.

2,029,548
FLATIRON
Walter M. Schwartz, Philadelphia, Pa., assignor to Procter & Schwartz, Incorporated, Philadelphia, Pa., a corporation of Pennsylvania
Application September 30, 1933, Serial No. 691,644
10 Claims. (Cl. 38—26)



1. A flat iron comprising a body member, a hollow handle for said member, support means for the iron adjustably mounted on said body, means operative to normally retract said support, and manual support-actuating means mounted within the handle for urging the support into operative position.

2,029,549
LAWN EDGER
Charles S. Scott, Bluffton, Ind.
Application April 8, 1935, Serial No. 15,339
1 Claim. (Cl. 97—227)

An implement of the class described comprising a scoop having a flat bottom wall, a rounded front wall and side walls and open at its top and rear end, said scoop being formed along one side edge thereof with a trough shaped rib depending from said bottom wall and inclining downwardly and rearwardly, said rib being open at its rear end and provided at said end with cutting edges, a socket member secured in said scoop to said bottom wall at one side of said rib, and a handle secured in said socket and inclining upwardly and rearwardly and also laterally of said scoop.

2,029,550
THERMOSTATIC RELIEF VALVE
William K. Simpson, Waterbury, Conn., assignor to Hoffman Specialty Company, Waterbury, Conn., a corporation of Illinois
Application February 2, 1933, Serial No. 655,076
5 Claims. (Cl. 236—64)

1. A thermostatic valve comprising a casing having a relatively large open end and a wall extending across the opposite end containing a vent port, the intermediate sides of the casing having a threaded zone of smaller diameter than the open end, a thermostatic unit comprising a dished base and a flexible diaphragm hermetically sealed at its rim to the base across the concave side of the latter, the base having a skirt complementally threaded to engage the threaded zone of the casing, and being separated from the encircling walls of the casing, which skirt has

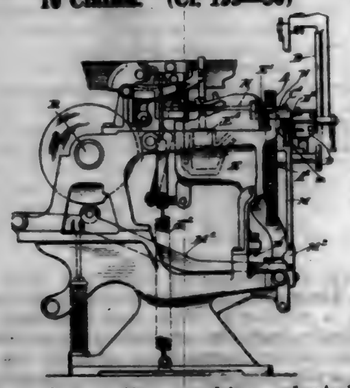
one or more ports for making communication between the interior spaces of the shell at opposite sides of the thermostat, a valve element carried by said diaphragm in position to open and close said port with movements of the diaphragm effected by expansion and contraction of fluid in the thermostat chamber, and fastening means holding the threaded skirt immovably at a given point of engagement with the threaded zone.

2,029,951

POLISH COMPACT

Arthur George Smith, Elyria, Ohio, assignor of one-third to E. Janet Smith and one-third to C. Willard Smith, both of Elyria, Ohio

Application July 16, 1934, Serial No. 735,420
5 Claims. (Cl. 15—258)



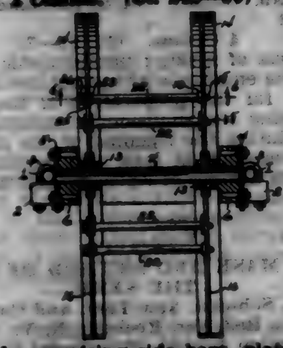
1. A polish compact, comprising a polish container having an upstanding side wall, a closure means removably engaging said polish container and terminating downwardly in a cover edge, a tab receiving recess in said side wall of said polish container, a polish applicator removably disposed in said polish container engaged by said closure means, and a tab forming a part of said polish applicator and removably positioned within said tab receiving recess in said side wall of said polish container in contact with and substantially sealing said polish container and said closure means and adapted for being interposed between said cover edge of said closure means and a finger tip during the separation of said closure means from said polish container.

2,029,952

SLUG CASTING MACHINE

Anthony J. Stouges, Queens Village, N. Y., assignor to Mergenthaler Linotype Company, a corporation of New York

Original application June 19, 1931, Serial No. 545,398. Divided and this application January 31, 1933, Serial No. 654,558. In Great Britain January 25, 1932
10 Claims. (Cl. 199—56)



1. In a slug casting machine, adapted to be equipped with a non-expansible composed matrix line of a given length, the combination of a supporting frame, right and left hand clamping jaws mounted for horizontal movement in said frame, a transporter for positioning said matrix line between said jaws, positive means for moving the left hand jaw toward the opposing jaw from a normal to a definite predetermined position, said means having a range of movement sufficient to reduce the distance between the jaws to less than the length of said matrix line, a line-clamping spring arranged behind the right hand jaw to permit it to yield under the thrust of the left hand jaw through the composed matrix line, and a fixed stop to limit the yielding movement of the right hand jaw.

2,029,953

WIRE REEL

John R. Sutliff, Lagina, Oreg.

Application December 3, 1934, Serial No. 755,824
2 Claims. (Cl. 242—96)

1. A reel comprising side bars, plates secured to the rear ends of the bars, one of said plates being imperforate and the other plate having an opening therethrough, blocks secured to the inner sides of the plates and having central openings, an axle inserted through the openings with one end abutting the imperforate plate, a lever pivoted on said plate below the opening therein, yieldable means normally holding the lever across the opening, a guard extending over the lever and against which the lever may abut to be held at one side of the opening, and a carrier rotatably mounted on the axle.

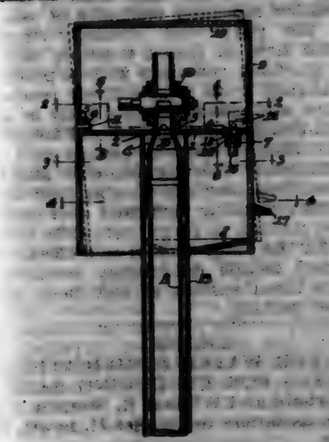
2,029,954

MANUFACTURE OF SYNTHETIC RESINS OF THE AMINE-ALDEHYDE TYPE

Theodor Sutter, Basel, Switzerland, assignor to Society of Chemical Industry in Basle, Basel, Switzerland

No Drawing. Application January 23, 1933, Serial No. 653,217. In Switzerland February 5, 1932
10 Claims. (Cl. 260—130)

1. Process of manufacturing moldable synthetic resins, which comprises reacting a polynuclear aromatic amine base, the nuclei of which are linked together by less than 2 mols of methylene-groups for each 2 mols of aromatic radicle and which contains at least as many amine groups as linked nuclei, with an aldehydic substance.



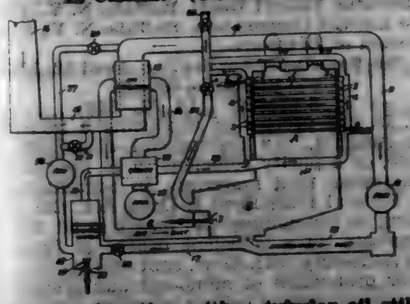
2,029,955

GUARD CAP

Henry Ray Taylor, Okemah, Okla.

Application November 7, 1934, Serial No. 751,911
2 Claims. (Cl. 137—12)

1. The combination with a valve, a riser leading thereto, and a pipe surrounding the riser, of a disk joined to said pipe, said disk having an opening therein, a hook upon the disk, an arcuate shield friedly joined to the pipe and located beneath the opening, a cap movable into position around the disk and shield, separate means carried by the cap for engaging the disk to support the cap, there being a finger depending from one of said means, said cap being rotatable relative to the disk to position one of said means in engagement with the hook and to bring the finger into the opening, a guard depending from the disk and extending around the opening to house the end of the finger, and a removable lock insertable into the guard for engagement with the finger above the shield, said lock being suspended within and surrounded and protected by the cap.



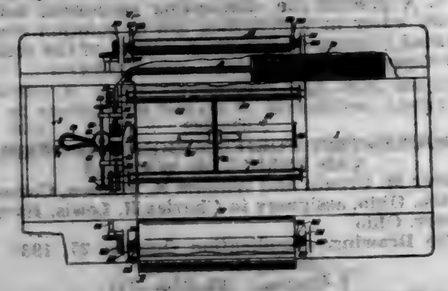
2,029,956

METHOD AND APPARATUS FOR FIRING OIL STILLS

Clarence H. Thayer, Wallingford, Pa., assignor to Sun Oil Company, Philadelphia, Pa., a corporation of New Jersey

Application August 15, 1935, Serial No. 36,234
12 Claims. (Cl. 196—110)

9. The combination with a tubular oil still in which the tubes are connected by return bends of header boxes surrounding said return bends, means for introducing an inert gas into said header boxes, and means for flowing gases from said header boxes to the combustion zone of said still.



2,029,957

ELECTRICAL MULTIPLE TYPEWRITER

Jakow Trachtenberg, Berlin-Charlottenburg, Germany

Application November 5, 1931, Serial No. 573,215
In Germany January 26, 1928
2 Claims. (Cl. 197—12)

1. An electrical multiple typewriter comprising a continuously rotatable typewheel, a platen, electro-magnetic typing means for bringing the platen into contact with a definite type on the typewheel, a contact arm rotating continuously and synchronously with the typewheel, a plurality of contact stops, a keyboard comprising a plurality of keys, electro-magnetic means operated by the keys and adapted to bring the contact

stops into the path of the rotating contact arm, a circuit closed by the contact of the stops and the contact arm and operating the electro-magnetic typing means, and means whereby the rotating contact arm returns the contact stops to their position of repose after closing said circuit.

2,029,958

PROCESS FOR THE PURIFICATION OF ORGANICALLY POLLUTED WATERS

Oliver M. Urbain, Columbus, Ohio, assignor to Charles H. Lewis, Harpster, Ohio

No Drawing. Application August 28, 1933. Serial No. 687,245
5 Claims. (Cl. 210—2)

1. A process for oxidizing putrescible organic matter in water comprising passing diffused air through the water containing the organic matter to be oxidized and promoting the oxidation by the employment of a catalyser in the form of a compound belonging to the class including the salts and hydroxides of a metal which can be oxidized at least two units of valence selected from the group including chromium, manganese, osmium, tin, vanadium, antimony, bismuth, molybdenum and selenium and continuing the passage of air through the water until at least a substantial portion of the catalyser compound has been oxidized through two units of valence.

2,029,959

PROCESS OF WATER PURIFICATION

Oliver M. Urbain, Columbus, Ohio, assignor to Charles H. Lewis, Harpster, Ohio

No Drawing. Application July 23, 1934, Serial No. 737,472
3 Claims. (Cl. 210—2)

1. A process for eliminating amines, cyclic amides and hydroxy compounds from water comprising reacting therewith a reagent of the isocyanate group.

2,029,960

PROCESS OF WATER PURIFICATION

Oliver M. Urbain, Columbus, Ohio, assignor to Charles H. Lewis, Harpster, Ohio

No Drawing. Application July 23, 1934, Serial No. 737,474
2 Claims. (Cl. 210—2)

1. A process for the elimination of amines and cyclic amides from water which comprises reacting therewith a reagent of the acidic phenol group.

2,029,961
PROCESS OF WATER PURIFICATION
Oliver M. Urbain, Columbus, Ohio, assignor to Charles H. Lewis, Harpster, Ohio
No Drawing. Application July 28, 1934, Serial No. 737,475
3 Claims. (Cl. 210—2)

1. A process for eliminating carboxylic acids from water in which they are in solution comprising reacting therewith a reagent of the acidic amine salt group.

2,029,962
PROCESS FOR PURIFICATION OF POTABLE AND POLLUTED WATERS
Oliver M. Urbain and William R. Stemen, Columbus, Ohio, assignors to Charles H. Lewis, Harpster, Ohio
No Drawing. Application October 27, 1934, Serial No. 750,386
6 Claims. (Cl. 210—23)

1. In a process for the treatment of potable and polluted waters, the step of subjecting the water to the action of chlorinated coal.

2,029,963
PROCESS FOR PURIFICATION OF POTABLE AND POLLUTED WATERS
Oliver M. Urbain and William R. Stemen, Columbus, Ohio, assignors to Charles H. Lewis, Harpster, Ohio
No Drawing. Application October 27, 1934, Serial No. 750,387
6 Claims. (Cl. 210—23)

1. In a process for the treatment of potable and polluted waters, the step of subjecting the water to the action of hydroxylated chlorinated coal.

2,029,964
PROCESS FOR PURIFICATION OF POTABLE AND POLLUTED WATERS
Oliver M. Urbain and William R. Stemen, Columbus, Ohio, assignors to Charles H. Lewis, Harpster, Ohio
No Drawing. Application April 1, 1935, Serial No. 14,185
2 Claims. (Cl. 210—2)

1. In a process for the treatment of potable and polluted waters, the step of subjecting the water to the action of etherated chlorinated coal.

2,029,965
WINDOW VENTILATOR
Damase J. Roy, North Attleboro, Mass.
Application April 16, 1935, Serial No. 16,648
1 Claim. (Cl. 98—96)

A rectangular window ventilator comprising a wooden body portion of a length substantially that of a window frame or window, of a substantial height, and of a substantial thickness having a longitudinal slot substantially the length thereof extending obliquely therethrough, said body having means on the edges thereof adapted to be non-leakably secured to a window pane edge and sash panel or a window frame, said body having an inner surface having an inset portion extending substantially over said inner surface, a closure plate vertically slidably mounted in said inset portion and having a central hole near the lower edge thereof, a hinged locking member mounted centrally of said plate having a pin projecting inwardly therefrom through said hole in closed position, said body also being provided centrally with a plurality of vertically aligned holes to selectively receive said pin to secure said closure to said body in adjustable vertical positions relative to said longitudinal slot, in a position completely closing said slot, a position completely opening said slot, and a plurality of positions partially closing said slot, retaining strips extending vertically over each edge of said inset portion to form therewith, retaining guideways for the outer ends of said closure plate, and threaded means detachably securing said strips to the inner surface of said body exterior of said inset portion.

2,029,966
REAGENT FOR WATER PURIFICATION AND PROCESS FOR PRODUCING SAME
Oliver M. Urbain and William R. Stemen, Columbus, Ohio, assignors to Charles H. Lewis, Harpster, Ohio
No Drawing. Application May 18, 1933, Serial No. 12,261
6 Claims. (Cl. 210—2)

1. A reagent for use in the purification of water comprising a nitrated oxidized carbonaceous material formed by reacting a carbonaceous material selected from the group consisting of bituminous coal, anthracite coal, lignite coal, cannel coal, peat and coke with a reagent selected from the group consisting of nitric acid, nitric acid and sulfuric acid, nitric acid and orthophosphoric acid, nitrous oxide and nitrogen dioxide.

2,029,967
TREATMENT OF COMMERCIAL DICALCIUM PHOSPHATE
Franciscus Visser't Hooft, Buffalo, N. Y., assignor to Lucidol Corporation, Buffalo, N. Y., a corporation of Delaware
No Drawing. Application April 22, 1933, Serial No. 667,495
5 Claims. (Cl. 23—243)

1. In the process of producing a non-caking, free-running, dry commercial dicalcium phosphate, of a purity sufficient to be used in edible farinaceous food materials, in compliance with the Federal Pure Food & Drug Act, the step of adding to dry commercial precipitated dicalcium phosphate, of a sufficient degree of fineness to mix uniformly with flour, containing only a very minor proportion of mono-calcium phosphate, a dry non-poisonous caking inhibitor consisting of a substance which will neutralize acidity of any mono-calcium phosphate present, said inhibitor being a compound of an alkali-forming metal, and which substance, ingested in small amounts, is non-injurious to health.

2,029,968
MANUFACTURE OF TEXTILES
Leo Wallerstein, Rowland A. Gale, and Thomas G. Hawley, Jr., New York, N. Y., assignors to Wallerstein Company Inc., a corporation of New York
No Drawing. Application April 26, 1934, Serial No. 725,544
6 Claims. (Cl. 117—3)

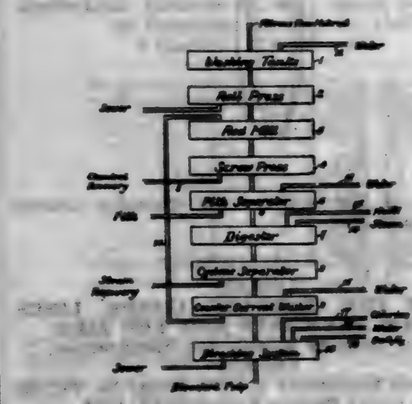
1. A process of making a fabric containing natural silk fibres provided with their body-giving gum coatings, some of which coatings in the fabric are in relatively inaccessible condition, while others are in accessible condition to the action of a subsequent decoating bath, which comprises impregnating these fibres, the coatings of which are relatively inaccessible with a proteolytic enzyme preparation without removing said coating, drying said impregnated fibres, combining said impregnated fibres with unimpregnated fibres, the coatings of which are relatively accessible to form a fabric.

2,029,969
SILK YARN PREPARED FROM NATURAL SILK IN THE GUM
Leo Wallerstein, Rowland A. Gale, and Thomas G. Hawley, Jr., New York, N. Y., assignors to Wallerstein Company Inc., a corporation of New York
No Drawing. Application April 26, 1934, Serial No. 722,545
1 Claim. (Cl. 117—53)

Highly twisted silk yarns for weaving and knitting, comprising natural silk in gum, said yarn being rendered more flexible and with lessened tendency toward kinkiness and unevenness by impregnation with a proteolytic enzyme preparation without removal of the gum, the yarn being dry and containing said preparation.

2,029,970
YARN
Leo Wallerstein, Rowland A. Gale, and Thomas G. Hawley, Jr., New York, N. Y., assignors to Wallerstein Company Inc., a corporation of New York
No Drawing. Application April 26, 1934, Serial No. 722,546
2 Claims. (Cl. 91—68)

1. A yarn composed of natural silk in gum and impregnated with a proteolytic enzyme, said yarn having enhanced absorptive properties and the gum on said yarn having substantially the original body-giving properties in respect to textile processing, said yarn being particularly adapted for knitting, weaving, and other textile operations.



2,029,971
MIXED CELLULOSE ACETATE-NATURAL SILK FABRICS
Leo Wallerstein, Rowland A. Gale, and Thomas G. Hawley, Jr., New York, N. Y., assignors to Wallerstein Company, Inc., a corporation of New York
No Drawing. Application April 26, 1934, Serial No. 722,567
1 Claim. (Cl. 139—420)

A mixed cellulose acetate-natural silk fabric, said natural silk being in the gum, the natural silk fibres of said fabric being impregnated with and containing a proteolytic enzyme, without degumming, said fabric being capable of being degummed at a temperature of less than 185° F. and at relatively low alkalinities to prevent injury to the cellulose acetate.

2,029,972
PROCESS OF MAKING A KNITTED FABRIC
Leo Wallerstein, Rowland A. Gale, and Thomas G. Hawley, Jr., New York, N. Y., assignors to Wallerstein Company, Inc., a corporation of New York
No Drawing. Application April 26, 1934, Serial No. 722,568
2 Claims. (Cl. 66—202)

1. A process of making a knitted fabric capable of being simultaneously dyed and degummed in acid, neutral and alkaline media, which comprises impregnating yarn composed of natural silk in gum with a proteolytic enzyme preparation, while leaving the gum on the yarn without disadvantageously affecting its body giving properties, then twisting the yarn and finally knitting the yarn.

2,029,973
PAPER PULP MAKING PROCESS
Sidney D. Wells, Combined Locks, Wis., assignor of one-half to Gerald D. Muggleton, Appleton, Wis.
Application August 22, 1934, Serial No. 741,010
9 Claims. (Cl. 92—8)

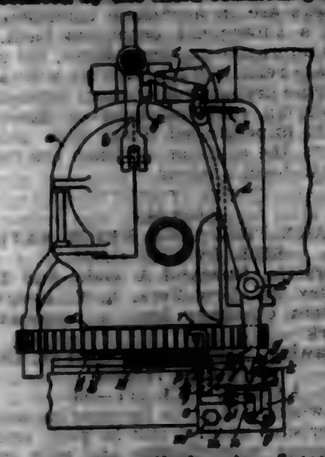
1. The hereindescribed method of producing paper pulp which consists in feeding a continuous stream of the material into a rod mill, immersing the material in partially spent, hot, cooking lyes from a subsequent digestion step, separation of the fibrous and cellular elements by the beating, pounding and rubbing action of the freely falling rods within the rotating drum of the mill, discharging the pulp material from the mill continuously, removal of the substantially completely spent lyes therefrom, treatment of the material to digestion at elevated temperature with cooking lyes containing an excess of cooking chemical and removal of the partially spent lyes from the completely pulped material for use in the preliminary treatment of the raw fibrous material in the rod mill.

2,029,974
HOG RING CLINCHING TOOL
Willard F. Whitaker, Batavia, Iowa
Application October 2, 1934, Serial No. 747,599
1 Claim. (Cl. 128—332)

A tool of the character described comprising pivoted levers having opposed jaws, one jaw being bifurcated and the other jaw having a substantially semi-circular shaped groove longitudinally therein, the bifurcated jaw being curved inwardly, a cross web bridging the bifurcation in the bifurcated jaw at its outer end and constituting an abutment for an eye end of a nose ring for hogs to confront the bifurcation and a clinching arm pivoted in the bifurcation in the bifurcated jaw in cross relation to the web and having a guide channel for conducting a prong end

of the nose ring when passed through the eye end of the latter about the eye end and in the

direction of the web for the clinching thereof with the eye end.



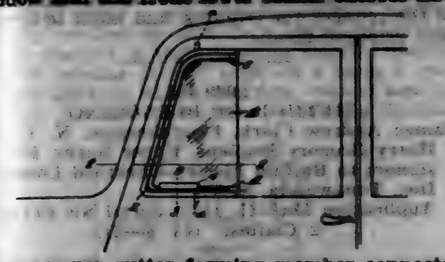
2,029,571
HOLDER FOR THREADS, CORDS, LINES, WIRES, FLY-CASTS AND THE LIKE
Hubert Douglas Winchester, Monkseaton, England
Application September 4, 1934, Serial No. 743,664
In Great Britain February 22, 1934
12 Claims. (Cl. 242—129)

1. An improved holder for threads, cords, lines, wires, fly-casts and the like (hereinafter referred to as "thread") comprising a hollow ring, a slit running around the said ring for the passage of the "end" of the thread, and resilient edges to the slit which edges press against each other so as yieldingly to grip the said thread "end".

2,029,574
PUMP STOP MECHANISM FOR TYPOGRAPHICAL LINE CASTING MACHINES
Paul Wunsch, Leipzig, Germany, assignor to Mergenthaler Linotype Company, Brooklyn, N. Y., a company of New York
Application May 5, 1934, Serial No. 724,643
In Germany May 19, 1933
11 Claims. (Cl. 199—53)

1. In a typographical line-casting machine having a metal-pot mouthpiece movable into and out of contact with the mold, the combination with a pump stop lever and means actuated during justification of a composed matrix line adapted to control said lever to release the pump stop, of secondary control means for the said lever actuated by the mold contacting movement

of the metal-pot mouthpiece to release the pump stop.

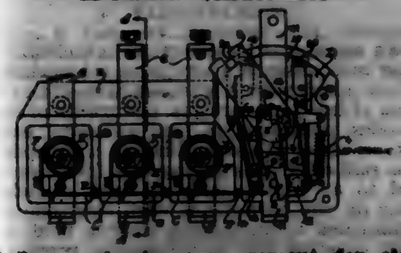


2,029,577
HOLDER
Louis A. Anderson, Somerville, Mass.
Application December 31, 1934, Serial No. 759,396
3 Claims. (Cl. 292—16)

1. A closure holder comprising a base, a standard mounted upon the base, arms extending from the standard at its upper end, a pair of spaced cylinders supported in axial alignment by the arms clear of and spaced a substantial distance from the upper end of the standard, and spring-pressed plungers slidable within and projecting beyond the opposed ends of the cylinders, the projecting ends of said plungers being of generally rounded form and adapted to cooperate with a latch pin disposed either parallel to or transversely of the standard.

2,029,578
GUTTER ATTACHMENT FOR VENTILATING WINDOWS OF MOTOR VEHICLES
Joseph Bolton Andrews, Jr., Newport, Ky.
Application October 29, 1934, Serial No. 750,584
4 Claims. (Cl. 296—44)

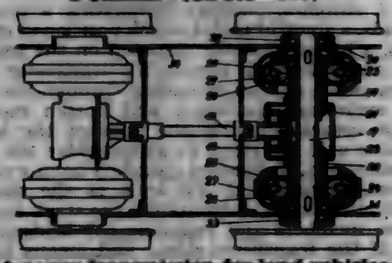
3. In combination with a ventilating window of a vehicle comprising a window panel pivoted on a vertical axis in said window, a gutter-forming member attached to the outer face thereof at the front and lower edges of the window panel, that portion of the bottom part of the gutter-forming member between the lower pivot of the window and the front lower corner thereof hav-



ing an upper gutter forming member connected therewith.

2,029,979
PHONOGRAPHIC FILM
Roger Bernheim, Bezons, France, assignor to Le Film Ozaphane, Société Anonyme, a corporation of France
Application October 2, 1934, Serial No. 748,492
In France October 14, 1933
8 Claims. (Cl. 274—41.5)

1. The method of obtaining a plurality of sound films from a film bearing a wide photographic sound record extending across the film, which comprises cutting the film longitudinally into a plurality of strips having identical sound records.



2,029,980
RELEASING ARRANGEMENT FOR ELECTRIC SWITCHES
Ernst Dessg, Baden-Baden, Germany
Application May 15, 1934, Serial No. 727,491
In Germany May 24, 1933
13 Claims. (Cl. 200—88)

13. In a releasing arrangement for electric switches, the combination of an insulating housing, thermally acting releasing members adapted to be heated by electric current, a winding for each releasing member and through which the heating electric current is adapted to flow, each of said windings co-operating with a magnet core with an armature to magnetize the same, partitions which subdivide said housing into a plurality of chambers whose number is greater by at least one than the number of releasing members, each releasing member and its winding being accommodated in a separate chamber, means for compensating for the influence of room tempera-

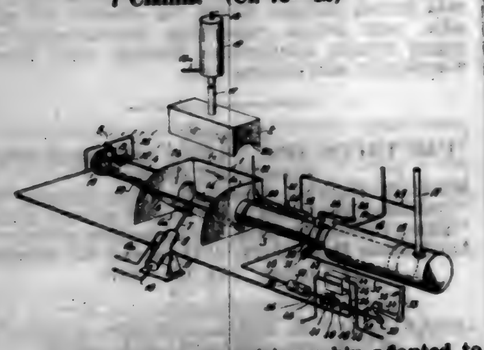
ture on the releasing members and for adjusting their releasing path, said means being arranged in the additional chamber not occupied by a releasing member and its winding, and a releasing cross-member adapted to be actuated by the releasing members and said armatures, said cross-member passing through apertures in the partitions, said partitions being adapted to insulate thermally and electrically said releasing members from each other and from said compensating-and-adjusting means.

2,029,981
TRANSMISSION GEAR
Willy Black, Hanover, Germany, assignor to Franz Kruckenberg and Curt Stedefeld, both of Hanover, Germany
Application January 23, 1933, Serial No. 653,146
In Germany January 29, 1932
8 Claims. (Cl. 105—118)

1. A power transmission for land vehicles, self-propelled railway cars and the like, comprising a driving axle carrying a pair of driving wheels, a driving shaft extending longitudinally of the vehicle and adapted to be continuously driven by a non-reversing power plant, a pair of hydraulic transmission gears each including a driving turbine wheel cooperating with a fixed guide wheel and a driven wheel, the axes of said transmission gears extending transversely of the vehicle, mechanical gearing actuated by said driving shaft for rotating the driving turbine wheels simultaneously in opposite directions with respect to each other, and means actuated alternatively by said driven turbine wheels for driving the said axle, said means comprising permanently-engaged driving connections between said driven wheels and said driving axle.

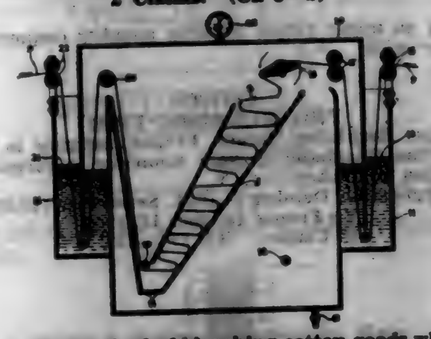
2,029,982
CAR TRUCK SIDE FRAME AND BOLSTER CONSTRUCTION
Albert O. Buckius, Cleveland, Ohio, assignor to National Malleable and Steel Castings Company, Cleveland, Ohio, a corporation of Ohio
Application October 27, 1931, Serial No. 571,295
14 Claims. (Cl. 105—197)

1. In a car truck, a side frame having a bolster receiving window opening and a shelf at the bottom of the window, a bolster having a spring retaining flange at its under side and outside the limits of the shelf, and having a flat spring seating portion extending from the flange to the end of the bolster, springs operatively interposed



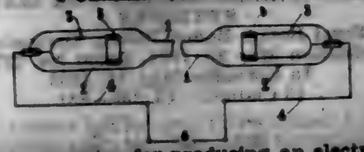
between the shelf and flat portion, and means whereby the bolster ties the side frames together, said flat portion of the bolster being adapted to rest on said shelf when said springs are removed.

2,029,863
MEANS AND METHOD OF PACKAGING
Earl I. Burke, Warren, Ohio, assignor to Republic Steel Corporation, Youngstown, Ohio, a corporation of New Jersey
Application December 16, 1933, Serial No. 702,706
3 Claims. (Cl. 206—60)



2. A shipping package comprising a plurality of skids, a stack of metal sheets positioned on said skids, a batten member disposed on the top surface and extending beyond the transverse edges of the stack, a strap extending through the skids and encircling the stack and batten member, means associated with the ends of the batten member and the strap so as to bridge the strap therebetween, end batten members having rounded ends disposed at the ends of the stack, a longitudinal strap surrounding the stack and end batten members and engaging the bridged portion of the transverse strap, and means for securing the longitudinal strap under tension, the straps serving to secure the skids, batten members and stack into a package capable of movement as a unit.

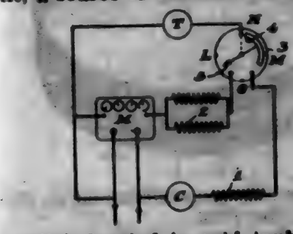
2,029,864
BALING PRESS
Alfred C. Buttfield, North Plainfield, and Raymond W. Muller, Bewaren, N. J., assignors to The Vulcan Detinning Company, a corporation of New Jersey
Application March 14, 1932, Serial No. 598,684
7 Claims. (Cl. 78—42)



1. A baling press comprising a bin adapted to receive a charge of loose material, a compression chamber having one of its ends in communication with the bin and its other end open, a ram reciprocable within the bin to compress the material in one direction, a plunger reciprocable within the bin in another direction to compress the material compactly within the compression chamber to form a bale, gripping means for holding a previously formed bale within the compression chamber to provide an abutment against which the loose material is compressed, means for actuating said gripping means, a latch for holding said gripping means against operation, and means operable in timed relation with respect to the plunger for tripping said latch to actuate said gripping means.

2,029,865
METHOD OF BLEACHING
James Andrew Clark, Poughkeepsie, N. Y., and Harry Gregory Smelcus, Upper Darby, Pa., assignors to Buffalo Electro-Chemical Company, Inc., Tonawanda, N. Y.
Application May 21, 1932, Serial No. 614,522
2 Claims. (Cl. 8—2)

1. The method of bleaching cotton goods which comprises wetting the goods with a quantity of a solution of hydrogen peroxide in water sufficient to moisten the goods, and thereafter subjecting the goods to a temperature above the boiling point of the solution in an atmosphere containing steam for a period of time sufficient to produce the desired bleaching effect in the goods.

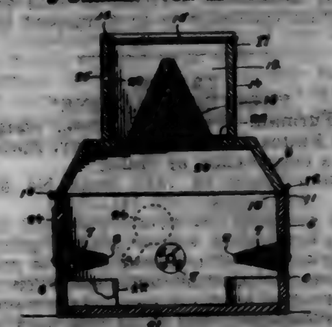


2,029,866
ELECTRIC LIGHTING APPARATUS
André Claude, Nanterre, France
Application February 19, 1932, Serial No. 593,114
In France February 19, 1931
9 Claims. (Cl. 176—126)

3. An apparatus for producing an electric discharge in a gaseous atmosphere, comprising an envelope filled with a gaseous atmosphere containing at least one rare gas, a plurality of spaced electrodes positioned in said envelope, each of which serves at the same time as a cathode and anode, said electrodes having thin free edges subjected to an intense electric field, a dielectric coating on the portions of each electrode which are subjected to an intense electric field, and a deposit covering the electrodes for producing a small cathodic drop and containing a metal selected from the group consisting of alkali and alkaline earth metals.

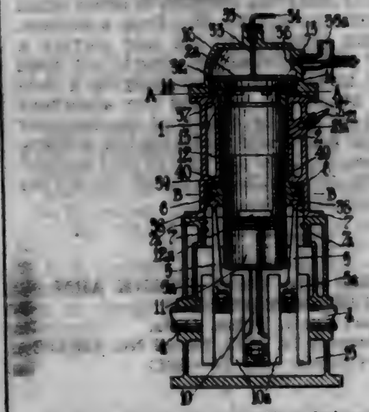
2,029,867
ELECTRIC WATER HEATER
Albert F. Craver, Lakewood, Ohio, assignor to The Cleveland Heater Company, Cleveland, Ohio, a corporation of Ohio
Application April 21, 1930, Serial No. 445,953
6 Claims. (Cl. 219—38)

1. In an electric water heater, in combination, a hot water storage tank, a cold water supply conduit communicating with said tank, a conduit for the withdrawal of hot water communicating with said tank, a low capacity electric heating element located in said tank adjacent to the bottom thereof, a high capacity electric heating element located in said tank on a level a substantial distance above said first named heating element, a source of electrical energy, a thermo-



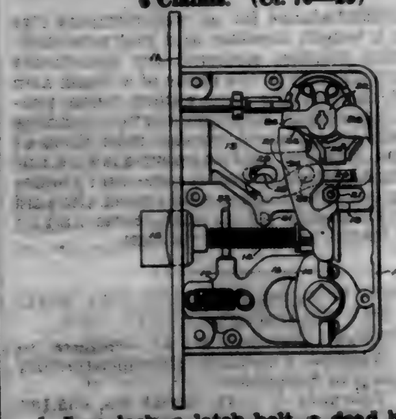
static switch located in said tank adjacent the upper heating element, said thermostatic switch controlling the supply of electrical energy to both of said heating elements, a meter for recording the consumption of electrical energy of said high capacity heating element only, and a manual switch for selectively connecting either said first named heating element or both said heating elements to said source of electrical energy.

2,029,868
METHOD AND MATERIAL FOR IMPROVING THE GROWTH OF PLANTS
William B. Doe, Jacksonville, Fla.; Flora N. Doe, administratrix of the estate of said William B. Doe, deceased, assignor to The Hydro-Humus Corporation of America, Jacksonville, Fla., a corporation of Florida
No Drawing. Application June 10, 1935, Serial No. 25,945
12 Claims. (Cl. 47—58)



1. The method of improving the growth of plants, trees, shrubs and other vegetation which comprises placing in the soil surrounding the roots thereof pieces of palmetto wood which have been cut into comparatively short lengths to expose the ends of the fibers thereof and provide a highly absorbent mass.

2,029,869
FLYCATCHER
William S. Driggers, Bostwick, Fla., assignor of one-half to E. J. Hancock, Palatka, Fla.
Application August 27, 1934, Serial No. 741,669
3 Claims. (Cl. 43—132)

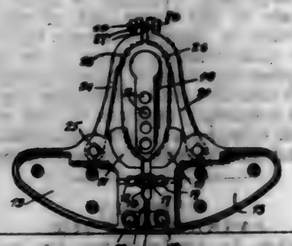


1. A trap of the kind described, comprising a hollow body having a vertically swinging lid forming a cover thereto, a dome rising from the lid and having a transparent top panel separably fitted therewith, reticulated entrance zones fitted in the sides of the body and in the lid for the passage of flies from without the body inwardly thereof and upwardly into the dome and a sun rays' reflector concentrically about the cones fitting the lid and at the bottom of the dome interiorly thereof.

2,029,880
INTERNAL COMBUSTION ENGINE
George Stanley Edlin and Hector Halhead Stewart, Auckland, New Zealand, assignors to The New Zealand Edlin-Stewart Engine Company Limited, Auckland, New Zealand, a company of New Zealand
Application June 28, 1930, Serial No. 464,585
14 Claims. (Cl. 123—50)

9. A method of operating internal combustion engines comprising trapping a body of combustion gases in the lower end of the cylinder space, forming a separate dense body of fuel mixture in said cylinder space, then compressing said bodies together to bring about ignition of the fuel mixture and adjusting the time of ignition by varying the areas of the admission ports of the cylinder to vary the speed of rotation of the fuel mixture in said cylinder space.

2,029,891
PANICPROOF LOCK
John V. Eichel, Jr., Philadelphia, Pa., assignor to H. S. Getty & Co., Inc., Philadelphia, Pa., a corporation of Pennsylvania
Application March 23, 1935, Serial No. 12,606
6 Claims. (Cl. 70—29)

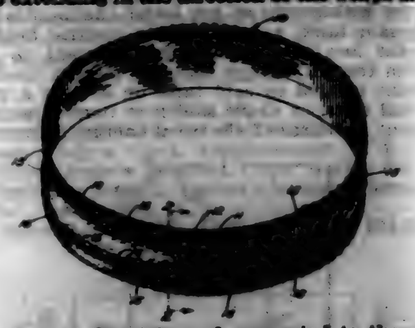


1. In a lock, a latch bolt, a dead bolt, a rollback yoke having portions to contact and simul-

taneously withdraw both said bolts from operative to inoperative position, either of said bolts being movable from operative to inoperative position independently of any movement of the roll-back yoke or of the other of the bolts and key-operated means to move said bolts.

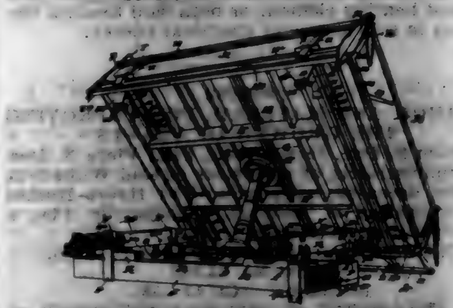
2,029,992
FINISH REMOVING PROCESS
Carleton Ellis, Montclair, N. J., assignor to Chadeloid Chemical Company, New York, N. Y., a corporation of West Virginia
No Drawing. Application September 17, 1931, Serial No. 563,689
5 Claims. (Cl. 87—5)

1. A process of removing coatings of dried liquid coating compositions and the like, from a surface, which comprises applying to the said surface a liquid remover and allowing the same to act upon the coating to soften the same, applying a pulverulent solid absorbent, working the absorbent with the slush formed by action of the remover upon the coating finish, and removing the mixture from the surface, the total amount of said absorbent added being substantially enough to dry up the slush on said surface.



2,029,993
ADJUSTABLE OIL WELL CRANK ARM COUNTERWEIGHT
Carl Esrit, Tulsa, Okla.
Application August 24, 1932, Serial No. 630,602
10 Claims. (Cl. 74—591)

10. A counterbalance for oil well pumping rigs comprising a weight member and instrumentalities including tension elements for detachably securing said member in the plane of a crank arm at one end thereof, the said weight being provided with a recess in its upper portion opposite the end of the crank arm to receive filler shoes of various sizes, whereby said member may be applied to crank arms of various sizes and shapes and at least one filler shoe in said recess, the said shoe being shaped to fit in said recess and to embrace at least a portion of said arm.

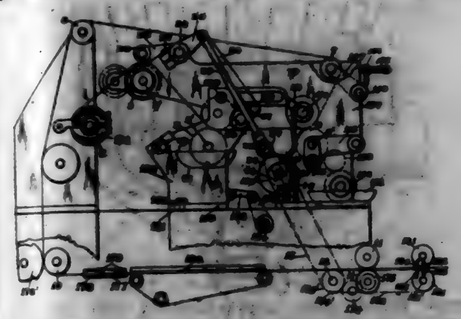


2,029,994
WICKING
George S. Fabel, Trenton, N. J., assignor to Southern Asbestos Company, Charlotte, N. C., a corporation of Delaware
Application February 3, 1933, Serial No. 655,102
4 Claims. (Cl. 87—40)

1. A wicking comprising a woven strip and a wire extending in the direction of the warps along

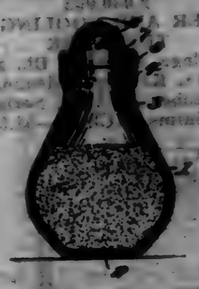
one face of the strip and connected to the strip by a strand of the strip.

2,029,995
DUMP VEHICLE
Henry Fort Flowers, Findlay, Ohio
Application November 28, 1933, Serial No. 644,715
28 Claims. (Cl. 298—18)



1. In a dump vehicle, a frame, a body, members on said body and frame for providing a lateral fulcrum about which said body may tilt, a downfolding side door pivoted on said body, and door controlling devices for positively closing the door during return of the body from tilting about said fulcrum and for maintaining the door closed during transport and during raising movement of the body relative to the frame adjacent said fulcrum, said devices including means which may be shifted for rendering the devices inoperative for effecting a positive closing of the door, and also including means on said frame, body and door which are effective for preventing accidental shifting of said shiftable means while the body is in transport position.

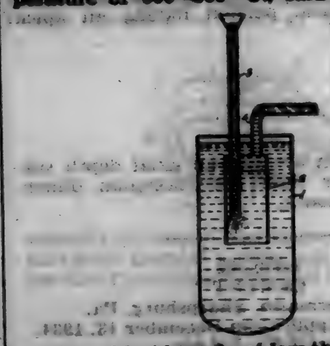
2,029,996
PRINTING MACHINE
Samuel Furman, Worcester, Mass., assignor to United States Envelope Company, Springfield, Mass., a corporation of Maine
Application March 30, 1933, Serial No. 661,945
25 Claims. (Cl. 101—228)



1. In a machine for printing spaced impressions on a continuous web by gravure printing, a gravure printing roll, a pressure roll to press the web against the printing roll, means for feeding a predetermined length of web between said rolls for each rotation of the print roll, said feeding means comprising a driving roll having the same surface speed as the printing roll, and a movable roll engaging said driving roll and pressing the web against said driving roll during a portion only of each rotation of said driving roll for advancing

the web between the printing and pressure rolls at the same speed as the rolls, and means for spacing the surface of the pressure roll from the printing roll during a portion of each rotation

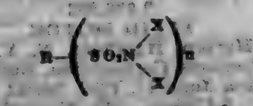
of the printing roll while the movable roll is spaced from the driving roll to provide for a relative movement between said web and the surface of the printing roll.



2,029,997
CONDIMENT HOLDER
Lenna I. Gaddy, Panama City, Fla.
Application November 20, 1934, Serial No. 753,969
1 Claim. (Cl. 65—45)

A condiment holder comprising an elastic compressible body of substantially oval formation and being restricted toward its upper end, a flat elastic base for said body and formed therewith, an elastic neck formed with the restricted upper end and being relatively thickened with an annular groove interiorly arranged therein, said restricted upper end merging into the neck in rounded formation to provide an exteriorly arranged annular recessed finger receiving portion, a substantially dome-shaped cap for closing the mouth of said neck and having dispensing openings therein, and an annular flange extending outwardly from the lower edge of the cap and shaped to fit the groove and detachably received therein.

2,029,998
METAL RECOVERY
Harvey N. Gilbert, Niagara Falls, N. Y., assignor to The E. I. du Pont de Nemours & Company Incorporated, Wilmington, Del., a corporation of Delaware
Application February 2, 1933, Serial No. 654,844
11 Claims. (Cl. 75—132)



1. A process for recovering sodium from a mixture of sodium, calcium, and non-metallic substances comprising introducing said mixture into a fused salt separating bath having a specific gravity greater than that of sodium at a temperature of 600°–900° C., said bath comprising

calcium chloride and not less than 30% by weight of sodium chloride.

2,029,999
PRINTING PREPARATION AND PROCESS
Fritz Griesbaber, Riehen, near Basel, Switzerland, assignor to the firm Society of Chemical Industry in Basle, Basel, Switzerland
No Drawing. Application June 30, 1934, Serial No. 733,327. In Switzerland July 8, 1933
10 Claims. (Cl. 8—5)

1. A process of printing native or regenerated cellulose or animal fibers with dyestuffs, consisting in using as assistants bodies of the general formula

wherein R represents alkyl, phenyl or naphthyl, the two X's represent hydrogen or an alkyl group free from carboxyl-groups, and n is 1, 2 or 3.

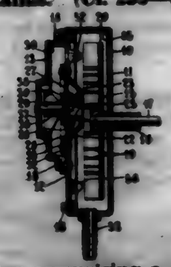
2,030,000
TROLLING CRADLE
Roland P. Harrington, Washington, D. C.
Application July 30, 1935, Serial No. 33,901
6 Claims. (Cl. 43—27)

1. Trolling apparatus comprising in combination with a trolling line and a spinner line, a symmetrically arranged carrier, swivel means interposed between one end of the carrier and the trolling line, separate swivel means interposed between the carrier and the spinner line, and means for removably mounting a weighted mass on said carrier.

2,030,001
CONE FOR USE IN WIRELESS LOUDSPEAKERS, TELEPHONES, AND THE LIKE
Frank Harrison, Braintree, England
Application November 26, 1932, Serial No. 644,231
In Great Britain November 19, 1929
9 Claims. (Cl. 181—31)

1. A diaphragm of conical formation, capable of vibrating freely over its full area in sympathy

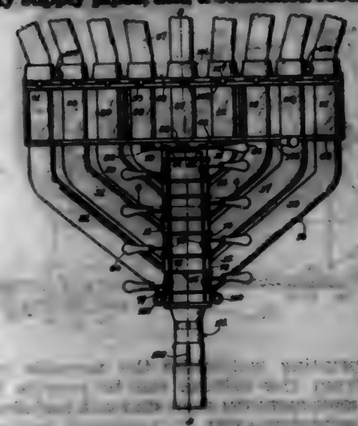
with the impulses transmitted axially at substantially the center of the cone, the diaphragm including a conical portion having an apical



angle of less than 30° and an axial depth substantially greater than the maximum dimension across the mouth.

2,030,002
CEMENT
Arnold Hermann, Sharpsburg, Pa.
No Drawing. Application December 18, 1934, Serial No. 758,094
1 Claim. (Cl. 106—39)

The process of producing cement comprising first forming a dry mixture of two kilograms of magnesium oxide, two kilograms of barium sulfate, and one kilogram of chalk, then forming a liquid mixture of three liters of an aqueous solution of magnesium chloride having a density of 27° Bé., one liter of sulphuric acid 22° Bé., one liter of muriatic acid 21° Bé., and combining five parts by volume of the dry mixture with two parts by volume of the liquid mixture.



2,030,003
FLUID MOTOR
Erwin C. Herten, Hamburg, N. Y., assignor to Trico Products Corporation, Buffalo, N. Y.
Application June 15, 1933, Serial No. 676,006
3 Claims. (Cl. 253—50)

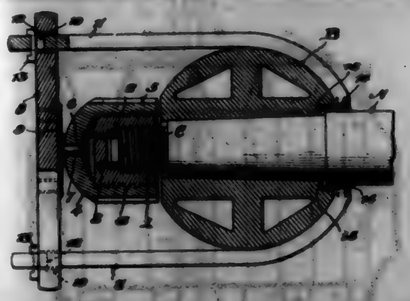
1. A fluid motor comprising a casing, a region of fluid under variable sub-atmospheric pressure communicating with said casing, a rotor journalled in the casing, a partition including a diaphragm carried in the casing, a valve having a connection with the diaphragm, an air supplying nozzle communicating with the atmosphere and disposed in the casing wall at a location spaced from the partition, and a nozzle in the partition normally closed against communication with the atmosphere by said valve, said diaphragm being responsive to changes in pressure in said region of fluid under variable sub-atmospheric pressure to open the valve whereby atmospheric air is directed against the rotor through the second nozzle.

2,030,004
DISPENSING APPARATUS
George R. Hutchison, Beckley, W. Va.
Application July 18, 1935, Serial No. 32,089
13 Claims. (Cl. 221—146)

1. In a dispensing apparatus, a plurality of upstanding downwardly inclined normally closed valve controlled selectably opened commodity conducting pipes, a chute common to the outlet ends of said pipes, each of said pipes including a transparent intake member for viewing the commodity conducted by the pipe, a plurality of commodity supply pipes, and a combined receiver and

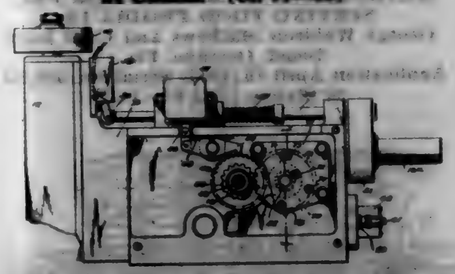
holder structure common to said supply pipes and intake members, said structure being formed with openings for establishing communication between the supply pipes and intake members and selectable cutoffs for said supply pipes.

2,030,005
CONTAINER AND COOLING MEANS THEREFOR
John L. Kellogg, Chicago, Ill., assignor to Helen L. Kellogg, Chicago, Ill.
Application October 30, 1933, Serial No. 695,715
6 Claims. (Cl. 62—61.5)



1. A portable refrigerating container comprising a receptacle having an inner wall and an outer wall spaced therefrom to provide a cooling chamber for the circulation of refrigerant, and a refrigerating element secured in a wall of the container, said element including a supporting head, and a double walled body supported on said head and having a storage compartment therein adapted to contain a mass of solidified gaseous refrigerant, said head and the inner wall of said body having openings therein to provide for circulation of gaseous refrigerant from the storage compartment through the space between the walls of said body and thence into the cooling chamber.

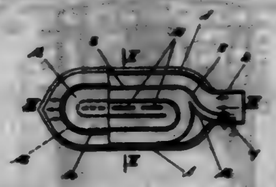
2,030,006
PROPELLER PULLER
Paul Kelly, English Lookout, La.
Application June 8, 1935, Serial No. 25,643
7 Claims. (Cl. 29—33)



1. A device of the character described for removing propellers or the like from their support-

ing shafts, including a stop member for removable support on said shaft, power means rotatable about and movable axially of said stop member and outwardly of the latter, and means for con-

necting the propeller and said power means whereby to move said propeller in an outward direction upon its shaft and against said stop member when the power means is moved outwardly upon said stop member.



2,030,007
FEED MECHANISM FOR MACHINE TOOL UNITS
Edward Joslin Kingsbury, Keene, N. H.
Application August 2, 1932, Serial No. 627,224
24 Claims. (Cl. 77—32)

1. In a device of the class described, the combination of a frame, a tool support reciprocable relative to said frame, a planetary body, gears coaxial with said body and having different numbers of teeth, gear means rotatably mounted on said body and in mesh with said gears, means for rotating said body, a detent mounted on the frame for holding one said gear against rotation, a connection between the other gear and said support for reciprocating the latter, and means controlled by the position of the element relative to the frame actuated upon predetermined movements of said other gear for effecting the engagement of said detent during the course of movement of said support in one direction and disengagement of said detent at the end of such movement in said one direction.

2,030,008
SILENCER
Josef Laubacher, Wandsbek-Hamburg, Germany
Application August 16, 1934, Serial No. 739,238
In Germany October 8, 1933
7 Claims. (Cl. 137—160)

1. In a device of the class described, a silencer consisting of a single spiral main channel with an inlet opening at one end thereof and an outlet opening at the other end, and a shorter flow channel having its widest transverse dimension substantially the same as the widest transverse dimension of the main channel, opening into the main channel at a point intermediate the inlet and outlet of the main channel and having the same direction of flow as the main channel

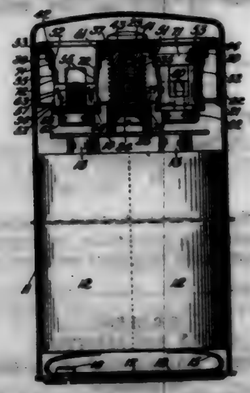
whereby the flow of the shorter channel causes in said main channel a reduction in pressure before the flow in said main channel reaches such point.

2,030,009
RED PIGMENTS
Ekbert Lederle, Ludwigshafen-on-the-Rhine, Germany
No Drawing. Application August 19, 1933, Serial No. 685,961. In Germany August 30, 1932
5 Claims. (Cl. 134—58)

1. The process of producing red pigments which comprises precipitating mixed crystals comprising normal lead chromate, normal lead sulphate and normal lead molybdate by adding to an aqueous solution containing a soluble lead salt a strongly acid aqueous solution containing sulphate, chromate and enough molybdate ions as to produce mixed crystals containing at least 4 per cent of lead molybdate.

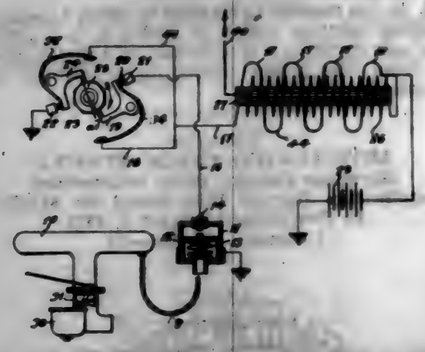
3. In the process as claimed in claim 1, using an aqueous solution which in addition to a soluble lead salt contains a soluble salt of a metal selected from the group consisting of barium and strontium.

2,030,010
ARTICULATED TRACK VEHICLE
Hermann Liechty, Bern, Switzerland
Application July 26, 1932, Serial No. 624,827
In Switzerland August 5, 1931
1 Claim. (Cl. 105—3)



In a track vehicle, the combination of three vehicle parts which are pivotally inter-connected, with two single axle pivot frames, which carry the central vehicle part, the two ends of each pivot frame being rotatably arranged at two abutting vehicle parts and also one of said pivot frame ends being at the same time connected longitudinally slidably with one of said vehicle parts.

2,030,011
ELECTRICALLY-OPERATED CIGARETTE LIGHTER
Duncan Tod Sloane Macleaman, Balham, London, England, assignor to Garnet Limited, London, England
Application June 16, 1934, Serial No. 730,984
In Great Britain August 3, 1933
11 Claims. (Cl. 219—33)

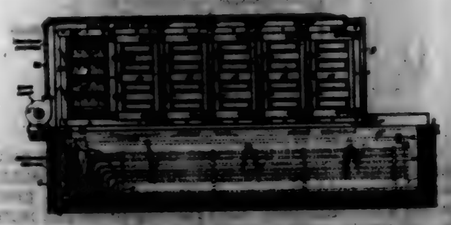


1. A cigarette lighter of the type specified comprising a bucket and an electric filament

mounted at the side of the bucket in contradistinction to the bottom of the bucket so as to

provide an extensive length of contact with the side surface of the cigarette wrapping.

1,888,912
IGNITION TIMER AND COIL
Marion Mallery, Detroit, Mich., assignor to Mallery Research Company, Toledo, Ohio, a corporation of Delaware
Application April 16, 1934, Serial No. 720,766
4 Claims. (Cl. 123—117)



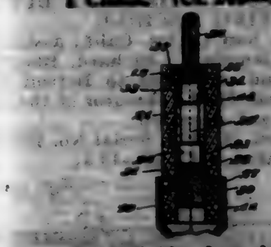
1. An ignition system for an internal combustion engine, having a throttle controlled inlet, comprising an ignition coil, a source of electricity connected therewith, an engine driven rotating cam, a pair of circuit breakers engaging therewith and timed one ahead of the other, a pair of contacts connected with each circuit breaker and in parallel with said coil, the circuit breaker which is the last to open having one contact permanently grounded, the other circuit breaker having one contact grounded only when the throttle is opened, so as to increase the time the current is flowing through said coil when the throttle is opened, the timing of the spark being unchanged by the grounding of said contact.

2,030,012
COMPUTING WEIGHING SCALE
Charles O. Marshall, Toledo, Ohio, assignor to Toledo Scale Manufacturing Company, Toledo, Ohio, a corporation of New Jersey
Application November 5, 1932, Serial No. 641,363
13 Claims. (Cl. 23—1)

1. In a device of the class described, in combination, a chart, said chart bearing identical sets of characters, each of said identical sets occupying a part of its length, means on each side of said chart for hiding one of said sets of characters, and magnifying means on each side of said chart for causing the unhidden set of characters apparently to occupy the whole length of said chart.

2,030,014
METHOD AND APPARATUS FOR PRESERVING FOOD PRODUCTS
George Waldron Mathews and Cecil John Benet, Orlando, Fla.
Application April 16, 1931, Serial No. 529,124
24 Claims. (Cl. 62—114)

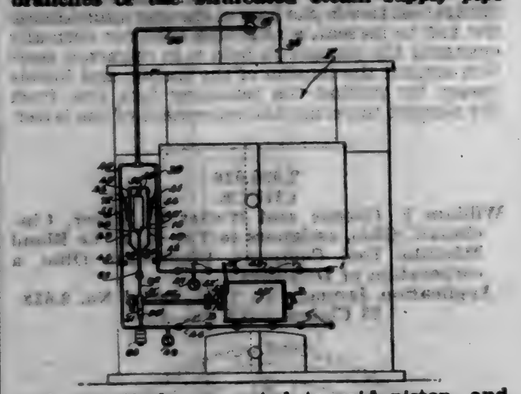
10. In an apparatus for preserving food products, a refrigerating chamber, in combination with independent food product containers independently and removably supported within said chamber, said containers comprising a tray and a cover telescopically related and adapted to contain the food product, said trays being provided with an enlarged base and being located one above the other, means for subjecting the bottoms of the said containers to the liquid refrigerant, whence it freely descends to the top of the container therebelow, said enlarged bases of the containers preventing the refrigerant from having access to the interiors of the covers of the containers, and means for taking off the refrigerant from the chamber.



2,029,915
APPARATUS FOR FORMING AND SURVEYING EARTH CORES
John R. McCurdy, Virginia, Minn.
Application February 10, 1935, Serial No. 6,914
19 Claims. (Cl. 255—72)

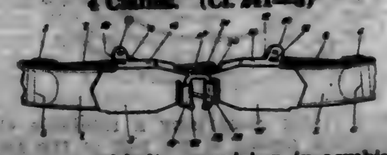
1. Apparatus of the character described, comprising a drill rod, an annular series of core forming drills, each drill being mounted for rotation about its longitudinal axis and actuated by the

drill rod, and dip and strike indicating means in fixed relation to the series of drills.



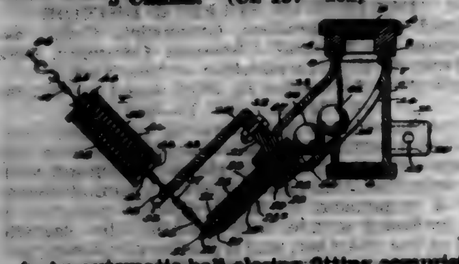
2,030,016
ELECTRICAL RECEPTACLE PLUG
William F. McIntosh, Charlestown, Mass.
Application January 7, 1935, Serial No. 675
1 Claim. (Cl. 200—115.5)

An improved cartridge fuse electrical plug comprising a split insulating member and a split base member, said base member having an electrical cable opening therein and annular grooves located around the inner surface of said openings adapted to engage said cable, a cartridge fuse contact pin assembly comprising a contact pin and receptacle for one end of said fuse and a recessed base member and compression spring adapted to receive the other end of said fuse and provide tension on the said fuse between said contact pin and recessed base members, a second recess located on said base member adjacent its back end and an offset opening connecting said recess at its bottom with the back end of said base member for the purpose of admitting electrical contact wires to said second recess.



2,030,017
AUTOMATIC SMOKE PREVENTER
Raymond Mills, Asnieres, France
Application September 28, 1931, Serial No. 565,154
In France September 30, 1930
3 Claims. (Cl. 110—55)

1. In a furnace smoke preventer, the combination of a bifurcated steam supply pipe, air ejectors communicating with each of the branches of said bifurcated pipe, series of sprays associated with each of said air ejectors and opening respectively in the fire box and in the ashpit of the furnace, a pressure cylinder filled with oil, a piston sliding in said cylinder, counter weights attached to said piston for normally retaining the latter in one position, vertical conduit means formed in said cylinder, a pin screw operated from the outside for regulating the passage of oil in said conduit means, valve means in the branches of the bifurcated steam supply pipe



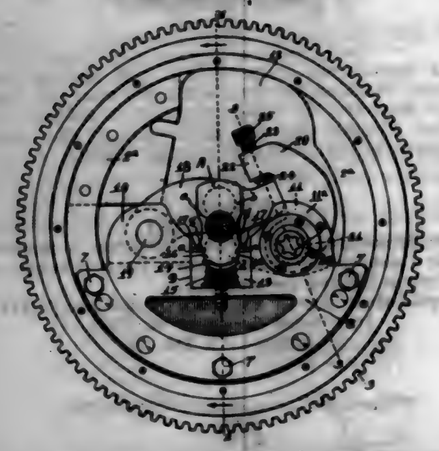
and operatively connected to said piston, and means establishing connection between the furnace door and the piston whereby to actuate the latter directly by the movement of the door against the action of said counterweights.

2,030,018
APPAREL BELT
Jules Meulhan, Paris, France, assignor to Société du Caoutchouc Manufacturé, Paris, France, a French limited corporation
Application March 14, 1935, Serial No. 11,144
In France February 20, 1935
4 Claims. (Cl. 241—8)

1. An apparel belt comprising, in combination, a girdle strap, a pair of hollow metal buckles through which the respective end portions of the strap are freely slidable, said buckles having associated fasteners, clamping levers pivotally carried by the buckles, and a pair of elastic band elements respectively secured adjustably at one end to the buckle levers inwardly of the positions where the strap end portions engage through the buckles and at the other end to the inner face of said strap end portions.

2,030,019
AUTOMATIC BALL CLOSING FITTING
Charles Tyler Bard, Norwich, Conn.
Application May 27, 1935, Serial No. 23,766
5 Claims. (Cl. 137—102)

4. An automatic ball closing fitting comprising a hollow body portion having an inlet and an



outlet in axial alinement and being provided with a seat, an integral angular extension carried on one side of said body portion, a ball arranged to engage the seat, a screw carried by said extension and being provided with a bore, a spring-pressed plunger carried in the bore of the screw for forcing the ball to its seat, a retaining fork for normally engaging the plunger to hold it in retracted position against the tension of the spring, and fusible means for pulling the retaining fork free from the plunger to permit the movement of the latter.

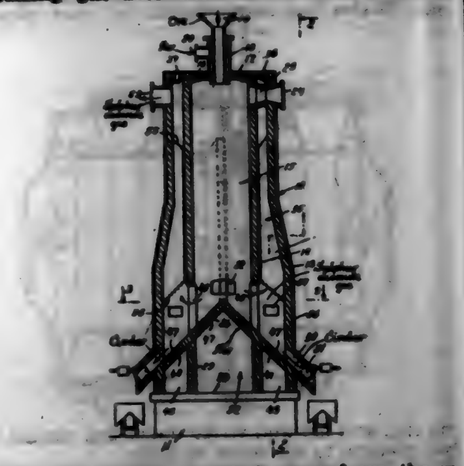
2,030,020

CHUCK

William F. Greene and Walter R. Meyer, Cincinnati, Ohio, assignors to The R. K. Le Blond Machine Tool Company, Cincinnati, Ohio, a corporation of Delaware

Application January 21, 1935, Serial No. 2,638
23 Claims. (Cl. 82—40)

1. In a chuck comprising a rotatable chuck body, locating means at one side of the axis of rotation of the chuck body having fixed, interspaced areas accurately positioned relative to said axis for effective angularly related engagement with respective angularly related areas accurately located on opposite sides of a work piece relative to a proper center of turning of the work piece, the aggregate effective engagement of the areas at both sides serving both to locate the work piece with said proper center of turning in accurate alinement with said axis of rotation, and to index the work piece during rotation of said chuck, and means on said chuck body to clamp the work piece to said areas.



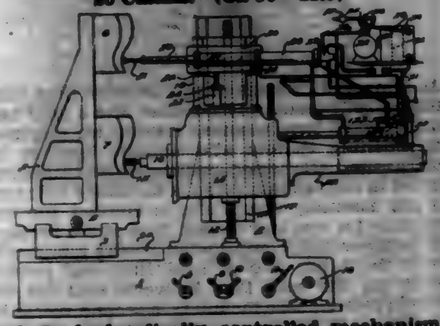
2,030,021

METHOD AND APPARATUS FOR THE PRODUCTION OF SULPHUR DIOXIDE

Harold O. C. Ingraham, Greenwich, Conn., assignor to General Chemical Company, New York, N. Y., a corporation of New York

Application September 15, 1932, Serial No. 633,251
8 Claims. (Cl. 75—60)

1. Apparatus of the character described comprising a reaction chamber, an inlet at one end of the reaction chamber, means associated with the inlet for introducing into the reaction chamber a suspension of finely divided material in an oxidizing gas, a wall forming the opposite end of the chamber, and a discharge opening adjacent said opposite end whereby solid materials are separated from reacted gases, means adjacent said opposite end for introducing supplemental oxidizing gas into the reaction chamber, and



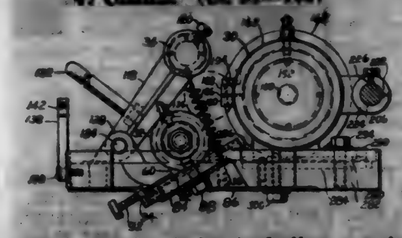
means for causing reacted gases from the reaction chamber to flow along the outer walls of the reaction chamber.

2,030,022

HYDRAULICALLY CONTROLLED DUPLICATING MACHINE

Clifford H. Kain, San Carlos, Calif., assignor of one-third to Clement C. Richard, Bloomfield Hills, Mich., and one-third to Detroit Trust Company, Detroit, Mich., executor of the estate of Otis K. Richard, deceased

Application April 12, 1934, Serial No. 720,375
25 Claims. (Cl. 90—13.5)



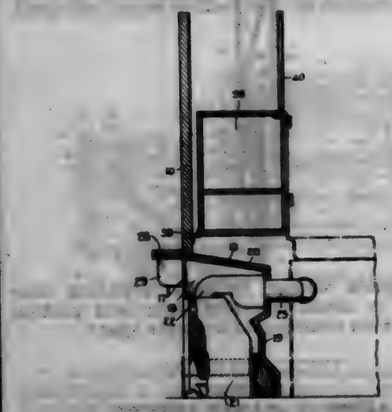
19. In hydraulically controlled mechanism, a tracer and tool adapted to be moved in a fixed relationship with the respective pattern and work, a cylinder associated with the tracer, a cylinder associated with the tool, a piston therein fixed to the tool, a piston in the tracer cylinder, a tubular element movable with the tracer piston, a rod to which the tracer is attached reciprocable in the tubular element, the tracer piston being ported, a valve within the tracer piston fixed to the tracer rod and through movement of which one or the other of the ports of the tracer piston are opened, means for applying hydraulic pressure to the interior of the piston and to be distributed by the valve to one side or the other of the tracer piston to cause movement thereof in its cylinder, means whereby movement of the tracer piston applies fluid under pressure to one side or the other of the tool piston, said tubular element in which the tracer rod is reciprocable being pivotally mounted to permit the tracer to be moved in any direction laterally of the shaft axis, means tending to yieldably restrain such movement of the tracer and permitting the tracer to be moved by pressure in excess thereof, and means whereby such lateral movement of the tracer actuates the valve to apply pressure to one side of the tracer piston and thereby move the tracer tube and connected parts in the same direction as is caused by movement of the tracer on the axis of the shaft away from the work, said last named means comprising a cylinder directly connected with the tracer piston and through which the tracer rod extends to the tracer piston, a piston within the said last named cylinder loosely mounted on the rod, said rod at one end having a part engaged by the piston when under hydraulic pressure at the opposite end to move the tracer rod and thereby move the tracer piston to open the ports thereof to apply fluid pressure to one side of the tracer piston and thus move the tracer piston in the same direction as the said piston slidable on the tracer rod is moved, a laterally movable disc valve actuatable by movement of the tracer tube on its pivotal axis to apply hydraulic pressure to the said piston slidable on the tracer rod and move the same to engagement with the said portion on the rod to cause movement of the rod and consequently of the tracer in a direction along the rod axis until the tracer assumes its neutral axial position and the valve disc is returned to neutral position, said cylinder for the slidable piston having a minute leakage aperture from high pressure to the chamber forward of the piston and further having a small aperture from the chamber at the rear of the piston to the low pressure whereby when the disc valve assumes neutral position the slidable piston by pressure in the chamber forward of the piston is moved out of contact with the portion of the tracer rod engageable thereby and out of position to effect axial movement of the tracer rod by pressure applied thereto to move the tracer in a direction toward or from the pattern.

2,030,023

CUTTING AND ABRADING MACHINE AND PROCESS

James F. Williams, Niagara Falls, Ontario, Canada, assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware

Application March 5, 1927, Serial No. 173,857
47 Claims. (Cl. 51—193)



11. An internal grinder including a grinding wheel for internal engagement with a work piece, a work support frictionally engaging the exterior of the work piece, a member frictionally engaging the exterior of the work piece at a point angularly spaced from the work support in opposition to the grinding wheel for urging the work piece into engagement with the grinding wheel, means for rotating the friction engaging member to impart a constant and uniform rotating movement to the work piece, means for definitely varying the separation of the friction member and the grinding wheel to control the amount of stock internally removed from the work piece, and means for urging the work piece in the direction of the friction member.

2,030,024

COMBINED PARTITION-FIXTURE UNIT

Robert L. Davison, New York, N. Y., assignor to John B. Pierce Foundation, New York, N. Y., a corporation of New York

Application December 20, 1932, Serial No. 648,136
1 Claim. (Cl. 20—1.11)

A unitary combined partition-wall and housing, comprising two substantially parallelly extending members serving respectively as the opposite face members of the combined partition-wall and housing, elements spacially related to one another and extending from and between said members at a predetermined spacing securing said members unitarily relative to one another, one of said members being provided with an opening arranged to receive and house a heating device, said heating device being disposed within the predetermined spacing intervening between said members, the other of said members being disposed with an opening for the reception of a cooking device accessible through said second-named opening, said cooking device being disposed within said predetermined spacing between said members, said opening in said first-named member being disposed substantially out of alignment with said second-named opening in said other member, said first-named member being otherwise arranged to serve as the wall of a living room or equivalent space of a building, said second-named member being otherwise arranged respectively to serve as the wall of a kitchen or equivalent space of the same building.

2,030,025

MECHANICAL PENCIL

Cy H. Davis, Fenwick, Ontario, Canada

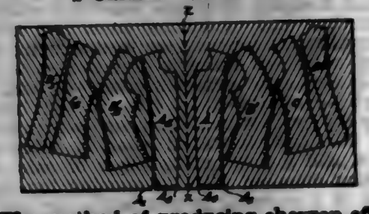
Application March 15, 1934, Serial No. 715,687
25 Claims. (Cl. 120—18)

1. A pencil having two relatively rotatable and axially shiftable body sections and feeding mechanism including two relatively rotatable parts one within the other and attached respectively to said body sections and operable by rotation of one of the body sections, and a slidable feed member within said parts and propelled thereby on relative rotation of said body sections in one direction, one of said body sections being readily detachable from the corresponding mechanism part on relative axial shifting of one of said body sections, whereby said mechanism parts become freely movable relatively to each other in the reverse direction by axial inward pressure on said feed member.

11. A pencil comprising an operating tube, upper and lower casing sections mounted thereon,

the upper section being slidable relatively to the lower section, the upper portion of said operating tube being adapted to contain leads, and lead-

delivery means formed in said operating tube below and in communication with said portion and exposed on sliding said sections apart.



2,030,626

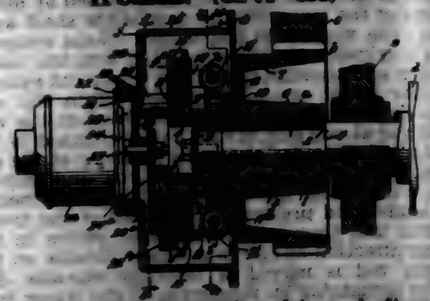
GARMENT MANUFACTURE

Edwin I. Golding, New York, N. Y., assignor to Ira W. Hirshfield, New York, N. Y.

Application April 10, 1935, Serial No. 15,572

2 Claims. (Cl. 2—243)

1. The method of producing chevron effects in an assembly consisting of a plurality of separate pieces united along contiguous edges, out of a piece of cloth patterned on its right side so that the pattern on one side of the longitudinal medial line thereof is the mirror image of the pattern on the opposite side, and each of said patterns being constituted by diagonal-like striped contours meeting at said longitudinal medial line so as to give a chevron effect: said method including the steps of doubling over said cloth along its longitudinal medial line, whereby the striped contours on its two halves run in the same direction, laying out the pieces constituting the assembly on one of the surfaces of said doubled-over cloth, so that one piece of each pair of pieces that are contiguously positioned in the assembly, is the mirror image of the contour required for fitting it to the other piece of the pair, and further positioning their contiguous edges so that the diagonal-like contour will intersect said edges at an angle sufficient to produce a chevron effect when the pieces are joined, cutting through said doubled-over cloth along said pattern lines, whereby two sets of pieces are produced, each piece of one set having its counterpart in the other set and differing therefrom in that it is a mirror image of the other, thereafter selecting the pieces required for an assembly by taking one of each pair of pieces contiguously positioned in the assembly from different layers of said doubled over cloth, and joining said selected pieces together so as to form the completed assembly, and similarly joining the remaining pieces to form an assembly that is the mirrer image of the said first-mentioned assembly.



2,030,627

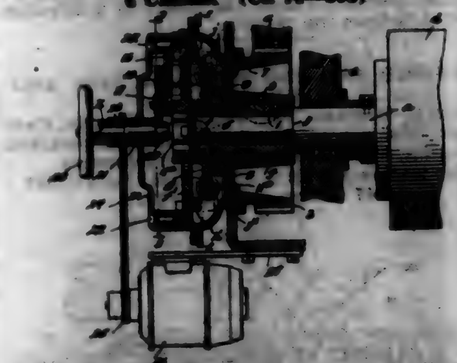
SHAFT ADJUSTING MEANS

Henry B. Greenwood, Glenarm, Md., assignor to F. X. Hooper Company, Inc., Glenarm, Md., a corporation of Maryland

Application December 31, 1934, Serial No. 760,811

11 Claims. (Cl. 74—395)

1. The combination with a driven shaft and a drive gear rotatively mounted thereon, of a worm gear fixed to the drive gear concentric with said shaft, a sleeve secured to said shaft so as to rotate therewith, a shaft carried by the sleeve, a worm pinion on the latter shaft meshing with the worm gear, a reversible electric motor supported by said sleeve and having its shaft co-axial with said driven shaft, and gearing connecting the motor shaft with the shaft carrying the worm pinion.



2,030,628

SHAFT ADJUSTING MEANS

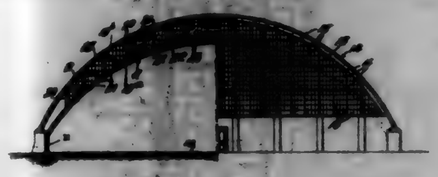
Henry B. Greenwood, Glenarm, Md., assignor to F. X. Hooper Company, Inc., Glenarm, Md., a corporation of Maryland

Application February 13, 1935, Serial No. 6,575

4 Claims. (Cl. 74—395)

1. The combination with a driven shaft and a drive gear rotatably mounted thereon, of a worm gear fixed to the drive gear concentric with said shaft, a sleeve secured to said shaft so as to rotate therewith, two worm pinions rotatively mounted on the sleeve and meshing with the worm gear, means for rotating said pinions in unison, and means for rotating one of said pinions independently of the other pinion.

2,030,629



ENCLOSURE FOR A NUMBER OF INDOOR COURTS

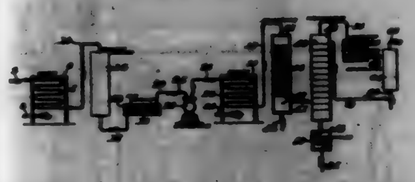
Gavin Hadden, New York, and Charles A. Hadden, New Rochelle, N. Y.; said Hadden assignor to said Hadden

Application July 6, 1933, Serial No. 679,324

4 Claims. (Cl. 20—1.13)

4. In a structure for inclosing a number of indoor tennis courts having an opaque roof arching over the floor in a direction corresponding with the longer dimension of said courts, the method of securing uniformity of illumination along the flight of the ball in any plane of play parallel to the said floor which comprises interposing in said opaque roof a crescent-shaped monitor hav-

ing light-admitting areas in its side walls and varying the area of said light-admitting areas so that the solid angle subtended by this area at any point in any line parallel to the monitor in the plane of play shall be approximately equal to the solid angle at any other point in the same line.



2,030,630

PYROLYSIS OF HYDROCARBON GASES

Michael Halpern, New York, William B. Logan, White Plains, and Robert E. Manley and Walter Ulrich, Beacon, N. Y., assignors to The Texas Company, New York, N. Y., a corporation of Delaware

Application June 26, 1933, Serial No. 677,163

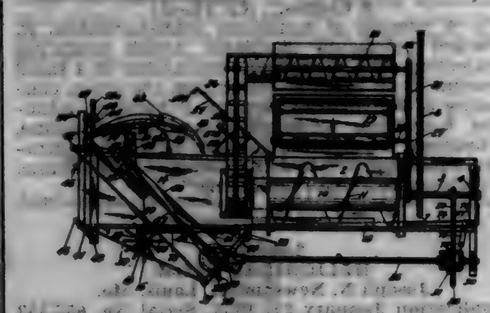
3 Claims. (Cl. 196—10)

1. In the conversion of normally gaseous hydrocarbons into higher molecular weight hydrocarbons by subjection of the gases to be treated to a pyrolysis operation to cause substantial cracking of paraffins into olefins and then passage of the resultant cracked products through an adsorptive catalyst to effect polymerization of the olefins into higher molecular weight compounds, the improvement which comprises passing the cracked products in the polymerization operation through a catalyst consisting essentially of a high power clay of the acid treated montmorillonite type and characterized by having 50–100% thereof finer than 200 mesh and a filler aid material in sufficient amount to substantially reduce the resistance of the clay to the flow of vapors and gases therethrough.

2,030,631

BALING APPARATUS

George Innes, Davenport, Iowa, assignor to Innes Manufacturing Company, Buttendorf, Iowa, a corporation of Delaware



Application May 17, 1934, Serial No. 726,182

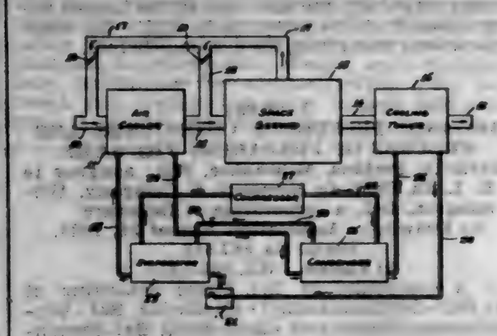
In Australia May 24, 1933

16 Claims. (Cl. 100—36)

1. A baler for the purpose indicated comprising a stalks-receiving compartment, a stalks-tying compartment, means for forcing the stalks from the first named compartment to the second named compartment, and means for receiving chaff and

loose grain from a combine and transporting same to and delivering it into one of said compartments to be there intermingled with loose stalks, after which the stalks will be compressed and tied into bales, the means for receiving the chaff and loose grain and delivering same comprising an auger and mechanism for carrying the chaff and grain from the auger to the place of delivery.

4. A stalks baler of the general nature indicated comprising a tubular member for receiving and forming the stalks into a bale, means for conveying the stalks from the point where received to the location where baled, a needle-carrying arm pivotally mounted on said tubular member and adapted to be actuated to carry needles through said tubular member, needles carried by said arm and forced through the tubular member, and a straw cutting means carried by each needle to pass through the tubular member and assist in enlarging the passage through the stalks therein for the reciprocation of this needle.



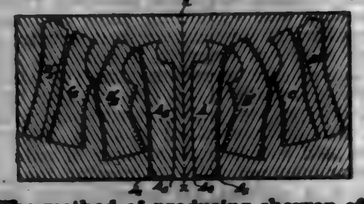
2,030,632

AIR CONDITIONING SYSTEM EMPLOYING REFRIGERATION

Robert E. Keyes, Dedham, Mass., assignor to The Cooling & Air Conditioning Corporation, New York, N. Y.

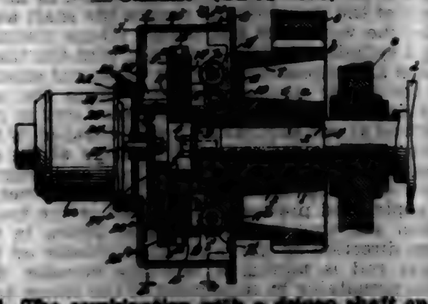
Application September 7, 1934, Serial No. 743,859

4 Claims. (Cl. 62—129)



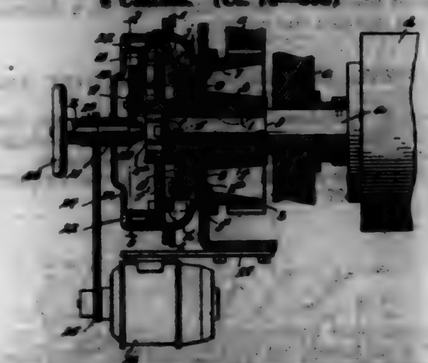
1. Air conditioning apparatus comprising an air cooler, a refrigeration plant including an evaporator for supplying a cooling effect to said cooler, means for passing air to be cooled through said cooler and into the space to be served, and for exhausting a portion of the cold air from the space, a cooling tower, means for directing said exhaust air through said tower, and means for passing the spray water returned in said cooling tower through said evaporator and then through said cooler.

the upper section being slidable relatively to the lower section, the upper portion of said operating tube being adapted to contain leads, and lead-



delivery means formed in said operating tube below and in communication with said portion and exposed on sliding said sections apart.

2,030,026
GARMENT MANUFACTURE
Edwin I. Gelding, New York, N. Y., assignor to Ira W. Hirshfield, New York, N. Y.
Application April 10, 1935, Serial No. 15,572
2 Claims. (Cl. 2—243)



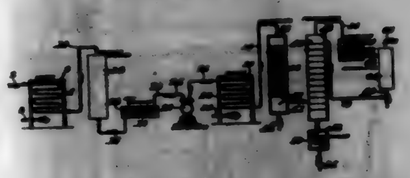
1. The method of producing chevron effects in an assembly consisting of a plurality of separate pieces united along contiguous edges, out of a piece of cloth patterned on its right side so that the pattern on one side of the longitudinal medial line thereof is the mirror image of the pattern on the opposite side, and each of said patterns being constituted by diagonal-like striped contours meeting at said longitudinal medial line so as to give a chevron effect: said method including the steps of doubling over said cloth along its longitudinal medial line, whereby the striped contours on its two halves run in the same direction, laying out the pieces constituting the assembly on one of the surfaces of said doubled-over cloth, so that one piece of each pair of pieces that are contiguously positioned in the assembly, is the mirror image of the contour required for fitting it to the other piece of the pair, and further positioning their contiguous edges so that the diagonal-like contour will intersect said edges at an angle sufficient to produce a chevron effect when the pieces are joined, cutting through said doubled-over cloth along said pattern lines, whereby two sets of pieces are produced, each piece of one set having its counterpart in the other set and differing therefrom in that it is a mirror image of the other, thereafter selecting the pieces required for an assembly by taking one of each pair of pieces contiguously positioned in the assembly from different layers of said doubled over cloth, and joining said selected pieces together so as to form the completed assembly, and similarly joining the remaining pieces to form an assembly that is the mirror image of the said first-mentioned assembly.

2,030,027
SHAFT ADJUSTING MEANS
Henry B. Greenwood, Glenarm, Md., assignor to F. X. Hooper Company, Inc., Glenarm, Md., a corporation of Maryland
Application December 31, 1934, Serial No. 760,811
11 Claims. (Cl. 74—395)

1. The combination with a driven shaft and a drive gear rotatively mounted thereon, of a worm gear fixed to the drive gear concentric with said shaft, a sleeve secured to said shaft so as to rotate therewith, a shaft carried by the sleeve, a worm pinion on the latter shaft meshing with the worm gear, a reversible electric motor supported by said sleeve and having its shaft co-axial with said driven shaft, and gearing connecting the motor shaft with the shaft carrying the worm pinion.

2,030,028
SHAFT ADJUSTING MEANS
Henry B. Greenwood, Glenarm, Md., assignor to F. X. Hooper Company, Inc., Glenarm, Md., a corporation of Maryland
Application February 12, 1935, Serial No. 6,575
4 Claims. (Cl. 74—395)

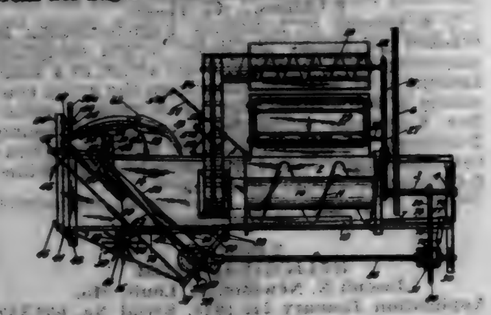
1. The combination with a driven shaft and a drive gear rotatably mounted thereon, of a worm gear fixed to the drive gear concentric with said shaft, a sleeve secured to said shaft so as to rotate therewith, two worm pinions rotatively mounted on the sleeve and meshing with the worm gear, means for rotating said pinions in unison, and means for rotating one of said pinions independently of the other pinion.



2,030,029
INCLOSURE FOR A NUMBER OF INDOOR COURTS
Gavin Hadden, New York, and Charles A. Holden, New Rochelle, N. Y.; said Holden assignor to said Hadden
Application July 5, 1933, Serial No. 679,524
4 Claims. (Cl. 98—1.13)

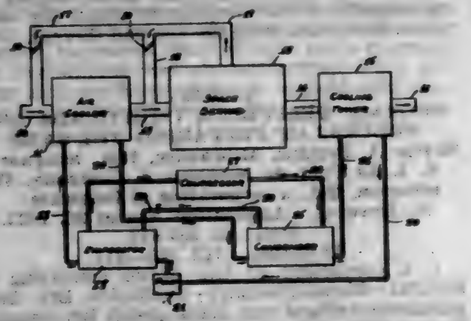
4. In a structure for inclosing a number of indoor tennis courts having an opaque roof arching over the floor in a direction corresponding with the longer dimension of said courts, the method of securing uniformity of illumination along the flight of the ball in any plane of play parallel to the said floor which comprises interposing in said opaque roof a crescent-shaped monitor hav-

ing light-admitting areas in its side walls and varying the area of said light-admitting areas so that the solid angle subtended by this area at any point in any line parallel to the monitor in the plane of play shall be approximately equal to the solid angle at any other point in the same line.



2,030,030
PYROLYSIS OF HYDROCARBON GASES
Michael Halpern, New York, William B. Logan, White Plains, and Robert E. Manley and Walter Ullrich, Syracuse, N. Y., assignors to The Texas Company, New York, N. Y., a corporation of Delaware
Application June 29, 1932, Serial No. 620,168
2 Claims. (Cl. 196—10)

1. In the conversion of normally gaseous hydrocarbons into higher molecular weight hydrocarbons by subjection of the gases to be treated to a pyrolysis operation to cause substantial cracking of paraffins into olefins and then passage of the resultant cracked products through an adsorptive catalyst to effect polymerization of the olefins into higher molecular weight compounds, the improvement which comprises passing the cracked products in the polymerization operation through a catalyst consisting essentially of a high power clay of the acid treated montmorillonite type and characterized by having 50–100% thereof finer than 200 mesh and a filter aid material in sufficient amount to substantially reduce the resistance of the clay to the flow of vapors and gases therethrough.



2,030,031
BALING APPARATUS
George Innes, Davenport, Iowa, assignor to Innes Manufacturing Company, Buttendorf, Iowa, a corporation of Delaware
Application May 17, 1934, Serial No. 726,182
In Australia May 24, 1933
13 Claims. (Cl. 100—36)

1. A baler for the purpose indicated comprising a stalks-receiving compartment, a stalks-tying compartment, means for forcing the stalks from the first named compartment to the second named compartment, and means for receiving chaff and loose grain from a combine and transporting same to and delivering it into one of said compartments to be there intermingled with loose stalks, after which the stalks will be compressed and tied into bales, the means for receiving the chaff and loose grain and delivering same comprising an auger and mechanism for carrying the chaff and grain from the auger to the place of delivery.

4. A stalks baler of the general nature indicated comprising a tubular member for receiving and forming the stalks into a bale, means for conveying the stalks from the point where received to the location where baled, a needle-carrying arm pivotally mounted on said tubular member and adapted to be actuated to carry needles through said tubular member, needles carried by said arm and forced through the tubular member, and a straw cutting means carried by each needle to pass through the tubular member and assist in enlarging the passage through the stalks therein for the reciprocation of this needle.

2,030,032
AIR CONDITIONING SYSTEM EMPLOYING REFRIGERATION
Robert E. Keyes, Dedham, Mass., assignor to The Cooling & Air Conditioning Corporation, New York, N. Y.
Application September 7, 1934, Serial No. 743,959
4 Claims. (Cl. 62—129)

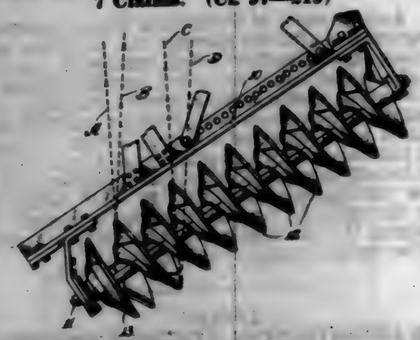
1. Air conditioning apparatus comprising an air cooler, a refrigeration plant including an evaporator for supplying a cooling effect to said cooler, means for passing air to be cooled through said cooler and into the space to be served, and for exhausting a portion of the cold air from the space, a cooling tower, means for directing said exhaust air through said tower, and means for passing the spray water returned in said cooling tower through said evaporater and then through said cooler.

2,030,623

TREATMENT OF CRACKED PETROLEUM DISTILLATES

Elliott B. McConnell, Cleveland Heights, Ohio, assignor to The Standard Oil Company, Cleveland, Ohio, a corporation of Ohio

No Drawing. Application June 19, 1933, Serial No. 675,297
8 Claims. (Cl. 44—9)



1. A process of inhibiting gum-formation in cracked petroleum distillates, which comprises subjecting such distillate to the action of a small amount of an agent selected from the group consisting of 8-hydroxy quinoline, 2-hydroxy quinoline, 6-hydroxy quinoline, 7-hydroxy quinoline, 2-hydroxy tetrahydroquinoline, 6-hydroxy tetrahydroquinoline, 7-hydroxy tetrahydroquinoline, 8-hydroxy tetrahydroquinoline.

2,029,624

HELICOIDAL PLOW

Joseph N. Newsom, St. Louis, Mo.

Application January 21, 1933, Serial No. 652,853
7 Claims. (Cl. 97—219)

1. A plow comprising a shaft, a cupped helicoidal blade supported on the shaft and a cup shaped disc supported on the shaft at one end of the helicoidal blade, and means for rotatably supporting said shaft at an angle to a line of draft with the disc end occupying the rearmost position, whereby the blade and disc will roll when drawn forwardly, the direction of the helixes being opposite to the direction in which the blade rolls when viewed from the disc end thereof.

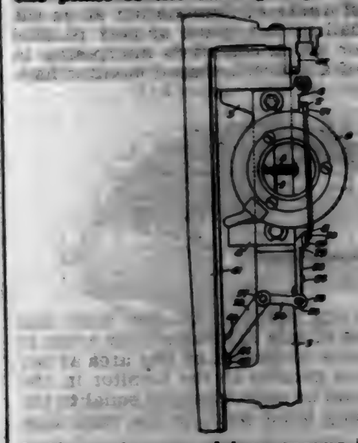
2,030,625

ORGANIC TELLURIUM COMPOUNDS AND PROCESS OF PREPARING THE SAME

Melvin A. Perkins, Milwaukee, Wis., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application August 26, 1933, Serial No. 687,012
11 Claims. (Cl. 260—61)

1. A compound of the group consisting of Bz1,Bz1'-dibenzanthronyl-ditelluride, Bz1-benzanthrone-tellurol and alkali-metal Bz1-benzanthrone tellurolate.



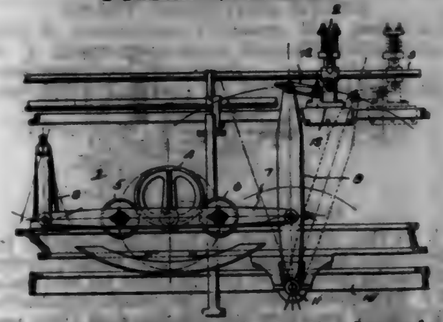
2,030,626

WIPER FOR SLUG TRIMMING KNIVES

Arthur G. Sperry, Hollis, N. Y., assignor to Intertype Corporation, Brooklyn, N. Y., a corporation of New York

Application May 24, 1935, Serial No. 23,204
12 Claims. (Cl. 199—42)

1. In a line casting machine having a pair of slug trimming knives, wipers individual to the knives and each mounted for movement across the plane of the cutting edge of the respective



knife, and power driven means for moving the wipers.

2,030,627

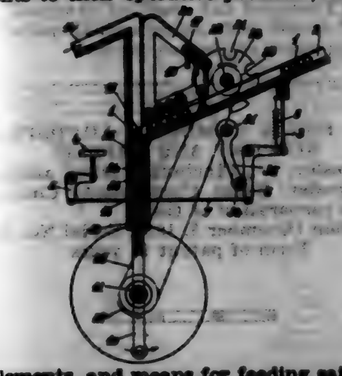
YIELDABLE SAFETY LOCK

Kurt O. Wassbäter and Herbert M. Sussa, Berlin, N. J., assignors to Textile Machine Works, Wyomissing, Pa., a corporation of Pennsylvania

Application January 11, 1934, Serial No. 706,166
4 Claims. (Cl. 66—32)

1. In combination with the friction box rod and the coulier motion mechanism of a full fashioned knitting machine, said rod subject to a variable force acting to resist its movement during reciprocation thereof, a device therefor having permanent drive connection to said mechanism and frictional releasable drive connection to said rod, whereby complete release of said device from said rod is effected upon the rod encountering a predetermined maximum resistance, and a shock absorbing limited relative movement, insufficient to effect complete release of said device and rod, is effected upon the rod encountering a resistance less than said predetermined maximum resistance.

2,030,628



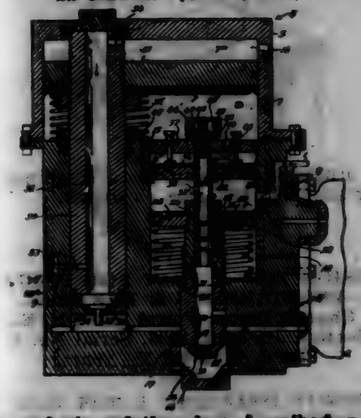
CONTROLLING DEVICE

Lajos Wenesior, Augsburg, Germany, assignor to Ubertype Aktiengesellschaft, Kubli Hemm, Glarus, Switzerland, a corporation of Switzerland

Application February 9, 1935, Serial No. 5,869
In Germany August 29, 1933
10 Claims. (Cl. 74—1)

1. A control mechanism, comprising loose registering elements adapted to freely move by gravity along definite paths, a rhythmically moving

member for uniformly conveying said registering elements to their operative positions, loose spac-



ing elements, and means for feeding said spacing elements into position to successively advance by gravity in between two registering elements.

2,030,629

AIR BRAKE MECHANISM

Dennis C. Hennan, Detroit, Mich.; Anna Dalton executrix of said Dennis C. Hennan, deceased

Application August 7, 1928, Serial No. 284,066
22 Claims. (Cl. 303—39)

1. In a device of the class described, a casing having a chamber adapted to be supplied with air from the main train line conduit, a second chamber adapted to receive air from the first chamber, means for conducting air from the second chamber to a brake cylinder, auxiliary means for conducting air from the second chamber to the brake cylinder, means for controlling the passage of air from the first chamber to the second chamber, and means associated with said last mentioned means for controlling the passage of air from the second chamber to the brake cylinder.

2,030,640

SHIPPING CONTAINER

George T. Hynes and Gordon S. Smith, Bala-Cynwyd, Pa.

Application December 3, 1934, Serial No. 756,565
7 Claims. (Cl. 294—59)

1. A package of merchandise comprising a piece of merchandise in rolled form and two relatively inverted container sections that telescope the oppositely disposed ends of said roll of merchandise and make contact at their inner edges so as to inclose the said roll within the said container; each of said container sections consisting of a tubular body and a load ring permanently fixed in the outer end of said tube, by means of metallic elements passing through said tube and load ring and clinched within said load ring; said load rings being substantially conterminous with the annular edges of the roll of merchandise and adapted to directly support said merchandise during all positions of said container; a pair of relatively thin discs, capable of withstanding compressive stress alone, positioned transversely of said container between said load rings and said merchandise, to prevent entry of dust; and a gummed tape overlapping the circumferential joint between said container sections to hold said sections in contact with each other.

DESIGNS

FEBRUARY 4, 1936

98,414

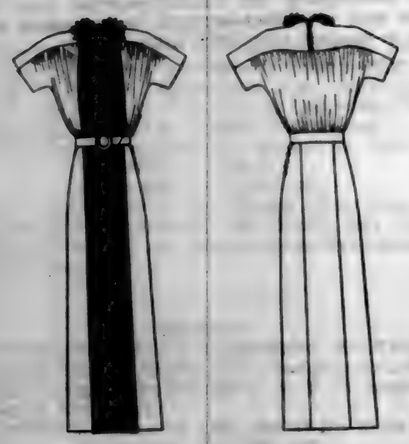
DESIGN FOR A MECHANICAL LEAD PENCIL

Robert Back, Chicago, Ill., assignor to The Wahl Company, Chicago, Ill., a corporation of Delaware

Application December 30, 1935, Serial No. 60,342

Term of patent 7 years

The ornamental design for a mechanical lead pencil, substantially as shown.



98,415

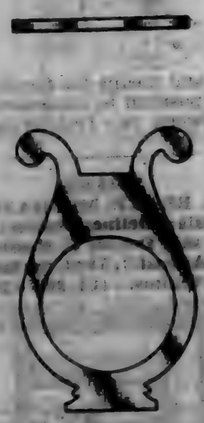
DESIGN FOR A DRESS

Charles Baum, Woodmere, N. Y.

Application January 2, 1936, Serial No. 60,470

Term of patent 3½ years

The ornamental design for a dress, substantially as shown and described.



98,416

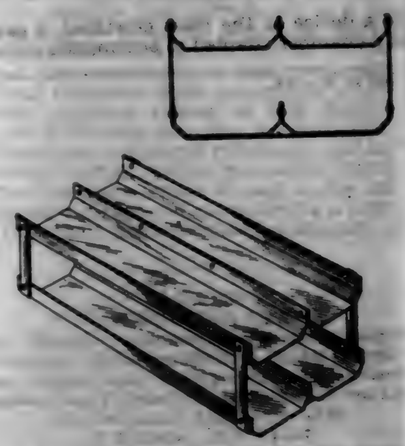
DESIGN FOR A COMBINED LOUDSPEAKER SUPPORT AND BAFFLE

Powel Crosley, Jr., Cincinnati, Ohio, assignor to The Crosley Radio Corporation, Cincinnati, Ohio, a corporation of Ohio

Application December 5, 1935, Serial No. 59,934

Term of patent 14 years

The ornamental design for a combined loudspeaker support and baffle, as shown.



98,417

DESIGN FOR A TRAY FOR FRUITS, VEGETABLES, OR THE LIKE

Charles Dunn, Forest Hills, N. Y.

Application June 26, 1935, Serial No. 57,349

Term of patent 3½ years

The ornamental design for a tray for fruits, vegetables, or the like, as shown.

98,418

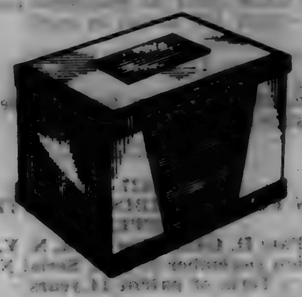
DESIGN FOR A TROPHY CUP

George C. De Hart, Los Angeles, Calif.

Application December 18, 1935, Serial No. 60,039

Term of patent 3½ years

The ornamental design for a trophy cup, substantially as shown.



98,419

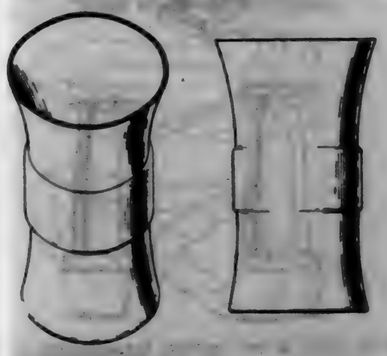
DESIGN FOR A MULTIPLE CANDY BOX

Irving A. Delme, Denver, Colo.

Application February 15, 1935, Serial No. 55,451

Term of patent 7 years

The ornamental design for a multiple candy box, as shown and described.



98,420

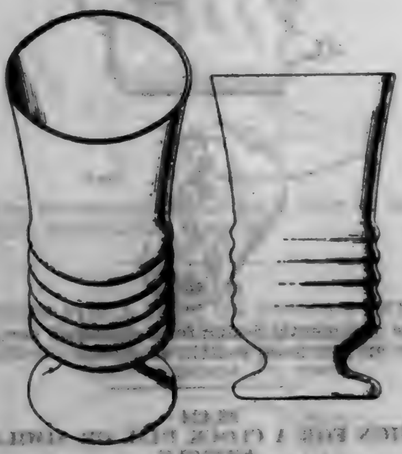
DESIGN FOR A DRINKING TUMBLER

Donald Deskey, New York, N. Y., assignor to The Libbey Glass Manufacturing Company, Toledo, Ohio, a corporation of Ohio

Application August 19, 1935, Serial No. 58,188

Term of patent 7 years

The ornamental design for a drinking tumbler substantially as shown.



98,421

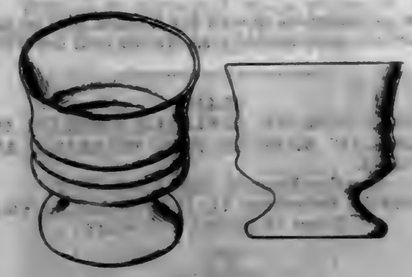
DESIGN FOR A TUMBLER

Donald Deskey, New York, N. Y., assignor to The Libbey Glass Manufacturing Company, Toledo, Ohio, a corporation of Ohio

Application December 14, 1935, Serial No. 60,064

Term of patent 7 years

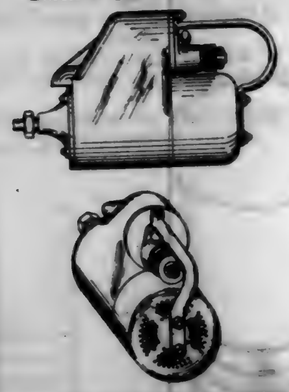
The ornamental design for a tumbler substantially as shown.



98,422

DESIGN FOR A SHERBET GLASS

Donald Deskey, New York, N. Y., assignor to The Libbey Glass Manufacturing Company, Toledo, Ohio, a corporation of Ohio



Application December 14, 1935, Serial No. 60,065

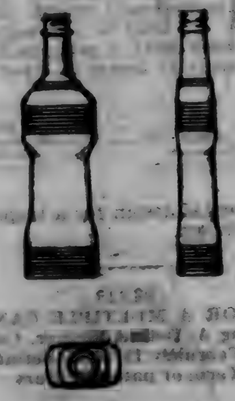
Term of patent 7 years

The ornamental design for a sherbet glass substantially as shown.

86,423
DESIGN FOR A COMBINED PORTABLE MOTOR AND ENCLOSED SWITCH
Forrest G. Douglass, Los Angeles, Calif., assignor to Viber Company Limited, a corporation of Nevada
Application December 7, 1935, Serial No. 59,949
Term of patent 14 years

The ornamental design for a combined portable motor and enclosed switch, as shown.

86,424
DESIGN FOR A CLOCK DIAL OR SIMILAR ARTICLE
Aaron Elkenin, Brooklyn, N. Y.
Application October 12, 1935, Serial No. 58,961
Term of patent 14 years

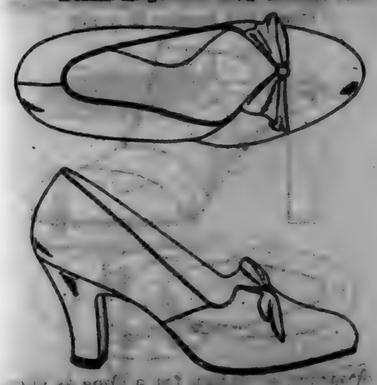


The ornamental design for a clock dial or similar article substantially as shown and described.

86,425
DESIGN FOR AN APPLIQUÉ EMBLEM OR SIMILAR ARTICLE FOR WEARING APPAREL
Charles Emmey, New York, N. Y.
Application December 17, 1935, Serial No. 60,141
Term of patent 3½ years

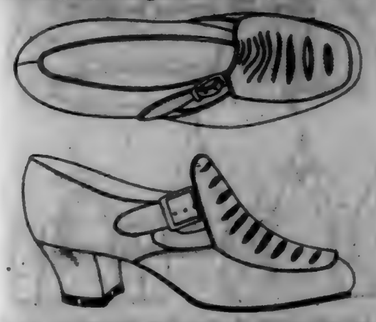
The ornamental design for an appliqué emblem or similar article for wearing apparel, substantially as shown and described.

86,426
DESIGN FOR A BOTTLE
Brooks D. Fuerst, Toledo, Ohio, assignor to Glass Crandall Company, Chicago, Ill., a corporation of Illinois
Application December 5, 1935, Serial No. 59,921
Term of patent 7 years



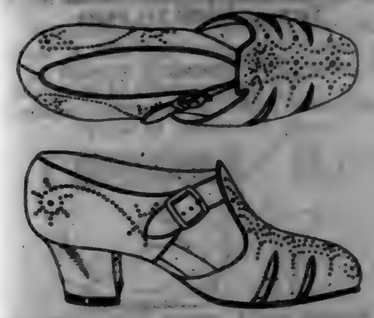
The ornamental design for a bottle substantially as shown.

86,427
DESIGN FOR A COMBINED BOTTLE AND STOPPER
Paul H. Gann, New York, N. Y.
Application December 5, 1935, Serial No. 59,913
Term of patent 14 years



The ornamental design for a combined bottle and stopper, as shown.

86,428
DESIGN FOR A SHOE OR SIMILAR ARTICLE
Julius A. Goldberg, Chicago, Ill.
Application December 19, 1935, Serial No. 60,172
Term of patent 3½ years



The ornamental design for a shoe or similar article, substantially as shown.

86,429
DESIGN FOR A SHOE OR SIMILAR ARTICLE
Julius A. Goldberg, Chicago, Ill.
Application December 19, 1935, Serial No. 60,173
Term of patent 3½ years

The ornamental design for a shoe or similar article, substantially as shown.

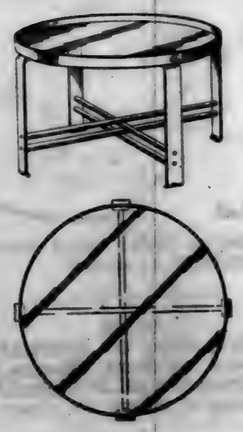
86,430
DESIGN FOR A SHOE OR SIMILAR ARTICLE
Julius A. Goldberg, Chicago, Ill.
Application December 19, 1935, Serial No. 60,174
Term of patent 3½ years

The ornamental design for a shoe or similar article, substantially as shown.

86,431
DESIGN FOR A SHOE OR SIMILAR ARTICLE
Julius A. Goldberg, Chicago, Ill.
Application December 19, 1935, Serial No. 60,175
Term of patent 3½ years

The ornamental design for a shoe or similar article, substantially as shown.

86,432
DESIGN FOR A SHOE OR SIMILAR ARTICLE
Julius A. Goldberg, Chicago, Ill.
Application December 19, 1935, Serial No. 60,176
Term of patent 3½ years



The ornamental design for a shoe or similar article, substantially as shown.

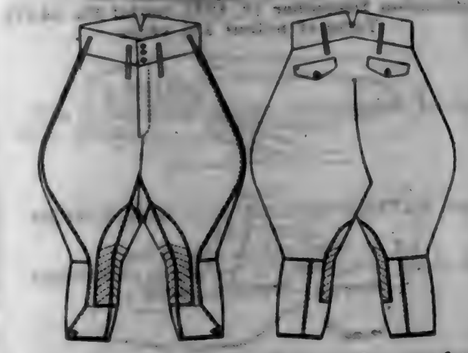
86,433
DESIGN FOR A TEXTILE FABRIC
William R. Haywood, White Plains, N. Y.
Application December 23, 1935, Serial No. 60,229
Term of patent 3½ years

The ornamental design for a textile fabric substantially as shown.

98,434
DESIGN FOR A TABLE
Wolfgang Hoffmann, Batavia, Ill., assignor to The Howell Company, St. Charles, Ill., a corporation of Illinois
Application December 24, 1935, Serial No. 60,266
Term of patent 3½ years

The ornamental design for a table, as shown.

98,435
DESIGN FOR A SHOE
Herbert Heitz, Haverhill, Mass.
Application November 15, 1935, Serial No. 59,581
Term of patent 3½ years

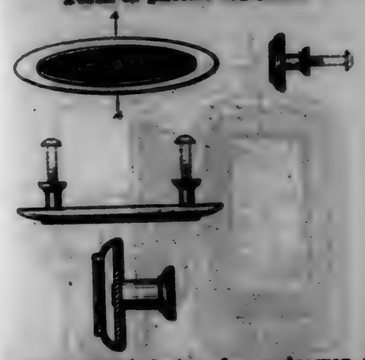


The ornamental design for a shoe as shown.

98,436
DESIGN FOR A SHOE
Herbert Heitz, Haverhill, Mass.
Application November 15, 1935, Serial No. 59,582
Term of patent 3½ years

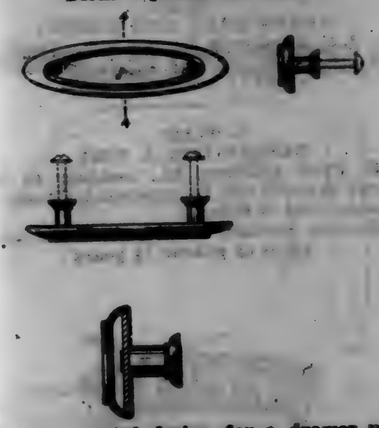
The ornamental design for a shoe as shown.

98,437
DESIGN FOR BREECHES
Harry Z. Isaacs, Baltimore, Md.
Application September 10, 1934, Serial No. 53,230
Term of patent 14 years



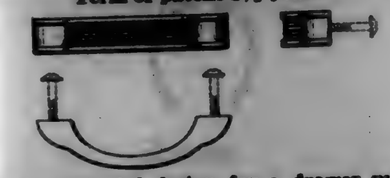
The ornamental design for breeches, as shown and described.

98,438
DESIGN FOR A SHOE
Helen R. Kozak, New York, N. Y., assignor to Laird, Schober Company, Inc., Philadelphia, Pa., a corporation of Pennsylvania
Application December 14, 1935, Serial No. 60,060
Term of patent 3½ years



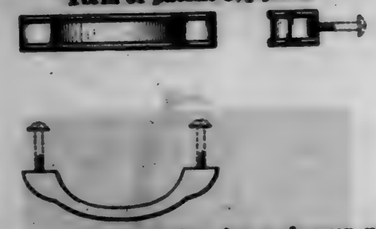
The ornamental design for a shoe, substantially as shown.

98,439
DESIGN FOR A DRAWER PULL
Raymond H. Martin, Bridgeport, Conn., assignor to The Bassick Company, Bridgeport, Conn., a corporation of Connecticut
Application November 20, 1935, Serial No. 59,667
Term of patent 3½ years



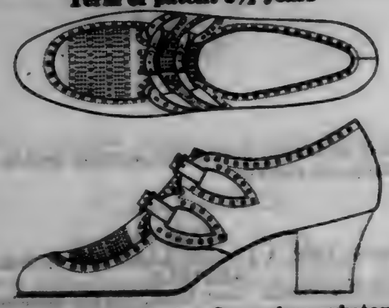
The ornamental design for a drawer pull, as shown.

98,440
DESIGN FOR A DRAWER PULL
Raymond H. Martin, Bridgeport, Conn., assignor to The Bassick Company, Bridgeport, Conn., a corporation of Connecticut
Application November 20, 1935, Serial No. 59,668
Term of patent 3½ years



The ornamental design for a drawer pull, as shown.

98,441
DESIGN FOR A DRAWER PULL
Raymond H. Martin, Bridgeport, Conn., assignor to The Bassick Company, Bridgeport, Conn., a corporation of Connecticut
Application November 20, 1935, Serial No. 59,669
Term of patent 3½ years



The ornamental design for a drawer pull, as shown.

98,442
DESIGN FOR A DRAWER PULL
Raymond H. Martin, Bridgeport, Conn., assignor to The Bassick Company, Bridgeport, Conn., a corporation of Connecticut
Application November 20, 1935, Serial No. 59,670
Term of patent 3½ years

The ornamental design for a drawer pull, as shown.

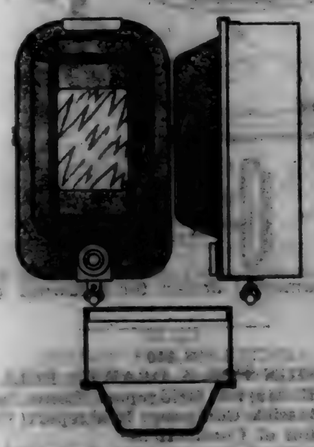
98,443
DESIGN FOR A SHOE
Joseph McGee, New York, N. Y., assignor to Bancroft-Walker Co., Waltham, Mass., a corporation of Massachusetts
Application December 14, 1935, Serial No. 60,086
Term of patent 3½ years

The ornamental design for a shoe substantially as shown and described.

98,444
DESIGN FOR A METAL BOTTLE
Charles E. McManus, Spring Lake, N. J., assignor to Crown Cork & Seal Company, Inc., Baltimore, Md., a corporation of New York
Application August 9, 1935, Serial No. 58,653
Term of patent 14 years

The ornamental design for a metal bottle, substantially as shown.

98,445
DESIGN FOR A METAL BOTTLE
Charles E. McManus, Spring Lake, N. J., assignor to Crown Cork & Seal Company, Inc., Baltimore, Md., a corporation of New York
Application August 9, 1935, Serial No. 58,855
Term of patent 14 years

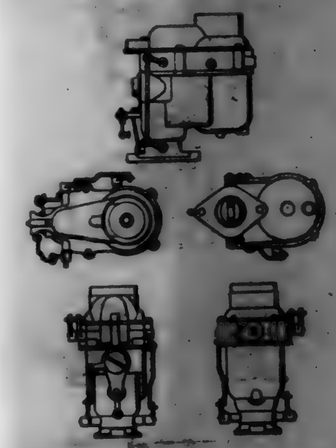


The ornamental design for a metal bottle, substantially as shown.

98,446
DESIGN FOR A FLASH LAMP OR SIMILAR ARTICLE
Samuel Osterman, New York, N. Y., assignor to Guth, Stern & Co. Inc., a corporation of New York
Application May 17, 1935, Serial No. 56,883
Term of patent 7 years

The ornamental design for a flash lamp or similar article, as shown.

98,447
DESIGN FOR A SUPPLEMENTARY METER CASING
Milton A. Finley and Edward H. McCloud, Columbus, Ohio
Application May 27, 1935, Serial No. 57,042
Term of patent 7 years



The ornamental design for a supplementary meter casing as shown and described.

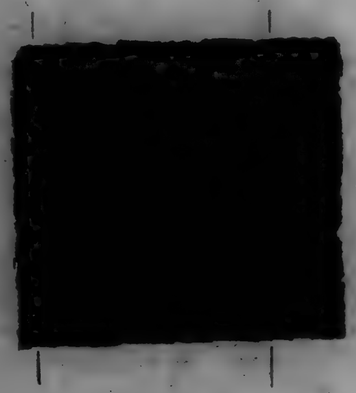
98,448
DESIGN FOR A TIRE
Bert R. Prall, Chicago, Ill., assignor to Montgomery Ward & Co., Incorporated, Chicago, Ill., a corporation of Illinois
Application January 8, 1935, Serial No. 48,766
Term of patent 14 years

The ornamental design for a tire, as shown.

98,449
DESIGN FOR A CARBURETOR OR SIMILAR ARTICLE
Arthur O. Randall, Miami, Fla., assignor to Randall Holding Corp., a corporation of Florida
Application February 21, 1935, Serial No. 58,556
Term of patent 14 years

The ornamental design for a carburetor or similar article, as shown.

98,450
DESIGN FOR BABY PANTS
Abraham N. Spanel, Rochester, N. Y.
Application December 11, 1935, Serial No. 60,011
Term of patent 14 years

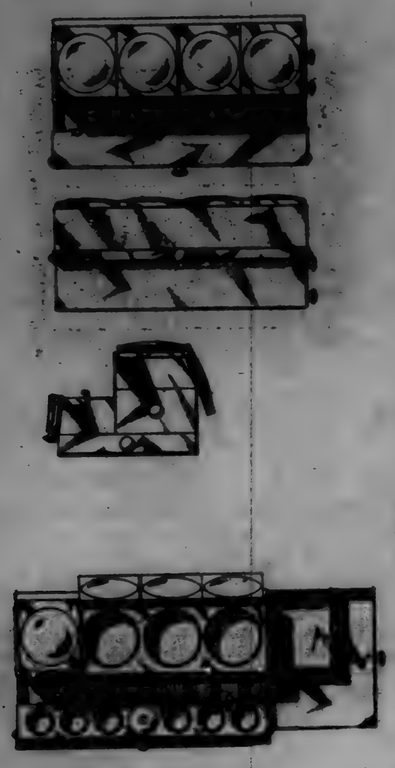


The ornamental design for baby pants as shown.

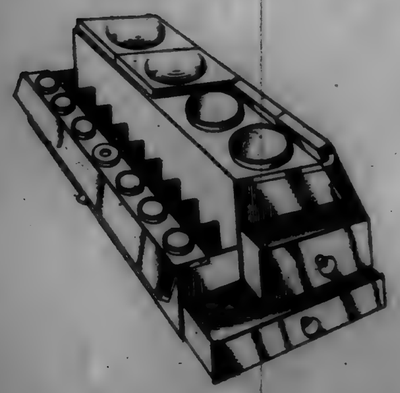
98,451
DESIGN FOR A BUCKLE
Harland F. Wright, New York, N. Y.
Application December 28, 1935, Serial No. 60,313
Term of patent 3½ years

The ornamental design for a buckle substantially as shown.

98,452
DESIGN FOR A LACE
Leon Birnbaum, New York, N. Y.
Application January 8, 1936, Serial No. 60,471
Term of patent 3½ years



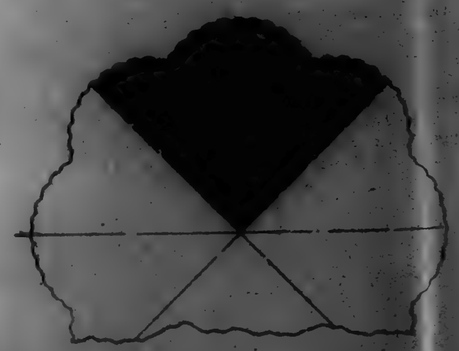
The ornamental design for a lace, substantially as shown and described.



98,453
DESIGN FOR A BOWL
Jeddie E. Clark, Dunkirk, Ind., assignor to Indiana Glass Company, Dunkirk, Ind., a corporation of Indiana
Application November 21, 1935, Serial No. 59,693
Term of patent 7 years

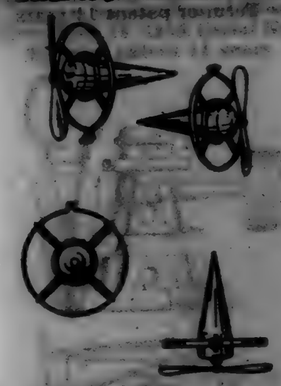
The ornamental design for a bowl, as shown.

98,454
DESIGN FOR A MANICURIST KIT
Eleanor Greenbaum, Los Angeles, Calif.
Application May 17, 1929, Serial No. 48,158
Term of patent 7 years



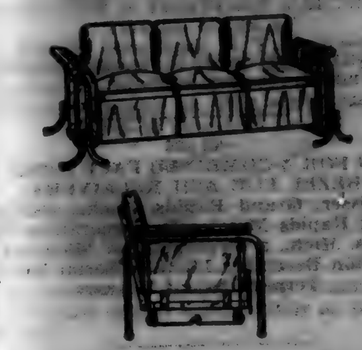
The ornamental design for a manicurist kit, as shown and described.

98,455
DESIGN FOR A BOTTLE
Marie Rose De Mandrille, Paris, France, assignor to Societe Anonyme Industrielle, Paris, France, a corporation of France
Application July 10, 1926, Serial No. 97,746
Term of patent 14 years



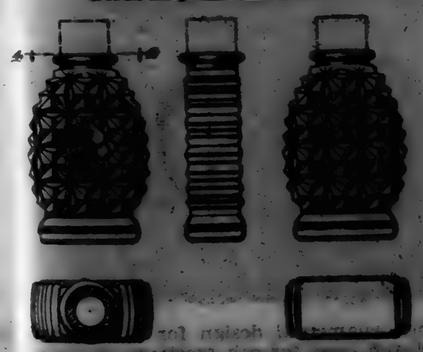
The ornamental design for a bottle, substantially as shown.

98,456
DESIGN FOR A DOILY
Kenneth C. Hamilton, Milwaukee, Wis., assignor to Milwaukee Lace Paper Company, Milwaukee, Wis., a corporation of Wisconsin
Application March 26, 1928, Serial No. 94,881
Term of patent 14 years



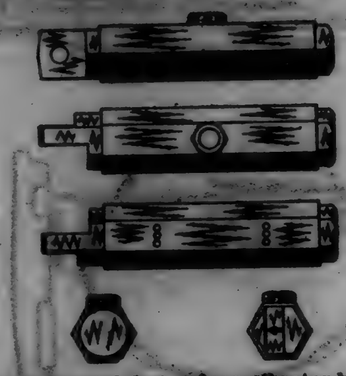
The ornamental design for a doily, substantially as shown and described.

98,457
DESIGN FOR AN ELECTRIC FAN
Charles D. Haynes, Fort Worth, Tex.
Application July 15, 1924, Serial No. 90,577
Term of patent 14 years



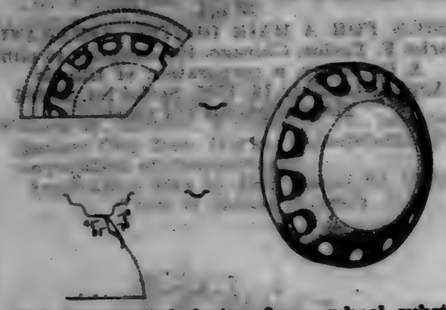
The ornamental design for an electric fan, as shown.

98,458
DESIGN FOR A GLIDER
William Hume Logan, Louisville, Ky.
Application March 11, 1925, Serial No. 55,811
Term of patent 3½ years



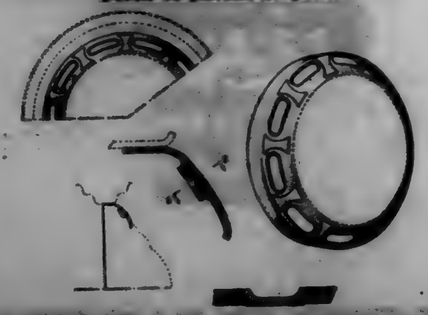
The ornamental design for a glider, as shown.

98,459
DESIGN FOR A BOTTLE
William H. Miller, Baltimore, Md., assignor to Carr-Lowrey Glass Co., Baltimore, Md.
Application December 15, 1925, Serial No. 80,192
Term of patent 14 years



The ornamental design for a bottle, as shown.

98,460
DESIGN FOR A VIBRATOR BODY
George B. Bishop, New Haven, Conn.
Application September 20, 1924, Serial No. 84,511
Term of patent 14 years

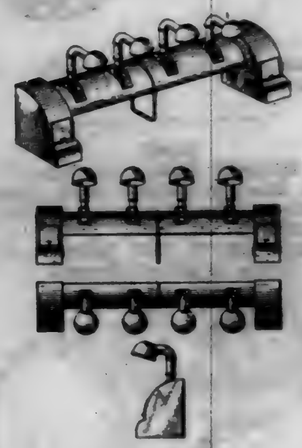


The ornamental design for a vibrator body substantially as shown.

98,461
DESIGN FOR A WHEEL
Charles W. Sinclair, Detroit, Mich., assignor to Kelsey-Hayes Wheel Company, Detroit, Mich., a corporation of Delaware
Application July 8, 1925, Serial No. 57,582
Term of patent 14 years

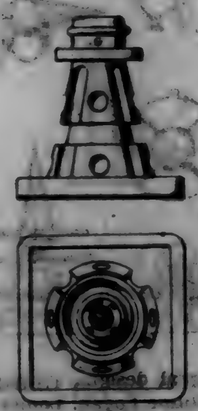
The ornamental design for a wheel substantially as shown.

98,462
DESIGN FOR A WHEEL
Charles W. Sinclair, Detroit, Mich., assignor to Kelsey-Hayes Wheel Company, Detroit, Mich., a corporation of Delaware
Application July 13, 1925, Serial No. 57,717
Term of patent 14 years



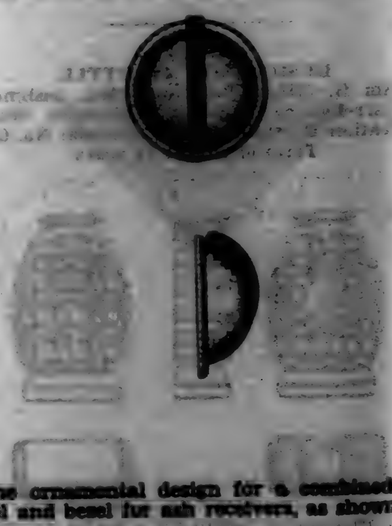
The ornamental design for a wheel substantially as shown.

98,462
DESIGN FOR BABY PANTS
Abrahan N. Spanel, Rochester, N. Y.
Application December 11, 1935, Serial No. 60,610
Term of patent 14 years



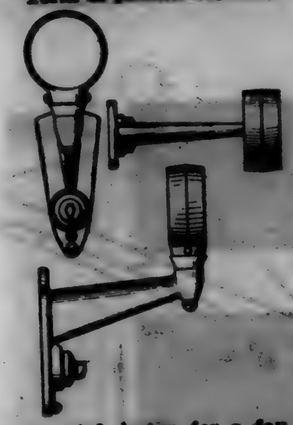
The ornamental design for baby pants as shown.

98,464
DESIGN FOR A HAIR DRYING APPARATUS
Charles F. Taylor, Chicago, Ill., assignor to Gibbs & Company, a corporation of Illinois
Application July 16, 1935, Serial No. 57,664
Term of patent 3½ years



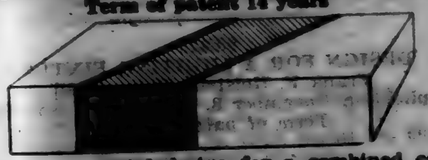
The ornamental design for a hair drying apparatus as shown.

98,465
DESIGN FOR A COMBINED CIGARETTE HOLDER AND ASH RECEIVER
William Benner Ulmer, Pottsville, Pa.
Application November 2, 1935, Serial No. 59,415
Term of patent 14 years



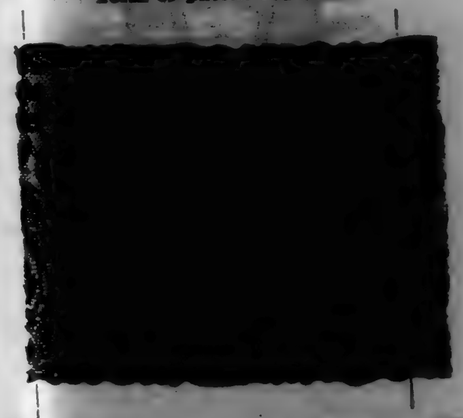
The ornamental design for a combined cigarette holder and ash receiver, as shown.

98,466
DESIGN FOR A COMBINED FACE PANEL AND BEZEL FOR ASH RECEIVERS
John Visser, Grand Rapids, Mich., assignor to Grand Rapids Metalcraft Corporation, Grand Rapids, Mich., a corporation of Michigan
Application December 14, 1935, Serial No. 60,043
Term of patent 14 years



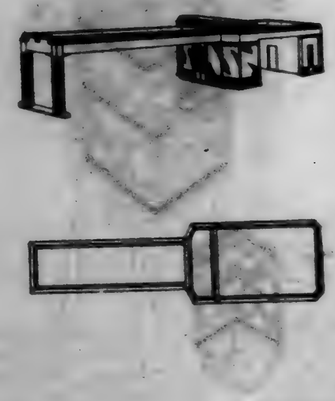
The ornamental design for a combined face panel and bezel for ash receivers, as shown.

98,467
DESIGN FOR A FAN BRACKET
James J. Wall, Wausau, Wis., assignor to Marathon Electric Manufacturing Corporation, Wausau, Wis., a corporation of Wisconsin
Application June 10, 1935, Serial No. 57,216
Term of patent 14 years



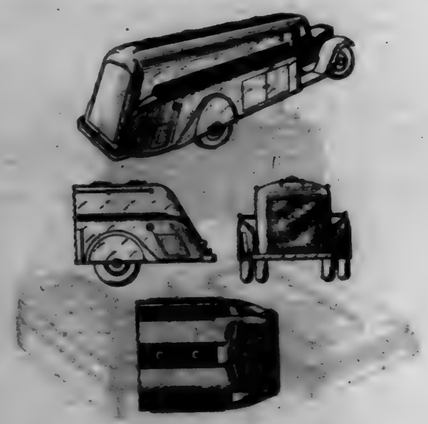
The ornamental design for a fan bracket as shown.

98,468
DESIGN FOR A COMBINED CARTON AND TOWEL DISPLAY
Kurt Wandel, New York, N. Y., assignor to The Rieser Company, Inc., New York, N. Y., a corporation
Application October 22, 1935, Serial No. 60,158
Term of patent 14 years



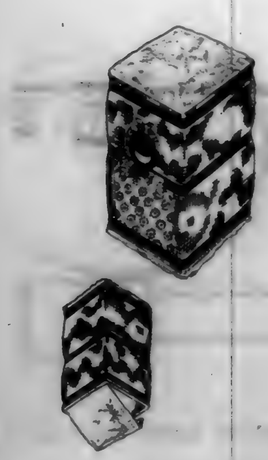
The ornamental design for a combined carton and towel display substantially as shown and described.

98,469
DESIGN FOR A LACE
Joseph D. Wiener, New York, N. Y.
Application December 31, 1935, Serial No. 60,214
Term of patent 3½ years



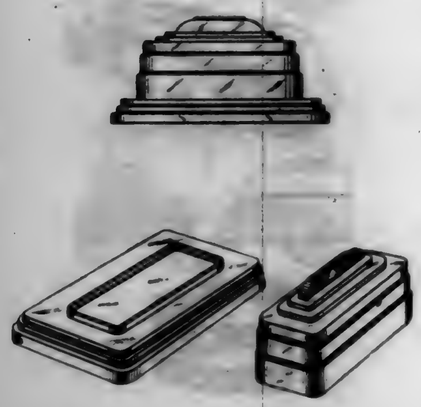
The ornamental design for a lace substantially as shown and described.

98,470
DESIGN FOR A SERVICE STATION
Ralph N. Aldrich, San Francisco, Calif., assignor to Standard Stations, Inc., San Francisco, Calif., a corporation of Delaware
Application December 9, 1935, Serial No. 59,969
Term of patent 14 years



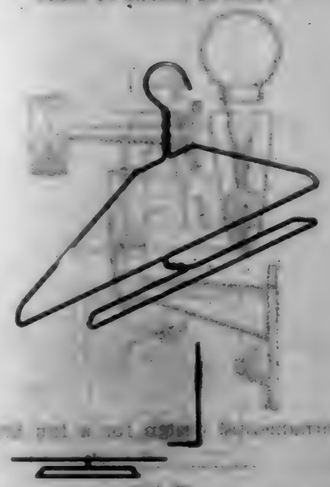
The ornamental design for a service station, as shown and described.

98,471
DESIGN FOR A TANK VEHICLE
William W. Ammon, Wyndmoor, Pa., assignor to Quaker City Iron Works, Philadelphia, Pa., a corporation of Pennsylvania
Application May 25, 1935, Serial No. 57,613
Term of patent 14 years



The ornamental design for a tank vehicle, substantially as shown and described.

86,472
DESIGN FOR A BOX
Pierre Eugene Bagur, New Orleans, La.
Application December 2, 1935, Serial No. 59,897
Term of patent 14 years

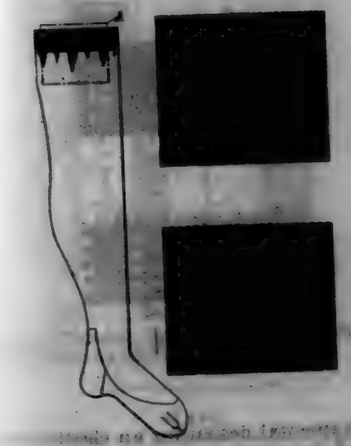


The ornamental design for a box, as shown.

86,473
DESIGN FOR A BUTTER DISH
Nettie M. Brockmeyer, University City, Mo.
Application November 7, 1935, Serial No. 59,427
Term of patent 3½ years

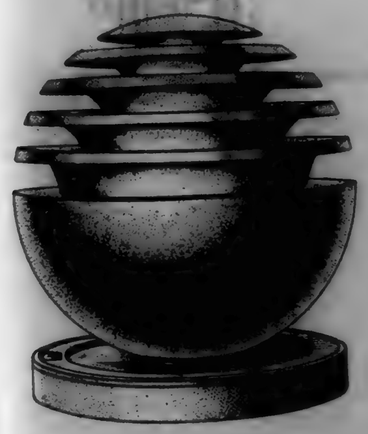
The ornamental design for a butter dish substantially as shown and described.

86,474
DESIGN FOR A GARMENT HANGER
Edward B. Farmer, St. Johnsbury, Vt.
Application January 15, 1935, Serial No. 54,944
Term of patent 7 years



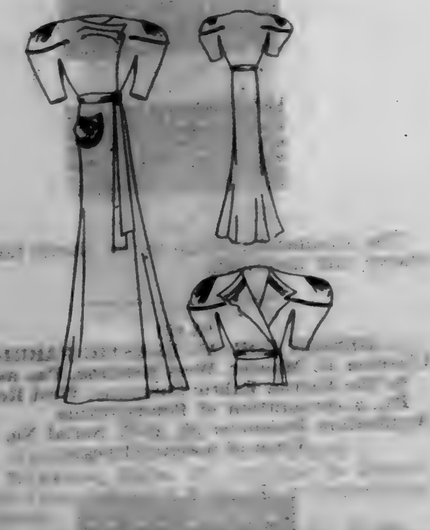
The ornamental design for a garment hanger, as shown and described.

86,475
DESIGN FOR A LIGHTING FIXTURE
Frank F. Holstein, Chicago, Ill.
Application November 2, 1935, Serial No. 59,439
Term of patent 7 years



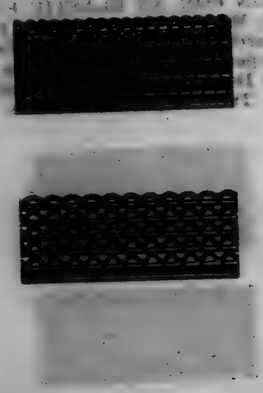
The ornamental design for a lighting fixture as shown and described.

86,476
DESIGN FOR A STOCKING
Otto Eugene Huber, Reading, Pa., assignor to The Narrow Fabric Company, West Reading, Pa., a corporation of Pennsylvania
Application December 23, 1935, Serial No. 60,235
Term of patent 14 years



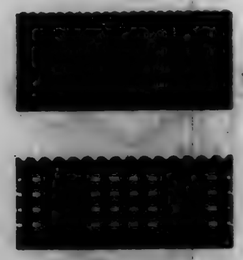
The ornamental design for a stocking as shown and described.

86,477
DESIGN FOR A RADIO CABINET
Gustav E. Jensen, New York, N. Y.
Application December 18, 1935, Serial No. 60,158
Term of patent 14 years



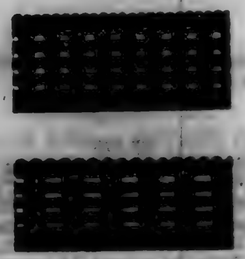
The ornamental design for a radio cabinet as shown.

86,478
DESIGN FOR A HOUSE COAT
Helen Lobel, New York, N. Y.
Application December 23, 1935, Serial No. 60,322
Term of patent 3½ years



The ornamental design for a house coat substantially as shown and described.

86,479
DESIGN FOR AN ELASTIC FABRIC
Clarence D. Maurer, West Reading, Pa., assignor to The Narrow Fabric Company, West Reading, Pa., a corporation of Pennsylvania
Application December 23, 1935, Serial No. 60,230
Term of patent 14 years

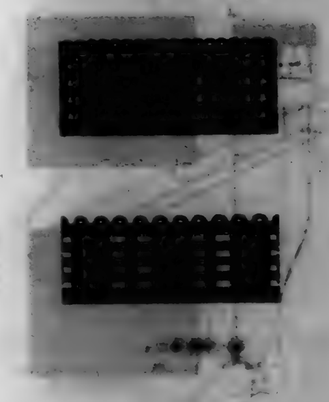


The ornamental design for an elastic fabric as shown and described.

98,480
DESIGN FOR AN ELASTIC FABRIC
Clarence D. Maurer, West Reading, Pa., assignor to The Narrow Fabric Company, West Reading, Pa., a corporation of Pennsylvania
Application December 23, 1935, Serial No. 60,231
Term of patent 14 years

The ornamental design for an elastic fabric, as shown and described.

98,481
DESIGN FOR AN ELASTIC FABRIC
Clarence D. Maurer, West Reading, Pa., assignor to The Narrow Fabric Company, West Reading, Pa., a corporation of Pennsylvania
Application December 23, 1935, Serial No. 60,232
Term of patent 14 years

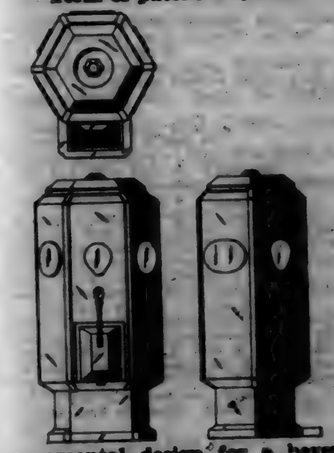


The ornamental design for an elastic fabric, as shown and described.

98,482
DESIGN FOR AN ELASTIC FABRIC
Clarence D. Maurer, West Reading, Pa., assignor to The Narrow Fabric Company, West Reading, Pa., a corporation of Pennsylvania
Application December 23, 1935, Serial No. 60,233
Term of patent 14 years

The ornamental design for an elastic fabric as shown and described.

98,483
DESIGN FOR AN ELASTIC FABRIC
Clarence D. Maurer, West Reading, Pa., assignor to The Narrow Fabric Company, West Reading, Pa., a corporation of Pennsylvania
Application December 23, 1935, Serial No. 60,234
Term of patent 14 years



The ornamental design for an elastic fabric as shown and described.

98,484
DESIGN FOR A COMBINED DRESSER CABINET AND BUREAU OR THE LIKE
Irving H. Stern, Boston, Mass.
Application February 21, 1935, Serial No. 55,546
Term of patent 7 years

The ornamental design for a combined dresser cabinet and bureau or the like as shown and described.

98,485
DESIGN FOR A BEVERAGE DISPENSING DEVICE
John M. Travis, St. Louis, Mo.
Application October 31, 1935, Serial No. 59,144
Term of patent 14 years

The ornamental design for a beverage dispensing device as shown.

98,486
DESIGN FOR A COMBINED BOTTLE CAP AND OPENER
Martin E. Trollen, St. Paul, Minn., assignor to Brown & Bigelow, St. Paul, Minn., a corporation of Minnesota
Application March 22, 1935, Serial No. 56,062
Term of patent 3½ years

The ornamental design for a combined bottle cap and opener as shown.

98,487
DESIGN FOR LACE
James Waterfield, Philadelphia, Pa., assignor to Louis A. Silk & Company, Inc., New York, N. Y.
Application January 4, 1936, Serial No. 60,410
Term of patent 3½ years

The ornamental design for lace substantially as shown and described.

98,488
DESIGN FOR A VANITY CASE
Albert Wewetzer, Elgin, Ill., assignor to Illinois Watch Case Company, Elgin, Ill., a corporation of Illinois
Application April 22, 1935, Serial No. 56,490
Term of patent 7 years

The ornamental design for a vanity case, as shown.

Goldberg, Julius A., Chicago, Ill. Shoe or similar article. 98,431; Feb. 4.

Goldberg, Julius A., Chicago, Ill. Shoe or similar article. 98,432; Feb. 4.

Grand Rapids Metalcraft Corporation. (See Visser, John, assignor.)

Guth, Stern & Co. (See Osterman, Samuel, assignor.)

Hamilton, Kenneth C., assignor to Milwaukee Lace Paper Company, Milwaukee, Wis. Doily. 98,456; Feb. 4.

Haynes, Charles F., Fort Worth, Tex. Electric fan. 98,457; Feb. 4.

Haywood, William R., White Plains, N. Y. Textile fabric. 98,483; Feb. 4.

Hoffmann, Wolfgang, Batavia, assignor to The Howell Company, St. Charles, Ill. Table. 98,434; Feb. 4.

Holstein, Frank F., Chicago, Ill. Lighting fixture. 98,475; Feb. 4.

Holtz, Herbert, Haverhill, Mass. Shoe. 98,435; Feb. 4.

Holtz, Herbert, Haverhill, Mass. Shoe. 98,436; Feb. 4.

Howell Company, The. (See Hoffmann, Wolfgang, assignor.)

Huber, Otto K., Reading, assignor to The Narrow Fabric Company, West Reading, Pa. Stocking. 98,476; Feb. 4.

Illinios Watch Case Company. (See Wewetzer, Albert, assignor.)

Indiana Glass Company. (See Clark, Jeddia B., assignor.)

Isaacs, Harry E., Baltimore, Md. Breeches. 98,437; Feb. 4.

Jensen, Gustav B., New York, N. Y. Radio cabinet. 98,477; Feb. 4.

Kelsey-Hayes Wheel Company. (See Sinclair, Charles W., assignor.)

Kosak, Helen B., New York, N. Y., assignor to Laird, Schober Company, Inc., Philadelphia, Pa. Shoe. 98,438; Feb. 4.

Laird, Schober Company. (See Kosak, Helen B., assignor.)

Libbey Glass Manufacturing Company, The. (See Deskey, Donald, assignor.)

Lobel, Helen, New York, N. Y. House coat. 98,478; Feb. 4.

Logan, William H., Louisville, Ky. Glider. 98,458; Feb. 4.

Marathon Electric Manufacturing Corporation. (See Wall, James J., assignor.)

Martin, Raymond H., assignor to The Basick Company, Bridgeport, Conn. Drawer pull. 98,439; Feb. 4.

Martin, Raymond H., assignor to The Basick Company, Bridgeport, Conn. Drawer pull. 98,440; Feb. 4.

Martin, Raymond H., assignor to The Basick Company, Bridgeport, Conn. Drawer pull. 98,441; Feb. 4.

Martin, Raymond H., assignor to The Basick Company, Bridgeport, Conn. Drawer pull. 98,442; Feb. 4.

Maurer, Clarence D., assignor to The Narrow Fabric Company, West Reading, Pa. Elastic fabric. 98,479; Feb. 4.

Maurer, Clarence D., assignor to The Narrow Fabric Company, West Reading, Pa. Elastic fabric. 98,480; Feb. 4.
Maurer, Clarence D., assignor to The Narrow Fabric Company, West Reading, Pa. Elastic fabric. 98,481; Feb. 4.
Maurer, Clarence D., assignor to The Narrow Fabric Company, West Reading, Pa. Elastic fabric. 98,482; Feb. 4.
Maurer, Clarence D., assignor to The Narrow Fabric Company, West Reading, Pa. Elastic fabric. 98,483; Feb. 4.
McCloud, Edward H. (See Pixley, M. A., and McCloud.)
McGee, Joseph, New York, N. Y., assignor to Bancroft-Walker Co., Waltham, Mass. Shoe. 98,443; Feb. 4.
McManus, Charles E., Spring Lake, N. J., assignor to Crown Cork & Seal Company, Inc., Baltimore, Md. Metal bottle. 98,444; Feb. 4.
McManus, Charles E., Spring Lake, N. J., assignor to Crown Cork & Seal Company, Baltimore, Md. Metal bottle. 98,445; Feb. 4.
Miller, William H., assignor to Carr-Lowrey Glass Co., Baltimore, Md. Bottle. 98,459; Feb. 4.
Milwaukee Lace Paper Company. (See Hamilton, Kenneth C., assignor.)
Montgomery Ward & Co. (See Prall, Bert R., assignor.)
Narrow Fabric Company, The. (See Huber, Otto E., assignor.)
Narrow Fabric Company, The. (See Maurer, Clarence D., assignor.)
Osterman, Samuel, New York, N. Y., assignor to Guth, Stern & Co., Inc. Flash lamp or similar article. 98,446; Feb. 4.
Pickop, George B., New Haven, Conn. Vibrator body. 98,480; Feb. 4.
Pixley, Milton A., and E. H. McCloud, Columbus, Ohio. Supplementary meter casing. 98,447; Feb. 4.
Prall, Bert R., assignor to Montgomery Ward & Co., Incorporated, Chicago, Ill. Tire. 98,448; Feb. 4.
Quaker City Iron Works. (See Ammen, William W., assignor.)
Randall, Arthur O., Miami, Fla., assignor to Randall Holding Corp., Carburetor or similar article. 98,449; Feb. 4.
Randall Holding Corp. (See Randall, Arthur O., assignor.)
Rieser Company, The. (See Wandel, Kurt, assignor.)
Silk, Louis A. & Company. (See Waterfield, James, assignor.)
Sinclair, Charles W., assignor to Kelsey-Hayes Wheel Company, Detroit, Mich. Wheel. 98,461; Feb. 4.
Sinclair, Charles W., assignor to Kelsey-Hayes Wheel Company, Detroit, Mich. Wheel. 98,462; Feb. 4.
Societe Anonyme Scherick. (See De Mascolo, Marie R., assignor.)
Spanel, Abraham N., Rochester, N. Y. Baby pants. 98,450; Feb. 4.
Spanel, Abraham N., Rochester, N. Y. Baby pants. 98,463; Feb. 4.
Standard Stations, Inc. (See Aldrich, Ralph N., assignor.)
Stern, Irving H., Boston, Mass. Combined dresser cabinet and bureau or the like. 98,464; Feb. 4.
Taylor, Charles F., Chicago, Ill., assignor to Gibbs & Company. Hair drying apparatus. 98,464; Feb. 4.
Travis, John M., St. Louis, Mo. Beverage dispensing device. 98,465; Feb. 4.
Trollen, Martin E., assignor to Brown & Bigelow, St. Paul, Minn. Combined bottle cap and opener. 98,456; Feb. 4.
Ulmer, William R., Pottsville, Pa. Combined cigarette holder and ash receiver. 98,465; Feb. 4.
Viber Company Limited. (See Douglass, Forrest G., assignor.)
Visser, John, assignor to Grand Rapids Metalcraft Corporation, Grand Rapids, Mich. Combined face panel and bezel for ash receivers. 98,466; Feb. 4.
Wahl Company, The. (See Beck, Robert, assignor.)
Wall, James J., assignor to Marathon Electric Manufacturing Corporation, Wausau, Wis. Fan bracket. 98,467; Feb. 4.
Wandel, Kurt, assignor to Rieser Company, Inc., New York, N. Y. Combined carton and towel display. 98,468; Feb. 4.
Waterfield, James, Philadelphia, Pa., assignor to Louis A. Silk & Company, Inc., New York, N. Y. Lace. 98,457; Feb. 4.
Wewetzer, Albert, assignor to Illinois Watch Case Company, Elgin, Ill. Vanity case. 98,458; Feb. 4.
Wiener, Joseph D., New York, N. Y. Lace. 98,469; Feb. 4.
Wright, Harland F., New York, N. Y. Buckle. 98,461; Feb. 4.

LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 4TH DAY OF FEBRUARY, 1936

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abrams, Armand J. (See Curtis, H. A., and Abrams.)
Adams, James L., Jr., Youngstown, Ohio. Metal rolling mill. 2,029,751; Feb. 4.
Agfa Ansco Corporation. (See Meiser, Georg, assignor.)
Aktiebolaget Nomy. (See Wallgren, A. G. F., and Jansson, assignors.)
Aktiebolaget-Spontan. (See Andersson, Nils F., assignor.)
Aktiebolaget Transiteria. (See Ljungström, Erik, assignor.)
Aktiebolaget Transiteria. (See Ljungström, E., and Olsson, assignors.)
Albert, Ralph K., assignor to Howell Electric Motors Company, Howell, Mich. Condenser. 2,029,580; Feb. 4.
Alexander, John W., Clarendon, Va. Fire alarm. 2,029,402; Feb. 4.
Allgemeine Elektricitats-Gesellschaft. (See Schubert, Paul, assignor.)
Allis-Chalmers Manufacturing Company. (See Peter, Charles, assignor.)
Alther, Joseph G., assignor to Universal Oil Products Company, Chicago, Ill. Method and apparatus for heating fluids. 2,029,291; Feb. 4.
Alther, Joseph G., assignor to Universal Oil Products Company, Chicago, Ill. Heating fluids and apparatus therefor. 2,029,292; Feb. 4.
Alther, Joseph G., assignor to Universal Oil Products Company, Chicago, Ill. Heating of fluids. 2,029,293; Feb. 4.
Alther, Joseph G., assignor to Universal Oil Products Company, Chicago, Ill. Heating of fluids. 2,029,294; Feb. 4.
Altorfer, Henry W., Peoria, Ill. Ironing machine cabinet. 2,029,283; Feb. 4.
Aluminum Company of America. (See Norton, A. B., and Guyot, assignors.)
Aluminum Company of America. (See Tumplin, Richard L., assignor.)
American Air Filter Company. (See Birkholz, Hans H., assignor.)
American Can Company. (See Ball, Charles O., assignor.)
American Can Company. (See Hoffman, Edmund, assignor.)
American Car and Foundry Company. (See Griffin, William T., assignor.)
American Chain Company. (See Bloecher, William H., Jr., assignor.)
American Cyanamid & Chemical Corporation. (See Jaeger, Alphons O., assignor.)
American Electric Fusion Corporation. (See von Henke, Edmund J., assignor.)
American Engineering Company. (See Bennett, Joseph S., assignor.)
American Engineering Company. (See Keene, Charles V., assignor.)
American Engineering Company. (See Link, Harry W., assignor.)
American Flange & Manufacturing Company. (See Sample, F. W., and Rose, assignors.)
American Laundry Machinery Company, The. (See Haney, Angus F., assignor.)
American Largi Corporation. (See Kolb, Viktor, assignor.)
American Magnesium Metals Corporation. (See Hanagirg, Fritz, assignor.)
American Screw Company. (See Reddy, Vincent J., assignor.)
American Smelting and Refining Company. (See Lindner, Karl A., assignor.)
American Steel Foundries. (See Hedgcock, William C., assignor.)
American Telephone and Telegraph Company. (See Green, Estill I., assignor.)
American Telephone and Telegraph Company. (See Green, E. I., and Leibe, assignors.)
American Zirconium Corporation. (See Little, William T., assignor.)
Amity Leather Products Co. (See Wehner, Heinz, assignor.)
Anderson, Howard P., Erie, Pa., assignor to The Standard Stoker Company, Incorporated. Locomotive tender. 2,029,295; Feb. 4.
Anderson, Louis A., Somerville, Mass. Holder. 2,029,317; Feb. 4.
Anderson, Lynn T., East Orange, N. J., and F. K. Low, Brooklyn, N. Y., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y. Telephone system. 2,029,[illegible]; Feb. 4.
Anderson, Swan F., Rockford, Ill. Combined mixing and capping machine. 2,029,[illegible]; Feb. 4.
Andersson, Nils F., Bromma, assignor to Aktiebolaget Spontan, Stockholm, Sweden. Internal combustion engine. 2,029,602; Feb. 4.
Andreas, Arno, Munster, Germany. Device for conveying finely divided material. 2,029,403; Feb. 4.
Andrews, George H., Yonkers, assignor to The Spool Cotton Company, New York, N. Y. Display device. 2,029,603; Feb. 4.
Andrews, Joseph B., Jr., Newport, Ky. Gutter attachment for ventilating windows of motor vehicles. 2,029,978; Feb. 4.
Angus, Leslie A., Owosso, Mich., assignor to Semet Solvay Engineering Corporation, New York, N. Y. Carburetted water gas process. 2,029,850; Feb. 4.
Anker-Werke Aktiengesellschaft. (See Jacob, Max, assignor.)
Apex Electrical Manufacturing Company, The. (See Frantz, Paul E., assignor.)
Appelberg, Friedrich, Bochum, assignor to Gebruder Eickhoff, Maschinenfabrik und Eisengiesserie, Bochum, Germany. Shaking conveyer. 2,029,805; Feb. 4.
Appleton Electric Company. (See Turnblom, Nils A., assignor.)
Archer Rubber Company. (See Gowdy, William F., assignor.)
Arfsten, Newton, assignor of one-fifth to K. Pohl, one-half to P. W. Buchhart, New York, and one-fifth to Franz Borchmann, Little Neck, Long Island, N. Y. Method and apparatus for producing stereoscopic effects. 2,029,500; Feb. 4.
Armacost, Wilbur H., assignor to The Superheater Company, New York, N. Y. Fluid heater. 2,029,284; Feb. 4.
Armstrong, Edward W. (See Rapaport, N., Armstrong, and Hutchinson.)
Arvin, James A., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Product and preparing same. 2,029,851; Feb. 4.
Atchison Revolving Door Co., The. (See Luke, Leo C., assignor.)
Austin, Oliver V., Hattiesburg, Miss. Fertiliser production from sewage. 2,029,648; Feb. 4.
Auto Research Corporation. (See Kocher, Edward H., assignor.)
Automatic Burner Corporation. (See Schroeder, O. C., and Perry, assignors.)
Ayres, Eugene E., Pittsburgh, Pa., assignor to Gulf Research & Development Corporation, Wilmington, Del. Reducing water flow in oil wells. 2,029,649; Feb. 4.
Bake, Louis S., Pennsgrove, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Preparing tetra alkyl lead. 2,029,801; Feb. 4.
Baker, Robert M., Toledo, Ohio. Temperature control device for furnaces. 2,029,551; Feb. 4.
Balfe, George T., assignor to Detroit Gasket & Mfg. Co., Detroit, Mich. Gasket and gasket material. 2,029,802; Feb. 4.
Ball, Charles O., River Forest, Ill., assignor to American Can Company, New York, N. Y. Apparatus for and method of canning. 2,029,803; Feb. 4.
Balsiger, Harold E. (See Steimer, A. F., Wise, and Balsiger.)
Banner, Abraham, New York, N. Y. Reversible handbag. 2,029,908; Feb. 4.
Bannister, William J., assignor to Commercial Solvents Corporation, Terre Haute, Ind. Esterification process. 2,029,694; Feb. 4.
Barco Manufacturing Co. (See Bard, F. N., Charles, and Gray, assignors.)
Bard, Charles T., Norwich, Conn. Automatic ball closing fitting. 2,029,019; Feb. 4.
Bard, Francis M., Highland Park, C. L. Charles, Chicago, and T. C. Gray, Evanston, Ill., assignors to Barco Manufacturing Co., Chicago, Ill. Reverse gear. 2,029,404; Feb. 4.
Barnes, John B., assignor to Universal Oil Products Company, Chicago, Ill. Treatment of petroleum. 2,029,752; Feb. 4.
Barney, Freeman. (See Lee, J. B., Gylleck, and Barney.)
Barney, Freeman. (See Lee, James B. and J. W., Gylleck, and Barney.)
Barnhart, George E., Pasadena, Calif. Method and machine for making tapered tubes. 2,029,552; Feb. 4.
Baroni, Guido B., Woodcliff, N. J. Dishwashing apparatus. 2,029,695; Feb. 4.
Barrett Company, The. (See Dawson, Pierre, assignor.)
Barrett Company, The. (See Gallaher, Alvan H., assignor.)
Barrett Company, The. (MacCubbin, A. A., and Zaverthal, Jr., assignors.)
Bartley, John G. (See Hunter, G. J., and Bartley.)
Bartnett, Arnold G., Oakmont, and E. L. Hadlow, Wynnewood, Pa., assignors to J. Edwards & Co., Philadelphia, Pa. Shoe fitting insert. 2,029,[illegible]; Feb. 4.
Bateman, Arthur T. (See Hoobler, S. J., Bateman, and Irvine.)

Bayer, Joseph, Ludwigshafen-on-the-Rhine, A. Haltmeier, Cologne, and K. Hencky, Leverkusen, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Carrying out exothermic catalytic gas reactions. 2,029,604; Feb. 4.

Bassoni, Lewis J., Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Trimming machine. 2,029,304; Feb. 4.

Bassoni, Lewis J., Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Trimming machine. 2,029,305; Feb. 4.

Beadle, Lynn C., assignor of one-half to K. B. Segall, Detroit, Mich. Float control. 2,029,405; Feb. 4.

Beardmore, Herbert F., Oklahoma City, Okla., assignor of one-half to Indian Territory Illuminating Oil Company, Bartlesville, Okla. Apparatus for flowing wells. 2,029,457; Feb. 4.

Beardsley, Wilson H., Houston, Tex., assignor to Sinclair Refining Company, New York, N. Y. Refining of South Texas lubricating oil. 2,029,605; Feb. 4.

Bearings Company of America. (See Schubert, Frank, assignor.)

Beaver Manufacturing Company. (See Hartmann, Poul D., assignor.)

Beck, Adolf. (See Schmidt, W., and Beck.)

Beckwith, Charles J., Brooklyn, assignor to Johns-Manville Corporation, New York, N. Y. Reenforced insulating roof slab. 2,029,352; Feb. 4.

Beckwith, Lawton B. (See Bray, U. B., and Beckwith.)

Beckwith, Lawton B. (See Bray, U. B., Beckwith, and Scott.)

Bell, Cornelia M. (See Schmitt, R. M., and Bell.)

Bell Telephone Laboratories, Incorporated. (See Anderson, L. T., and Low, assignors.)

Bell Telephone Laboratories, Incorporated. (See Bode, Hendrik W., assignor.)

Bell Telephone Laboratories, Incorporated. (See Bowne, Langford J., assignor.)

Bell Telephone Laboratories, Incorporated. (See Field, Joseph C., assignor.)

Bell Telephone Laboratories, Incorporated. (See Johnson, L. H., and Low, assignors.)

Bell Telephone Laboratories, Incorporated. (See Mallina, Rudolph F., assignor.)

Bell Telephone Laboratories, Incorporated. (See Stokely, Ray L., assignor.)

Bendix Brake Company. (See Dodge, Adiel Y., assignor.)

Bennett, Geoffrey R., assignor to Toledo Scale Manufacturing Company, Toledo, Ohio. Composite structure. 2,029,906; Feb. 4.

Bennett, John M., Detroit, Mich. Key holder. 2,029,696; Feb. 4.

Bennett, Joseph S., Merion, assignor to American Engineering Company, Philadelphia, Pa. Furnace. 2,029,285; Feb. 4.

Bennett, Stanley Q., assignor to Toledo Scale Manufacturing Company, Toledo, Ohio. Weighing scale. 2,029,907; Feb. 4.

Bent, Quincy, Friedensville, and E. F. Kenney, Bethlehem, Pa., assignors to Bethlehem Steel Company. Process and apparatus for rail handling and treatment. 2,029,286; Feb. 4.

Berg, Herman, assignor to The Kelly Reamer Company, Cleveland, Ohio. Boring tool. 2,029,458; Feb. 4.

Berggren, Charles W., Brooklyn, N. Y. Pump and compressor. 2,029,554; Feb. 4.

Bergman, Herbert A., Chicago, Ill., assignor to Zim Manufacturing Company. Tool for lapping valve seats. 2,029,753; Feb. 4.

Bergqvist, Abe. (See Seving, F. W., Bergqvist, and Olsson.)

Berndt, Edward C. (See Creighton, H. M., and Berndt.)

Bernheim, Roger, Besons, France, assignor to Le Film Ozaphane Société Anonyme. Photographic film. 2,029,979; Feb. 4.

Bertele, Ludwig, Dresden, assignor to the firm Carl Zeiss, Jena, Germany. Objective. 2,029,806; Feb. 4.

Besag, Ernst, Baden-Baden, Germany. Releasing arrangement for electric switches. 2,029,980; Feb. 4.

Best, John H. & Sons, Inc. (See Best, Leon H., assignor.)

Best, Leon H., assignor to John H. Best & Sons, Inc., Galva, Ill. Lighter. 2,029,697; Feb. 4.

Bethlehem Shipbuilding Corporation, Ltd. (See Frear, Hugo P., assignor.)

Bethlehem Steel Company. (See Bent, Q., and Kenney, assignors.)

Betz, William, Detroit, Mich. Drill jig. 2,029,650; Feb. 4.

Beust, Cecil J. (See Mathews, G. W., and Beust.)

Bickford, Herbert A., Warwick, R. I., assignor to Boston Wire Stitcher Company, Portland, Maine. Machine for attaching articles to other objects. 2,029,859; Feb. 4.

Biersdorf, Herman E., et al. (See Minott, David L., assignor.)

Biggers, Boyd. (See Howard, J. R., and Biggers.)

Bilhuber, E., Inc. (See Schmidt, Karl F., assignor.)

Binks Manufacturing Company. (See Brameen, S., Wahlin, and Gustafson, assignors.)

Binks Manufacturing Company. (See Gustafson, Eric, assignor.)

Birkbolz, Hans E., assignor to America Air Filter Company, Inc., Louisville, Ky. Air or gas filter unit. 2,029,406; Feb. 4.

Birky, Walter. (See Hathaway, R. F., and Birky.)

Black, Willy, Hanover, assignor to F. Kruchenberg and C. Rudefeld, Hanover, Germany. Transmission gear. 2,029,981; Feb. 4.

Bleecker, William H., Jr., Mount Lebanon, Pa., assignor, by mesne assignments, to American Chain Company, Inc. Display sign. 2,029,908; Feb. 4.

Bliss, Lyman A., assignor to The Linde Air Products Company, New York, N. Y. Liquid trapping device. 2,029,852; Feb. 4.

Blumberg, Harry E., assignor to M. W. Kellogg Company, New York, N. Y. Heat treating welded containers. 2,029,807; Feb. 4.

Blume, George F., Philadelphia, Pa. Roll for clothes wringers. 2,029,459; Feb. 4.

Blumental, Benjamin, Youngstown, Ohio. Display stand. 2,029,407; Feb. 4.

Blumenthal, Sidney, & Co. (See Ferguson, D., and Schell, assignors.)

Bode, Hendrik W., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Wave transmission network. 2,029,696; Feb. 4.

Bohn Aluminum and Brass Corporation. (See Boshkoff, R. J., Bateman, and Irvine, assignors.)

Boller, Peter, Machine Works. (See Boller, William N., assignor.)

Boller, William N., Oak Park, assignor to Peter Boller Machine Works, Chicago, Ill. Mechanism for brakes and clutches. 2,029,287; Feb. 4.

Bonney-Floyd Company, The. (See Gregg, A. W., and Frank, assignors.)

Borchmann, Franz, et al. (See Arfsten, Newton, assignor.)

Borg-Warner Corporation. (See Reed, Harold V., assignor.)

Born, Russell. (See Rosenbloom, L., and Born.)

Boruff, Clair S. (See Boswell, A. M., and Boruff.)

Bossart, Paul N., assignor to The Union Switch & Signal Company, Swissvale, Pa. Electrical amplifier. 2,029,854; Feb. 4.

Boston Wire Stitcher Company. (See Bickford, Herbert A., assignor.)

Bowles, Edward L., Wellesley Farms, Mass. Electric meter. 2,029,355; Feb. 4.

Bowne, Langford J., Howard Beach, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Alarm system. 2,029,699; Feb. 4.

Boykow, Johann M., Berlin-Lichterfelde-West, assignor to Deutsche Luftfahrt-und Handels-Aktien-Gesellschaft, Berlin, Germany. Inclination responsive device for aircraft. 2,029,760; Feb. 4.

Brady, Thomas, West Caldwell, N. J. Drink vending machine. 2,029,440; Feb. 4.

Brameen, Svend, F. Wahlin, and E. Gustafsson, assignors to Binks Manufacturing Company, Chicago, Ill. Powder-spraying appliance. 2,029,408; Feb. 4.

Brand, Louis C., Ottawa, Ill. Arch support shoe. 2,029,409; Feb. 4.

Braund, John J., Washington, D. C. Embossing apparatus. 2,029,651; Feb. 4.

Bray, Ulric B., Palos Verdes Estates, assignor to Union Oil Company of California, Los Angeles, Calif. Petroleum resin. 2,029,288; Feb. 4.

Bray, Ulric B., Palos Verdes Estates, L. B. Beckwith, San Pedro, and F. S. Scott, assignors to Union Oil Company of California, Los Angeles, Calif. Asphalt-asbestos mastic and producing same. 2,029,289; Feb. 4.

Bray, Ulric B., Palos Verdes Estates, and L. B. Beckwith, San Pedro, assignors to Union Oil Company of California, Los Angeles, Calif. Asphalts and producing same. 2,029,290; Feb. 4.

Bredtschneider, Kurt, Dortmund, Germany. High pressure joint for pressure vessels. 2,029,608; Feb. 4.

Brenner, Frederick W., Philadelphia, Pa. Can punch. 2,029,607; Feb. 4.

Briede & Rogovsky, Inc. (See Templin, William, assignor.)

Brill, J. G., Company, The. (See Martin, Marvin G., assignor.)

Brown Company. (See Schur, Milton G., assignor.)

Brown, Elmo L., Asheville, N. C. Carburetor. 2,029,536; Feb. 4.

Brown, Frank. (See Ellis, G. H., and Brown.)

Brown-Lipe Gear Company, et al. (See Tower, Elmer V. J., assignor.)

Bruce, E. L., Company. (See Bruce, Frank E., assignor.)

Bruce, Frank E., assignor to E. L. Bruce Company, Memphis, Tenn. Wood floor. 2,029,808; Feb. 4.

Brune, Rudolf. (See Hagenbücker, A., and Brune.)

Brush, Chester E., Chicago, Ill., assignor to E. H. Scott. Remote control for radio receivers. 2,029,467; Feb. 4.

Bruynes, Johannes. (See de Boer, J. H., Bruynes, and Teves.)

Buchbert, P. William, et al. (See Arfsten, Newton, assignor.)

Buchman, Samuel, Pittsburgh, Pa. Pillow. 2,029,[illegible]; Feb. 4.

Buckley, Albert O., Cleveland, assignor to National Malleable and Steel Castings Company, Cleveland, Ohio. Car truck side frame and bolster construction. 2,029,587; Feb. 4.

Buckley, James W., Weatherford, Tex. Electric [illegible]. 2,029,867; Feb. 4.

Budd, David B., Anchorville, Mich., and F. C. Beebe, Toledo, Ohio. Garden roller manufacture. 2,029,518; Feb. 4.

Buffalo Electro-Chemical Company. (See Clark, J. A., and Smolenz, assignors.)

Buffalo-Springfield Roller Co., The. (See Greiner, Carl F., assignor.)

Bull, William B., Pelham Manor, N. Y. Moving picture and sound cabinet. 2,029,306; Feb. 4.

Burch Corporation, The. (See Moss, Lester T., assignor.)

Burditt, Arthur K., Roselle Park, N. J. Soap pulverizer and dispenser. 2,029,701; Feb. 4.

Burke, Earl L., Warren, assignor to Republic Steel Corporation, Youngstown, Ohio. Packaging. 2,029,983; Feb. 4.

Burns, Erwin, Los Angeles, and H. P. Wickersham, Huntington Park, Calif. Well tool. 2,029,609; Feb. 4.

Boswell, Arthur M., and C. S. Boruff, Urbana, Ill. Digestion of industrial wastes. 2,029,762; Feb. 4.

Buttfield, Alfred C., North Plainfield, and E. W. Muller, Bewaren, N. J., assignors to The Vulcan Detinning Company. Baling press. 2,029,984; Feb. 4.

Byrnes, Clarence P. (See James, Joseph H., assignor.)

California Spray-Chemical Corporation. (See Parker, William B., assignor.)

Campanella, Vito, New York, N. Y. Carburetor. 2,029,553; Feb. 4.

Campbell, Harry B., Baltimore, Md., and A. Sargent, Bronxville, assignors to Campbell Metal Window Corporation, New York, N. Y. Window ventilator. 2,029,610; Feb. 4.

Campbell, Lee R., Hazel Park, Mich. Method and apparatus for manufacturing products by subjecting a material to relatively high temperatures. 2,029,807; Feb. 4.

Campbell Metal Window Corporation. (See Campbell, H. B., and Sargent, assignors.)

Cannity, Ernest, assignor to The James Hunter Machine Company, North Adams, Mass. Automatic variable speed drive for textile machines. 2,029,554; Feb. 4.

Capps, Emmit B. (See Capps, Joseph W., assignor.)

Capps, Joseph W., Portales, New Mexico, assignor of one-half to Emmit Sidney Capps, Pecos, Tex. Cultivator attachment for tractors. 2,029,682; Feb. 4.

Capps, Washington T., Baltimore, Md., assignor to The Standard Stoker Company, Incorporated. Stoker. 2,029,519; Feb. 4.

Carbaugh, Conrad A., Fulton County, Pa. Hanger for eaves troughs. 2,029,462; Feb. 4.

Carey, William J., Cleveland Heights, Ohio. Pump or motor. 2,029,520; Feb. 4.

Carlsen, Iver G., Rosebank, N. Y. Igniting device. 2,029,356; Feb. 4.

Carothers, Wallace H., Fairville, Pa., A. M. Collins, and J. E. Kirby, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Chemical products and processes for producing same. 2,029,410; Feb. 4.

Cassell, Joseph L., assignor, by mesne assignments, to Wired Radio, Inc., New York, N. Y. Automatic radio receiving apparatus. 2,029,909; Feb. 4.

Causey, Daniel W., Norfolk, Va. Shade protector. 2,029,308; Feb. 4.

Celanese Corporation of America. (See Ellis, G. H., and Brown, assignors.)

Central United National Bank, as trustee. (See Wheelwarger, Albert E., assignor.)

Chadeloid Chemical Company. (See Ellis, Carleton, assignor.)

Challenge Machinery Company, The. (See Lee, J. H., Gylleck, and Barney, assignors.)

Challenge Machinery Company, The. (See Lee, James H. and J. W., Gylleck, and Barney, assignors.)

Chalmers, George W., Summit, Ill., assignor to International Patents Development Company, Wilmington, Del. Can feeding apparatus. 2,029,580; Feb. 4.

Chambers, Cornelius, Shirley, Birmingham, England. Apparatus for washing drinking vessels. 2,029,355; Feb. 4.

Charles, Carl L. (See Bard, F. N., Charles, and Over.)

Chazan, Saul H., Rochester, N. Y. Display device. 2,029,663; Feb. 4.

Chemical Construction Corporation. (See Christensen, Axel, assignor.)

Chewning, Walter L., Cynwyd, assignor to United Engineers & Constructors Inc., Philadelphia, Pa. Disk filter. 2,029,611; Feb. 4.

Chicago Metallic Manufacturing Company. (See Langel, Adrian L., assignor.)

Chicago Pump Company. (See Durdin, Augustus C., Jr., assignor.)

Childs, Henry R., Kingsport, Tenn., assignor to Eastman Kodak Company, Rochester, N. Y. Thread fluid treating device. 2,029,910; Feb. 4.

Christensen, Axel, Rye, N. Y., assignor to Chemical Construction Corporation. Regenerating absorbent liquids. 2,029,411; Feb. 4.

Chrysler, William A., Dayton, Ohio, assignor to General Motors Corporation, Detroit, Mich. Fluid flow control device. 2,029,397; Feb. 4.

Clapp, James K., Auburndale, assignor to General Radio Company, Cambridge, Mass. Electromechanical vibrator. 2,029,358; Feb. 4.

Clark, George J. J. (See Fred, E., and Clark.)

Clark, Harold W., assignor to The McCaskey Register Company, Alliance, Ohio. Receipt control [illegible]. 2,029,784; Feb. 4.

Clark, James A., Poughkeepsie, N. Y., and H. G. Smolenz, Upper Darby, Pa., assignors to Buffalo Electro-Chemical Company, Inc., Tonawanda, N. Y. Bleaching. 2,029,986; Feb. 4.

Clark, John A., assignor to Manton-Gaulin Manufacturing Company, Inc., St. Johnsbury, Vt. Packing for homogenizers. 2,029,463; Feb. 4.

Claude, André, Nanterre, France. Electric lighting apparatus. 2,029,986; Feb. 4.

Cleveland Automatic Machine Company, The. (See Ruppel, Harry W., assignor.)

Cleveland Heater Company, The. (See Craver, Albert F., assignor.)

Cohen, Isidor, Brooklyn, N. Y. Refrigerator door construction. 2,029,755; Feb. 4.

Colbert, William H., Breckenridge, Pa., assignor to Liberty Mirror Works. Rear view mirror. 2,029,911; Feb. 4.

Coleman, Alfred E., Corvallis, Oreg. Finger ring. 2,029,464; Feb. 4.

Collette, Antoinette D., Winnetka, Ill. Table covering. 2,029,856; Feb. 4.

Collins & Aikman Corporation. (See Hiers, Glen S., assignor.)

Collins & Aikman Corporation. (See Kaufman, Frank M., assignor.)

Collins, Arnold M. (See Carothers, W. H., Collins, and Kirby.)

Collins, Arthur E., Cuyahoga Falls, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Apparatus for shirring rubber articles. 2,029,859; Feb. 4.

Colomb, Henri, Tavannes, Switzerland. Watch movement for fancy watches. 2,029,559; Feb. 4.

Commercial Solvents Corporation. (See Bannister, William J., assignor.)

Compagnie Generale de Telegraphie Sans Fil. (See Lucas, René, assignor.)

Comprex Oscillator Corp. (See Kleine, Arnold, assignor.)

Concrete Engineering Company. (See Ochiltree, Ned A., assignor.)

Connolly, William F., Farley, and W. F. Yeoman, Monticello, Iowa. Jar lifter. 2,029,809; Feb. 4.

Connolly, William F., Farley, and W. F. Yeoman, Monticello, Iowa. Jar holder. 2,029,810; Feb. 4.

Conradty, C. (See Conradty, Ottmar, assignor.)

Conradty, Ottmar, assignor to C. Conradty, Nuremberg, Germany. Trolley system. 2,029,857; Feb. 4.

Cooke, Horace B. (See Sperr, Frederick W., Jr., assignor.)

Cooling & Air Conditioning Corporation, The. (See Kayes, Robert E., assignor.)

Copland, Charles J., North Kansas City, Mo., assignor to International Patents Development Company, Wilmington, Del. Crystallization of dextrose. 2,029,860; Feb. 4.

Corbalogesellschaft m. b. H. (See Philipp, Robert B., assignor.)

Cosser, Frank, Finsbury Park, London, England. Sphygmomanometer bandage. 2,029,912; Feb. 4.

Couch, Glenn F., Rochester, assignor to The Symington Company, New York, N. Y. Journal box. 2,029,521; Feb. 4.

Couch, Hayden G., Grant, Fla. Dredge. 2,029,858; Feb. 4.

Coulson, Charles H., Hanover, Pa. Heel forming machine. 2,029,854; Feb. 4.

Coulter, Andrew C. L., Honolulu, Territory of Hawaii. Apparatus for straining sugar cane juice. 2,029,655; Feb. 4.

Cox, Gerald J., and M. L. Dodds, Pittsburgh, Pa., assignors, by mesne assignments, to Niacet Chemicals Corporation, New York, N. Y. Manufacture of esters of levulinic acid. 2,029,413; Feb. 4.

Cornell, Frank, Plainfield, N. J. Oil burner. 2,029,860; Feb. 4.

Craver, Albert F., Lakewood, assignor to The Cleveland Heater Company, Cleveland, Ohio. Electric water heater. 2,029,967; Feb. 4.

Creighton, Harry M., East Norwalk, and R. C. Berndt, Norwalk, assignors to The R. U. V. Engineering Corporation, South Norwalk, Conn. Active ray treating device. 2,029,612; Feb. 4.

Crompton & Knowles Loom Works. (See Vose, Lewis S., assignor.)

Cross, Wallace R., Detroit, Mich. Machine for salvaging carbons. 2,029,522; Feb. 4.

Crown Cork & Seal Company. (See Huntley, G. J., and Bartley, assignors.)

Crumrine, Chester W., assignor to Eastman Kodak Company, Rochester, N. Y. Camera latch. 2,029,913; Feb. 4.

Cunningham, Lewis L., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Modulating electric valve. 2,029,465; Feb. 4.

Curtis, Harry A., Knoxville, Tenn., and A. J. Abrams, Colbert County, near Sheffield, assignors to Tennessee Valley Authority, Wilson Dam, Ala. Preparing phosphate charging stock. 2,029,809; Feb. 4.

Curtis, Leslie F., assignor to United American Bosch Corporation, Springfield, Mass. Tone compensated volume control. 2,029,[illegible]; Feb. 4.

Cutler-Hammer, Inc. (See Laabs, Eric H., assignor.)

Dabgin, William, New York, N. Y. Adjustable hand for flashlights. 2,029,861; Feb. 4.

Daemicke Company, The. (See Daemicke, Roland P., assignor.)

Bayer, Joseph, Ludwigshafen-on-the-Rhine, A. Haltzmeier, Cologne, and K. Hencky, Leverkusen, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Carrying out exothermic catalytic gas reactions. 2,029,604; Feb. 4.

Bassoni, Lewis J., Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Trimming machine. 2,029,304; Feb. 4.

Bassoni, Lewis J., Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Trimming machine. 2,029,305; Feb. 4.

Beadle, Lynn C., assignor of one-half to K. B. Segall, Detroit, Mich. Float control. 2,029,405; Feb. 4.

Beardmore, Herbert P., Oklahoma City, Okla., assignor of one-half to Indian Territory Illuminating Oil Company, Bartlesville, Okla. Apparatus for flowing wells. 2,029,457; Feb. 4.

Beardsley, Wilson H., Houston, Tex., assignor to Sinclair Refining Company, New York, N. Y. Refining of South Texas lubricating oil. 2,029,605; Feb. 4.

Bearings Company of America. (See Schubert, Frank, assignor.)

Beaver Manufacturing Company. (See Hartmann, Povl D., assignor.)

Beck, Adolf. (See Schmidt, W., and Beck.)

Beckwith, Charles J., Brooklyn, assignor to Johns-Manville Corporation, New York, N. Y. Reenforced insulating roof slab. 2,029,352; Feb. 4.

Beckwith, Lawton B. (See Bray, U. B., and Beckwith.)

Beckwith, Lawton B. (See Bray, U. B., Beckwith, and Scott.)

Bell, Cornelia M. (See Schmitt, R. M., and Bell.)

Bell Telephone Laboratories, Incorporated. (See Anderson, L. T., and Low, assignors.)

Bell Telephone Laboratories, Incorporated. (See Bode, Hendrik W., assignor.)

Bell Telephone Laboratories, Incorporated. (See Bowne, Langford J., assignor.)

Bell Telephone Laboratories, Incorporated. (See Field, Joseph C., assignor.)

Bell Telephone Laboratories, Incorporated. (See Johnson, L. H., and Low, assignors.)

Bell Telephone Laboratories, Incorporated. (See Mallina, Rudolph F., assignor.)

Bell Telephone Laboratories, Incorporated. (See Stokely, Ray L., assignor.)

Bendix Brake Company. (See Dodge, Adiel Y., assignor.)

Bennett, Geoffrey R., assignor to Toledo Scale Manufacturing Company, Toledo, Ohio. Composite structure. 2,029,906; Feb. 4.

Bennett, John M., Detroit, Mich. Key holder. 2,029,696; Feb. 4.

Bennett, Joseph S., Merion assignor to American Engineering Company, Philadelphia, Pa. Furnace. 2,029,285; Feb. 4.

Bennett, Stanley Q., assignor to Toledo Scale Manufacturing Company, Toledo, Ohio. Weighing scale. 2,029,907; Feb. 4.

Bent, Quincy, Friedensville, and E. F. Kenney, Bethlehem, Pa., assignors to Bethlehem Steel Company. Process and apparatus for rail handling and treatment. 2,029,286; Feb. 4.

Berg, Herman, assignor to The Kelly Reamer Company, Cleveland, Ohio. Boring tool. 2,029,458; Feb. 4.

Berggren, Charles W., Brooklyn, N. Y. Pump and compressor. 2,029,554; Feb. 4.

Bergman, Herbert A., Chicago, Ill., assignor to Zim Manufacturing Company. Tool for lapping valve seats. 2,029,753; Feb. 4.

Bergqvist, Abe. (See Seving, F. W., Bergqvist, and Olsson.)

Berndt, Edward C. (See Creighton, H. M., and Berndt.)

Bernheim, Roger, Bezons, France, assignor to Le Film Ozaphane Société Anonyme. Phonographic film. 2,029,979; Feb. 4.

Bertele, Ludwig, Dresden, assignor to the firm Carl Zeiss, Jena, Germany. Objective. 2,029,806; Feb. 4.

Besag, Ernst, Baden-Baden, Germany. Releasing arrangement for electric switches. 2,029,980; Feb. 4.

Best, John H. & Sons, Inc. (See Best, Leon H., assignor.)

Best, Leon H., assignor to John H. Best & Sons, Inc., Galva. Ill. Lighter. 2,029,697; Feb. 4.

Bethlehem Shipbuilding Corporation, Ltd. (See Frear, Hugo P., assignor.)

Bethlehem Steel Company. (See Bent, Q., and Kenney, assignors.)

Betz, William, Detroit, Mich. Drill jig. 2,029,650; Feb. 4.

Beust, Cecil J. (See Mathews, G. W., and Beust.)

Bickford, Herbert A., Warwick, R. I., assignor to Boston Wire Stitcher Company, Portland, Maine. Machine for attaching articles to other objects. 2,029,859; Feb. 4.

Biersdorf, Herman R., et al. (See Minott, Daniel L., assignor.)

Biggers, Boyd. (See Howard, J. R., and Biggers.)

Bilhuber, E., Inc. (See Schmidt, Karl F., assignor.)

Binks Manufacturing Company. (See Bramsen, S., Wahlin, and Gustafsson, assignors.)

Binks Manufacturing Company. (See Gustafsson, Eric, assignor.)

Birkbolz, Hans R., assignor to America Air Filter Company, Inc., Louisville, Ky. Air or gas filter unit. 2,029,406; Feb. 4.

Bixby, Walter. (See Hathaway, R. F., and Bixby.)

Black, Willy, Hanover, assignor to F. Kruckenberg and C. Brederfeld, Hanover, Germany. Transmission gear. 2,029,961; Feb. 4.

Bleecker, William H., Jr., Mount Lebanon, Pa., assignor, by mesne assignments, to American Chain Company, Inc. Display sign. 2,029,908; Feb. 4.

Bliss, Lyman A., assignor to The Linde Air Products Company, New York, N. Y. Liquid trapping device. 1,029,852; Feb. 4.

Blumberg, Harry S., assignor to M. W. Kellogg Company, New York, N. Y. Heat treating welded containers. 2,029,807; Feb. 4.

Blume, George F., Philadelphia, Pa. Roll for clothes wringers. 2,029,459; Feb. 4.

Blumental, Benjamin, Youngstown, Ohio. Display stand. 2,029,407; Feb. 4.

Blumenthal, Sidney, & Co. (See Ferguson, D., and Schell, assignors.)

Bode, Hendrik W., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Wave transmission network. 2,029,686; Feb. 4.

Bohn Aluminum and Brass Corporation. (See Bashore, R. J., Bateman, and Irvine, assignors.)

Boller, Peter, Machine Works. (See Boller, William N., assignor.)

Boller, William N., Oak Park, assignor to Peter Boller Machine Works, Chicago, Ill. Mechanism for brake and clutches. 2,029,287; Feb. 4.

Bonney-Floyd Company, The. (See Green, A. W., and Frank, assignors.)

Borchmann, Franz, et al. (See Arfsten, Newton, assignor.)

Borg-Warner Corporation. (See Reed, Harold V., assignor.)

Born, Russell. (See Rosenbloom, I., and Born.)

Boruff, Clair S. (See Buswell, A. M., and Boruff.)

Boscart, Paul N., assignor to The Union Switch & Signal Company, Swissvale, Pa. Electrical amplifier. 2,029,354; Feb. 4.

Boston Wire Stitcher Company. (See Bickford, Herbert A., assignor.)

Bowles, Edward L., Wellesley Farms, Mass. Electric meter. 2,029,355; Feb. 4.

Bowne, Langford J., Howard Busch, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Alarm system. 2,029,699; Feb. 4.

Boykow, Johann M., Berlin-Lichterfelde-West, assignor to Deutsche Luftfahrt-und Handels-Aktien-Gesellschaft, Berlin, Germany. Inclination responsive device for aircraft. 2,029,700; Feb. 4.

Brady, Thomas, West Caldwell, N. J. Drink vending machine. 2,029,460; Feb. 4.

Bramsen, Svend, F. Wahlin, and E. Gustafsson, assignors to Binks Manufacturing Company, Chicago, Ill. Powder-spraying appliance. 2,029,408; Feb. 4.

Brand, Louis C., Ottawa, Ill. Arch support shoe. 2,029,409; Feb. 4.

Braund, John J., Washington, D. C. Embossing apparatus. 2,029,651; Feb. 4.

Bray, Ulric B., Palos Verdes Estates, assignor to Union Oil Company of California, Los Angeles, Calif. Petroleum resin. 2,029,288; Feb. 4.

Bray, Ulric B., Palos Verdes Estates, L. B. Beckwith, San Pedro, and P. S. Scott, assignors to Union Oil Company of California, Los Angeles, Calif. Asphalt-asbestos mastic and producing same. 2,029,289; Feb. 4.

Bray, Ulric B., Palos Verdes Estates, and L. B. Beckwith, San Pedro, assignors to Union Oil Company of California, Los Angeles, Calif. Asphalts and producing same. 2,029,290; Feb. 4.

Bredtschneider, Kurt, Dortmund, Germany. High pressure joint for pressure vessels. 2,029,600; Feb. 4.

Brenner, Frederick W., Philadelphia, Pa. Can punch. 2,029,807; Feb. 4.

Briede & Rogevsky, Inc. (See Tompkin, William, assignor.)

Brill, J. G., Company, The. (See Martin, Marvin G., assignor.)

Brown Company. (See Scherr, Milton O., assignor.)

Brown, Elmo L., Asheville, N. C. Carburetor. 2,029,596; Feb. 4.

Brown, Frank. (See Ellis, G. H., and Brown.)

Brown-Lipe Gear Company, et al. (See Tower, Elmer V. J., assignor.)

Bruce, E. L., Company. (See Bruce, Frank E., assignor.)

Bruce, Frank E., assignor to E. L. Bruce Company, Memphis, Tenn. Wood floor. 2,029,808; Feb. 4.

Brune, Rudolf. (See Hagenbücker, A., and Brune.)

Brush, Chester E., Chicago, Ill., assignor to E. H. Scott. Remote control for radio receivers. 2,029,461; Feb. 4.

Bruynes, Johannes. (See de Boer, J. H., Bruynes, and Tevet.)

Buchbert, F. William, et al. (See Arfsten, Newton, assignor.)

Buchman, Samuel, Pittsburgh, Pa. Pillow. 2,029,698; Feb. 4.

Buckius, Albert O., Cleveland, assignor to National Malleable and Steel Castings Company, Cleveland, Ohio. Car truck side frame and bolster construction. 2,029,962; Feb. 4.

Buckley, James W., Westhampton, Tex. Electric trap. 2,029,597; Feb. 4.

Budd, David B., Anchorville, Mich., and F. C. Sparks, Toledo, Ohio. Garden roller manufacture. 2,029,518; Feb. 4.

Buffalo Electro-Chemical Company. (See Clark, J. A., and Smolens, assignors.)

Buffalo-Springfield Roller Co., The. (See Greisser, Carl F., assignor.)

Bull, William R., Pelham Manor, N. Y. Moving picture and sound cabinet. 2,029,806; Feb. 4.

Burch Corporation, The. (See Horn, Lester T., assignee.)

Burditt, Arthur K., Roselle Park, N. J. Soap pulverizer and dispenser. 2,029,701; Feb. 4.

Burke, Earl L., Warren, assignor to Republic Steel Corporation, Youngstown, Ohio. Packaging. 2,029,643; Feb. 4.

Burns, Erwin, Los Angeles, and H. P. Winterburn, Huntington Park, Calif. Well tool. 2,029,609; Feb. 4.

Buswell, Arthur M., and C. S. Boruff, Urbana, Ill. Digestion of industrial wastes. 2,029,762; Feb. 4.

Battfield, Alfred C., North Plainfield, and R. W. Muller, Sewaren, N. J., assignors to The Vulcan Detinning Company. Baling press. 2,029,984; Feb. 4.

Byrnes, Clarence P. (See James, Joseph H., assignor.)

California Spray-Chemical Corporation. (See Parker, William B., assignor.)

Campanella, Vito, New York, N. Y. Carburetor. 2,029,868; Feb. 4.

Campbell, Harry R., Baltimore, Md., and A. Sargent, Bronxville, assignors to Campbell Metal Window Corporation, New York, N. Y. Window ventilator. 2,029,610; Feb. 4.

Campbell, Lee R., Hazel Park, Mich. Method and apparatus for manufacturing products by subjecting a material to relatively high temperatures. 2,029,977; Feb. 4.

Campbell Metal Window Corporation. (See Campbell, H. R., and Sargent, assignees.)

Cannity, Ernest, assignor to The James Hunter Machine Company, North Adams, Mass. Automatic variable speed drive for textile machines. 2,029,554; Feb. 4.

Cappa, Emmit B. (See Cappa, Joseph W., assignor.)

Cappa, Joseph W., Portales, New Mexico, assignor of one-half to Emmit Sidney Cappa, Texas, Tex. Cultivator attachment for tractors. 2,029,852; Feb. 4.

Cappa, Washington T., Baltimore, Md., assignor to The Standard Stoker Company, Incorporated. Stoker. 2,029,519; Feb. 4.

Carbaugh, Conrad A., Fulton County, Pa. Hanger for eaves troughs. 2,029,462; Feb. 4.

Carey, William J., Cleveland Heights, Ohio. Pump or motor. 2,029,550; Feb. 4.

Carlsen, Iver G., Rosebank, N. Y. Igniting device. 2,029,854; Feb. 4.

Carothers, Wallace H., Fairville, Pa., A. M. Collins, and J. E. Kirby, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Chemical products and processes for producing same. 2,029,419; Feb. 4.

Cassell, Joseph L., assignor, by mesne assignments, to Wired Radio, Inc., New York, N. Y. Automatic radio receiving apparatus. 2,029,906; Feb. 4.

Causey, Daniel W., Norfolk, Va. Shade protector. 2,029,308; Feb. 4.

Celanese Corporation of America. (See Ellis, G. H., and Brown, assignors.)

Central United National Bank, as trustee. (See Wheelbarger, Albert S., assignor.)

Chadeloid Chemical Company. (See Ellis, Carleton, assignor.)

Challenge Machinery Company, The. (See Lee, J. E., Gylleck, and Barney, assignors.)

Challenge Machinery Company, The. (See Lee, James E. and J. W., Gylleck, and Barney, assignors.)

Chalmers, George W., Summit, Ill., assignor to International Patents Development Company, Wilmington, Del. Can feeding apparatus. 2,029,568; Feb. 4.

Chambers, Cornelius, Shirley, Birmingham, England. Apparatus for washing drinking vessels. 2,029,853; Feb. 4.

Charles, Carl L. (See Bard, F. N., Charles, and Gray.)

Chasan, Saul H., Rochester, N. Y. Display device. 2,029,653; Feb. 4.

Chemical Construction Corporation. (See Christensen, Axel, assignor.)

Chewning, Walter L., Cynwyd, assignor to United Engineers & Constructors Inc., Philadelphia, Pa. Disk filter. 2,029,611; Feb. 4.

Chicago Metallic Manufacturing Company. (See Langel, Adrian L., assignor.)

Chicago Pump Company. (See Durdin, Augustus C., Jr., assignor.)

Childs, Henry R., Kingsport, Tenn., assignor to Eastman Kodak Company, Rochester, N. Y. Thread guide treating device. 2,029,910; Feb. 4.

Christensen, Axel, Rye, N. Y., assignor to Chemical Construction Corporation. Regenerating absorbent liquids. 2,029,411; Feb. 4.

Chryst, William A., Dayton, Ohio, assignor to General Motors Corporation, Detroit, Mich. Fluid flow control device. 2,029,307; Feb. 4.

Clapp, James E., Auburndale, assignor to General Radio Company, Cambridge, Mass. Electromechanical vibrator. 2,029,359; Feb. 4.

Clark, George J. J. (See Field, B., and Clark.)

Clark, Harold W., assignor to The McCaskey Register Company, Alliance, Ohio. Receipt control. 2,029,784; Feb. 4.

Clark, James A., Poughkeepsie, N. Y., and H. G. Smolens, Upper Darby, Pa., assignors to Buffalo Electro-Chemical Company, Inc., Tonawanda, N. Y. Bleaching. 2,029,985; Feb. 4.

Clark, John A., assignor to Manton-Gaulin Manufacturing Company, Inc., St. Johnsbury, Vt. Packing for homogenizers. 2,029,463; Feb. 4.

Claude, André, Nanterre, France. Electric lighting apparatus. 2,029,986; Feb. 4.

Cleveland Automatic Machine Company, The. (See Ruppel, Harry W., assignor.)

Cleveland Heater Company, The. (See Craver, Albert F., assignor.)

Cohen, Leidor, Brooklyn, N. Y. Refrigerator door construction. 2,029,755; Feb. 4.

Colbert, William H., Brackenridge, Pa., assignor to Liberty Mirror Works. Rear view mirror. 2,029,911; Feb. 4.

Coleman, Alfred E., Corvallis, Oreg. Finger ring. 2,029,464; Feb. 4.

Collette, Antoinette D., Winnetka, Ill. Table covering. 2,029,856; Feb. 4.

Collins & Aikman Corporation. (See Hiers, Glen S., assignor.)

Collins & Aikman Corporation. (See Kaufman, Frank M., assignor.)

Collins, Arnold M. (See Carothers, W. H., Collins, and Kirby.)

Collins, Arthur E., Cuyahoga Falls, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Apparatus for shirring rubber articles. 2,029,859; Feb. 4.

Colomb, Henri, Tavannes, Switzerland. Watch movement for fancy watches. 2,029,559; Feb. 4.

Commercial Solvents Corporation. (See Bannister, William J., assignor.)

Compagnie Generale de Telegraphie Sans Fil. (See Lucas, René, assignor.)

Compton Oscillator Corp. (See Kleins, Arnold, assignor.)

Concrete Engineering Company. (See Ochiltree, Ned A., assignor.)

Connolly, William F., Farley, and W. F. Yeoman, Monticello, Iowa. Jar lifter. 2,029,809; Feb. 4.

Connolly, William F., Farley, and W. F. Yeoman, Monticello, Iowa. Jar holder. 2,029,810; Feb. 4.

Conradty, C. (See Conradty, Ottmar, assignor.)

Conradty, Ottmar, assignor to C. Conradty, Nuremberg, Germany. Trolley system. 2,029,837; Feb. 4.

Cooke, Horace B. (See Sperr, Frederick W., Jr., assignor.)

Cooling & Air Conditioning Corporation, The. (See Keyes, Robert R., assignor.)

Copland, Charles J., North Kansas City, Mo., assignor to International Patents Development Company, Wilmington, Del. Crystallization of dextrose. 2,029,560; Feb. 4.

Corbellogesellschaft m. b. H. (See Philipp, Robert R., assignor.)

Cosser, Frank, Finsbury Park, London, England. Sphygmomanometer bandage. 2,029,912; Feb. 4.

Couch, Glenn F., Rochester, assignor to The Symington Company, New York, N. Y. Journal box. 2,029,521; Feb. 4.

Couch, Royden O., Grant, Fla. Dredge. 2,029,853; Feb. 4.

Coulson, Charles H., Hanover, Pa. Heel forming machine. 2,029,654; Feb. 4.

Coulter, Andrew C. L., Maalaha, Territory of Hawaii. Apparatus for straining sugar cane juice. 2,029,655; Feb. 4.

Cox, Gerald J., and M. L. Dodds, Pittsburgh, Pa., assignors, by mesne assignments, to Niacet Chemicals Corporation, New York, N. Y. Manufacture of esters of levulinic acid. 2,029,412; Feb. 4.

Connell, Frank, Plainfield, N. J. Oil burner. 2,029,889; Feb. 4.

Craver, Albert F., Lakewood, assignor to The Cleveland Heater Company, Cleveland, Ohio. Electric water heater. 2,029,967; Feb. 4.

Creighton, Harry M., East Norwalk, and H. C. Berndt, Norwalk, assignors to The R. U. V. Engineering Corporation, South Norwalk, Conn. Active ray treating device. 2,029,612; Feb. 4.

Crompton & Knowles Loom Works. (See Voss, Lewis S., assignor.)

Croes, Wallace R., Detroit, Mich. Machine for salvaging carbons. 2,029,532; Feb. 4.

Crown Cork & Seal Company. (See Huntley, G. J., and Bartley, assignors.)

Crumrine, Chester W., assignor to Eastman Kodak Company, Rochester, N. Y. Camera latch. 2,029,913; Feb. 4.

Cunningham, Lewis L., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Modulating electric valve. 2,029,445; Feb. 4.

Curtis, Harry A., Knoxville, Tenn., and A. J. Abrams, Colbert County, near Sheffield, assignors to Tennessee Valley Authority, Wilson Dam, Ala. Preparing phosphate charging stock. 2,029,509; Feb. 4.

Curtis, Leslie F., assignor to United American Bosch Corporation, Springfield, Mass. Tone compensated volume control. 2,029,522; Feb. 4.

Cutler-Hammer, Inc. (See Lasko, Eric H., assignor.)

Dabgin, William, New York, N. Y. Adjustable head for flashlights. 2,029,561; Feb. 4.

Daeuniche Company, The. (See Daeuniche, Roland P., assignor.)

Daemicke, Roland P., assignor to The Daemicke Company, Chicago, Ill. Refrigerator display case. 2,029,860; Feb. 4.

Dallas, Samuel B., Baltimore, Md. Swaging and alignment die. 2,029,704; Feb. 4.

Dalton, Anna, executrix. (See Hessian, Dennis C.)

Damm, Max, Newark, N. J. Traveling bag. 2,030,466; Feb. 4.

Dardelet Threadlock Corporation. (See Thomson, Robert, assignor.)

Davis, Augustine, Jr., Cincinnati, Ohio. Vehicle body. 2,029,756; Feb. 4.

Davis, Cy H., Fenwick, Ontario, Canada. Mechanical pencil. 2,030,025; Feb. 4.

Davis, Elmer M., assignor to Swift and Company, Chicago, Ill. Cover retaining means. 2,029,811; Feb. 4.

Davis, Willie H., Angola, assignor of one-half to A. Lacoste, New Roads, La. Band buckle. 2,029,418; Feb. 4.

Davison, Robert L., assignor to John B. Pierce Foundation, New York, N. Y. Combined partition-fixture unit. 2,030,024; Feb. 4.

Dawson, Charles W. (See Richardson, T. A., and Dawson.)

Dawson, Harry, Everett, Wash. Barrel truck. 2,029,656; Feb. 4.

Day, George G., North Holston, Va., assignor to The Mathieson Alkali Works, Inc., New York, N. Y. Distillation of ammonia from aqueous ammoniacal brines. 2,029,467; Feb. 4.

Day, Roland B., Palos Verdes Estates, Calif., assignor to Universal Oil Products Company, Chicago, Ill. Improving hydrocarbon liquids. 2,029,757; Feb. 4.

Day, Roland B., assignor to Universal Oil Products Company, Chicago, Ill. Treatment of hydrocarbon oils. 2,029,758; Feb. 4.

Dazey Churn & Manufacturing Co. (See Dazey, Harry L., assignor.)

Dazey, Harry L., assignor to Dazey Churn & Manufacturing Co., St. Louis, Mo. Can opener. 2,029,812; Feb. 4.

Dean, Dion K., Rahway, N. J., assignor to Foster Wheeler Corporation, New York, N. Y. Heat recovery system. 2,029,880; Feb. 4.

De Boer, Jan H., J. Bruynes, and M. C. Teves, Eindhoven, Netherlands, assignors to Radio Corporation of America. Photo-electric tube and making same. 2,029,414; Feb. 4.

De Caigny, Hector. (See Gould, E. A., and De Caigny.)

Deibler, Lillian E., Chevy Chase, Md. Motor vehicle service indicator. 2,029,468; Feb. 4.

De Laval Separator Company, The. (See Field, Eugene T., assignor.)

De Mey, René, Brussels, Belgium. Guiding vane for fans or the like. 2,029,813; Feb. 4.

Denning, Paul S., Joliet, Ill., assignor to F. B. Schundler & Co., Inc. Making expanded vermiculite. 2,029,524; Feb. 4.

Dennis, Oliver C., Wilmetta, Ill. Picture display device. 2,029,415; Feb. 4.

Derby, Ira H., and H. R. Horner, assignors to Peter C. Reilly, Indianapolis, Ind. Apparatus for the treatment of carbonaceous material. 2,029,759; Feb. 4.

Derby, Ira H., and H. R. Horner, assignors to Peter C. Reilly, Indianapolis, Ind. Apparatus for treating carbonaceous material. 2,029,760; Feb. 4.

Derby, Ira H., and H. R. Horner, assignors to Peter C. Reilly, Indianapolis, Ind. Forming charges. 2,029,761; Feb. 4.

Derby, Ira H., and H. R. Horner, assignors to Peter C. Reilly, Indianapolis, Ind. treating carbonaceous material. 2,029,762; Feb. 4.

Derby, Ira H., and H. R. Horner, Indianapolis, Ind., assignors to Peter C. Reilly, Indianapolis, Ind. Apparatus for treating carbonaceous material. 2,029,763; Feb. 4.

Detroit Gasket & Mfg. Co. (See Balfe, George T., assignor.)

Detroit Trust Company, executor estate of Otis E. Richard, deceased. (See Kahn, Clifford H., assignor.)

Deutsche Luftfahrt-und Handels-Aktien-Gesellschaft. (See Boykow, Johann M., assignor.)

Dewey, Josiah A., Oakland, Calif., assignor of one-half to A. H. Upton, and one-half to I. M. Upton, Stinson Beach, Calif. Folding bed. 2,029,705; Feb. 4.

De Witt, William J., assignor to Shoe Form Co., Inc., Auburn, N. Y. Method and apparatus for making leathery forms. 2,029,706; Feb. 4.

Diller, Alvin L. (See L'Hollier, L. H., and Diller.)

Diller, Alvin L., Belmont, and L. H. L'Hollier, Waltham, assignors to Hood Rubber Company, Inc., Watertown, Mass. Producing surfaces of comminuted material. 2,029,861; Feb. 4.

Dillon, Lyle, assignor to Union Oil Company of California, Los Angeles, Calif. Electric dehydrater. 2,029,962; Feb. 4.

Dodds, Mary L. (See Cox, G. V., and Dodds.)

Dodelin, Fred A., Glen Ridge, assignor to Pyrene Manufacturing Company, Newark, N. J. Supporting bracket for fire extinguishers. 2,029,707; Feb. 4.

Dodge, Adiel Y., South Bend, assignor to Bendix Brake Company, South Bend, Ind. Electrical disk brake. 2,029,862; Feb. 4.

Doe, Flora M., administratrix. (See Doe, William B.)

Doe, William B., Jacksonville, Fla., F. M. Doe, administratrix of the estate of said W. B. Doe, deceased, assignor to The Hydro-Humus Corporation of America, Jacksonville, Fla. Method and material for improving the growth of plants. 2,029,968; Feb. 4.

Doppers, Rudolph, Los Angeles, Calif. Resonator for stringed musical instruments. 2,029,488; Feb. 4.

Douglas, James K., and G. L. Heiden, assignors to The Oilgear Company, Milwaukee, Wis. Hydraulic pump. 2,029,708; Feb. 4.

Dow Chemical Company, The. (See Lowry, H. D., and Reynolds, assignors.)

Downie, Robert E., Beaver Falls, Pa. Mechanical hammer. 2,029,963; Feb. 4.

Draper, Charles H., Cleveland Heights, and W. C. Greene, Cleveland, assignors to The Draper Manufacturing Company, Cleveland, Ohio. Buzz ring construction. 2,029,764; Feb. 4.

Draper Manufacturing Company, The. (See Draper, C. H., and Greene, assignors.)

Dreher, Stanley C., Cincinnati, Ohio. Revolving door. 2,029,914; Feb. 4.

Drewsen, Pierre, Sandusky, Ohio, assignor to The Barrett Company. Felt and making same. 2,029,510; Feb. 4.

Driggers, William S., Bostwick, assignor of one-half to J. Hancock, Palatka, Fla. Flycatcher. 2,029,969; Feb. 4.

Duby, John F., Boston, Mass. Plumb gauge. 2,029,581; Feb. 4.

Dunn, Frank R., Cleveland, Ohio. Brick. 2,029,814; Feb. 4.

Du Pont, E. I., de Nemours & Company. (See Arvin, James A., assignor.)

Du Pont, E. I., de Nemours & Company. (See Bain, Louis A., assignor.)

Du Pont, E. I., de Nemours & Company. (See Carruthers, W. H., Collins, and Kirby, assignors.)

Du Pont, E. I., de Nemours & Company. (See Engelmann, Max, assignor.)

Du Pont, E. I., de Nemours and Company. (See Macallum, Alexander D., assignor.)

Du Pont, E. I., de Nemours & Company. (See Perkins, Melvin A., assignor.)

Du Pont, E. I., de Nemours & Company. (See Rittmeister, Wilhelm, assignor.)

Du Pont, E. I., de Nemours & Company Incorporated, The. (See Gilbert, Harvey N., assignor.)

Du Pont Cellophane Company. (See Hawkins, J. F., and Underwood, assignors.)

Durdin, Augustus C., Jr., assignor to Chicago Pump Company, Chicago, Ill. Pumping apparatus. 2,029,709; Feb. 4.

Durdin, Augustus C., Jr., Niles Center, assignor to Chicago Pump Company, Chicago, Ill. Screw feed centrifugal pump. 2,029,708; Feb. 4.

Durgin, Edgar E., assignor to New Jersey Optical Company, Newark, N. J. Nose pad connection for eyeglass frames. 2,029,479; Feb. 4.

Du Sang, Virgil L., Kokomo, Ind. Wheel balancing weight. 2,029,561; Feb. 4.

Dwight & Lloyd Metallurgical Company. (Lloyd, E. L., and Hyde, assignors.)

Earle, Ralph H., Wauwatosa, assignor to Line Material Company, South Milwaukee, Wis. Protective device. 2,029,562; Feb. 4.

Earle, Richard W., Los Angeles, Calif. Chronoscope. 2,029,563; Feb. 4.

Eastman Kodak Company. (See Childs, Henry E., assignor.)

Eastman Kodak Company. (See Crumrine, Chester W., assignor.)

Eastman Kodak Company. (See Fourst, Carl C., assignor.)

Eastman Kodak Company. (See Hall, David C., assignor.)

Eastman Kodak Company. (See Luce, Richard W., assignor.)

Eastman Kodak Company. (See Martin, Louis D., assignor.)

Eastman Kodak Company. (See McNally, James G., assignor.)

Eastman Kodak Company. (See Mihalyi, Joseph, assignor.)

Eastman Kodak Company. (See Van Dyke, R. H., Sand, and Gray, assignors.)

Easy Washing Machine Corporation. (See Nelson, John C., assignor.)

Eclipse Aviation Corporation. (See Nowodzinski, Edward R., assignor.)

Edlin, George E., and H. H. Stewart, assignors to The New Zealand Edlin Stewart Engine Company, Limited, Auckland, New Zealand. Internal combustion engine. 2,029,909; Feb. 4.

Edström, Erik, Stockholm, Sweden, assignor to Electrolux Corporation, Dover, Del. Vacuum cleaner. 2,029,611; Feb. 4.

Edwards, J. & Co. (See Bertschi, A. G., and Heller, assignors.)

Eichel, John V., Jr., assignor to H. S. Getty & Co., Inc., Philadelphia, Pa. Pasteproof lock. 2,029,991; Feb. 4.

Eisenhauer, Wynn E., McAfee, Nova Scotia, Canada. Mechanical lead pencil. 2,030,127; Feb. 4.

Electric Game Company, The. (See Proudian, Howard M., assignor.)

Electric Storage Battery Company, The. (See Lord, Edward L., assignor.)

Electrolux Corporation. (See Edström, Erik, assignor.)

Elgnard, Laurits, Kew Gardens, N. Y., assignor to Semet-Solvay Engineering Corporation, New York, N. Y. Gas valve. 2,029,564; Feb. 4.

Ellis, Nathaniel M., New York, N. Y. Insulating material. 2,029,811; Feb. 4.

Elmington, James M., San Francisco, Calif. Dishwashing machine. 2,029,565; Feb. 4.

Ellis, Carleton, Montclair, N. J., assignor to Ellis-Foster Company. Transparent tissue and making same. 2,029,525; Feb. 4.

Ellis, Carleton, Montclair, N. J., assignor to Chadeloid Chemical Company, New York, N. Y. Finish removing process. 2,029,992; Feb. 4.

Ellis-Foster Company. (See Ellis, Carleton, assignor.)

Ellis, George H., and F. Brown, Spondon, near Derby, England, assignors to Celanese Corporation of America. Dyestuffs and their application. 2,029,812; Feb. 4.

Ellis, George H., and F. Brown, Spondon, near Derby, England, assignors to Celanese Corporation of America. Production and application of new dyestuffs. 2,029,813; Feb. 4.

Ellis, Stuart, Fredericksburg, Va. Grave-level cemetery vase. 2,029,314; Feb. 4.

Emmens, Hendrik. (See van Geel, W. C., and Emmens.)

Engelmann, Max, assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Tri-fluoro-methyl-phenyl-azo diamine pyridines and making the same. 2,029,215; Feb. 4.

Engineering and Research Corporation, The. (See Kelly, Frederick G., Jr., assignor.)

Erlt, Carl, Tulsa, Okla. Adjustable oil well crank arm counterweight. 2,029,998; Feb. 4.

Ewing, Willard E., Libertyville, assignor to McWilliams Dredging Company, Chicago, Ill. Dredging apparatus. 2,029,816; Feb. 4.

Ewing, Willard E., Libertyville, assignor to McWilliams Dredging Company, Chicago, Ill. Cutter for hydraulic dredges. 2,029,816; Feb. 4.

Fabel, George S., Trenton, N. J., assignor to Southern Asbestos Company, Charlotte, N. C. Wicking. 2,029,994; Feb. 4.

Fast, John E., & Company. (See Kegebein, Louis, assignor.)

Fawell, Joseph E., Pittsburgh, Pa., Feeder and catcher apparatus for rolling mills. 2,029,915; Feb. 4.

Federal Tobacco Corporation. (See Loewenthal, Bert, assignor.)

Fegles, Donald B., Minneapolis, Minn. Roof covering. 2,029,817; Feb. 4.

Ferguson, Duncan, New Haven, Conn., and H. H. Schell, Garden City, assignors to Sidney Blumenthal & Co., Inc., New York, N. Y. Printed fabric and making same. 2,029,768; Feb. 4.

Ferris, William D., assignor to Frantz Manufacturing Co., Sterling, Ill. Door opening apparatus. 2,029,528; Feb. 4.

Field, Bernard, Brookline, and G. J. J. Clark, Whitman, Mass. Gas burner. 2,029,471; Feb. 4.

Field, Eugene T., Poughkeepsie, assignor to The De Laval Separator Company, New York, N. Y. Bowl-manipulating crane for centrifugal machines. 2,029,709; Feb. 4.

Field, Joseph C., Maplewood, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Selective signaling system. 2,029,716; Feb. 4.

Filippone, E., & Co. Inc. (See Tanzi, Guido, assignor.)

Fischer, August H., Welsey, S. Dak. Watch attachment. 2,029,416; Feb. 4.

Fischer, Fritz, Berlin-Charlottenburg, F. Strecker, Berlin-Siemensstadt, and H. Neugebauer, Berlin-Lichterfelde, assignors to Siemens & Halske, Aktiengesellschaft, Siemensstadt, near Berlin, Germany. Apparatus for taking or projecting lenticulated films. 2,029,614; Feb. 4.

Fisher, Harmon F., assignor to Union Oil Company of California, Los Angeles, Calif. Electrical dehydrator. 2,029,527; Feb. 4.

Fleming, Burritt G., Columbus, Ohio. Door operating mechanism. 2,029,818; Feb. 4.

Flowers, Henry F., Findlay, Ohio. Dump vehicle. 2,029,995; Feb. 4.

Foley, Louis D., Louisville, Ky. Spring for vehicles. 2,029,472; Feb. 4.

Food Machinery Corporation. (See Sheldon, Henry A., assignor.)

Förster, Arthur, Gerlitz, Germany. Neck protector for use with hairdresser's wrappers or the like. 2,029,417; Feb. 4.

Fort Orange Paper Company. (See Metzger, Henry L., assignor.)

Foster Wheeler Corporation. (See Dean, Dion K., assignor.)

Foster Wheeler Corporation. (See Frisch, Martin, assignor.)

Fox, Charles E., Bakersfield, Calif. Supercharging device for oil pumps. 2,029,473; Feb. 4.

Frank, Raymond H. (See Gregg, A. W., and Frank.)

Frantz Manufacturing Co. (See Ferris, William D., assignor.)

Frantz, Fred E., assignor to The Apex Electrical Manufacturing Company, Cleveland, Ohio. Door check. 2,029,711; Feb. 4.

Fraser, Eugene S., et al. (See Moore, Guy S., assignor.)

Frear, Hazn P., New York, N. Y., assignor to Bethlehem Shipbuilding Corporation, Ltd. Ship construction. 2,029,712; Feb. 4.

Free Use of the Public, Dedicated to The. (See Shedd, C. K., and Collins.)

Frey, Charles N. (See Kirby, G. W., and Frey.)

Frey, Frederick E. (See Guyer, J. A., Frey, and Huppke.)

Frey, Frederick E., W. F. Huppke, and J. A. Guyer, Bartlesville, assignors to Phillips Petroleum Company, Bartlesville, Okla. Converting hydrocarbon fluids into fuel gas. 2,029,057; Feb. 4.

Friedland, Max, New York, N. Y. Reflex shutter. 2,029,418; Feb. 4.

Friedman, Sidney C. (See Masse, M. K., and Friedman.)

Friermood, Charles L., assignor to C. K. Hellinger, receiver for the Ridgley Trimmer Company, Springfield, Ohio. Paper trimmer. 2,029,916; Feb. 4.

Frisch, Martin, assignor to Foster Wheeler Corporation, New York, N. Y. Pulverization. 2,029,917; Feb. 4.

Fuel Development Corporation. (See Kimball, Leo B., assignor.)

Fuerst, Carl C., assignor to Eastman Kodak Company, Rochester, N. Y. Camera construction. 2,029,918; Feb. 4.

Fuller, Frederic B., assignor to Package Machinery Company, Springfield, Mass. Web registering device. 2,029,919; Feb. 4.

Furman, Samuel, Worcester, Mass., assignor to United States Envelope Company, Springfield, Mass. Printing machine. 2,029,996; Feb. 4.

Gaddy, Leona L., Panama City, Fla. Condiment holder. 2,029,997; Feb. 4.

Gale, Rowland A. (See Wallerstein, L., Gale, and Hawley, Jr.)

Gale, Rowland A. (See Wallerstein, L., Hawley, and Gale.)

Gallaher, Alvan H., Plainfield, N. J., assignor to The Barrett Company, New York, N. Y. Coking hydrocarbon material and coke oven for practicing said process. 2,029,865; Feb. 4.

Gard, Earle W., Palos Verdes Estates, assignor to Union Oil Company of California, Los Angeles, Calif. Fractional distillation. 2,029,529; Feb. 4.

Gebhard, Louis A., Washington, D. C. System of amplification of alternating current. 2,029,314; Feb. 4.

Gebrueder Eichhoff, Maschinenfabrik und Eisengiesserei. (See Engelberg, Friedrich, assignor.)

Geisler, Walter. (See Oswald, P., and Geisler.)

Gelbman, Louis, Yonkers, N. Y. Concrete block machine. 2,029,865; Feb. 4.

General Aniline Works, Inc. (See Hagenbücker, A., and Brune, assignors.)

General Aniline Works, Inc. (See Lauka, L., and Haller, assignors.)

General Aniline Works, Inc. (See Petrus-Blumberger, José S., assignor.)

General Aniline Works, Inc. (See Schindhelm, H., and Schultis, assignors.)

General Aniline Works, Inc. (See Wizinger, Robert, assignor.)

General Cable Corporation. (See Schatzel, Rudolph A., assignor.)

General Chemical Company. (See Ingraham, Harold O. C., assignor.)

General Chemical Company. (See Joseph, Henry, assignor.)

General Electric Company. (See Newman, Delbert F., assignor.)

General Electric Company. (See Vare, Ethan W., assignor.)

General Motors Corporation. (See Chryst, William A., assignor.)

General Motors Corporation. (See Geyer, Harvey D., assignor.)

General Motors Corporation. (See Williams, James F., assignor.)

General Outdoor Advertising Co. (See Rosner, Max, assignor.)

General Radio Company. (See Clapp, James K., assignor.)

Genecche, Wilhelm. (See Petersen, A. E., and Genecche.)

Germint Limited. (See MacLennan, Duncan T. S., assignor.)

Getty, H. S., & Co. Inc. (See Eichel, John V., Jr., assignor.)

Geyer, Harvey D., Dayton, Ohio, assignor, by mesne assignments, to General Motors Corporation, Detroit, Mich. Solid lubricating material. 2,029,866; Feb. 4.

Geyer, Harvey D. Dayton, Ohio, assignor to General Motors Corporation, Detroit, Mich. Composite rubber piston. 2,029,867; Feb. 4.

Gilbert, Harvey N., Niagara Falls, N. Y., assignor to The E. I. du Pont de Nemours & Company Incorporated, Wilmington, Del. Metal recovery. 2,029,998; Feb. 4.

Gille, Willis H., St. Paul, assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Two-stage valve. 2,029,615; Feb. 4.

Gillette Safety Razor Company. (See Lewando, Felix J., assignor.)

Gilowitz, Benjamin, Bronx, N. Y., assignor of one-fourth to William Joseph, New York, N. Y. Fire escape. 2,029,419; Feb. 4.

Githens, Otto W., Indianapolis, Ind., assignor to Universal Camera Corporation, New York, N. Y. Photographic camera. 2,029,474; Feb. 4.

Githens, Otto W., assignor to Universal Camera Corporation, New York, N. Y. Photographic camera. 2,029,475; Feb. 4.

Githens, Otto W., assignor to Universal Camera Corp., New York, N. Y. Photographic camera. 2,029,476; Feb. 4.

Goldblatt, Joseph, New York, N. Y. Mounting for the crystal of a wrist watch casing. 2,029,760; Feb. 4.

Gold Dust Corperation. (See Heckel, J. T., and Walker, assignors.)

Golding, Edwin I., assignor to I. W. Hirshfield, New York, N. Y. Garment manufacture. 2,030,026; Feb. 4.

Goldthwaite, George E., South Easton, assignor to B. F. Sturtevant Company, Hyde Park, Mass. Method and apparatus for conditioning air. 2,029,568; Feb. 4.

Gooch, Stapleton D. (See Kerschbaum, F. P., Wargaman, and Gooch.)

Goodman Manufacturing Company. (See Pratt, Charles A., assignor.)

Goodrich, B. F., Company, The. (See Collins, Arthur E., assignor.)

Goodrich, B. F., Company, The. (See Heidenbrand, Carl H., assignor.)

Goodrich, B. F., Company, The. (See Merrill, A. B., and Stewart, assignors.)

Goodrich, B. F. Company, The. (See Semon, Waldo L., assignor.)

Gordon, Cecil E., Pocatello, Idaho. Battery stabilizer. 2,029,658; Feb. 4.

Gould, Edward A., and H. De Caigny, Duluth, Minn. Tank filling pipe closure. 2,029,477; Feb. 4.

Gowdy, William F., assignor to Archer Rubber Company, Milford, assignor to Archer Rubber Company, Milford, Mass. Wearing apparel. 2,029,564; Feb. 4.

Grant, John, Los Angeles, Calif. Roller cutter reamer. 2,029,770; Feb. 4.

Gray, Harry Le B. (See Van Dyke, R. H., Staud, and Gray.)

Gray, John D., Chicago, Ill. Display device. 2,029,771; Feb. 4.

Gray, Thomas C. (See Bard, F. N., Charles, and Gray.)

Green, Estill I., East Orange, N. J., assignor to American Telephone and Telegraph Company. Concentric conductor transmission system. 2,029,630; Feb. 4.

Green, Estill I., East Orange, and F. A. Leibe, Dunellen, N. J., assignors to American Telephone and Telegraph Company. Concentric conductor transmission system. 2,029,421; Feb. 4.

Greenwood, Henry B., assignor to F. X. Hooper Company, Inc., Glenarm, Md. Shaft adjusting means. 2,030,027; Feb. 4.

Greenwood, Henry B., assignor to F. X. Hooper Company, Inc., Glenarm, Md. Shaft adjusting means. 2,030,028; Feb. 4.

Gregg, Alfred W. and R. H. Frank, assignors to The Bonney-Floyd Company, Columbus, Ohio. Differentially heat-treated cast steel wheel. 2,029,819; Feb. 4.

Greiner, Carl F., Springfield, assignor to The Buffalo-Springfield Roller Co., Springfield, Ohio. Road roller. 2,029,649; Feb. 4.

Griesbaber, Fritz, Rieben, near Basel, assignor to the firm Society of Chemical Industry in Basle, Basel, Switzerland. Printing preparation and process. 2,029,899; Feb. 4.

Griffin, William T., Berwick, Pa., assignor to American Car and Foundry Company, New York, N. Y. Window construction. 2,029,772; Feb. 4.

Greene, William F., and W. R. Meyer, assignors to The R. K. Le Blond Machine Tool Company, Cincinnati, Ohio. Chuck. 2,030,029; Feb. 4.

Grosser, Walter C. (See Draper, C. H., and Grosser.)

Guild, Herbert C., Mamaroneck, N. Y. Condenser. 2,029,422; Feb. 4.

Gulf Research & Development Corporation. (See Ayres, Eugene E., assignor.)

Gustafsson, Eric. (See Bramsen, S., Wahlin, and Gustafsson.)

Gustafsson, Eric, assignor to Binks Manufacturing Company, Chicago, Ill. Air nozzle for flat spraying appliances. 2,029,423; Feb. 4.

Gutman, Maurice R., Lynbrook, N. Y. Drain tile connector. 2,029,930; Feb. 4.

Guyer, James A. (See Frey, F. R., Huppke, and Guyer.)

Guyer, James A., F. R. Frey, and W. F. Huppke, assignors to Phillips Petroleum Company, Bartlesville, Okla. Gas making apparatus. 2,029,817; Feb. 4.

Guyot, Marius. (See Morton, A. S., and Guyot.)

Gylleck, Olaf T. (See Lee, J. B., Gylleck, and Barney.)

Gylleck, Olaf T. (See Lee, James B. and J. W., Gylleck, and Barney.)

Haberl, Paul A., Denver, Colo. Demountable wheel. 2,030,306; Feb. 4.

Hach, Clarence A., Long Island, assignor to Western Electric Company, Incorporated, New York, N. Y. Floor. 2,029,713; Feb. 4.

Hadden, Gavin, New York, and C. A. Holden, New Rochelle, N. Y.; said Holden assignor to said Hadden. Inclosure for a number of indoor cuspi. 2,030,079; Feb. 4.

Hagenbücker, Alfred, and E. Bruns, Frankfort-on-the-Main-Hoechst, Germany, assignors to General Aniline Works, Inc., New York, N. Y. Thioindigo dyestuff preparations and preparing them. 2,029,714; Feb. 4.

Hagenbook, Thurloe M., assignor, by mesne assignments, to International Door Company, Evansville, Ind. Revolving door speed control. 2,029,518; Feb. 4.

Hagland, Gustaf, Stockholm, assignor to Patentaktiebolaget Grondal-Ramen, Stockholm, Sweden. Preparing alkali sulphite or alkali bisulphite solutions from waste liquors obtained in the digestion of cellulose with alkali sulphur compounds. 2,029,616; Feb. 4.

Hagland, Ture E., Stockholm, Sweden. Containing products containing spinels. 2,029,773; Feb. 4.

Haines, Marcus W., Long Beach, assignor to Technicraft Engineering Corp., Los Angeles, Calif. Perforating deep wells. 2,029,478; Feb. 4.

Hall-Welter Co. (See Welter, Herman C., assignee.)

Haller, Oskar. (See Lasch, L., and Haller.)

Halliburton, Erle P., Los Angeles, Calif. Monolithic cementitious pipe. 2,029,909; Feb. 4.

Halmi, Steve, New York, N. Y. Automatic lock for dumbwaiters. 2,029,867; Feb. 4.

Halpern, Michael, New York, W. E. Logan, White Plains, Robert E. Marley and W. Ulrich, Beacon, N. Y., assignors to The Texas Company, New York, N. Y. Pyrolysis of hydrocarbon gases. 2,030,030; Feb. 4.

Haltmeier, Alfred. (See Bayer, J., Haltmeier, and Henchy.)

Hammes, James H., Vincennes, Ind. Multifocal ophthalmic lens and blank therefor. 2,029,479; Feb. 4.

Hammon, James H., Vincennes, Ind. Multifocal ophthalmic lens and blank therefor. 2,029,480; Feb. 4.

Hancock, R. J. (See Driggers, William S., assignor.)

Hanits, Hans. (See Oberhoffken, A., and Hanits.)

Hanks, Frederick W., Cleveland, Ohio. Motor disk. 2,029,819; Feb. 4.

Hanney, Angus F., Norwood, assignor to The American Laundry Machinery Company, Norwood, Ohio. Control mechanism for garment pressing machines. 2,029,715; Feb. 4.

Hansgirg, Fritz, Badenthein, Carinthia, Austria, assignor to American Magnesium Metals Corporation, Pittsburgh, Pa. Apparatus for producing substantially pure magnesium. 2,029,221; Feb. 4.

Harbert, Victor H., assignor to Illinois Railway Equipment Company, Chicago, Ill. Draft key retainer locking means. 2,029,963; Feb. 4.

Hardy, Sydney T. C., Gladesville, Sydney, Australia, assignor to Sun Newspapers Limited, Sydney, New South Wales, Australia. Rotary printing press. 2,029,686; Feb. 4.

Harrington, Roland P., Washington, D. C. Trolling cradle. 2,030,060; Feb. 4.

Harris, Leonard B., Bayside, assignor to International Oil-Gas Corporation, New York, N. Y. Oil gas generating apparatus. 2,029,774; Feb. 4.

Harrison, Benjamin P., Glenns Ferry, Idaho, assignor to The Standard Stoker Company, Incorporated. Multiple underfeed stoker. 2,029,196; Feb. 4.

Harrison, Frank, Braintree, England. Cone for use in wireless loudspeakers, telephones, and the like. 2,030,001; Feb. 4.

Hardhaw Chemical Company, The. (See Pirat, P. E., assignor.)

Hartmann, Povl D., New York, N. Y., assignor to Bauer Manufacturing Company, Newark, N. J. Electric filter. 2,029,716; Feb. 4.

Harvey, Lloyd E., Logan, assignor of one-half to J. S. Keith, Gloucster, Ohio. Tie for extension trackways. 2,029,830; Feb. 4.

Haskins, Joseph F., Wilmington, Del., and William F. Underwood, Waynesboro, Va., assignors to Du Pont Cellophane Company, Inc., New York, N. Y. Esterification of cellulosic materials. 2,029,431; Feb. 4.

Hasbauer, Adolf, East Orange, N. J. Cathode for thermionic valves. 2,029,482; Feb. 4.

Hathaway, Edgar F., Wellesley, and W. Kirby, Dorchester, Mass. Circuit controller. 2,029,821; Feb. 4.

Hawley, Thomas. (See Wallerstein, L., Hawley, and Galek.)

Hawley, Thomas G., Jr. (See Wallerstein, L., Gale, and Hawley, Jr.)

Hebermehl, Reinhard. (See Rosenthal, L., and Hebermehl.)

Heckel, John T., and R. S. Walker, Indianapolis, Ind., assignors to Gold Dust Corporation, New York, N. Y. Method of and machine for sealing inpreme material. 2,029,812; Feb. 4.

Hedgcock, William C., Wilmette, assignor to American Steel Foundries, Chicago, Ill. Bolster. 2,029,833; Feb. 4.

Heiden, George L. (See Douglas, J. K., and Heiden.)

Heinze Development Company. (See Heinze, John O., assignor.)

Heinze, John O., Detroit, Mich., assignor, by mesne assignments, to Heinze Development Company. Heating unit. 2,029,717; Feb. 4.

Heidenbrand, Carl H., Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Cushioning structure. 2,029,170; Feb. 4.

Henchy, Karl. (See Bayer, J., Haltmeier, and Henchy.)

Herbert, Elizabeth A., executrix. (See Herbert, James A., assignor.)

Herbert, James A., deceased, Cleveland, Ohio, E. A. Herbert, executrix, assignor of one-fourth to Gilbert Morgan, Cleveland, Ohio. Safety appliance for flanged wheels. 2,029,928; Feb. 4.

Herbert, James A., deceased, Cleveland, Ohio, E. A. Herbert, executrix, assignor of one-fourth to G. Morgan, Cleveland, Ohio. Safety appliance for trucks of railway cars. 2,029,924; Feb. 4.

Hering, Edward, Beverly, assignor to United States Pipe and Foundry Company, Burlington, N. J. Reading structure. 2,029,900; Feb. 4.

Hermann, Arnold, Sharpsburg, Pa. Cement. 2,030,032; Feb. 4.

Herser, Arno E., Upper Darby, Pa. Helmet. 2,029,884; Feb. 4.

Hessian, Dennis C., deceased, Detroit, Mich., A. Dultra, executrix. Air brake mechanism. 2,030,049; Feb. 4.

Hickler, Walter E., Weston, assignor to Hood Rubber Company, Inc., Watertown, Mass. Article of footwear and producing same. 2,029,571; Feb. 4.

Hiers, Glen S., Cynwyd, assignor to Collins & Aikman Corporation, Philadelphia, Pa. Sponge rubber and making the same. 2,029,617; Feb. 4.

Hildreth, Louis E. (See LaPointe, William P., assignor.)

Hill, Charles A., assignor to Mueller Brass Co., Port Huron, Mich. Pipe. 2,029,424; Feb. 4.

Hirshfield, Ira W. (See Golding, Edwin I., assignor.)

Hobson, Stanley H., and F. I. Hoffman, assignor to Geo. D. Roper Corporation, Rockford, Ill. Broiler drawer. 2,029,712; Feb. 4.

Hoffman, Edmund, Brooklyn, assignor to American Gas Company, New York, N. Y. Spool and protector therefor. 2,029,829; Feb. 4.

Hoffman Specialty Company. (See Simpson, William K., assignor.)

Hofmann, Alfred, Needle Works, Inc. (See Hofmann, Alfred, assignor.)

Hofmann, Alfred, Palisade, assignor to Alfred Hofmann Needle Works, Inc., Union City, N. J. Roller attachment. 2,029,572; Feb. 4.

Holden, Charles A. (See Hadden, G., and Holden.)

Holland, James J., Parkersburg, Pa. Water syringe. 2,029,483; Feb. 4.

Hollman, Peter I. (See Hobson, S. H., and Hoffman.)

Holske, Clifford F., Williston Park, N. Y. Refrigeration. 2,029,870; Feb. 4.

Hood Rubber Company. (See Diller, A. L., and L'Hollier, assignors.)

Hood Rubber Company. (See Hickler, Walter E., assignor.)

Hood Rubber Company. (See L'Hollier, L. H., and Diller, assignors.)

Hooper, F. X., Company. (See Greenwood, Henry B., assignor.)

Hopf, Heinrich, Ludwigshafen-on-the-Rhine, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Production of alcohols. 2,029,613; Feb. 4.

Horner, Harold E. (See Darby, I. H., and Horner.)

Horni, Paul P., Newark, N. J. Fire alarm box door. 2,029,878; Feb. 4.

Horstmann, Frederick W., Maplewood, N. J. Fur trimming machine. 2,029,775; Feb. 4.

Horton, Erwin C., Hamburg, assignor to Trico Products Corporation, Buffalo, N. Y. Fluid meter. 2,030,003; Feb. 4.

Hostetler, Charles W., Flushing, N. Y. Display device. 2,029,719; Feb. 4.

Houch, William S., Kokomo, Ind. Making embossing dies. 2,029,567; Feb. 4.

Houston, Junious W., Toledo, Ohio. Electromagnetic pump. 2,029,874; Feb. 4.

Howard, John E., and B. Biggers, Concord, N. C. Fishing rod. 2,029,484; Feb. 4.

Howell Electric Motors Company. (See Albert, Ralph E., assignor.)

Hudson Sharp Machine Company. (See Schmeler, Frederick C., assignor.)

Huffine, Robert L. (See Bartlett, A. G., and Huffine.)

Hull, David C., Kingsport, Tenn., assignor to Eastman Kodak Company, Rochester, N. Y. Cellulose organic ester compositions containing a propionyl ester of glycerol. 2,029,925; Feb. 4.

Hullinger, Charles E., receiver. (See Fehrenbach, Charles L., assignor.)

Hunter, James, Machine Company, The. (See Cassidy, Ernest, assignor.)

Hunter, William L., assignor to Northern Equipment Company, Erie, Pa. Feed water regulator. 2,029,831; Feb. 4.

Huntley, George J., and J. S. Huntley, assignors to Crown Cork & Seal Company, Inc., Baltimore, Md. Filling and closing machine. 2,029,528; Feb. 4.

Huppke, Walter F. (See Frey, F. R., Huppke, and Guyer, assignor.)

Huppke, Walter F. (See Guyer, J. A., Frey, and Huppke.)

Hurt, Samuel H., assignor to Toledo Scale Manufacturing Company, Toledo, Ohio. Weighing scale. 2,029,936; Feb. 4.

Hutchison, George E., Beckley, W. Va. Dispensing apparatus. 2,030,004; Feb. 4.

Hutchinson, Oliver G. (See Rapoport, N., Armstrong, and Hutchinson.)

Hyde, Reed W. (See Lloyd, R. I., and Hyde.)

Hydro-Human Corporation of America, The. (See Doe, William B., assignor.)

Ryser, George T. and G. S. Smith, Sale-Cynwyd, Pa. Shipping container. 2,030,040; Feb. 4.

I. G. Farbenindustrie Aktiengesellschaft. (See Bayer, J., Haltmeier, and Henchy, assignors.)

I. G. Farbenindustrie Aktiengesellschaft. (See Hopf, Heinrich, assignor.)

I. G. Farbenindustrie Aktiengesellschaft. (See Kircher, C., Mueller, and Succesenguth, assignors.)

I. G. Farbenindustrie Aktiengesellschaft. (See Ostwald, P., and Geisler, assignors.)

I. G. Farbenindustrie Aktiengesellschaft. (See Rosenthal, L., and Hebermehl, assignors.)

Ice Cream Cone Machine Corporation. (See Tatosian, Harry G., assignor.)

Ignell, Carl, Chicago, Ill. Audible electric signal. 2,029,720; Feb. 4.

Illinois Railway Equipment Company. (See Herbert, Victor H., assignor.)

Imperial Chemical Industries Limited. (See Sexton, Wilfred A., assignor.)

Imperial Chemical Industries Limited. (See Wormald, Alec, assignor.)

Indahl, Maurits C., Rydal, assignor to Lanston Monotype Machine Company, Philadelphia, Pa. Typographic mold. 2,029,529; Feb. 4.

Indian Territory Illuminating Oil Company. (See Beardmore, Herbert F., assignor.)

Ingersoll Milling Machine Company. (See Oberhoffken, A., and Hanits, assignors.)

Ingraham, Harold O. C., Greenwich, Conn., assignor to General Chemical Company, New York, N. Y. Method and apparatus for the production of sulphur dioxide. 2,030,021; Feb. 4.

Innes, George, Davenport, assignor to Innes Manufacturing Company, Bettendorf, Iowa. Baling apparatus. 2,030,031; Feb. 4.

Innes Manufacturing Company. (See Innes, George, assignor.)

International Door Company. (See Hagenbook, Thurloe M., assignor.)

International Oil-Gas Corporation. (See Harris, Leonard B., assignor.)

International Patents Development Company. (See Chalmers, George W., assignor.)

International Patents Development Company. (See Copland, Charles J., assignor.)

Intertype Corporation. (See Sperry, Arthur G., assignor.)

Ireland, Thomas H., Rockville Centre, N. Y. Water heater. 2,029,927; Feb. 4.

Irvine, Andrew. (See Roshirt, R. J., Bateman, and Irvine.)

Irwin Auger Bit Company, The. (See Swain, Howland M., assignor.)

Isaacson, Arthur M., Flushing, assignor to Western Electric Company, Incorporated, New York, N. Y. Floor. 2,029,721; Feb. 4.

Jacob, Max, assignor to the firm Auter-Werke Aktiengesellschaft, Bielefeld, Germany. Cash register. 2,029,776; Feb. 4.

Jaeck, Wolfgang, Basel, and A. Schürch, Rieben, near Basel, assignors to firm Society of Chemical Industry in Basle, Basel, Switzerland. Printing acetate artificial silk. 2,029,583; Feb. 4.

Jaeger, Alphons O., Greentree, Pa., assignor, by mesne assignments, to American Cyanamid & Chemical Corporation, New York, N. Y. Synthetic tanning material. 2,029,322; Feb. 4.

Jaeger, Alphons O., Mount Lebanon, Pa., assignor, by mesne assignments, to American Cyanamid & Chemical Corporation. Contact sulphuric acid process. 2,029,530; Feb. 4.

Jaeger, Alphons O., Mount Lebanon, Pa., assignor, by mesne assignments, to American Cyanamid & Chemical Corporation. Contact sulphuric acid process. 2,029,531; Feb. 4.

James, Cleveland A., Philadelphia, Pa., assignor to W. P. Montgomery, Atlantic City, N. J., and J. M. Zerbey, Philadelphia, Pa. Reflector. 2,029,575; Feb. 4.

James, Joseph H., Pittsburgh, Pa., assignor to Clarence P. Byrnes, trustee. Purification of oxidation products. 2,029,619; Feb. 4.

Janson, Carl G. (See Wallgren, A. G. F., and Janson.)

Jeffrey Manufacturing Company, The. (See Strawn, Orval E., assignor.)

Jersey, Vernon, assignor to S. M. A. Corporation, Cleveland, Ohio. Refining fats and oils. 2,029,722; Feb. 4.

Johns-Manville Corporation. (See Beckwith, Charles J., assignor.)

Johns-Manville Corporation. (See Parkinson, John S., assignor.)

Johnson, Arthur P., Wylde Green, Birmingham, England. Chronascope apparatus. 2,029,871; Feb. 4.

Johnson, Edward T. (See Tufts, N., and Johnson.)

Johnson, Henry C., Los Angeles, Calif. Waffle cooker. 2,029,020; Feb. 4.

Johnson, Lewis H., Madison, N. J., and F. K. Low, Brooklyn, assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y. Signaling system. 2,029,723; Feb. 4.

Johnson, Oscar R., Easton, Kans. Field tiller. 2,029,872; Feb. 4.

Johnston, Clarence A., Pecos, N. Mex. Dispensing container. 2,029,690; Feb. 4.

Johnston Pump Company. (See Miller, De Mont G., assignor.)

Jones, David, Iraan, Tex., assignor of one-half to F. M. King. Sand separator. 2,029,323; Feb. 4.

Jones, David, assignor of one-fourth to P. B. Scott, one-fourth to R. G. Thomson, and one-fourth to C. Rivers, Ottawa, Ontario, Canada. Sash lock and holder. 2,029,500; Feb. 4.

Jones, George O., Ludowici, Ga. Transmission. 2,029,661; Feb. 4.

Jonsson, Augustinus H., Stockholm, Sweden. Apparatus for preparation of malt. 2,029,574; Feb. 4.

Joseph, Henry, Rosedale, assignor to General Chemical Company, New York, N. Y. Making a catalyst. 2,029,576; Feb. 4.

Joseph, William. (See Gilowitz, Benjamin, assignor.)

Kablisch, Gustav. (See Reiners, W., and Kablisch.)

Kain, Clifford H., San Carlos, Calif., assignor of one-third to C. C. Richard, Bloomfield Hills, and one-third to Detroit Trust Company, Detroit, Mich. Hydraulically controlled duplicating machine. 2,030,022; Feb. 4.

Kammerdiner, James A. (See McCullough, Ira J., assignor.)

Kaplan, Benjamin J., Brookline, Mass. Decorative patent leather and making the same. 2,029,577; Feb. 4.

Karcher, Arthur A., Fostoria, Ohio. Adjustable lamp support. 2,029,582; Feb. 4.

Kasarjian, Armen A., Jackson Heights, N. Y. Spark plug. 2,029,570; Feb. 4.

Kaufman, Frank M., Merion, assignor to Collins & Aikman Corporation, Philadelphia, Pa. Pile fabric and making the same. 2,029,621; Feb. 4.

Kautter, Wolfgang. (See Rosenstein, H. O., Kautter, and Rothe.)

Kaylor, Raymond, near Los Angeles, and R. H. Kenney, Los Angeles, Calif. Combination clip board and light. 2,029,425; Feb. 4.

Keith, James H. (See Harvey, Lloyd R., assignor.)

Kellogg, Helen L. (See Kellogg, John L., assignor.)

Kellogg, John L., assignor to H. L. Kellogg, Chicago, Ill. Container and cooling means therefor. 2,030,005; Feb. 4.

Kellogg, M. W., Company. (See Blumberg, Harry S., assignor.)

Kelly, Bryant S., Lubec City, Ga. Turpentine gum cup cover. 2,029,571; Feb. 4.

Kelly, Frederick G. Jr., assignor to The Engineering and Research Corporation, New Haven, Conn. Electric timing apparatus. 2,029,622; Feb. 4.

Kelly, Paul, English Lookout, La. Propeller puller. 2,030,006; Feb. 4.

Kelly Reamer Company, The. (See Berg, Herman, assignor.)

Kenney, Edward F. (See Bent, Q., and Kenney.)

Kenney, Ray E. (See Kaylor, R., and Kenney.)

Kennison, Frank, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Apparatus for use in applying pressure to shoe bottoms. 2,029,624; Feb. 4.

Kernen, Frank H., Louisville, Ky. Display tray. 2,029,662; Feb. 4.

Kerschbaum, Friedrich P., Frankfort-on-the-Main, Germany, W. H. Waggaman, Baltimore, Md., and S. D. Gooch, Pembroke, Fla., assignors, by mesne assignments, to Pembroke Chemical Corporation. Recovery of phosphorus from dilute gases. 2,029,643; Feb. 4.

Keeling, Elmer G., Bloomfield, Mo. Gear shifting mechanism. 2,029,486; Feb. 4.

Keyes, Robert E., Dedham, Mass., assignor to The Cooling & Air Conditioning Corporation, New York, N. Y. Air conditioning system employing refrigeration. 2,030,032; Feb. 4.

Kidde, Walter & Company. (See Mapes, Daniel, assignor.)

Kimball, Leo B., New Haven, Conn., assignor to Fuel Development Corporation. Obtaining the optimum position of ignition contacts in internal combustion engines. 2,029,874; Feb. 4.

King, F. E. (See Jones, David, assignor.)

Kingdon, Ralph H., Maywood, assignor to Sears, Roebuck and Co., Chicago, Ill. Rubbing device. 2,029,426; Feb. 4.

Kingsbury, Edward J., Keene, N. H. Feed mechanism for machine tool units. 2,030,007; Feb. 4.

Kinnaird, William E., assignor to Universal Oil Products Company, Chicago, Ill. Valve. 2,029,777; Feb. 4.

Kinney, Fay D., Southbridge, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Method of and apparatus for operating on the sole edges of rubber-soled shoes. 2,029,553; Feb. 4.

Kinney, Justus R., Boston, Mass. Broom. 2,029,436; Feb. 4.

Kirby, George W., New York, and C. H. Frey, Scarsdale, assignors to Standard Brands Incorporated, New York, N. Y. Manufacture of yeast. 2,029,572; Feb. 4.

Kirby, James E. (See Carothers, W. H., Collins, and Kirby.)

Kircher, Carl, and F. Mueller, Ludwigshafen-on-the-Rhine, and H. Suosseguth, Mannheim, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Working up of natural and industrial salt mixtures. 2,029,623; Feb. 4.

Kispert, Joseph J., Hamden, assignor to I. Newman & Sons, Inc., New Haven, Conn. Clasp and hook stay. 2,029,576; Feb. 4.

Klau, David W., New York, N. Y. Spool and winder therefor. 2,029,427; Feb. 4.

Klein, Franklin S., Malverne, N. Y. Wall block coupling. 2,029,576; Feb. 4.

Kleine, Arnold, Flushing, assignor to Compagnie Oscillator Corp., New York, N. Y. Illuminated sanitary electrode. 2,029,467; Feb. 4.

Knapp, Andrew H., and H. Smith, assignors to Knapp-Monarch Company, Belleville, Ill. Stove construction. 2,029,578; Feb. 4.

Knapp, Archer L., assignor to Packard Motor Car Company, Detroit, Mich. Motor vehicle. 2,029,534; Feb. 4.

Knapp-Monarch Company. (See Knapp, A. H., and Smith, assignors.)

Knapp-Monarch Company. (See Kochner, William B., assignor.)

Knapp-Monarch Company. (See Smith, Howard, assignor.)

Knapp-Monarch Company. (See Smith, John M., assignor.)

Knight, Donald H., assignor to Refrigeration Research Corporation, Brooklyn, N. Y. Air conditioning method and apparatus. 2,029,425; Feb. 4.

Knudsen, Charles O., Brooklyn, N. Y. Air conditioner and water heating system. 2,029,574; Feb. 4.

Knudsen, Peder M., Katonah, N. Y. Identification device. 2,029,577; Feb. 4.

Koch, Earl L., Chicago, Ill., assignor, by mesne assignments, to Earl L. Koch Holding Corporation, New York, N. Y. Negative resistance crystal controlled oscillator. 2,029,466; Feb. 4.

Koch, Earl L., Holding Corporation. (See Koch, Earl L., assignor.)

Kocher, Edward H., Boonton, N. J., assignor to Avco Research Corporation. Compression tubing coupling. 2,029,326; Feb. 4.

Kochner, William B., assignor to Knapp-Monarch Company, St. Louis, Mo. Toaster base assembly. 2,029,575; Feb. 4.

Kohl, Charles E., Harvey, Ill., assignor to Western-Austin Company. Transport truck. 2,029,480; Feb. 4.

Kolb, Viktor, Frankfort-on-the-Main, Germany, assignor to American Lurgi Corporation, New York, N. Y. Apparatus for burning low-grade fuels, especially refuse. 2,029,576; Feb. 4.

Koons, Charles V., assignor to American Engineering Company, Philadelphia, Pa. Steering mechanism. 2,029,378; Feb. 4.

Koons, Sydney R., Cleveland, Ohio. Attachable handle for paper cups. 2,029,430; Feb. 4.

Kooperative Forbundet Forening u. p. a. (See Boving, F. W., Barsqvist, and Gimson, assignors.)

Koptnski, Louis, Cicero, assignor to John E. Post & Company, Chicago, Ill. Tubular condenser. 2,029,490; Feb. 4.

Kraemmer, Henry E., Hempstead, N. Y. Aircraft. 2,029,719; Feb. 4.

Krantz, Hubert F., West Palm Beach, assignor to Recording Card Table Company, Inc., West Palm Beach, Fla. Recording safety game board. 1,029,725; Feb. 4.

Kroll, Wilhelm, Luxembourg. Nitrided steel and its production. 2,029,724; Feb. 4.

Kruchenberg, Franz, et al. (See Black, Willy, assignor.)

Kublanow, Joseph, Pittsburgh, Pa. Reinforced wall structure. 2,029,578; Feb. 4.

Kuhner, Max H., assignor to Riley Stoker Corporation, Worcester, Mass. Method and apparatus for burning sewage sludge. 2,029,729; Feb. 4.

Laabs, Eric H., assignor to Cutler-Hammer, Inc., Milwaukee, Wis. Controller for printing presses. 2,029,726; Feb. 4.

La Costa, Arnaud. (See David, Willie H., assignor.)

Landis Tool Company. (See Stoiber, A. P., Wise, and Baleiger, assignors.)

Lane, Wilfred G., assignor to The Technicraft Engineering Corporation, Los Angeles, Calif. Controlling deep well gunsire for perforating casings. 2,029,490; Feb. 4.

Lane, Wilfred G., assignor to The Technicraft Engineering Corporation, Los Angeles, Calif. Gun-type formation tester. 2,029,491; Feb. 4.

Lanzel, Adrian L., Chicago, Ill., assignor to Chicago Metallic Manufacturing Company. Punching apparatus. 2,030,030; Feb. 4.

Lanston Monotype Machine Company. (See Isbell, Maurice C., assignor.)

La Pointe, William R., Los Angeles, Calif., assignor to Louis E. Hildreth, Columbus, Ohio. Bumper. 2,029,634; Feb. 4.

Laska, Leopold, and O. Haller, Offenbach-on-the-Main, Germany, assignors to General Aniline Works, Inc., New York, N. Y. Symmetrical di-(arylamino)-hydroxyterphenes and preparing them. 2,029,727; Feb. 4.

Lassiter, Lemuel L., Greensboro, N. C. Baking a loaf of bread. 2,029,464; Feb. 4.

Lautscher, Josef, Wandsbek-Hinsberg, Germany. Silencer. 2,030,040; Feb. 4.

Lawton, Robert E., assignor to Weber Costello Co., Chicago Heights, Ill. Map cabinet. 2,029,586; Feb. 4.

Leahy, Francis T., Jr., Brookline, Mass. Automatic sensing control for radio communication apparatus. 2,029,779; Feb. 4.

Le Blond, R. K., Machine Tool Company, The. (See Groton, W. F., and Meyer, assignors.)

Le Boeuf, Arthur W., Cranston, R. I., assignor to Universal Winding Company, Boston, Mass. Machine for winding electrical coils. 2,029,577; Feb. 4.

Leberle, Hubert, Ludwigshafen-on-the-Rhine, Germany. Red pigments. 2,030,049; Feb. 4.

Lee, James E., O. T. Gyllock, and F. Barney, assignors to The Challenge Machinery Company, Grand Haven, Mich. Paper slitting and slotting machine. 2,029,624; Feb. 4.

Lee, James E., J. W. Lee, O. T. Gyllock, and F. Barney, assignors to The Challenge Machinery Company, Grand Haven, Mich. Wax-coated paper cutter. 2,029,625; Feb. 4.

Lee, James W. (See Lee, James E. and J. W., Gyllock, and Barney.)

Le Film Graphana, Societé Anonyme. (See Berrabeim, Roger, assignor.)

Leibe, Frank A. (See Green, E. L., and Leibe.)

Lembke, Halford, Seattle, Wash. Combination power tool. 2,029,626; Feb. 4.

Lewando, Felix J., South Boston, assignor to Gillette Safety Razor Company, Boston, Mass. Protected blade for safety razors. 2,029,625; Feb. 4.

Lewis, Charles H. (See Urbain, Oliver M., assignor.)

Lewis, Charles H. (See Urbain, O. M., and Stenzel, assignors.)

Lewis, Robert J., Baltimore, Md. Portable container. 2,029,481; Feb. 4.

L'Hollier, Leslie H. (See Diller, A. L., and L'Hollier.)

L'Hollier, Leslie H., Waltham, and A. L. Diller, Belmont, assignors to Hood Rubber Company, Inc., Watertown, Mass. Making ornamented rubber articles. 2,029,579; Feb. 4.

Liberty Mirror Works. (See Colbert, William H., assignor.)

Liechty, Hermann, Bern, Switzerland. Articulated truck vehicle. 2,030,010; Feb. 4.

Lierley, Clarence B., Los Angeles, Calif. Scrubbing mit. 2,029,626; Feb. 4.

Liesen & Co. (See Truelsen, Heinrich C., assignor.)

Linde Air Products Company, The. (See Bliss, Lyman A., assignor.)

Lindley, George W., Philadelphia, Pa. Knitting machine. 2,029,879; Feb. 4.

Lindley, George W., Philadelphia, Pa. Elastic fabric. 2,029,880; Feb. 4.

Lindner, Karl A., Roselle Park, N. J., assignor to American Smelting and Refining Company, New York, N. Y. Metallurgical furnace of the suspended arch type. 2,029,492; Feb. 4.

Line Material Company. (See Earle, Ralph H., assignor.)

Line Material Company. (See Schultz, W. O., and Steinmayer, assignors.)

Link, Harry W., assignor, by mesne assignments, to American Engineering Company, Philadelphia, Pa. Fluid control device. 2,029,468; Feb. 4.

Lippincott, Walter M., Lynbrook, N. Y., assignor to Potter, Pierce & Schneider, Washington, D. C. Automatic lubricating mechanism. 2,029,827; Feb. 4.

Little, William T., Westfield, N. J., assignor, by mesne assignments, to American Zirconium Corporation, Baltimore, Md. Producing titanium dioxide. 2,029,581; Feb. 4.

Ljungström, Erik Lidman-Brevik, assignor to Aktiebolaget Transiteria, Stockholm, Sweden. Condenser. 2,029,328; Feb. 4.

Ljungström, Erik Lidman-Brevik, assignor to Aktiebolaget ignora to Aktiebolaget Transiteria, Stockholm, Sweden. Device for opening cans. 2,029,329; Feb. 4.

Lloyd, Richard L., Great Neck, N. Y., and R. W. Hyde, Summit, N. J., assignors to Dwight & Lloyd Metallurgical Company, New York, N. Y. Manufacture of basic refractory material. 2,029,637; Feb. 4.

Loewenthal, Bert, New York, N. Y., assignor to Federal Tobacco Corporation. Treatment of tobacco. 2,029,494; Feb. 4.

Logan, William B. (See Halpern, M., Logan, Manley, and Ullrich.)

Lord, Edward L., Glenside, Pa., assignor to The Electric Storage Battery Company, Philadelphia, Pa. Controlling the charge and discharge of a storage battery. 2,029,628; Feb. 4.

Low, Frank E. (See Anderson, L. T., and Low.)

Low, Frank E. (See Johnson, L. H., and Low.)

Lowe, Frank A., San Francisco, Calif. Surgical instrument. 2,029,496; Feb. 4.

Lowry, Robert D., and F. L. Reynolds, assignors to The Dow Chemical Company, Midland, Mich. Rolling magnesium alloys. 2,029,729; Feb. 4.

Lubin, David J. H., San Francisco, Calif. Apparatus for preparing blood films for the methods of differential counts. 2,029,498; Feb. 4.

Lubosher, Benjamin B., Harrow, England. Cinematographic apparatus. 2,029,782; Feb. 4.

Lucas, Kurt, assignor to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany. Deformable plate for variable condensers. 2,029,587; Feb. 4.

Lucas, René, assignor to Compagnie Generale de Telegraphie Sans Fil, Paris, France. Piezo-electric quartz crystal. 2,029,729; Feb. 4.

Lucy, Richard W., Elizabeth, N. J., assignor to Eastman Kodak Company, Rochester, N. Y. Calibrating unit. 2,029,929; Feb. 4.

Lucidol Corporation. (See Vincent Hooft, Francisous, assignor.)

Lutz, Leo C., assignor to The Atchison Revolving Door Co., Independence, Kans. Wind shield. 2,029,643; Feb. 4.

Lyman, Kenneth R., Lake Forest, Ill. Automatic clutch. 2,029,538; Feb. 4.

M and M Company, The. (See McLean, John C., assignor.)

Macallum, Alexander D., Niagara Falls, N. Y., assignor, by mesne assignments, to E. I. du Pont de Nemours and Company. Decomposition of solutions. 2,029,824; Feb. 4.

MacCubbin, Alexander A., Montclair, and J. Haverstalk, Jr., Harrington, N. J., assignors to The Barrett Company, New York, N. Y. Distillation of tar. 2,029,683; Feb. 4.

MacLennan, Duncan T. S., Balham, London, assignor to Germint Limited, London, England. Electrically-operated cigarette lighter. 2,030,011; Feb. 4.

Magnesium Development Corporation. (See Schmidt, W., and Beck, assignors.)

Magnesium Development Corporation. (See Wagner, Karl F., assignor.)

Maiser, Georg, Dessau in Anhalt, Germany, assignor to Agfa Ansco Corporation, Binghamton, N. Y. Flashlight. 2,029,578; Feb. 4.

Maier, Christian, Tubingen, Germany. Machine for continuously inserting bottoms and lids in finished vessel walls of paper, cardboard, and the like. 2,029,827; Feb. 4.

Mainert, Ludwig A., Detroit, Mich. Brake mechanism. 2,029,884; Feb. 4.

Mahina, Rudolph F., Little Rock, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Combined recorder and reproducer. 2,029,720; Feb. 4.

Mallory, Marion, Detroit, Mich., assignor to Mallory Research Company, Toledo, Ohio. Ignition timer and coil. 2,030,012; Feb. 4.

Mallory Research Company. (See Mallory, Marion, assignee.)

Manley, Robert E. (See Halpern, M., Logan, Manley, and Ullrich.)

Mann, Leon, Mount Vernon, N. Y. Box dismembering machine. 2,029,585; Feb. 4.

Manning, Sanford E., assignor to The R. S. M. Company, Inc., Houston, Tex. Apparatus for and method of cementing wells. 2,029,380; Feb. 4.

Manton-Gaulin Manufacturing Company. (See Clark, John A., assignor.)

Manufacture de Machines du Haut-Rhin S. A. (See Sautier, Emile, assignor.)

Marcy, Daniel, Upper Montclair, N. J., assignor to Walter Kidde & Company, Inc., New York, N. Y. System and apparatus for release of fluids. 2,029,629; Feb. 4.

Märklin Apparatebau Gesellschaft mit beschrankter tung. (See Markwart, Walter, assignor.)

Markowicz, Frank, Detroit, Mich. Scriber indicator. 2,029,823; Feb. 4.

Markwart, Walter, Chemnitz Niederwiesa, assignor to Märklin Apparatebau Gesellschaft mit beschrankter Haftung, Chemnitz, Germany. Carburetor. 2,029,666; Feb. 4.

Marshall, Charles O., assignor to Toledo Scale Manufacturing Company, Toledo, Ohio. Computing weighing scale. 2,030,013; Feb. 4.

Marshall, Charles X., Chicago, Ill. Lawn canopy. 2,029,830; Feb. 4.

Martin, Louis D., assignor to Eastman Kodak Company, Rochester, N. Y. Cam follower for a strip advancing mechanism. 2,029,930; Feb. 4.

Martin, Marvin G., assignor to The J. G. Brill Company, Philadelphia, Pa. Metal door. 2,029,492; Feb. 4.

Martinson, Carl J., Wayzata, Minn. Double glazing window sash and doors. 2,029,541; Feb. 4.

Mathews, George W., and C. J. Beast, Orlando, Fla. Method and apparatus for preserving food products. 2,030,014; Feb. 4.

Mathieson Alkali Works, Inc., The. (See Day, George G., assignor.)

Matt, George J., Brooklyn, assignor to Roberts Numbering Machine Company, Brooklyn, N. Y. Numbering head wheel and making same. 2,029,887; Feb. 4.

Maurer, Theodore H., Richmond Hill, N. Y. Self-feeding pencil. 2,029,781; Feb. 4.

Maus, Louis, Baldwin, N. Y. Strap fastener. 2,029,830; Feb. 4.

Maxwell, Charles J., Dallas, Tex. Program clock. 2,029,667; Feb. 4.

Mayer, Moses K., and S. C. Friedman, Springfield, Mass. Fuel feeding apparatus. 2,029,780; Feb. 4.

McCarthy, Lionel F., Durrweston Mews, England. Suction nozzle or vacuum cleaning apparatus. 2,029,668; Feb. 4.

McCarthy, Zollie H., Manhasset, assignor to Western Electric Company, Incorporated, New York, N. Y. Floor. 2,029,732; Feb. 4.

McCaskey Register Company, The. (See Clark, Harold W., assignor.)

McConnell, Elliott B., Cleveland Heights, assignor to The Standard Oil Company, Cleveland, Ohio. Treatment of cracked petroleum distillates. 2,030,033; Feb. 4.

McCullough, Ira J., Huntington Park, assignor to James A. Kammerdiner, Los Angeles, Calif. Jarring tool. 2,029,579; Feb. 4.

McCurdy, John E., Virginia, Minn. Apparatus for forming and surveying earth cores. 2,030,015; Feb. 4.

McGraw Electric Company. (See Schaaf, Frank W., assignor.)

McIntosh, William F., Charlestown, Mass. Electrical receptacle plug. 2,030,016; Feb. 4.

McLean, John C., assignor to The M and M Company, Cleveland, Ohio. Receiving and transferring device. 2,029,751; Feb. 4.

McMichael, Samuel, Round Hill, assignor, by mesne assignments, of one-fifth to Rachel C. Smith, Berryville, Va. Water pipe. 2,029,620; Feb. 4.

McNally, James G., assignor to Eastman Kodak Company, Rochester, N. Y. Laminated glass and making the same. 2,029,951; Feb. 4.

McNeil, William M., assignor to United States Gypsum Company, Chicago, Ill. Bag filling machine. 2,029,735; Feb. 4.

McWilliams Dredging Company. (See Ewing, Williard R., assignor.)

Mead, Samuel M., Amesbury, Mass. Motor brush assembly. 2,029,782; Feb. 4.

Meininghaus, Ulrich, Mulheim-Ruhr, Germany. Apparatus for regulating turbomachines. 2,029,331; Feb. 4.

Mettsler, Charles R., assignor of one-half to O. H. Pieper and one-half to A. F. Pieper, Rochester, N. Y. Dental syringe. 2,029,734; Feb. 4.

Mekler, Lev A., assignor to Universal Oil Products Company, Chicago, Ill. Coking of hydrocarbon oils. 2,029,783; Feb. 4.

Mennie, Robert S., Montclair, N. J. Ball lubricator. 2,029,828; Feb. 4.

Merco Nordstrom Valve Company. (See Nordstrom, Sven J., assignor.)

Mergenthaler Linotype Company. (See Stouges, Anthony J., assignor.)

Mergenthaler Linotype Company. (See Wunsch, Paul, assignor.)

Merkt, Gustav A., Worcester, assignor to Morgan Construction Company, Worcester, Mass. Combustion conditioning system for soaking pits. 2,029,580; Feb. 4.

Merriam, Jesse R., assignor to Waukesha Motor Company, Waukesha, Wis. Intake valve deflector. 2,029,581; Feb. 4.

Merrill, Allan B., and G. H. Stewart, Akron, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y. Endless belt. 2,029,381; Feb. 4.

Merrill, David R., Long Beach, assignor to Union Oil Company of California, Los Angeles, Calif. Producing high molecular weight compounds from petroleum oil. 2,029,382; Feb. 4.

Messier, George L. R. J., deceased, late of Paris, France, by Y. L. Messier, born Bonnamy, administratrix, Paris, France. System for ensuring fluid-tightness for horizontal hydraulic cylinders. 2,029,829; Feb. 4.

Messier, Yvonne L., administratrix. (See Messier, George L. R. J.)

Metallgesellschaft Aktiengesellschaft. (See Petersen, A. E., and Gensecke, assignors.)

Metropolitan Engineering Company. (See Murray, Thomas E., assignor.)

Metzger, Henry L., Castleton-on-Hudson, assignor to Fort Orange Paper Company, Castleton-on-Hudson, N. Y. Box. 2,029,588; Feb. 4.

Meyer, Fred C., Paterson, and G. M. Moffitt, East Paterson, assignors to The Okonite-Callender Cable Company, Incorporated, Paterson, N. J. Pothead. 2,029,332; Feb. 4.

Meyer, Walter R. (See Groene, W. F., and Meyer.)

Mihalyi, Joseph, Rochester, assignor to Eastman Kodak Company, Rochester, N. Y. Range finder for cameras. 2,029,932; Feb. 4.

Mille, Raymond, Auberviliers, France. Automatic smoke preventer. 2,030,017; Feb. 4.

Miller, DeMont G., San Marino, assignor to Johnston Pump Company, Los Angeles, Calif. Turbine well pump. 2,029,338; Feb. 4.

Miller, George J. (See Paulson, George, assignor.)

Millmoe, Michael J., assignor to F. B. Redington Company, Chicago, Ill. Razor blade packaging machine. 2,029,933; Feb. 4.

Millmoe, Michael J., assignor to F. B. Redington Co., Chicago, Ill. Gum wrapping machine. 2,029,934; Feb. 4.

Millmoe, Michael J., assignor to F. B. Redington Co., Chicago, Ill. Carton feeding mechanism. 2,029,935; Feb. 4.

Minneapolis-Honeywell Regulator Company. (See Cunningham, Lewis L., assignor.)

Minneapolis-Honeywell Regulator Company. (See Gille, Willis H., assignor.)

Minneapolis-Honeywell Regulator Company. (See Taylor, Daniel G., assignor.)

Minott, Daniel L., assignor of one-half to E. F. Tuggle, and one-half to H. R. Blatzdorf, Portland, Oreg. Automotive body and frame. 2,029,735; Feb. 4.

Mitchell, Earle A. (See Moody, C. F., and Mitchell.)

Mitchell, John K., Bryn Mawr, Pa. Game table. 2,029,433; Feb. 4.

Mitchell, John K., Bryn Mawr, Pa. Table construction. 2,029,434; Feb. 4.

Moffitt, George R. (See Meyer, F. C., and Moffitt.)

Moldenhauer, Gustav C., Manitowoc, Wis. Folding dip or minnow net bow. 2,029,582; Feb. 4.

Molk, Solomon, Lynn, Mass. Securing heels to shoes. 2,029,497; Feb. 4.

Montgomery, W. P., et al. (See James, Cleveland A., assignor.)

Moody, Charles F., Yonkers, and E. A. Mitchell, Hastings-on-the-Hudson, assignors to Phelps Dodge Copper Products Corporation, New York, N. Y. Apparatus for producing sheathed articles. 2,029,435; Feb. 4.

Moore, Guy S., Salem, assignor of fifty-one per cent to E. B. Fraser, Lynn, and twenty-four per cent to F. H. Rowe, Gloucester, Mass. Centrifugal electrical mercury switch. 2,029,632; Feb. 4.

Moran, William R. J., Rutherford Springs, Texas. Fly screen. 2,029,229; Feb. 4.

Morf, Ernest, La Chaux-de-Fonds, Switzerland. Watertight watchcase. 2,029,784; Feb. 4.

Morgan Construction Company. (See Merkt, Gustav A., assignor.)

Morgan, Gilbert. (See Herbert, James A., assignor.)

Morgan, John E., Jr., Inglewood, and D. A. Murphy, Torrance, Calif., assignors to The National Superior Company, Toledo, Ohio. Swivel. 2,029,681; Feb. 4.

Morganstern, Charles R., assignor to Nineteen Hundred Corporation, Binghamton, N. Y. Ironing machine. 2,029,883; Feb. 4.

Morin, Henry L., Holyoke, Mass. Safety feeding device for wringers. 2,029,936; Feb. 4.

Morrell, Jacque C., assignor to Universal Oil Products Company, Chicago, Ill. Treatment of hydrocarbon oil. 2,029,766; Feb. 4.

Morrison, Montford, Montclair, N. J., assignor to Westinghouse X-Ray Company, Inc. X-ray system for reducing steepness of wave front. 2,029,636; Feb. 4.

Morsbach, Kurt, Berlin-Zehlendorf, Germany. Motion picture camera. 2,029,736; Feb. 4.

Morton, Avery A., Watertown, and J. R. Stevens, Cambridge, Mass. Preparation of cyanuric of the triphenylmethane series and related substances. 2,029,588; Feb. 4.

Mouilbau, Jules, assignor to Société du Caoutchouc Manufacturé, Paris, France. Apparel belt. 2,030,010; Feb. 4.

Mueller Brass Co. (See Hill, Charles A., assignor.)

Mueller, Erwin H., Grosse Pointe Park, Mich. Attaching means for handles. 2,029,737; Feb. 4.

Mueller, Fritz. (See Kircher, C., Mueller, and Steenguth.)

Muggleton, Gerald D. (See Wells, Sidney D., assignor.)

Muhleisen, Karl, assignor to Schutte & Koerting Company, Philadelphia, Pa. Flow indicator. 2,029,632; Feb. 4.

Muller, Raymond W. (See Buttfield, A. C., and Muller.)

Murphy, Dewsery A. (See Morgan, J. E., Jr., and Murphy.)

Murphy, Dewsery A. (See Timbs, R., and Murphy.)

Murphy, Dewsery A. (See Morgan, J. E., Jr., and Murphy.)

Murray, John F., executor et al. (See Murray, Thomas E.)

Murray, Joseph R., executor et al. (See Murray, Thomas E.)

Murray, Thomas E., deceased, by J. F., J. R., and T. E. Murray, Jr., executors, Brooklyn, N. Y., assignors to Metropolitan Engineering Company. Heat conducting tube. 2,029,437; Feb. 4.

Murray, Thomas E., Jr., executor et al. (See Murray, Thomas E.)

Myddleton, William W., Hanworth, assignor to Robinson Bindley Processes Limited, Sutton, England. Catalyst. 2,029,786; Feb. 4.

Nagel-Chase Mfg. Co., The. (See Schultz, Edward, assignor.)

Nall, Bismer L., Wheaton, Ill. Liquid dispensing device. 2,029,334; Feb. 4.

National Malleable and Steel Castings Company. (See Buchtien, Albert O., assignor.)

National Superior Company, The. (See Morgan, J. E., Jr., and Murphy, assignors.)

National Superior Company, The. (See Timbs, R., and Murphy, assignors.)

Nelson, Axel. (See Petersen, Charles, assignor.)

Nelson, James C., assignor to Easy Washing Machine Corporation, Syracuse, N. Y. Combined washing and drying machine. 2,029,937; Feb. 4.

Nestler, Albert, Actien Gesellschaft. (See Stahl, Wilhelm, assignor.)

Neugebauer, Hans. (See Fischer, F., Strecker, and Neugebauer.)

New England Box Company, The. (See Tufts, N., and Johnson, assignors.)

New Jersey Optical Company. (See Durgin, Edgar R., assignor.)

Newman, David F., Rockville Centre, N. Y., assignor to Trans-Lux Daylight Picture Screen Corporation, New York, N. Y. Projection apparatus. 2,029,938; Feb. 4.

Newman, Delbert F., Schenectady, N. Y., assignor to General Electric Company. Condenser for refrigerating machines. 2,029,590; Feb. 4.

Newman, Delbert F., Schenectady, N. Y., assignor to General Electric Company. Condenser for refrigerating machines. 2,029,591; Feb. 4.

Newman, L., & Sons, Inc. (See Klispert, Joseph J., assignor.)

Newson, Joseph N., St. Louis, Mo. Hollowtile floor. 2,030,024; Feb. 4.

Newton, Herbert E., Brookline, Mass. Lawn mower. 2,029,194; Feb. 4.

New Zealand Dillin-Stewart Engine Company Limited, The. (See Dillin, G. S., and Stewart, assignors.)

Niacet Chemicals Corporation. (See Carr, O. J., and Dodds, assignors.)

Niccolai, Eugenio, Rome, Italy. Hydrostatic valve, more particularly for siphon discharge apparatus. 2,029,939; Feb. 4.

Nisbert, Joseph R., New York, N. Y. Condensation product and process. 2,029,592; Feb. 4.

Nisetema Hundred Corporation. (See Morgenstern, Charles E., assignor.)

Nordstrom, Sven J., Piedmont, assignor to Marco Nordstrom Valve Company, San Francisco, Calif. Plug valve. 1,029,438; Feb. 4.

Northam Warren Corporation. (See Reichle, Hans, assignor.)

Northern Equipment Company. (See Hunter, William L., assignor.)

Norton, Allen B., and M. Guyot, Cleveland, Ohio, assignors to Aluminum Company of America, Pittsburgh, Pa. Metal mold. 2,029,490; Feb. 4.

Nowosielski, Edward B., Bloomfield, assignor to Eclipse Aviation Corporation, East Orange, N. J. Spark plug. 2,029,660; Feb. 4.

Obenchain, John A., Tampa, Fla. Sash lock. 2,029,583; Feb. 4.

Oberhoffken, Alexander, and H. Haaltz, assignors to Ingersoll Milling Machine Company, Rockford, Ill. Control mechanism for machine tools. 2,029,330; Feb. 4.

O'Brien, Willis H., Los Angeles, Calif., assignor to Radio Corporation of America. Composite picture. 2,029,500; Feb. 4.

Ochiltree, Ned A., Peoria, Ill., assignor to Concrete Engineering Company, Omaha, Nebr. Fence post. 2,029,439; Feb. 4.

Ohler, Albert A., Detroit, Mich. Foot protecting device for skaters. 2,029,787; Feb. 4.

Oliger Company, The. (See Douglas, J. K., and Holden, assignors.)

Okonite-Callender Cable Company, The. (See Meyer, F. C., and Moffitt, assignors.)

Olmsted, Russell C., Cliffside, N. J. Roadway construction. 2,029,892; Feb. 4.

Olson, Mark, Detroit, Mich. Hydraulic heat regulator. 2,029,440; Feb. 4.

Olson, Karl B. (See Seving, F. W., Berggvist, and Olson.)

Olson, Olof A. (See Ljungstrom, B., and Olson.)

Oswald, Philipp, Hofheim, and W. Geisler, Frankfort-on-the-Main-Hochst, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Production of alkali nitrate. 2,029,738; Feb. 4.

Ostling, William, Los Angeles, Calif., assignor to The Pyrate Corporation of Nevada. Tank washing apparatus. 2,029,788; Feb. 4.

Package Machinery Company. (See Fuller, Frederic B., assignor.)

Packard Motor Car Company, The. (See Knapp, Archer L., assignor.)

Page, Alexander G., assignor to Union Oil Company of California, Los Angeles, Calif. Method and apparatus for distillation of oil. 2,029,501; Feb. 4.

Pilsson, Bror, Malmo, Sweden. Fire extinguishing apparatus. 2,029,896; Feb. 4.

Parker, William B., Placerville, assignor to California Spray-Chemical Corporation, Berkeley, Calif. Nozzle. 2,029,357; Feb. 4.

Parker, William B., Placerville, assignor to California Spray-Chemical Corporation, Berkeley, Calif. Impinging nozzle. 2,029,358; Feb. 4.

Parkhurst, George L., assignor to Standard Oil Company, Chicago, Ill. Solvent fractionation. 2,029,089; Feb. 4.

Parkinson, John S., Somerville, N. J., assignor to Johns-Manville Corporation, New York, N. Y. Acoustical structure. 2,029,441; Feb. 4.

Parks, Roland D., Houghton Village, Mich. Tieldable support. 2,029,789; Feb. 4.

Patentaktiebolaget Grondal-Ramen. (See Haglund, Gustaf, assignor.)

Paulson, George, assignor of one-third to G. J. Miller, Erie, Pa. Automatic control system for automobile lights. 2,029,502; Feb. 4.

Pavek, Edward, Minneapolis, Minn. Metal fence post. 2,029,739; Feb. 4.

Pembroke Chemical Corporation. (See Kerschbaum, F. P., Wargaman, and Gooch, assignors.)

Peperkorn, Richarch, Kassel-Wilhelmshoe, Germany, assignor to The Superheater Company, New York, N. Y. Superheater. 2,029,894; Feb. 4.

Perkins, Julius L., West Springfield, Mass. Machine tool. 2,029,335; Feb. 4.

Perkins, Melvin A., Milwaukee, Wis., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Organic tellurium compounds and preparing the same. 2,030,036; Feb. 4.

Perry, Stanley. (See Schroeder, O. C., and Perry.)

Peter, Charles, West Allis, assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis. Pneumatic drive system. 2,029,684; Feb. 4.

Petersen, Alfred H., Frankfort-on-the-Main, Germany, and W. Gensecke, Gross-Steinheim, near Frankfort-on-the-Main, Germany, assignors to Metallgesellschaft Aktiengesellschaft, Frankfort-on-the-Main, Germany. Concentrating rubber latices. 2,029,681; Feb. 4.

Petersen, Charles, Iron Mountain, Mich., assignor of forty per cent to Axel Nelson, Florence, Wis. Automatic change pitch propeller. 2,029,503; Feb. 4.

Petrus-Blumberger, Josef B., Delft, Netherlands, assignor to General Aniline Works, Inc., New York, N. Y. Anodyestuffs. 2,029,586; Feb. 4.

Peyton, William C., New York, N. Y., assignor to The Standard Stoker Company, Incorporated. Locomotive tender. 2,029,891; Feb. 4.

Phelps Dodge Copper Products Corporation. (See Moody, C. F., and Mitchell, assignors.)

Philipp, Robert H., assignor to Corballogesellschaft m. b. H., Reutlingen, Germany. Ringing device for ball games. 2,029,790; Feb. 4.

Phillips Petroleum Company. (See Frey, F. H., Huppke, and Guyer, assignors.)

Phillips Petroleum Company. (See Guyer, J. A., Frey, and Huppke, assignors.)

Pieper, Alphonse F., et al. (See Mettsler, Charles R., assignor.)

Pieper, Henri, Brussels, Belgium. Brake system. 2,029,670; Feb. 4.

Pieper, Oscar H., et al. (See Mettsler, Charles R., assignor.)

Pieper, Oscar H., Rochester, N. Y. Connecter for X-ray tubes. 2,029,584; Feb. 4.

Pierce, John B., Foundation. (See Davison, Robert L., assignor.)

Pierson, William D., assignor to The Waterbury Farrel Foundry & Machine Company, Waterbury, Conn. Belt driven wire spooler. 2,029,832; Feb. 4.

Placia, William, Altoona, Pa. Micrometer. 2,029,940; Feb. 4.

Pine, Paul R., assignor to The Harshaw Chemical Company, Elyria, Ohio. Depositing metals electrolytically. 2,029,336; Feb. 4.

Pine, Paul R., assignor to The Harshaw Chemical Company, Elyria, Ohio. Electrodeposition. 2,029,337; Feb. 4.

Pipenhagen, Charles A. (See Tyler, Herbert B., assignor.)

Pirich, George, Minneapolis, Minn. Weeder and seeder. 2,029,333; Feb. 4.

Plachino, Giuseppe, West New York, N. J. Hair clipper blade. 2,029,791; Feb. 4.

Plachino, Giuseppe, West New York, N. J. Hair cutting comb. 2,029,792; Feb. 4.

Pohl, Karl, et al. (See Arfsten, Newton, assignor.)

Pokorney, Henry, Rome, N. Y. Internal combustion engine "Diesel". 2,029,941; Feb. 4.

Polin, Herbert S., assignor to Polin, Inc., New York, N. Y. Remote control system. 2,029,542; Feb. 4.

Polin, Inc. (See Polin, Herbert S., assignor.)

Porteous, William, Fresno, Calif. Trailer. 2,029,540; Feb. 4.

Potter, Pierce & Scheffler. (See Lippincott, Walter M., assignor.)

Pratt, Charles A., assignor to Goodman Manufacturing Company, Chicago, Ill. Mining machine. 2,029,795; Feb. 4.

Prentice, George H., Berlin, Conn. Fastener unit. 2,029,585; Feb. 4.

Prentice, James M., assignor to The Electric Game Company, Holyoke, Mass. Electrically operated game apparatus. 2,029,534; Feb. 4.

Prince, Marius D., Los Angeles, Calif. Separating device. 2,029,671; Feb. 4.

Procter & Gamble Company, The. (See Reed, Robert M., assignor.)

Proctor & Schwartz, Incorporated. (See Schwartz, Walter M., assignor.)

Pyrate Corporation of Nevada, The. (See Ostling, William, assignor.)

Pyrate Corporation of Nevada, The. (See Richard, Clare, assignor.)

Pyrene Manufacturing Company. (See Dodelin, Fred A., assignor.)

Quaker State Oil Refining Company. (See Talbot, Frank A., assignor.)

R. K. M. Company, The. (See Manning, Sanford E., assignor.)

R. U. V. Engineering Corporation, The. (See Creighton, H. M., and Berndt, assignors.)

Rabinowitz, Julius, New York, N. Y. Composite strip. 2,029,442; Feb. 4.

Radio Corporation of America. (See deBoer, J. H., Bruynes, and Teves, assignors.)

Radio Corporation of America. (See O'Brien, Willis H., assignor.)

Radio Corporation of America. Ringel, Abraham, assignor.)

Radio Corporation of America. (See Smith, Theodore A., assignor.)

Radio Corporation of America. (See van Geel, W. C., and Emmens, assignors.)

Ragatz, Edward G., assignor to Union Oil Company of California, Los Angeles, Calif. Producing oxidized asphalts. 2,029,504; Feb. 4.

Ralson, Alfred H. Sandviken, Sweden. Flat plate for laterally joining two or more metallic strips. 2,029,635; Feb. 4.

Rankin, Henry L., Tampa, Fla. Oil-level gauge. 2,029,572; Feb. 4.

Rapaport, Nahan, and R. W. Armstrong, Belfast, Northern Ireland, and O. G. Hutchinson, Brighton, England. Sewing machine. 2,029,943; Feb. 4.

Rawson, Emanuel, North Bergen, N. J., assignor to The Superheater Company, New York, N. Y. Balanced automatic valve. 2,029,595; Feb. 4.

Recording Card Table Company. (See Krantz, Hubert F., assignor.)

Redington, F. B., Co. (See Millmoe, Michael J., assignor.)

Reed, Harold V., assignor, by mesne assignments, to Borg-Warner Corporation, Chicago, Ill. Clutch plate. 2,029,339; Feb. 4.

Reed, Robert M., assignor to The Procter & Gamble Company, Cincinnati, Ohio. Soap stabilizer. 2,029,506; Feb. 4.

Refrigeration Research Corporation. (See Knight, Donald B., assignor.)

Reichle, Hans Braux, assignor to Northam Warren Corporation, New York, N. Y. Applicator. 2,029,835; Feb. 4.

Reilly, Peter C. (See Derby, I. H., and Horner, assignors.)

Reiners, Wilhelm, and G. Kahlisch, Gladbach, assignors to W. Schlafhorst & Co., Gladbach, Rheydt, Germany. Yarn and thread tensioning mechanism for cop winding and like textile machines. 2,029,943; Feb. 4.

Reiss, Winold, New York, N. Y. Creating and displaying decorative effects with light. 2,029,543; Feb. 4.

Rendoff, Philip R., Toledo, Ohio. Cement block. 2,029,586; Feb. 4.

Republic Steel Corporation. (See Burke, Bart L., assignor.)

Rettstadt, Hugo, Aldan, Pa. Tool handle fastening. 2,029,794; Feb. 4.

Reynolds, Fred L. (See Lowry, R. D., and Reynolds.)

Richard, Clare, Los Angeles, Calif., assignor to The Pyrate Corporation of Nevada. Apparatus for cleaning tanks and the like. 2,029,795; Feb. 4.

Richard, Clement C., et al. (See Kain, Clifford H., assignor.)

Richardson, Thomas A., Verona, and C. W. Dawson, Oakmont, assignors to Woodings-Verona Tool Works, Verona, Pa. Head shaping machine. 2,029,336; Feb. 4.

Richard, Eric M., assignor to The Western Union Telegraph Company, New York, N. Y. Selective signaling device. 2,029,636; Feb. 4.

Ricks, Fred, Leicester, England, assignor to United Shoe Machinery Corporation, Paterson, N. J. Counter-shaping machine. 2,029,544; Feb. 4.

Ridgely Trimmer Company, The. (See Friermood, Charles L., assignor.)

Riley Stoker Corporation. (See Kuhner, Max H., assignor.)

Ringel, Abraham, Merchantville, N. J., assignor to Radio Corporation of America. Recording and reproduction of electrical impulses. 2,029,889; Feb. 4.

Ripper, Kurt, Vienna, Austria. Molding composition and molded articles made therefrom. 2,029,836; Feb. 4.

Ripper, Kurt, Vienna, Austria. Making condensation products. 2,029,893; Feb. 4.

Ripper, Kurt, Vienna, Austria. Molding composition. 2,029,894; Feb. 4.

Rittmeister, Wilhelm, Dessau, Anhalt, Germany, assignor, by mesne assignments, to E. I. du Pont de Nemours & Co., Wilmington, Del. Procedure for the hydrogenizing and/or splitting of coal tars, mineral oils, and the like. 2,029,895; Feb. 4.

Rivera, Charles, et al. (See Jones, David, assignor.)

Riverside Sheet Metal Works, Inc. (See Summerhays, Harold F., assignor.)

Roberts Numbering Machine Company. (See Matt, George J., assignor.)

Robertson, H. H., Company. (See Sargent, Edward B., assignor.)

Robinson Bindley Processes Limited. (See Myddleton, William W., assignor.)

Robinson, Jack, Wood River, Ill., assignor to Standard Oil Company, Chicago, Ill. Countercurrent contactor. 2,029,691; Feb. 4.

Rockwell, Edward A., New York, N. Y. Combined free-wheeling and power brake unit. 2,029,637; Feb. 4.

Roddy, Vincent J., assignor to American Screw Company, Providence, R. I. Recess forming punch and holder. 2,029,944; Feb. 4.

Rode, Fredrich J., Toledo, Ohio. Hydraulic cushion. 2,029,587; Feb. 4.

Rodgers, Earle V., Kenilworth, N. J. Waterproofed plastic paper and producing the same. 2,029,390; Feb. 4.

Roosenstein, Hans O., W. Kautter and H. Rothe, assignors to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany. Electron discharge tube. 2,029,291; Feb. 4.

Roper, Geo. D., Corporation. (See Hobson, S. H., and Holtman, assignors.)

Rosenbloom, Israel, and R. Born, Pittsburgh, assignors to Ruffsdale Distilling Company, Braddock, Pa. Bottle closure. 2,029,896; Feb. 4.

Rosenthal, Leo, Leverkusen-Wiesdorf, and R. Hebermehl, Cologne-Deutz, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Film-forming compositions. 2,029,585; Feb. 4.

Rosbirt, Randolph J., A. T. Bateman, and A. Irvine, Detroit, assignors to Bohn Aluminum and Brass Corporation, Detroit, Mich. Permanent molding apparatus. 2,029,673; Feb. 4.

Rosner, Max, assignor to General Outdoor Advertising Co., Inc., Chicago, Ill. Earth anchor. 2,029,749; Feb. 4.

Ross, Lester T., assignor to The Burch Corporation, Crestline, Ohio. Snow plow. 2,029,545; Feb. 4.

Ross, Robert D. (See Sample, F. W., and Ross.)

Rossman, Allen M., Chicago, Ill., assignor to Rossman Engineering Company, Metal clad switching unit. 2,029,589; Feb. 4.

Rossman Engineering Company. (See Rossman, Allen M., assignor.)

Rothe, Horst. (See Roosenstein, H. O., Kautter, and Rothe.)

Rowe, Fred H., et al. (See Moore, Guy S., assignor.)

Roy, Damase J., North Attleboro, Mass. Window ventilator. 2,029,548; Feb. 4.

Royal, Thomas M., Philadelphia, Pa. Manufacture of bags. 2,029,940; Feb. 4.

Rubinstein, Milton M., Jersey City, N. J. Denture valve construction. 2,029,945; Feb. 4.

Ruffsdale Distilling Company. (See Rosenbloom, I., and Born, assignors.)

Ruppel, Harry W., Shaker Heights, assignor to The Cleveland Automatic Machine Company. Automatic lathe. 2,029,638; Feb. 4.

Ruske, Albert F. W., San Francisco, Calif. Roller skate. 2,029,893; Feb. 4.

Russell Manufacturing Company, The, et al. (See Tower, Elmer V. J., assignor.)

S. M. A. Corporation. (See Jersey, Vernon, assignor.)

Salomon, François M. M. E., Paris, France. Vibration dampener. 2,029,796; Feb. 4.

Sample, Fleck W., and R. D. Ross, assignors to American Flange & Manufacturing Company, Chicago, Ill. Pipe mechanism for mounting bushings. 2,029,541; Feb. 4.

Sanders, Omer T., Nashville, Tenn. Combination calendar and coin container. 2,029,443; Feb. 4.

Sargent, Allston. (See Campbell, H. B., and Sargent.)

Sargent & Company. (See Voight, Henry G., assignor.)

Sargent, Edward B., Mount Lebanon, assignor, by mesne assignments, to H. H. Robertson Company, Pittsburgh, Pa. Floor outlet fixture housing. 2,029,892; Feb. 4.

Sautier, Emile, Ensisheim, assignor to Manufacture de Machines du Haut-Rhin, S. A., Mulhouse-Bourtzwiller, Haut-Rhin, France. Apparatus for the manufacture of cups from which cartridge cases can be cold drawn. 2,029,797; Feb. 4.

Scharf, Frank W., Sioux City, Iowa, assignor to McGraw Electric Company, Chicago, Ill. Rotary motor or pump. 2,029,580; Feb. 4.

Schattel, Rudolph A., Rome, assignor to General Cable Corporation, New York, N. Y. Insulated conductor. 2,029,546; Feb. 4.

Schell, Herbert H. (See Ferguson, D., and Schell.)

Schellin, John C., Wooster, Ohio. Hose coupling thread terminals indicator. 2,029,799; Feb. 4.

Schilling, Ludwig, Poughkeepsie, N. Y. Electric iron. 2,029,807; Feb. 4.

Schindelbeck, Hans, and C. W. Schultis, Frankfort-on-the-Main, Fechenheim, Germany, assignors to General Aniline Works, Inc., New York, N. Y. Azodyestuffs. 2,029,591; Feb. 4.

Schlveley, Raymond F., Houston, Tex. Magazine loader. 2,029,444; Feb. 4.

Schlachter, Henry, Beatrice, Nebr. Windmill. 2,029,681; Feb. 4.

Schlafhorst, W., & Co. (See Reiners, W., and Kahlisch, assignors.)

Schlamp, Philip M., Miami, Fla. Window shade. 2,029,675; Feb. 4.

Schlesinger, Kurt, Berlin, Germany. Brake rim. 2,029,689; Feb. 4.

Schlesinger, Kurt, Berlin, Germany. Aerial arrangement for short wave television purposes. 2,029,640; Feb. 4.

Schlicher, Arthur G., Allentown, Pa. Folding sanitary roof or curtain. 2,029,676; Feb. 4.

Schmid, John V., Philadelphia, Pa. Blow-off valve. 2,029,827; Feb. 4.

Schmid, Max, Riehen, near Basel, assignor to Society of Chemical Industry in Basle, Switzerland. Making photographic emulsions. 2,029,942; Feb. 4.

Schmidt, Karl F., Ludwigshafen-on-the-Rhine, Germany, assignor to M. Nilhaber, Inc., Jersey City, N. J. Producing tetrazoles of the camphor group and products thereof. 2,029,789; Feb. 4.

Schmidt, Walther, and A. Beck, Bitterfeld, Germany, assignors, by mesne assignments, to Magnesium Development Corporation. Purifying magnesium. 2,029,891; Feb. 4.

Schmitt, Ruth M., New York, and C. M. Bell, New Rochelle, N. Y. Facial mask and making the same. 2,029,947; Feb. 4.

Schneider, Henry J., Quincy, Mass. Steam generator. 2,029,588; Feb. 4.

Schroeder, Oscar C., and S. Perry, said Perry, assignor to Automatic Burner Corporation, Chicago, Ill. Oil burner. 2,029,741; Feb. 4.

Schubert, Frank, Detroit, Mich., assignor to Bearings Company of America, Lancaster, Pa. Bearing. 2,029,445; Feb. 4.

Schubert, Paul, Berlin, assignor to Allgemeine Elektricitäts-Gesellschaft, Berlin, Germany. Driving gear for counting mechanisms. 2,029,677; Feb. 4.

Schütz, Anthony G., Los Angeles, Calif. Sound-producing device. 2,029,641; Feb. 4.

Schueler, Frederick C., assignor to Hudson Sharp Machine Company, Green Bay, Wis. Paper conveyor. 2,029,446; Feb. 4.

Schultis, Carl T. (See Schindelbeck, H., and Schultis.)

Schultz, Alfred, assignor to Standard Brands Incorporated, New York, N. Y. Manufacture of yeast. 2,029,893; Feb. 4.

Schultz Arthur P. (See Teller, J., and Schultz.)

Schultz, Edward, assignor to The Hand-Cheep Mfg. Co., Chicago, Ill. Smoking stand. 2,029,942; Feb. 4.

Schultz, William G., South Milwaukee, and A. G. Stollmayer, Milwaukee, assignors to Lisr Material Company, South Milwaukee, Wis. Drop-out fuse. 2,029,806; Feb. 4.

Schundler, F. E., & Co. (See Denning, Paul E., assignor.)

Schur, Milton O., assignor to Brown Company, Berlin, N. H. Production of nitrocellulose. 2,029,547; Feb. 4.

Schürch, Arthur. (See Jaeck, W., and Schürch.)

Schutte & Koerting Company. (See Mahlmann, Karl, assignor.)

Schwartz, Walter M., assignor to Proctor & Schwartz, Incorporated, Philadelphia, Pa. Flatiron. 2,029,948; Feb. 4.

Scott, Charles E., Bluffton, Ind. Lawn edger. 2,029,949; Feb. 4.

Scott, E. H. (See Brush, Chester E., assignor.)

Scott, Frederick S. (See Bray, U. E., Beckwith, and Scott.)

Scott, Paul E., et al. (See Jones, David, assignor.)

Scovill Manufacturing Co. (See Aspender, Donald L., assignor.)

Scringeour, William, Washington, D. C. Making hollow forged valves. 2,029,507; Feb. 4.

Scringeour, William, Washington, D. C. Making hollow articles. 2,029,508; Feb. 4.

Scroggs, Joseph W., Norman, Okla. Door operating mechanism. 2,029,679; Feb. 4.

Sears, Roebuck and Co. (See Kingston, Ralph H., assignor.)

Sedgley, Reginald F., and M. Warner, Philadelphia, Pa. Machine gun. 2,029,539; Feb. 4.

Segall, Karl B. (See Bendix, Lynn C., assignor.)

Semet-Solvay Engineering Corporation. (See Angus, Leslie A., assignor.)

Semet-Solvay Engineering Corporation. (See Bignard, Lauritz, assignor.)

Semon, Waldo L., Silver Lake Village, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Making secondary aromatic amines. 2,029,843; Feb. 4.

Sessions, Frank L., Lakewood, Ohio. Apparatus for electric welding. 2,029,594; Feb. 4.

Sevring, Franz W., A. Bergqvist, and K. H. Olsson, assignors to Kooperativa Forbundet Forening u. p. a., Stockholm, Sweden. Insulation. 2,029,679; Feb. 4.

Sexton, Wilfred A., Huddersfield, England, assignor to Imperial Chemical Industries Limited. Arylamides of 2,3-hydroxynaphthoic acids. 2,029,509; Feb. 4.

Shedd, Claude K., and E. V. Collins, Ames, Iowa, Dedicated to the Free Use of the Public. Attachment for lister planters. 2,029,680; Feb. 4.

Sheldon, Henry A., Buffalo, N. Y., assignor to Food Machinery Corporation, San Jose, Calif. Green corn cutter. 2,029,844; Feb. 4.

Shoe Form Co. (See De Witt, William J., assignor.)

Sidebotham, Melvin H., West Newton, Mass., assignor to Specialty Automatic Machine Company, Medford, Mass. Box blank folding mechanism. 2,029,894; Feb. 4.

Siemens & Halske, Aktiengesellschaft. (See Fischer, F., Strecker, and Neugebauer, assignors.)

Siemens & Halske, Aktiengesellschaft. (See Thal, Wilhelm, assignor.)

Siverts, William C., Quincy, Mass. Balanced gear pump or motor. 2,029,742; Feb. 4.

Simpson, William K., assignor to Hoffman Specialty Company, Waterbury, Conn. Thermostatic relief valve. 2,029,950; Feb. 4.

Sinclair, Ida M., Cuyahoga Falls, Ohio. Flower holder. 2,029,643; Feb. 4.

Sinclair Refining Company. (See Beardsley, Wilson H., assignor.)

Smith, Arthur G., Myrtle, assignor of one-third to E. J. Smith and one-third to C. W. Smith, Myrtle, Ohio. Polish compact. 2,029,951; Feb. 4.

Smith, C. Willard, et al. (See Smith, Arthur G., assignor.)

Smith, E. Jenet, et al. (See Smith, Arthur G., assignor.)

Smith, Gordon B. (See Hynes, G. T., and Smith.)

Smith, Howard. (See Knapp, A. S., and Smith.)

Smith, Howard, assignor to Knapp-Monarch Company, Belleville, Ill. Thermostat construction. 2,029,596; Feb. 4.

Smith, John E., assignor to Knapp-Monarch Company, Belleville, Ill. Automatic coffee maker. 2,029,806; Feb. 4.

Smith, Rachel C. (See McMichael, Samuel, assignor.)

Smith, Theodore A., Ridgewood, N. J., assignor to Radio Corporation of America. Television system. 2,029,285; Feb. 4.

Smolens, Harry G. (See Clark, J. A., and Smolens.)

Société du Caoutchouc Manufacturé. (See Moreltan, Jules, assignor.)

Society of Chemical Industry in Basle. (See Griesbaber, Fritz, assignor.)

Society of Chemical Industry in Basle. (See Jaeck, W., and Schürch, assignors.)

Society of Chemical Industry in Basle. (See Schmid, Max, assignor.)

Society of Chemical Industry in Basle. (See Sutter, Theodor, assignor.)

Soderberg, Carl F., Swarthmore, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Turbine rotor construction. 2,029,631; Feb. 4.

Sorenson, Andrew J., Edgewood, assignor to The Union Switch & Signal Company, Swissvale, Pa. Apparatus for communication systems. 2,029,296; Feb. 4.

Southern Asbestos Company. (See Tubel, George S., assignor.)

Specialty Automatic Machine Company. (See Sidebotham, Melvin H., assignor.)

Speke, Frank C. (See Budd, D. B., and Speke.)

Spender, Donald L., assignor to Scovill Manufacturing Co., Waterbury, Conn. Liquid dispenser. 2,029,743; Feb. 4.

Sperr, Frederick W., Jr., Vineland, N. J., assignor of one-fourth to H. E. Cooke, Greenwich, Conn. Mulch and using the same. 2,029,548; Feb. 4.

Sperry, Arthur G., Hollis, assignor to Intertype Corporation, Brooklyn, N. Y. Wiper for slug trimming knives. 2,030,036; Feb. 4.

Spool Cotton Company, The. (See Andrews, George H., assignor.)

Squires, Martin O., San Francisco, Calif. Dental manikin. 2,029,682; Feb. 4.

Stahl, Wilhelm, Lahr, Baden, assignor to firm Albert Nestler Actien Gesellschaft, Lahr, Baden, Germany. Ruler attachment. 2,029,899; Feb. 4.

Standard Brands Incorporated. (See Kirby, G. W., and Frey, assignors.)

Standard Brands Incorporated. (See Schultz, Alfred, assignor.)

Standard Car Truck Company. (See Webb, Edwin W., assignor.)

Standard Oil Company, The. (See McConnell, Elliott B., assignor.)

Standard Oil Company. (See Parkhurst, George L., assignor.)

Standard Oil Company. (See Robinson, Jack, assignor.)

Standard Oil Company. (See Wilson, Robert E., assignor.)

Standard Stoker Company, The. (See Anderson, Howard P., assignor.)

Standard Stoker Company, The. (See Capps, Washington T., assignor.)

Standard Stoker Company, The. (See Harrison, Benjamin F., assignor.)

Standard Stoker Company, The. (See Peyton, William C., assignor.)

Standard Stoker Company. (See Surdykowski, Charles J., assignor.)

Standard Stoker Company. (See Surdykowski (Surdy), Charles J., assignor.)

Standard Stoker Company, The. (See Turner, E. A., and Surdy, assignors.)

Staud, Cyril J. (See Van Dyke, R. H., Staud, and Gray.)

Stedefeld, Curt, et al. (See Black, Willy, assignor.)

Steel, Gladstone M., Chillicothe, Ohio. Animated mechanical toy. 2,029,744; Feb. 4.

Steiner, Ames P., H. P. Wise and H. B. Balsiger, assignors to Landis Tool Company, Waynesboro, Pa. Hydraulic ball race grinder. 2,029,510; Feb. 4.

Steiner, Ames P., H. P. Wise and H. B. Balsiger, Waynesboro, assignors to Landis Tool Company, Waynesboro, Pa. Hydraulic ball race grinder. 2,029,511; Feb. 4.

Steinmayer, Alwin G. (See Schultz, W. O., and Steinmayer.)

Stemen, William R. (See Urbain, O. M., and Stemen.)

Sterling, Robert J., assignor to United States Gypsum Company, Chicago, Ill. Plaster board reenforcement. 2,029,849; Feb. 4.

Stevens, Joseph E. (See Morton, A. A., and Stevens.)

Stewart, George H. (See Merrill, A. B., and Stewart.)

Stewart, Hester H. (See Billin, G. S., and Stewart.)

Stiner, Edgar R., Sharps Chapel, Tenn. Retractable step for vehicles and the like. 2,029,745; Feb. 4.

Stokely, Ray L., Floral Park, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Telephone system. 2,029,583; Feb. 4.

Stoeger, Anthony J., Queens Village, N. Y., assignor to Mergenthaler Linotype Company. Slug casting machine. 2,029,952; Feb. 4.

Strau-Steel Corporation. (See Waugh, Hugh L., assignor.)

Strawn, Orval R., Columbus, Ohio, assignor to The Jeffrey Manufacturing Company. Material handling mechanism. 2,029,513; Feb. 4.

Strecker, Felix. (See Fischer, F., Strecker, and Neugebauer.)

Sturtevant, B. F., Company. (See Goldthwaite, George R., assignor.)

Submarine Signal Company. (See Turner, Edwin E., assignor.)

Suess, Herbert M. (See Waechtler, K. O., and Suess.)

Suessenguth, Hermann. (See Kircher, C., Mueller, and Suessenguth.)

Summerhays, Harold F., assignor to Riverside Sheet Metal Works, Inc., Riverside, Calif. Orchard heater. 2,029,540; Feb. 4.

Sun Newspapers Limited. (See Hardy, Sydney T. C., assignor.)

Sun Oil Company. (See Thayer, Clarence H., assignor.)

Superheater Company, The. (See Armacost, Wilbur H., assignor.)

Superheater Company, The. (See Feparstorn, Heinrich, assignor.)

Superheater Company, The. (See Rowson, Emanuel, assignor.)

Surdy, Charles J., (judicial change of name). (See Surdykowski, Charles J.)
Surdy, Charles J. (See Turner, R. A., and Surdy.)
Surdykowski, Charles J., Tuckahoe, N. Y., said Surdykowski, now by judicial change of name, C. J. Surdy, assignor to Standard Stoker Company, Inc. Locomotive tender. 2,029,298; Feb. 4.
Surdykowski, Charles J., Tuckahoe, N. Y., now by judicial change of name, C. J. Surdy, assignor to Standard Stoker Company, Inc. Locomotive tender. 2,029,397; Feb. 4.
Sutlief, John R., Lapine, Oreg. Wire reel. 2,029,953; Feb. 4.
Sutter, Theodor, assignor to the firm Society of Chemical Industry in Basle, Basel, Switzerland. Manufacture of synthetic resins of the aminealdehyde type. 2,029,954; Feb. 4.
Swain, Howland M., assignor to The Irwin Auger Bit Company, Wilmington, Ohio. Auger bit. 2,029,447; Feb. 4.
Swift and Company. (See Davis, Elmer M., assignor.)
Sykes, William E. (See Try, Walter H., assignor.)
Sykes, William E., Buffalo, N. Y. Gear generating machine. 2,029,398; Feb. 4.
Symington Company, The. (See Couch, Glenn F., assignor.)
Talbot, Frank A., Baltimore, Md., assignor to Quaker State Oil Refining Co. Combined filling closure and gauge rod. 2,029,845; Feb. 4.
Tassi, Guido, Brooklyn, N. Y., assignor, by mesne assignments, to B. Filippone & Co. Inc., Passaic, N. J. Making dough forms and product. 2,029,684; Feb. 4.
Tatosian, Harry G., Bridgeport, Conn., assignor, by mesne assignments, to Ice Cream Cone Machine Corporation, New York, N. Y. Cake baking iron. 2,029,448; Feb. 4.
Tatum, John J., Baltimore, Md. Car spring mounting. 2,029,644; Feb. 4.
Taylor, Albert H., Washington, D. C., and L. C. Young, Hyattsville, Md. Oscillator. 2,029,346; Feb. 4.
Taylor, Daniel G., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Temperature control system. 2,029,513; Feb. 4.
Taylor, Henry R., Okemah, Okla. Guard cap. 2,029,955; Feb. 4.
Technicraft Engineering Corp. (See Haines, Marcus W., assignor.)
Technicraft Engineering Corporation, The. (See Lane, Wilfred G., assignor.)
Technicraft Engineering Corporation, The. (See Wells, Walter T., assignor.)
Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H. (See Lucas, Kurt, assignor.)
Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H. (See Rosenstein, H. O., Kautter, and Rothe, assignors.)
Teletype Corporation. (See Walden, Lester M., assignor.)
Teller, Jacob, New Rochelle, and A. P. Schuls, assignors to Teller Stove Designing Corporation, New York, N. Y. Cooking range construction. 2,029,449; Feb. 4.
Teller Stove Designing Corporation. (See Teller, J., and Schuls, assignors.)
Templin, Richard L., New Kensington, assignor to Aluminum Company of America, Pittsburgh, Pa. Preparing metal stock and apparatus therefor. 2,029,800; Feb. 4.
Templin, William, Glen Ellyn, assignor to Briede & Rogovsky, Inc., Chicago, Ill. Advertising window illumination. 2,029,841; Feb. 4.
Tennessee Valley Authority. (See Curtiss, H. A., and Abrams, assignors.)
Teves, Martin C. (See de Boer, J. H., Bruynes, and Teves.)
Texas Company, The. (See Halpern, M., Logan, Manley, and Ullrich, assignors.)
Texas Company, The. (See White, George D., assignor.)
Textile Machine Works. (See Waechtler, K., and Suess, assignors.)
Thal, Wilhelm, Nowawes, near Potsdam, assignor to Siemens & Halske, Aktiengesellschaft, Siemensstadt, near Berlin, Germany. Supervision of the dielectric losses of a conductor. 2,029,685; Feb. 4.
Thau, Philip F., New York, N. Y. Bicycle with horse riding action. 2,029,842; Feb. 4.
Thayer, Clarence H., Wallingford, assignor to Sun Oil Company, Philadelphia, Pa. Method and apparatus for firing oil stills. 2,029,956; Feb. 4.
Thomas, Michael, Los Angeles, Calif. Toe holder. 2,029,597; Feb. 4.
Thomson, Robert, Arlington, N. J., assignor to Dardelet Threadlock Corporation, New York, N. Y. Thread cutting tool. 2,029,514; Feb. 4.
Thomson, Robert G., et al. (See Jones, David, assignor.)
Timbs, Edward, Los Angeles, and D. A. Murphy, Torrance, Calif., assignors to The National Superior Company, Toledo, Ohio. Swivel. 2,029,598; Feb. 4.
Toledo Pipe Threading Machine Company, The. (See Vosper, William W., assignor.)
Toledo Scale Manufacturing Company. (See Bennett, Geoffrey R., assignor.)
Toledo Scale Manufacturing Company. (See Bennett, Stanley G., assignor.)
Toledo Scale Manufacturing Company. (See Hurt, Samuel N., assignor.)
Toledo Scale Manufacturing Company. (See Marshall, Charles O., assignor.)
Toledo Scale Manufacturing Company. (See Waltz, Foster V., assignor.)
Toledo Scale Manufacturing Company. (See Weckerly, Mark A., assignor.)
Toppin, Francis V., Lyndhurst, N. J. Perpetual calendar ruler. 2,029,845; Feb. 4.
Tornblom, Nils A., Chicago, Ill., assignor to Appleton Electric Company. Actuating enclosed electric switches. 2,029,599; Feb. 4.
Tower, Elmer V. J., North Syracuse, N. Y., assignor, by mesne assignments, of one-half to The Russell Manufacturing Company, Middletown, Conn., and one-half to Brown-Lipe Gear Company, Toledo, Ohio. Clutch transmitting disk. 2,029,515; Feb. 4.
Tower, Elmer V. J., North Syracuse, N. Y., assignor of one-half to The Russell Manufacturing Company, Middletown, Conn., and one-half to Brown-Lipe Gear Company, Toledo, Ohio. Transmitting element. 2,029,516; Feb. 4.
Trachtenberg, Jakow, Berlin-Charlottenburg, Germany. Electrical multiple typewriter. 2,029,957; Feb. 4.
Trans-Lux Daylight Picture Screen Corporation. (See Newman, David F., assignor.)
Trico Products Corporation. (See Herten, Erwin C., assignor.)
Truelsen, Heinrich C., assignor to the firm Lieben & Co., Crefeld, Germany. Heat exchanger. 2,029,445; Feb. 4.
Try, Walter H., Stalybridge, England, assignor to William E. Sykes, Buffalo, N. Y. Gear cutter. 2,029,396; Feb. 4.
Tufts, Nathan, and E. T. Johnson, assignors to The New England Box Company, Greenfield, Mass. Nesting box with stacking irons. 2,029,746; Feb. 4.
Tuggle, Robert F., et al. (See Minott, Daniel L., assignor.)
Turner, Edwin A., New York, and C. J. Surdy, Tuckahoe, N. Y., assignors to The Standard Coke Company, Incorporated. Distributor member for stokers. 2,029,317; Feb. 4.
Turner, Edwin R., Jr., West Roxbury, assignor to Submarine Signal Company, Boston, Mass. Distance finding. 2,029,347; Feb. 4.
Tyler, Herbert R., Berwyn, assignor of one-half to C. A. Pipenhagen, Chicago, Ill. Steriliser. 2,029,844; Feb. 4.
Tyler, W. S. Company, The. (See Wettlaufer, William L., assignor.)
Ubertype Aktiengesellschaft. (See Wenczler, Lajos, assignor.)
Ullrich, Walter. (See Halpern, M., Logan, Manley, and Ullrich.)
Underwood, William F. (See Hastins, J. F., and Underwood.)
Union Oil Company of California. (See Bray, Ulric B., assignor.)
Union Oil Company of California. (See Bray, U. B., and Beckwith, assignors.)
Union Oil Company of California. (See Bray, U. B., Beckwith, and Scott, assignors.)
Union Oil Company of California. (See Dillon, Lyle, assignor.)
Union Oil Company of California. (See Fisher, Harmon F., assignor.)

United Shoe Machinery Corporation. (See Kinney, Fay D., assignor.)
United Shoe Machinery Corporation. (See Rice, Fred, assignor.)
United States Envelope Company. (See Furman, Samuel, assignor.)
United States Gypsum Company. (See McNeil, William M., assignor.)
United States Gypsum Company. (See Sterling, Robert J., assignor.)
United States Pipe and Foundry Company. (See Hering, Edward, assignor.)
Universal Camera Corporation. (See Githens, Otto W., assignor.)
Universal Oil Products Company. (See Alther, Joseph S., assignor.)
Universal Oil Products Company. (See Barnes, John S., assignor.)
Universal Oil Products Company. (See Day, Roland B., assignor.)
Universal Oil Products Company. (See Kinsloe, William E., assignor.)

Universal Oil Products Company. (See Mekler, Lev A., assignor.)
Universal Oil Products Company. (See Merrell, Jacque C., assignor.)
Universal Oil Products Company. (See Weber, Harold C., assignor.)
Universal Winding Company. (See LeBoeuf, Arthur W., assignor.)
Upton, Archie H., et al. (See Dewey, Josiah A., assignor.)
Upton, Ida M., et al. (See Dewey, Josiah A., assignor.)
Urbain, Oliver M., Columbus, assignor to C. H. Lewis, Harpster, Ohio. Purification of organically polluted waters. 2,029,958; Feb. 4.
Urbain, Oliver M., Columbus, assignor to C. H. Lewis, Harpster, Ohio. Water purification. 2,029,959; Feb. 4.
Urbain, Oliver M., Columbus, assignor to C. H. Lewis, Harpster, Ohio. Water purification. 2,029,960; Feb. 4.
Urbain, Oliver M., Columbus, assignor to C. H. Lewis, Harpster, Ohio. Water purification. 2,029,961; Feb. 4.
Urbain, Oliver M., and W. R. Stemen, Columbus, assignors to C. H. Lewis, Harpster, Ohio. Purification of potable and polluted waters. 2,029,962; Feb. 4.
Urbain, Oliver M., and W. R. Stemen, Columbus, assignors to C. H. Lewis, Harpster, Ohio. Purification of potable and polluted waters. 2,029,963; Feb. 4.
Urbain, Oliver M., and W. R. Stemen, Columbus, assignors to C. H. Lewis, Harpster, Ohio. Purification of potable and polluted waters. 2,029,964; Feb. 4.
Urbain, Oliver M., and W. R. Stemen, Columbus, assignors to C. H. Lewis, Harpster, Ohio. Reagent for water purification and producing same. 2,029,965; Feb. 4.
VanDenburg, John W., White Plains, N. Y. Headlight system. 2,029,849; Feb. 4.
Van Dyke, Russel H., C. J. Staud, and H. Le B. Gray, assignors to Eastman Kodak Company, Rochester, N. Y. Fibrous esterification of cellulose. 2,029,900; Feb. 4.
Van Geel, Willem C., and H. Emmens, Eindhoven, Netherlands, assignors to Radio Corporation of America. Electrolytic condenser. 2,029,451; Feb. 4.
Vars, Ethan W., Erie, Pa., assignor to General Electric Company. Gasket for refrigerator cabinets and the like. 2,029,845; Feb. 4.
Venning, Frank J., Cleveland Heights, and F. J. Teig, Euclid, assignors to The Union Salt Company, Cleveland, Ohio. Dispensing receptacle. 2,029,747; Feb. 4.
Victor, Joseph N., Allentown, Pa. Combination mesh and screen latch. 2,029,452; Feb. 4.
Victor, Joseph N., Allentown, Pa. Device for securing articles of hardware to wooden members. 2,029,453; Feb. 4.
Visser't Hooft, Franciscus, assignor to Lucidol Corporation, Buffalo, N. Y. Treatment of commercial dicalcium phosphate. 2,029,967; Feb. 4.
Voight, Henry G., assignor to Sargent & Company, New Haven, Conn. Exit doorlock. 2,029,901; Feb. 4.
Von Henke, Edmund J., assignor to American Electric Fusion Corporation, Chicago, Ill. Coupling. 2,029,846; Feb. 4.
Voss, Lewis S., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Shuttle changing loom. 2,029,801; Feb. 4.
Vosper, William W., assignor to The Toledo Pipe Threading Machine Company, Toledo, Ohio. Threading and facing tool. 2,029,847; Feb. 4.
Vulcan Detinning Company, The. (See Buttfield, A. C., and Muller, assignors.)
Waechtler, Kurt O., and H. M. Suess, Berlin, N. J., assignors to Textile Machine Works, Wyomissing, Pa. Yieldable safety lock. 2,030,037; Feb. 4.
Waggaman, William H. (See Kerschbaum, F. P., Waggaman, and Gooch.)
Wagner, Karl F., Stuttgart, Germany, assignor, by mesne assignments, to Magnesium Development Corporation, Newark, N. J. Automatic control mechanism. 2,029,349; Feb. 4.
Wahlin, Fritz. (See Bramsen, S., Wahlin, and Gustafson.)
Walden, Lester M., assignor to Teletype Corporation, Chicago, Ill. Rail shift mechanism for linecasting and composing machines. 2,029,400; Feb. 4.
Walker, Ralph S. (See Heckel, J. T., and Walker.)
Wallerstein Company. (See Wallerstein, L., Hawley, and Gale, assignors.)
Wallerstein Company Inc. (See Wallerstein, L., Gale, and Hawley, Jr., assignors.)
Wallerstein, Leo, T. Hawley, and R. A. Gale, assignors to Wallerstein Company, Inc., New York, N. Y. Treating silk and silk products. 2,029,850; Feb. 4.
Wallerstein, Leo, R. A. Gale, and T. G. Hawley, Jr., New York, N. Y., assignors to Wallerstein Company Inc. Manufacture of textiles. 2,029,968; Feb. 4.
Wallerstein, Leo, R. A. Gale, and T. G. Hawley, Jr., New York, N. Y., assignors to Wallerstein Company Inc. Silk yarn prepared from natural silk in the gum. 2,029,969; Feb. 4.
Wallerstein, Leo, R. A. Gale, and T. G. Hawley, Jr., New York, N. Y., assignors to Wallerstein Company Inc. Yarn. 2,029,970; Feb. 4.
Wallerstein, Leo, R. A. Gale, and T. G. Hawley, Jr., New York, N. Y., assignors to Wallerstein Company Inc. Mixed cellulose acetate-natural silk fabrics. 2,029,971; Feb. 4.
Wallerstein, Leo, R. A. Gale, and T. G. Hawley, Jr., New York, N. Y., assignors to Wallerstein Company Inc. Making a knitted fabric. 2,029,972; Feb. 4.
Wallgren, August G. F., and C. G. Janson, assignors to Aktiebolaget Nomy, Stockholm, Sweden. Bearing. 2,029,600; Feb. 4.
Walton, George W., London, England. Method of and apparatus for obtaining optical effects by electrical means. 2,029,401; Feb. 4.
Waltz, Foster V., assignor to Toledo Scale Manufacturing Company, Toledo, Ohio. Weighing scale. 2,029,902; Feb. 4.
Waterbury Farrel Foundry & Machine Company, The. (See Pierson, William D., assignor.)
Waugh, Hugh L., Ferndale, assignor to Stran-Steel Corporation, Detroit, Mich. Structural element. 2,029,645; Feb. 4.
Waukesha Motor Company. (See Merriam, Jesse R., assignor.)
Webb, Edwin W., assignor to Standard Car Truck Company, Chicago, Ill. Running gear for railway cars. 2,029,749; Feb. 4.
Webber, Owen T., London, England. Sink and draining board, particularly for domestic use. 2,029,802; Feb. 4.
Weber Costello Co. (See Lawton, Robert B., assignor.)
Weber, Harold C., Milton, Mass., assignor to Universal Oil Products Company, Chicago, Ill. Storage of gasoline. 2,029,748; Feb. 4.
Weckerly, Mark A., assignor to Toledo Scale Manufacturing Company, Toledo, Ohio. Weighing scale. 2,029,903; Feb. 4.
Wehner, Heinz, assignor to Amity Leather Products Co., West Bend, Wis. Center expanding pocket. 2,029,686; Feb. 4.
Wells, Sidney D., Combined Locks, assignor of one-half to G. D. Muggleton, Appleton, Wis. Paper pulp making process. 2,029,972; Feb. 4.
Wells, Walter T., Glendale, assignor to The Technicraft Engineering Corporation, Los Angeles, Calif. Perforating well casings. 2,029,454; Feb. 4.
Welter, Herman C., assignor to Hall-Welter Co., Inc., Rochester, N. Y. Inking mechanism for check writers. 2,029,646; Feb. 4.
Wenczler, Lajos, Augsburg, Germany, assignor to Ubertype Aktiengesellschaft, Kubli House, Glarus, Switzerland. Controlling device. 2,030,038; Feb. 4.
Western-Austin Company. (See Kohl, Charles E., assignor.)
Western-Austin Company. (See Wilson, Fred D., assignor.)
Western Electric Company. (See Hach, Clarence A., assignor.)
Western Electric Company. (See Isaacson, Arthur M., assignor.)
Western Electric Company. (See McCarthy, Rollin H., assignor.)
Westinghouse Electric & Manufacturing Company. (See Soderberg, Carl R., assignor.)
Westinghouse X-Ray Company. (See Morrison, Montford, assignor.)
Western Union Telegraph Company, The. (See Rickard, Eric M., assignor.)
Wettlaufer, William L., Buffalo, N. Y., assignor to The W. S. Tyler Company, Cleveland, Ohio. Vibrating screen. 2,029,848; Feb. 4.
Wheelbarger, Albert S., Dayton, assignor, by mesne assignments to Central United National Bank, Cleveland, Ohio, as trustee. Locking mechanism. 2,029,805; Feb. 4.
Whitaker, Willard F., Batavia, Iowa. Hog ring clinching tool. 2,029,974; Feb. 4.
White, George D., Port Arthur, Tex., assignor to The Texas Company, New York, N. Y. Conversion of hydrocarbon oils. 2,029,601; Feb. 4.
Whitehouse, Francis R. B., Edgbaston, Birmingham, England. Walking toy. 2,029,849; Feb. 4.
Wickersham, Harry P. (See Burns, E., and Wickersham.)
Williams, James F., Niagara Falls, Ontario, Canada, assignor to General Motors Corporation, Detroit, Mich. Cutting and abrading machine and process. 2,030,023; Feb. 4.
Williams, Percy N., Tucson, Ariz. Orthodontic appliance. 2,029,904; Feb. 4.
Williamson, Frank E., Reigate, England. Device for catching crown corks and like bottle-closures. 2,029,804; Feb. 4.
Wilson, Fred D., Harvey, Ill., assignor to Western-Austin Company. Grade finding mechanism. 2,029,455; Feb. 4.
Wilson, Robert E., assignor to Standard Oil Company, Chicago, Ill. Continuous process for countercurrent contacting of two liquids. 2,029,687; Feb. 4.
Wilson, Robert E., assignor to Standard Oil Company, Chicago, Ill. Process and apparatus for contacting two materials. 2,029,688; Feb. 4.
Wilson, Robert E., assignor to Standard Oil Company, Chicago, Ill. Process and apparatus for contacting two liquids. 2,029,690; Feb. 4.
Winchester, Hubert D., Monkseaton, England. Holder for threads, cords, lines, wires, fly-casts, and the like. 2,029,975; Feb. 4.
Wine, Edgar P. (See Steiner, A. P., Wine, and Balsiger.)
Winterich, John W., Cleveland, Ohio. Wainscoting construction. 2,029,549; Feb. 4.
Wired Radio, Inc. (See Cassell, Joseph L., assignor.)

Weinlager, Robert, Bonn-on-the-Rhine, Germany, assignor to General Aniline Works, Inc., New York, N. Y. Ethylene azo dyestuffs and their manufacture. 2,029,647; Feb. 4.
Woodings-Verona Tool Works. (See Richardson, T. A., and Dawson, assignors.)
Wormald, Alec, Blackley, England, assignor to Imperial Chemical Industries Limited. Dyeing process. 2,029,351; Feb. 4.
Wunsch, Paul, Leipzig, Germany, assignor to Mergenthaler Linotype Company, Brooklyn, N. Y. Pump stop mechanism for typographical line casting machines. 2,029,976; Feb. 4.
Wurser, Martin. (See Sedgley, R. F., and Wurser.)
Yelp, Frank J. (See Venning, F. J., and Yelp.)
Yeomans, William F. (See Connolly, W. F., and Yeomans.)
Young, Leo C. (See Taylor, A. H., and Young.)
Young, Ruth, Enid, Okla. Sign. 2,029,799; Feb. 4.
Zavertnik, Joseph, Jr. (See MacCubbin, A. A., and Zavertnik, assignors.)
Zeiss, Carl. (See Bertele, Ludwig, assignor.)
Zerbey, John M., et al. (See James, Cleveland A., assignor.)
Zim Manufacturing Company. (See Beckman, Herbert A., assignor.)
Zindel, Ernst, Dessau, Germany. Firearm equipment for aircraft. 2,029,092; Feb. 4.
Zuber, Robert E., Birmingham, Ala. Tripping mechanism. 2,029,456; Feb. 4.

LIST OF REISSUE INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 4TH DAY OF FEBRUARY, 1936

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Diamines and making same, Unsulphonated diacylated. G. de Montmollin, J. Dannaser, G. Bonhôte and H. Johner. 19,842; Feb. 4.
Grader, Combination tractor. A. and A. G. Rossing. 19,846; Feb. 4.
Guy wire protector. H. E. Miller. 19,845; Feb. 4.
Hosiery, Mechanism for knitting full-fashioned. G. Gastrich. 19,843; Feb. 4.
Optical mensuration method and instrument, Clinical. A. Ames, Jr., and G. H. Gliddon. 19,841; Feb. 4.
Strip, Antisqueak. E. W. Springer. 19,847; Feb. 4.
Suction cleaner. W. H. Kitto. 19,844; Feb. 4.

LIST OF DESIGN INVENTIONS

Appliqué emblem or similar article for wearing apparel. C. Emmey, 98,428; Feb. 4.
Beverage dispensing device. J. M. Travis. 98,435; Feb. 4.
Bottle. M. R. De Mascolo. 98,455; Feb. 4.
Bottle. B. D. Fuerst. 98,426; Feb. 4.
Bottle. W. H. Miller. 98,450; Feb. 4.
Bottle and stopper, Combined. P. H. Gans. 98,427; Feb. 4.
Bottle cap and opener, Combined. M. E. Trelles. 98,436; Feb. 4.
Bottle, Metal. C. E. McMaster. 98,444–5; Feb. 4.
Bowl. J. B. Clark. 98,453; Feb. 4.
Box. P. E. Bagur. 98,472; Feb. 4.
Box, Multiple candy. L. A. Deline. 98,419; Feb. 4.
Breeches. H. S. Isaacs. 98,437; Feb. 4.
Buckle. H. F. Wright. 98,451; Feb. 4.
Carburetor or similar article. A. O. Randall. 98,449; Feb. 4.
Carton and towel display, Combined. E. Wandel. 98,468; Feb. 4.
Casing, Supplementary meter. M. A. Pixley and E. H. McCloud. 98,447; Feb. 4.
Cigarette holder and ash receiver, Combined. W. B. Ulmer. 98,465; Feb. 4.
Clock dial or similar article. A. Mikosza. 98,434; Feb. 4.
Coat, House. H. Lobel. 98,475; Feb. 4.
Cup, Trophy. G. C. De Hart. 98,418; Feb. 4.
Dish, Butter. N. M. Brockmeyer. 98,473; Feb. 4.
Doily. K. C. Hamilton. 98,454; Feb. 4.
Drawer pull. R. H. Martin. 98,439–43; Feb. 4.
Drum. C. Baum. 98,415; Feb. 4.
Dresser cabinet and bureau or the like, Combined. I. H. Stern. 98,424; Feb. 4.
Elastic fabric. C. D. Maurer. 98,479–83; Feb. 4.
Fan bracket. J. J. Wall. 98,467; Feb. 4.
Fan, Electric. C. F. Haynes. 98,457; Feb. 4.
Glass, Sherbet. D. Deskey. 98,422; Feb 4.
Glider. W. H. Logan. 98,458; Feb. 4.
Hair drying apparatus. C. F. Taylor. 98,464; Feb. 4.
Hanger, Garment. E. B. Farmer. 98,474; Feb. 4.
Kit, Manicurist. E. Comradeau. 98,454; Feb. 4.
Lace. L. Birnbaum. 98,452; Feb. 4.
Lace. J. Waterfield. 98,467; Feb. 4.
Lace. J. D. Wiener. 98,469; Feb. 4.
Lamp or similar article, Flash. S. Osterman. 98,446; Feb. 4.
Lighting fixture. F. F. Holstein. 98,475; Feb. 4.
Loudspeaker support and baffle, Combined. P. Crosley, Jr. 98,416; Feb. 4.
Motor and enclosed switch, Combined portable. F. G. Douglass. 98,423; Feb. 4.
Panel and bezel for ash receivers, Combined face. J. Vimer. 98,466; Feb. 4.
Pants, Baby. A. N. Spanel. 98,450; Feb. 4.
Pants, Baby. A. N. Spanel. 98,463; Feb. 4.
Pencil, Mechanical lead. E. Back. 98,414; Feb. 4.
Radio cabinet. G. B. Jensen. 98,477; Feb. 4.
Service station. E. N. Aldrich. 98,470; Feb. 4.
Shoe. H. Holtz. 98,435–6; Feb. 4.
Shoe. H. B. Komar. 98,438; Feb. 4.
Shoe. J. McGee. 98,443; Feb. 4.
Shoe or similar article. J. A. Goldberg. 98,428–32; Feb. 4.
Stocking. O. E. Huber. 98,476; Feb. 4.
Table. W. Hoffmann. 98,434; Feb. 4.
Tank vehicle. W. W. Ammen. 98,471; Feb. 4.
Textile fabric. W. B. Haywood. 98,438; Feb 4.
Tire. B. E. Prall. 98,448; Feb. 4.
Tray for fruits, vegetables, or the like. C. Daum. 98,417; Feb. 4.
Tumbler. D. Deskey. 98,421; Feb. 4.
Tumbler, Drinking. D. Deskey. 98,420; Feb. 4.
Vanity case. A. Wewetzer. 98,433; Feb. 4.
Vibrator body. G. B. Pickop. 98,460; Feb. 4.
Wheel. C. W. Sinclair. 98,481–2; Feb. 4.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 4TH DAY OF FEBRUARY, 1936

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Acid process, Contact sulphuric. A. O. Jaeger. 2,029,530–1; Feb. 4.
Acoustical structure. J. S. Parkinson. 2,029,441; Feb. 4.
Active ray treating device. H. M. Creighton and E. C. Berndt. 2,029,612; Feb. 4.
Adjustable lamp support. A. A. Karcher. 2,029,532; Feb. 4.
Air conditioner and water heating system. C. D. Knudsen. 2,029,574; Feb. 4.
Air conditioning method and apparatus. D. B. Knight 2,029,428; Feb. 4.
Air conditioning system employing refrigeration. R. E. Keyes. 2,030,032; Feb. 4.
Aircraft. H. B. Krammer. 2,029,778; Feb. 4.
Air, Method and apparatus for conditioning. G. R. Goldthwaite. 2,029,368; Feb. 4.
Alarm system. L. J. Bowne. 2,029,699; Feb. 4.
Alcohols, Production of. H. Hopff. 2,029,618; Feb. 4.
Alkali nitrate, Production of. P. Oswald and W. Geisler. 2,029,738; Feb. 4.
Alkali sulphite or alkali bisulphite solutions from waste liquors obtained in the digestion of cellulose with alkali sulphur compounds, Preparing. G. Haglund. 2,029,616; Feb. 4.
Amines, Making secondary aromatic. W. L. Benon. 2,029,642; Feb. 4.
Ammonia from aqueous ammoniacal brines, Distillation of. G. G. Day. 2,029,467; Feb. 4.
Amplification of alternating current, System of. L. A. Gebhard. 2,029,316; Feb. 4.
Anchor, Earth. M. Rosner. 2,029,740; Feb. 4.
Apparel, Wearing. W. F. Gowdy. 2,005,564; Feb. 4.
Applicator. H. Reichle. 2,029,835; Feb. 4.
Articles, Making hollow. W. Scrimgeour. 2,029,508; Feb. 4.
Arylamides of 2,3-hydroxynaphthole acids. W. A. Sexton. 2,029,509; Feb. 4.
Asphalt-asbestos mastic and producing same. U. B. Bray, L. B. Beckwith, and F. S. Scott. 2,029,289; Feb. 4.
Asphalts and producing same. U. B. Bray and L. B. Beckwith. 2,029,290; Feb. 4.
Asphalts, Producing oxidized. E. G. Ragatz. 2,029,504; Feb. 4.
Audible electric signal. C. Ignell. 2,029,720; Feb. 4.
Audion arrangement for short wave television purposes. K. Schlesinger. 2,029,640; Feb. 4.
Auger bit. H. M. Swain. 2,029,447; Feb. 4.
Automatic clutch. K. B. Lyman. 2,029,538; Feb. 4.
Automotive body and frame. D. L. Minott. 2,029,735; Feb. 4.
Azodyestuffs. J. S. Petrus-Blumberger. 2,029,555; Feb. 4.
Azodyestuffs. H. Schindhelm and C. T. Schultis. 2,029,591; Feb. 4.
Bag: *See*—
Traveling bag.
Bag filling machine. W. M. McNeil. 2,029,733; Feb. 4.
Bags, Manufacture of. T. M. Royal. 2,029,340; Feb. 4.
Balanced automatic valve. E. Rawson. 2,029,505; Feb. 4.
Baling apparatus. G. Innes. 2,030,031; Feb. 4.
Baling press. A. C. Buttfield and H. W. Muller. 2,029,964; Feb. 4.
Bandage, Sphygmomanometer. F. Cossor. 2,029,012; Feb. 4.
Battery, Controlling the charge and discharge of a storage. E. L. Lord. 2,029,628; Feb. 4.
Battery stabilizer. C. E. Gordon. 2,029,658; Feb. 4.
Bearing. J. O. Heinze. 2,029,717; Feb. 4.
Bearing. F. Schubert. 2,029,445; Feb. 4.
Bearing. A. G. F. Wallgren and C. G. Janson. 2,029,600; Feb 4.
Bed, Folding. J. A. Dewey. 2,029,705; Feb. 4.
Belt, Apparel. J. Moulibau. 2,020,018; Feb. 4.
Belt, Endless. A. B. Merrill and G. H. Stewart. 2,029,381; Feb. 4.
Bicycle with horse riding action. P. F. Thau. 2,029,842; Feb. 4.
Bit: *See*—
Auger bit.
Blade for safety razors, Protected. F. J. Lewando. 2,029,825; Feb. 4.
Bleaching. J. A. Clark and H. G. Smolens. 2,029,985; Feb. 4.
Block: *See*—
Cement block.
Blow-off valve. J. V. Schmid. 2,029,837; Feb. 4.
Board: *See*—
Game board.
Bolster. W. C. Hedgcock. 2,029,822; Feb. 4.
Boring tool. H. Berg. 2,029,458; Feb. 4.
Bottle closure. I. Rosenbloom and R. Bern. 2,029,896; Feb. 4.
Box: *See*—
Journal box.
Box. H. L. Metzger. 2,029,888; Feb. 4.
Box blank folding mechanism. M. H. Hilsbothan. 2,029,394; Feb. 4.
Box dismembering machine. L. Mann. 2,029,885; Feb. 4.
Bracket for fire extinguishers, Supporting. F. A. Dodds. 2,029,707; Feb. 4.
Brake: *See*—
Electrical disk brake.
Brake mechanism. L. A. Majneri. 2,029,884; Feb. 4.
Brake mechanism, Air. D. C. Hensian. 2,030,049; Feb. 4.
Brake system. H. Pieper. 2,029,670; Feb. 4.
Brake unit, Combined freewheeling and power. E. A. Rockwell. 2,029,487; Feb. 4.
Brakes and clutches, Mechanism for. W. M. Boller. 2,029,287; Feb. 4.
Braun tube. K. Schlesinger. 2,029,639; Feb. 4.
Brick. F. B. Dunn. 2,029,814; Feb. 4.
Broiler drawer. S. H. Hobson and P. I. Hollman. 2,029,719; Feb. 4.
Broom. J. R. Kinney. 2,029,486; Feb. 4.
Brush assembly, Motor. S. N. Mead. 2,029,782; Feb. 4.
Buckle, Band. W. H. Davis. 2,029,413; Feb. 4.
Bumper. W. B. La Pointe. 2,029,824; Feb. 4.
Bung ring construction. C. H. Draper and W. C. Greene. 2,029,764; Feb. 4.
Burner: *See*—
Gas burner.
Oil burner.
Cabinet, Ironing machine. H. W. Altorfer. 2,029,293; Feb. 4.
Cabinet, Map. R. B. Lawton. 2,029,536; Feb. 4.
Cabinet, Moving picture and sound. W. R. Bell. 2,029,806; Feb. 4.
Calendar and coin container, Combination. O. T. Sanden. 2,029,443; Feb. 4.
Cam follower for a strip advancing mechanism. L. D. Martin. 2,029,950; Feb. 4.
Camera construction. C. C. Pierce. 2,029,818; Feb. 4.
Camera latch. C. W. Crumrine. 2,029,913; Feb. 4.
Camera, Motion picture. K. Morenoch. 2,029,726; Feb. 4.
Camera, Photographic. O. W. Gitchens. 2,030,474-6; Feb. 4.
Can feeding apparatus. O. W. Chalmers. 2,029,583; Feb. 4.
Canning, Apparatus for and method of. C. O. Bell. 2,029,303; Feb. 4.
Canopy, Lawn. C. K. Marshall. 2,029,886; Feb. 4.
Cap, Guard. H. R. Taylor. 2,029,955; Feb. 4.
Carbonaceous material, Apparatus for the treatment of. I. H. Derby and H. R. Horner. 2,029,759; Feb. 4.
Carbonaceous material, Apparatus for treating. I. H. Derby and H. R. Horner. 2,029,760; Feb. 4.
Carbonaceous material, Apparatus for treating. I. H. Derby and H. R. Horner. 2,029,763; Feb. 4.
Carbonaceous material, Treating. I. H. Derby and H. R. Horner. 2,029,762; Feb. 4.
Carburetor. E. L. Brown. 2,029,556; Feb. 4.
Carburetor. V. Campanella. 2,029,858; Feb. 4.
Carburetor. W. Markwart. 2,029,666; Feb. 4.
Carton feeding mechanism. M. J. Milmoe. 2,029,965; Feb. 4.
Case: *See*—
Refrigerator display case.
Cash register. M. Jacob. 2,029,776; Feb. 4.
Casings, Perforating well. W. T. Wells. 2,029,454; Feb. 4.
Catadioptric unit. R. W. Lace. 2,029,929; Feb. 4.
Catalyst. W. W. Myddleton. 2,029,786; Feb. 4.
Catalyst, Making a. H. Joseph. 2,029,576; Feb. 4.
Cathode for thermionic valves. A. Haslauer. 2,029,462; Feb. 4.
Cellulose, Fibrous esterification of. E. H. Van Dyke, C. J. Staud and H. Le B. Gray. 2,029,900; Feb. 4.
Cellulose organic ester compositions containing a propionyl ester of glycerol. D. C. Hull. 2,029,823; Feb. 4.
Cellulosic materials, Esterification of. J. F. Haskins and W. F. Underwood. 2,029,481; Feb. 4.
Cement. A. Hermann. 2,030,002; Feb. 4.
Cement block. P. E. Bendel. 2,029,586; Feb. 4.
Charges, Forming. I. H. Derby and H. R. Horner. 2,029,761; Feb. 4.
Chemical products and producing same. W. H. Carothers, A. M. Collins and J. E. Kirby. 2,029,410; Feb. 4.
Chronoscope. R. W. Earle. 2,029,863; Feb. 4.
Chuck. W. F. Greene and W. R. Meyer. 2,030,030; Feb. 4.

Cinematograph apparatus. A. P. Johnson. 2,029,871; Feb. 4.
Cinematograph apparatus. R. E. Lebouleux. 2,029,706; Feb. 4.
Circuit controller. H. F. Hathaway and W. Bixby. 2,029,821; Feb. 4.
Clasp and hook stay. J. J. Klaport. 2,029,876; Feb. 4.
Cleaner: *See*—
Suction cleaner.
Vacuum cleaner.
Clip board and light, Combination. R. Kaylor and R. B. Kenney. 2,029,425; Feb. 4.
Clock, Program. C. J. Maxwell. 2,029,667; Feb. 4.
Closure and gauge rod, Combined filling. F. A. Talbot. 2,029,345; Feb. 4.
Clutch: *See*—
Automatic clutch.
Clutch plate. H. V. Reed. 2,029,830; Feb. 4.
Clutch transmitting disk. R. V. J. Tower. 2,029,515; Feb. 4.
Coal, tars, mineral oils, and the like, Procedure for the hydrogenizing and/or splitting of. W. Rittmeister. 2,029,895; Feb. 4.
Coffee maker, Automatic. J. E. Smith. 2,029,906; Feb. 4.
Comb, Hair cutting. G. Pischino. 2,029,792; Feb. 4.
Combustion conditioning system for soaking pits. G. A. Merkt. 2,029,580; Feb. 4.
Communication systems, Apparatus for. A. J. Serrasva. 2,029,396; Feb. 4.
Compact, Pellet. A. G. Smith. 2,029,951; Feb. 4.
Composite structure. G. R. Bennett. 2,029,906; Feb. 4.
Compounds from petroleum oil, Producing high molecular weight. D. E. Merrill. 2,029,332; Feb. 4.
Compression tubing coupling. S. H. Kocher. 2,029,525; Feb. 4.
Concrete block machine. L. Gelbman. 2,029,365; Feb. 4.
Condensation product and process. J. B. Niederl. 2,029,559; Feb. 4.
Condensation products, Making. K. Ripper. 2,029,893; Feb. 4.
Condenser: *See*—
Electrolytic condenser.
Tubular condenser.
Condenser. R. K. Albert. 2,029,550; Feb. 4.
Condenser. H. C. Guild. 2,029,423; Feb. 4.
Condenser for refrigerating machines. D. F. Newman. 2,029,890–1; Feb. 4.
Condiment holder. L. I. Gaddy. 2,029,907; Feb. 4.
Conductor, Insulated. R. A. Schatzel. 2,029,546; Feb. 4.
Conductor, Supervision of the dielectric losses of a. W. Thal. 2,029,665; Feb. 4.
Conductor transmission system, Concentric. E. I. Green. 2,029,420; Feb. 4.
Conductor transmission system, Concentric. E. I. Green and F. A. Leibe. 2,029,421; Feb. 4.
Cone for use in wireless loudspeakers, telephones, and the like. F. Harrison. 2,030,001; Feb. 4.
Connecter: *See*—
Tile connecter.
Connecter for X-ray tubes. O. H. Pieper. 2,029,584; Feb. 4.
Container: *See*—
Dispensing container.
Shipping container.
Portable container.
Container. E. Ljungström. 2,029,320; Feb. 4.
Container and cooling means therefor. J. L. Kellogg. 2,030,005; Feb. 4.
Containers, Heat treating welded. H. S. Blumberg. 2,029,807; Feb. 4.
Control mechanism, Automatic. K. F. Wagner. 2,029,340; Feb. 4.
Control mechanism for garment pressing machines. A. F. Hanney. 2,029,715; Feb. 4.
Control mechanism for machine tools. A. Oberhoffken and H. Hanitz. 2,029,535; Feb. 4.
Control system for automobile lights, Automatic. G. Paulson. 2,029,502; Feb. 4.
Controller for printing presses. R. H. Leahe. 2,029,726; Feb. 4.
Controlling device. L. Wenceslao. 2,029,036; Feb. 4.
Conveyer, Shaking. F. Appelberg. 2,029,805; Feb. 4.
Cooker, Waffle. H. C. Johnson. 2,030,020; Feb. 4.
Countercurrent contacting of two liquids, Continuous process for. R. H. Wilson. 2,029,687; Feb. 4.
Countercurrent contactor. J. Robinson. 2,029,691; Feb. 4.
Counter-shaping machine. F. Ricks. 2,029,544; Feb. 4.
Coupling: *See*—
Compression tubing coupling.
Wall block coupling.
Coupling. R. J. van Hinke. 2,029,848; Feb. 4.
Cover: *See*—
Turpentine gum cup cover.
Cover retaining means. E. M. Davis. 2,029,811; Feb. 4.
Cradle, Trolling. R. F. Harrington. 2,030,000; Feb. 4.
Crane for centrifugal machines, Bowl-manipulating. H. T. Field. 2,029,709; Feb. 4.
Crank arm counterweight, Adjustable oil well. C. Berit. 2,029,993; Feb. 4.
Cultivator attachment for tractors. J. W. Capps. 2,029,652; Feb. 4.
Cups from which cartridge cases can be cold drawn, Apparatus for the manufacture of. R. Sautier. 2,029,797; Feb. 4.
Cushion, Hydraulic. F. J. Rode. 2,029,597; Feb. 4.
Cushioning structure. C. H. Heidenbrand. 2,029,870; Feb. 4.
Cutter: *See*—
Gear cutter.
V-slot paper cutter.
Green corn cutter.
Cutter for hydraulic dredges. W. R. Ewing. 2,029,816; Feb. 4.
Cutting and abrading machine and process. J. F. Williams. 2,030,023; Feb. 4.
Decorative effects with light, Creating and displaying. W. Reiss. 2,029,843; Feb. 4.
Dehydrator, Electric. L. Dillon. 2,029,362; Feb. 4.
Dehydrator, Electrical. H. F. Fisher. 2,029,527; Feb. 4.
Demountable wheel. F. A. Haberl. 2,029,966; Feb. 4.
Dental manikin. M. O. Squires. 2,029,683; Feb. 4.
Device for catching crown corks and like bottle-closures. F. E. Williamson. 2,029,804; Feb. 4.
Device for opening cans. E. Ljungström and O. A. Olmon. 2,029,329; Feb. 4.
Device for securing articles of hardware to wooden members. J. N. Victor. 2,029,453; Feb. 4.
Dextrose, Crystallisation of. C. J. Copland. 2,029,560; Feb. 4.
Di-(arylamino)- hydroxybenzenes and preparing them, Symmetrical. L. Laska and O. Haller. 2,029,727; Feb. 4.
Dicalcium phosphate, Treatment of commercial. F. Visser't Hooft. 2,029,967; Feb. 4.
Die: *See*—
Swaging and alignment die.
Die mechanism for mounting bushings. F. W. Sample and R. D. Ross. 2,029,341; Feb. 4.
Dies, Making embossing. W. S. Hough. 2,029,587; Feb. 4.
Dishwashing apparatus. G. E. Barozzi. 2,029,695; Feb. 4.
Dishwashing machine. J. E. Elkington. 2,029,583; Feb. 4.
Disk filter. W. L. Chewning. 2,029,611; Feb. 4.
Dispenser: *See*—
Liquid dispenser.
Dispensing apparatus. G. E. Hutchinson. 2,030,004; Feb. 4.
Dispensing container. C. A. Johnston. 2,029,660; Feb. 4.
Dispensing receptacle. F. J. Venning and F. J. Yetp. 2,029,747; Feb. 4.
Display device. G. H. Andrews. 2,029,603; Feb. 4.
Display device. S. H. Chasan. 2,029,653; Feb. 4.
Display device. J. D. Gray. 2,029,771; Feb. 4.
Display device. C. W. Hostock. 2,029,719; Feb. 4.
Display sign. W. H. Bleecker, Jr. 2,029,908; Feb. 4.
Display stand. B. Blumental. 2,029,407; Feb. 4.
Distance finding. E. E. Turner, Jr. 2,029,347; Feb. 4.
Distillation, Fractional. E. W. Gard. 2,029,528; Feb. 4.
Distributor member for stokers. E. A. Turner and C. J. Surdy. 2,029,517; Feb. 4.
Door check. P. E. Frantz. 2,029,711; Feb. 4.
Door construction, Refrigerator. I. Cohen. 2,029,755; Feb. 4.
Door, Fire alarm box. P. P. Horni. 2,029,373; Feb. 4.
Door, Metal. M. G. Martin. 2,029,482; Feb. 4.
Door opening apparatus. W. D. Ferris. 2,029,526; Feb. 4.
Door operating mechanism. B. G. Fleming. 2,029,818; Feb. 4.
Door operating mechanism. J. W. Scroggs. 2,029,678; Feb. 4.
Door, Revolving. S. C. Dreher. 2,029,914; Feb. 4.
Door speed control, Revolving. T. M. Hagenbook. 2,029,318; Feb. 4.
Dough forms and product, Making. G. Tansi. 2,029,664; Feb. 4.
Draft key retainer locking means. V. H. Harbert. 2,029,968; Feb. 4.
Dredge. R. O. Couch. 2,029,858; Feb. 4.
Dredging apparatus. W. R. Ewing. 2,029,815; Feb. 4.
Drill jig. W. Betz. 2,029,650; Feb. 4.
Drink vending machine. T. Brady. 2,029,460; Feb. 4.
Drive for textile machines, Automatic variable speed. E. Cannity. 2,029,854; Feb. 4.
Drive system, Pneumatic. C. Peter. 2,029,634; Feb. 4.
Duplicating machine, Hydraulically controlled. C. H. Kain. 2,030,022; Feb. 4.
Dyeing process. A. Wormald. 2,029,851; Feb. 4.
Dyestuff preparations and preparing them, Thioindigo. A. Hagenbocker and R. Brune. 2,029,714; Feb. 4.
Dyestuffs and their application. G. H. Ellis and F. Brown. 2,029,312; Feb. 4.
Dyestuffs and their manufacture, Ethylene azo. E. Wisinger. 2,029,647; Feb. 4.
Dyestuffs of the triphenylmethane series and related substances, Preparation of. A. A. Morton and J. R. Stevens. 2,029,530; Feb. 4.
Dyestuffs, Production and application of new. G. H. Ellis and F. Brown. 2,029,313; Feb. 4.
Earth cores, Apparatus for forming and surveying. J. R. McCardy. 2,030,015; Feb. 4.
Edger, Lawn. C. S. Scott. 2,029,949; Feb. 4.
Eggs, Poaching. A. L. Langel. 2,029,535; Feb. 4.
Elastic fabric. G. W. Lindley. 2,029,880; Feb. 4.
Electric fitting. P. D. Hartmann. 2,029,716; Feb. 4.
Electric meter. E. L. Bowles. 2,029,855; Feb. 4.
Electric timing apparatus. F. C. Kelly, Jr. 2,029,622; Feb. 4.
Electrical amplifier. P. N. Bennett. 2,029,854; Feb. 4.
Electrical disk brake. A. Y. Dodge. 2,029,862; Feb. 4.
Electrical impulses, Recording and reproduction of. A. Ringel. 2,029,339; Feb. 4.
Electrical receptacle plug. W. F. McIntosh. 2,030,018; Feb. 4.

Electrode, Illuminated cautery. A. Kleine. 2,029,487; Feb. 4.
Electrodeposition. P. R. Pine. 2,029,287; Feb. 4.
Electrolytic condenser. W. C. van Geel and H. Emmens. 2,029,451; Feb. 4.
Electromagnetic pump. J. W. Houston. 2,029,374; Feb. 4.
Electron discharge tube. H. O. Roosenstein, W. Kautter, and H. Rothe. 2,029,391; Feb. 4.
Embossing apparatus. J. J. Braund. 2,029,651; Feb. 4.
Engine: *See*—
Internal combustion engine.
Engine "Diesel". Internal combustion. H. Pokorney. 2,029,941; Feb. 4.
Esterification process. W. J. Bannister. 2,029,694; Feb. 4.
Esters of levulinic acid, Manufacture of. G. J. Cox and M. L. Dodds. 2,029,412; Feb. 4.
Exit doorlock. H. G. Voight. 2,029,901; Feb. 4.
Fabric: *See*—
Elastic fabric.
Fabric, Making a knitted. L. Wallerstein, B. A. Gale, and T. G. Hawley, Jr. 2,029,972; Feb. 4.
Fabric and making same, Printed. D. Ferguson and H. H. Schell. 2,029,768; Feb. 4.
Fastener: *See*—
Strap fastener.
Fastener unit. G. E. Prentice. 2,029,585; Feb. 4.
Fastening, Tool handle. H. Bettstadt. 2,029,784; Feb. 4.
Fats and oils, Refining. V. Jersey. 2,029,723; Feb. 4.
Feed mechanism for machine tool units. H. J. Kingsbury. 2,030,007; Feb. 4.
Feed water regulator. W. L. Hunter. 2,029,231; Feb. 4.
Feeder and catcher apparatus for rolling mills. J. E. Fawell. 2,029,915; Feb. 4.
Felt and making same. P. Drewsen. 2,029,310; Feb. 4.
Fence post. N. A. Ochiltree. 2,029,423; Feb. 4.
Fertilizer production from sewage. O. V. Austin. 2,029,648; Feb. 4.
Field tiller. O. B. Johnson. 2,029,872; Feb. 4.
File, Receipt control. H. W. Clark. 2,029,754; Feb. 4.
Filling and capping machine, Combined. E. F. Anderson. 2,029,299; Feb. 4.
Filling and closing machine. G. J. Huntley and J. S. Bartley. 2,029,528; Feb. 4.
Film-forming composition. L. Rosenthal and R. Hebermehl. 2,029,588; Feb. 4.
Film, Phonographic. R. Bernheim. 2,029,979; Feb. 4.
Films, Apparatus for taking or projecting lenticulated. F. Fischer, F. Strecker, and H. Netzebauer. 2,029,614; Feb. 4.
Films for the making of differential counts, Apparatus for preparing blood. D. J. B. Lubin. 2,029,496; Feb. 4.
Filter: *See*—
Desk filter.
Filter unit, Air or gas. H. E. Birkholz. 2,029,466; Feb. 4.
Finger ring. A. K. Coleman. 2,029,464; Feb. 4.
Finish removing process. C. Ellis. 2,029,892; Feb. 4.
Fire alarm. J. W. Alexander. 2,029,402; Feb. 4.
Firearm equipment for aircraft. R. Zindel. 2,029,692; Feb. 4.
Fire escape. B. Gilowitz. 2,029,419; Feb. 4.
Fire extinguishing apparatus. B. Pålsson. 2,029,836; Feb. 4.
Fish plate for laterally joining two or more metallic strips. A. B. Ralson. 2,029,635; Feb. 4.
Fishing rod. J. R. Howard and B. Biggers. 2,029,484; Feb. 4.
Fitting, Automatic ball closing. C. T. Bard. 2,030,019; Feb. 4.
Fixture housing, Floor outlet. E. B. Sargent. 2,029,398; Feb. 4.
Flashlight. O. Maiser. 2,029,578; Feb. 4.
Flashlights, Adjustable head for. W. Dabgin. 2,029,561; Feb. 4.
Flatiron. W. M. Schwartz. 2,029,948; Feb. 4.
Flinging device for ball games. R. B. Philipp. 2,029,790; Feb. 4.
Float control. L. C. Beadle. 2,029,405; Feb. 4.
Floor. C. A. Hach. 2,029,713; Feb. 4.
Floor. A. M. Isaacson. 2,029,721; Feb. 4.
Floor. R. H. McCarthy. 2,029,782; Feb. 4.
Floor, Wood. F. M. Bruce. 2,029,806; Feb. 4.
Flow indicator. K. Muhleisen. 2,029,688; Feb. 4.
Flower holder. I. M. Sinclair. 2,029,642; Feb. 4.
Fluid control device. H. W. Link. 2,029,498; Feb. 4.
Fluid flow control device. W. A. Chryst. 2,029,307; Feb. 4.
Fluid heater. W. H. Armacost. 2,029,284; Feb. 4.
Fluid motor. E. C. Horton. 2,030,003; Feb. 4.
Fluid-tightness for horizontal hydraulic cylinders, System for ensuring. G. L. E. J. Messier. 2,029,829; Feb. 4.
Fluids and apparatus therefor, Heating. J. G. Alther. 2,029,292; Feb. 4.
Fluids, Heating of. J. G. Alther. 2,029,293–4; Feb. 4.
Fluids into fuel gas, Converting hydrocarbon. F. E. Frey, W. P. Huppke, and J. A. Guyer. 2,029,657; Feb. 4.
Fluids, Method and apparatus for heating. J. G. Alther. 2,029,291; Feb. 4.
Fluids, System and apparatus for release of. D. Mapes. 2,029,639; Feb. 4.
Fly catcher. W. S. Driggers. 2,029,930; Feb. 4.
Fly screen. W. B. J. Moren. 2,029,839; Feb. 4.
Folding dip or minnow net bow. G. C. Meidenhauer. 2,029,582; Feb. 4.
Food products, Method and apparatus for preserving. S. W. Mathews and C. J. Benet. 2,030,014; Feb. 4.
Foot protecting device for skaters. A. A. Ohler. 2,029,787; Feb. 4.
Footwear and producing same, Article of. W. R. Hicks. 2,029,371; Feb. 4.
Formation tester, Gas-type. W. G. Lane. 2,029,461; Feb. 4.
Forms, Method and apparatus for making hosiery. W. J. De Witt. 2,029,706; Feb. 4.
Frame and holster construction, Car truck side. A. O. Buckius. 2,029,962; Feb. 4.
Fuel feeding apparatus. M. E. Mauer and S. C. Friedman. 2,029,780; Feb. 4.
Fuels, especially refuse, Apparatus for burning low-grade. V. Kolb. 2,029,576; Feb. 4.
Fur treating machine. F. W. Herstmann. 2,029,773; Feb. 4.
Furnace. J. S. Bennett. 2,029,285; Feb. 4.
Furnace of the suspended arch type, Metallurgical. E. A. Lindner. 2,029,492; Feb. 4.
Fuse, Drop-out. W. O. Schultz and A. O. Steinmeyer. 2,029,505; Feb. 4.
Game apparatus, Electrically operated. J. M. Prentiss. 2,029,834; Feb. 4.
Game board, Recording safety. H. F. Krantz. 2,029,988; Feb. 4.
Game table. J. K. Mitchell. 2,029,433; Feb. 4.
Garment manufacture. E. J. Golding. 2,030,026; Feb. 4.
Gas burner. B. Field and C. J. J. Clark. 2,029,611; Feb. 4.
Gas making apparatus. J. A. Guyer, F. E. Frey, and W. P. Huppke. 2,029,817; Feb. 4.
Gas process, Carburetted water. L. A. Angus. 2,030,000; Feb. 4.
Gas reactions, Carrying out exothermic catalytic. J. Bayer, A. Haltmeier, and K. Henecke. 2,029,904; Feb. 4.
Gases, Pyrolysis of hydrocarbon. M. Halpern, W. E. Logan, R. E. Manley, and W. Ullrich. 2,030,030; Feb. 4.
Gasket and gasket material. G. T. Balfe. 2,029,961; Feb. 4.
Gasket for refrigerator cabinets and the like. E. W. Vass. 2,029,845; Feb. 4.
Gasoline, Storage of. H. C. Weber. 2,029,743; Feb. 4.
Gauge: *See*—
Oil level gauge.
Plumb gauge.

Handbag, Reversible. A. Banner. 2,029,906; Feb. 4.
Handle for paper cups, Attachable. E. E. Koons. 2,029,459; Feb. 4.
Handles, Attaching means for. E. H. Mosher. 2,029,797; Feb. 4.
Hanger for eaves troughs. C. A. Carbaugh. 2,029,468; Feb. 4.
Head shaping machine. T. A. Richardson and C. W. Dawson. 2,029,898; Feb. 4.
Head wheel and making same, Numbering. G. J. Mott. 2,029,887; Feb. 4.
Headlight system. J. W. Van Denburg. 2,029,843; Feb. 4.
Heat conducting tube. T. E. Murray. 2,029,457; Feb. 4.
Heat exchanger. H. C. Truslow. 2,029,450; Feb. 4.
Heat recovery system. D. K. Dean. 2,029,880; Feb. 4.
Heat-treated cast steel wheel, Differentially. A. W. Gruy and R. H. Frank. 2,029,819; Feb. 4.
Heater: *See*—
Fluid heater.
Water heater.
Orchard heater.
Heel forming machine. C. H. Cousens. 2,029,954; Feb. 4.
Heels to shoes, Securing. E. Molk. 2,029,497; Feb. 4.
Helmet. A. E. Herner. 2,029,580; Feb. 4.
Hog ring clinching tool. W. F. Whitaker. 2,029,976; Feb. 4.
Holder: *See*—
Condiment holder.
Key holder.
Flower holder.
Tie holder.
Jar holder.
Holder. L. A. Anderson. 2,029,977; Feb. 4.

Holder for threads, cords, lines, wires, fly-casts and the like. H. D. Winchester. 2,029,975; Feb. 4.
Hose coupling thread terminus indicator. J. C. Schellin. 2,029,708; Feb. 4.
Hot gas valve. L. Bignard. 2,029,891; Feb. 4.
Hydraulic heat regulator. M. Olson. 2,029,449; Feb. 4.
Hydraulic press. J. K. Douglas and G. L. Heiden. 2,029,708; Feb. 4.
Hydrocarbon material and coke oven for practicing said process, Process of coking. A. H. Gallaher. 2,029,865; Feb. 4.
Identification device. P. M. Knudsen. 2,029,877; Feb. 4.
Igniting device. I. G. Carlson. 2,029,356; Feb. 4.
Ignition contacts in internal combustion engines, Obtaining the optimum position of. L. B. Kimball. 2,029,874; Feb. 4.
Ignition timer and coil. M. Mallory. 2,030,012; Feb. 4.
Inclination responsive device for aircraft. J. M. Boykow. 2,029,700; Feb. 4.
Inclosure for a number of indoor courts. G. Hadden and C. A. Holden. 2,030,029; Feb. 4.
Index, Shoe fitting. A. G. Bartschi and R. L. Huffine. 2,029,558; Feb. 4.
Indicator: *See*—
Flow indicator.
Vehicle service indicator.
Scriber indicator.
Industrial wastes, Digestion of. A. M. Buswell and C. S. Boruff. 2,029,702; Feb. 4.
Inking mechanism for check writers. H. C. Welter. 2,029,646; Feb. 4.
Insulating material. N. M. Elias. 2,029,511; Feb. 4.
Insulation. F. W. Seving, A. Bergqvist, and E. R. Olsson. 2,029,679; Feb. 4.
Internal combustion engine. N. F. Andersson. 2,029,602; Feb. 4.
Internal combustion engine. G. S. Ellis and H. H. Stewart. 2,029,900; Feb. 4.
Iron, Cake baking. H. G. Tatesian. 2,029,448; Feb. 4.
Iron, Electric. L. Schilling. 2,029,597; Feb. 4.
Ironing machine. C. R. Morgenstern. 2,029,382; Feb. 4.
Jar holder. W. F. Connelly and W. F. Yeoman. 2,029,810; Feb. 4.
Jar lifter. W. F. Connelly and W. F. Yeoman. 2,029,809; Feb. 4.
Jarring tool. I. J. McCullough. 2,029,579; Feb. 4.
Joint for pressure vessels, High pressure. K. Bredtschneider. 2,029,606; Feb. 4.
Journal box. G. F. Couch. 2,029,521; Feb. 4.
Key holder. J. M. Bennett. 2,029,696; Feb. 4.
Knitting machine. G. W. Lindley. 2,029,879; Feb. 4.
Latch: *See*—
Sash and screen latch.
Camera latch.
Lathe, Automatic. H. W. Ruppel. 2,029,638; Feb. 4.
Layers of material, Method of and machine for uniting. J. T. Heckel and R. S. Walker. 2,029,922; Feb. 4.
Lead, Preparing tetra alkyl. L. S. Bake. 2,029,801; Feb. 4.
Leather and making the same, Decorative patent. H. J. Kaplan. 2,029,877; Feb. 4.
Lifter: *See*—
Jar lifter.
Lighter. L. H. Best. 2,029,697; Feb. 4.
Lighter, Electrically-operated cigarette. D. T. S. MacLennan. 2,030,011; Feb. 4.
Lighting apparatus, Electric. A. Claude. 2,029,986; Feb. 4.
Liquid dispenser. D. L. Spender. 2,029,743; Feb. 4.
Liquid dispensing device. E. L. Nail. 2,029,884; Feb. 4.
Liquid trapping device. L. A. Bliss. 2,029,852; Feb. 4.
Liquids, Hydrocarbon. R. B. Day. 2,029,757; Feb. 4.
Liquids, Process and apparatus for contacting two. R. R. Wilson. 2,029,690; Feb. 4.
Liquids, Regenerating absorbent. A. Christensen. 2,029,411; Feb. 4.
Lister planters, Attachment for. C. K. Rhodd and R. V. Colling. 2,029,680; Feb. 4.
Loaf of bread, Baking a. L. L. Lasseter. 2,029,864; Feb. 4.
Lock: *See*—
Pairproof lock.
Yieldable safety lock.
Sash lock.
Lock and holder, Sash. D. Jones. 2,029,599; Feb. 4.
Lock for dumbwaiters, Automatic. S. Halasi. 2,029,587; Feb. 4.
Locking mechanism. A. S. Wheelbarger. 2,029,806; Feb. 4.
Locomotive tender. H. F. Anderson. 2,029,596; Feb. 4.
Locomotive tender. W. C. Peyton. 2,029,227; Feb. 4.
Locomotive tender. C. J. Surdykowski. 2,029,596; Feb. 4.
Locomotive tender. C. J. Surdykowski. 2,029,597; Feb. 4.
Loom: *See*—
Shuttle changing loom.
Lubricating machine, Automatic. W. M. Lipplecott. 2,029,327; Feb. 4.
Lubricating material, Solid. H. D. Geyer. 2,029,396; Feb. 4.
Lubricator: *See*—
Rail lubricator.
Machine for attaching articles to other objects. H. A. Bickford. 2,029,353; Feb. 4.
Machine for continuously inserting bottoms and lids in finished vessel walls of paper, cardboard, and the like. C. Majer. 2,029,227; Feb. 4.
Machine for salvaging carbons. W. R. Cross. 2,029,822; Feb. 4.
Machine for winding electrical coils. A. W. Le Boeuf. 2,029,577; Feb. 4.
Machine tool. J. L. Perkins. 2,029,385; Feb. 4.
Magazine loader. R. F. Schiveley. 2,029,444; Feb. 4.
Magnesium alloys, Rolling. R. D. Lowry and F. L. Reynolds. 2,029,728; Feb. 4.
Magnesium, Apparatus for producing substantially pure. F. Hansgirg. 2,029,921; Feb. 4.
Magnesium, Purifying. W. Schmidt and A. Beck. 2,029,896; Feb. 4.
Malt, Apparatus for preparation of. A. E. Jonsson. 2,029,873; Feb. 4.
Mask and making the same, Facial. R. M. Schmitt and C. M. Ball. 2,029,947; Feb. 4.
Material, Device for conveying finely divided. A. Andreas. 2,029,403; Feb. 4.
Material handling mechanism. O. R. Strawa. 2,029,512; Feb. 4.
Materials, Process and apparatus for contacting two. R. R. Wilson. 2,029,689; Feb. 4.
Mercury switch, Centrifugal electrical. G. E. Moore. 2,029,632; Feb. 4.
Metal fence post. E. Pavek. 2,029,739; Feb. 4.
Metal mold. A. E. Norton and M. Guyot. 2,029,499; Feb. 4.
Metal recovery. H. N. Gilbert. 2,029,908; Feb. 4.
Metal rolling mill. J. L. Adams, Jr. 2,029,751; Feb. 4.
Metal stock and apparatus therefor, Preparing. E. L. Templin. 2,029,500; Feb. 4.
Metals electrolytically, Depositing. P. R. Pine. 2,029,286; Feb. 4.
Meter: *See*—
Electric meter.
Meter disk. F. W. Hanks. 2,029,819; Feb. 4.
Micrometer. W. Pincin. 2,029,940; Feb. 4.
Mill: *See*—
Metal rolling mill.
Mining machine. C. A. Pratt. 2,029,788; Feb. 4.
Mirror, Rear view. W. H. Colbert. 2,029,911; Feb. 4.
Mit, Scrubbing. C. E. Lierley. 2,029,626; Feb. 4.
Modulating electric valve. L. L. Cunningham. 2,029,466; Feb. 4.
Mold: *See*—
Metal mold.
Typographic mold.
Molding apparatus, Permanent. H. J. Roehirt, A. T. Bateman, and A. Irvine. 2,029,673; Feb. 4.
Molding composition. K. Ripper. 2,029,894; Feb. 4.
Molding composition and molded articles made therefrom. K. Ripper. 2,029,836; Feb. 4.
Monolithic cementitious pipe. E. P. Halliburton. 2,029,369; Feb. 4.
Motor: *See*—
Fluid motor.
Motor or pump, Rotary. F. W. Scharf. 2,029,890; Feb. 4.
Mounting, Car spring. J. J. Tatum. 2,029,644; Feb. 4.
Mounting for the crystal of a wrist watch casing. J. Goldblatt. 2,029,769; Feb. 4.
Mower, Lawn. H. B. Newton. 2,029,498; Feb. 4.
Mulch and method of using the same. F. W. Sperr, Jr. 2,029,348; Feb. 4.
Nesting box with stacking irons. N. Tufts and E. T. Johnson. 2,029,746; Feb. 4.
Nitrocellulose, Production of. M. O. Schur. 2,029,547; Feb. 4.
Nose pad connection for eyeglass frames. E. R. Durgin. 2,029,470; Feb. 4.
Nozzle. W. B. Parker. 2,029,337; Feb. 4.
Nozzle for flat-spraying appliances, Air. E. Gustafsson. 2,029,423; Feb. 4.
Nozzle, Inspirating. W. B. Parker. 2,029,338; Feb. 4.
Nozzle of vacuum cleaning apparatus, Suction. L. F. McCardle. 2,029,666; Feb. 4.
Objective. L. Bertele. 2,029,806; Feb. 4.
Oil burner. F. Cossoll. 2,029,859; Feb. 4.
Oil burner. O. C. Schroeder and S. Perry. 2,029,741; Feb. 4.
Oil gas generating apparatus. L. B. Harris. 2,029,774; Feb. 4.
Oil level gauge. H. L. Rankin. 2,029,672; Feb. 4.
Oil, Method and apparatus for distillation of. A. G. Page. 2,029,501; Feb. 4.
Oil, Reducing of South Texas lubricating. W. H. Beardsley. 2,029,905; Feb. 4.
Oil, Treatment of hydrocarbon. J. C. Morrell. 2,029,785; Feb. 4.
Oil, Coking of hydrocarbon. L. A. Mekler. 2,029,788; Feb. 4.
Oils, Conversion of hydrocarbon. G. D. White. 2,029,501; Feb. 4.
Oils, Treatment of hydrocarbon. R. B. Day. 2,029,758; Feb. 4.
Opener, Can. H. L. Dasey. 2,029,812; Feb. 4.
Ophthalmic lens and blank therefor, Multifocal. J. H. Hammon. 2,029,479–80; Feb. 4.
Optical effects by electrical means, Method of and apparatus for obtaining. G. W. Walton. 2,029,401; Feb. 4.
Orchard heater. H. F. Summerhays. 2,029,548; Feb. 4.
Orthodontic appliance. P. N. Williams. 2,029,904; Feb. 4.
Oscillator. A. H. Taylor and L. C. Young. 2,029,346; Feb. 4.
Oscillator, Negative resistance crystal controlled. E. L. Koch. 2,029,483; Feb. 4.
Oxidation products, Purification of. J. H. James. 2,029,619; Feb. 4.

Packaging. E. I. Burke. 2,029,963; Feb. 4.
Packing for homogenizers. J. A. Clark. 2,029,463; Feb. 4.
Paneiproof lock. J. V. Eichel, Jr. 2,029,991; Feb. 4.
Paper and producing the same, Waterproofed plastic. R. V. Rodgers. 2,029,590; Feb. 4.
Paper conversion. F. C. Schueler. 2,029,446; Feb. 4.
Paper pulp making process. S. D. Wells. 2,029,973; Feb. 4.
Paper slitting and slotting machine. J. R. Lee, O. T. Gylleck, and F. Barney. 2,029,624; Feb. 4.
Partition-fixture unit, Combined. R. L. Davison. 2,030,024; Feb. 4.
Pencil, Mechanical. C. H. Davis. 2,030,025; Feb. 4.
Pencil, Mechanical lead. W. E. Eisenhauer. 2,029,767; Feb. 4.
Pencil, Self-feeding. T. H. Maurer. 2,029,731; Feb. 4.
Petroleum distillates, Treatment of cracked. E. B. McConnell. 2,030,033; Feb. 4.
Petroleum resin. U. B. Bray. 2,029,238; Feb. 4.
Petroleum, Treatment of. J. B. Barnes. 2,029,752; Feb. 4.
Phosphate charging stock, Preparing. H. A. Curtis and A. J. Abrams. 2,029,309; Feb. 4.
Phosphorus from dilute gases, Recovery of. F. P. Kerschbaum, W. H. Waggaman, and S. D. Geoch. 2,029,683; Feb. 4.
Photo-electric tube and making same. J. H. de Boer, J. Bruynes, and M. C. Teves. 2,029,414; Feb. 4.
Photographic emulsions, Making. M. Schmid. 2,029,946; Feb. 4.
Picture, Composite. W. H. O'Brien. 2,029,500; Feb. 4.
Picture display device. O. C. Dennis. 2,029,415; Feb. 4.
Pile fabric and making the same. F. M. Kaufman. 2,029,621; Feb. 4.
Pillow. S. Buchman. 2,029,608; Feb. 4.
Pipe: *See*—
Monolithic cementitious Water pipe.
pipe.
Pipe. C. A. Hill. 2,029,424; Feb. 4.
Pipe closure, Tank filling. E. A. Gould and H. de Caigny. 2,029,477; Feb. 4.
Piston, Composite rubber. H. D. Geyer. 2,029,267; Feb. 4.
Pitch propeller, Automatic change. C. Peterson. 2,029,503; Feb. 4.
Plants, Method and material for improving the growth of. W. B. Doe. 2,029,968; Feb. 4.
Plasterboard reenforcement. R. J. Sterling. 2,029,840; Feb. 4.
Plate for variable condensers, Variable. K. Lucas. 2,029,537; Feb. 4.
Plow, Helicoidal. J. N. Newsom. 2,030,034; Feb. 4.
Plow, Snow. L. T. Ross. 2,029,545; Feb. 4.
Plug: *See*—
Electrical receptacle plug. Spark plug.
Plug valve. S. J. Nordstrom. 2,029,433; Feb. 4.
Plumb gauge. J. F. Duby. 2,029,364; Feb. 4.
Pocket, Center expanding. H. Wehner. 2,029,686; Feb. 4.
Portable container. R. J. Lewis. 2,029,431; Feb. 4.
Post: *See*—
Fence post. Metal fence post.
Pothead. F. C. Meyer and G. E. Moffit. 2,029,832; Feb. 4.
Powder-spraying appliance. S. Bramsen, F. Wahlin, and E. Gustafsson. 2,029,408; Feb. 4.
Power tool, Combination. H. Lambke. 2,029,326; Feb. 4.
Press: *See*—
Baling press. Rotary printing press.
Hydraulic press.
Pressure to shoe bottoms, Apparatus for use in applying. F. Kennison. 2,029,324; Feb. 4.
Printing machine. S. Furman. 2,029,996; Feb. 4.
Printing preparation and process. F. Grieshaber. 2,029,990; Feb. 4.
Product and preparing same. J. A. Arvin. 2,029,851; Feb. 4.
Products by subjecting a material to relatively high temperatures, Method and apparatus for manufacturing. L. R. Campbell. 2,029,307; Feb. 4.
Products containing spinels, Obtaining. T. B. Hagland. 2,029,773; Feb. 4.
Projection apparatus. D. F. Newman. 2,029,038; Feb. 4.
Propeller puller. P. Kelly. 2,030,006; Feb. 4.
Protective device. R. H. Earle. 2,029,562; Feb. 4.
Protector: *See*—
Guywire protector. Shade protector.
Protector for use with hairdresser's wrappers or the like, Neck. A. Förster. 2,029,417; Feb. 4.
Puller: *See*—
Propeller puller.
Pulverization. M. Frisch. 2,029,917; Feb. 4.
Pump: *See*—
Electromagnetic pump. Turbine well pump.
Screw feed centrifugal pump.
Pump and compressor. C. W. Berggren. 2,029,554; Feb. 4.
Pump or motor. W. J. Carey. 2,029,520; Feb. 4.
Pump or motor, Balanced gear. W. C. Sieverts. 2,029,742; Feb. 4.
Pump stop mechanism for typographical line casting machines. P. Wunsch. 2,029,976; Feb. 4.
Pumping apparatus. A. C. Durdin, Jr. 2,029,705; Feb. 4.
Punch and holder, Recess forming. V. J. Roddy. 2,029,944; Feb. 4.
Punch, Can. F. W. Brenner. 2,029,507; Feb. 4.
Pyridines and making the same, Tri-fluoro-methyl-phenyl-azo-diamino. M. Bugnimann. 2,029,115; Feb. 4.
Quartz crystal, Piezoelectric. R. Lucas. 2,029,729; Feb. 4.
Radio receiving apparatus, Aeronautic. S. L. Cassel. 2,029,909; Feb. 4.
Rail handling and treatment, Process and apparatus for. O. Bent and E. F. Kenney. 2,029,286; Feb. 4.
Rail lubricator. R. B. Mennie. 2,029,826; Feb. 4.
Rail shift mechanism for linecasting and composing machine. L. M. Walden. 2,029,400; Feb. 4.
Range construction, Cooking. J. Teller and A. P. Schuh. 2,029,449; Feb. 4.
Range finder for cameras. J. Mihalyi. 2,029,932; Feb. 4.
Razor blade packaging machine. M. J. Mifsud. 2,029,983; Feb. 4.
Reagent for water purification and producing same. O. M. Urbain and W. R. Stemen. 2,029,966; Feb. 4.
Receiving and transferring device. J. C. McLean. 2,029,781; Feb. 4.
Receptacle: *See*—
Dispensing receptacle.
Recorder and reproducer, Combined. E. F. Mallin. 2,029,730; Feb. 4.
Red pigments. E. Lederle. 2,030,008; Feb. 4.
Reflector. C. A. James. 2,029,275; Feb. 4.
Reel: *See*—
Wire reel.
Refractory material, Manufacture of basic. R. L. Lloyd and R. W. Hyde. 2,029,627; Feb. 4.

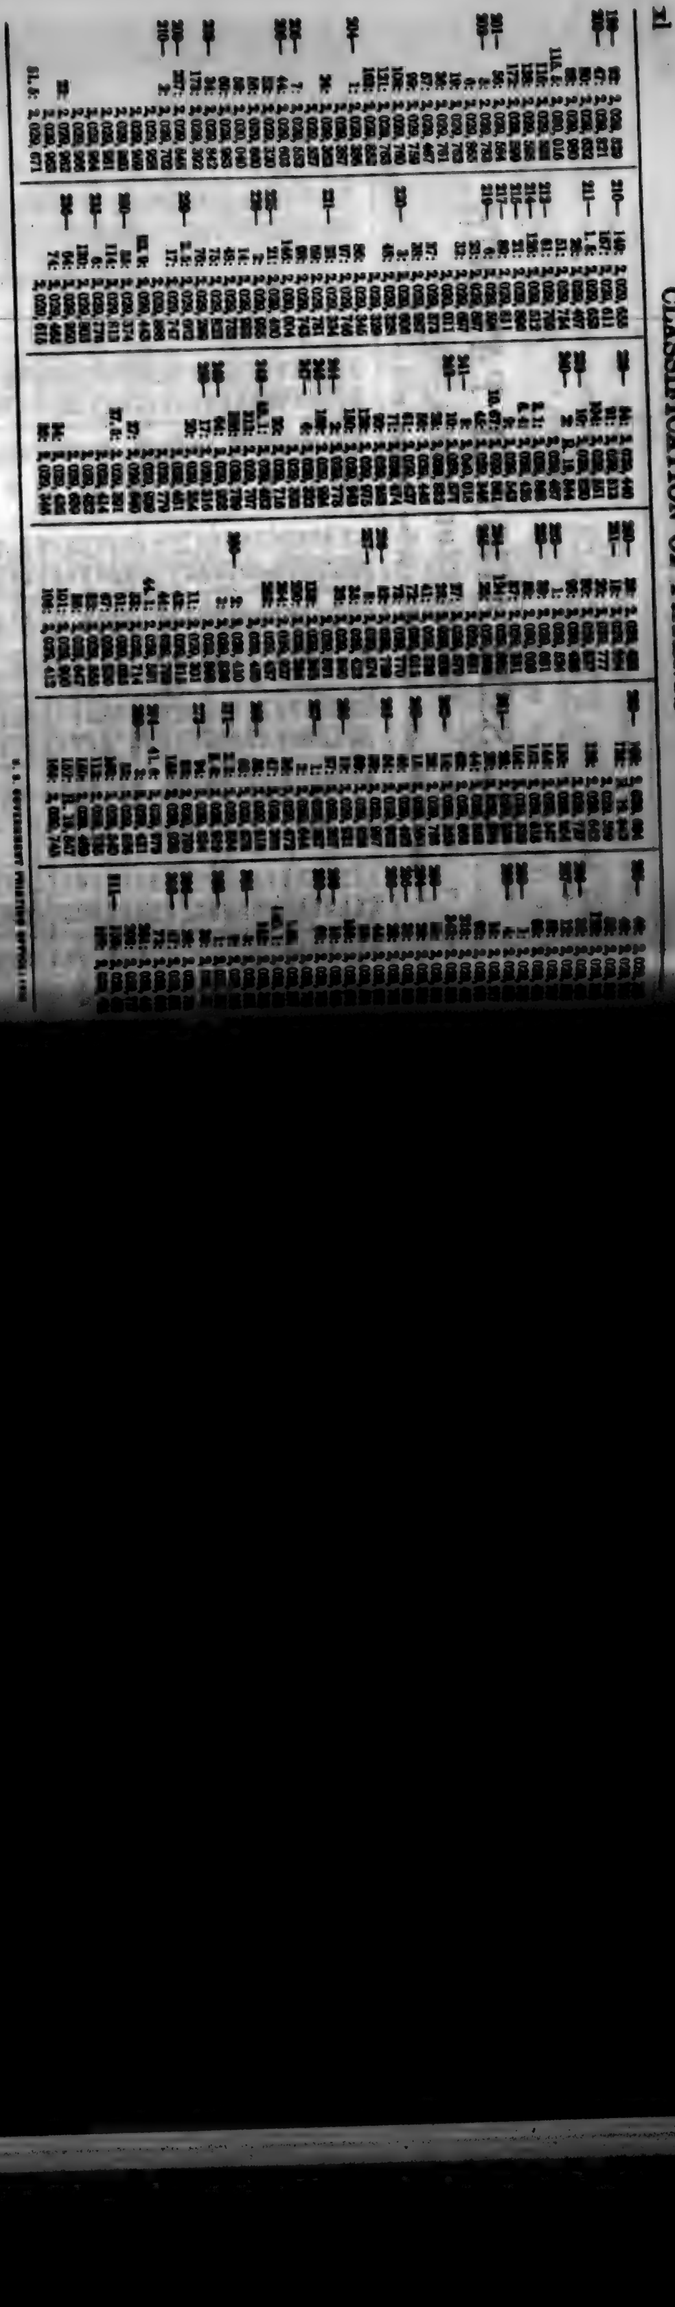
Sheathed articles, Apparatus for producing. C. F. Moody and E. A. Mitchell. 2,029,435; Feb. 4.
Ship construction. H. P. Frear. 2,029,712; Feb. 4.
Shipping container. G. T. Hynes and G. S. Smith. 2,030,040; Feb. 4.
Shoe, Arch support. L. C. Brand. 2,029,409; Feb. 4.
Shutter, Reflex. M. Friedland. 2,029,418; Feb. 4.
Shuttle changing loom. L. S. Voss. 2,029,901; Feb. 4.
Sign: *See*—
Display sign.
Sign. R. Young. 2,029,750; Feb. 4.
Signal: *See*—
Audible electric signal.
Signaling device, Selective. R. M. Rickard. 2,029,636; Feb. 4.
Signaling system. L. H. Johnson and F. K. Low. 2,029,723; Feb. 4.
Signaling system, Selective. J. C. Field. 2,029,710; Feb. 4.
Silencer. J. Laubscher. 2,030,003; Feb. 4.
Silk and silk products, Treating. L. Wallerstein, T. Hawley, and E. A. Gale. 2,029,250; Feb. 4.
Silk fabrics, Mixed cellulose acetate-natural. L. Wallerstein, R. A. Gale, and T. G. Hawley, Jr. 2,029,971; Feb. 4.
Silk, Printing acetate artificial. W. Jacob and A. Schürch. 2,029,568; Feb. 4.
Sink and draining board, particularly for domestic use. O. T. Webber. 2,029,902; Feb. 4.
Skate, Roller. A. F. W. Ruske. 2,029,892; Feb. 4.
Slot closer. L. C. Lake. 2,029,882; Feb. 4.
Slug casting machine. A. J. Stouges. 2,029,962; Feb. 4.
Smoke preventer, Automatic. E. Mills. 2,030,017; Feb. 4.
Smoking stand. E. Schultz. 2,029,542; Feb. 4.
Soap pulveriser and dispenser. A. K. Burditt. 2,029,701; Feb. 4.
Soap stabiliser. E. M. Read. 2,029,506; Feb. 4.
Sole edges of rubber-soled shoes, Method of and apparatus for operating on the. F. D. Kinney. 2,029,883; Feb. 4.
Solutions, Dehydration of. A. B. Macallum. 2,029,829; Feb. 4.
Solvent fractionation. G. L. Parkhurst. 1,029,629; Feb. 4.
Sound producing device. A. G. Schock. 2,029,641; Feb. 4.
Spark plug. A. A. Kazarjian. 2,029,570; Feb. 4.
Spark plug. E. B. Nowosielski. 2,029,660; Feb. 4.
Spool and protector therefor. E. Hoffman. 2,029,320; Feb. 4.
Spool and winder therefor. D. W. Klau. 2,029,427; Feb. 4.
Spring for vehicles. L. D. Foley. 2,029,472; Feb. 4.
Stand: *See*—
Display stand. Smoking stand.
Steam generator. H. J. Schneider. 2,029,888; Feb. 4.
Steel and its production, Nitrided. W. Krell. 2,029,734; Feb. 4.
Steering mechanism. C. V. Koons. 2,029,878; Feb. 4.
Step for vehicles and the like, Retractable. E. E. Stiner. 2,029,745; Feb. 4.
Stereoscopic effects, Method and apparatus for producing. N. Arfsten. 2,029,300; Feb. 4.
Steriliser. H. E. Tyler. 2,029,844; Feb. 4.
Stills, Method and apparatus for firing oil. C. H. Thayer. 2,029,956; Feb. 4.
Stoker. W. T. Capps. 2,029,519; Feb. 4.
Stoker, Multiple underfeed. E. F. Harrison. 2,029,296; Feb. 4.
Stove construction. A. S. Knapp and H. Smith. 2,029,573; Feb. 4.
Strap fastener. L. Mann. 2,029,330; Feb. 4.
Strip, Composite. J. Rabinowitz. 2,029,442; Feb. 4.
Structural element. H. L. Waugh. 2,029,645; Feb. 4.
Sugar cane juice, Apparatus for straining. A. C. I. Coulter. 2,029,655; Feb. 4.
Sulphur dioxide, Method and apparatus for the production of. H. O. C. Ingraham. 2,030,021; Feb. 4.
Superchanging device for oil pumps. C. E. Fox. 2,029,478; Feb. 4.
Superheater. H. Peperkorn. 2,029,884; Feb. 4.
Support: *See*—
Adjustable lamp support. Yieldable support.
Surfaces of comminuted material, Producing. A. L. Diller and L. H. L'Hollier. 2,029,381; Feb. 4.
Surgical instrument. F. A. Love. 2,029,485; Feb. 4.
Swaging and alignment die. S. E. Dallas. 2,029,704; Feb. 4.
Switch: *See*—
Mercury switch.
Switches, Actuating enclosed electric. N. A. Torabinen. 2,029,509; Feb. 4.
Switching unit, Metal clad. A. M. Bowman. 2,029,589; Feb. 4.
Swivel. J. E. Morgan, Jr., and D. A. Murphy. 2,029,681; Feb. 4.
Swivel. D. Timbs and D. A. Murphy. 2,029,596; Feb. 4.
Syringe, Dental. C. E. Meitzler. 2,029,734; Feb. 4.
Syringe, Water. J. J. Holland. 2,029,483; Feb. 4.
Table: *See*—
Game table.
Table construction. J. K. Mitchell. 2,029,434; Feb. 4.
Table covering. A. D. Collette. 2,029,856; Feb. 4.
Tank washing apparatus. W. Ostling. 2,029,788; Feb. 4.
Tanks and the like, Apparatus for cleaning. C. Richard. 2,029,795; Feb. 4.
Tanning material, Synthetic. A. O. Jaeger. 2,029,822; Feb. 4.
Tar, Distillation of. A. A. MacCubbin and J. Eavertaik, Jr. 2,029,583; Feb. 4.
Telephone system. L. T. Anderson and F. K. Low. 2,029,692; Feb. 4.
Telephone system. R. L. Stokely. 2,029,683; Feb. 4.
Television system. T. A. Smith. 2,029,396; Feb. 4.
Tellurium compounds and preparing the same, Organic. M. A. Perkins. 2,030,035; Feb. 4.
Temperature control device for furnaces. E. M. Baker. 2,029,551; Feb. 4.
Temperature control system. D. G. Taylor. 2,029,518; Feb. 4.
Tetranales of the camphor group and products therefrom, Producing. K. F. Schmidt. 2,029,799; Feb. 4.
Textiles, Manufacture of. L. Wallerstein, R. A. Gale, and T. G. Hawley, Jr. 2,029,968; Feb. 4.
Thermostat construction. H. Smith. 2,029,595; Feb. 4.
Thermostatic relief valve. W. K. Simpson. 2,029,950; Feb. 4.
Thread cutting tool. E. Thomson. 2,029,514; Feb. 4.
Thread fluid treating device. H. R. Childs. 2,029,910; Feb. 4.
Threading and facing tool. W. W. Vosper. 2,029,847; Feb. 4.
Tie for extension trackways. L. E. Harvey. 2,029,820; Feb. 4.
Tie holder. M. Thomas. 2,029,597; Feb. 4.
Tile connector, Drain. M. R. Gutman. 2,029,920; Feb. 4.
Tissue and making same, Transparent. C. Hills. 2,029,525; Feb. 4.
Titanium dioxide, Producing. W. T. Little. 2,029,881; Feb. 4.
Toaster base assembly. W. B. Kochner. 2,029,575; Feb. 4.
Tobacco, Treatment of. B. Loewenthal. 2,029,494; Feb. 4.
Tool: *See*—
Boring tool. Power tool.
Hog ring clinching tool. Thread cutting tool.
Jarring tool. Threading and facing tool.
Machine tool. Well tool.
Tool for lapping valve seats. H. A. Berkman. 2,029,753; Feb. 4.
Toy, Animated mechanical. G. M. Steel. 2,029,744; Feb. 4.
Toy, Walking. F. E. B. Whitehouse. 2,029,849; Feb. 4.
Trailer. W. Porteous. 2,029,540; Feb. 4.
Transmission. G. O. Jones. 2,029,661; Feb. 4.
Transmission gear. W. Black. 2,029,961; Feb. 4.
Transmitting element. B. V. J. Tower. 2,029,516; Feb. 4.
Traveling bag. M. Damm. 2,029,466; Feb. 4.
Tray, Display. F. H. Kernen. 2,029,862; Feb. 4.
Trimmer, Paper. C. L. Friermood. 2,029,910; Feb. 4.
Trimming machine. L. J. Bassoul. 2,029,804-5; Feb. 4.
Tripping mechanism. R. B. Zuber. 2,029,456; Feb. 4.
Trolley system. O. Conradty. 2,029,887; Feb. 4.
Truck, Barrel. H. Dawson. 2,029,656; Feb. 4.
Truck, Transport. C. E. Kohl. 2,029,489; Feb. 4.
Truss, Eccentric. J. W. Buckley. 2,029,557; Feb. 4.
Tube: *See*—
Brass tube. Heat conducting tube.
Electron discharge tube.
Tubes, Method and machine for making tapered. G. E. Barnhart. 2,029,552; Feb. 4.
Tubular condenser. L. Kopinski. 2,029,490; Feb. 4.
Tuning control for radio communication apparatus, Automatic. F. T. Leahy, Jr. 2,029,779; Feb. 4.
Turbine rotor construction. C. E. Soderberg. 2,029,881; Feb. 4.
Turbine well pump. De M. G. Miller. 2,029,833; Feb. 4.
Turbomachines, Apparatus for regulating. U. Meininghaus. 2,029,331; Feb. 4.
Turpentine gum cup cover. B. S. Kelly. 2,029,571; Feb. 4.
Two-stage valve. W. H. Gills. 2,029,615; Feb. 4.
Typewriter, Electrical multiple. J. Trachtenberg. 2,029,529; Feb. 4.
Typewriter, Electrical multiple. J. Trachtenberg. 2,029,967; Feb. 4.
Typographic mold. M. C. Indahl. 2,029,529; Feb. 4.
V-slot paper cutter. J. R. and J. W. Lee, O. T. Gylleck, and F. Barney. 2,029,625; Feb. 4.
Vacuum cleaner. E. Edström. 2,029,613; Feb. 4.
Valve: *See*—
Balanced automatic valve. Plug valve.
Blow-off valve. Thermostatic relief valve.
Hot gas valve. Two-stage valve.
Modulating electric valve.
Valve. W. R. Kinnaird. 2,029,777; Feb. 4.



Valve construction, Denture. M. M. Rubinstein. 2,029,945; Feb. 4.
Valve deflector, Intake. J. R. Merriam. 2,029,581; Feb. 4.
Valve, more particularly for siphon discharge apparatus, Hydrostatic. R. Niccolai. 2,029,989; Feb. 4.
Valves, Making hollow forged. W. Scrimgeour. 2,029,507; Feb. 4.
Vane for fans or the like, Guiding. R. De Mey. 2,029,513; Feb. 4.
Vase, Ground-level cementery. S. Ellis. 2,029,314; Feb. 4.
Vehicle, Articulated track. H. Liechty. 2,030,010; Feb. 4.
Vehicle body. A. Davis, Jr. 2,029,756; Feb. 4.
Vehicle, Dump. H. F. Flowers. 2,029,995; Feb. 4.
Vehicle, Motor. A. L. Knapp. 2,029,534; Feb. 4.
Vehicle service indicator, Motor. L. R. Deibler. 2,029,468; Feb. 4.
Ventilator: *See*—
Window ventilator.
Vermiculite, Making expanded. P. S. Denning. 2,029,524; Feb. 4.
Vessels, Apparatus for washing drinking. C. Chambers. 2,029,855; Feb. 4.
Vibrating screen. W. L. Wettlaufer. 2,029,848; Feb. 4.
Vibration dampener. F. M. M. B. Salomon. 2,029,790; Feb. 4.
Vibrator, Electromechanical. J. K. Clapp. 2,029,358; Feb. 4.
Volume control, Tone compensated. L. F. Curtis. 2,029,523; Feb. 4.
Wainscoting construction. J. W. Winterich. 2,029,549; Feb. 4.
Wall block coupling. F. S. Klein. 2,029,876; Feb. 4.
Wall structure, Reenforced. J. Kublanow. 2,029,878; Feb. 4.
Washing and drying machine, Combined. J. C. Nelson. 2,029,937; Feb. 4.
Watch attachment. A. H. Fischer. 2,029,416; Feb. 4.
Watchcase, Watertight. E. Morf. 2,029,784; Feb. 4.
Watch movement for fancy watches. H. Colomb. 2,029,559; Feb. 4.
Water flow in oil wells, Reducing. R. R. Ayres. 2,029,649; Feb. 4.
Water heater. T. H. Ireland. 2,029,827; Feb. 4.
Water heater, Electric. A. F. Craver. 2,029,987; Feb. 4.
Water pipe. S. McMichael. 2,029,630; Feb. 4.
Water purification. O. M. Urbain. 2,029,959–61; Feb. 4.
Waters, Purification of organically polluted. O. M. Urbain. 2,029,958; Feb. 4.
Waters, Purification of potable and polluted. O. M. Urbain and W. R. Stemen. 2,029,962–4; Feb. 4.
Wave transmission network. H. W. Bode. 2,029,[illegible]; Feb. 4.
Web registering device. F. B. Fuller. 2,029,918; Feb. 4.
Weeder and seeder. G. Pirich. 2,029,835; Feb. 4.
Weight, Wheel balancing. V. L. De Sang. 2,029,581; Feb. 4.
Welding, Apparatus for electric. F. L. Sessions. 2,029,594; Feb. 4.
Well tool. M. Burns and H. P. Wickersham. 2,029,[illegible]; Feb. 4.
Wells, Apparatus for and method of cementing. S. R. Manning. 2,029,890; Feb. 4.
Wells, Apparatus for sewing. H. F. Beardmore. 2,029,457; Feb. 4.
Wells, Perforating deep. M. W. Haimes. 2,029,[illegible]; Feb. 4.
Wheel: *See*—
Demountable wheel.
Heat-treated cast steel wheel.
Wicking. G. S. Fabel. 2,029,994; Feb. 4.
Windmill. H. Schlachter. 2,029,674; Feb. 4.
Window construction. W. T. Griffin. 2,029,772; Feb. 4.
Window illumination, Advertising. W. Tompkin. 2,029,941; Feb. 4.
Window ventilator. H. R. Campbell and A. Sargent. 2,029,610; Feb. 4.
Window ventilator. D. J. Roy. 2,029,965; Feb. 4.
Wiper for slug trimming knives. A. G. Sperry. 2,030,044; Feb. 4.
Wire reel. J. R. Sutliff. 2,029,953; Feb. 4.
Wire spooler, Belt driven. W. D. Pierson. 2,029,883; Feb. 4.
Wringers, Safety feeding device for. H. L. Mote. 2,029,936; Feb. 4.
X-ray system for reducing steepness of wave front. M. Morrison. 2,029,436; Feb. 4.
Yarn. L. Wallerstein, E. A. Gale, and T. G. Hawley, Jr. 2,029,970; Feb. 4.
Yarn and thread tensioning mechanism for cop winding and like textile machines. W. Reinert and G. Kahlert. 2,029,945; Feb. 4.
Yarn prepared from natural silk in the gum, Silk. L. Wallerstein, E. A. Gale, and T. G. Hawley, Jr. 2,029,969; Feb. 4.
Yeast, Manufacture of. G. W. Kirby and C. H. Fay. 2,029,572; Feb. 4.
Yeast, Manufacture of. A. Schultz. 2,029,582; Feb. 4.
Yieldable safety lock. K. O. Waechtler and E. M. Sass. 2,030,067; Feb. 4.
Yieldable support. R. D. Parks. 2,029,788; Feb. 4.

CLASSIFICATION OF PATENTS

ISSUED FEBRUARY 4, 1936

NOTE.—First number—class, second number—subclass, third number—patent number

1— 3: 2,029,303
49.6: 2,029,444
2— 30: 2,029,878
50: 2,029,417
88: 2,029,594
243: 2,029,926
1— 189: 2,029,802
1— 150: 2,029,705
339: 2,029,[illegible]
351: 2,029,[illegible]
1— 2: 2,029,260
2,029,[illegible]
2,029,313
2,029,[illegible]
2,029,[illegible]
5: 2,029,312
2,029,[illegible]
2,029,[illegible]
2,029,[illegible]
6: 2,029,351
10— 24: 2,029,944
109: 2,029,847
141: 2,029,514
12— 1: 2,029,523
33: 2,029,324
42: 2,029,304
2,029,305
50: 2,029,434
86: 2,029,544
147: 2,029,407
15— 158: 2,029,698
197: 2,029,496
211: 2,029,856
231: 2,029,426
258: 2,029,[illegible]
16— 1: 2,029,488
86: 2,029,711
114: 2,029,420
18— 3: 2,029,708
6: 2,029,436
8: 2,029,916
50: 2,029,617
2,029,531
54: 2,029,481
56: 2,029,301
2,029,[illegible]
2— 1.11: 2,029,[illegible]
1.12: 2,029,[illegible]
.3.5: 2,029,713
2,029,721
2,029,722
7: 2,029,806
18: 2,029,[illegible]
2,029,914
19: 2,029,[illegible]
35: 2,029,755
54.5: 2,029,541
69: 2,029,945
22— 106: 2,029,[illegible]
2,029,[illegible]
7: 2,029,411
40: 2,029,[illegible]
84: 2,029,[illegible]
102: 2,029,[illegible]
120: 2,029,[illegible]
175: 2,029,[illegible]
2,029,[illegible]
202: 2,029,[illegible]
223: 2,029,[illegible]
2,029,[illegible]
234: 2,029,[illegible]
236: 2,029,[illegible]
239: 2,029,745
243: 2,029,[illegible]
258: 2,029,[illegible]
23— 23: 2,029,[illegible]
31: 2,029,[illegible]
49: 2,029,[illegible]
69: 2,029,[illegible]
205: 2,029,[illegible]
27— 41: 2,029,[illegible]
27.1— 1: 2,029,[illegible]
34: 2,029,[illegible]
42: 2,029,[illegible]
85: 2,029,[illegible]
103: 2,029,[illegible]
156.7: 2,029,[illegible]
2,029,[illegible]
28— 1: 2,029,791
3: 2,029,[illegible]
30— 90: 2,029,[illegible]
33— 8: 2,029,[illegible]
[illegible]: 2,029,[illegible]
71: 2,029,[illegible]
36— 107: 2,029,[illegible]
188: 2,029,[illegible]
172: 2,029,[illegible]
188: 2,029,[illegible]
37— 69: 2,029,771
38— 1: 2,029,[illegible]
7.2: 2,029,[illegible]
32: 2,029,[illegible]
71: 2,029,[illegible]
87— 42: 2,029,[illegible]
67: 2,029,[illegible]
2,029,[illegible]
77: 2,029,[illegible]
188: R. 19,[illegible]
2,029,[illegible]
40— 78: 2,029,[illegible]
2,029,[illegible]
70: 2,029,[illegible]
82: 2,029,[illegible]
84: 2,029,[illegible]
118: 2,029,[illegible]
120: 2,029,[illegible]
125: 2,029,[illegible]
127: 2,029,[illegible]
41— 31: 2,029,[illegible]
43— 7: 2,029,[illegible]
27: 2,029,[illegible]
122: 2,029,[illegible]
44— 9: 2,029,[illegible]
45— 77: 2,029,[illegible]
46— 126: 2,029,[illegible]
118: 2,029,[illegible]
146: 2,029,[illegible]
47— 9: 2,029,[illegible]
11: 2,029,[illegible]
41: 2,029,[illegible]
48— 94: 2,029,[illegible]
2,029,[illegible]
206: 2,029,[illegible]
214: 2,029,[illegible]
49— 81: 2,029,[illegible]
51— 97: 2,029,[illegible]
2,029,[illegible]
103: 2,029,[illegible]
189: 2,029,[illegible]
53— 1: 2,029,[illegible]
3: 2,029,[illegible]
5: 2,029,[illegible]
10: 2,029,[illegible]
2,029,[illegible]
55— 30: 2,029,[illegible]
56— 264: 2,029,[illegible]
58— 20: 2,029,[illegible]
2,029,[illegible]
72: 2,029,[illegible]
80: 2,029,[illegible]
91: 2,029,[illegible]
2,029,[illegible]

Patents Nos. 2,050,041 to 2,090,332

THE OFFICIAL GAZETTE

OF THE

United States Patent Office

Vol. 463—No. 2 TUESDAY, FEBRUARY 11, 1936 Price—$10 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting this Gazette should be addressed. Issued weekly. Subscriptions, $10.00 per annum, including annual index, $10.75; single numbers, 20 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Notices of Cancellation

U. S. PATENT OFFICE, Washington, Jan. 16, 1936.

A. G. Morse Co., its assigns or legal representatives take notice:

An application for cancellation having been filed in this Office by Lovell and Covel Company, Cambridge, Mass., to effect the cancellation of trade-mark registration of A. G. Morse Co., 210–220 N. Halstead Street, Chicago, Ill., No. 183,675, dated January 4, 1921, and the notice of such proceeding sent by registered mail to said A. G. Morse Co., at the said address having been returned by the post office undeliverable, notice is hereby given that unless said A. G. Morse Co., its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the cancellation will be proceeded with as in the case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

RICHARD SPENCER,
First Assistant Commissioner.

U. S. PATENT OFFICE, Washington, Jan. 24, 1936.

Mexican American Habanero Corporation, its assigns or legal representatives take notice:

An application for cancellation having been filed in this Office by C. F. Hernandez, S. en C., 3a Calle de Cuahutemotzin, Number 92, Mexico, D. F., to effect the cancellation of trade-mark registration of Mexican American Habanero Corporation, 23 East 40th Street, New York, N. Y., No. 319,866, dated December 4, 1934, and the notice of such proceeding sent by registered mail to the said Mexican American Habanero Corporation at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Mexican American Habanero Corporation, its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the cancellation will be proceeded with as in the case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

RICHARD SPENCER,
First Assistant Commissioner.

Adjudicated Patents

(C. C. A. Ohio.) Sloper patent, No. 1,372,567, for method of manufacturing the covers of pneumatic tires, claims 1 to 4 *Held* invalid, claims 2, 3, and 4 *Held* not infringed. *Firestone Tire & Rubber Co. v. U. S. Rubber Co.*, 79 F.(2d) 548.

(C. C. A. Ohio.) Hopkinson patent, No. 1,374,505, for method of making motor-vehicle tires, claims 2, 9, and 15 *Held* not infringed, claims 16, 18, 23, and 27 *Held* invalid. *Id.*

(C. C. A. Ohio.) Gammeter patent, No. 1,420,719, for method and apparatus for making or manipulating tires, claims 1, 2, 18, and 19 *Held* not infringed, claim 17 *Held* invalid. *Id.*

(C. C. A. Ohio.) Sloper patent, No. 1,437,033, for apparatus for making the covers of pneumatic tires, claims 1, 2, 3, 4, 6, 7, 8, and 14 *Held* not infringed, claims 1 to 4 *Held* invalid. *Id.*

(C. C. A. Ohio.) Abbott patent, No. 1,507,563, for method and apparatus for manufacturing tire casings, claims 11, 23, and 31 *Held* valid and infringed. *Id.*

(C. C. A. Ohio.) Lough patent, No. 1,607,266, for rubberized fabric and its method of manufacture, claim 3 *Held* invalid. *Id.*

(C. C. A. Ohio.) Hopkinson reissue patent, No. 17,618, for manufacture of tire casings, claims 13, 14, 15, 16, 17, 18, 19, 21, 24, and 25 *Held* invalid. *Id.*

Notice Regarding Payment of Fees

All fees must be paid in advance. Payment of money required for Office fees must be made in specie, Treasury notes, national-bank notes, post-office money orders, or certified checks. Money orders and checks must be made payable to the "Commissioner of Patents." Money sent by mail to the Patent Office will be at the risk of the sender. (See Rule 194.)

Certified checks, bank drafts, express and foreign money orders must be immediately negotiable in this country and for the full amount of the fee required by the Patent Office. No allowance can be made by this Office for any charge for their collection or exchange. Postage stamps will not be accepted. Failure to comply with the above instructions will cause delay.

Condition of Applications Under Examination at Close of Business January 25, 1926

(Total number of applications awaiting action, exclusive Trade-Mark Division, 28,326; Trade-Mark Division, 1,287. Oldest new case, September 28, 1925; oldest amended, September 28, 1925. The dates given are 1925 except where † indicates 1924.)

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

In re Dougherty

No. 3,317. Decided November 16, 1925

1. PATENTABILITY—GAS WATER HEATER.

Claims for a gas water heater *Held* unpatentable over the prior art.

2. PATENTABILITY—AGGREGATION.

Certain claims for a gas water heater, reciting a plurality of interchangeable burners of different maximum capacity, *Held* properly rejected on ground of aggregation.

APPEAL from the Patent Office. Affirmed.

Mr. Arthur B. Paige for Dougherty.

Mr. R. F. Whitehead and *Mr. Howard B. Miller* for the Commissioner of Patents.

BLAND, *J.*:

The claimed invention in this appeal from a decision of the Board of Appeals of the United States Patent Office, relates to a gas water heater. The Board of Appeals affirmed the Primary Examiner's rejection of all the claims, of which claims 11 and 16 were regarded as illustrative by the Board and will be so regarded by us. They follow:

11. A gas water heater including a fixed frame portion comprising a casing inclosing a water container in heating relation with a combustion chamber and a flue outlet tube from said chamber; said casing having permanently connected therewith cold water inlet and hot water outlet conduits and a gas supply conduit; a plurality of interchangeable gas burners which are of respectively different maximum capacities and readily removable and replaceable in cooperative relation to said gas supply conduit; and changeable baffle means fitted to said flue tube and adjustable for changing the effective length of the passageway for products of combustion through said flue tube for cooperative relation to said different burners; whereby said heater is selectively convertible for widely different capacities of gas combustion and water heating effect without disturbance of said fixed frame portion or the water and gas conduits connected therewith.

16. A gas water heater, selectively convertible for widely different capacities of gas combustion and water heating effect, without disturbance of the water connections for said heater; comprising a gas burner and a water container with a flue tube, of invariable length, fixed in said container, with its axis in vertical position, for products of combustion from said burner in heating relation to water in said container; and variable means for changing the effective length of the passageway for products of combustion through said flue tube in accordance with the rate of combustion and heating effect desired.

Appellant's application discloses a gas water heater of the usual type containing a combustion chamber, water container, gas pipe, gas burner, intake and outlet pipes, and a flue. Appellant's alleged invention is claimed to be useful in small private residences where the cost of hot water must be limited in accordance with the income of the occupant and where it is desirable to have a single water heater available, the capacity of which can be decreased or increased at will. To this end applicant provides

"a plurality of interchangeable gas burners which are of respectively different maximum capacities and readily removable and replaceable in cooperative relation to said gas supply conduit",

and in addition to the interchangeable burners the applicant provides changeable baffle means

"fitted to said flue tube and adjustable for changing the effective length of the passageway for products of combustion through said flue tube for cooperative relation to said different burners".

By permitting the exchange of a large burner for a small one, and by substituting, in the flue, baffles of different pitches, which substitution lengthens the flue passage, applicant states that his device may be thus regulated or controlled so as to increase or decrease the supply of hot water and the amount of gas consumed.

Some of the claims at bar provide for baffling means to be constructed in a certain manner, while other claims merely call for baffling means in the flue adjustable for changing the length of the passageway.

The claims were rejected on the following references: Elmendorf, 600,910, Mar. 22, 1898; Way, 799,130, Sept. 12, 1905; Roth, 1,272,118, July 9, 1918; Burke, 1,540,585, June 2, 1925; Morley, 1,859,745, May 24, 1932.

The patent to Elmendorf is for a heating device and particularly one to be used in connection with stove pipes. Products of combustion pass and radiate their heat through the pipe to the air outside. This patent shows baffles of different pitch which operate to increase the length of the passage and regulate the flow of the heat therein.

Way shows a radiator with sectional baffles inserted in a stovepipe. The sectional baffles are positioned around a central rod.

Roth shows a boiler in which there is a spiral baffle member made up of sections having a central sleeve member which may be mounted upon a supporting shaft. The various sections when put together constitute a spiral baffle. The baffles may be arranged so as to permit a relatively unimpeded flow of fluid along the same.

Burke styles his patent a "Heat Saver and Heat Increasing Action for Boiler Flues" and discloses a water heater with flues which contain helical or spiral baffles which can be removed by an implement.

Morley's patent relates to a flue structure for heating apparatus and shows a water heating tank, a burner, and a flue in which is a tube which supports a spiral blade surrounding it.

The Examiner rejected the claims on three grounds: Lack of invention over the references, old combination, and aggregation.

After the Examiner's ruling, a new claim 11 was submitted which differed somewhat in its terms from the original claim 11.

We do not regard it necessary to apply the references to appellant's structure any more than is above set out, and we agree with both tribunals below that appellant's disclosure shows nothing inventive over the disclosures of the prior art.

Concerning the rejection of the claims on the ground of aggregation, the Board said:

The claims are rejected on three grounds—lack of invention over the references, old combination and aggregation.

The claims, as they appear in the Examiner's statement, do not seem to us to be aggregations as there is no defi-

nite inclusion of any part which may not, under some circumstances, cooperate with the other parts claimed to produce a unitary result. This is not true, however, of new claim 11 also claims 12–15 which depend upon it. These claims include a plurality of interchangeable gas burners only one of which would obviously be used for the production of hot water under a given set of conditions. The other burners might be miles away in the storehouse of the service company. While claim 11 includes a changeable baffle, this expression is broad enough to cover a baffle having removable sections all of which might be used under certain circumstances.

In contending for the patentability of claim 11 and the claims which depend upon it, appellant has cited certain decisions of this Board which on their face seem to be directed to quite an analogous set of circumstances. In any combination claimed we think it essential that all recited elements shall be capable of cooperation to produce some unitary result.

It will be noticed that the Examiner gave as one ground of rejection that the claims call for an old combination. In the Board's decision it is pointed out that Morley discloses a gas heating device which contains all the elements of appellant's corresponding device. The Board then points out that Morley does not disclose interchangeability of burners or baffles. The Board, therefore, does not affirmatively approve of the Examiner's rejection on this ground. It does not, however, expressly reverse the Examiner on this ground of rejection. Whether the claims call for an old combination is, in view of our conclusion as to the other two grounds of rejection, wholly immaterial.

[1-2] We think it is clear that all the claims were properly rejected upon the ground of lack of invention over the prior art cited, and the claims calling for interchangeability of burners and baffles were properly rejected on the ground of aggregation. *John H. Thropp's Sons Company* v. *Sieberling*, 294 U. S. 320, 327 O. G. 441.

The decision of the Board of Appeals is affirmed.

Affirmed.

U. S. Court of Customs and Patent Appeals

IN RE CARTER AND MERRIAM

No. 3,540. Decided November 25, 1935

PATENTABILITY—METHOD OF ROASTING ORES.

Claims for a method of roasting ores *Held* unpatentable over the prior art.

APPEAL from the Patent Office. Affirmed.

Mr. Forbes Sibley, Mr. Benjamin Swosedler and *Mr. Joseph A. Ryan* for Carter and Merriam.

Mr. R. F. Whitehead and *Mr. Howard S. Miller* for the Commissioner of Patents.

GARRETT, *J.*:

This is an appeal from a decision of the Board of Appeals of the United States Patent Office, affirming the Examiner's rejection of three method claims, numbered respectively 7, 8, and 9, in appellants' application relating to roasting ores. Four claims for an apparatus stand allowed.

Claims 8 and 9 read:

8. In the method of roasting ores involving the roasting in gaseous suspension of finely divided sulfide ore and the production of sulfur dioxide gases at temperatures not substantially less than 1600° F. and containing entrained dust particles and condensable sulfuric acid, the improvement which comprises reducing the temperature of the exit gases of the roasting operation to not substantially less than the dew point of the contained sulfuric acid and not substantially more than 700° F. by heat interchange with a cooling medium maintained at a temperature not substantially less than the dew point of the sulfuric acid, whereby condensation of sulfuric acid is avoided and whereby the temperature and volume of the gases are materially reduced to permit subsequent removal of dust from the gases by means of a metallic dust separator.

9. In the method of roasting ores involving the roasting in gaseous suspension of finely divided sulphide ore and the production of sulphur dioxide gases at temperatures not substantially less than 1600° F. and containing entrained dust particles and condensable sulphuric acid, the improvement which comprises reducing the temperature of the exit gases of the roasting operation to not substantially less than the dew point of the contained sulfuric acid by heat interchange with a cooling fluid maintained at not less than about the dew point of the sulphuric acid, whereby condensation of sulphuric acid is avoided, and then separating entrained dust from the gases.

Certain limitations contained in claim 8 are lacking in claim 7. Claim 7 also recites a reduction of the temperature of the exit gases "to not substantially more than 1000° F.," differing in that respect from the "700° F." recited in claim 8.

The appealed claims were held "not allowable over" patent, No. 1,563,616, issued December 1, 1925, to one Fassotte.

Appellants' general object is the production from sulfide ores, particularly pyrites or fool's gold, of sulfur dioxide gases for use in the manufacture of sulfuric acid. To this end they designed an apparatus for "suspension roasting of finely divided sulfide ores, such as flotation concentrates."

Suspension roasting of pyrites of the kind so described was old in the art, as illustrated by a patent to Cordy et al., No. 1,758,188, referred to in appellants' specification.

Appellants' specification relates, in substance, that in the roasting process the gases produced contain appreciable quantities of dust which must be removed from the gas stream before the gases can be utilized; that to effect such removal "various constructions and arrangements" of dust chambers in the gas line have been prepared, the prior art teaching being that usually such dust chambers, whatever their construction, are arranged immediately following the outlet of the roasting chamber; that the temperature of the gases at the time of leaving the roasting chamber are not substantially less than 1600° F. and commonly are in the neighborhood of 1800° F., and that the dust chambers of the prior art, because of the high temperatures and consequent large volume of expanded gases, have necessarily been of large size and constructed of refractory material.

The specific teaching upon which appellants' appealed claims rest is that of reducing the temperatures of the "exit gases" to the degrees defined in the claims. This reduction of temperatures, it is said, results in such a reduction in the volume of gases as to make possible the removal of the dust by means of a metallic dust separator of relatively small size instead of having the large sized chambers constructed of refractory material such as were used in the prior art.

To state it in another way, appellants claim a process whereby the temperature of the gases is reduced from the point of 1800° F., at which they emerge from the roasting chamber, to from 700° F. to 1000° F. as they enter the dust collector.

The means provided by appellants for reducing the temperatures of the gases consists of what is designated a "waste heat boiler," interposed between the roasting unit and the dust chamber.

The sole question to be determined, as the issue comes before us, is whether the Fassotte patent, which is in the same field of art as the application of appellants, discloses or teaches reduction of temperatures of the gases in such manner as fairly to anticipate appellants' method claims.

Appellants' apparatus differs in many respects from the apparatus of Fassotte, and there are features in the Fassotte process which appellants do not teach. For example, Fassotte teaches and claims the introduction of preheated air into the roasting unit of his device, a feature not referred to in the application of appellants.

Fassotte discloses, interposed between his roasting unit and his dust collecting chamber, a "heat exchanger" in which there are two elements designated as "economizers." The air which he preheats is passed through these economizers by means of pipes and the preheating is accomplished by heat being extracted from the gases as they pass through the economizer units. So preheated, the air is carried into the roasting chamber.

It is argued before us on behalf of appellants that Fassotte does not reduce the normal temperature of the gases (1600° F. to 1800° F.) in the system as a whole, and that in his device they enter the dust collecting chamber at practically the same temperature at which they leave the roasting unit.

To support this argument appellants apparently make the assumption that Fassotte's device requires, at first, a normal heating in the roasting chamber of 1800° F.; that in the economizers there are extracted, for illustration, 500° F. which is returned to the roasting chamber, thus increasing the temperature of the gases to 2300° F. as they exit from said chamber, and that upon passing into the economizers 500° F. continues to be extracted and returned, so that when the gases pass on into the dust chamber they are still at a temperature of 1800° F.

We are unable to deduce any such teaching from the Fassotte patent. There is nothing therein to indicate that he, at any time, obtains any higher roasting temperature than was normal in the prior art. So far as we can determine, he teaches nothing more, upon this particular feature, than the obtaining of at least a part of the required total volume of heat by extracting heat from the gases with which to preheat air that is passing to the roasting chamber.

Certainly, there is nothing to indicate that any of the heat so extracted is returned to the gases after they leave the heat exchanger and before they enter the dust chamber. In the very nature of things, therefore, the gases entering the dust chambe must be lower in temperature than when leaving the roasting chamber, just as they are, except perhaps in the matter of degree, in the process of appellants.

It is noted that Fassotte provides valves in connection with his heat exchanger by means of which the amount of preheated air flowing from it into the roasting chamber is regulated, and the natural presumption would seem to be that by means of these the temperature in the roasting chamber is kept at whatever point may be desired.
